Despite this language from Frothingham, the formalist period ended without the Court having to resolve precisely the question of under what circumstances a plaintiff with a generalized grievance may have standing to challenge the constitutionality of a federal act if authorized by Congress to do so. The Court in this era did not repudiate the concept that a writ of mandamus, or other similar writ, could be secured by a party having only a generalized grievance, subject to the discretion of the Court. However, the Court's specific conclusions in the cases cast doubt over whether the Court would be willing to adopt any very general and broad concept of standing.

The formalist approach to congressional ability to create standing where none existed before is similarly informed by separation of powers concerns. Reflecting the formalist approach, Justice Scalia recounted in 1992 in Lujan v. Defenders of Wildlife327 that the Court had often held that a particular individual's general grievance about government – claiming only harm to every citizen's interest in proper application of the Constitution and laws – does not state an Article III case or

324 Id. at 487-88.
325 Id. at 488-89.
326 Id. at 487.
controversy. Justice Scalia then adopted a strict separation of powers justification for these holdings. Under this approach, there are rigid distinctions between the appropriate role of Congress, the courts, and the executive, and thus there are rigid limits on Congress' ability to use the courts to help check executive department compliance with federal laws. As Justice Scalia stated in *Lujan*:

> If the concrete injury requirement has the separation-of-powers significance we have always said, the answer must be obvious: To permit Congress to convert the undifferentiated public interest in executive officers' compliance with the law into an "individual right" vindicable in the courts is to permit Congress to transfer from the President to the courts the Chief Executive's most important constitutional duty, to "take Care that the Laws be faithfully executed." 328

Underscoring the conclusion that from this strict separation of powers view Congress should have no special leeway in determining when standing should be granted in federal courts, even when the source of the asserted right is a federal statute, Justice Scalia said:

> [T]here is absolutely no basis for making the Article III inquiry turn on the source of the asserted right. Whether the courts were to act on their own, or at the invitation of Congress, in ignoring the concrete injury requirement described in our cases, they would be discarding a principle fundamental to the separate and distinct constitutional role of the Third Branch – one of the essential elements that identifies those "Cases" and "Controversies" that are the business of the courts rather than of the political branches. 329

Having thus stated that Congress' ability to create standing where it would otherwise not be found by the Court is greatly limited, Justice Scalia did note that nothing in his opinion contradicted the principle stated in prior cases that the injury required by Article III may exist solely by virtue of statutes creating legal rights, the invasion of which creates standing. The two cases he used to illustrate that principle involved congressional elevation to the status of legally cognizable injuries

---

328 504 U.S. at 577.

329 *Id.* at 576. This view is in contradiction to Justice Powell's statement in *Warth v. Seldin* that standing "often turns on the nature and source of the claim asserted," 422 U.S. at 500, a view which reflects the impact on the modern natural law approach to standing of a sharing of powers, checks-and-balances approach to separation of powers. See *infra* text accompanying notes 430-38. It is also in contradiction to a Holmesian approach toward standing, which also adopts a sharing of powers, checks-and-balances approach to separation of powers analysis. See *infra* text accompanying notes 354-60. And, of course, it is in contrast to an instrumentalist approach which permits Congress to create standing as long the Court is not placed in the position of rendering advisory opinions and concrete adverseness exists between the parties. See *supra* text accompanying notes 368-72. For an example of a formalist strict separation of powers approach to standing, but which to achieve its result adopted functional sharing of powers language, consistent with recent Supreme Court majority opinions, see Charles S. Abell, *Note, Ignoring the Trees for the Forest: How the Citizen Suit Provision of the Clean Water Act Violates the Constitution's Separation of Powers Principle*, 81 Virginia L. Rev. 1957 (1995).
some concrete, *de facto* injuries that were previously inadequate in law. One was injury to an individual's personal interest in living in a racially integrated community, while the other was injury to a company's interest in marketing its product free from competition.330 Explaining the general principle which justified these case results, Justice Scalia quoted from a 1972 case, *Sierra Club v. Morton*, 331 “[Statutory] broadening [of] the categories of injury that may be alleged in support of standing is a different matter from abandoning the requirement that the party seeking review must himself have suffered an injury.”

Exactly what this language means in practice is unclear. A rigid formalist approach would probably want to limit this principle to the cases cited by Justice Scalia, that is, cases where a concrete actual injury of the same kind as existed at common law is made the basis of a cause of action created by Congress. This approach would not let Congress add injuries to the list of those sufficient for standing which are more generalized or abstract, like an interest in an ecosystem generally (“ecosystem nexus”), or an interest in animals generally (“animal nexus”), or a general professional interest in studying animals without any concrete plans for that study (“vocational nexus”).332

Justice Scalia's opinion in *Lujan* is consistent with this result, but does not clearly foreclose the greater congressional ability that may exist under Holmesian or modern natural law approaches, as discussed at §§ 17.3.1.2.C nn.354-60 & 17.3.1.2.E nn.430-38. To get members of the Court other than a formalist like Justice Thomas to join his *Lujan* opinion, it may have been necessary for Justice Scalia to leave his opinion deliberately vague on this point.

**C. The Holmesian Era: 1937-1954**

The limited view of standing suggested in *Frothingham* was developed further by the Supreme Court between 1937 and 1954, when a majority of the Justices were deeply influenced by Holmes. During this period, the Court acknowledged an explicit separation of powers base to standing doctrine, and for the first time began to articulate standing doctrine in terms of the requirement of a "distinct injury." This articulation is consistent with the influences on judicial interpretation discussed at § 15.3 nn.67-69. As noted there, Holmesian Stage 4½ is based on formal operational thought, which involves abstract reasoning about the theoretical foundations of existing phenomenon. Such theoretical reasoning is consistent with a movement from a concrete “cause of action” approach to restatement as a “distinct injury” requirement. However, as noted at § 15.3 nn.70-71, since this first stage of formal operational thought focuses in moral terms on the arbitrariness of any rule system, it yields a system of moral reasoning based merely on the values of the dominant forces in society.

A limited view of standing is consistent with this Holmesian deference-to-government posture. On issues of justiciability, this posture of judicial deference suggests that courts should decide cases only when it is clear that the parties have standing, that the case is ripe for resolution and not moot,

332 *Id.* at 565-67.
and that it does not represent a political question. The Holmesian approach is also reflected in Justice Brandeis' list of principles in *Ashwander v. Tennessee Valley Authority*, discussed at § 17.1.3.2, that the Court has developed "for its own governance in the cases confessedly within its jurisdiction . . . under which it has avoided passing upon a large part of all the constitutional questions pressed upon it for decision." Justice Brandeis mentioned, in passing, the need for personal injury when he wrote in *Ashwander* that "the Court will not pass upon the validity of a statute upon complaint of one who fails to show that he is injured by its operation."

After the events of 1937, when a consistent 5-Justice Holmesian majority replaced the pre-1937 formalist majority on the Court, as discussed at § 14.2.3, the Holmesian/Brandeis approach to standing triumphed. Not surprisingly, the initial cases in the Holmesian era continued to use the same common-law cause of action terminology. However, the cases began to reach results more limited in their view of standing than were reached during the formalist era.

For example, in 1939, the Court refused to grant standing in *Tennessee Electric Power Co. v. Tennessee Valley Authority*, where a lawsuit was brought by a private utility company which alleged it would suffer economic damage by unfair TVA competition. The Court said that the kind of damage complained of was *damnum absque injuria*, that is, not consequent upon the violation of any right recognized by law. Connecting the result to the traditional reasoning of the natural law and formalist periods, the Court explained that the plaintiff lacked standing because the right claimed – to be free from competition like that posed by the TVA – was not "one of property, one arising out of contract, one protected against tortious invasion, or one founded upon a statute which confers a privilege." That the result would have been different during the formalist era is suggested by the dissent in the case from the two remaining formalist holdovers on the Court from the pre-1937 formalist era.

As the Holmesian era progressed, the requirement of an injury different from that suffered generally, independent of a common-law cause of action analysis, began to appear more prominently. For example, in 1944, in *Stark v. Wickard*, the first case to use the word “standing” as a constitutional requirement, Holmesian Justice Reed defended the distinct injury requirement as implicit in that part of the traditional natural law approach focused on the separation of powers base for standing doctrine. Justice Reed quoted language by Chief Justice Marshall in *Marbury v. Madison* to support

336 *Id.* at 137-38.
337 *See id.* at 147-52 (Butler, J., joined by McReynolds, J., dissenting) (complainants each had a valuable right as a public utility and its value will suffer diminution by defendant's program. Therefore, plaintiffs were entitled to have a judgment on the questions they raised).
the view that Justice Marshall required the plaintiff to have a personal interest beyond that of the people generally.

Similarly, this requirement of a direct or distinct injury became the explicit reason for denying a taxpayer standing in the 1952 case of *Doremus v. Board of Education.*339 The Court stated, "Without disparaging the availability of the remedy by taxpayer's action to restrain unconstitutional acts which result in direct pecuniary injury, we reiterate what the Court said of a federal statute as equally true when a state Act is assailed: 'The party who invokes the power must be able to show not only that the statute is invalid but that he has sustained or is imminently in danger of sustaining some direct injury as the result of its enforcement, and not merely that he suffers in some indefinite way in common with people generally.'"

Though written after 1954, the Holmesian approach toward standing can also be found in Professor Bickel's "passive virtues" theory as to when a court should refuse to reach a decision on the merits.340 It is also reflected in the 1961 case of *Poe v. Ullman,*341 where Justice Frankfurter wrote of "prudential limitations" to a case being justiciable342 and emphasized an injury-in-fact requirement.343 Justice Frankfurter explained the source of standing limitations in *Poe* as follows: "[These limitations] have derived from the historically defined, limited nature and function of courts, [and from] the fundamental federal and tripartite character of our National Government and from the role – restricted by its very responsibility – of the federal courts, and particularly this Court, within that structure."344

Additional evidence of this Holmesian perspective continued to appear during the instrumentalist era in Justice Harlan's dissent in *Flast v. Cohen.*345 In that 1968 case, an instrumentalist majority allowed taxpayers to challenge a congressional appropriation as invalid because of the Establishment

---

342 Id. at 504 ("[F]ederal judicial power is to be exercised to strike down legislation, whether state or federal, only at the instance of one who is himself immediately harmed, or immediately threatened with harm, by the challenged action.").

343 To emphasize the injury requirement, Justice Frankfurter quoted from *Frothingham v. Mellon*: "The party who invites the power [to annul legislation on grounds of its unconstitutionality] must be able to show not only that the statute is invalid but that he has sustained or is immediately in danger of sustaining some direct injury as a result of its enforcement . . ." *Id.* at 504-05, *quoting* *Frothingham v. Mellon*, 262 U.S. 447, 488 (1923).

344 Id. at 503.

Clause. Arguably this suit was on behalf of the public rather than the plaintiffs because the plaintiffs had not suffered any tangible personal injuries. Justice Harlan, dissenting, said that there must be some effective power in the government to restrain constitutional infractions, but, "as Mr. Justice Holmes wisely observed, the other branches of Government are ultimate guardians of the liberties and welfare of the people in quite as great a degree as the courts."

Because of its posture of deference to the other branches of government, the Holmesian way of phrasing the first central issue of standing, that is, how difficult should it be to establish standing in non-traditional kinds of cases, tends to put higher barriers in the way of a litigant suing the government than does a natural law or formalist approach. For example, rather than requiring that it be "likely" an injury will occur, Justice Rehnquist said in *Whitmore v. Arkansas* that a "threatened injury must be 'certainly impending' to constitute injury in fact."

Trying to create a longer pedigree for his newly-minted requirement that the injury be "certainly impending," Justice Rehnquist noted in *Whitmore* that the phrase "certainly impending" had been used in an old formalist-era case, *Pennsylvania v. West Virginia*. In that 1923 case, however, the Court merely found that the plaintiffs could easily meet the standing requirement because their injury was, in fact, "certainly impending." The Court did not require in *Pennsylvania* that an injury had to be "certainly impending" for standing to be found. The cite in *Whitmore* to *Pennsylvania* thus appears to be an attempt by Justice Rehnquist to support a higher standard of injury with a precedent that does not lend itself to such support.

Chief Justice Rehnquist's opinion in *Valley Forge Christian College v. Americans United for the Separation of Church and State* is a good example of a Holmesian approach toward the injury-in-fact requirement. In *Valley Forge*, a nonprofit organization, composed of 90,000 "taxpayer members," challenged as a violation of the Establishment Clause the sale of surplus federal property to an educational institution operating under the supervision of a religious order. A majority of the Court concluded that the group had no standing to bring the complaint. The plaintiffs claimed that *Flast* acknowledged that the Establishment Clause gives each citizen a personal constitutional right to a government that does not establish religion. Justice Rehnquist first distinguished *Flast* on narrow factual grounds, saying that *Valley Forge* involved administrative rather than congressional action, and that the authorizing legislation in *Valley Forge* was an exercise of Congress' power under

349 *Id.*

the Property Clause rather than the Taxing and Spending Clause of Article I, § 8.351 Later cases, however, like Bowen v. Kendrick,352 make it clear that these factual distinctions are not what motivated the Rehnquist opinion in Valley Forge.

Instead, after alluding to the "rigor with which the Flast exception to the Frothingham principle ought to be applied," Justice Rehnquist rejected the personal constitutional right argument. He said that psychological consequences produced by observing conduct with which one disagrees are not an injury sufficient to confer standing under Article III. He added, “It is evident that respondents are firmly committed to the constitutional principles of separation of Church and State, but standing is not measured by the intensity of a litigant's interest or the fervor of his advocacy.” Reflecting the Holmesian deference to government, Justice Rehnquist continued, "The federal courts were simply not constituted as ombudsmen of the general welfare," and that "cases or controversies" do not arise merely because litigation might be a convenient vehicle for correcting constitutional errors.353

With regard to the second central issue of standing, whether substantial congressional extensions of standing should be permitted, the Holmesian posture of deference to the other branches of government means that Holmesian judges will be relatively willing to allow suits by individual litigants representing the public interest, despite their lack of economic or personal interests, if Congress has clearly authorized such actions. Thus, although they are rather strict when interpreting the Article III injury-in-fact requirement in response to the first central issue of standing, with regard to the second central issue, Holmesian judges can be expected to give Congress substantial leeway in authorizing private actions. As Justice Harlan noted in Flast,354 "This Court has previously held that individual litigants have standing to represent the public interest, despite their lack of economic or other personal interests, if Congress has appropriately authorized such suits."

---

351 454 U.S. at 479-80.

352 In Bowen v. Kendrick, 487 U.S. 589, 619 (1988), Chief Justice Rehnquist admitted that the fact that the congressionally authorized action had flowed through an agency in Valley Forge was irrelevant to the decision. But Justice Rehnquist still distinguished Valley Forge from Flast based on the Property Clause explanation. Id. However, from a functional analysis, usually used by Holmesian judges, whether congressional expenditures are by tax funds or government property, they are equally congressional expenditures. This functional point was explicitly made by the instrumentalis in their dissent in Valley Forge. 454 U.S. at 511-12 (Brennan, J., joined by Marshall, J., and Blackmun, J., dissenting); id. at 515 (Stevens, J., dissenting).

353 Id. at 481, 486-87.

354 392 U.S. 83, 131 (1968) (Harlan, J., dissenting). Justice Harlan added in a footnote, however, "I do not, of course, suggest that Congress' power to authorize suits by specified classes of litigants is without constitutional limitation." Id. at 131 n.21. As for what these limitations might be, Justice Harlan said only the following: "This Court has recognized a panoply of restrictions upon the actions that may properly be brought in federal courts, or reviewed by this Court after decision in state courts. It is enough now to emphasize that I would not abrogate these restrictions in situations in which Congress has authorized a suit. The difficult case of Muskrat v. United States, 219 U.S. 346, 31 S. Ct. 250, 55 L. Ed. 246, does not require more." Id.
For these reasons, Holmesian judges should be willing to move substantially beyond Justice Scalia's two cases of congressionally-enhanced standing to other cases if congressional intent is clearly stated, provided the Court is not asked to become an ombudsman for the general welfare. For example, in *Joint Anti-Fascist Refugee Committee v. McGrath*, 355 Justice Frankfurter, concurring, spoke of Congress' ability to create standing by statute as long as the injury was an "adverse personal interest," "not wholly negligible," and "more than that [suffered] in some indefinite way in common with people generally." In *Trafficante*, 356 Justice White, concurring, indicated that while he might not be prepared to find standing were the Court deciding the case absent congressional authorization, the fact of congressional authorization made standing easier to find. And, as previously discussed, Justice Harlan's dissent in *Flast v. Cohen* also suggests relatively broad authority for Congress to create standing where none would previously exist. 357

Focusing on the earlier Holmesian-era cases, such as *Tennessee Electric Power Co. v. Tennessee Valley Authority*, which used the cause of action terminology, and on the Holmesian willingness to let Congress create new private rights of actions, Professor Sunstein noted in his article that the Brandeis/Frankfurter innovations were broadly compatible with the traditional English and American common-law cause of action approach to standing. For the most part, he said, their opinions "can be read to hold that no one has a right to sue unless some law has conferred a right to do so." 358 He added that in "cases in which the cause of action was denied, no such right had been conferred," and that this was "the key point in the relevant opinions." Professor Sunstein also noted, quite correctly, that Justice Brandeis' list of factors in *Ashwander* counseling judicial restraint were phrased as prudential factors, not Article III constitutional requirements. 359 Of course, Justice Brandeis' opinion, in 1936, preceded the later Holmesian-era cases that developed the distinct injury test.

This reading of the cases ignores the later Holmesian-era cases that speak in terms of an injury-in-fact requirement. However, Sunstein's reading is broadly consistent with a Holmesian/Frankfurter/Brandeis approach to standing that emphasizes deference to the legislature in determining the

---

It must be acknowledged that perhaps Justice White's conclusion here was limited to Congress exercising its enforcement authority under § 5 of the 14th Amendment, since Justice White cited *Katzenbach v. Morgan*, 384 U.S. 641, 648-49 (1966), a case involving § 5, in support of his conclusion to defer to the congressional grant of standing. However, congressional authority to pass the Civil Rights Act of 1968, involved in *Trafficante*, like the congressional authority to pass the Civil Rights Act of 1964, is based on the Commerce Clause. See *Heart of Alabama Motel, Inc. v. United States*, 379 U.S. 241, 258-59 (1964). So, technically speaking, Justice White's deference to Congress approach in *Trafficante* applies to virtually any congressional action.

358 Sunstein, supra note 292, at 180.

359 *Id.* at 180 & n.83.
contours of the Supreme Court's jurisdiction. Furthermore, no Holmesian-era case directly resolved the question of the extent to which Congress could authorize citizen-actions to challenge the constitutionality of a statute in situations where the Court would not otherwise find an injury. In sum, the pre-instrumentalist-era cases clearly resolved only the easy question that the Constitution naturally permits federal courts to decide actions involving challenges to laws whose operation causes injury to the plaintiff in some personal way that differentiates the plaintiff from other persons in society. Despite the common-law cause of action rhetoric in most of the pre-instrumentalist standing cases, the Court had never explicitly granted standing to a plaintiff based only on a generalized grievance rationale where the plaintiff had no colorable claim of direct injury.360

D. The Instrumentalist Era: 1954-1986

Because of instrumentalist concern with individuals being able to vindicate their rights in court, as discussed at § 11.2.1.2 nn.17-20, an instrumentalist approach is more willing than any other decisionmaking style to find that a party has standing, that the case is ripe, is not moot, and that the case does not present a political question.361 For example, rejecting Professor Bickel's "passive virtues" approach to constitutional adjudication, Justice Brennan, an archetypical instrumentalist, wrote, "[C]onstitutional interpretation for a federal judge is, for the most part, obligatory. When litigants approach the bar of the court to adjudicate a constitutional dispute, they may justifiably demand an answer. Judges cannot avoid a definitive interpretation because they feel unable to, or would prefer not to, penetrate to the full meaning of the Constitution's provisions."362

Thus, during the 1960s, when instrumentalism held sway on the Court, the Court readily found standing for voters and taxpayers to challenge governmental action. A majority reasoned that standing barriers were based primarily on what was needed for effective judicial administration, rather than on separation of powers concerns about judicial invasion of the province of other branches, which underlies the concrete injury requirement. The critical turning point can be found

360 Cases like Weston v. City Council of Charlestown and Union Pacific Railroad Co. v. Hall are not to the contrary, as the plaintiffs in each of these cases had a colorable claim of personal injury. See supra text accompanying notes 309, 318-20.

361 See Archibald Cox, The Role of the Supreme Court: Judicial Activism or Self-Restraint, 47 Md. L. Rev. 118, 127-28 (1987) ("Measured in institutional terms, the constitutional decisions of the Warren and early Burger Courts . . . encouraged constitutional litigation by easing access to the federal courts in constitutional cases, and also by loosening the rules determining whether, when, and upon whose complaint a court will decide a constitutional question."). See generally Geoffrey R. Stone, Louis M. Seidman, Cass R. Sunstein & Mark V. Tushnet, Constitutional Law 94-106 (2d ed. 1991) (discussing the broadening of standing doctrine during the 1960s and early 1970s, and reflecting on the fact that during the late 1970s and 1980s, when the Court narrowed standing doctrine, Justices Brennan and Marshall frequently dissented).

in the 1962 case of *Baker v. Carr*, where Justice Brennan wrote: “Have the appellants alleged such a personal stake in the outcome of the controversy as to assure that concrete adverseness which sharpens the presentation of issues upon which the court so largely depends for illumination of difficult constitutional questions? This is the gist of the question of standing.”

Six years later, Chief Justice Warren cited this language with approval in *Flast v. Cohen*, where the Court found standing for federal taxpayers to raise an Establishment Clause challenge to government spending that reached some parochial schools. The Chief Justice noted in *Flast* that because the question whether "a particular person is a proper party to maintain the action does not, of its own force, raise separation of powers problems," most standing limitations are prudential, imposed as a matter of policy rather than constitutional requirement. The central constitutional core, said Warren, and the rule that "implements the separation of powers prescribed by the Constitution," is merely that the Court will not give advisory opinions. Based upon this reasoning, the Chief Justice rejected the idea that there is an absolute bar in Article III to suits by federal taxpayers. Instead, the Chief Justice concluded, “[I]n terms of Article III limitations on federal court jurisdiction, the question of standing is related only to whether the dispute sought to be adjudicated will be presented in an adversary context and in a form historically viewed as capable of judicial resolution.”

The Chief Justice then turned to the problem of determining what circumstances give a federal taxpayer the personal stake and interest that imparts the necessary concreteness. His answer was to invent a two-pronged test. First, there must be a logical link between the party's status and the type of legislative enactment attacked. Second, a taxpayer must establish a nexus between that status and the precise nature of the constitutional infringement alleged. Thus, a taxpayer must show that the challenged enactment exceeds specific constitutional limitations imposed on the exercise of the taxing and spending power. The taxpayers in *Flast* satisfied both parts of the nexus test because they were challenging the exercise of congressional spending under Article I, § 8, and because the Establishment Clause specifically limits the taxing and spending power granted by Article I, § 8. In contrast, Mrs. Frothingham lacked the second nexus because she was merely alleging that Congress had exceeded the general powers delegated to it by Article I, § 8 and, thus, had invaded the powers reserved to the states by the Tenth Amendment.

Dissenting in *Flast*, Justice Harlan noted that the nexus criteria are unrelated to the extent of a taxpayer's personal interest. Justice Harlan stated, "The intensity of a plaintiff's interest in a suit is not measured, even obliquely, by the fact that the constitutional provision under which he claims is, or is not, a 'specific limitation' upon Congress' spending powers."
By using language from *Baker v. Carr, Flast v. Cohen* appeared to make possible a wide expansion of the concept of standing in every case, not just cases of taxpayer challenges to government spending. All that was needed was some kind of personal stake in the outcome, relating to the status asserted by the plaintiff, which assured concrete adverseness in the litigation. And, unless the case involved an advisory opinion, Justice Warren's opinion in *Flast* seemed to assume that Congress was not constitutionally limited in its ability to create standing.\footnote{368}{See 392 U.S. at 94-101.}

This possible result of *Flast* began to become clearer in several cases decided shortly thereafter where the Court extended the loose, prudential approach of *Flast* to actions based upon a congressional statute. For example, with regard to the first central issue of standing, the Court was quite willing to follow an attenuated line of reasoning to find an injury in fact caused by the challenged conduct in *United States v. Students Challenging Regulatory Agency Procedures (SCRAP)*.\footnote{369}{412 U.S. 669, 689-90 (1973).} This case involved § 702 of the Administrative Procedure Act. It authorized judicial review by persons "adversely affected or aggrieved" or "suffering legal wrong." Five law students were permitted to challenge a surcharge imposed on freight rates established by the Interstate Commerce Commission without the ICC first filing a detailed environmental impact statement. The students claimed that the ICC had thereby caused them economic harm and affected their use of the environment because the higher rates proposed by the IOC on freight rates for recyclable goods would lead to greater use of non-recyclable goods, which would harm the environment they enjoyed both in terms of greater amounts of non-recyclable trash and in terms of greater depletion of the forests they enjoyed to produce non-recyclable goods. The Court said that standing is not to be denied simply because many people suffer the same injury, and the Court could not say that plaintiffs could not prove their allegations which, if proved, "would place them squarely among those persons injured in fact by the Commission's action," and entitled to seek review.

The same year as SCRAP, the Court explicitly noted the recent expansion of standing doctrine in *Linda R.S. v. Richard D.*\footnote{370}{409 U.S. 205, 208-12 (1972), interpreting 82 Stat. 83, 42 U.S.C. § 3610(d).} The Court stated, “Recent decisions by this Court have greatly expanded the type of 'personal stake[s]' which are capable of conferring standing on a potential plaintiff.”

Regarding the second central issue of standing, the Court assumed congressional power to create standing in *Trafficante v. Metropolitan Life Ins. Co.*\footnote{371}{401 U.S. 614, 616-17 (1973).} There the Court concluded that in § 804 of the Civil Rights Act of 1968 Congress had given residents of housing facilities covered by the statute an actionable right to be free from the adverse consequences to them of racially discriminatory practices directed at and immediately harmful to others. The Court similarly noted

---

\footnote{368}{See 392 U.S. at 94-101.}
\footnote{369}{412 U.S. 669, 689-90 (1973).}
in *Linda R.S. v. Richard D.*\(^{372}\) that "Congress may enact statutes creating legal rights, the invasion of which creates standing, even though no injury would exist without the statute.”

However, shortly after the high-water mark of a prudential and more relaxed approach to standing was reached in cases like *Flast*, *SCRAP*, *Trafficante*, and *Linda R.S.*, another process was getting under way that has resulted in the Court's return to a largely pre-instrumentalist perspective. Between 1969 and 1972, four new Justices were appointed to the Court. The retirement of Justices Warren and Fortas resulted in a loss of the 5-Justice instrumentalist majority on the Court (Chief Justice Warren and Justices Douglas, Brennan, Marshall, and Fortas). Though Justice Blackmun, who replaced Fortas, eventually adopted a moderate instrumentalist perspective, after 1973 there were at most only four instrumentalist Justices on the Court at any one time (Justices Brennan, Marshall, Blackmun, and Douglas, replaced by Stevens in 1975). To get the critical fifth vote to follow up vigorously on the path opened by *Flast*, one natural law, formalist, or Holmesian Justice would have to join what the instrumentalist perspective suggested. Based on the historically more limited approach to standing represented by these approaches, this rarely happened. Instead, by a variety of doctrinal developments, the late stages of the instrumentalist era saw the Court cut back on the implications of *Flast* and begin once again to emphasize the constitutional nature of standing doctrine, its roots in the separation of powers doctrine, and the need for a concrete personal injury.

The first signal of a change in the Court's perspective occurred during 1974 in *United States v. Richardson*,\(^{373}\) where the majority held that a federal taxpayer did not have standing to challenge financial secrecy provisions in the Central Intelligence Agency Act of 1949 on the ground that it violates Art. I, § 9, cl. 7, a clause that requires a statement of account of all public money from time to time. The holding in *Richardson* was that there was no logical nexus, as required by *Flast*, between the status of taxpayer and the lack of detailed reports. However, per Chief Justice Burger, the Court also noted that Richardson's claim – that without this information he could not intelligently follow actions of the CIA or Congress – was a generalized grievance and not a concrete injury.

Similar increased attention to an Article III separation of powers concrete injury requirement, as opposed to *Flast*'s mere judicial administrative effectiveness concern with concrete adverseness to sharpen the issues for court review, appeared in *Schlesinger v. Reservists to Stop the War*.\(^{374}\) Plaintiffs, who were an association of past and present members of the Reserves, sued in that capacity, and as citizens and taxpayers, to challenge the Reserve membership of some members of Congress. They alleged that such membership violated the Incompatibility Clause, Art I. § 6, cl. 2, which states that "no Person holding any Office under the United States, shall be a Member of either House during his continuance in Office." The challengers said that the possible inconsistent obligations of the members of Congress might deprive plaintiffs of the faithful discharge of those members' services.

\(^{372}\) 410 U.S. 614, 617 n.3 (1973).

\(^{373}\) 418 U.S. 166, 175-77 (1974).

With regard to taxpayer standing, Chief Justice Burger noted, as in *Richardson*, that the plaintiffs failed to satisfy the first nexus of *Flast* because as taxpayers they were not challenging action under the taxing and spending power of Art. I, § 8, but rather "the action of the Executive Branch in permitting Members of Congress to maintain Reserve status." With regard to citizen standing, however, the Court was forced to address the constitutional injury requirement more directly. In denying the plaintiff’s standing on generalized grievance grounds, the Chief Justice stated: "Concrete injury, whether actual or threatened, is that indispensable element of a dispute which serves in part to cast it in a form traditionally capable of judicial resolution. . . . [Only] concrete injury presents the factual context within which a court [is] capable of making decisions."  

§ 17.3.1.3  The Modern Natural Law Approach: 1986-Today

A.  The Injury-in-Fact Requirement

Justices using the modern natural law approach have tried to develop a reasoned elaboration of standing doctrine while responding to the tension between the old English common-law basis for standing and the American separation of powers base. In addition, modern standing doctrine has been developed against a backdrop of later judicial precedents regarding standing, many of which suggest for standing a separation of powers base, along with an "injury-in-fact" requirement.

Elaborating the concerns animating standing doctrine, Justice Kennedy has noted that application of the separation of powers doctrine is intended not only to avoid advisory opinions and insure concrete adverseness in judicial proceedings, the reasons given by Chief Justice Warren in *Flast*, but also to confine the Court to appropriate judicial functions and to avoid eroding the President's duty to see that the laws are faithfully executed. 376 The questions of what judicial functions are "appropriate" under this approach, and what constitutes "erosion" of Presidential duty, naturally depend on how the judge approaches separation of powers questions generally.

As discussed in greater depth at § 19.1, the natural law approach toward separation of powers has been to find that the framers were motivated by a sharing of powers, check-and-balances philosophy, rather than Justice Scalia's formalist strict separation of powers approach. For example, in 1833, Justice Story said that separation of powers is not meant to require the three branches of government:

> be kept wholly separate and distinct, and have no common link or connection or dependence, the one upon the other, in the slightest degree. The true meaning is, that the whole power of one of these department should not be exercised by the same hands, which possess the whole power of either of the other departments. . . . [A]s a corollary, that, in reference to each other, neither of them ought to possess, directly or indirectly, an overruling influence in the administration of their respective powers. 377

375  *Id.* at 220-21, 228.

376  *Lujan*, 504 U.S. at 580-81 (Kennedy, J., joined by Souter, J., concurring).

This approach has been adopted by modern natural law Justices. Accordingly, natural law Justices have generally allowed sharing of powers concepts to inform their analysis of the "appropriate" judicial function and what constitutes "erosion" of Presidential power. Thus, they permit sharing of powers concepts to inform their analysis of the congressional ability to create standing by permitting individuals to sue in court to ensure that the executive is taking care that the laws are faithfully executed. Natural law Justices have also typically adopted a moderate checks-and-balances approach to inform their analysis of how much injury in fact is required to permit plaintiffs to sue ("check") defendants in court, particularly government defendants.

Reflecting, as he often did, an incipient resurgence of a modern natural law approach, Justice Powell, concurring in 1974 in United States v. Richardson, said that he would abandon the Flast two-part nexus test which, building on Baker v. Carr, had moved the Court to quite relaxed requirements for standing. Central to his argument were separation of powers concerns, particularly the worry that Flast had gone too far in permitting citizens to draw courts into performing a "checking" function on governmental activity. Powell noted:

Relaxation of standing requirements is directly related to the expansion of judicial power. It seems to me inescapable that allowing unrestricted taxpayer or citizen standing would significantly alter the allocation of power at the national level, with a shift away from a democratic form of government. I also believe that repeated and essentially head-on confrontations between the life-tenured branch and the representative branches of government will not, in the long run, be beneficial to either.

On the other hand, as a moderate "checks-and-balances" approach, Justice Powell's views on standing contain the traditional natural law receptivity to granting standing as long as some concrete injury in fact is established. Two closely related cases, decided within three years of Richardson, provide good insight into Justice Powell's approach.

In 1975, in Warth v. Seldin, Justice Powell was joined by conservative Holmesian and formalist Justices on the Court to form a majority denying the plaintiff standing. Prior to dealing with the facts, Justice Powell set forth, on behalf of the Court, his understanding of the then-current principles of standing. Regarding the constitutional limit, Justice Powell said that Art. III judicial

---

378 See, e.g., Public Citizen v. United States Dep't of Justice, 491 U.S. 440, 487 (1989) (Kennedy, J., concurring, joined by Rehnquist, C.J., and O'Connor, J.) ("This is not to say that each of the three Branches must be entirely separate and distinct, for that is not the governmental structure of checks and balances established by the Framers."); Mistretta v. United States, 488 U.S. 361, 380-81 (1989) (Blackmun, J., joined by all Justices except Justice Scalia) ("[T]he Framers did not require – and indeed rejected – the notion that the three Branches must be entirely separate and distinct.").

379 Richardson, 418 U.S. at 187-88 (Powell, J., concurring).

380 Id. at 188.

381 422 U.S. 490 (1975).
power exists to redress or otherwise protect against injury to the complaining party only when the plaintiff has suffered some threatened or actual concrete injury resulting from the putatively illegal action.\textsuperscript{382} As to prudential limits, Powell said that the harm of a generalized grievance alone normally does not warrant exercise of jurisdiction and that normally the plaintiff must assert his own legal rights and cannot rest his claim to relief on the legal rights or interests of others.\textsuperscript{383}

The Court then applied these principles to the facts in \textit{Warth}. \textit{Warth} involved an attempt to enforce the Constitution against government action, without the benefit of a specific statutory action. The plaintiffs in \textit{Warth} were various organizations and individuals who contended that the defendant town's zoning ordinance excluded persons of low and moderate income from living in the town, in violation of constitutional rights. Because none of the plaintiffs had presented evidence of present ability to build or buy low-income or moderate-income housing in the town even if the ordinance were ruled unconstitutional, the Court held that the plaintiffs had not alleged injury to themselves caused by the alleged infractions.\textsuperscript{384}

The dissents in \textit{Warth} expressed a concern that perhaps \textit{Warth} represented adoption of a heightened injury requirement in cases where the majority was hostile to the claim on the merits.\textsuperscript{385} Two years later, however, in \textit{Village of Arlington Heights v. Metropolitan Housing Development Corp.},\textsuperscript{386} the Court, per Justice Powell, made it clear that an injury in fact can be established in a \textit{Warth}-like case as long as some attention is paid to establish that an actual injury exists. Plaintiffs who alleged they would qualify for low-cost housing in a specific project blocked by allegedly unconstitutional zoning laws were granted standing because, unlike the plaintiffs in \textit{Warth}, they could show an actual specific project blocked by the city's zoning laws.\textsuperscript{387}

This approach towards standing, which involves the traditional natural law receptivity to granting standing as long as some concrete injury is actually established, is now ensconced as the majority approach on the Supreme Court. The result of the Court's recent major decisions regarding injury in fact has been to dismiss some rather tenuous claims of injury, but to allow an action to be brought by almost all persons with any kind of realistic personal stake.

\textsuperscript{382} \textit{Id.} at 499.

\textsuperscript{383} \textit{Id.} at 499-500.

\textsuperscript{386} 429 U.S. 252 (1977).

\textsuperscript{387} \textit{Id.} at 261-64.
Naturally, standing will be found where a direct, present injury is apparent. Thus, standing was found in *McCleskey v. Kemp*, 388 which involved a black criminal defendant, sentenced to death, who had standing to claim race discrimination in sentencing based on certain sentencing statistics because actual harm to him, his death sentence, was his alleged injury. Standing was also found in *Quinn v. Millsap*, 389 which involved a plaintiff who did not own real property, who challenged a state law requirement that one had to own real property in order to serve on a government board.

Even where the alleged injury is not so direct or apparent, the Court has been willing to find standing. For example, in *Meese v. Keene*, 390 standing was granted where a state representative alleged that his professional reputation would suffer if he were required to exhibit a film using the authorities' label of "political propaganda," since his personal, political, and professional reputation would suffer, as would his ability to gain reelection, if the film had to be distributed under that label. This allegation was supported by a public opinion poll and the views of an experienced political analyst. The Court also found standing in *Northeastern Florida Contractors v. Jacksonville*, 391 where contractors were allowed to challenge a city's allegedly discriminatory bidding policy without alleging that they would have received contracts had the discrimination not existed. To show injury from a 10% city contract racial set-aside program, non-minority contractors need allege only that they were denied an equal opportunity to compete, not that "but for" the law the plaintiffs would have landed city contracts.

Another typical standing case is *Wyoming v. Oklahoma*. 392 In this case, Wyoming alleged a decline in Wyoming severance tax revenues from fewer sales of coal by Wyoming producers caused by an Oklahoma statute which required Oklahoma coal-fired utilities to burn a mixture containing at least 10% Oklahoma-mined coal. Conservative formalist and Holmesian Justices were unwilling to grant a summary judgment motion finding standing because they argued that a material fact question existed over whether the alleged injury was too speculative in nature. 393 However, the natural law Justices, along with instrumentalists on the Court, formed a majority who agreed with the Special Master's findings that a sufficiently concrete injury in the case was an undisputed fact. 394

---

389 491 U.S. 95, 103 (1989).
393 *Id.* at 465-68 (Scalia, J., joined by Rehnquist, C.J., and Thomas, J., dissenting) (Wyoming had not established that overall sales of Wyoming coal producers were diminished by the Oklahoma statute, only that less sales occurred in Oklahoma. Thus, a general issue of material fact existed regarding whether Wyoming's tax revenues were affected by the Oklahoma statute).
394 *Id.* at 447-450 (Wyoming alleged that the Oklahoma law results in Oklahoma utilities reducing their purchase of Wyoming-mined coal; Wyoming likely would gain lost revenues if its
Perhaps most revealingly, in *Lujan v. Defenders of Wildlife*, natural law Justices joined with instrumentalists to indicate that had the plaintiffs bought plane tickets to view the site where the alleged harm to species was occurring, standing would have been granted. Although from a functional, instrumentalist perspective, as in the Justice Stevens and Blackmun dissents in *Lujan*, it may seem nit-picking to have standing turn on whether plaintiffs buy a couple of tickets to visit a site, from the more analytic perspective of a natural law approach, Justices Kennedy and Souter are right that the concreteness of the injury is materially enhanced if tickets are bought. Similarly, it is important from an analytic perspective that plaintiffs be able to demonstrate an actual concrete injury to housing purchases or building projects that are blocked by zoning laws, the difference between the results regarding standing in *Arlington Heights versus Warth*. No great limitation on standing is created by such a requirement because the burden on plaintiffs to establish an actual injury is minimal. Thus, the Kennedy/Souter approach is willing to find an injury in fact as long as some actual or reasonably imminent injury is alleged and proven.

The natural law respect for precedent can also be important in the results reached in modern standing doctrine. For example, respect for the core holdings of instrumentalist-era precedents was critical in finding standing in *Bowen v. Kendrick*. Despite the case being one involving taxpayer standing, the Court held in *Bowen* that taxpayers had standing to bring an Establishment Clause challenge to a federal grant program administered by HEW, since funding for service relating to adolescent sexuality and pregnancy could be provided to religious organizations. Although the general reasoning of *Flast* has been rejected by the post-instrumentalist Court, the Court explicitly relied upon the core holding of *Flast* as a precedent to support its holding in *Bowen*.

suit to overturn the Oklahoma law succeeded and, thus, it was directly affected in a real and substantial way that could be redressed by judicial action).

504 U.S. at 579-80 (Kennedy, J., joined by Souter, J., concurring) (plaintiffs would have had a sufficient concrete injury caused by the challenged conduct had they purchased tickets to visit the site, rather than just stating they had vague plans to visit the site); *id.* at 581-83 (Stevens, J., concurring) (buying tickets not required to satisfy standing); *id.* at 590-92 (Blackmun, J., joined by O'Connor, J., dissenting) (buying tickets not required to satisfy standing).

For representative court of appeals cases, see, e.g., Wilbur v. Locke, 423 F.3d 1101, 1107-09 (9th Cir. 2005), *cert. denied*, 126 S. Ct. 1338 (2006) (negotiations between state of Washington and Native American tribe to enter into a Compact regarding taxation of cigarette sales by Native American retailers sufficiently non-speculative to give retailer standing, based on allegation that the Compact would be executed “within the near future”); Baur v. Veneman, 352 F.3d 625, 631-36 (2nd Cir. 2003) (standing granted to challenge Department of Agriculture policy on “downer” cows because of non-speculative injury-in-fact from “mad cow” disease if the policy is not effective). *But see* National Resources Defense Council v. EPA, 440 F.3d 476, 483-84 (D.C. Cir. 2006) (plaintiffs did not suffer injury in fact by final rule issued by the EPA under “Montreal Protocol” regarding critical use of methyl bromide, where chance of injury to members due to alleged increase in probability of contracting skin cancer, cataracts, and other ailments was miniscule).

Only in cases where the injury was very remote, less personal, or further removed from the challenged conduct, has the Court, with its current majority, refused to find that an injury in fact had occurred. For example, in *Whitmore v. Arkansas*, 398 the petitioner, a death row inmate, challenged the validity of a death sentence imposed on another inmate, a mass murderer who had elected to forgo his right of appeal. The petitioner claiming that he was injured because of the possibility that if he was retried and resentenced he might be disadvantaged by having the other inmate's heinous crime included in a data base. The Court said that petitioner had provided no factual basis to conclude that the sentence imposed on the mass murderer would even be relevant to a future comparative review of his sentence, and thus the complaint represented only a generalized concern about procedures surrounding imposition of the death penalty.

In *Lujan v. National Wildlife Foundation*, 399 members of an environmental group lacked standing to question a decision of the Bureau of Land Management concerning mining on public lands. The plaintiffs focused only on the use of some lands "in the vicinity" of the federal tracts on which mining might occur, rather than use of lands that would be more clearly affected by the proposed mining. The plaintiff's complaint thus represented nothing more than a generalized grievance about the Bureau's decisionmaking.

In *United States v. Hays*, 400 resident voters in one district were held to lack standing to challenge the lines drawn for another district as unconstitutionally based solely on race, since plaintiffs offered no evidence that they personally suffered injury. Justice O'Connor stated for the majority that unless there is evidence that the plaintiff has personally been subjected to a racial classification, as where

---

398 495 U.S. 149, 154-61 (1990). An instrumentalist dissent concluded that because the other inmate had standing, the Court could allow plaintiff to sue as next friend because of the important public interests involved and concrete adverseness could be established, even though it had not been shown that the other inmate was unable to litigate his own cause due to mental incapacity, lack of access to court, or other disability. Engaging in an instrumentalist policy balance, the dissent concluded that a desire to prevent uninvited intermeddlers from pursuing habeas corpus relief was outweighed in this case by society's interest in preventing an illegal execution. *Id.* at 176-81 (Marshall, J., joined by Brennan, J., dissenting).

400 515 U.S. 737, 743-47 (1995). Justice Stevens said he would find standing to challenge the creation of a majority-minority district only if it is proved that the state's redistricting had substantially disadvantaged plaintiff voters in their opportunity to influence the political process, or that they have been shut out of the process. *Id.* at 750-51 (Stevens, J., concurring in the judgment). Justices Souter, Ginsburg and Breyer left it open whether they would join the majority’s approach, Justice Stevens' approach, or adopt an alternative approach in later cases. *See id.* at 747 (Ginsburg, J., concurring in the judgment only); *id.* at 750 (Souter, J., joined by Breyer, J., concurring in Justice O'Connor's opinion only as it related to plaintiffs residing outside a racially gerrymandered district). *See also* Hoffman v. Jeffords, 175 F. Supp. 2d 49 (D. Vt. 2001), aff'd 2002 WL 1364311, 2002 U.S. App. LEXIS 12495 (D.C. Cir. 2002), *cert. denied*, 537 U.S. 1108 (2003) (voters challenging Senator Jeffords' switch from the Republican Party to independent have no personal injury to grant standing).
plaintiff resides in a racially gerrymandered district or there is other evidence of personal harm, plaintiff “would be asserting only a generalized grievance against governmental conduct.” On the other hand, Justice O’Connor noted, “Where a plaintiff resides in a racially gerrymandered district, however, the plaintiff has been denied equal treatment because of the legislature’s reliance on racial criteria, and therefore has standing to challenge the legislature’s action.”

The fact that plaintiff may have standing to claim damages for past violations does not in itself establish a real and immediate threat of future injury. In City of Los Angeles v. Lyons, a 5-4 Court held that plaintiff lacked standing to seek an injunction against chokeholds by the Los Angeles police force. Plaintiff had pled past injury, but the majority said it was only speculation that plaintiff might again be stopped and choked. In dissent, instrumentalist Justices Brennan, Marshall, Blackmun, and Stevens objected that since no one can show that he or she will be choked in the future, the Court's theory meant that no one would have standing to question a possibly invalid police policy. Justice Marshall said that the plaintiff had standing from the past injury, and since plaintiff was choked pursuant to city policy, there was a basis for the District Court's equitable relief – a preliminary injunction not to use the hold except when threatened by deadly force.

B. Modern Causation Analysis

Under the modern natural law approach, causation is easy to establish if the plaintiff’s injuries are caused directly by the allegedly unconstitutional feature of a law. For example, in Northeastern Florida Chapter of Associated General Contractors v. Jacksonville, a racial set-aside program was the direct cause of plaintiff’s injury of a denial of an equal opportunity to compete absent racial discrimination. If the injury is indirect, however, it may be more difficult to show causation.

The case which laid the foundation for all recent denials of standing because of lack of causation was the 1975 case of Warth v. Seldin. In that case, plaintiffs charged a zoning board with discriminating against persons of low and moderate income by vigorous enforcement of a zoning ordinance against developers and builders who might otherwise build some low-income and moderate-income housing. In addition to their lack of injury in fact, the plaintiff home-buyers were also held to lack standing because the record suggested that their inability to live in Penfield was caused by "the economics of the area housing market, rather than of respondents' allegedly illegal acts." Plaintiff builders lacked standing because they did not allege that they had specific projects for which they would like to seek approval.

However, as with Lujan, where merely buying tickets would have been sufficient to satisfy the injury-in-fact and causation requirements, causation can be established in a Warth-like case as long as some attention is paid to make sure causation actually exists. For example, causation was proved

402 Id. at 120-30 (Marshall, J., joined by Brennan, Blackmun & Stevens, JJ., dissenting).
404 422 U.S. 490, 506, 514-17 (1975).
in *Village of Arlington Heights v. Metropolitan Housing Development Corp.* by a plaintiff who alleged he would have qualified for low-cost housing in a specific project blocked by allegedly unconstitutional zoning laws. Because there was a specific project and indications the plaintiff would qualify absent the zoning law, causation was established, and *Warth* was distinguished.

Indirect causation was also established in *Duke Power Co. v. Carolina Environmental Study Group, Inc.* In *Duke Power*, the Court decided that the Price-Andersen Act limiting liability to $500 million for injuries caused by an accident at a nuclear power plant was causally related to the ability to obtain financing to build nuclear power plants which, in turn, caused injury to plaintiffs. Indirect causation was also found in *Meese v. Keene,* the case involving a state representative wishing to exhibit a film without labeling it "political propaganda," discussed at § 17.3.1.2.E.2 n.390. The causal connection between exhibiting the films identified as political propaganda, and the state senator's reputation, was supported in the case by a public opinion poll and the views of an experienced political analyst.

Despite such holdings that found indirect causation adequate for standing, the causation requirement has become a hurdle in the path of proving standing in cases involving inferences from IRS tax policy. For example, in the 1984 case of *Allen v. Wright,* the parents of black children could not obtain judicial review of Internal Revenue Service standards relating to the tax exempt status of racially discriminatory private schools. Although reduction of an opportunity for children to receive education in an integrated school would be an injury that would justify standing, the Court said it was not shown that the withdrawal of tax exemptions from discriminatory schools would make an appreciable difference in public school integration in the plaintiffs' locality. Justice O'Connor said that it was speculative whether the withdrawal of the tax exemption would cause particular schools to change their policies or that any parent of a child attending such a private school would transfer the child to public schools as a result of any changes once the school lost its tax-exempt status.

In reaching this decision, Justice O'Connor said the decision was underpinned by the separation of powers concern not to have courts enforcing generalized claims seeking to have the government act in certain ways. Instrumentalist Justices Brennan, Stevens, and Blackmun dissented in the case, saying the connection between tax policy and school attendance was clear enough for standing purposes.

---

409 Id. at 758-65.

410 Id. at 766 (Brennan, J., dissenting); id. at 783 (Stevens, J., joined by Blackmun, J., dissenting). Justice Marshall did not participate in the case. Id. at 766.
A similar conclusion had occurred earlier in *Simon v. Eastern Kentucky Welfare Rights Organization*. 411 There, indigents and organizations representing indigents claimed that the IRS encouraged hospitals to deny service to indigents by allowing hospitals favorable tax treatment even if the hospitals limited aid to indigents seeking emergency room service. Causation was missing, said Justice Powell, since "it is purely speculative whether the denials of service specified in the complaint fairly can be traced to 'encouragement' or instead result from decisions made by the hospitals without regard to the tax implications." Accordingly, the complaint did not suggest any substantial likelihood that victory would result in plaintiffs receiving the treatment they desired. Justice Brennan, joined by Justice Marshall, disagreed with Justice Powell's reasoning regarding causation. Justice Brennan said that plaintiffs had a right protected by the Internal Revenue Code to an opportunity and an ability to receive medical service and there was injury to that right caused by the IRS action which established the necessary personal stake in the outcome. 412

As a practical manner, it is unclear why the Court has been so reluctant in these cases to trace chains of causation from tax policy to individual behavior, since tax policy does affect individual behavior, and is often intended to have that result. Perhaps these cases represent a legacy of the modern Court's rejection of taxpayer standing involved in *Flast*, and hostility to questions challenging tax policy, though the issues involved in the two kinds of cases are quite distinct. Some support for this hypothesis appears in *Allen v. Wright*, where the Court quoted with approval the court of appeals observation in *Allen* that the earlier case of *Simon* "suggests that litigation concerning tax liability is a matter between taxpayer and IRS, with the door barely ajar for third-party challenges." 413

A more understandable case denying standing based upon a lack of causation occurred in 1986. In *Diamond v. Charles*, 414 a pediatrician was held to lack standing to defend an Illinois anti-abortion statute whose enforcement the lower federal courts had enjoined, a decision in which the state acquiesced. The Court said it was only speculation that the doctor would have more fee-paying patients if fewer abortions were performed.

Causation was also the focus of the analysis in *Bennett v. Spear*. 415 The plaintiffs there claimed an injury caused by a “Biological Opinion” allegedly being acted on by the Secretary of the Interior without following required procedures. The Government contended that the Opinion was only

412 *Id.* at 55-56 (Brennan, J., joined by Marshall, J., concurring).
413 468 U.S. at 748-49.
414 476 U.S. 54, 66 (1986). See also *Nova Health Systems v. Gandy*, 416 F.3d 1149, 1155-58 (10th Cir. 2005) (health care facility lacks standing to sue state officials challenging statute making abortion providers liable for post-abortion medical costs associated with abortions performed on minors without parental consent, because even if state officials were enjoined from seeking damages under statute, there would still be many other prospective litigants, including minors and treating physicians, who could potentially sue provider, and thus any harm not “caused” by state officials).
"advisory" and that the proximate cause of any harm was an as-yet unidentified decision by the Fish and Wildlife Service. Even formalist Justice Scalia rejected this contention, stating that it "wrongly equates injury 'fairly traceable' to the defendant with injury as to which the defendant's actions are the very last step in the chain of causation." Justice Scalia noted, "While, as we have said, it does not suffice if the injury complained of is "th[e] result [of] the independent action of some third party not before the court," . . . that does not exclude injury produced by determinative or coercive effect upon the action of someone else." Justice Scalia then concluded that the Service was aware of the "virtually determinative effect of its biological opinions." Thus, "it is not difficult to conclude that petitioners have met their burden – which is relatively modest at this stage of the litigation [a motion to dismiss for lack of jurisdiction] – of alleging that their injury is 'fairly traceable' to the Service's Biological Opinion and that it will 'likely' be redressed – i.e., the Bureau will not impose such water level restrictions – if the Biological Opinion is set aside.”

C. Current Doctrine on Redressability

The third element of standing – the requirement of redressability – concerns whether the court action sought would be likely to correct or prevent the problem from occurring.  If causation is established, redressability is usually a foregone conclusion, since, in addition to any damage award that might be appropriate, the Court can grant an injunction preventing the challenged conduct which is causing the harm. For this reason, although redressability is logically part of a complete analysis, redressability adds little to the causation analysis.

Justice O'Connor's attempt to distinguish redressability from causation in Allen v. Wright does not withstand full analysis. In Allen, Justice O'Connor was properly troubled by the fact that where "the relief requested goes well beyond the violation of the law alleged," plaintiff may be able to establish that there is a means to redress the injury even if those means go beyond the harm caused by the defendant. This analysis only establishes, however, that injury in fact and redressability are not sufficient grounding for Article III concerns; causation is a necessary element. Justice O'Connor was thus right in Allen to the extent her point was that cases like Simon v. Eastern Kentucky Welfare Rights Organization were deficient in phrasing the Article III standing requirement as depending only on whether "the plaintiff has shown an injury to himself that is likely to be redressed by a favorable decision." However, once injury in fact and causation are part of the Article III analysis, the Court has never clearly explained what the third element of redressability meaningfully adds to the analysis.

418 Allen, 468 U.S. at 753 n.19.

419 Simon, 426 U.S. at 38.
This is not to say that there are no issues involved with whether a particular remedial scheme is appropriate to enforce. Various doctrines of equity are appropriately kept in mind, such as in selecting contempt sanctions against state or local officials, federal courts should use the "least possible power adequate to the end proposed."420 As discussed at § 17.4.4, these doctrines are concerned, however, with whether a particular remedial scheme should be implemented. All presume that a remedial scheme could be implemented constitutionally, and thus differ from a constitutionally grounded Article III redressability requirement.

Because of the close connection between causation and redressability, and their focus on reasoned elaboration of the law, natural law Justices have not seemed to embrace fully "redressability" as a third independent requirement of Article III standing analysis in the same way as formalist and Holmesian Justices, who have focused on it as a matter of existing "positive" law. Thus, in recent cases, the redressability factor has usually been dodged by natural law Justices. For example, in Renne v. Geary,421 voters were prevented from challenging a provision in the California Constitution that prohibited political party endorsements in official voter pamphlets for partisan elections. The voters had failed to challenge a separate California statute that might also ban such endorsements in voter pamphlets. Thus, striking down the constitutional provision might not redress the injury alleged. In Justice Kennedy's opinion for the Court, however, the specific holding in the case was that in any event ripeness concerns meant that the case would not be heard at this time.422 Of course, focusing on causation, it might just as easily be said that the ban on endorsements in voter pamphlets was not caused by the provision in the California Constitution which the plaintiffs had challenged, since another independent provision might ban the endorsements in any event. This observation underscores the "mirror-image" quality of causation versus redressability analysis.

In Lujan,423 a plurality of conservative formalist and Holmesian Justices found redressability lacking. In addition to the plaintiffs' lack of injury in fact discussed at § 17.3.1.2.B n.327-32, the plurality said that it was conjectural whether the activity alleged to affect the plaintiffs would be redressed by changing the United States government's behavior, because the United States was supplying less than 10% of the funding for the projects which the plaintiff alleged were doing them harm. But this part of the opinion was not joined by any natural law Justice.424

422 Id. at 321-23.
424 Id. at 580 (Kennedy, J., joined by Souter, J., concurring) (unnecessary to address redressability, since injury in fact is lacking); id. at 595-98 (Blackmun, J., joined by O'Connor, J., dissenting) (concluding that because there exists a constitutional injury in fact caused by the challenged conduct, redressability poses no problem).
Redressability was also an issue in *Steel Co. v. Citizens for a Better Environment*. This was a private enforcement action under the citizen-suit provision of the Emergency Planning and Community Right-To-Know Act (EPCRA). An environmental association sued a small manufacturing company for past violations of EPCRA in failing to file an annual hazardous-chemical inventory and toxic-chemical release forms. The Act provided for "any person" to commence a civil action against an owner who failed to file such forms. After the action was filed the defendant submitted all of the overdue forms. The Court dismissed the case for lack of standing since redressability had not been shown. In discussing the issue of redressability, Justice Scalia explained that none of the items of relief sought would serve to reimburse plaintiffs for their loss of useful information. He noted:

1. The requested declaratory judgement would be worthless since a statutory violation was admitted.
2. The civil penalties authorized by the statute are payable to the United States government, not the individual plaintiff in the case.
3. Psychic satisfaction is not an acceptable Article III remedy since it does not redress a cognizable Article III injury.
4. Plaintiff requested costs, but a plaintiff cannot achieve standing to litigate a substantive issue by bringing suit for the cost of bringing the suit.
5. Giving plaintiff access to defendant's records and future filings would be remedial only if the plaintiff alleged a continuing violation or imminence of a future violation.

In Part II of his concurrence, Justice Stevens disagreed with this analysis regarding redressability, noting that civil penalties payable to the United States treasury, like punitive damages payable to the state in state tort actions, should be viewed as valid ways to "redress" a plaintiff’s injury. In Part III of his opinion, Justice Stevens, joined by Justices Souter and Ginsburg, concurred in the majority’s result, because he concluded that the Court should have dismissed the case on the merits since the relevant statute did not permit citizen suits for past violations.

Justices Kennedy and O'Connor agreed with the majority opinion that usually the Court should be certain of its jurisdiction before reaching the merits, but would leave open the possibility that the Court could reserve difficult questions of jurisdiction when the case alternatively could be resolved on the merits in favor of the same party, as Justice Stevens did in Part III of his opinion. Justice Breyer said he would reserve judgment on that matter, but he said that he probably would agree with Justice O'Connor and Kennedy's conclusion.

427 Id. at 127-34 (Stevens, J., joined by Souter & Ginsburg, JJ. as to Part III, concurring in the judgment); id. at 134 (Ginsburg, J., concurring in the judgment).
428 Id. at 110-11 (O'Connor, J., joined by Kennedy, J., concurring); id. at 111-12 (Breyer, J., concurring in part and concurring in the judgment).
Another case of redressability occurred in *Wyoming Sawmills, Inc. v. United States Forest Service.* 429 In this case, the Tenth Circuit held that a timber company’s complaint – that the Forest Service’s plans to consult with Native American tribes to minimize any Forest Service action on sites sacred to the tribes violated with Establishment Clause – failed for lack of redressability. The court noted that while the timber company might have an injury-in-fact from lost timber sales depending on the Forest Service action, any future timber sales lie within the discretion of the Forest Service, and thus the court could do nothing to redress their concern. Viewed alternatively, the court could have said that any future loss in timber sales could not be proven to be caused by the challenged conduct, the consultation with the tribes. Any argument that the plaintiff had a right to have the government not engage in unconstitutional consultations would be a generalized grievance, not sufficiently concrete to be an injury-in-fact, following *Richardson* and *Schlesinger*, discussed at § 17.3.1.2.D. nn.373-75.

D. Congressional Authority to Create Standing

Justice Powell's opinion in *Warth v. Seldin,* and Justices Kennedy and Souter’s concurrence in *Lujan,* are probably the two best examples of the modern natural law approach to the possibility of Congress granting standing where the Court otherwise would not find standing. In *Warth,* 430 Justice Powell noted that standing “often turns on the nature and source of the claim asserted. The actual or threatened injury required by Art. III may exist solely by virtue of statutes creating legal rights, the invasion of which creates standing. . . . Essentially, the standing question is whether [the provision] can be understood as granting persons in plaintiff's position a right to judicial relief.”

This language is in direct contrast to Justice Scalia's approach where standing does not depend on the nature or source of the claim asserted, and reflects a sharing of powers understanding of separation of powers concerns. Under Justice Powell's approach, the Court may be willing to grant standing if Congress decides that checks and balances would be improved if individual litigants could sue in court to check executive department compliance with the law, and either the President agrees or two-thirds of both houses override a Presidential veto. For this reason, Justice Powell's language offers some comfort for a broader view of congressional power to create standing because it suggests that the standing inquiry will be different, and easier, for the plaintiff to meet if the nature and source of the right asserted is a congressional statute. However, Justice Powell limited his conclusion in *Warth* regarding congressional ability to create standing by noting:

Of course, Art. III's requirement remains: the plaintiff still must allege a distinct and palpable injury to himself, even if it is an injury shared by a large class of other possible litigants. But as long as this requirement is satisfied, persons to whom Congress has granted a right of action, either expressly or by clear implication, may have standing to seek relief on the basis of the legal rights and interests of others, and, indeed, may invoke the general public interest in support of their [claim]. 431

---

430 *Warth,* 422 U.S. at 500.

431 *Id.* at 501.
In *Lujan*, Justice Kennedy, joined by Justice Souter, adopted an approach similar to that of Justice Powell in *Warth*. As Justice Powell had indicated in *Warth*, Justice Kennedy noted in *Lujan*:

> In my view, Congress has the power to define injuries and articulate chains of causation that will give rise to a case or controversy where none existed before, and I do not read the Court's opinion to suggest a contrary view. . . . In exercising this power, however, Congress must at the very least identify the injury it seeks to vindicate and relate the injury to the class of persons entitled to bring suit.432

Similarly, just as Justice Powell had counseled that there is some limitation on Congress' power to create new causes of action, Justice Kennedy observed:

> While it does not matter how many persons have been injured by the challenged action, the party bringing suit must show that the action injures him in a concrete and personal way. This requirement is not just an empty formality. It preserves the viability of the adversarial process by assuring both that the parties before the court have an actual, as opposed to professed, stake in the outcome and that "the legal question presented ... will be resolved, not in the rarified atmosphere of a debating society, but in a concrete factual context conducive to a realistic appreciation of the consequences of judicial action." . . . In addition, the requirement of concrete injury confines the Judicial Branch to its proper, limited role in the constitutional framework of government.433

Thus, while it seems that this modern natural law approach, along with a Holmesian approach, will grant Congress great leeway in creating standing where none existed before, there are some limits, based upon separation of powers concerns, on how far Congress can go in making generalized grievances a matter of proper constitutional standing. By carefully indicating that some limits apply, the Holmesian and natural law Justices seem to be cautioning Congress not to go too far in extending standing in citizen suit cases.

That Congress can go pretty far, however, is suggested by the reasoning in Justice Blackmun's dissent in *Lujan*, which was joined by Justice O'Connor. Justice Blackmun feared that the Court might be seeking to impose fresh limitations on the power of Congress to allow citizen-suits in the federal courts for injuries deemed "procedural" in nature. He said that the federal courts do not violate the separation of powers doctrine when, at the command of Congress, they enforce procedures that Congress has imposed on the executive branch. Here, Congress did not delegate executive power to the courts; rather, Congress sought only to strengthen the procedures it

---

432 504 U.S. at 580. Applying this principle to the facts of the case, Justice Kennedy continued, "The citizen-suit provision of the Endangered Species Act does not meet these minimal requirements, because while the statute purports to confer a right on 'any person . . . to enjoin ... the United States and any other governmental instrumentality or agency . . . who is alleged to be in violation of any provision of this chapter,' it does not of its own force establish that there is an injury in 'any person' by virtue of any 'violation.'" *Id.*

433 *Id.* at 581.
legislatively mandated. Thus, he concluded, Justice Scalia's opinion reflected "an unseemly solicitude" for protecting the powers of the executive branch.434

In reaching this conclusion, Justice Blackmun's opinion explicitly rejected Justice Scalia's "anachronistically formal view of the separation of powers." He noted that from a sharing of powers, checks-and-balances approach, just as "Congress does not violate separation of powers by structuring the procedural manner in which the Executive shall carry out the laws, surely the federal courts do not violate separation of powers when, at the very instruction of Congress, they enforce these procedures."435 On this point, Justice Blackmun's opinion is not necessarily inconsistent with Justice Kennedy's and Souter's concurrence. Both Kennedy's concurrence and Blackmun's dissent adopt a similar sharing of powers, checks-and-balances approach toward separation of powers issues. From such a perspective, the Constitution is not necessarily violated if Congress calls on the courts to help hold the executive branch to procedures mandated by Congress.436 One can well imagine Justices Ginsburg and Breyer, who have joined the Court since Lujan, either agreeing with, or being slightly more receptive to standing, than the approaches represented in the Kennedy/Souter concurrence or the Blackmun/O'Connor dissent in Lujan.437 Justice Stevens' concurrence in Lujan makes it clear that typically he is more willing to find standing than are Justices Kennedy and Souter.438

Thus, given the current make-up of the Court, so long as Congress makes clear what injury constitutes the invasion of a right and relates that injury to a class of persons entitled to bring suit, Congress should be able to expand standing substantially beyond what the Court might otherwise

434 Id. at 601-06 (Blackmun, J., joined by O'Connor, J., dissenting).

435 Id. at 602, 604.

436 Of course, for Justice Blackmun, as for Justice Kennedy, there were some limitations on how far Congress can go. See id. at 606 (Blackmun, J., joined by O'Connor, J., dissenting) ("There may be factual circumstances in which a congressionally imposed procedural requirement is so insubstantially connected to the prevention of a substantive harm that it cannot be said to work any conceivable injury to an individual litigant. But, as a general matter, the courts owe substantial deference to Congress' substantive purpose in imposing a procedural requirement. In all events, "[o]ur separation of powers analysis does not turn on the labeling of an activity as 'substantive' as opposed to 'procedural.'"). Indeed, the only major difference between the Kennedy/Souter concurrence and the Blackmun/O'Connor dissent seems to be whether plane tickets must be bought on the Lujan facts to satisfy the injury-in-fact requirement of Article III.

437 For example, in Hays v. United States, 515 U.S. 737 (1995), Justices Stevens, Souter, Ginsburg, and Breyer, all refused to join unreservedly Justice O'Connor's majority opinion.

438 Justice Stevens concurred in the judgment in Lujan because he thought on the merits that Congress did not intend the challenged consultation requirement to apply to activities in foreign countries. However, he disagreed with the Court's conclusion that the threatened injury to plaintiffs' interests was not imminent, and concluded in his opinion that Congress could grant standing to these plaintiffs if Congress so intended. 504 U.S. at 581-82.
find adequate. Per the approach of Justices Powell, O’Connor, Kennedy, and Souter, the Court will still insist on finding some kind of concrete and personal injury against a backdrop of separation of powers concerns and, thus, will be more restrictive than during the instrumentalist era. Indeed, even Professor Sunstein stated, “I do not contend that there are no limits to Congress' power to decide what is a 'case' or 'controversy.' In all likelihood, for example, Congress is barred from overcoming the ban on advisory opinions. . . . In very rare cases, there may even be barriers to the congressional conferral of standing for separation-of-powers reasons. Consider, for example, a grant of standing to all members of Congress to challenge all executive action. I do not deal with such exotic examples here.”

Based upon reasoned elaboration of the separation of powers concerns implicit in Marbury v. Madison, precedents from the original natural law, formalist, and Holmesian eras, and the explicit focus on separation of powers concerns in standing cases that have been decided since 1974, this modern natural law approach will also be more restrictive than the traditional natural law "cause of action" approach.

However, the modern natural approach will be more receptive to finding an injury in fact than was suggested by the heightened injury requirements of the Holmesian approach. And the modern natural law approach will be much more receptive than the modern formalist approach regarding Congress' ability to create standing where none existed before.

In light of the above analysis, the results of modern standing cases are not surprising if one separates the Justices into those who evince: (1) a formalist concern with clearly defined injuries and a strict separation of powers approach that limits the ability of individuals to sue in court to aid the executive function of taking care that the laws be faithfully executed; (2) a Holmesian deference to government concern in deciding whether individuals have standing; (3) a natural law focus with protecting the rights of individuals against the backdrop of a sharing of powers, checks-and-balances approach to the separation of powers; and (4) an instrumentalist theory that standing depends primarily on whether the case has concrete adverseness, with parties clearly adversaries on each side, rather than a concrete injury requirement. While the Supreme Court of the instrumentalist era, in its desire to bring about legal reform, was quite willing to frame standing doctrine as a set of relatively lax prudential guidelines, the modern formalists and Holmesians, in company with the increasing number of modern natural law Justices, have joined to reverse or limit the instrumentalist decisions which remade standing doctrine into a set of easily met prudential guidelines.

For these reasons, in the immediate future the Court is likely to:

(1) follow, rather than extend or contract, existing precedents on standing which call for concrete injury, causation, and redressability;

(2) require Congress to think carefully before creating any new citizen-suits, so as to satisfy the concerns expressed by Justices Kennedy and Souter in Lujan; and

Sunstein, supra note 292, at 179 n.79. Professor Sunstein also noted that in his view some constitutional rights may be sufficiently "personal" to the individual directly affected that Congress could not grant third-party standing to vindicate those rights. Id. at 235 n.311, citing William A. Fletcher, The Structure of Standing, 98 Yale L.J. 221, 278-79 (1988).
(3) take a moderate approach toward the injury-in-fact and causation components of Article III analysis, making use of reasoning by analogy from the precedents when applying existing principles and precedents to new fact situations.

The resulting judicial posture, while perhaps not as exciting as being ombudsman for the nation, should provide an appropriate and balanced response to issues of standing. By requiring for standing not only concrete adverseness – the instrumentalist phrasing based predominantly on a concern with effective judicial decisionmaking – but also a concrete injury requirement caused by the challenged conduct, the Court's current approach accords with traditional separation of powers concerns.

E. Standing under the Qui Tam Statute

It is illegal under 31 U.S.C. § 3729, the False Claims Act, knowingly to present a false or fraudulent claim for payment or approval to the federal government. The Qui Tam statute, 31 U.S.C. § 3730, provides that any person may have a civil action against “any person” who violates 31 U.S.C. § 3729. Plaintiff can recover a reasonable amount up to 25 percent of the judgment unless the government exercises its right to step in, in which case the amount drops to 10 percent. In either event, plaintiff gets reasonable costs if the suit is successful.

The Qui Tam statute raises obvious questions of constitutionality because the plaintiff ordinarily will have no way of showing a personal injury in fact. However, plaintiffs in a qui tam action were held to have standing in Vermont Agency of Natural Resources v. United States re rel. Stevens.440 Adopting a theory suggested by the Ninth Circuit, the Court said that the law can be interpreted as a partial assignment of the government’s damages claim to the relator, giving rise to “representational standing.” For the Court, Justice Scalia referred to the doctrine that the assignee of a claim has standing to assert the injury in fact suffered by the assignor.

The Court left open in Vermont three further questions. First, are local government entities exempt from liability under the FCA because of the presumption against imposing punitive damages on such entities? Second, do qui tam suits violate the separation of powers because they impermissibly intrude on the executive’s Article II duty to take care that the laws be faithfully executed? Finally, assume that Congress amends the statute in order to allow qui tam suits against states. Would that violate the 11th Amendment immunity that states have against suits brought against them for damages? Perhaps not, in view of the Court’s theory that it is the United States government’s cause of action that the relator is bringing in his or her representational capacity. It may be recalled that the 11th Amendment does not apply to actions brought by the United States government against a state, § 17.2.4.1 n.178, though the Court said in Vermont there is “serious doubt” on this score.441

440 529 U.S. 765, 771-78 (2000). In Vermont, the Court also held that “any person” made liable in the federal Act for presenting a false claim to the United States Government did not include a State because the damages awarded are essentially punitive in nature and there is a general presumption that punitive penalties are not to be imposed on governmental agencies. Id. at 781-88.

441 Id. at 787-88.
Under the normal, formalist strict separation of powers approach, *qui tam* actions should probably be viewed as unconstitutional, since the litigant has only a generalized grievance, and *qui tam* actions basically involve transferring from the executive to individual litigants the duty to see that the laws are faithfully executed. It can also be noted that, as an additional technical problem, a *qui tam* plaintiff undertakes executive functions and yet has not been appointed according to the Appointments Clause of Article II, § 2. Nevertheless, based upon formalist adherence to the specific intent of the framers and ratifiers and to settled law, it is not surprising that even Justice Scalia upheld the constitutionality of the *qui tam* statute in *Vermont*. Of course, the great respect for judicial precedents that natural law Justices have, combined with their sharing of powers, checks-and-balances approach to separation of powers, makes it even more likely that natural law judges would uphold the constitutionality of *qui tam* statutes. The Holmesian deference to government approach regarding congressional conferral of standing, and the instrumentalist willingness to let Congress create standing as long as the Court is not placed in the position of rendering advisory opinions, mean that these judges too would likely continue to uphold the constitutionality of *qui tam* statutes.

§ 17.3.1.4 Prudential Principles of Standing

As noted at § 17.3.1.1, in addition to the Article III requirements for standing, the Court has also developed a number of prudential principles to determine whether to grant standing in any individual case. Because these principles are not required by the Constitution, but are only prudential principles developed by the Court, Congress can overrule these principles in cases involving the Supreme Court’s appellate jurisdiction by using its power to make regulations and exceptions to the Supreme Court’s appellate jurisdiction. The prudential principles can be organized under five broad headings: (1) generalized grievances; (2) the “zone of interest” test; (3) third-party standing; (4) representational standing; and (5) equitable discretion.

A. Generalized Grievances

Even if a plaintiff alleges a constitutionally adequate injury under Article III that was caused by the challenged conduct and that can be redressed by the Court, the Court will not adjudicate generalized grievances pervasively shared and more appropriately addressed by the representative branches. During the instrumentalist era, when the Article III standing doctrine was easier for plaintiffs to meet, this prudential principle regarding generalized grievances was used to deny plaintiffs standing in cases where the plaintiffs were viewed as having Article III standing. Thus, the Court held that a taxpayer lacks standing in a suit against the CIA to learn details of its expenditures on the theory that published statements of account are required by Art I, §9, cl. 7, and that, lacking such

---

442 See Sunstein, supra note 292, at 173-77 (discussing the specific intent of the framers regarding *qui tam* actions); § 9.2.2.2 (formalist adherence to settled law).

443 529 U.S. at 771-78. See also *Lujan*, 504 U.S. at 572-73 (Justice Scalia noting that *Lujan* did not involve "Congress [creating] a concrete private interest in the outcome of a suit against a private party for the government's benefit, by providing a cash bounty for the victorious plaintiff.").

publications, plaintiff cannot be an informed voter.\textsuperscript{445} So, too, reservists and citizens had only an abstract interest in, and no nexus as taxpayers for, objecting to CIA secrecy.\textsuperscript{446}

Near the end of the instrumentalist era, in 1984, a 5-Justice non-instrumentalist majority, in an opinion written by Justice O’Connor, held in \textit{Allen v. Wright}\textsuperscript{447} that citizens with only generalized grievances against unlawful governmental actions, or members of minority groups with only generalized grievances against having their minority group stigmatized, did not have a sufficiently “distinct and palpable” injury to satisfy the injury-in-fact test of Article III standing. Thus, the Court transferred the concern with generalized grievances from prudential principles doctrine to Article III “injury-in-fact” standing doctrine. For this reason, the prudential principle regarding generalized grievances, post-\textit{Allen v. Wright}, has limited applicability. The most important consequence of this shift is that once the generalized grievance concern is an Article III concern, not a mere prudential principle, Congress cannot easily reinstate jurisdiction to sue for plaintiffs with generalized grievances through a statutory citizen suit provision. Instead, Congress has to use whatever power it has under the Article III analysis to articulate injuries and chains of causation where none existed before, a more confined congressional power, as discussed at § 17.3.1.3.D.

\textbf{B. The "Zone of Interests" Test}

During the instrumentalist era, when Article III standing was easier to achieve, the Court developed two kinds of “zone of interests” tests to limit standing on prudential grounds: one for constitutional claims, and one for statutory claims.

The constitutional “zone of interests” test was stated in \textit{Flast v. Cohen},\textsuperscript{448} where the Court found standing for federal taxpayers to raise an Establishment Clause challenge to government spending that reached some parochial schools. In \textit{Flast}, Chief Justice Warren concluded that while there was no absolute Article III bar to taxpayers suing as taxpayers, the plaintiff would have to meet a two-pronged “zone of interests” test. Under this test, there must be a logical link between the party's status and the type of legislative enactment attacked. Second, a taxpayer must establish a nexus between that status and the precise nature of the constitutional infringement alleged. Thus, a taxpayer must show that the challenged enactment exceeds specific constitutional limitations imposed on the exercise of the taxing and spending power. The taxpayers in \textit{Flast} satisfied both parts of the nexus test because they were challenging the exercise of congressional spending under Article I, § 8, and the Establishment Clause specifically limits the taxing and spending power granted by Article I, § 8.

\end{itemize}

Page 660
With the more stringent view of Article III standing which developed after the Warren Court, the *Flast* “zone of interests” test has been limited its precise facts, as in *Bowen v. Kendrick*. In no other case, including cases with similar facts, such as *Valley Forge Christian College*, discussed at § 17.3.1.2.C nn.350-54, has the Court applied the *Flast* test to grant standing to taxpayers, or any other parties with generalized grievances. Following *Allen v. Wright* in 1984, discussed at § 17.3.1.1 n.290, the Court holds in these cases that taxpayers do not have a sufficiently distinct injury to satisfy the modern injury-in-fact requirement of Article III standing.

With regard to statutory claims, the statutory “zone of interests” test was developed by Justice Douglas in 1970 in *Association of Data Processing Service Organizations, Inc. v. Camp*. There, an association of data processors challenged a ruling by the Comptroller which allowed national banks to make data processing services available to other banks and to bank customers. Because of the resulting increase in competition, plaintiff data processors suffered Article III injury. The question was whether they had standing to sue under § 702 of the Administrative Procedure Act (APA), which granted standing to a person "aggrieved by agency action within the meaning of a relevant statute." In an opinion by Justice Douglas, the Court concluded that Congress had not intended to allow suit by every person suffering injury in fact. Douglas said that in addition to the requirement that the complainant be "adversely affected," i.e., injured in fact, the Court had a prudential requirement of asking “whether the interest sought to be protected by the complainant is arguably within the zone of interests to be protected or regulated by the statute or constitutional guarantee in question.”

The precise question before the Court was the scope of § 702 of the APA, and the case could easily be interpreted as merely a gloss on the meaning of that section if Justice Douglas had not gone on to add "or constitutional guarantee in question." Several later cases have suggested that this phrase, which probably had meaning to Justice Douglas as a prudential limitation to an almost constitutionally unlimited power to find standing, continues to have some meaning in the context of a constitutionally based interpretation of Article III.

---

450 *Allen*, 468 U.S. 737, 758-65 (1984); *Valley Forge*, 454 U.S. 464, 470, 479-80 (1982). *See also* DaimlerChrysler Corp. v. Cuno, 126 S. Ct. 1854 (2006) (municipal taxpayers lack standing as taxpayers to challenge an investment tax credit as creating an excessive burden under the dormant commerce clause); Lingle v. Arakaki, 423 F.3d 954, 968-69 (9th Cir. 2005) (state taxpayers have standing to bring a lawsuit claiming appropriation of state revenues to support state programs that limit benefits to persons of “Hawaiian ancestry” violates the Equal Protection Clause), *vacated*, 126 S. Ct. 2859 (2006)[S]
452 *Id.* at 153-54, interpreting 5 U.S.C. § 702.
453 *Id.* at 153.
For example, in Valley Forge, as part of a supporting argument that prudential limitations on standing were closely related to policies reflected in the Article III requirement of actual or threatened injury, Justice Rehnquist listed three prudential limitations: first, that the plaintiff must generally assert his own legal rights and interests; second, that the Court will not adjudicate pervasively shared generalized grievances; and third, that "plaintiff's complaint fall within the 'zone of interests' to be protected or regulated by the statute or constitutional guarantee in question."\(^{454}\) A zone of interests inquiry was also undertaken in a dormant Commerce Clause case.\(^{455}\)

Despite this use of the zone of interests test, these cases did not firmly establish the zone of interests test as a part of all standing inquiries. In 1987, Justice White attempted in Clarke v. Securities Industry Association\(^{456}\) to trim back the test to its roots in the APA. Acknowledging that the zone of interests test had been the subject of much critical scholarly writing, Justice White noted that the "principal cases in which the 'zone of interests' test has been applied are those involving claims under the APA, and the test is most usefully understood as a gloss on the meaning of § 702." According to Justice White, under the APA the presumption is in favor of judicial review of agency action, but that presumption could be overcome "whenever the congressional intent to preclude judicial review is 'fairly discernible in the statutory scheme.'"\(^{457}\)

As to when this zone-of-interest test is met, Justice White said:

> In cases where the plaintiff is not itself the subject of the contested regulatory action, the test denies a right of review if the plaintiff's interests are so marginally related to or inconsistent with the purposes implicit in the statute that it cannot reasonably be assumed that Congress intended to permit the suit. The test is not meant to be especially demanding; in particular, there need be no indication of congressional purpose to benefit the would-be plaintiff."\(^{458}\)

Justice White indicated that this is the appropriate test for actions brought under § 702 of the APA. Where a private right of action under a statute is asserted in conditions that make the APA inapplicable, as for a preliminary question of whether there is an implied right of action at all, rather than just whether the plaintiff is within the “zone of interests” of the statute granting some persons

\(^{454}\) 454 U.S. 474-75.

\(^{455}\) Boston Stock Exchange v. State Tax Comm'n, 429 U.S. 318, 320 n.3 (1977) (holding invalid as a discriminatory burden on interstate commerce a statute imposing lower taxes on interstate stock transactions where the sale took place within the state, rather than outside the state).

\(^{456}\) 479 U.S. 388, 400 n.16 (1987). Naturally, the same “zone of interests” test should be applied when an APA action is joined with a suit under the substantive statutory provision whose procedures are alleged to be violated. See, e.g., Bennett v. Spear, 520 U.S. 154, 162-66 (1997).

\(^{457}\) Clark, 479 U.S. at 396.

\(^{458}\) Id. at 395-400.
the right to sue, the Court requires the would-be plaintiff to show more, as under *Cort v. Ash*,\(^{459}\) that the plaintiffs were “one of the class for whose especial benefit the statute was enacted.”

Justice White's restriction of the zone of interests test to the context of the APA is consistent with a Holmesian approach towards standing – one focused on deference to the legislature. If the test is grounded in a congressional statute, Congress is free to amend the test by statute if Congress so wishes. Justice White's restriction of the zone of interests test to the APA is also consistent with a natural law concern for reasoned elaboration of modern standing doctrine.

Since *Data Processing* was decided in 1970, the Court has tightened the Article III constitutional test by requiring a concrete injury caused by the challenged conduct and redressability by the Court, as discussed above. Given this fact, it is unclear what role remains for the zone of interests test in constitutional cases. As elaborated by Justice White, the "not terribly demanding" zone of interests test would appear to be far less demanding than the current version of the injury-in-fact test that is now declared to be a constitutional minimum. In addition, the lack of clarity as to what the zone of interests test can add in constitutional cases, combined with the paucity of cases using zone of interests analysis to deal with constitutional issues, suggests the difficulty of developing a workable zone of interests analysis in constitutional cases that would add coherence and consistency to the law.

All of these considerations suggest that the modern Court will not extend use of the zone of interests test much beyond the confines of § 702 of the Administrative Procedure Act or other statutes which purport to grant standing. Although Justice White's exegesis in *Clark* on the zone of interests test was said to be "wholly unnecessary" by a three-judge concurrence,\(^{460}\) Justice White's remarks were supported by five Justices, Justice Scalia not participating. There is a possibility, however, that the zone of interests test may not be fully confined to § 702 of the APA, as indicated by Justice Scalia's dissent in *Wyoming v. Oklahoma*. Following a literal approach to precedents regarding the zone of interests test, formalist Justices Scalia and Thomas, along with Holmesian Chief Justice Rehnquist, indicated a willingness to apply the zone of interests test in a dormant Commerce Clause case, and more generally in constitutional cases of all kinds.\(^{461}\) The majority did not embrace this analysis, however, and thus the zone of interests test is probably limited as Justice White has suggested.\(^{462}\)

459 See id. at 400 n.16, discussing *Cort v. Ash*, 422 U.S. 66 (1975).

460 *Id.* at 410 (Stevens, J., joined by Rehnquist, C.J., and O'Connor, J., concurring).

The fact that the “zone of interests” test still has some bite to it under the APA is indicated by *Air Courier v. American Postal Workers Union*. In this case, the postal workers’ union challenged a Postal Service decision to give up monopoly control over “extremely urgent” letters. The majority, per Chief Justice Rehnquist, held that the unions were not within the “zone of interests” of the relevant Postal Service regulations because nothing in the statutory language or legislative history suggested that in passing these regulations “Congress intended to protect jobs with the Postal Service.” Concurring, Justices Stevens, joined by Justices Brennan and Marshall, indicated that no “zone of interests” test need be done because the relevant “section of the Postal Reorganization Act provides that the judicial review provisions of the Administrative Procedure Act (APA) do not apply to the exercise of the powers of the Postal Service. It is therefore not only unnecessary, but also unwise, for the Court to issue an opinion on the entirely hypothetical question whether, if the APA did authorize judicial review of actions of the Postal Service, its employees would have standing to invoke such review to challenge a regulation that may curtail their job opportunities.”

More recent opinions have found that most parties with Article III injury-in-fact are within the “zone of interests” of the relevant statute. For example, in *Bennett v. Spear*, several ranch operators and irrigation districts sued the Secretary of the Interior and other officials of the Interior Department. Plaintiffs alleged economic injury in fact from failure by officials to follow procedures prescribed in the Endangered Species Act before accepting a Biological Opinion report that recommended lowered water levels in reservoirs serving land in which plaintiffs had an interest. Plaintiffs said they were within the zone of interests intended to be protected by a provision in the ESA that "any person may commence a civil suit on his own behalf . . . . to enjoin any person. . . who is alleged to be in violation of any provision of this chapter." The Government contended that this authorization was limited to persons who alleged an interest in preserving a species.

The Court agreed with plaintiffs. The Court pointed to the "remarkable breath" of the statutory language, saying there was no textual basis to conclude that it applied to environmentalists alone. Justice Scalia's opinion, for a unanimous Court, said that implications from the text were augmented by (1) an obvious purpose in the statute to encourage enforcement by so-called "private attorneys general," and (2) a reservation to the Government of a right of first refusal to pursue the action initially and a right to intervene later on. Thus, Congress had expanded the zone of interests to include developers as well as environmentalists. Since the “zone of interests” doctrine is clearly a prudential principle, even a formalist like Justice Scalia, who grants Congress limited power over defining injuries and chains of causation under the Article III branch of standing doctrine, discussed at § 17.3.1.2.B nn.327-32, acknowledged that "the breadth of the zone of interests varies according to the provisions of law at issue."

---

464 Id. at 921-22 (Stevens, J., joined by Brennan & Marshall, JJ., concurring).

A similar broad approach to the “zone of interests” test appeared in *National Credit Union Administration v. First National Bank & Trust Co.* In this case, the Court concluded that banks had standing to challenge a change in federal regulations that would allow credit unions to compete more directly with the banks. As in *Bennett*, where both developers and environmentalists were viewed as within the zone of interests there, both banks and credit unions were part of the balance of interests represented by this enactment, and thus both within the zone of interests as well. Application of this doctrine broadly would mean that virtually any individual who has suffered an injury-in-fact from a statute would be within the “zone of interests” of individuals part of the statutory balance, rendering the statutory “zone of interests” test as irrelevant in the future as the constitutional “zone of interests” test currently appears to be.

C. Standing to Assert the Rights of Third Parties

The general rule is that plaintiffs must assert their own rights and do not have standing to raise the rights of third persons. But there are exceptions. If a plaintiff has suffered injury and is closely related to another whose rights might be diluted if plaintiff could not assert them, the plaintiff may contend that a law is unconstitutional because it impinges on the rights of those third parties.

The Court stated in *Singleton v. Wulff* that for third-party standing to be granted the plaintiff must show, in addition to that party’s own Article III standing, that: (a) the plaintiff is in a sufficiently special relationship with the third-party that the plaintiff can reasonably be expected properly to frame the issue and litigate vigorously on the third-party’s behalf; and (b) practical limitations prevent the third-party from asserting the rights on his or her own. In applying this test, the Court takes practical considerations into account. For example, the Court acknowledged in *Wulff* the privacy concerns of women seeking abortions might limit their ability to bring lawsuits themselves, although the literal option of using a fictitious name, like Roe or Doe, is present.

The third-party standing test has been satisfied by doctors suing on behalf of their patients, or businesses suing on behalf of potential customers. On the other hand, an attorney whose only relationship to indigent criminal defendants was a prospective attorney-client relationship with as-yet unknown clients lacked third-party standing to challenge a state practice of refusing to appoint appellate counsel for indigent defendants who pleaded guilty or *nolo contendere*, although Justices Stevens, Ginsburg, and Souter dissented from this conclusion.

---

468 *See, e.g.*, Craig v. Boren, 429 U.S. 190 (1976) (majority allowed a saloon-keeper to assert the rights of potential male patrons under 21 who were being denied the right to purchase alcohol); Singleton v. Wulff, 428 U.S. 106 (1976) (doctor permitted to sue on behalf of patients regarding abortion regulations).

469 Kowalski v. Tesmer, 543 U.S. 125, 128-34 (2004); *id.* at 138-41 (Ginsburg, joined by Stevens & Souter, JJ., dissenting).
Not surprisingly, instrumentalist Justices have been the most willing to find that third-party standing exists, while formalist and conservative Holmesian have been the least willing to grant third-party standing. Of course, a statute may also grant the right to represent others, and where such a statute clearly indicates that intent even formalist and conservative Holmesian judges will give the statute that interpretation, since Congress can always overrule a prudential principle by a statute.

An additional exception appeared in *Craig v. Boren*.470 In this case, the Court held, in the alternative, that a party has standing if a lower court has decided the merits, without objection by either party, and the constitutional questions are presented vigorously and cogently. However, in light of the Court's increasing emphasis on the injury-in-fact requirement for standing, discussed at § 17.3.1.3, it seems likely that this exception will no longer be recognized by the Court.

A final exception regarding third-party standing involves the ability of parties in First Amendment cases to challenge a statute as substantially overbroad, and thus unconstitutional as applied to other parties, even though the statute could be validly applied to their conduct, discussed at § 29.6.1.5.471

D. Representational Standing for Organizations, States, and Elected Representatives

Three main types of representational standing cases exist: organizational standing, standing of states to sue on behalf of state citizens, and suits by legislators. Each kind of case raises its own concerns.

An association can sue as representative of its members if: (a) one or more members satisfy the Article III requirements for standing; (b) the interests to be protected are germane to the organization so that the organization can properly partake of its member’s Article III standing; and (c) neither the claim, nor the relief requested, require the participation of the individual members.472 The first two of these requirements are constitutional Article III requirements. The third is prudential, and is relatively easy to meet regarding injunctive relief, but more difficult to prove if the claim is for damages.473 As the Court has noted, there is a “hazard of litigating a case to the damages stage only to find the plaintiff lacking detailed records or the evidence necessary to show the harm with sufficient specificity,” as well as a “risk that the damages recovered by the association will fail to find their way into the [members’] pockets.”474

474 *Id.* at 556.
States may assert citizens' rights against other individuals or corporations as *parens patriae* when sovereign or quasi-sovereign interests are implicated, that is, the interests to be protected in the lawsuit are germane to the state’s functioning.475 However, the Court has consistently held that states cannot use the *parens patriae* power against other states, nor against the federal government, where the state would be entering a controversy as a nominal party in order to forward the claims of individual citizens.476

On the other hand, a state may act as “the representative of its citizens in original actions [in the Supreme Court] where the injury alleged affects the general population of a State in a substantial way.”477 A classic case illustrating this principle is *Pennsylvania v. West Virginia*.478 In that case, West Virginia, then the leading producer of natural gas, required gas producers in the state to meet the needs of all local customers before shipping any gas interstate. Ohio and Pennsylvania sued under the Supreme Court's original jurisdiction claiming that the statute violated dormant commerce clause principles as constituting an excessive burden on interstate commerce. Both states claimed to be protecting a twofold interest – "one as the proprietor of various public institutions and schools whose supply of gas will be largely curtailed or cut off by the threatened interference with the interstate current, and the other as the representative of the consuming public whose supply will be similarly affected." The Court stated, "The private consumers in each State not only include most of the inhabitants of many urban communities but constitute a substantial portion of the State's population. Their health, comfort and welfare are seriously jeopardized by the threatened withdrawal of the gas from the interstate stream. This is a matter of grave public concern in which the State, as the representative of the public, has an interest apart from that of the individuals affected. It is not merely a remote or ethical interest but one which is immediate and recognized by law."

Of course, suits by states are also permissible to protect the state’s sovereign power of government, or its own proprietary capacity in a state-run business, as long as the state meets the constitutional requirements of Article III. A classic case of this kind is a state versus state lawsuit over a boundary dispute between the states.479 Cities, or other municipalities, may also have standing to bring

---

478 262 U.S. 553, 591-92 (1923).

complaints against their state, despite being “creatures” of the state, to protect property interests deriving from action in a proprietary capacity, as opposed to substantive matters of the state's internal political organization, where no standing would exist. Whether foreign states may sue in federal courts as parents patriae to vindicate the rights of their citizens is a matter of debate.

Historically, legislators have been able to sue to vindicate the interests of their branch of government. Cases during the instrumentalist era permitted legislators to sue on behalf of their branch, House or Senate, even if only a minority of legislators in that branch joined the lawsuit. However, in 1997 in Raines v. Byrd, the Court decided that, at a minimum, to entertain such lawsuits brought on behalf of the House or Senate a majority of the House or Senate members must join in the lawsuit for standing prudentially to be granted. Chief Justice Rehnquist’s opinion actually went farther to suggest that in the absence of the suing legislators proving that they had sufficient votes to prevail on the merits of the issue behind the lawsuit, then perhaps no suit of this kind could ever be brought. The majority’s opinion in Raines provoked dissents by Justices Stevens and Breyer, and a concurrence on narrower prudential grounds particular to the individual case by Justice Souter, joined by Justice Ginsburg. The difference between Chief Justice Rehnquist’s broader, more Holmesian deference-to-government decision, permitting the political interplay between Congress and the President to resolve whatever separation of powers issues were involved, and a natural law approach focused more analytically on whether a majority of the House or Senate support the lawsuit so the suit is really in their name, is not likely to be of much practical difference. In the vast majority of cases, either approach will lead to the same result.

The Court’s decision in Raines was followed on its narrower holding by a lower court in Walker v. Cheney. In Walker, the Comptroller General of Congress was denied power to sue Vice-President

481 See generally Estados Unidos Mexicanos v. DeCoster, 229 F.3d 332, 337-43 (1st Cir. 2000) (absent a clear indication to the contrary from the Supreme Court, or the legislative or executive branches, parens patriae standing can only be granted to domestic states, not foreign countries); Kenneth Juan Figueroa, Immigrants and the Civil Rights Regime: Parens Patriae Standing, Foreign Governments, and Protection From Private Discrimination, 102 Colum. L. Rev. 408 (2002).

483 See, e.g., Goldwater v. Carter, 444 U.S. 996 (1979) (case dismissed on grounds of ripeness and political questions doctrine, not standing, although only a minority of members of both Houses had brought the lawsuit).

484 521 U.S. 811, 824-30 (1997); id. at 830 (Souter, J., joined by Ginsburg, J., concurring); id. at 835 (Stevens, J., dissenting); id. at 838 (Breyer, J., dissenting). Despite joining Justice Souter’s concurrence, Justice Ginsburg also joined the majority opinion. Id. at 813.

Cheney to release documents related to an Energy Task force on grounds that a majority of neither the House of Representatives nor the Senate had joined the lawsuit.

E. Equitable Discretion

In *Allen v. Wright*, the Court stated that sometimes case or controversy considerations may “shade into those determining whether the complaint states a sound basis for equitable relief.” This is particularly true, the Court stated in *Rizzo v. Goode*, if the plaintiff seeks “to enjoin the activity of a government agency” because the Government has traditionally been granted wide latitude in “dispatch of its own internal affairs.”

In addition, without regard to the question of equitable relief, sometimes the Court concludes based on general prudential considerations not to hear the case. For example, in *Elk Grove Unified School District v. Newdow*, a case challenging the constitutionality of reciting in public school the phrase “under God” in the Pledge of Allegiance, the Court decided that Mr. Newdow lacked standing to challenge the Pledge on behalf of his daughter who was attending public school. Mr. Newdow did not have the legal right to sue on behalf of his daughter under his custody arrangement with his ex-wife, and the ex-wife, who did have the legal right to represent the daughter, opposed the lawsuit. The Court stated, “In our view, it is improper for the federal courts to entertain a claim by a plaintiff whose standing to sue is founded on family law rights that are in dispute when prosecution of the lawsuit may have an adverse effect on the person who is the source of the plaintiff’s claimed standing. When hard questions of domestic relations are sure to affect the outcome, the prudent course is for the federal court to stay its hand rather than reach out to resolve a weighty question of federal constitutional law.” Unlike the prudential principles regarding abstention, which apply in the context of on-going or expected state proceedings to justify abstention, noted at § 17.2.4.4, the principle of equitable discretion can apply, as in *Newdow*, to cases filed only in federal court.

§ 17.3.2 The Ripeness Doctrine

The Court has said that a claim is not ripe for adjudication if it rests upon contingent future events that may not occur as anticipated, or indeed may not occur at all. Thus, before the federal courts will entertain a declaratory judgment suit or suit for an injunction, the plaintiff must show that there is a real and immediate threat of injury. A case is ripe for decision in a federal court only if

487 423 U.S. 362, 378-79 (1976), and cases cited therein.

490 See, e.g., Younger v. Harris, 401 U.S. 37, 41-42, 46-49 (1971) (a person indicted under the California Syndicalism Act could seek an injunction on the ground it was unconstitutional, but not persons who merely felt inhibited in their teaching); City of Los Angeles v. Lyons, 461 U.S. 95, 103-06 (1983) (that plaintiff might again be subjected to a chokehold applied beyond the strictures
plaintiff has suffered a specific present harm or plaintiff seeks to enjoin a specific proceeding that is threatened or underway so the case has an imminence and reality.\textsuperscript{491}

In making that determination, the Court considers both the fitness of the issues for judicial decision and the hardship to the parties of withholding court consideration.\textsuperscript{492} The Court is more likely to find a case not ripe if it relates to a state statute that has not yet been interpreted by the state's courts.\textsuperscript{493} If the lawsuit involves a “facial” attack on the law, rather than “as applied,” and thus the precise facts are not as critical for resolution, there are indications that the Court may be more willing to find a sufficient threat, since waiting will not help further “crystallize” the issue for judicial review.\textsuperscript{494}

The ripeness problem often arises in actions for a declaratory judgment or an injunction. Because the conduct alleged to create a constitutional issue may never take place, the Court proceeds on a case-to-case basis.\textsuperscript{495} If plaintiff shows only a generalized fear of prosecution under a statute not being enforced, the case will likely be viewed as not ripe for a declaratory judgment on constitutionality.\textsuperscript{496} Where the threat of injury is immediate enough, however, the Court may conclude that the case is ripe for resolution, given the hardship to the plaintiff if the plaintiff were required to wait and be prosecuted under the statute before the case could be heard. The relevant provisions regarding declaratory judgments are 28 U.S.C. § 2201 and Fed. R. Civ. P. Rule 57.

\textsuperscript{492} Texas v. United States, 523 U.S. 296, 300-02 (1998).

\textsuperscript{493} Id. at 301.

\textsuperscript{494} See, e.g., United Public Workers v. Mitchell, 330 U.S. 75, 89-91 (1947) (“As applied” challenge by government workers who sought an injunction against the Hatch Act because it might unconstitutionally make illegal certain political activities in which they planned to engage did not have a ripe case); Adler v. Board of Education, 342 U.S. 485, 486-87 (1952) (“Facial” attack on a state law that required the discharge of teachers who belonged to allegedly subversive groups was treated as ripe, over a dissent saying plaintiffs were merely complaining of a chill on teachers joining groups); id. at 503-05 (Frankfurter, J., dissenting).

\textsuperscript{495} Regional Rail Reorganization Act Cases, 419 U.S. 102, 123-25 (1974).

\textsuperscript{496} For example, the Court dismissed a challenge to Connecticut's ban on using birth control devices since it had not been enforced and there was no real fear of personal liability. Poe v. Ullman, 367 U.S. 497 (1961). However, in Epperson v. Arkansas, 393 U.S. 97 (1968), the Court reversed a state court decision upholding the validity of a law that prohibited the teaching of evolution in public schools even though, as Justice Black noted, id. at 109-11 (Black, J., concurring), there was no evidence that the statute ever been enforced during its 40 years on books.
The Court seems particularly concerned with this potential hardship when the prosecution would involve a criminal prosecution, particularly with the potential of jail time, as opposed to a civil prosecution. Where the potential is only for administrative fines, or a case involving only monetary damages, as in Takings Clause cases, the Court’s concern with the potential hardship to the individual of having to wait to see if the fine is imposed is much less. Of course, in addition to establishing standing and that the case is ripe, the plaintiff in an action for an injunction must show the likelihood of substantial and immediate irreparable injury, and the inadequacy of remedies at law.

In general, liberal instrumentalists have been more willing to find cases ripe for resolution, because of their preference to proceed to the merits and do justice in the case. Holmesian judges, because of their greater posture of deference to government, have been less willing to find cases ripe for resolution, as are formalist judges, because of their literalness in ensuring that an injury has in fact occurred. Based on their respect for precedent, combined with the background natural law principle of “where there is a right, there should be remedy,” natural law judges tend to be in the middle, without a strong predisposition in either direction.

Given these considerations, cases from the Holmesian and instrumentalist eras, in particular, have a tendency to reach different results on ripeness even when the underlying facts are similar. A case that sheds light on the meaning of "imminence" during the Holmesian era is United Public Workers v. Mitchell. There, the plaintiffs sought a declaratory judgment that the Hatch Act, which limits the political activities of government employees, violated their First Amendment rights, and they provided detailed affidavits listing the activities in which they wished to engage. Nevertheless, the Court held that such a challenge was not ripe on behalf of employees who simply desired to engage in the prohibited activities. The Court said that the separation of powers doctrine calls for courts to avoid writing advisory opinions and the Court should not adjudicate unless there are prejudicial interferences with definite rights. During the instrumentalist era, however, in United States Civil Service Commission v. National Association of Letter Carriers, AFL-CIO, the Court found a challenge to the Hatch Act to be ripe, concluding that the plaintiffs had shown that they desired to engage in specific political activities, and the threat of prosecution was “imminent” enough.

---

498 See, e.g., City of Los Angeles v. Lyons, 461 U.S. 95 (1983) (Court should exercise restraint in enjoining state police officers in the absence of irreparable injury both great and immediate).

A good Supreme Court discussion of ripeness from the modern post-1986 Court perspective occurred in *Ohio Forestry Ass'n, Inc. v. Sierra Club*.\(^{501}\) There a unanimous Court held not ripe for judicial review the Sierra Club's request for an injunction barring the United States Forest Service from permitting timber harvest under its then-current plan. The Court stressed that before the plan could be implemented the Service would have to choose logging areas and methods, hold a hearing, conduct an environmental analysis, and make a final decision to permit logging, which could be challenged in an administrative appeals process and in court. Justice Breyer first explained that with respect to controversies involving administrative agencies, the ripeness requirement is designed "to prevent the courts, through avoidance of premature adjudication, from entangling themselves in abstract disagreements over administrative policies, and also to protect the agencies from judicial interference until an administrative decision has been formalized and its effects felt in a concrete way by the challenging parties." Applying that concept, the Court found that: (1) to withhold court consideration at present would not cause the parties significant hardship since the club had an ample opportunity later to bring its legal challenge at a time when harm is more imminent and more certain; (2) immediate judicial review could hinder agency efforts to refine its policies; (3) immediate judicial review would have to take place without benefit of the focus that a particular logging proposal could provide; and (4) Congress had not provided for pre-implementation judicial review of forest plans, as it had done in some other federal agency laws.\(^{502}\)

In another post-1986 case, *Texas v. United States*,\(^{503}\) the Court also found the claim not ripe. Texas, a covered jurisdiction under the Voting Rights Act, sought a ruling that preclearance procedures did not apply to the appointment of a master to oversee the operations of a local school district which was not performing according to state academic performance indicators. The Court said that it was too speculative whether there would ever be a problem that needed solving. Nor could the Court anticipate whether under any circumstance such an appointment could constitute a change affecting voting. In any event, if Texas wanted to make such an appointment it could go ahead, without delay, and seek a preliminary injunction against enforcement of the federal law.

The Court did find ripeness in *Suitum v. Tahoe Regional Planning Agency*.\(^{504}\) There the plaintiff alleged that a state planning agency committed an unconstitutional regulatory taking when it determined that her residential lot was ineligible for development. The agency obtained summary judgment on the ground that plaintiff's claim was not ripe for adjudication because she had not attempted to sell the transferable development rights (TDR's) she had been given in exchange for the bar on development. The district court and the Ninth Circuit Court of Appeals had agreed that the case was not ripe for an adjudication on taking because until plaintiff applied for transfer of her TDR's to a purchaser, there was no evidence on the degree of interference with plaintiff's reasonable investment-backed expectations and no final decision on application of the law to her property.

\(^{504}\) 520 U.S. 725 (1997).
The Supreme Court reversed. Justice Souter's opinion first noted the two independent prudential hurdles regarding ripeness in cases of regulatory taking. There must be (1) a final decision from the entity implementing the regulations, and (2) the plaintiff must have sought compensation through the State procedures provided for that purpose. Leaving to the Court of Appeals, on remand, the question of whether the agency had any procedure for paying just compensation, the Court held that the agency had made a final decision that plaintiff's land was within a no-development zone, and there was no question that nothing could be built there. As to transferable development rights (TDR's), the agency had power to veto a particular sale if the buyer's planned use would be illegal, but ability to sell the property was beyond question.505

Regarding whether the doctrine is merely prudential or has some constitutional basis, it seems clear that the ripeness doctrine is grounded in both Article III and prudential concerns. As the Court stated in Reno v. Catholic Social Services, Inc.,506 citing Buckley v. Valeo and Socialist Labor Party v. Gilligan, “We have noted that the ripeness doctrine is drawn both from Article III limitations on judicial power and from prudential reasons for refusing to exercise jurisdiction.” In some cases, when the threat against which plaintiff seeks a declaration or injunction is quite speculative and remote, the Court will conclude, as it did in Lyons, the chokehold case, that no Article III injury has occurred, or that in any event Article III ripeness requirements are not met. Other times, as in Justice Powell's opinion in Goldwater v. Carter,507 it is clear that the Justice, or the Court, has found Article III satisfied, but that it would not be prudent to decide the case. In Goldwater, Powell said that as a prudential matter a dispute between Congress and the President is not ready for judicial review unless and until each branch has taken action asserting its constitutional authority.

Most often, the Court does not carefully explain whether the issue arose under Article III or involves only prudential concerns. However, formalists and Holmiesians, reflecting the “positivist” aspect of their judicial decisionmaking style, tend to put ripeness on Article III grounds, as though the matter is out of their hands. To preserve their ability to reach out and decide important issues, instrumentalist judges tend to discuss ripeness in prudential terms and, thus, attempt to preserve flexibility in application of the doctrine. In terms of a natural law focus on reasoned elaboration of the law, it would be helpful if the Court would state what difference there is, if any, between the Article III requirement of a “case or controversy” sufficient to grant standing, with its injury-in-fact requirement, and an Article III requirement of a sufficiently ripe case.

505 Justice Scalia, with Justices O'Connor and Thomas, concurred in the judgment but objected to any discussion of transferable development rights (TDR's) for that would tend to suggest that the value of the TDR's was relevant to whether a final decision on taking had occurred. A final decision was made, said Scalia, when the agency refused to allow plaintiff to build a house on her land because it fell within a "Stream Environmental Zone." The market value of any TDR given in exchange relates only to the just compensation issue. Id. at 745-50.

The treatises similarly do not provide a neat theoretic base for the ripeness doctrine. Professor Tribe has said that the categorization of a case as unripe for federal adjudication cannot be reduced to an orderly, much less a highly principled and predictable, process. On the other hand, he said, it is unclear whether judicial discretion to engage in such avoidance of decision could be significantly constrained without unduly restricting the flexibility needed to discharge the Article III function wisely. Professor Tribe ventured two generalizations. First, a case in which early legal challenges are held to be ripe normally presents either or both of two features: significant present injuries produced by contemplation of a future event or legal questions that do not depend for their resolution on an extensive factual background. Thus, the Court may be more willing to find a case ripe if the plaintiff is challenging a law as facially vague or overbroad, than if the challenge is to the law as applied. Second, a prudential factor underlying the determination of ripeness is the extent that a delay in judgment will cause hardship. Delay may cause harm by imposing the continuing harm of uncertainty and expense flowing from doubt about the authority of legal rules governing relations between private parties, by failing to provide clear guidelines needed for effective long-term investment, or by failing to honor explicit legislative goals of certainty.

Professors Nowak and Rotunda are no more precise. They say that just as a case can be brought too late, and thereby be moot, it can be brought too early, and therefore not yet be ripe for court adjudication. While the general ripeness principle is not disputed, its application by the Supreme Court has resulted in a line of cases with seemingly inconsistent rulings.

Perhaps the better approach would be to conclude that the “case” or “controversy” injury-in-fact requirement encompasses both Article III standing and ripeness concerns. This would be consistent with the Court’s precedents, which in speaking about the Article III ripeness test have typically resorted to general “case” or “controversy” language. For example, in both *Buckley v. Valeo* and *Socialist Labor Party v. Gilligan*, cited in *Reno*, the Court’s analysis of the constitutional component of ripeness merely focused on the Article III “case” or “controversy” requirement.

From the perspective of reasoned elaboration of the law, it is unclear, if a plaintiff has met the Article III test for standing, what additional requirements should be imposed to satisfy an Article III ripeness requirement. A plaintiff who has suffered an injury in fact, caused by the challenged conduct, redressable by the court, should be viewed as having a sufficiently ripe case to satisfy an Article III “case” or “controversy” requirement. Development of the doctrine in this way would mean that all of the ripeness concerns of fitness for judicial decision, including whether the facts have sufficiently crystallized for judicial decision, and the issue of the relative hardship to the parties of deciding the case now, or not, would be viewed as prudential considerations, which they seem to be.

Looking to the future, as the instrumentalist Justices of the 1960s have been replaced largely by non-instrumentalist Justices, the Court today will tend to give greater weight to separation of powers

---

concepts that encourage judicial restraint than did the Court of the instrumentalist era, thus increasing the likelihood that even in a case where standing exists, the Court will find the case not ripe for resolution. Nevertheless, even in the *Lyons* chokehold case, arguments exist whereby the Court could find both standing and ripeness, based on credible allegations that the city authorized the chokehold and many officers had so used the hold on persons not resisting arrest.

Of course, where the Justices wish to reach the merits of a case, ripeness may well be found in close cases even by formalist and Holmesian Justices. For example, in *Bush v. Gore*, Justice Scalia indirectly addressed a ripeness concern when, in his concurrence to the Emergency Stay Order, he stated that “irreparable injury” would result to “petitioner [Bush], and to the country, by casting a cloud upon what he claims to be the legitimacy of his election.” In this view, Bush’s challenge to the Florida Supreme Court’s recount proceedings was ripe for resolution, even though it was speculative whether the recount would show that Bush won or lost, and thus it was unclear whether the recount would cast a cloud of legitimacy over his election as president, or help to confirm it.

In contrast, as four Justices noted in dissent in *Bush v. Gore*, “If this Court had allowed the State to follow the course indicated by the opinions of its own Supreme Court, it is entirely possible that there would ultimately have been no issue requiring our review, and political tension could have worked itself out in the Congress following the procedures provided in 3 U.S.C. § 15.” Based on the results of a later recount of the ballots at issue in *Bush v. Gore* by a consortium of newspaper and news media outlets, which showed that Bush would have still had more votes than Gore after the Florida Supreme Court’s ordered recount, the dissent may well have been factually right in making their assertion that *Bush v. Gore* was not ripe for resolution under normal ripeness principles.

§ 17.3.3 The Doctrine of Mootness and the Ban on Giving Advisory Opinions

§ 17.3.3.1 Introduction to Mootness and Advisory Opinion Doctrine

Because Article III speaks in terms of “Cases” and “Controversies,” the Court will not render an advisory opinion. This conclusion is based not only on this text of Article III, but on history. The framers did not accept a proposal to give the Court power to issue advisory opinions. The ban on federal courts giving advisory opinions was initially, and most famously, stated in 1792 in *Hayburn’s Case*, discussed at § 17.3.1.2.A. nn.313-15. This Article III ban only applies to the federal courts. Under a few state provisions, such as in Colorado, Florida, Maine, Massachusetts, Michigan, New Hampshire, Rhode Island, and South Dakota in their state Constitutions, and in

512 *Id.* at 129 (Souter, J., joined by Stevens, Ginsburg, & Breyer, JJ., dissenting).

Alabama, Delaware, and Oklahoma by state statute, some state Supreme Courts have power to issue advisory opinions, as do many constitutional courts in other countries and courts created pursuant to international treaties. These opinions are reviewable in federal court only if they lead to an injury-in-fact, which can be used to satisfy federal standing, ripeness, and advisory opinion doctrine.

Just as federal courts will not render advisory opinions, federal courts will not render an opinion in a “collusive suit.” A “collusive suit” involves a case where the parties on both sides want the same result, and are only nominally on opposite sides of the litigation. In such a case, there is the “absence of a genuine adversary issue between the parties,” as can occur if the defendant pays attorneys on both sides of the lawsuit.

In contrast, a “test case” is different. In a “test case” there is an adversary issue between the parties, even though the particular act that gave rise to the controversy may have been planned to raise that issue in court. While there usually is jurisdiction to hear a “test case,” the Court is likely to be sensitive to the contrived nature of the controversy, and, particularly in cases involving constitutional challenges to governmental action, exercise prudence in deciding whether to decide the case, especially if the facts suggest some conflict of interest among the parties to the lawsuit, such as the attorney for one side having connections to the opposing side.

Just as federal courts do not give advisory opinions or decide collusive lawsuits, they also will not decide a case which, by the time for decision or review, is moot, that is, is no longer an actual dispute because it no longer touches legal relations of parties having adverse legal interests. For example, in DeFunis v. Odegaard, the plaintiff brought suit on his own behalf claiming reverse discrimination and asking for an injunction commanding his admission to law school. By the time the case reached the Supreme Court, he had been admitted to the law school and was in the final term of his final year. Thus, his status would not be affected by any view the Court might express on the matter. As a matter of procedural law, the mootness rule applies even when the Court is reviewing the decision of a state court. A moot federal case will be vacated and remanded for

There are four main exceptions to the mootness doctrine. One exception is where the case is "capable of repetition, yet evading review." This occurs, for example, where there is a reasonable expectation that the same controversy will recur involving the same complaining party and yet the judicial order will always become moot by the time of appeal. One typical case of this kind involves challenges to election or ballot access laws. In most cases, by the time the case reaches the Supreme Court, the date of the election has passed, yet if the case were then dismissed as moot, the Court would never rule on election law issues. Another typical case involves challenges to abortion laws. In most of these cases, the women has already made some decision regarding an abortion prior to the case being decided by the Supreme Court.

Another exception involves the “voluntary cessation of allegedly illegal conduct, which could reoccur.” Such voluntary cessation does not deprive the tribunal of power to hear and determine the case. A typical example of this kind of case involves civil rights challenges to government action, where the government has “voluntarily” ceased its behavior by the time the case reaches the courts. In these cases, the court must determine how likely it is that the voluntarily ceased conduct could reoccur. The cases can also arise in the context of environmental litigation, where the alleged polluter may have voluntarily ceased the conduct by the time of litigation.

A third exception to the mootness doctrine is where the plaintiff has brought a class action and there is a reasonable expectation that others similarly situated in the class will face the same issue in the future. As the Court held in *Sosna v. Iowa*, a class action case does not become moot merely because it has become moot as to the named plaintiffs in the class, as long as other parties in the class have an on-going dispute.

---

The fourth exception involves cases where collateral consequences still exist, even if the main complaint has been mooted. For example, in *Sibron v. New York*, the plaintiff was permitted to challenge the constitutionality of a criminal conviction even though the prison term had already been served. The individual’s case was not moot, even though the individual was out of prison, because of the collateral consequence of having a criminal record, which the individual wanted expunged. Similarly, in *Powell v. McCormack*, Congressman Powell’s main complaint, that he should not have been excluded from the 90th Session of Congress, was moot by the time the case got to the Supreme Court, because that session of Congress had already passed and Powell had been reelected to the 91st Session of Congress. Yet his case was not moot because the issue of whether he was constitutionally excluded from the prior session affected his seniority in Congress and the amount of his congressional pension, issues for which there was still a live controversy.

§ 17.3.3.2 Points of Contention in Mootness Doctrine

The Court has not been entirely of one mind with respect to whether the mootness doctrine and its exceptions are prudential principles or Article III requirements. The third and fourth exceptions listed above, ongoing class actions and cases where collateral consequences still exist, technically involve plaintiffs who have ongoing injuries. Since Article III is thereby met in those cases, the application of those exceptions clearly involve prudential considerations. There is a debate on the Court, however, concerning what part of the “capable of repetition, yet evading review” exception and “voluntarily ceased conduct but may reoccur” exception are matters of prudential principle and what part are matters of Article III requirement.

The matter was explored in *Honig v. Doe*. There, the Court held that the challenge of an emotionally handicapped child to a school district's violation of the Education of the Handicapped Act was not moot. This was so even though the plaintiff, after 7 years of litigation, was now 20 years old and no longer resided in the school district that had excluded him. Justice Brennan noted that the child remained eligible for educational services under the Act, and there was a reasonable probability that he would again enroll and be subjected to improper exclusion for disruptive conduct unless state-wide injunctive relief was issued. Justice Brennan wrote in *Honig*:

Under Article III . . . this Court may only adjudicate actual, ongoing controversies. . . . That the dispute between the parties was very much alive when suit was filed, or at the time the Court of Appeals rendered its judgment, cannot substitute for the actual case or controversy that an exercise of this Court's jurisdiction requires. . . . In the present case we have jurisdiction if there is a reasonable likelihood that respondents will again suffer the deprivation of EPA-mandated rights that gave rise to this suit. We believe that, at least with respect to respondent Smith, such a possibility does in fact exist and the case therefore remains justiciable.

---

533 *Id.* at 317-18.
Chief Justice Rehnquist, concurring, urged the Court to consider carefully what part of the doctrine concerning dismissing cases for mootness was premised on constitutional constraints. Rehnquist said that if Article III underlies all aspects of mootness doctrine, the exception for cases "capable of repetition, yet evading review" would be incomprehensible. He continued:

[W]hile an unwillingness to decide moot cases may be connected to the case or controversy requirement of Art. III, it is an attenuated connection that may be overridden where there are strong reasons to override it. The "capable of repetition, yet evading review" exception is an example. So too is our refusal to dismiss as moot those cases in which the defendant voluntarily ceases, at some advanced stage of the appellate proceedings, whatever activity prompted the plaintiff seek an injunction. . . . I believe that we should adopt an additional exception to our present mootness doctrine for those cases where the events which render the case moot have supervened since our grant of certiorari. . . . [U]nique resources – the time spent preparing to decide the case by reading briefs, hearing oral argument, and conferring – are squandered in every case in which it becomes apparent after the decisional process is underway that we may not reach the question presented. To me the unique and valuable ability of this Court to decide a case – we are, at present, the only Art. III court which can decide a federal question in such a way as to bind all other courts – is a sufficient reason either to abandon the doctrine of mootness altogether in cases which this Court has decided to review, or at least to relax the doctrine of mootness in such a manner as the dissent accuses the majority of doing here.534

Disagreeing with the Chief Justice that the mootness doctrine is based on prudential considerations to this extent, Justice Scalia, dissenting in Honig v. Doe, with Justice O'Connor, sought to explain the “evading review” exception within the confines of Article III constitutional doctrine. He said:

Jurisdiction on the basis that a dispute is "capable of repetition, yet evading review" is limited to the "exceptional situatio[n] . . . where the following two circumstances simultaneously occur: "(1) the challenged action [is] in its duration too short to be fully litigated prior to its cessation or expiration, and (2) there [is] a reasonable expectation that the same complaining party would be subjected to the same action again." . . . I cannot believe that it is only our prudence, and nothing inherent in the understood nature of "The judicial Power," U.S. Const. Art III, § 1, that restrains us from pronouncing judgment in a case that the parties have settled, or a case involving a non-surviving claim where the plaintiff has died, or a case where the law has been changed so that the basis of the dispute no longer exists, or a case where conduct sought to be enjoined has ceased and will not recur. Where the conduct has ceased for the time being but there is a demonstrated probability that it will recur, a real-life controversy between parties with a personal stake in the outcome continues to exist, and Art. III is no more violated than it is violated by entertaining a declaratory judgment action. I agree with THE CHIEF JUSTICE to this extent: the "yet evading review" portion of our "capable of repetition yet evading review" test is prudential; whether or not that criterion is met, a justiciable controversy exists. But the probability of recurrence between the same parties is essential to our jurisdiction as a court.535

534  Id. at 331-332.

535  Id. at 333.
Justice Brennan replied to Justice Scalia’s conclusion that the second requirement was not met in the case by stating in footnote 6 of his opinion:

We believe the dissent overstates the stringency of the “capable of repetition” test. Although Justice SCALIA equates “reasonable expectation” with “demonstrated probability,” the very case he cites for this proposition described these standards in the disjunctive.536

Honig v. Doe provides a good opportunity to observe how decisionmaking style is reflected in judicial opinions. Liberal instrumentalists, such as former Justices Douglas, Brennan, Marshall, and Warren, and present-day Justice Stevens, tend to give greater weight to protecting the rights of individuals than they do to preserving structural policies such as the separation of powers. Justice Brennan conceded in Honig v. Doe that the doctrine is based in part on Article III concerns. However, along with other instrumentalist Justices, Justice Brennan was quick to find that an issue was capable of repetition, yet evading review, as in Honig, or voluntarily ceased conduct could reoccur. For example, in DeFunis, Justice Brennan concluded that it was possible that Mr. DeFunis would have to withdraw from his last term at law school because of any “number of unexpected events – illness, economic necessity, even academic failure.” Thus, although the law school had voluntarily admitted him, he might have to face the affirmative action policy again.537

Formalists, such as Justices Scalia and Thomas, prefer clear, bright-line rules that are capable of logical and predictable application. They call for a strict application of separation of powers doctrine. In Honig v. Doe, Justice Scalia approved a rigorous, constitutionally based test for determining when a situation is capable of repetition, yet evading review. The only portion of the mootness doctrine that he finds outside constitutional requirements is when the Court decides whether a kind of case is likely to evade review. Because he requires a “demonstrated probability” that a case could reoccur to satisfy Article III, he is quite ready to dismiss cases for being moot.

Holmesians judges emphasize the need for judicial restraint and deference to the legislative and executive branches. This suggests a relatively strict approach to the mootness doctrine, particularly among conservative Holmesians. On the other hand, as a functional approach, Holmesians are willing to apply doctrine in light of purpose and practical considerations. Justice Rehnquist’s opinion in Honig v. Doe involves this respect for Holmesian, practical considerations, in that he would relax mootness requirements once the Court has taken certiorari. This may reflect an agenda Rehnquist has promoted as Chief Justice: the need for effective use of limited federal judicial resources. Reflecting his liberal Holmesian predisposition, Justice White often voted with the instrumentalists in mootness cases, as he did in DeFunis and Honig, in order to advance his liberal predisposition for vigorous enforcement of federal court remedies, as discussed at § 10.3.3 nn.63-78.

Natural law Justices seek reasoned elaboration of the law in light of its purposes and history, fidelity to precedent, and respect for consistent legislative or executive practice. They believe the framers and ratifiers were motivated by a sharing of powers, checks-and-balances philosophy, rather than

536 Id. at 318, n 6.

537 416 U.S. at 349 (Brennan, J., joined by Douglas, Marshall & White, JJ., dissenting).
a strict separation of powers approach. They also tend to decide constitutional law cases narrowly, with a facts-of-this-case orientation. Given this general orientation, they should be more willing to find cases moot than instrumentalists, but less willing than formalist or conservative Holmesian Justices.

A typical example is *Friends of the Earth, Inc. v. Laidlaw Environmental Services (TOC), Inc.*[^538^] In this case, Justices O'Connor, Kennedy, and Souter all joined Justice Ginsburg’s majority opinion which held that in deciding whether behavior could “reoccur” under the “voluntary cessation” exception to mootness doctrine, the burden is on the defendant to meet the “formidable burden of showing that it is absolutely clear the allegedly wrongful behavior could not reasonably be expected to reoccur.” Justice Ginsburg noted that this burden is different than under standing doctrine where the plaintiff has the burden, as in the *Lyons* chokehold case, of demonstrating that some behavior may reoccur in order to establish a non-speculative threat of future injury to justify declaratory or injunctive relief. For this reason, Justice Ginsburg concluded, “The plain lesson of these cases is that there are circumstances in which the prospect that a defendant will engage in (or resume) harmful conduct may be too speculative to support standing, but not too speculative to overcome mootness.” Formalist Justice Scalia and Thomas dissented from this analysis, stating, “[T]he Court suggests that to avoid mootness one needs even less of a stake in the outcome than the Court’s watered-down requirements for initial standing. I dissent from all of this.”[^539^]

On the other hand, while natural law Justices may be less willing to find cases moot than formalists, it is important to note that Justice O'Connor joined Justice Scalia's dissent in *Honig v. Doe.*[^540^] Justice Kennedy was not on the Court at the time *Honig* was argued, and Justice Souter was not on the Court at the time *Honig* was decided. Thus, it remains somewhat speculative how they would have decided that case. Further, it is useful to note that Justice Powell joined with the majority in *DeFunis* to find that case moot, and did not join Justice Brennan’s dissent in the case.[^541^]

§ 17.3.4 Political Question Doctrine

§ 17.3.4.1 The Original Natural Law Era: 1789-1873

The roots of the political question doctrine trace back to a 1794 speech by John Marshall. He said that for the judiciary to answer a question it must assume a legal form for litigation by parties.[^542^]

[^539^]: Id. at 198 (Scalia, J., joined by Thomas, J., dissenting).

[^541^]: 416 U.S. 312 (1974) (per curiam opinion).

Justice Marshall also indicated in *Marbury v. Madison*\(^{543}\) that “the President is invested with certain important political powers, in the exercise of which he is to use his own discretion, and is accountable only to his country in his political character and to his own conscience.”

The earliest case where the political questions doctrine was applied to find an issue a political question was *Luther v. Borden*.\(^{544}\) The question in *Luther* involved the Guarantee Clause of Article IV, § 4, which provides, “The United States shall guarantee to every State in this Union a Republican Form of Government, and shall protect each of them against Invasion; and on Application of the Legislature, or of the Executive (when the Legislature cannot be convened) against domestic Violence.” In *Luther*, the Court declined to find under the Guarantee Clause which of two groups was the legitimate government of Rhode Island, leaving it to Congress and the President to intervene, if necessary, to resolve the issue and disarm the factions.

\section*{\textbf{\textsection 17.3.4.2 The Formalist Era: 1873-1937}}

During the formalist era, a Guarantee Clause challenge to the state of Kentucky's procedure in a contested gubernatorial election was held nonjusticiable.\(^{545}\) In a case involving Oregon's initiative and referendum process, the Court held broadly that the question of whether a state has a republican form of government is political in character.\(^{546}\) The Court also held that a proclamation by the Secretary of State that the 19th Amendment was ratified by enough states was a political question conclusive upon the courts.\(^{547}\) In these cases, the Court seemed to adopt a bright-line categorical approach that any case raising a Guarantee Clause or Ratification issue was a political question, although in 1874 the Court had noted in passing in *Minor v. Happersatt*\(^{548}\) that denying women the right to vote did not deprive any state of a republican form of government, a decision consistent with historical practice denying women the right to vote in 18th- and 19th-century America, as in other democracies of the time, discussed at \textsection 26.3.1.1.

\section*{\textbf{\textsection 17.3.4.3 The Holmesian Era: 1937-1954}}

Holmesian deference led to an increased number of decisions in which the Court found that certain kinds of questions were political and thus for the other branches of government to resolve. The Holmesian-era Courts found that not only Ratification or Guarantee Clause issues were political questions, but also that aspects of the President’s foreign affairs power, such as deciding which government validly represents a foreign state, present a political question. For example, in *United

\begin{footnotes}
\item[543] 5 U.S. (1 Cranch.) 137, 164 (1803).
\item[544] 48 U.S. (7 How.) 1, 42-43 (1849).
\item[546]  Pacific States Telephone & Telegraph Co. v. Oregon, 223 U.S. 118, 143-51 (1912).
\item[547]  Leser v. Garnett, 258 U.S. 130, 137 (1922).
\item[548]  88 U.S. 162, 175-78 (1874).
\end{footnotes}
States v. Pink, the Court deferred to the President when holding that deciding which government represents a foreign state is a political question. Speaking more broadly, the Court said in Chicago & S. Air Lines v. Waterman S.S. Corp. that the Constitution gives the President the exclusive right to make foreign policy decisions. Regarding the Ratification Clause, the Court held in Coleman v. Miller that it was exclusively for Congress to resolve questions on the time within which an Amendment may be ratified, and the legal effects of a state first rejecting and later attempting to ratify an Amendment. In a challenge under the Guarantee Clause, the Court held in Colgrove v. Green that state malapportionment of congressional districts was a political question.

§ 17.3.4.4 The Instrumentalist Era: 1954-1986

The modern era of political questions doctrine traces its roots to the Supreme Court’s decision in 1962 in Baker v. Carr. Stressing that the challenge to a state reapportionment in Baker v. Carr was brought under the Equal Protection Clause, rather than the Guarantee Clause, and thus Colgrove could be distinguished, Justice Brennan wrote for the Court in Baker that malapportionment of congressional districts is not a political question. His opinion changed the way in which the Court decides whether a question is political.

First, Justice Brennan said that the nonjusticiability of political questions is primarily due to the separation of powers doctrine. Accordingly, there is need for a case-by-case inquiry into precise facts, without use of any semantic cataloguing. That gave him an opening to challenge statements in earlier cases as too sweeping. As Justice Brennan analyzed the prior cases, he did not conclude that they had held that every Guarantee Clause, or Ratification issue, or use of Presidential power in foreign affairs, raised only political questions. Instead, he concluded that the Court had looked carefully at the history of a question's management by political branches, whether it was susceptible to judicial handling, and the consequences of judicial action on separation of power concerns.

Based upon this reasoning, Justice Brennan then abandoned any attempt to classify based on the clause or the question. Instead, he announced that "prominent on the surface of any case held to involve a political question is found one or more of six factors." These six factors stated in Baker v. Carr, (a) - (f), can be conveniently grouped into three categories, as did Justice Powell in his concurrence in Goldwater v. Carter:

---

549 315 U.S. 203, 229 (1942).
552 328 U.S. 549, 556 (1946).
553 369 U.S. 186 (1962).
554 Id. at 209-17.
555 Id. at 217, cited in 444 U.S. 996, 998-1002 (1979) (Powell, J., concurring in the judgment).
(1) does there exist (a) a textually demonstrable constitutional commitment of the issue to a coordinate branch of government; 
(2) the core separation of powers concerns with whether (b) there are judicially manageable standards or (c) does the issue call for an initial non-judicial policy decision; and 
(3) general separation of powers concerns dealing with whether prudential considerations counsel against judicial intervention, such as a special concern with (d) expressing lack of respect for a coordinate branch of government, (e) a need for finality, or (f) potential embarrassment from multifarious pronouncements if the court second-guessed how the coordinate branch has acted.

Justice Brennan said that unless one or more of these factors is "inextricable" from the case at bar there should not be a dismissal for non-justiciability on the ground of a political question. Through this opinion, Justice Brennan provided the Court with concepts and techniques that would enable the Court to expand its power by reaching the merits in many more cases than if the Court had continued to use the broad categories characteristic of the formalist and Holmesian-era judicial styles, such as simply noting that a Clause, such as the Guarantee Clause, or the general subject matter, such as foreign relations, was involved in the case.

Justice Brennan's case-by-case approach was applied by Chief Justice Warren, writing in *Powell v. McCormack*.\(^{556}\) Warren held that although Art. I, § 5 is a textually demonstrable commitment to the House of Representatives of power to judge qualifications expressly set forth in the Constitution, the Court is not deciding a political question when it interprets the Constitution to forbid the House to add additional qualifications to those listed in the Constitution, and thus to exclude from Congress a person duly elected by constituents who meets all three of the expressed requirements for membership – age, citizenship, and residence. Warren noted that if the Constitution is interpreted in light of the principle that the people may choose whom they please to govern, the Court's holding did not present an embarrassing confrontation between the Court and Congress. Nor were any other political question factors "inextricable from the case at bar" because the Court was merely engaged in traditional constitutional interpretation. Indeed, the decision that Congress may not add qualifications to those listed in the Constitution is similar to the Court’s conclusion in *Marbury v. Madison*, discussed at § 17.2.2.1.A nn.101-07, that Congress cannot add cases to the Supreme Court’s original jurisdiction. In both cases, the constitutional text is determinative.

Another decision applying the *Baker v. Carr* factors is *Davis v. Bandemer*.\(^{557}\) In this case, the Court decided that a state’s political gerrymandering might violate the Equal Protection Clause, and was not a political question. In reaching this conclusion, the instrumentalists on the Court were joined by Justice White, as they often were concerning enforcement of federal remedies for alleged constitutional violations, as discussed at § 10.3.3, and by moderate natural law Justice Powell.

Formalist Chief Justice Burger called the question political, along with Justices who lean toward conservative Holmesian deference to state government actions, Justices Rehnquist, and in her early

years on the Court, Justice O’Connor. In her opinion, Justice O’Connor said that the Court had not found any judicially manageable standards to determine when such a gerrymander was a violation, and the issue is a classic issue which calls for a non-judicial policy decision by political actors in each state. Political gerrymandering cases are different than the “one person, one vote” standard for population malapportionment, involved in *Baker v. Carr*, or cases involving racial discrimination in redistricting, discussed at § 26.2.1.5, where the Court has been able to adopt agreed-upon standards of review. Reflecting the difficulty in determining a test for the constitutionality of a political gerrymander, a 4-Judge plurality of Justices Brennan, White, Marshall, and Blackmun adopted one approach, while Justices Powell and Stevens adopted a different approach.

During the instrumentalist era, however, some issues were found to be political questions under the *Baker v. Carr* doctrine. For example, in *Gilligan v. Morgan*, the plaintiff sought an injunction with respect to training the national guard so it would not deny due process by using fatal force in suppressing civilian disorders. The Court said that Art. I, § 8, cl. 16 vested training of the militia to Congress. Chief Justice Burger’s opinion also spoke of the lack of judicial competence and the separation of powers concern that control of the military should be in the hands of elected persons, although Burger’s opinion did note, consistent with *Baker v. Carr*’s case-by-case approach, that “we neither hold nor imply that the conduct of the National Guard is always beyond judicial review.”

The issue of the constitutionality of the United States military action in Vietnam was presented to lower courts during the 1960s and 1970s, since Congress never formally declared War against Vietnam, passing only the “Gulf of Tonkin Resolution.” A number of lower courts ruled that issues surrounding the legality of military action in Vietnam were political questions, applying the factors in *Baker v. Carr*, but the Supreme Court never took certiorari in any of those cases.

A final important instrumentalist-era case involving the political questions doctrine is *Goldwater v. Carter*. In *Goldwater*, members of Congress sought a declaration that President Carter's
termination of a treaty with Taiwan deprived them of their constitutional role in making law. The Court dismissed without a majority opinion. The question, narrowly viewed, was whether the President alone may recognize or withdraw recognition from foreign governments. Viewed more broadly, the question was the authority of the President in the conduct of foreign relations, and the extent to which the Senate or the Congress is authorized to negate actions of the President in that area. For four Justices, Justice Rehnquist reasoned broadly in a pre-\textit{Baker v. Carr} style and, relying on the Holmesian-era case \textit{Coleman v. Miller}, said these were political questions. \textit{Coleman} was directly analogous, said Justice Rehnquist, because the Constitution has express text on how the Senate participates in the ratification of a treaty, but is silent on its participation in the abrogation of a Treaty, and different termination procedures might be appropriate for different treaties. Since the Constitution is silent on the matter, there are no judicially manageable standards to govern court review, and thus the matter “must surely be controlled by political standards.”

Justice Powell, who usually wrote from the natural law perspective, applied the factor analysis of \textit{Baker v. Carr} to find that the issue in the case was not a political question. He said no constitutional provision unquestionably commits the power to terminate treaties to the President alone, there was no lack of judicially discoverable and manageable standards for resolving a case of presidential power, and no special considerations regarding mutual respect called for the Court to avoid deciding the case. Further, if the case were ripe, a decision would eliminate multiple interpretations. However, since Congress had remained silent and there was no impasse, the case was not ripe for resolution.\textsuperscript{563}

Justice Brennan agreed with Justice Powell that the political question doctrine did not always apply when the question was whether a particular branch has been constitutionally designated as the repository of political decision-making power. On the merits, he would hold that the President alone has power to recognize and withdraw recognition from foreign governments.\textsuperscript{564} Justices White and Blackmun voted to set the case for argument. Marshall concurred in the result to remand the case to the district court with instructions to dismiss the complaint.\textsuperscript{565}

\section*{§ 17.3.4.5 Modern Political Questions Doctrine: 1986–Today}

Two relatively easy cases involving the political questions doctrine decided since 1986 are \textit{United States v. Munoz-Flores} and \textit{New York v. United States}. In \textit{Munoz-Flores},\textsuperscript{566} the Court held that whether a law was passed in violation of the Origination Clause, which requires bills for raising revenue to originate in the House of Representatives, was not a political question. The Court concluded that just as judicially manageable standards existed in \textit{Powell v. McCormack} to determine

\textsuperscript{563} \textit{Id.} at 996-97, 998-1002 (Powell, J., concurring in the judgment).

\textsuperscript{564} \textit{Id.} at 1006-07 (Brennan, J., would grant the petition for certiorari and affirm the judgment of the Court of Appeals, which held that the President has that recognition power).

\textsuperscript{565} \textit{Id.} at 997, 1006 (Blackmun, J., joined by White, J., would grant the petition for certiorari and set the case for oral argument); \textit{id.} at 996 (Marshall, J., concurs in the result).

\textsuperscript{566} 495 U.S. 385, 389-93, 397-401 (1990).
congressional power under the Qualifications Clause, judicial manageable standards existed to determine congressional power under the Origination Clause. On the merits, the Court then held that a statute creating a particular program and raising revenue for that program was not a bill for raising revenue within the Origination Clause, as noted at § 17.1.3.4.

In New York v. United States, the Court raised, but did not have to decide, the question whether cases brought under the Guarantee Clause are always nonjusticiable, or whether a better rule would be that the nature of a claim, rather than the nature of the clause, should determine whether the claim was justiciable. The fact that the Court left the question open, however, suggests a predisposition to continue repudiation of the category approach of the pre-instrumentalist era, and follow the case-by-case approach adopted in Baker v. Carr. The Guarantee Clause issue could be avoided in New York because the case was decided under the 10th Amendment, as discussed at § 18.4.5.

Given the natural law respect for precedent, for reasoned elaboration of the law, and a predisposition to decide cases on a fact-by-fact basis, it is likely that political questions doctrine will continue to be determined by the six-factor Baker v. Carr approach. However, without the instrumentalist predisposition to find cases are not political questions so the Court can rule on the merits of the lawsuit, the make-up of the Court today suggests that it will likely find more questions are political questions than did the instrumentalist Court.

For example, in Vieth v. Jubelirer, a four-Justice plurality of formalist Justices Scalia and Thomas, Holmesian Chief Justice Rehnquist, and natural law Justice O’Connor departed from Davis v. Bandemer and held that all questions involving political gerrymandering are political questions not appropriate for court review. They based this conclusion largely on the fact that no judicially manageable standards had been developed by the Supreme Court or the lower federal courts during the 18 years between Davis and Vieth to guide resolution of the issue. To give some greater guidance in applying the Baker v. Carr factors, they also noted that in their view the six factors of Baker v. Carr are “probably listed in descending order of importance and certainty.”

Reflecting the natural law predisposition for case-by-case adjudication, Justice Kennedy concurred in Vieth, but indicated that he would not foreclose the possibility that in the future judicially manageable standards could be developed reflecting “some limited and precise rationale” to guide court resolution of political gerrymandering cases. The difficulty in developing such standards was underscored by the four Justices in dissent in Vieth, who adopted three different standards to test the constitutionality of political gerrymandering.

Id. at 306 (Kennedy, J., concurring in the judgment).

Id. at 317-19 (Stevens, J., dissenting); id. at 343-47 (Souter, J., joined by Ginsburg, J., dissenting); id. at 355-60 (Breyer, J., dissenting).
An easier case for deciding something is a political question was *Nixon v. United States.* In *Nixon*, the Court held that whether Congress could have testimony taken before a Committee in an impeachment trial was a political question. Chief Justice Rehnquist’s opinion was joined by formalist Justices Scalia and Thomas and natural law Justices O'Connor and Kennedy. Applying *Baker v. Carr*, Rehnquist said that the Constitution’s text, which grants the Senate the "sole power" to try impeachments, indicates that the Constitution left to the Senate alone the authority to decide how the individual should be tried. Further, the word "try" lacks sufficient precision to afford a judicially manageable standard of review. Also counseling against justiciability were prudential concerns about lack of finality and the difficulty of fashioning relief. The concern that the Senate be checked was met by two safeguards: the division of impeachment power, with the House having the sole power to accuse, and the two-thirds vote in the Senate required to convict.

Adopting a perspective more typical of the instrumentalist-era Court, Justice White, joined by Justice Blackmun, said that not every question regarding trying impeachments was a political question. In their view, the framers intended for judicial review to ensure that the Senate adhered to a minimal set of procedural standards in conducting impeachment trials. On the merits, they concluded that the use of a fact-finding committee was compatible with the Constitution's command that the Senate "try all impeachments." In a separate concurrence, Justice Souter also concluded that not every issue regarding trying impeachments is a political question. He noted that although the Constitution contemplates that the Senate can provide for issues relating to process, the Court should interfere if the Senate's actions seriously threaten the integrity of its results, as if it used a coin-toss.

Justice Stevens concurred with the majority’s conclusion that all questions relating to the Senate trying impeachments are political questions, but he reached the result on different grounds. Justice Stevens concluded that “the Framers decided to assign the impeachment power to the Legislative Branch”; that “respect for a coordinate branch of government forecloses any assumption that improbable hypotheticals like those mentioned by Justice White or Justice Souter will ever occur”; and that “wise policy of judicial restraint” supports this view.

Based on similar reasoning of an issue being committed to the discretion of another branch, the Ninth Circuit has held whether to place particular items on a “commodity control” list is “quintessentially matters of policy entrusted by the Constitution to the Congress and the President, for which there are not meaningful standards of judicial review.”

§ 17.3.4.6 General Principles Underlying Political Questions Doctrine

The most complete statement by the Court on the political question doctrine is the six-factor analysis of *Baker v. Carr*. Justice Brennan there said the doctrine is primarily a function of the separation of powers, but he did not state any principles to explain why each factor is relevant to the doctrine. In *Goldwater v. Carter*, Justice Powell did not offer any theory, but did usefully group the *Baker v. Carr* factors into three categories, as indicated at § 17.3.4.4 n.555. These categories group the six factors under three of the six general sources of constitutional meaning: text (the first *Baker* factor), contextual considerations of separation of powers (*Baker* factors two and three), and prudential considerations (*Baker* factors four, five, and six).

In practice, the other three sources of constitutional meaning – history, legislative and executive practice, and precedents – are also used in political questions cases. Where relevant, the Court has resorted to arguments of history, such as the history discussed in *Nixon v. United States* surrounding impeachment provisions. The nature of legislative and executive practice concerning foreign relations was important to Justice Rehnquist in his opinion in *Goldwater v. Carter*. Prior court precedents on political questions are always relevant in deciding each new case.

Scholars have struggled to provide a general theory of political questions doctrine. Since the matter includes prudential concerns, it is unlikely that the Court will tie its hands by any general theory. Even so, an effort to identify a theory may help in case analysis. From an analytic perspective, several professors have written that there is nothing more to the political question doctrine than ordinary constitutional interpretation. For example, Professor Wechsler has said that the only acceptable use of the doctrine is when the Court decides that the Constitution commits a question to another branch using standard analytical reasoning and normal rules of construction. To the contrary, a functional analysis of the role of the Court has been proposed by Professor Sharpf. He said that in determining whether to decide a certain issue or case the Court should consider factors such as the difficulty of understanding the broad picture in foreign relations cases; the need for uniformity of decision; and the wider responsibilities of other branches, as where President Roosevelt dealt with Russian debts in connection with recognizing the Soviet government. However, reflecting the perspective of an instrumentalist functional view, Professor Sharpf also suggested that the doctrine should not be applied if important individual rights are at stake.

government, there exist no judicially manageable standards to determine propriety of executive actions, and adjudication would require non-judicial policy determinations) [S]

576 444 U.S. at 1004-05.

Applying a functional analysis from a Holmesian deference to government perspective, Professor Bickel contended that the political question doctrine does not involve normal constitutional interpretation. Instead, there is “something different about it, in kind, not in degree, from the general 'interpretative process,' something greatly more flexible, something of prudence, not construction and principle.” The political questions doctrine, he said, ultimately rests on “the Court's sense of lack of capacity, compounded in unequal parts of (a) the strangeness of the issue and its intractability to principled resolution; (b) the sheer momentousness of it, which tends to unbalance judicial judgment; (c) the anxiety, not so much that the judicial judgment will be ignored, as that perhaps it should be but will not be; (d) finally, [the] inner vulnerability, the self-doubt of an institution which is electorally irresponsible and has no earth to draw strength from.”

Other authors have adopted variations of these views. One coursebook on Constitutional Law suggests, "[T]he result in *Goldwater* may be an appreciation by the Court of the need in a complex, changing and dangerous world for immediate presidential action. *Goldwater* may thus be seen as less a political question case than as another chapter in the steady accretion of executive power in the field of foreign relations." Professor Tribe has said that the doctrine does not put any provisions of the Constitution off-limits to judicial interpretation. However, "it does require federal courts to determine whether constitutional provisions which litigants would have judges enforce do in fact lend themselves to interpretations as guarantees of enforceable rights." Tribe continued, "[U]ltimately, the political question doctrine, like other justiciability doctrines, at bottom reflects the mixture of constitutional interpretation and judicial discretion which is an inevitable by-product of the efforts of federal courts to define their own limitations.

A possible explanation for the paucity of theory is that the Court changed its rationale for the political question doctrine in *Baker v. Carr* during the instrumentalist era and only now is beginning slowly to return to pre-instrumentalist approaches. During the formalist period, the Court tried to lay down some rules as to which clauses of the Constitution, in their application, presented only political questions. The Court also undertook to state what particular kinds of issues, such as the President's power in foreign relations, present only political questions. However, *Baker v. Carr*, decided in 1962, said the Court had been overgeneralizing and, in a case-by-case inquiry, should consider whether one or more of a list of factors was inextricable from the case at bar. Under that approach, any clause of the Constitution which might reasonably be interpreted as granting an individual right would probably not be held to raise a political question.

The Court still cites the *Baker* factors, as organized by Powell in *Goldwater*. Today, however, a majority of the Court is likely to give somewhat greater weight to separation of powers concerns and be prepared to allow other branches to decide questions that the instrumentalists would have

---

582  *Id.* at 107.
decided. Further, it is significant that only three Justices – White, Blackmun and Souter – sought in *Nixon v. United States* to use a rather narrow fact-oriented approach in order to preserve some remnant of judicial review over the Senate's trial of impeachment cases.583

Another factor that should be considered in evaluating the political question cases is the influence of judicial style. Instrumentalists, such as former Justices Douglas, Brennan, Marshall, and Warren, and present-day Justice Stevens, seek to advance sound social policies whenever leeways exist in the law. Thus, they are the least likely to find that a case includes a political question, particularly if avoiding that conclusion creates an opportunity to protect an individual right that a constitutional clause might reasonably be construed to create.

At the opposite extreme, formalists, such as Justices Scalia and Thomas, prefer clear, bright-line rules that are capable of logical and predictable application. With respect to the political questions doctrine, they would tend to prefer the pre-instrumentalist approach whereby certain categories of cases, and certain clauses, were held to present political questions. For cases which are viewed as falling outside these categories, however, formalist judges might be more willing than Holmesian judges, who focus more on functional and prudential considerations, to view the case as justiciable. For example, formalist Justices Butler and McReynolds dissented from the 1939 Holmesian-era case of *Coleman v. Miller*,584 based upon their view that whether a constitutional provision was ratified within a reasonable time was not a political question, but could be guided by court standards of reasonableness. Justice Butler noted that the case fell outside the core holdings of the formalist-era cases concerning certification of ratification being a political question, and was consistent with *Dillon v. Gloss*, which had held in 1921 that the seven-year period for ratification of the 18th Amendment regarding Prohibition was reasonable.

Holmesians emphasize the need for judicial restraint and deference to legislative and executive practice. With respect to political questions, that deferential posture would tend to support finding a question political, particularly for an extreme Holmesian, such as Professor Alexander Bickel, or Justices Frankfurter and Brandeis during the Holmesian era of the Court. On the other hand, the functional aspect of the Holmesian approach would support an analysis based on a range of prudential considerations, as in *Baker v. Carr*, rather than a rigid formalist, categorical approach. Chief Justice Rehnquist has written many opinions which evidence this style. His opinion in *Nixon v. United States* used the concepts introduced by Justice Brennan in *Baker v. Carr*, as reformulated by Justice Powell in *Goldwater v. Carter*, but in applying that doctrine he is more likely than an instrumentalist to find political questions. Indeed, as noted above, in *Nixon* he found that all three of the categories noted by Powell were present: a commitment to Congress, the lack of judicially manageable standards, and prudential reasons suggesting nonjusticiability.

The natural law predisposition for reasoned elaboration of the law, but deciding cases narrowly, with a facts-of-the-case orientation, discussed at § 12.2.2.2, makes them likely to follow the *Baker v. Carr*

approach, but to give it more structured understanding. This supports, for example, embracing the language in *Vieth*, cited at § 17.3.4.5 n.568, that the six factors of *Baker v. Carr* are “probably listed in descending order of importance and certainty.” At a minimum, it suggests that Justice Powell’s grouping of the six *Baker* factors are listed in descending order of importance: first, text (the first *Baker* factor); second, contextual considerations of separation of powers (*Baker* factors two and three); and third, prudential considerations (*Baker* factors four, five, and six). In particular, consistent with *Vieth* and a focus on reasonable elaboration of the law, a natural law approach will take very seriously, after consideration of whether there exists a textually demonstrable commitment, the second *Baker* factor of whether judicially manageable standards exists. Both Justices O’Connor and Kennedy focused quite heavily on this factor in their opinions in *Vieth*.585

Such a natural law approach would be consistent with current doctrine, discussed above throughout § 17.3.4, where questions of a “republican form of government” under the Guarantee Clause; the circumstances regarding “valid ratification” of constitutional amendments or “political gerrymandering”; military matters of “proper” training of troops or “valid declarations of war”; foreign policy issues regarding matters like “valid termination of treaties”; issues of legislative discretion, such as what conduct is a “high crime or misdemeanor” for purposes of impeachment or “valid procedures” to try impeachments; and issues of executive discretion, like placing names on a “commodity control list,” are regarded as political questions.586

§ 17.4 Consequences of Having a Justiciable Claim

§ 17.4.1 As Applied Versus Facial Challenges

Litigants can attack the constitutionality of government action in two ways: they can bring a facial challenge to the law, alleging that it is unconstitutional in all of its applications, or they can bring an as-applied challenge, alleging that the law is unconstitutional as applied to the particular facts of their case. However, because standing doctrine requires a litigant to demonstrate an injury-in-fact, caused by the challenged conduct, redressable by the Court, discussed at § 17.3.1, it has been noted:

586 See also Motion Systems Corp. v. Bush, 437 F.3d 1356 (Fed. Cir. 2006) (President's discretionary decision to deny import relief under U.S.-China Relations Act to the United States industry manufacturing pedestal actuators was political question, and not subject to judicial review as outside the scope of authority delegated to him by Congress); Whiteman v. Dorotheum GmbH & Co. KG, 431 F.3d 57 (2nd Cir. 2005) (suit stemming from Nazi confiscation of property from Austrian Jews, which is last suit of its kind to be filed in United States district courts, is non-justiciable political question in light of United States government assertion of foreign policy interests embodied in executive agreements with Austria to establish fund to settle such claims once all related suits are dismissed).
There is no single distinctive category of facial, as opposed to as-applied, litigation. All challenges to statutes arise when a litigant claims that a statute cannot be enforced against her [or him]. In the course of as-applied litigation, rulings of facial validity sometimes occur, but they do not reflect trans-substantive rules governing a purported general category of facial challenges. Rather, rulings that a statute is facially (or partly) invalid are the consequence of the particular doctrinal tests that courts apply to resolve particular cases.587

In United States v. Salerno,588 the Supreme Court stated that to succeed on a facial challenge the challenger labors under a “heavy burden” and “must establish that no set of circumstances exists under which the Act could be valid.” In practice, two kinds of facial challenges appear to exist:

First, a facial challenge may be asserted as an “overbreadth facial challenge,” which predicates facial invalidity on some aggregate number of unconstitutional applications of an otherwise valid rule of law. Second, and quite distinctly, a facial challenge may be asserted as a “valid rule facial challenge,” which predicates facial invalidity on a constitutional defect inhering in the terms of the statute itself, independent of the statute’s application to particular cases.589

Although the issue is not without dispute, the best reading of the Court’s cases suggests that Salerno’s “no set of circumstances” language applies only to the “valid rule facial challenge” cases, thus permitting a finding of unconstitutionality in the “overbreadth” cases based on a “substantial” number of invalid applications, even though some set of circumstances exist where the statute might be valid.590 In such cases, an individual is permitted to bring the lawsuit even if the statute might be constitutional as applied to that individual’s activities, based on a concern with “chilling” the rights of others whose behavior might be affected by the statute’s substantial overbreadth.

As has been noted, when the Court permits such cases to go forward, the Court is really granting third-party standing to an individual to vindicate the rights of other parties not before the Court whose behavior might be affected by the statute under consideration.591 Because this “substantial overbreadth” doctrine is most prominently applied in First Amendment free speech cases, the “substantial overbreadth” doctrine is discussed at § 29.6.1.5, despite formally being a Fifth and 14th Amendment due process issue.

590  See generally id. at 371-85.

591  Id. at 369-70; Fallon, supra note 587, at 1359-64.
§ 17.4.2  The Severability Issue

If a particular provision in a statute is determined by a court to be unconstitutional, the court must decide whether to "sever" that provision from the statute, and then enforce the rest of the statute as written, or whether to hold that the entire statute is unconstitutional. Regarding this issue of severability, the Supreme Court stated in *INS v. Chadha}*592 that "invalid portions of a statute are to be severed ‘[u]nless it is evident that the Legislature would not have enacted those provisions which are within its power, independent of that which is not.’" The Court similarly noted in *United States v. Raines*593 a preference for enjoining only the unconstitutional applications of a statute while leaving other applications in force.

Three interrelated principles inform this approach to remedies. First, the Court tries not to nullify more of a legislature's work than is necessary, for "[a] ruling of unconstitutionality frustrates the intent of the elected representatives of the people."594 As the Court noted back in 1921, it is axiomatic that a "statute may be invalid as applied to one state of facts and yet valid as applied to another."595 Accordingly, the Court has indicated that the "normal rule" is that "partial, rather than facial, invalidation is the required course," such that a "statute may . . . be declared invalid to the extent that it reaches too far, but otherwise left intact."596 Second, reflecting the divide between legislative and judicial mandates and institutional competencies, the Court usually refrains from "rewrit[ing] state law to conform it to constitutional requirements" even as the Court strives to salvage it.597 Third, "the touchstone for any decision about remedy is legislative intent, for a court cannot ‘use its remedial powers to circumvent the intent of the legislature.’"598 On the other hand, the Court has noted that it is wary of legislatures who would rely on its intervention, for "‘[i]t would certainly be dangerous if the legislature could set a net large enough to catch all possible offenders, and leave it to the courts to step inside’ to announce to whom the statute may be applied. ‘This would, to some extent, substitute the judicial for the legislative department of the government.’"599

599  *Ayotte*, 126 S. Ct. at 968, citing United States v. Reese, 92 U.S. 214, 221 (1876).
Taken together, these principles create a presumption of severability, or partial invalidity, which in practice is difficult to rebut. On the other hand, where the invalid provision in the statute is sufficiently central to, or a dominant part of, the entire statutory scheme, a court may conclude that the legislature would not have enacted the statute absent that part of the provision. This is particularly true if the offending provision is an exception to, or limitation on, a general grant of power. A court may conclude that Congress would not have passed the statute absent the limitation being valid. Of course, the presumption of severability can be supported by language in the statute that addresses directly the issue of severability. For example, in Chadha, the relevant statute provided, “If any particular provision of this Act, or application thereof to any person or circumstance, is held invalid, the remainder of the Act and the application of the Act to other persons or circumstances should not be affected thereby.”

Where the statute does not have such a severability provision, the Court will resort to statutory interpretation methods to determine congressional intent. For example, the Court noted in United States v. Booker that to determine whether Congress would have preferred “the excision of some of the Act” to the “total invalidation of the statute” the Court will examine “the consequences of the Court’s constitutional requirement in light of the Act’s language, its history, and its basic purposes.” This approach follows the modern approach to statutory interpretation discussed at § 6.2.3.1.

Normally under severability analysis the Court merely excises the offending provision and then enforces the remainder of the statute. To preserve a constitutional statutory scheme, the Court has indicated a willingness, however, as in Booker, to adjust other provisions in the statute to make the overall statute constitutional, as long as the Court determines that would be Congress’ intent.

§ 17.4.3 The Retroactivity Issue and the Standards Used to Consider a Valid Claim

In each case, the Court must decide what is the appropriate doctrine to apply. This could involve a balancing test, discussed at § 7.2.1, or a categorical approach, discussed at § 7.2.2. As discussed at § 21.2.2.1, in most cases the Court applies the so-called "minimal rational review" level of scrutiny. That approach traces from McCulloch v. Maryland, where Chief Justice Marshall wrote, “Let the end be legitimate, let it be within the scope of the constitution, and all means which are appropriate, which are plainly adapted to that end, which are not prohibited, but consist with the letter and spirit of the constitution, are constitutional.” Applying this standard today, the Court requires that parties who attack the constitutionality of governmental action must show that the challenged action was not rationally related to a legitimate governmental purpose. In addition to this base level of minimum rational review, there are a range of additional kinds of scrutiny that the

600 462 U.S. at 932.

602 Id. at 758-59.

603 17 U.S. (4 Wheat) 316, 421 (1819).

Court will apply in various cases. All of these kinds of scrutiny are discussed at §§ 21.2.2.1-21.2.2.4. A summary of these balancing tests appears at § 7.2.1 in Table 7.2.

In each case where the litigant is determined to have a valid claim, the Court must consider whether to make the ruling retroactive, as to the existing case or all cases not yet decided on appeal, or whether to make the ruling prospective only. Before the instrumentalist era, the common law and the Court had recognized a general rule of retrospective effect for the constitutional decisions of the Court, subject to certain limited exceptions. Despite this tradition, during the instrumentalist era, the Supreme Court held that the Constitution neither prohibits nor requires retrospective effect, treating the matter as one of policy. The post-instrumentalist Court has reverted to traditional theory. As stated in 1995 in Reynolds v. Hyde,605 “[W]hen (1) the Court decides a case and applies the (new) legal rule of that case to the parties before it, then (2) it and other courts must treat the same (new) legal rule as ‘retroactive,’ applying it, for example, to all pending cases, whether or not those cases involve predecision events.” This retroactivity doctrine is discussed at § 7.3.4.1.

§ 17.4.4 Remedial Issues

The Supreme Court stated in 1803 in Marbury v. Madison,606 “[E]very right, when withheld, must have a remedy, and every injury its proper redress. The government of the United States has been emphatically termed a government of laws, and not of men. It will certainly cease to deserve this high appellation, if the laws furnish no remedy for violation of a vested legal right.”

The Court phrased this point more precisely in 1977 in Milliken v. Bradley.607 In Milliken, the Court said that the remedy should be determined by the nature and scope of the constitutional violation. The decree must be remedial in nature, that is, it must be designed “as nearly as possible ‘to restore the victims . . . to the position they would have occupied in the absence of such [unconstitutional] conduct.’ . . . [T]he federal courts in devising a remedy must take into account the interests of state and local authorities in managing their own affairs, consistent with the Constitution.”

In deciding what would be an appropriate remedy, the Supreme Court is mindful of its limited role in the system of separation of powers. Thus, the Court noted in Missouri v. Jenkins608 that “although the ‘remedial powers of an equity court must be adequate to the task, . . . they are not unlimited,’ and one of the most important considerations governing the exercise of equitable power is a proper respect for the integrity and function of local governmental institutions.” Nonetheless, where court action is necessary to protect constitutional rights, the Court has been willing to countenance extensive remedial action. For example, federal courts engaged in vigorous remedial action in dealing with the school redistricting cases of the 1960s and 1970s to implement the Court’s decision

606 5 U.S. (1 Cranch) 137, 163 (1803).
in *Brown v. Board of Education* striking down racially segregated school systems, discussed at § 26.2.1.3. Federal courts have also been somewhat vigorous dealing with unconstitutional behavior in prison systems, in state mental health facilities, and with respect to police misconduct.609

Remedies involving these kinds of injunctive or specific performance remedies must be contrasted with remedies involving damage actions. Principles of executive immunity limit damage actions unless the executive official knowingly violates clearly established constitutional rights, as discussed at § 20.1.4.2. State sovereign immunity principles limit damage actions against states, as discussed at §§ 17.2.4.1-17.2.4.3. It has also been noted that “the limitation on money damages shifts societal resources away from reparation for past harms and [through injunctive relief] toward investment in future welfare, continually redistributing societal resources from older to younger citizens.”610

In each of these cases, the court must decide what role they have to play. As Professor Abram Chayes noted in his classic article, *The Role of the Judge in Public Law Litigation*:

In our received tradition, the lawsuit is a vehicle for settling disputes between private parties about private rights. The defining features of this conception of civil litigation are:

1. The lawsuit is bipolar. Litigation is organized as a contest between two individuals or at least two unitary interests, diametrically opposed, to be decided on a winner-takes-all basis.
2. Litigation is retrospective. The controversy is about an identified set of completed events: whether they occurred, and if so, with what consequences for the legal relations of the parties.
3. Right and remedy are interdependent. The scope of the relief is derived more or less logically from the substantive violation under the general theory that the plaintiff will get compensation measured by the harm caused by the defendant’s breach of duty – in contract by giving plaintiff the money he would have had absent the breach; in tort by paying the value of the damage caused.
4. The lawsuit is a self-contained episode. The impact of the judgment is confined to the parties. If plaintiff prevails there is a simple compensatory transfer, usually of money, but occasionally the return of the thing or the performance of a definite act. If defendant prevails, a loss lies where it has fallen. In either case, entry of judgment ends the court’s involvement.
5. The process is party-initiated and party-controlled. The case is organized and the issues defined by exchanges between the parties. Responsibility for fact development is theirs. The trial judge is a neutral arbiter of their interactions who decides questions of law only.

if they are put in issue by an appropriate move of a party.611

In contrast, in public law litigation, the role of the judge may be quite different. As stated by Professor Chayes:

The public law litigation model portrayed in this paper reverses many of the crucial characteristics and assumptions of the traditional concept of adjudication:

(1) The scope of the lawsuit is not exogenously given but is shaped primarily by the court and parties.
(2) The party structure is not rigidly bilateral but sprawling and amorphous.
(3) The fact inquiry is not historical and adjudicative but predictive and legislative.
(4) Relief is not conceived as compensation for past wrong in a form logically derived from the substantive liability and confined in its impact to the immediate parties; instead, it is forward looking, fashioned ad hoc on flexible and broadly remedial lines, often having important consequences for many persons including absentees.
(5) The remedy is not imposed but negotiated.
(6) The decree does not terminate judicial involvement in the affair: its administration requires the continuing participation of the court.
(7) The judge is not passive, his function limited to analysis and statement of governing legal rules; he [or she] is active, with responsibility not only for credible fact evaluation but for organizing and shaping the litigation to ensure a just and viable outcome.
(8) The subject matter of the lawsuit is not a dispute between private individuals about private rights, but a grievance about the operation of public policy.612

These two models of adjudication are presented by Professor Chayes as bipolar opposites. In many cases litigation may involve aspects of each. For example, in public interest litigation, a remedy may have to be imposed if the parties cannot agree upon a negotiated “consent decree.” Further, some public interest cases may begin as a dispute by a private individual seeking traditional compensatory damage relief or an injunction against some governmental action based on an “as applied” challenge, but may morph into a broader classic public interest case during the course of litigation.

As might be expected, instrumentalist judges tend to be the most willing to have judges take on the public interest litigation model of judicial activism. Formalist judges are most comfortable with the traditional lawsuit model, followed closely by Holmesian judges, with their deference to government posture. Given their analytic, but normative decisionmaking background, natural law judges can be expected to try to balance the appropriate role for each kind of litigation consistent with a desire for reasoned elaboration of the law.

612 Id. at 1302.
Whether in any case, any particular judicial decree, or consent decree entered into by parties against the backdrop of the public law litigation model of adjudication, is a good or bad idea, can be a matter of some dispute. Details of the various judicial decisions on constitutional law issues are discussed in the remaining Chapters 18-32 of this book. Summarizing the position of those who are concerned about some of these Court decisions, it has been noted:

[In 1976,] Chayes concluded that the anti-democratic consequences were acceptable because the outcomes as he saw them had been good, and because judges who would be in charge of reforms would be restrained by institutional factors within the judicial culture, such as the general expectation as to competence and conscientiousness, professional traditions, and accepted canons of office.

More than a quarter century later, it is clear that the judges are not really in charge and the outcomes are sometimes strikingly bad. Under many consent decrees, effective control of the state or local governmental institution is shifted from elected officials to an ad hoc group of lawyers that writes and administers the judicial regime – we call them the “controlling group.” Consent decrees are plagued by unintended consequences, yet are difficult to modify in light of experience and changing circumstances. \(^{613}\)

CHAPTER 18: FEDERALISM

§ 18.1 National Power: Its Nature and Scope

As noted at the beginning of Part IV, the Preamble to the Constitution announced the broad purposes for which the Constitution was framed. It states: “We the People of the United States, in Order to form a more perfect Union, establish Justice, insure domestic Tranquility, provide for the common defence, promote the general Welfare, and secure the Blessings of Liberty to ourselves and our Posterity, do ordain and establish this Constitution for the United States of America.”

As noted at § 5.2.1 nn.25-27, in his 1953 treatise, Politics and the Constitution,¹ Professor Crosskey argued that since the Preamble covers virtually all the subjects for which a government might regulate, the Constitution must have been intended to create plenary power in the federal government, subject to limitations on power indicated by clear constitutional text. In his 1833 Commentaries on the Constitution of the United States,² Justice Story discussed more limited inferences to be drawn from the Preamble. He stated that the Preamble’s “true office is to expound the nature and extent and application of the powers actually conferred by the Constitution, and not substantively to create them.”³ Justice Story then indicated, consistent with a natural law focus on “purpose” and “mischiefs to be remedied,” discussed at § 12.2.1.1 nn.8-12, how each of the various clauses of the Preamble were related to various mischiefes which had arisen under the Articles of Confederation that needed to be remedied.⁴ Various purposes behind constitutional doctrine, organized consistent with the Preamble, are discussed in Chapter 8, which is entitled, “The Purposes or Ends of Constitutional Interpretation.”

With regard to the specific issue of federal versus state power, as with any constitutional issue, this subject can be studied in terms of the literal text of a constitutional provision; arguments of purpose; arguments of context, particularly related provisions within the Constitution and theories of federalism which structured the Constitution; the history leading up to a constitutional provision’s ratification; legislative, executive, and social practice under that provision; the Supreme Court’s precedents in interpreting that constitutional provision; and prudential considerations. Over time, legislative and executive practice and Court precedents have become the most important elements. However, it is worthwhile to start by considering text, structure, and history.

---

On the preamble generally, see Milton Handler, Brian Leiter & Carole E. Handler, A Reconsideration of the Relevance and Materiality of the Preamble in Constitutional Interpretation, 12 Cardozo L. Rev. 117 (1990).
§ 18.1.1  Background for Studying the Nature of Federal Power: Text, Structure of the Constitution, and History

Perhaps the most important single section of the Constitution is Article I, § 8, the enumeration of congressional powers. It begins with the phrase, "The Congress shall have Power," and then continues in seventeen clauses to list powers, concluding in clause 18 with the Necessary and Proper Clause. That clause provides that Congress has the power “To make all Laws which shall be necessary and proper for carrying into Execution the foregoing powers, and all other Powers vested by this Constitution in the Government of the United States, or in any Department or Officer thereof.”

The greatest constitutional struggles in the first 150 years of our Nation, apart from the related question of secession, were fought over the meaning of three of the provisions in Article I, § 8: clause 1, the General Welfare Clause; clause 3, the Commerce Clause; and clause 18, the Necessary and Proper Clause. The political background for much of this time was: (1) slavery and the racial problems that developed in the aftermath of slavery; (2) economic policy, particularly regarding tariffs and the protection of manufacturing in the United States from foreign competition; and (3) the role of the federal government, as opposed to state governments, in the promotion of economic activity generally.

Clause 1 of Article I, § 8, which includes the General Welfare Clause, provides: “The Congress shall have Power To lay and collect Taxes, Duties, Imposts and Excises, to pay the Debts and provide for the common Defence and general Welfare of the United States, but all Duties, Imposts and Excises shall be uniform throughout the United States.” There are at least three ways that one could read this Clause:

1. The narrowest view, espoused originally by Thomas Jefferson and James Madison, was that it granted a power to tax and spend only with respect to the specifically enumerated legislative powers listed in the remaining 17 clauses of § 8.5 Jefferson’s views on this matter are summarized at § 7.1 nn.5-8.

2. Alexander Hamilton wrote that it granted a power to levy taxes generally, and an independent power to pay the debts and provide for the common defense and general welfare – in short, a general spending power. Justice Story agreed with this view in his 1833 work, Commentaries on the Constitution of the United States.6

3. The broadest interpretation of this Clause is that it grants plenary power to Congress to legislate on any matter, through regulation or by spending, as part of a plenary power to levy taxes, pay debts, and provide for the common defense and general welfare of the United States.7

---

5 See generally Crosskey, supra note 1, at 404-07.

6 Id. at 401-03, discussing, inter alia, Joseph Story, Commentaries on the Constitution of the United States §§ 984-88 (1833).

7 Id. at 391-94.
In his treatise, *Politics and the Constitution*, Professor Crosskey concluded that the correct view was the third, or broadest, view. Responding to the argument that under this view the rest of the enumeration of powers in Article I, § 8 would be superfluous, he said that the primary purpose of the rest of § 8 was not to give the federal government power, but to allocate power and insure that a number of powers which historically, and according to Blackstone, belonged to the executive branch in England, the King, were transferred to the legislative branch.

This broader view has never been adopted by the Supreme Court. Instead, in cases like *United States v. Butler, Steward Machine Co. v. Davis, and Helvering v. Davis*, the Supreme Court has adopted the second view of Hamilton and Story that the General Welfare Clause is a general grant of power to tax and spend, but that congressional power to regulate must be found in one of the remaining clauses of Article I, § 8. Some commentators have argued based on text, context, and history for the first, narrower view of Jefferson and Madison.

The Commerce Clause, Article I, § 8, cl. 3, provides that Congress has the power “to regulate Commerce with foreign Nations, among the several States, and with the Indian Tribes.” The main points of contention in interpreting the Commerce Clause have been: (1) what constitutes “commerce”; and (2) how to interpret the phrase “among the several States.” Regarding the first issue, the question involves whether “commerce” has a limited meaning, restricted mostly to buying and selling, and thus not covering activities such as manufacturing, mining, or agriculture, or does “commerce” have a broader meaning, encompassing all forms of economic commercial activity. Regarding the second issue, the question involves whether “among” means "between," so that only interstate commerce can be regulated by Congress, or does "among" include commerce carried on within a state, interpreting "States" in a collective fashion, so that any commerce carried on within the United States is commerce “among” the States.

---

8 *Id.* at 391-94, 411-41 (discussing among congressional powers listed in Art. I, § 8 that would have raised a concern with the King’s prerogatives in England, those powers carried over from the Articles of Confederation, the power to coin money, cl. 5; to punish piracies and felonies committed on the high seas, cl. 10; and to declare war and grant letters of marque and reprisal, cl. 11; and, among new powers for Congress, to provide copyright-patent protection, cl. 8; to create lower federal courts, cl. 9; to punish for violations of the Law of Nations, cl. 10; to raise and support the military, and provide for their regulation, training, and discipline, cl. 12-16; and to exercise exclusive legislation over the Nation’s capitol, cl. 17).

9 *See* United States v. Butler, 297 U.S. 1, 65-68 (1936) (the General Welfare Clause provides for general taxing and spending power, consistent with Hamilton’s and Story’s views, but the Clause does not give Congress the power to regulate); Charles C. Steward Machine Co. v. Davis, 301 U.S. 548, 581-83 (1937) (social security tax on employers and unemployment compensation scheme constitutional under the General Welfare Clause); Helvering v. Davis, 301 U.S. 619, 640-46 (1937) (social security pension scheme constitutional under the General Welfare Clause).

As discussed at § 18.2.5, the Court has settled on the broader meaning of “commerce” to include all forms of economic activity, but on the more limited interpretation of “among” meaning "between." However, the Court has held consistently since 1937 that congressional regulatory power under the Commerce Clause extends to any subject which, in the aggregate, “substantially affects” interstate commerce between the states.\textsuperscript{11}

Notes on the Constitutional Convention do not authoritatively resolve the scope of the General Welfare Clause or the Commerce Clause. However, they do suggest that the drafters intended for the federal government to have considerable power. The backdrop to the Constitutional Convention was the view that the Articles of Confederation, which had been adopted in 1781, did not give the federal government sufficient power. Although both the Articles of Confederation and the Constitution represented federal systems of government broadly consistent with a “confederate republic” model of government, as discussed at § 15.4.1 nn.57-58, under the Articles there was no federal power to tax, no federal executive branch, no federal judiciary, and no federal power to prevent protectionist legislation passed by various states in the aftermath of the Revolutionary War. Such protectionist legislation, passed by a number of states to protect their own state’s commerce from competition, had the effect of retarding economic growth in the United States generally.\textsuperscript{12}

Faced with this reality, a meeting in Annapolis, Maryland was called and held in the summer of 1786, particularly to focus on the need to amend the Articles to deal with this economic problem and provide for “uniform rules regarding trade.” Although only 5 States sent delegates – New York, New Jersey, Pennsylvania, Delaware, and Virginia – the problems raised at that meeting convinced the participants, including James Madison and Alexander Hamilton, to petition the states for a broader Constitutional Convention the following year. This led to the Constitutional Convention in 1787 in Philadelphia, which framed the current United States Constitution.\textsuperscript{13}

On May 29, 1787, Mr. Randolph opened the Convention by noting a number of defects in the existing Articles of Confederation: there was no security against foreign invasion, there were quarrels between the states, a need for commercial regulations, and a need to make the federal government paramount over state constitutions.\textsuperscript{14}

An early proposal, on May 31, was that the national legislature ought to be empowered to enjoy the legislative rights vested in Congress by the Confederation; and moreover to legislate in all cases to which the separate states are incompetent or in which the harmony of the United States may be

\textsuperscript{11} See, \textit{e.g.}, United States v. Lopez, 514 U.S. 549, 558-60 (1995).

\textsuperscript{14} I Farrand, Records of the Federal Convention of 1787, at 18-19 (1911).
interrupted by the exercise of individual legislation. The "incompetent" clause was objected to as too vague and taking too much from the states. Madison favored an enumeration, but wanted to insure a government that would provide for the safety, liberty, and happiness of the community. Despite this objection, the delegates approved the May 31 proposition 9-0-1.\(^\text{15}\)

On July 17, a substitute was introduced by Mr. Sherman to give Congress the power to legislate in all cases which may concern the common interests of the Union, but not to interfere with matters of the internal police of the states. Clearly this was an attempt to narrow the power of Congress. Gouvernour Morris, who was the floor leader for the Northern States, opposed the motion, saying that the internal police ought to be infringed in many cases. Sherman's motion lost by 8 to 2. The framers then approved a motion, seconded by Morris, to add a clause on legislating for the general interests of the union. As amended, the proposition gave Congress power to make laws binding on the people of the United States in all cases which may concern the common interests of the Union and, moreover, to legislate in all cases for the general interests of the Union and also in those to which the states are separately incompetent or in which the harmony of the United States may be interrupted by the exercise of individual legislation. This passed 8 to 2.\(^\text{16}\)

A Committee of Detail was appointed on July 24 to report a Constitution conformable to Resolutions passed by the Convention. On August 6, the Committee on Detail reported its work as "conformable to the Resolutions passed by the Convention."\(^\text{17}\) Thus, there was no indication in its report that the enumeration was intended to limit the power of Congress in ways not authorized by the initial set of resolutions.

The report looks like the Constitution which ultimately passed, except there was no General Welfare Clause. A debate developed in which Northerners expressed their opposition to the slave trade and Southerners were concerned that the commerce power might be used to interfere with slavery. In order to avoid having the whole convention break down on this issue, a special committee of 11 was appointed on August 22.\(^\text{18}\) On August 24, the Committee, avoiding use of the word “slaves,” recommended that the migration or importation of such persons as any of the states now existing shall think proper to admit shall not be prohibited by Congress prior to the year 1800. On August 25, that language was amended so the bar extended to 1808. Southerners appear to have thought that by then they would have a majority in the House and thus could protect slavery from federal action.

On September 4, the same committee of 11, to whom a number of policy resolutions had been referred, recommended that the clause empowering Congress to levy taxes be amended by adding the Common Defense and General Welfare Clause. This was approved, apparently without debate.

\(^\text{15}\) \textit{Id.} at 53-54. This was part of the "Virginia Plan" to amend the Articles of Confederation.

\(^\text{16}\) II Farrand, Records of the Federal Convention of 1787, at 21, 25-27 (1911).

\(^\text{17}\) \textit{Id.} at 181-82. These actions clearly rejected the more states' rights "New Jersey" plan.

\(^\text{18}\) \textit{Id.} at 374.
Also, "and with the Indian tribes" was added to the Commerce Clause.\textsuperscript{19}

On September 12, the Committee of Style reported a full draft of the proposed Constitution, according to the above decisions.\textsuperscript{20} Then, on September 14, the clause "but all such Duties, Imposts and Excises shall be uniform throughout the United States," was unanimously added after the General Welfare Clause.\textsuperscript{21} The fact that the Uniformity Clause limitation on the taxing power was added at the last minute, independent of the General Welfare Clause, lends some credence to Alexander Hamilton's theory, adopted by Supreme Court majorities, that the General Welfare Clause was intended by the framers to be an independent substantive grant of legislative power, rather than included as part of limiting the taxing power, as is the Uniformity Clause. In contrast, Jefferson and Madison had argued that the “general welfare” language was merely part of limiting the taxing power to being able to tax only “in order” to pay debts and provide for the common defense and general welfare of the United States, general welfare being defined by the enumerated legislative powers listed in the remaining 17 clauses of § 8.

The fact that the South did not have a majority in the House of Representatives by 1808 led to a long battle by Southern interests to limit the commerce power of Congress. This battle was resisted by Chief Justice Marshall and the Marshall Court in terms of constitutional doctrine, but Southerners were remarkably successful for a long time in terms of actual legislative action. Further, as discussed at § 18.2.2, from 1873-1937, the Supreme Court adopted doctrines significantly limiting Congress’ power to regulate commercial activity as part of a Republican pro-business majority on the Supreme Court. As discussed at § 18.2.5, under modern Supreme Court doctrine the internal police power of the states can be infringed by Congress in most cases, and Congress can legislate in economic matters in almost all cases for the general interests of the Nation. However, Congress’ power in non-economic matters is limited to the other powers listed in the Constitution independent of the Commerce Clause. This result is confirmed in \textit{United States v. Lopez}, discussed at § 18.2.5 nn.100-15, decided in 1995, and \textit{United States v. Morrison}, discussed at § 18.2.5 nn.116-18, decided in 2000.

\section*{§ 18.1.2 The Natural Law Approach: The Nature of Federal Power as Spelled Out in \textit{McCulloch v. Maryland}}

The story of what has happened to Congress' power under the Necessary and Proper Clause, the Commerce Clause, and the General Welfare Clause is a great lesson in jurisprudence and American legal history. In 1791, a debate arose involving the constitutionality of Congress creating a national bank. As discussed at § 7.1 nn.5-14, President Washington’s Secretary of State, Thomas Jefferson, counseled Washington that incorporating a bank was not authorized by the Constitution. As a strong proponent of states’ rights, Jefferson also believed a national bank was not a good idea in practice. President Washington’s Secretary of the Treasury, Alexander Hamilton, counseled Washington on why the bank bill was constitutional and prudent. Among other members of Washington’s Cabinet,

\begin{itemize}
  \item \textit{Id.} at 497.
  \item \textit{Id.} at 585, 590 et. seq.
  \item \textit{Id.} at 614.
\end{itemize}
Washington’s Attorney General, Edmund Randolph, sided with Jefferson on the constitutional issue, although Randolph did not join Jefferson in criticizing the bank on policy grounds.22 Congress, in passing the bill, and Washington, in signing it, sided with Hamilton, creating the First National Bank of the United States, with a 20-year charter, from 1791-1811.

When that charter ran out, Congress did not re-authorize the bank. As a competitor to existing state banks of the time, the National Bank was not favored by states’ rights advocates. The difficulties generated by not having a national bank during the War of 1812, however, in terms of not having a central repository for tax receipts, nor a central location from which army and navy personnel could be paid, persuaded the Congress, and President Madison, to authorize a Second National Bank of the United States in 1816, pursuant to a new 20-year charter, from 1816-1836. Congress, in fact, had been persuaded of the need for a bank by 1814, but Madison vetoed the bank bill at that time, although not on constitutional grounds, but on grounds of public policy that the bill did not address reviving the public credit or aiding the treasury in collecting taxes.23

Following chartering of the Second National Bank in 1816, Maryland imposed a tax on notes issued by any branch of the bank located in Maryland. When the cashier of the Baltimore branch refused to pay the tax, Maryland brought suit to recover a forfeit for issuing notes on unstamped paper. The trial court awarded judgment for plaintiff and the Maryland Court of Appeals affirmed. Thus, there was a clash between state interests and those of the United States. Specifically, the issues were whether Congress had the power to create such a bank, and the right of the Maryland to tax it.24

Marshall's opinion in 1819 in McCulloch v. Maryland, sustaining federal power to incorporate a bank, and protecting it from state taxation, is one of the finest ever written in any field of law. It has had more long-lasting influence than any other decision in constitutional law except, perhaps, Marbury v. Madison. The most fruitful way to consider McCulloch is to focus on the process of reasoning that Chief Justice Marshall used to consider the problem.

Among the possible sources of text, context, history, practice, and precedent, Chief Justice Marshall first discussed the arguments of practice and precedent, viewing them as the strongest arguments to uphold the constitutionality of the Bank. Regarding arguments of legislative and executive practice, Marshall noted, “It has been truly said, that this can scarcely be considered as an open question, entirely unprejudiced by the former proceedings of the Nation respecting it. The principle now contested was introduced at a very early period of our history, [and] has been recognized by many successive legislatures.” Indeed, Marshall noted, “The bill for incorporating the bank of the United States did not steal upon an unsuspecting legislature, and pass unobserved. Its principle was

---

completely understood, and was opposed with equal zeal and ability. After being resisted, first in the fair and open field of debate, and afterwards in the executive cabinet, with as much persevering talent as any measure has ever experienced, and being supported by arguments which convinced minds as pure and as intelligent as this country can boast, it became a law. 25 Regarding arguments of precedent, Marshall noted that the principle that the Bank is a constitutionally valid institution “has been acted upon by the judicial department, in cases of peculiar delicacy, as a law of undoubted obligation.” 26

These arguments of practice and precedent had convinced at least one prominent figure, James Madison, that such a bank was constitutional. As President, Madison had signed the legislation creating the Second National Bank in 1816, despite the fact that Madison had opposed the First National Bank in 1791 as unconstitutional, agreeing then with Jefferson’s arguments of text, context, and history, discussed at § 7.1 nn.5-9. However, for Madison, reflecting the natural law theory of interpretation, discussed at §§ 12.2.2.1-12.2.2.2, later legislative and executive action, and judicial precedents, can change the meaning of the Constitution, and had done so in this case, as noted at §§ 5.3.2.1 n.92 & 6.3.1 n.107. Alternatively, it could be argued that Madison’s change of heart regarding the bank’s constitutionality was based only on Madison changing his view on the “necessity” of the national bank, given his experience during the War of 1812, and thus Madison’s change was consistent with a fixed, static view of constitutional interpretation merely interpreting in light of new knowledge what is “necessary” under the “Necessary and Proper Clause.” However, that is not the reason Madison gave in his letter signing the bank bill, which focused on later legislative, executive, judicial, and social practice, as noted at § 6.3.1 n.107, nor is it consistent with Madison’s support throughout his life that such later action (“usus”) can fix the meaning of the Constitution, as discussed at § 6.3.1 nn.105-06.

For the same reason, while Madison initially adopted a narrow view regarding the General Welfare Clause, as noted at § 18.1.1 n.5, it would be inaccurate to characterize this view as the “Madisonian view,” as some commentators have done. 27 The legislative, executive, and judicial practice since 1819, which conform to Hamilton’s and Story’s views, fix that interpretation as proper under the natural law theory of interpretation in which Madison believed. Only if Madison were a formalist, with a “static” focus on text, context, and history, and limited impact of practice and precedent, would Madison today support the views he stated in 1791. As noted at §§ 6.3.4 & 7.1, Thomas Jefferson supported more of a formalist model of interpretation, but not James Madison.

Regarding arguments of text, context, and history, Chief Justice John Marshall began by looking to arguments of purpose, related provisions, and general history. He reasoned that the people had created a government of limited and enumerated powers, but supreme in its sphere of action. Marshall noted the Constitution was not drafted by the framers as a detailed Code. Marshall stated, “A constitution, to contain an accurate detail of all the subdivisions of which its great powers will admit, would partake of the prolixity of a legal code, and could scarcely be embraced by the human

---

26 Id. at 401.
27 See, e.g., Natelson, supra note 10, at 10.
mind. It would probably never be understood by the public. . . . Its nature, therefore, requires, that only its great outlines should be marked, its important objects designated, and the minor ingredients which compose those objects be deduced from the nature of the objects themselves.”

In addition, Marshall compared the related provision in the Articles of Confederation, which excluded implied powers by stating that the powers had to be “expressly delegated” to the Continental Congress, with the 10th Amendment, which states only that powers have to be “delegated” to the federal government, and does not require that they be “expressly delegated.” Indeed, the drafters of the 10th Amendment specifically rejected adding the words “express” to the 10th Amendment, although consistent with the natural law interpretation practice at the time, discussed at §§ 6.2.3.1 nn.64-66 & 12.2.1.3 nn.25-27, Marshall did not make use of this piece of legislative history in his opinion. Based on the comparison of the enacted text of the two documents, however, Marshall similarly concluded that the Constitution does not exclude incidental or implied powers. In particular, Marshall noted that the means for executing the “great powers,” which he referred to as “ample powers on the due execution of which the happiness and prosperity of the nation so vitally depends,” were not enumerated in the Constitution, but were intended to be ample for executing the federal government’s powers, including the powers to levy taxes, borrow money, regulate commerce, declare and conduct war, and raise armies and navies.

Regarding what means could be implied to advance such governmental powers, Marshall stated that the Necessary and Proper Clause gives Congress the power to adopt means conducive to legitimate ends because "necessary" often imports "useful," not “absolute necessity,” as argued by Maryland, and the Constitution, meant to endure for ages and not to be a legal code, was intended to be adapted to various crises. Again, Marshall resorted to arguments of related provisions. The framers had used the phrase “absolutely necessary” in Article I, § 10, cl. 2 of the Constitution regarding preventing states from imposing duties on imports or exports, “except what may be absolutely necessary for executing its inspection Laws,” but did not use a similar phrase in Article I, § 8, cl. 18. Furthermore, as a structural matter, the Necessary and Proper Clause is placed among the grants of legislative power in Article I, § 8, and not among limitations upon those powers listed in Article I, § 9. Therefore, Marshall concluded, consistent with the natural law focus on both literal text (letter) and purpose (spirit), “Let the end be legitimate, let it be within the scope of the constitution, and all means which are appropriate, which are plainly adapted to that end, which are not prohibited, but consist with the letter and spirit of the constitution, are constitutional.”

Marshall continued his opinion in *McCulloch* by saying that where a law is not prohibited and is calculated to effect any object entrusted to the government, all questions about the degree of necessity for choosing a means are for the legislature. It is sufficient that the law be “appropriate.”

---

28 17 U.S. at 407.

30 17 U.S. at 406-09.

31 *Id.* at 409-21.
or “plainly adapted to that end,” and Marshall concluded that “none can deny it [the bank] being an appropriate measure” to aid in the collection and expenditure of revenue to facilitate the execution of various great objects of government.32

After making this observation, Marshall did note that “should Congress under the pretext of executing its powers, pass laws for the accomplishment of objects, not entrusted to the government, it would become the painful duty of this tribunal . . . to say that such an act was not the law of the land.”33 Although it could be argued that this “pretext” language imposes an additional obligation on the Court to consider legislative motives in determining the constitutionality of ordinary legislation, the view of Court precedents has been, and the view of Marshall in private letters was, that this language merely requires Congress to advance legitimate interests, not illegitimate interests outside the scope of constitutionally delegated powers. So viewed, the “pretext” language adds nothing to the modern phrasing of the McCulloch doctrine as requiring statutes to be “rationally related to legitimate government interests.”34

This approach to the Necessary and Proper Clause naturally gives Congress great latitude in terms of determining appropriate legislative means. Not for nothing was this clause called “the Sweeping Clause” by both proponents and opponents of the Constitution at the time of ratification. Under its terms, much legislation can be “swept” under the umbrella of its protective cover, and thus be made constitutional, although the requirement that the legislation be “proper” does impose, as Marshall noted, a requirement that the legislation advance legitimate government objects.35

This conclusion that the Necessary and Proper Clause should be interpreted to give Congress great discretion in deciding upon “appropriate” means to advance “proper” governmental ends has not gone unchallenged. Consistent with Jefferson’s analysis of the Necessary and Proper Clause, discussed at § 7.1 nn.5-9, Maryland argued in McCulloch that “necessary” meant “absolutely necessary.”36 While not adopting such an extreme view, James Madison indicated that “necessary” must mean more than merely “useful” or “appropriate,” or else the clause would expand Congress’ powers too greatly.37 Indeed, even though Madison supported the constitutionality of a national

Granger, The “Proper” Scope of Federal Power: A Jurisdictional Interpretation of the Sweeping Clause, 43 Duke L.J. 267, 270 n.10 (1993) (use of the phrase “Sweeping Clause); id. at 280-311 (discussion of the independent requirements that the legislation be “necessary” and “proper”).

36 17 U.S. at 413-15.

37 Madison’s concerns on this score are well summarized in Randy E. Barnett, The Original Meaning of the Necessary and Proper Clause, 6 U. Pa. J. Const. L. 183, 190-94 (2003).
bank in 1816, Madison criticized this aspect of Marshall’s opinion after *McCulloch* was decided.\textsuperscript{38}

Later commentators focusing on arguments of text, context, and history have also suggested that the Necessary and Proper Clause should have a more limited meaning than that given to it by Marshall in *McCulloch v. Maryland*. For example, Professor Randy Barnett has indicated that while the failure to use the phrase “indispensably necessary” or “absolutely necessary” in the Necessary and Proper Clause does suggest that the State of Maryland’s argument is weak, since had the framers and ratifiers wanted that meaning they were familiar with such a phrase, and would have used it in the Clause, the intent of the framers would have been to have more vigorous scrutiny of the necessity of certain means than Marshall’s mere use of the term “appropriate.”\textsuperscript{39}

There are two main problems with such an approach. The first problem would be to determine how much “need” is required to satisfy this more vigorous “necessary” requirement. No judicially manageable standards have ever been proposed that clearly resolve this issue. Thus, Marshall’s conclusion that the “degree” of the need is substantially within the political discretion of Congress, subject only to an “appropriateness” limitation, or as phrased in contemporary doctrine, “rational related to a legitimate government interest,” as discussed at § 21.2.2.1 nn.49-50, is consistent with a concern regarding a “lack of judicially manageable standards” in the political questions doctrine, discussed at § 17.3.4.6 nn.585-86. Second, the phrase “necessary and proper” was often used in 18th-century agency and trust documents to give the agent or trustee great discretion to determine means to carry out legitimate ends of the grantor, consistent also with Marshall’s approach toward the term.\textsuperscript{40}

While Madison criticized this aspect of *McCulloch* soon after its decision, as noted above, consistent judicial precedents following *McCulloch*, as well as the legislative and executive practice after *McCulloch* consistent with Marshall’s view of congressional power to determine appropriate means, would mean that Marshall’s views would be viewed today even by Madison as the controlling doctrine under a natural law theory of interpretation, despite whatever historical evidence might be noted to support Madison’s views of 200 years ago. Similarly, the more extreme pro-federal government views of Professor Crosskey, noted at §§ 18.1 n.1 & 18.1.1 nn.7-8, which give Congress virtually unlimited power to legislate on any matter, would be rejected today under a natural law theory of interpretation, despite one’s views on the historical evidence that could be used to support that view.

Following the prevailing mode of interpretation at the time, which prevented resort to legislative or constitutional history, as discussed at § 6.2.3.1 nn.64-66, Marshall made no reference in his opinion to the internal deliberations of the Convention regarding the power of Congress to incorporate a national bank. That history would have shown that Congress rejected a general power of incorporation, in part out of a fear that this would give the federal government the power to

\textsuperscript{38} See id. at 201-02.

\textsuperscript{39} Id. at 203-08.

incorporate a bank. The Convention also rejected a more limited proposal to give Congress the power to incorporate companies for the building of canals.\textsuperscript{41} Without such a general incorporation power in the Constitution, most corporations are creatures of state laws, not federal laws.

However, this history is not conclusive on the narrow question of congressional power to incorporate a bank as an institution “necessary and proper” to advance the other enumerated powers in Article I, § 8. This history on incorporation only conclusively establishes the view that a general power to incorporate, independent of a Necessary and Proper Clause analysis, lies with states, not the federal government.\textsuperscript{42} Further, unlike the great weight placed upon subjective specific historical intent, as in the interpretation theory of Raoul Berger, discussed at § 9.3.4, under the natural law theory of interpretation, the sources of interpretation other than history would override this historical evidence in any event.\textsuperscript{43}

Chief Justice Marshall also touched in \textit{McCulloch} on the general question of the relationship between the federal government and the states in terms of the “dual theory of sovereignty.” As this part of the opinion is directly related to interpretation of the 10\textsuperscript{th} Amendment, the discussion of this part of the \textit{McCulloch} opinion is reserved for § 18.4.5 nn.23-38, and its discussion of 10\textsuperscript{th} Amendment issues. Finally, regarding taxation, Marshall said that states have no power, by taxation or otherwise, to burden the operation of federal laws because this would be to act upon a government created by others as well as themselves, a government whose law is supreme.\textsuperscript{44} However, states can tax the real property owed by a national bank or the interests Maryland citizens have in the bank. This aspect of intergovernmental immunities doctrine is discussed at § 20.2.1.

\textit{McCulloch v. Maryland} has remained a vital precedent in constitutional law. Recurring to reasoned deductions from the general purpose of the Constitution, its structure, history, legislative and executive practice, and judicial precedents, the Chief Justice created a relatively deferential approach toward judicial review of congressional enactments. Once a legitimate governmental interest is established, all that need be established is that the legislative means are an “appropriate” way to advance that legitimate end.

As discussed at § 21.2.2.1 nn.49-50, this requirement is phrased in modern doctrine as legislation having to be “rationally related to a legitimate governmental interest.” While \textit{McCulloch}'s holding, and most of its reasoning, have rarely been questioned by later Supreme Court majorities, during

\textsuperscript{44} 17 U.S. at 425-37.
the formalist era, between 1873 and 1937, the Court did not always leave questions of the degree of necessity to Congress. As discussed at § 27.3.2.1 nn.149-66, during the Lochner era the Court applied a “reasonableness” test that, while never clearly defined, was similar to that proposed by Madison or Professor Barnett in that it second-guessed legislative judgment more than during the natural law era test of “appropriate” government action, or the post-1937 phrasing of a “rational relationship” between means and ends.

§ 18.2 Congressional Power to Regulate Under the Commerce Clause

§ 18.2.1 The Natural Law Approach: Broad Power to Regulate Commercial Activity Which Concerns More States Than One

§ 18.2.1.1 The Marshall Court: The Concurrent Power Approach

In the early 1800s, broad interpretation of Congress' Commerce Clause power was opposed by Southern political interests who feared federal regulation of the slave trade, which, according to the Constitution, was possible beginning in 1808. Southern political interests were also concerned about the aggrandizing of centralized economic power in the large Northern corporate banking centers, such as New York, Philadelphia, and Boston. They preferred economic policy to be left to the market, or a matter of experimentation among the states, rather than a coordinated federal approach. Southern political strategy was thus to limit federal power to regulate commerce among the states.

For example, in 1817, President Madison vetoed a law for building national roads and canals because he said those matters were not enumerated and could not be included in regulating commerce among the states. In 1822, President Monroe vetoed repair of the Cumberland Road for similar reasons and sent a copy of his veto message to the Justices. Following Monroe’s veto, Justice Johnson sent President Monroe a letter saying that all the Justices agreed that McCulloch v. Maryland settled the matter in holding that the grant of a principal power carries all adequate and appropriate means of executing it, and selection of those means rests with Congress and the President, who are supreme. Without regard to justifying such a federal law as a necessary and proper adjunct to the Commerce Clause, such a law would be clearly constitutional today under Hamilton’s and Story’s views on the spending power of the General Welfare Clause, which the Supreme Court has adopted, as noted at §§ 18.1.1 n.9 & 18.3.2.1 nn.158-61.

The first major Commerce Clause case decided by the Supreme Court was Gibbons v. Ogden. That case involved whether Congress could pass laws regulating navigation in New York Harbor.

45 See generally Arthur M. Schlesinger, Jr., The Age of Jackson 115-31 (1945).

46 30 Annals of Cong. 211, 211-12 (1817) (Madison’s veto); 46 Annals of Cong. 1838, 1849 (1822) (Monroe’s veto).

47 Quoted in 1 Warren, The Supreme Court in United States History 596-97 (1926).

48 22 U.S. 1 (1824).
and if Congress could pass such laws, how that affected the ability of states to pass laws on the same subject-matter. The case raised the question of what the terms “commerce” and “among the states” meant under the Commerce Clause.

On the first question, Marshall concluded that “commerce” included all kinds of commercial intercourse, including navigation. Marshall’s main argument in support of this conclusion was an argument of legislative, executive, and social practice. Marshall noted, “If commerce does not include navigation, the government of the Union has no direct power over that subject. . . . Yet this power has been exercised from the commencement of the government, has been exercised with the consent of all, and has been understood by all to be a commercial regulation.” Marshall also relied upon an argument of purpose, noting, “The power over commerce, including navigation, was one of the primary objects for which the people of America adopted their government, and must have been contemplated in forming it.” A related provision argument also confirmed this reading. Article I, § 9, states that “no preference shall be given, by any regulation of commerce or revenue, to the ports of one state over those of another.” Marshall noted that in this context “commerce” clearly includes navigation because “the most obvious preference which can be given to one port over another, in regulating commerce, applies to navigation.”

These arguments of practice, purpose, and related provisions clearly outweighed for Marshall any more formalist-inspired argument that the literal textual definition of “commerce” relates only to buying and selling, and thus Congress’ power under the Commerce Clause should be so limited. According to dictionaries in the 18th Century, the term “commerce” was ordinarily defined as “Exchange of one thing for another; trade; traffick.” However, even early states’-rights advocates, such as St. George Tucker, famous for his 1803 annotated edition of Blackstone’s Commentaries, adopted the natural law emphasis on purpose to favor a broader reading of the Commerce Clause.

While Gibbons held that “commerce” should be interpreted to include transportation of goods, the Court did not address directly the broader question of whether “commerce” was limited to buying, selling, and transporting goods, or included other kinds of commercial activity, such as manufacturing goods, mining raw materials, or growing crops. However, Chief Justice Marshall did note that “[t]he genius and character of the whole government seem to be, that its action is to be applied to all the external concerns of the nation, and to those internal concerns which affect the states generally.” The phrase “internal concerns” suggests a broad reading of “commerce” to include all kinds of economic activity. Further, Marshall noted that the term “commerce” in the Commerce Clause also modified the phrases “with foreign nations” and “with the Indian tribes, and

49 Id. at 190-91.

that it has been “universally admitted that these words comprehend every species of commercial intercourse between the United States and foreign nations.” Marshall concluded, “If this be the admitted meaning of the word, in its application to foreign nations, it must carry the same meaning throughout the sentence” and thus be equally applicable to commerce “among the several States.”

It has been argued that despite these passages, Marshall conceived of commerce as not including these other kinds of economic activity, because Marshall indicated in Gibbons that “[i]nspection laws, quarantine laws, health laws of every description, as well as laws for regulating the internal commerce of a State, and those which respect turnpikes, ferries, etc., are components parts of this mass” of subject-matters for state regulation. However, as Marshall made clear in Gibbons, while the federal government has “no direct general power over these objects,” the “legislative power of the Union can reach them . . . for national purposes,” and the federal government under a theory of concurrent jurisdiction “may use means also employed by a State, in the exercise of its acknowledged power.”

On the other hand, cases following Gibbons before the Civil War did not raise this precise issue because the federal government engaged in virtually no regulation of manufacturing, mining, or agricultural activities during this time. A few bills were passed by Congress aiding financing of canals and other projects during the 1820s, and were signed by Presidents James Monroe and John Quincy Adams. In 1852, Congress passed a major bill providing for the regulation and licensing of steamboats, including rules regarding boiler construction. This Act contributed to a dramatic decline in deaths by boiler explosions on steamboats that had caused more than 750 deaths during 1850 and 1851 alone. However, such congressional activity was limited and sporadic. For example, after the Panic of 1837, petitions from farmers in 1838 and thereafter requested a federal Department of Agriculture. The Department was not created until 1862. The Interstate Commerce Commission was not created until 1887. With the exception of federal tariff laws, regulation of economic activity in the United States prior to the Civil War was predominantly a matter of state law.

After the Civil War, the closest the Supreme Court came to discussing the issue during the natural law era was in 1868 in Paul v. Virginia. In this case, the Court upheld a state statute regulating an insurance contract, in part because the statute conflicted with no federal law. Foreshadowing the approach soon to be adopted during the formalist era, the Court noted in dicta that the purchase of

52 22 U.S. at 192-95.

54 22 U.S. at 203.

56 75 U.S. (8 Wall.) 168, 182-85 (1868).
insurance was not “commerce,” and thus the federal government could not regulate insurance contracts even if the federal government had attempted to do so. Despite this suggestion of a limitation on what is “commerce,” the issue of whether “commerce” includes all kinds of commercial activity, or only buying, selling, and transportation, was left substantially unresolved during the natural law era.

As to the second question, how to interpret the phrase “among the several States,” the facts in *Gibbons* presented an easy case, since the navigation at issue in the case involved traveling the New York Harbor between New York and New Jersey. Any definition of “among” would include such activity. Nevertheless, Marshall presented in *Gibbons* a more complete theory of how the term “among” should be read. Focusing on the purpose of the Commerce Clause to provide national economic solutions to national economic problems, Marshall indicated that Congress could regulate commerce as long as the commercial activity “concerns more states than one.” On the other hand, noted Marshall, Congress does not have the power to regulate economic activities “which are completely within a particular state, which do not affect other states, and with which it is not necessary to interfere, for the purpose of executing some of the general powers of the government.”

This doctrine, applied faithfully, would seem to leave only a few matters of exclusively internal commerce for the states. For example, the Court stated that the federal government could regulate the purely intrastate activity of a steamer that transported goods and people between cities in the state of Michigan in the 1871 case, *The Daniel Ball*, because “it is admitted that the steamer was engaged in shipping and transporting down Grand River goods destined and marked for other States than Michigan. . . . So far as [the ship] was employed in transporting goods destined for other States, or goods brought from without the limits of Michigan and destined to places within that State, she was engaged in commerce between the States.”

Once it was determined in *Gibbons v. Ogden* that Congress could regulate navigation in New York Harbor, the question arose whether the New York State regulation of navigation could stand. Justice Johnson, concurring, said that New York's law would be invalid even without the federal law because the grant of power to regulate commerce among the states carries the whole subject, leaving nothing for the states to act upon. Justice Marshall indicated, “There is great force in this argument, and the court is not satisfied that it has been refuted.”

However, Justice Marshall adopted in *Gibbons* a theory of concurrent federal and state power to pass laws on many subjects, each government seeking its own legitimate purposes, with federal law supreme in case of conflict. Under this approach, a state can regulate subjects that Congress may also regulate if the state's purpose is not to regulate commerce among the states, but for the state’s own internal regulatory reasons, and the state law is not inconsistent with federal law. For example, states can pass inspection or quarantine laws because no exclusive power over these objects is granted to Congress, although national power can also reach them for national purposes under its implied powers. Marshall concluded in *Gibbons* that the Court need not decide between the Johnson

---

57 22 U.S. at 195.

58 77 U.S. (10 Wall.) 557, 565 (1871).
approach and the concurrent jurisdiction approach because the federal license law granted a power with which the New York law conflicted. Thus, the New York law was invalid in any event.59

A few years later, in Willson v. Black Bird Creek Marsh Co.,60 Marshall applied the theory of concurrent power by holding that Delaware, for the purpose of improving lands adjacent to a navigable creek, could build a dam on the creek if that did not conflict with an act of Congress. Marshall said that state laws enacted for the purpose of regulating their own purely internal affairs are constitutional if not within a constitutional prohibition unless they conflict with a valid act of Congress. Here, Congress had passed no act with which the state law conflicted, and thus the state law was not "repugnant to the power to regulate commerce in its dormant state."

There is also a possible argument that the term "regulate" in the Commerce Clause only involves the power to limit commerce, but not the power to ban some activity entirely.61 Given the purpose of the Commerce Clause to solve national economic problems, it is no surprise that Marshall instead read the term “regulate” to give a plenary power to Congress to prescribe rules, which would include authorizing or banning the activity entirely, and that later Supreme Courts in every era of interpretation have uniformly adopted the same view.62

§ 18.2.1.2 The Taney Court: Areas of Exclusive Federal Commerce Power and Exclusive State Commerce Power Under The Cooley Subject-Matter Approach

Even under the concurrent power theory of Gibbons and Willson, there might be some areas where the purpose of the Commerce Clause to ensure national economic solutions to national economic problems might require exclusive federal regulation, leaving nothing for the states to act upon. This was not true in 1847 in The License Cases,63 where the Court upheld state power to require a license for the sale of imported liquor. Indeed, one Justice suggested some subjects, such as port of entry regulation, were exclusively for the states since Congress could not enact the necessary details. However, the idea that some powers are exclusively in the federal government gained strength in 1849 in The Passenger Cases.64 Here, a 5-4 Court held invalid a New York tax on arriving aliens, saying that Congress had exclusive power to regulate foreign commerce.

59 22 U.S. at 204
60 27 U.S. 245, 252 (1829).
61 See Barnett, supra note 50, at 139-46 (questioning Congress’ ability to prohibit commerce).
62 See, e.g., Gibbons, 22 U.S. at 17-18 (Congress’ commerce power is plenary, and extends to prohibiting state regulation of commercial activity); Champion v. Ames, 188 U.S. 321 (1903) (banning interstate transportation of lottery ticket); United States v. Darby, 312 U.S. 100 (1941) (prohibiting shipment of lumber by workers paid less than the minimum wage).
63 Thurlow v. Commonwealth of Massachusetts (The License Cases), 46 U.S. 504 (1847); id. at 606 (Catron, J., opinion).
64 Smith v. Turner (The Passenger Cases), 48 U.S. 283 (1849).
In 1851, in *Cooley v. Board of Wardens*, the Court upheld a state statute requiring local pilots on arriving or departing vessels. This result in *Cooley* accords with *Gibbons* and *Willson*, as the state law, passed to protect local interests, did not conflict with any federal law. However, Justice Curtis added, "When it is said that the nature of a power requires that it should be exercised exclusively by Congress, it must be intended to refer to the subjects of that power, and to say they are of such a nature as to require exclusive legislation by Congress." Some subjects, he added, require a single uniform rule. Others require local diversity. By this language, the Court claimed the power in *Cooley* to identify subjects as exclusively for federal or state law-making. This was a modification of Marshall's theory of concurrent power, with Congress excluded only from "exclusively internal commerce" affecting only one state with which it was not necessary to interfere for federal purposes.

One reason that it might have seemed plausible in 1851 that the Constitution reserved exclusively to the states certain subjects of regulation is that the Court by that time had narrowly interpreted several constitutional limits on state power to regulate commerce and, thus, the states appeared to have more power to regulate commerce than might otherwise have been perceived. For example, in 1798 the Court had held in *Calder v. Bull* that the Ex Post Facto Clause is limited to criminal law and does not bar all retroactive civil legislation. This helped make it clear that Congress, also restrained by the clause, could pass a national bankruptcy statute. In 1827, a 4-3 Court held in *Ogden v. Saunders* that the Contracts Clause is limited to legislating retroactive changes in contracts previously entered into. With repeal of the United States bankruptcy law in 1803, pressure had increased for state bankruptcy laws which this holding made possible. And, in 1833, the Bill of Rights was held in *Barron v. Baltimore* to restrain only the federal government.

The *Cooley* analysis led to decisions holding that a subject exclusively for state power was "intragate commerce." The federal government could regulate "interstate commerce" and subjects that "directly affect" interstate commerce. The first opinion which used the phrase "interstate commerce" was *Woodruff v. Parham* in 1869. The determination of what was interstate commerce and what directly affected interstate commerce was for the Court to decide. As discussed at §14.2.1, the Taney Court used this doctrine to approve many state economic regulations. This was a useful power at the time because Congress was not acting forcefully to protect persons from negative consequences of the new economic activity, such as industrial injuries and injuries to persons caused by railroads. After the Civil War, however, the pro-business Supreme Court used the doctrine more to strike down state regulations, as in *Wabash, St. Louis & Pacific Railway Co. v. Illinois*, which held unconstitutional an Illinois railroad regulation as interfering with the

65 53 U.S. 299, 319 (1851).
66 3 U.S. 386, 390-91 (1798).
69 75 U.S. 123, 137 (1869).
70 118 U.S. 557, 575-77 (1886).
exclusive power of Congress to regulate interstate railroad commerce under the *Cooley* doctrine. Until 1937, as detailed at § 18.2.2, the Court also substantially restricted Congress' power to regulate commerce under a revised interpretation of the terms “commerce” and “among the states.”

§ 18.2.2 The Formalist Era: The Diminution of Federal Power to Regulate Commerce

During the formalist era, the majority of the Supreme Court gave a more literal reading to the terms “commerce” and “among the states.” Reflecting the formalist emphasis on literal, textual meaning, the Court departed from an emphasis on legislative and executive practice under the Constitution, and the purpose behind the Commerce Clause to provide national economic solutions to national economic problems, the twin focuses of Chief Justice Marshall’s opinion in *Gibbons v. Ogden*. This formalist mode of interpretation also advanced the pro-business perspective of many of the Justices appointed to the Supreme Court during this period, as discussed at § 14.2.2 nn.36-55.

With regard to the first issue of the definition of “commerce,” the formalist-era Court narrowed the concept of "commerce" to buying and selling, the “core” dictionary definition of “commerce,” as well as transportation incident thereto. The first set of cases in the 1880s involved state regulations of activity, where the more limited definition of commerce appeared in *dicta*. For example, in *Coe v. Town of Errol*, the Court held that a state could tax logs destined for export, because those logs were not articles of commerce until their interstate journey began, and thus questions of federal preemption could not arise. In *Kidd v. Pearson*, Iowa was allowed to ban the manufacture of liquor because manufacturing was held not to be interstate commerce, and neither were mining, agriculture, or domestic fisheries, commerce being defined as buying and selling and transportation incidental thereto. The exercise of federal power was indirectly inhibited by cases upholding state laws that suggested that the states had exclusive power over the subjects involved.

As noted at § 18.2.1.1 n.55, until late in the 19th century Congress was not very active in regulation of the economy. Since business was expanding very rapidly as the national railroad system came into being toward the middle of the 19th century, there was a strong tendency on the Court to want to uphold state regulation of the economy. This could have been achieved, even under the *Cooley* case, by finding that most subjects of regulation were not exclusively for either the states or the federal government, and thus states could regulate as long as their regulations were not inconsistent with federal law.

Instead, during the formalist era, from 1873 to 1937, the Court adopted a formalist literal mode of interpretation, holding that agriculture, manufacturing, mining, and other such economic activities do not fall within a literal definition of commerce, which involves buying and selling. Thus, the Court held these other activities to precede commerce, or having come to rest after commerce, but not to be commerce at all. In addition, exclusively for the states, as state subject matter, became all intrastate commerce, including transactions not yet in commerce and transactions after interstate movement had ended – so long as the subject did not directly affect interstate commerce.

---

71 116 U.S. 517, 528-29 (1886).

72 128 U.S. 1, 9-12 (1888).
Exclusively for Congress was interstate commerce, defined as commerce between the states, and transactions that directly affected interstate commerce. Thus, the test for "directly affecting" interstate commerce became critical.

Under this approach to defining commerce, federal regulation began to be ruled unconstitutional beginning in the 1890s. For example, in 1895, the Court held in United States v. E.C. Knight Co.\(^\text{73}\) that the Sherman Act could not be applied to a “monopoly” in “manufacture” because “[c]ommerce succeeds to manufacture, and is not a part of it.” In 1918, in Hammer v. Dagenhart,\(^\text{74}\) over a 4-Justice dissent, authored by Justice Holmes, the Court held that Congress could not prevent shipment in interstate commerce of goods made by children who worked longer hours than permitted since the evil occurred during the manufacturing process before the goods became articles of commerce. In the mid-1930s, the Court indicated a willingness to invalidate much of President Roosevelt's "New Deal," including regulations of agriculture, manufacturing, and mining.\(^\text{75}\) These rulings were all inconsistent, of course, with legislative and executive practice, including that during the natural law era, where Congress created the Agriculture Department in 1862.

Despite this narrowing, the Court did not adopt a more extreme version of formalism that would have limited the Commerce Clause power only to the core dictionary definition of buying and selling. The natural law-era precedents of Gibbons, Willson, and The Daniel Ball were maintained, the Court stating in 1878 in Hannibal v. Husen,\(^\text{76}\) “Transportation is essential to commerce, or rather it is commerce itself.” Indeed, these precedents were extended in cases like Champion v. Ames,\(^\text{77}\) which involved transporting a lottery ticket across state lines; Hipolite Egg Co. v. United States,\(^\text{78}\) transporting impure food and drugs across state lines; and Hoke v. United States,\(^\text{79}\) transporting women across state lines for the purpose of prostitution. As noted at § 9.3.2 nn.64-65, in Ames,\(^\text{80}\)

\(^{74}\) 247 U.S. 251 (1918); id. at 277-81 (Holmes, J., joined by McKenna, Brandies & Clarke, JJ. dissenting).

\(^{75}\) See, e.g., Schechter Poultry Corp. v. United States, 295 U.S. 495 (1935) (Congress cannot regulate prices of a chicken slaughterhouse because the transactions occur after the chickens have come to rest and, thus, are intrastate); Carter v. Carter Coal Co., 298 U.S. 238 (1936) (Congress cannot regulate prices, wages, or hours in the mining industry because mining is a local activity that affects interstate commerce only indirectly); United States v. Butler, 297 U.S. 1 (1936) (Congress cannot regulate crop acreage because farming is not in interstate commerce).

\(^{76}\) 95 U.S. 465, 470 (1878).

\(^{77}\) 188 U.S. 321 (1903).

\(^{78}\) 220 U.S. 45 (1911).

\(^{79}\) 227 U.S. 308 (1913).

\(^{80}\) 188 U.S. at 371 (Fuller, C.J., joined by Brewer, Shiras & Peckham, JJ., dissenting).
this more moderate formalist view prevailed by just one vote, with four more extreme formalist Justices in dissent stating that if “a lottery ticket is not an article of commerce, how can it become so when placed in an envelope or box or other covering, and transported by an express company.”

The moderate formalist view also prevailed with the doctrine that federal regulations could be upheld by finding that the regulated activity "directly affected" commerce, even if the activity itself was not “commerce.” For example, the Sherman Act could be applied to a railroad holding company because “the constituent companies ceased, under such a combination, to be in active competition for trade and commerce along their respective lines.” The moderate formalist majority also held that Congress could consent to state regulation of interstate commerce by adopting as part of a federal rule whatever state laws were enacted on a subject.

With regard to the second issue of defining the phrase “among the several States,” the Court also adopted a moderate formalist view, as noted at § 9.3.2 n.70. The extreme view would have been that only activity literally crossing state lines could be defined as commerce among the states. Some Justices during this period held that view. However, in The Shreveport Rate Cases, with two Justices dissenting, the Court permitted the Interstate Commerce Commission to adjust intrastate railroad rates to prevent discrimination between intrastate and interstate rates because Congress can regulate the instruments of commerce "in all matters having such a close and substantial relation to interstate commerce that it is necessary or appropriate to exercise the control for the effective government of that commerce." Similarly, in Swift Co. v. United States, the Sherman Act could be applied to price fixing in a stock yard because “its affects upon commerce among the States is not accidental, or secondary, remote or merely probable,” but instead “is a typical, constantly recurring course” making the affect of that price-fixing “a current of commerce.”

§ 18.2.3 The Holmesian Era: The Post-1937 Broadening of Federal Commerce Power

As discussed at § 14.2.3 nn.59-63, between 1937 and 1954 the formalist analysis of the Commerce Clause gave way to a Holmesian analysis which took note of the felt necessities of the times. This took place in 1937 after moderate formalists, Chief Justice Hughes and Justice Roberts, changed their minds regarding a proper interpretation of the Commerce Clause and joined non-formalist Justices Brandies, Stone, and Cardozo to make a 5-Justice non-formalist majority. The rejection of formalism continued after 1937 because President Roosevelt got to make a number of Court appointments between 1937 and 1941, allowing him to replace all four extreme formalists on the Court – Justices Van DeVanter, McReynolds, Sutherland, and Butler – with non-formalist Justices.

81 Northern Securities Co. v. United States, 193 U.S. 197, 326 (1904).

82 In re Rahrer, 140 U.S. 545, 562-65 (1891).

83 Houston, East & West Texas Railway v. United States (The Shreveport Rate Cases), 234 U.S. 342, 355 (1914). See also Wabash, St. L. & P. Ry. Co. v. Illinois, 118 U.S. 557, 576-77 (1886) (power to regulate interstate railroad rates is exclusively in Congress, even as to trips within a state).

84 196 U.S. 375, 397, 399 (1905).
With regard to the first issue of interpretation under the Commerce Clause, the Holmesian Court adopted the view that commercial activities like agriculture, manufacturing, or mining, in addition to buying, selling, and transportation, met the first part of the Commerce Clause test that the regulation be a regulation of “commerce.” Thus, in 1937, in NLRB v. Jones & Laughlin Steel Corp., the Court held that Congress can regulate any activity, not merely railroad transportation at issue in The Shreveport Rate Cases, even though it has an intrastate character, if the activity has such a close and substantial relation to interstate commerce that control is appropriate to attain a legitimate end.

With regard to the second issue, the Court concluded that even indirect, secondary, or remote affects upon interstate commerce could satisfy the requirement that commerce being regulated was commerce “among the States” as long as the affects upon interstate commerce were “substantial.” Thus, in 1937, in Jones & Laughlin, the Court made much of the fact that the business was engaged in nationwide operations. In 1939, the Court held in NLRB v. Fainblatt that the NLRB could also reach small garment manufacturers because small units, in the aggregate, contribute to a vast amount of commerce, and strikes in the industry could have a substantial effect on interstate commerce. In 1941, the Court held in United States v. Darby that a motive or purpose to control some aspect of local activity is irrelevant, and Congress can exclude from interstate commerce all goods produced in substandard conditions, overruling Hammer v. Dagenhart, because Congress can choose means reasonably appropriate to a legitimate end even though that involves control of intrastate activities.

In 1942, in Wickard v. Filburn, Justice Jackson said for the Court that even if an activity is local, it can be regulated by Congress if it exerts a substantial economic affect when taken together with actions of others similarly situated. Thus, in Wickard, the Court upheld the Agricultural Adjustment Act’s wheat allocation provisions, as applied to a wheat farmer who grew wheat, mostly for use as feed on his own farm, on only 23 acres of land. This was so because while “appellee’s own contribution to the demand for wheat may be trivial . . . , his contribution, taken together with that of many others similarly situated, is far from trivial.” Finally, in 1944, Justice Black wrote for the Court in United States v. South-Eastern Underwriters Association that a nationwide business is not deprived of its interstate character merely because it is built on local sales contracts. This case rejected the limitation upon congressional power stated in Paul v. Virginia, noted at § 18.2.1.1 n.56, where in 1868 the Court stated in dicta that Congress could not regulate the insurance industry, saying that such a business based on local contracts was not in interstate commerce.

85 301 U.S. 1, 36-40 (1937).
86 Id. at 41-43.
88 312 U.S. 100, 113-19 (1941).
As a result of these cases, the power of Congress under the Commerce Clause was much changed from 1936 to 1944. In 1936, Congress could only regulate interstate commerce and activities directly affecting interstate commerce. Congress could not regulate intrastate activities such as agriculture, manufacturing, and mining that affect interstate commerce only indirectly because of the manner in which the effect is brought about, such as shipment after production or transactions after goods have come to rest. By 1944, however, as a result of the above cases and others, Congress could regulate local economic activity, including agriculture, manufacturing, and mining, if, considered in the aggregate, that activity could exert a substantial economic affect on interstate commerce so that federal regulation would be an appropriate means to obtain a legitimate end.

This doctrine edged quite close to the view of congressional power in *Gibbons v. Ogden*. The only apparent difference is that under *Gibbons* Congress could regulate any commercial activity which “concerns more States than one,” while under the Holmesian-era doctrine, the commercial activity had to have a “substantial affect” on interstate commerce for Congress to regulate. In practice, however, these two formulations are almost identical, given the *Wickard* principle, discussed above, at § 18.2.3 n.89, that even if an activity is local, it can be regulated by Congress if it exerts a substantial economic affect when taken together with actions of others similarly situated. The *Wickard* aggregation principle virtually ensures that any economic activity which “concerns more States than one” would be viewed by the Court as having a “substantial affect” on interstate commerce.

This similarity between the natural law and Holmesian approach to the Commerce Clause underscores that the Court’s rejection of the formalist model of interpretation in 1937 was not a shift from all pre-1937 constitutional doctrine, but rather was merely an example of the kind of shift from one style of interpretation to another style that has happened many times in our Nation’s history. First there was the shift from the natural law to the formalist model of interpretation, beginning with the *Slaughter-House Cases* in 1873, discussed at § 25.3 nn.59-64, but foreshadowed in Commerce Clause cases between 1868 and 1873 in *Paul v. Virginia* and *Woodruff v. Parham*, discussed at §§ 18.2.1.1 n.56 & 18.2.1.2 n.69, and *United States v. Dewitt*, discussed at § 18.2.5 n.105. Next, there was the shift in 1937 from the formalist to the Holmesian model of interpretation, foreshadowed between 1934-37 in cases like *Home Building & Loan Association v. Blaisdell*, discussed at § 22.1.2 nn.18-23, and *Nebbia v. New York*, discussed at § 27.3.2.1 n.161. Next there was the shift from Holmesian to instrumentalist interpretation, most clearly indicated in *Brown v. Board of Education* in 1954, but foreshadowed by cases like *Sweatt v. Painter* and *McLaurin v. Oklahoma State Regents* in 1950, all discussed at § 26.2.1.1.C. Finally, there was the shift from an instrumentalist mode of interpretation predominating in Court decisionmaking which began in 1954 to the modern natural law Justices holding the controlling votes, which occurred most clearly beginning with the Rehnquist Court in 1986, but was foreshadowed by the transition from the instrumentalist Warren Court decisions of the 1960s to the Burger Court decisions of the 1970s and 1980s. In addition, because the formalist-era Court majority adopted a moderate version of formalism, which paid some attention to purpose, practice, and precedent, as noted at §§ 9.3.2 & 18.2.2, the shift from that moderate version of formalism to the Holmesian approach in 1937 was not as extreme as it might otherwise have been.

For this reason, the shift in interpretive methodology of a majority of the Supreme Court in 1937 is not a unique kind of moment in American constitutional history, viewed as a *de facto* amendment
of the Constitution analogous in some ways to the de jure 13th, 14th, and 15th Amendments to the Constitution following the Civil War. Rather, it is just an evolution in interpretation, although an important one, with President Roosevelt’s Court-Packing Plan of 1937, discussed at § 14.2.3 nn.61-65, another of the many examples of executive or legislative frustration with certain Supreme Court rulings that ultimately do not get passed, like Senator La Follette’s plan to permit 2/3 both Houses of Congress to overrule the Court on the constitutionality of federal statutes, or proposals to require a 2/3 majority on the Court to render a statute unconstitutional, both discussed at § 17.1.4 n.62, or proposals to restrict Supreme Court jurisdiction, discussed at § 17.2.3.1 nn.154-58.

Admittedly, some commentators, and most prominently Professor Bruce Ackerman, have viewed the shift in 1937 as a “constitutional moment” of major status, akin to the Civil War Amendments, and have built a theory of interpretation to justify such a de facto amendment process.91 Without regard to the appropriateness of such a theory of constitutional interpretation,92 under the approach adopted in this book no such theory is needed to understand the evolution in constitutional interpretation that occurred in 1937, as it was just one example of a number of shifts in interpretation style in our Nation’s constitutional history.

§ 18.2.4 The Instrumentalist Era: Further Broadening of Federal Commerce Power

During the instrumentalist era between 1954 and 1986, the Court not only edged closer to the Gibbons v. Ogden formulation, but went beyond the Gibbons formulation of when a commercial activity meets the Commerce Clause test of being “commerce among the several States.”

With regard to the first part of the Commerce Clause test, whether the activity being regulated is “commerce,” dicta in some of the instrumentalist-era cases suggested that a separate finding that the activity is commercial in nature is no longer required. It would be enough if the activity, whether commercial or not, had the requisite affect on interstate commerce to satisfy what had previously been regarded as the second part of a two-pronged test. Thus, in Heart of Atlanta Motel v. United States,93 the Court stated that the Civil Rights Act of 1964 was constitutional, because the activity it regulated, racial discrimination at hotels generally open to the public, affected the movement of persons across state lines. If individuals knew they could be discriminated against on racial grounds, they would be less likely to travel, and this would affect how much those individuals would spend in interstate commerce. Similarly, in Perez v. United States,94 a criminal law banning extortionate

---

91 See generally Bruce Ackerman, We the People: Foundations (1991).

94 402 U.S. 146, 150-57 (1971). In his opinion, Justice Douglas said that the broader view of the Commerce Clause announced by Justice Marshall in Gibbons had been restored. Justice Douglas quoted Marshall’s statement in Gibbons that “the genius and character of the whole government seem to be, that its action is to be applied to all the external concerns of the nation, and to those
credit transactions was constitutional because of the affect of extortionate credit on interstate organized crime. Indeed, Congress was permitted to require in Preseault v. Interstate Commerce Commission\(^{95}\) the preservation of railroad rights-of-way not currently in service, allowing interim use of the land as a recreational trail. The Court held that Congress could decide that every line is a potentially valuable national asset that could eventually affect interstate commerce, and thus merits preservation, even if no future rail use is currently foreseeable.

With regard to the second issue of what constitutes commerce “among the states,” the Gibbons formulation only required that the commerce “affects other states,” without a requirement that this affect be “substantial.” In Hodel v. Indiana and in Russell v. United States, the majority opinions also spoke of an “affect” on commerce, but did not specify that the affect must be "substantial," language which provoked Justice Rehnquist, concurring in Hodel, to insist on the Holmesian-era phrasing that Congress can regulate intrastate activity only if it has a "substantial" affect on commerce.\(^{96}\) In addition, the instrumentalist cases made clear, in cases like Katzenbach v. McClung,\(^{97}\) that the test for "affecting interstate commerce" is not what the Court must find, but whether there is any rational basis for a finding by Congress that a class of activity, in the aggregate, affects interstate commerce. In addition, the particular intrastate activity need not itself affect commerce where the activity, in the aggregate, may affect commerce.\(^{98}\) And it is not necessary that every facet of a program directly relate to a valid congressional goal. It is enough that the entire scheme, as a whole, satisfy the McCulloch test of being “rationally related to a legitimate government interest.”\(^{99}\)

This line of cases did not directly alter the two-part Commerce Clause test, however, because in each case economic activity was being regulated. Thus, the civil rights law in Heart of Atlanta Motel involved the economic transaction of renting a hotel room. The criminal law in Perez involved the economic crime of extortionate credit. Even the railroad right-of-way in Preseault involved something that was a potentially valuable economic asset. Thus, although the general reasoning in these cases seemed to dispense with an independent requirement that the activity being regulated be commerce, and focused only on whether the activity being regulated had an affect on interstate commerce, the core holdings of each of the cases involved an activity with a clear economic nexus.

§ 18.2.5  The Modern Natural Law Era: A Recent Curb on Congress' Commerce Power

In 1995, in *United States v. Lopez*, the Supreme Court summarized Commerce Clause precedents as holding that where “commerce” is involved, commerce “among the states” exists in three kinds of cases: (1) regulating “the use of the channels of interstate commerce,” as in the lottery case, *Champion v. Ames*; (2) protecting “the instrumentalities of interstate commerce, or persons or things in interstate commerce, even though the threat may come only from intrastate activities,” as in *The Shreveport Rate Cases*; and (3) regulating “those activities that substantially affect interstate commerce.”

Two main issues have framed the Court’s recent elaboration of this Commerce Clause doctrine. The first is whether the Holmesian-era “substantial affects” test or the instrumentalist-era “affects” test will be used to determine commerce “among the States.” The second is whether to keep the traditional requirement that the activity regulated be “commerce,” or to adopt the suggestion in *dicta* in the instrumentalist-era cases that no independent requirement need be satisfied and any activity can be regulated, whether economic or not, as long as that activity affects interstate commerce.

With regard to the first issue, as a doctrinal matter, there is much less to the debate than may initially appear. Even under the Holmesian-era “substantial affects” test, the *Wickard* aggregate analysis has meant that even very local affects can be regulated by Congress as long as the local affect exerts a substantial economic affect when taken together with actions of other similarly situated parties. Further, Holmesian-era and instrumentalist-era judges, as well as judges following the natural law approach of Marshall in cases like *Gibbons* and *McCulloch*, agree that the test is not what the Court must find, but whether there is any rational basis for a finding by Congress that a class of activity, in the aggregate, sufficiently affects interstate commerce. Given this, if the underlying activity being regulated is truly economic activity, it is likely that the substantial affects test will be met.

As a matter of Court decisions, the precedents are split, with the traditional natural law and late instrumentalist-era precedents using the “affects” language, while the Holmesian and early instrumentalist-era precedents used the “substantial affects” language. The purpose of the Commerce Clause to have national economic solutions to national economic problems is not determinative, since one could argue there is no national economic problem until there is a substantial affect on interstate commerce. The structure of our federal system also suggests that there needs to be some practical distinction between what things are truly national and truly local. Congressional practice has also been to regulate only where there have been substantial affects, in part because congressional inertia is hard to overcome for local economic problems that do not have substantial economic affects.

In *United States v. Lopez*, a 5-4 Court held in 1995 that Congress violated its Commerce Clause powers in adopting the Gun-Free School Zones Act of 1990. In an opinion authored by Chief Justice Rehnquist, the Court required in *Lopez* that the congressional legislation must apply to

---

101 Id. at 557-59.
activity that "substantially affects" interstate commerce. Justices O'Connor and Kennedy joined Chief Justice Rehnquist and Justices Scalia and Thomas in this holding. This is consistent with the practice of O'Connor and Kennedy, discussed at § 12.3.2, to follow the core holdings of instrumentalist-era precedents, but not their general reasoning. As noted above, the core holdings of the instrumentalist-era cases all involved commercial activity that did substantially affect interstate commerce.

In contrast, Justice Breyer’s dissent in *Lopez*, joined by Justices Stevens, Souter and Ginsburg, concluded that the Court should have adopted a “significant affects” test. Acknowledging that the Court had used various phrases to describe how much “affect” was required, Justice Breyer settled on the term “significant” because “the word ‘substantial’ implies a somewhat narrower power than recent precedents suggest.” Id. at 615-16. The fact that Justice Souter joined this dissent is consistent with his practice, discussed at § 12.3.2, to follow the general reasoning of instrumentalist-era precedents, not merely their core holdings. That general reasoning, as noted above, had suggested a broader power in Congress to regulate any activity that affects interstate commerce.

In a separate concurrence, Justice Thomas questioned in *Lopez* whether even the Holmesian-era “substantial affects” test should be used. Reflecting his usual formalist style of decisionmaking, Justice Thomas called for a return to the formalist-era vision of more limited congressional power under the Commerce Clause. This was based on the formalist-era distinction between commerce, which Congress can regulate, and other commercial activities, such as agriculture, manufacturing, and mining, which Congress cannot regulate. Id. at 585-93 (Thomas, J., concurring).

Justice Thomas also suggested that the "affects" language, as interpreted by Chief Justice Marshall in *Gibbons v. Ogden*, supports this view by stating that *Gibbons* at most permits Congress to regulate only intrastate commerce that substantially affects interstate and foreign commerce, not manufacturing, mining, or agriculture. Id. at 593-96. Given Marshall’s consistently held view of broad federal power, as reflected in cases like *McCulloch v. Maryland* and *Gibbons v. Odgen*, this attempt to limit the general reasoning of *Gibbons* to conform to formalist-era doctrine is not persuasive. Justice Thomas did note, however, that one case near the end of the original natural law era in 1870, *United States v. Dewitt*, did adopt a more limited understanding of commerce “among the states” in denying Congress the power to ban the sales within a state of “naphtha and illuminating oils.”

Despite his analysis, Justice Thomas admitted that many believe it is too late to undertake a fundamental reexamination of the last 60 years of precedents, and that considerations of *stare decisis* and reliance interests may convince the Court that it cannot wipe the slate clean. As Justices

105 Id. at 597, discussing United States v. Dewitt, 76 U.S (9 Wall.) 41 (1870).
Kennedy noted in his concurrence in Lopez, joined by Justice O’Connor, “Stare decisis operates with great force in counseling us not to call into question the essential principles now in place respecting congressional power to regulate transactions of a commercial nature. That fundamental restraint on our power forecloses us from reverting to an understanding of commerce that would serve only an 18th-century economy . . . . Congress can regulate in the commercial sphere on the assumption that we have a single market and a unified purpose to build a stable national economy.” Justice Thomas would have the Court at least to "temper" its Commerce Clause jurisprudence. Despite Thomas’ plea, the reality of sustained legislative and executive practice, and Supreme Court precedents, mean that the real debate on the Court is between the “substantial affects” test of Chief Justice Rehnquist’s opinion in Lopez and the “significant affects” test of Justice Breyer’s dissent.

This conclusion is valid whether or not Justice Thomas’ views are correct as a matter of historical understanding, which is not at all clear, given Chief Justice Marshall’s views in McCulloch v. Maryland and Gibbons v. Odgen. In addition, Justice Thomas said that if Congress could regulate all matters that substantially affect interstate commerce, there would have been no need for many of the specific grants of power in Article I, § 8. This analysis ignores the fact that the framers and ratifiers may have wanted to make clear that Congress was being granted certain powers, and not leave them to implication by the Court as part of a general Commerce Clause analysis. Further, as discussed at § 18.1.1 n.8, Professor Crosskey noted that many of the items in the enumeration of powers in Article I, § 8 may well have been included to make sure that powers that had been in England the prerogative of the executive branch, the King, were transferred explicitly to Congress, and thus could not be understood as part of the President's power.

Regarding the precise facts in Lopez, Chief Justice Rehnquist concluded in his opinion that there were no “substantial affects” on interstate commerce from the mere possession of a gun around a school. The government alleged that possession of a gun in a school zone may result in violent crime, which could impact the insurance rates in the community or reduce the willingness of individuals to travel to that community and thus spend money in that community. Further, the government argued that the presence of guns around schools might handicap the learning environment, resulting in less educated graduates, which might result in a less productive citizenry, which would have a substantial affect on the Nation’s economic well-being over the long-term. Faced with such attenuated chains of causation, Rehnquist concluded in Lopez that “it is difficult to perceive any limitation on federal power, even in areas such as criminal law enforcement or education where states historically have been sovereign. Thus, if we were to accept the Government’s arguments, we are hard pressed to posit any activity by an individual that Congress is without power to regulate.”

106 Id. at 574 (Kennedy, J., joined by O’Connor, J., concurring).

107 Id. at 601 & n.8 (Thomas, J., concurring).

108 Id. at 588-89.

109 See generally Crosskey, supra note 1, at 411-43.

110 514 U.S. at 563-64.
In his dissent, Justice Breyer did not directly challenge this last assertion, but did note that on these facts there was a significant connection between gun-related school violence and interstate commerce. Reports and hearings had made clear that the problem of guns around schools is widespread and dangerous; it significantly interferes with the quality of education in schools; and education today is intertwined with the Nation's economy because more jobs now demand greater educational skills and many firms base location decisions on the presence, or absence, of a work force with a basic education. Further, Justice Breyer noted that under the Court's doctrine the relevant question is whether Congress has a rational basis for making such a finding, not independent de novo review by the Court. Given this, Justice Breyer concluded that Congress did have a rational basis for finding that gun possession around schools would have a significant, or even substantial, affect on interstate commerce.\footnote{Id. at 618-25 (Breyer, J., joined by Stevens, Souter & Ginsburg, JJ., dissenting).}

The second issue in the modern Commerce Clause cases – whether to keep the traditional requirement that the activity regulated be “commerce,” or to adopt the suggestion in dicta in the instrumentalist-era cases that no independent requirement need be done and that any activity, whether economic or not, can be regulated by Congress under the Commerce Clause as long as that activity affects interstate commerce – was also in the backdrop in \textit{Lopez}. Justice Rehnquist noted in \textit{Lopez} that the statute had nothing to do with “commerce” or any sort of economic enterprise.\footnote{Id. at 561.} In his dissent, Justice Breyer rejected the notion that the regulated activity must itself be commerce as distinguished from its affect on commerce. He added that, in any event, schools serve both social and commercial purposes.\footnote{Id. at 628-29 (Breyer, J., joined by Stevens, Souter & Ginsburg, JJ., dissenting).} Justice Rehnquist replied to Justice Breyer by stating that under Breyer's approach Congress could regulate not only all violent crimes, but also all activities that might lead to violent crime, including marriage, divorce, and custody, and Congress could regulate the educational process directly, based on a hypothetical substantial effect on interstate commerce.\footnote{Id. at 564-65.}

Justice Kennedy, concurring with Justice O'Connor, noted in addition that of the various structural elements in the Constitution, the framers had made a unique contribution to political science and political theory by their insight that freedom was enhanced by the creation of two governments, rather than one. If the federal government could take over the regulation of entire areas of traditional state concern, such as education, that are beyond the realm of commerce, in the ordinary and usual sense of that term, the boundaries between the spheres of federal and state authority would blur, and political responsibility would become illusory. Local programs for the prohibition of guns would be in danger of displacement by federal authority, and the ability of states to experiment with various forms of regulation would be preempted by a uniform federal rule.\footnote{Id. at 574-83 (Kennedy, J., joined by O'Connor, J., concurring).}
All of these arguments were underdeveloped in *Lopez*, however, because of the Court’s conclusion that the regulated activity did not substantially affect interstate commerce in any event. However, this second issue regarding whether the activity being regulated must be “commerce” in some sense came to the forefront in *United States v. Morrison*. *Morrison* involved the constitutionality of the Violence Against Women Act of 1994 (VAWA). That Act allowed victims of “gender-motivated violence” to bring federal civil-rights lawsuits against their attackers. In *Morrison*, it was relatively undisputed, as noted in Justice Souter’s dissent, joined by Justices Stevens, Ginsburg, and Breyer, that Congress had assembled a mountain of data regarding the effects on interstate commerce caused by lost days from work and lost productivity as a result of violence against women. Under the general reasoning of the instrumentalist-era precedents, that substantial affect would permit Congress to regulate without finding that the activity being regulated was commercial in nature.

For the 5-Justice majority, Chief Justice Rehnquist replied that it was not enough to find that the cost of crime and work days lost by victims had a substantial effect on commerce. That would permit Congress “to regulate not only all violent crime, but all activities that might lead to violent crime, regardless of how tenuously they relate to interstate commerce.” Instead, the majority concluded that Congress may not regulate “noneconomic, violent criminal conduct based solely on that conduct’s aggregate affect on interstate commerce.” This conclusion is consistent with the core holdings of the instrumentalist-era cases, which all involved some aspect of commercial activity. Thus, based upon the actual holdings, Rehnquist could accurately conclude in *Morrison*, “The regulation and punishment of intrastate violence that is not directed at the instrumentalities, channels, or goods involved in interstate commerce has always been the province of the States.”

With regard to the particular facts in *Morrison*, Chief Justice Rehnquist noted that gender-motivated crimes are not in any sense economic activity and that the law contained no jurisdictional element linking it to the commerce power. The plaintiff had sued two college football players who had allegedly raped her. Rehnquist said, “If the allegations here are true, no civilized system of justice could fail to provide her a remedy. . . . But under our federal system that remedy must be provided by the Commonwealth of Virginia, and not by the United States.” Under the laws of Virginia, the plaintiff did have redress through laws against rape and laws against assault and battery.

Looking to the future, it seems clear that *Lopez* and *Morrison*, while important, do not represent a major shift from the Court’s basic Commerce Clause doctrine. In their concurrence in *Lopez*, Justice Kennedy and O’Connor noted that the result in *Lopez* should not call into question the core holdings of the instrumentalist-era cases. Thus, *Heart of Atlanta Motel* and *Katzenbach v. McClung* are still good law upholding congressional power to pass civil rights laws regarding renting a hotel room or

---

117 *Id.* at 613, 617-18.

118 *Id.* at 627. The Court also held that the law was not valid under § 5 of the 14th Amendment, because § 5 provides no shield against private conduct and there were no findings that a sufficient problem existed of state discrimination against victims of gender-motivated violence. This aspect is discussed at § 28.3 n.36, concerning Congress’ power to enforce the Civil War Amendments.
buying food in a restaurant, as is Perez, regarding congressional power over economic criminal activity. And Wickard is still good law regarding aggregating affects on interstate commerce.

In addition, without regard to any “substantial affects” analysis, Congress can also regulate under the first two categories listed in Lopez, use of the channels of interstate commerce and protecting the instrumentalities of interstate commerce, noted at § 18.2.5 n.100. For example, five days after Lopez was handed down, the Court issue a unanimous per curiam decision in United States v. Robertson.119 Without regard to whether a single gold mine in Alaska had a substantial affect on interstate commerce, the Court held that Congress could regulate the ownership and operation of a gold mine in Alaska because some goods used at the mine had moved in interstate commerce, and some workers at the mine had come from out of state. Thus, under Champion v. Ames, Congress was regulating “the use of the channels of interstate commerce.” This satisfied both the Constitution and the “interstate commerce” element of the Racketeer Influenced and Corrupt Organizations Act (RICO). Similarly, Congress’ amended statute, following Lopez, which regulates the possession of guns around schools as long as the gun moved in interstate commerce, probably is constitutional.120

Under the second category listed in Lopez, Congress can also regulate purely intrastate activities if they threaten the instrumentalities of interstate commerce, or persons or things in interstate commerce, because that congressional regulation would then be “necessary and proper” to advance legitimate governmental ends, as it was in The Shreveport Rate Cases.

An example of how all of these various theories give Congress great power to regulate activities with an economic nexus of any kind occurred in 2005 in Gonzales v. Raich.121 In Raich, a 6-3 Court upheld application of the federal Controlled Substances Act (CSA) to intrastate growers and users of marijuana for medical purposes under the provisions of California law. The majority opinion by Justice Stevens, joined by Justices Kennedy, Souter, Ginsburg, and Breyer, reasoned, as in Wickard v. Filburn, that Congress could find that failure to regulate this class of activity could result, in the aggregate, in a substantial affect on the broad market for illegal drugs that Congress was regulating by the CSA. Lopez and Morrison were distinguishable because the laws in those cases did not regulate economic activity, whereas the activities regulated by the CSA, involving the production, distribution, and consumption of commodities, were “quintessentially economic.” Congress acted rationally in determining that none of the characteristics making up the purported class of marijuana users compelled an exemption from CSA.122

Justice Scalia, concurring, said that in addition to a power to regulate activities having a substantial affect on interstate commerce, Congress has power under the The Shreveport Rate Cases to make

121 545 U.S. 1 (2005).

122 Id. at 14-33.
its regulations of interstate commerce effective. Justice Scalia noted that even *Lopez* suggested that “Congress may regulate even noneconomic local activity if that regulation is a necessary part of a more general regulation of interstate commerce.” That was true here, since the use of even homegrown drugs, like the medical marijuana in this case, would have a necessary affect on the demand for the interstate market in marijuana. Thus, Congress could rationally conclude that application of the CSA to homegrown medical marijuana was a “necessary and proper” aspect of regulating the interstate commercial drug market.\textsuperscript{123}

Justice O’Connor was joined in dissent by Chief Justice Rehnquist and Justice Thomas. Justice O’Connor concluded that “the homegrown cultivation and personal possession and use of marijuana for medicinal purposes has no apparent commercial character.” She noted that even *Wickard* did not specifically approve of federal control over small-scale, noncommercial wheat farming, since the federal law exempted the planting of less than 6 tons of wheat and, when the wheat was harvested, federal law exempted plantings of less than 6 acres. Even if the activity was commercial in some sense, Justice O’Connor concluded, “There is simply no evidence that homegrown medicinal marijuana users constitute, in the aggregate, a sizable enough class to have a discernable, let alone substantial, impact on the national illicit drug market – or otherwise to threaten the CSA regime.”\textsuperscript{124}

This conclusion that it would be irrational for Congress to conclude that all homegrown medical marijuana users in all states would pose no substantial affect on the interstate marijuana market even under the *Wickard* aggregation principle reflects a very states’ right-oriented application of *Wickard*. That is consistent with Justice O’Connor’s strong predisposition toward states’ rights, discussed at § 12.4.2, along with Chief Justice Rehnquist’s similar strong conservative predisposition toward states’ rights, discussed at § 10.3.3, and Justice Thomas’ similar conservative predisposition, discussed at § 9.3.3.

Justice Thomas also penned a separate dissent in which he took issue with fellow formalist Justice Scalia’s interpretation of *The Shreveport Rate Case* and its Necessary and Proper Clause analysis. Justice Thomas said that the intrastate ban was not “necessary and proper” as applied to medical marijuana users like respondents. Justice Thomas applied an understanding of the terms “necessary and proper” reflecting the kind of heightened scrutiny approach proposed by Madison at the time of *McCulloch v. Maryland* in 1819, used occasionally by formalist-era Courts between 1873-1937, and supported by Professor Randy Barnett today, as discussed at § 18.1.2 nn.37-40. A majority of the Supreme Court during the original natural law era, 1789-1873, and a majority of the Court since 1937, including Justice Scalia, have rejected this heightened scrutiny approach in favor of minimum rational review under the Necessary and Proper Clause. Given the spirit or purpose of heightened scrutiny to limit federal power under the Necessary and Proper Clause, Justice Thomas concluded in *Raich* that federal regulation was not “necessary” or “proper” here, and that our federalist system “properly understood, allows California and a growing number of other states to decide for

\textsuperscript{123} *Id.* at 33-42 (Scalia, J., concurring in the judgment).

\textsuperscript{124} *Id.* at 49-56 (O’Connor, J., joined by Rehnquist, C.J., and Thomas, J., as to all but Part III, dissenting).
themselves how to safeguard the health and welfare of their citizens.\footnote{Id. at 57-66, 74 (Thomas, J., dissenting).}

Recent cases in the United States Courts of Appeals, even before \textit{Raich}, applied \textit{Lopez} and \textit{Morrison} in the narrow manner suggested above. In virtually all the court of appeals cases where the federal regulation was economically related, the court found the necessary substantial connection with interstate commerce.\footnote{\textit{See, e.g.}, Rancho Viejo, LLC. \textit{v.} Norton, 323 F.3d 1062 (D.C. Cir. 2003) (preventing a large developer from construction that would harm an endangered species of arroyo toads was substantially related to interstate commerce); GDF Realty Investments, Ltd. \textit{v.} Norton, 326 F.3d 622 (5th Cir. 2003) (protecting five subterranean invertebrate species was upheld from a Commerce Clause attack because taking endangered species, in the aggregate, has a substantial effect on interstate commerce); United States \textit{v.} Rayborn, 312 F.3d 229 (6th Cir. 2002) (federal arson statute could be applied to burning a church which was involved in interstate commerce through its radio broadcasts which brought in money and attendees from several states); United States \textit{v.} Deaton, 332 F.3d 698 (4th Cir. 2003) (no serious constitutional question when the United States Corps of Engineers prevented a landowner from affecting a wetland by digging a 1000-foot ditch which emptied into a roadside ditch that eventually led to navigable waters because Congress has long had power to protect navigable waters from injurious purposes and that carries with it the authority to regulate non-navigable waters when necessary to achieve congressional goals). On court of appeals decisions after \textit{Morrison}, see generally Daniel J. Lowenberg, \textit{The Texas Cave Bug and the California Arroyo Toad “Take” on the Constitution’s Commerce Clause}, 36 St. Mary’s L. Rev. 149 (2004).} However, by a 2-1 vote, an Eighth Circuit Court of Appeals panel held that it was not a valid exercise of Congress’ Commerce Clause power to apply the Americans with Disabilities Act to prohibit a state from assessing a $2 annual fee for windshield placards authorizing the use of reserved parking spaces by physically disabled persons. The court pointed out in \textit{Klingler v. Director, Department of Revenue}\footnote{366 F.3d 614 (8th Cir. 2004), \textit{judgment vacated}, 125 S. Ct. 2899 (2005), \textit{on remand}, 433 F.3d 1078, 1079, 1082 (2006).} that Congress had made no findings suggesting the existence of a substantial relationship between the fee and interstate commerce. It added that the effect of the placard fee on interstate commerce was much more speculative and attenuated than that of the racial discrimination in \textit{Katzenbach} and \textit{Heart of Atlanta}. This approach is consistent with the Justice O’Connor’s dissent in \textit{Raich}. The third judge on the Eighth Circuit panel, more consistent with the majority in \textit{Raich}, said that in the absence of express findings the court should assume the existence of any state of facts reasonably conceivable by the legislature and reminded the majority that the burden of proving the contrary is on the challenger. In response to \textit{Klingler}, the Supreme Court vacated the judgment in light of \textit{Raich}, and on remand, the state abandoned the Commerce Clause challenge. The Eighth Circuit then held, consistent with other courts, that such a surcharge does constitute “discriminatory” treatment under the ADA and is properly banned.

 Courts have also struggled with the question of the impact of \textit{Lopez}’s holding on gun possession around a school on other areas where mere possession has been made a crime. For example, a range
of federal statutes criminalize the production or possession of child pornography. In most cases, Courts of Appeals have found the requisite affects on interstate traffic in child pornography to uphold such statutes.\(^{128}\) However, in *United States v. Maxwell*,\(^{129}\) the Eleventh Circuit Court of Appeals ruled that mere possession of child pornography on a disk that, when blank, had moved in interstate commerce, was insufficient to create a substantial affect on interstate commerce, nor could *Ames* be used since the disk was blank, and thus did not contain child pornography, when it moved across state lines. The Supreme Court vacated this judgment in light of *Raich*, and on remand the Eleventh Circuit upheld the constitutionality of the prosecution.

Despite the limited impact of *Lopez* and *Morrison* in cases involving economic regulation, these cases nonetheless send a message to Congress that it should consider federalism concerns when legislating near the outer reaches of its Commerce Clause power, and it should do something to make it clear how Congress perceives a connection between its regulation and commerce. Indeed, it seems likely that the main practical effect of *Lopez* and *Morrison* regarding economic regulation is to suggest that Congress buttress its Commerce Clause legislation with findings that show a connection between the legislation and a substantial affect on interstate commerce. Although under *Lopez* such findings are not constitutionally required, a prudent Congress would indicate its view of that connection.

A second impact of *Lopez* and *Morrison* lies in the realm of statutory interpretation. For example, in *Solid Waste Agency v. Army Corps of Engineers*,\(^{130}\) the same 5-4 majority as in *Lopez* and *Morrison*, in an opinion again by Chief Justice Rehnquist, refrained from ruling on whether Congress could authorize the Army Corps of Engineers to regulate abandoned sand and gravel pits that provided a habitat for migratory birds. Instead, the majority held that because of the constitutional problems that such an attempted delegation would present – what is the commercial activity that is being regulated, and what is the substantial affect on interstate commerce – the Court would read the Clean Water Act as not granting the Corps power over non-navigable, isolated, intrastate waters merely because of the presence of migratory birds. Justice Rehnquist noted that Congress does not ordinarily casually authorize administrative agencies to interpret a statute in a way that pushes the limits of congressional power. This concern is heightened, he said, where the administrative interpretation alters the federal-state framework by permitting federal encroachment upon a traditional state power.

\(^{128}\) See, e.g., *United States v. Adams*, 343 F.3d 1024 (9th Cir. 2003) (criminal statute banning possession of commercially-produced child pornography constitutional, the court saying that those who possess and view child porn encourage its continued production and distribution); *United States v. Holston*, 343 F.3d 83 (2nd Cir. 2003) (intrastate use of camera equipment to produce child pornography feeds the national market for child pornography and stimulates demand); *United States v. Rodia*, 194 F.3d 465 (3rd Cir. 1999) (a person viewing child pornography produced intrastate might develop an increased appetite for child pornography that could increase demand for interstate child pornography).

\(^{129}\) 386 F.3d 1042 (11th Cir. 2004), judgment vacated, 126 S. Ct. 321 (2005), on remand, 446 F.3d. 1210 (2006).

In contrast to Chief Justice Rehnquist’s use of the canon of interpretation to avoid constitutional problems if an interpretation of a statute is possible that avoids the constitutional issue, it has been noted that vigorous application of this canon, often associated with the 1806 case, *Murray v. The Schooner Charming Betsy*, may denigrate actual congressional or administration agency intent.131 In *Solid Waste Agency*, a dissent by Justice Stevens, joined by Justices Souter, Ginsburg, and Breyer, found that Congress did indeed intend to adopt the broad definition of power claimed by the Corps. Further, Stevens noted that no serious constitutional problem was presented inasmuch as the strong causation connection between the filling of wetlands and the decline of commercial activities associated with migratory birds was not attenuated. Rather, it was direct and concrete.132

*Solid Waste Agency* does provide a good reminder that in each of these Commerce Clause cases the first issue is whether (1) the congressional statute actually was intended to reach the conduct at issue in the case. Once it is determined that the statute does apply, then the two constitutional questions apply of whether the activity is (2) “commerce” and (3) “among the states.” In determining this, (4) congressional findings, particularly if the case involves proving substantial affects, will be useful.

The Court returned to the Clean Water Act in *Rapanos v. United States*.133 In *Rapanos*, Justice Scalia, joined by Chief Justice Roberts, and Justices Thomas and Alito, held that the phrases “the waters of the United States” and “navigable waters” in the Clean Water Act should be given a literal meaning to “connote continuously present, fixed bodies of water, as opposed to ordinarily dry channels through which water occasionally or intermittently flows.” Reflecting a natural law focus on purpose, Justice Kennedy indicated in his concurrence, which was the controlling vote in the case, that the term “navigable waters” should refer to any body of water with a “substantial nexus” to a continuously present, fixed body of water, since the purpose of the Clean Water Act was to permit federal regulation of any body of water that could affect the navigable waters of the United States. Reflecting his formalist style of interpretation, Justice Scalia strongly criticized Justice Kennedy for letting that focus on purpose trump his focus on literal meaning. Reflecting the liberal predisposition to uphold grants of federal power, noted at § 6.2.2.3, Justice Stevens, joined by Justices Souter, Ginsburg, and Breyer, in dissent, indicated their view that “any nexus” should be sufficient for federal regulation. Under that approach, which was implicit in an instrumentalist-era case, *United States v. Riverside Bayview Homes, Inc.*, if any “hydrological connection,” even a single drop of water, can be traced from its source to a navigable waterway, the Corps has jurisdiction.

With regard to noneconomic activity, the impact of *Lopez* and *Morrison* is more profound. *Lopez* and *Morrison* make clear that the Court will not grant to Congress under the Commerce Clause plenary legislative power to regulate on any social matter that Congress may wish to regulate. For

---

132 531 U.S. at 693-96 (Stevens, J., joined by Souter, Ginsburg & Breyer, JJ., dissenting).

noneconomic regulation, Congress must find its constitutional grant of power in some other clause of the Constitution. Thus, for example, federal hate crimes laws, or laws making it an independent crime to do violence to a fetus, such as the Unborn Victims of Violence Act of 2004 (UVVA), would need to be authorized under some provision of the Constitution other than the Commerce Clause given the reasoning of *Lopez* and *Morrison*. This may be difficult, both for generic hate crimes statutes, but also for the UVVA, since the jurisdictional hook for many of the crimes covered by the UVVA depend on the person attacked being a federal employee, or serving in a federal role, or being a foreign official serving in the United States, which could be true of the pregnant woman being harmed, but not true for the fetus. Provisions of the UVVA based on federal control over events on federal property, discussed at § 18.3.10, could more easily be upheld.  

This result is consistent with the text and structure of Article I, § 8, which does seem to indicate that congressional power under the Commerce Clause must have some connection to economic activity. Thus, congressional power over purely non-economic kind of activities must be found in other of the enumerated provisions in Article I.

§ 18.2.6 Congress' Commerce Power With Foreign Nations and the Indian Tribes

§ 18.2.6.1 Congress' Commerce Power With Foreign Nations

As Chief Justice Marshall indicated in *Gibbons v. Ogden*, cited at § 18.2.1.1 n.52, it is “universally admitted” that the text of Article I, § 8, cl. 3 giving Congress’ power to “regulate Commerce with foreign Nations” comprehends “every species of commercial intercourse between the United States and foreign nations.” This power is augmented, of course, by the power of the federal government to enter into treaties with foreign countries pursuant to presidential negotiation and ratification by 2/3 of the Senate, and the power of the president to enter into executive agreements with foreign countries, with implementing legislation, where necessary or prudent, passed by Congress, discussed at § 18.3.9; and the general federal power over foreign relations matters, discussed at § 19.3.2.

Given these constellation of powers, litigation regarding federalism issues in this area has mostly been concerned with whether state laws that arguably conflict with federal foreign policy, such as state laws barring state or local governments’ procuring goods or services from persons doing business with pariah governments, are preempted by Congress, discussed at § 20.3.1.2, or violate a dormant commerce clause analysis, discussed at § 20.3.2.2.C. Federal power over commerce with foreign nations, foreign corporations, or persons in foreign countries is usually understood to be plenary, although a formalist analysis could limit that power through a literal interpretation of phrase “Commerce with foreign Nations.”

---

For example, in *United States v. Clark*, a Ninth Circuit panel ruled that Congress could criminalize the activity of a United States citizen traveling abroad to engage in illegal commercial sex with a minor under the foreign commerce clause power, because that activity involved the immoral use of the channels of foreign commerce. In support of this ruling, the court noted that the Supreme Court had stated in *Japan Line, Ltd. v. Los Angeles County*, “Although the Constitution, Art. I, § 8, cl. 3, grants Congress the power to regulate commerce ‘with foreign Nations’ and ‘among the several States’ in parallel phrases, there is evidence that the Founders intended the scope of the foreign commerce power to be greater.” In contrast to this analysis, a formalist dissent argued in *Clark* that since the illegal commercial sex act was not with a foreign country, but with a person in a foreign country, it could not constitute “commerce with foreign nations.”

§ 18.2.6.2  Congress' Commerce Power with the Indian Tribes

The Court’s view regarding congressional power under Article I, § 8, cl. 3 to “regulate commerce . . . with the Indian Tribes” has shifted according to the same eras of judicial decisionmaking as in the other areas of the law. During the original natural law era, in cases like *Cherokee Nation v. Georgia*, the Marshall Court adopted the customary and traditional way of viewing Indian tribes as “domestic, dependent nations.” Based on the then-prevalent natural law view of “discovery,” Native American tribes were held to “lose” their rights to the land given European discovery of the New World, but the precise rights “reserved” to the tribes were the subject of treaty negotiations, the tribes being viewed as sovereign nations for that purpose.

While this conclusion is logically inconsistent with the “discovery” doctrine, which would make tribal rights dependent on delegated federal authority, since the tribes had “lost” rights upon discovery, the “reserved-rights” theory and the canons of interpretation associated with it had profound implications for tribal authority. As held in *Worcester v. Georgia*, under the “reserved-rights” theory, a treaty should be interpreted as the tribe would have understood it. This is because the treaty was negotiated and written in a language foreign to Native Americans, who could not be expected to understand nuance; the purpose of the treaty was to establish a peaceful relationship between sovereigns, not to "annihilat[e] the political existence of one of the parties"; and thus a tribe could be held to have abdicated its sovereignty only if that result had "been openly avowed" in the treaty. Further, because tribal sovereignty was understood as being retained from a tribe's inherent, pre-constitutional sovereignty, rather than consisting of delegated power as consistent with the “discovery” doctrine, the exercise of sovereignty did not entail any federal or state action that would trigger the Constitution. Finally, Native Americans were not viewed as citizens of the United States, and thus not accorded citizenship rights. Control over the destiny of the Native American tribes

135  435 F.3d 1100, 1116-17 (9th Cir. 2006), citing *Japan Lines*, 441 U.S. 434, 448 & n.12 (1979); *id.* at 1117-21 (Ferguson, J., dissenting).

136  30 U.S. (5 Pet.) 1, 16-20 (1831).

137  31 U.S. (5 Pet.) 515, 554, 559-61 (1832).

was held to be exclusively in the control of the federal government, pursuant to the “Indian Commerce Clause” and the federal government treaty power, as held in *Worcester*.

Toward the end of the natural law era, and at the dawn of the formalist era, in 1871, Congress altered this understanding by stating that treaties would no longer be used to regulate Native American tribes, but that such regulation would be done pursuant to congressional statutes and executive implementation only. This was done to ensure that the House of Representatives would have an equal say in making policy, rather than policy made by the President and 2/3 of the Senate under the treaty power. Consistent with a Stage 4 focus on a “melting pot” approach to society, discussed at § 15.4.1 nn.65-66, the congressional actions during the formalist era focused most of its attention on “assimilation” of Native Americans into United States society, rather than respect for different tribal cultures, with a culmination of the “assimilation policy” in 1924 with all Native Americans who had not already been granted citizenship under various agreements with particular tribes given citizenship rights. Under *Lone Wolf v. Hitchcock*, most congressional or executive decisions regarding Native Americans were viewed as political questions not justiciable by the courts.139

During the Holmesian deference-to-government era of judicial decisionmaking, from 1937-1954, court deference to Congress and the President remained intact. However, starting near the end of the formalist era in 1934, and continuing through the Holmesian era, congressional action began to respond toward granting tribes greater control over their own governance, and greater respect for tribal cultures. This change is consistent with a Stage 4½ understanding that the dominant values in society merely reflect the dominant interest groups, but that other individuals may have different customs and traditions, discussed at § 15.4.1 n.70-71. This respect was uneven, however, until the Stage 5 instrumentalist era began in 1954 with its respect for diversity, discussed at § 15.4.1 nn.75-76. For example, in 1953, Congress adopted “a draconian policy of terminating the sovereignty of some Indian tribes” and “also adopted Public Law 280, requiring several states, and authorizing others, to exercise jurisdiction in Indian country.”

During the instrumentalist era, from 1954-1986, the more activist liberal instrumentalists on the Court cut back on the view that questions regarding Native American policy were political questions. In interpreting 19th-century treaties, or later congressional statutes, as well as deciding on Equal Protection, Due Process, or Takings Clause challenges, the Court decided cases utilizing canons of interpretation reflecting respect for tribal sovereignty and, more broadly, based on a “common law” judicial activist approach to interpretation, reflected liberal social policy considerations that favored Native American interests in most cases.140

---

140 *See id.* at 445-60.
Since 1986, the Court has begun to consider Native American cases, as in *Duro v. Reina*,\(^{141}\) authored by Justice Kennedy, from the perspective of a natural law theory of legitimate government being based upon a social contract and consent of the governed. Thus, in *Duro*, non-tribal Native Americans, as well as United States citizens, could not be tried by tribal courts, since they had not consented to the tribe’s social contract. Following *Duro*, Congress enacted the "*Duro* fix," which specified that the tribes' "powers of self-government" include "the inherent power of Indian tribes, hereby recognized and affirmed, to exercise criminal jurisdiction over all Indians."\(^{142}\)

In *United States v. Lara*,\(^{143}\) the Court was faced with the question of whether to view tribal exercises of criminal jurisdiction as based on inherent tribal sovereignty or delegated federal power. Based on a logical elaboration of the natural law theory of “discovery,” Justices Souter, in dissent, concluded that any power exercised by tribal authorities must derive from delegated federal authority, not inherent tribal authority. Thus, a criminal proceeding by a tribal court should trigger the double jeopardy clause of the Fifth Amendment, and prohibit a subsequent trial in a federal court.\(^{144}\) Because the literal text of the Commerce Clause distinguishes between “foreign nations” and “Indian tribes,” formalist Justices tend to side with this view that tribal authority is not “inherent,” as it is for foreign nations, but dependent on federal delegation. In *Lara*, Justice Scalia joined Justice Souter in dissent, and Justice Thomas indicated in his concurrence a need to resolve the conflict in the cases between viewing Native American tribes as dependent or sovereign.\(^{145}\)

In contrast, for Justice Kennedy, based on the “reserved-rights” branch of natural law doctrine, tribal exercises of jurisdiction could be based on inherent power unless altered by Congress, which had not been done in this case. Indeed, the congressional statute granting tribes the authority to exercise criminal jurisdiction in the case was explicitly phrased as confirming inherent tribal authority, not delegated federal power.\(^{146}\) A modern natural law approach, transcending the limitations of Stage 3 natural law’s reliance on custom as a component of reason, and relying instead on granting equal concern and respect to all individuals, as discussed at § 15.4.1 nn.53-56, would similarly reject the logical implications of the “discovery” doctrine. It would treat Native American tribes as sovereigns with “inherent power” over their affairs, subject to treaty limitations and constitutional congressional statutes. On the other hand, reflecting his natural law view in *Duro* regarding social contract theory, Justice Kennedy remained skeptical whether Congress could constitutionally authorize tribal

---

144 *Id.* at 228-29 (Souter, J., joined by Scalia, J, dissenting).

145 *Id.* at 214-15 (Thomas, J., concurring in the judgment); *id.* at 226 (Souter, J., joined by Scalia, J., dissenting).

146 *Id.* at 211-12 (Kennedy, J., concurring in the judgment).
jurisdiction over non-tribal members, an issue not directly before the Court in *Lara*.\footnote{147}{Id. at 212-14.}

Reflecting their more functional and prudential approach to doctrine, discussed at §§ 3.2-3.3, Holmesian and instrumentalist Justices have been willing, as has Congress, to consider Native American tribes as having “inherent power” over their affairs, similar to that of foreign nations, and for Congress to so acknowledge that in statutes and treaties. Thus, in *Lara*, instrumentalist Justices Stevens, Ginsburg, and Breyer, along with Holmesian Chief Justice Rehnquist and occasionally Holmesian-leaning Justice O’Connor, had no trouble concluding that the tribe’s exercise of criminal jurisdiction was based on inherent tribal authority that raised no double jeopardy problems for a subsequent prosecution in federal court for the same offense.\footnote{148}{Id. at 210 (Breyer, J., for the Court).}

While matters of Native American affairs were viewed as exclusively in the control of the federal government in *Worcester* in 1832, as noted at § 18.2.6 n.137, cases since then have indicated a more nuanced approach. This is similar to the blanket statement of Chief Justice Marshall in *McCulloch v. Maryland* that states have no power to tax the federal national bank, noted at § 18.1.2 n.41, but later doctrine reflecting a more nuanced approach to intergovernmental tax immunities, discussed at § 20.2.1.

Justice Scalia has stated, in passing, in *Nevada v. Hicks*,\footnote{149}{533 U.S. 353, 365 (2001).} that states have “inherent jurisdiction on reservations” which can, of course, “be stripped by Congress.” While the Court has clearly indicated that states have power to enforce their own laws against tribal members for acts committed off a reservation, and to enter reservations for purposes of serving process, as involved in *Hicks*, the extent of state authority beyond that is unclear. It has been noted that traditional formalist arguments of text, context, and history, as well as early congressional practice, provide little support for such inherent state authority.\footnote{150}{See, e.g., Gloria Valencia-Weber, *The Supreme Court’s Indian Law Decisions: Deviations from Constitutional Principles and the Crafting of Judicial Smallpox Blankets*, 5 U. Pa. J. Const. L. 405, 413-65 (2003).} Since Congress has regulated so heavily in this area, sometimes giving states regulatory authority anyway, the issue of inherent state authority may be of little practical import. The predisposition of conservative Justices to favor states’ rights versus the contrary predisposition of liberal Justices may determine outcomes in any litigated cases.

### § 18.3 Congrressional Power Under Clauses Other Than Commerce Clause

The New Deal and later federal programs created a mass of federal economic regulations. From *Jones & Laughlin* in 1937 to *Lopez* in 1995, the Court did not declare any federal law invalid under the Commerce Clause. Judicial review of other provisions in Article I, § 8 is at least as deferential as modern Commerce Clause review. Thus, practical limits on congressional power under these clauses must usually be sought in other prohibitions in the Constitution, such as the Bill of Rights,
rather than direct limits on these powers. When combined with the Necessary and Proper Clause, these clauses also give the federal government power to pass criminal laws to protect the effective functioning of these granted powers, as discussed throughout §§ 18.3.1-18.3.10.

§ 18.3.1 The Taxing Power

By its terms, the language of Article I, § 8, cl.1 stating that “Congress shall have Power To lay and collect Taxes, Duties, Imposts and Excises” grants to Congress broad power to tax. If a law appears to be a tax, does not describe or treat the subject as criminal, and produces some revenue, the law is a tax even though it has a regulatory effect or discourages the activities taxed. Indeed, even the Uniformity Clause in § 8, cl. 1, which provides that “all Duties, Imposts, and Excises shall be uniform throughout the United States,” has been held not to bar Congress from dealing with geographically isolated problems by using geographically neutral factors, such as the high cost of extracting oil in Alaska, which justified an exemption of such oil from a windfall profits tax.\(^{151}\) Laws regarding punishment for income tax evasion are constitutional as a “necessary and proper” means to make effective this taxing power.\(^{152}\)

During the formalist era, the Court applied a more literal approach to the taxing power and held that a tax would be invalid if it were intended to be not only a tax, but also to have (1) a coercive effect of regulating an area over which (2) Congress did not have regulatory power. Thus, in 1922, in the Child Labor Tax Case,\(^{153}\) the Court invalidated a 10% tax on goods produced by child labor because the Court held that the tax was a coercive attempt to regulate child labor indirectly, and thus evade the Supreme Court’s 1918 decision in Hammer v. Dagenhart. As discussed at § 18.2.2 n.74, Hammer v. Dagenhart had held that Congress did not have the power to regulate manufacturing, since manufacturing was not literally commerce. Reflecting the moderate formalism that characterized a majority during the formalist era, the Court said regarding element (1) of the test stated above that a tax must truly be “coercive” or a “penalty” before it would be held unconstitutional. The Court noted that every tax will create some incentives for parties not to engage in the taxed behavior, and that such “incidental restraint and regulation which a tax must inevitably involve” is constitutional.

As discussed at § 18.2.3, since 1937 Congress has been granted broad regulatory power over economic activity that substantially affects interstate commerce. Thus, regarding element (2) of the test stated above, there are few areas today where the Child Labor Tax Case reasoning could apply. Further, Justice Stone noted in 1937 in Sonzinski v. United States\(^{154}\) that it is beyond judicial

\(^{154}\) 300 U.S. 506, 513-14 (1937). See also United States v. Kahriger, 345 U.S. 22 (1953) (tax on persons engaged in business of accepting wagers upheld 5-4 even though it discouraged the activities taxed and produced only negligible revenue).
competence to inquire into the "hidden motives" of Congress to determine whether a tax is an attempt to exercise forbidden regulatory power.

The formalist-era Court held in 1895 in *Pollock v. Farmers’ Loan & Trust Co.* that a generic income tax was unconstitutional as violating Article I, § 9, cl. 4, which provides, “No Capitation, or other direct, tax shall be laid, unless in direct Proportion to the Census or Enumeration herein before directed to be taken.” Based on literal text and specific historical intent, five members of the Court (Chief Justice Fuller, and Justices Brewer, Field, Gray, and Shiras) held that an income tax was a “direct tax” to which the “Census and Enumeration” Clause applied. Since an income tax is not based proportionately on population, but merely on income of individuals, such a tax was therefore held to be unconstitutional.

Four Justices in dissent, looking more to arguments of purpose, general historical evidence, legislative and executive practice, and judicial precedents (as would moderate formalists, or Holmesians, as for Justice Harlan), concluded that an income tax was not such a “direct tax.” In his dissent, Justice Brown noted that were the case to be decided based on literal text alone, he might vote with the majority, but the other sources of interpretation counseled for him a different result. In his dissent, Justice Jackson, rejecting a conclusion based on literal text, specifically referred to arguments of purpose, stating that “we cannot attribute to the framers of the constitution an intention to make any tax a direct tax which it was impossible to apportion.” Bowing to the practical needs of government financing, the decision in *Pollock* was overturned in 1913 by the 16th Amendment to the Constitution, which provides: “The Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several States, and without regard to any census or enumeration.”

§ 18.3.2 The Spending Power

§ 18.3.2.1 Basic Doctrine

During the formalist era, in 1936, the Court held in *United States v. Butler* that Congress could not raise and spend money in order to regulate indirectly any interstate activity that it could not regulate directly. Like the similar formalist-era approach to the taxing power, only coercive uses of the spending power, and not incidental incentives created by spending, were unconstitutional. Like the formalist-era tax doctrine, this view has been limited in cases decided since 1937.

The first step in moving away from *Butler* occurred in 1937 in *Charles C. Steward Machine Co. v. Davis.* There, a 5-4 Court, limiting *Butler*, upheld an employer tax used to fund unemployment

---

156 *Id.* at 638-60 (Harlan, J., dissenting); *id.* at 686-95 (Brown, J., dissenting); *id.* at 696-705 (Jackson, J., dissenting); *id.* at 706-15 (White, J., dissenting).

157 297 U.S. 1, 72-78 (1936).

158 301 U.S. 548, 592-98 (1937).
compensation schemes, with a 90% tax credit for funds contributed to a qualified state unemployment program. The Court said that spending money to relieve unemployment during the Great Depression promoted the general welfare. Rebating the tax only to "qualified" state programs created an incentive for state enactment of such programs, and was not illegitimate coercion.

The second step was taken in Helvering v. Davis, also decided in 1937. In Helvering, the Court upheld paying old age benefits under the General Welfare Clause. The Court said that when money is spent to promote the general welfare, the concept of welfare or its opposite is shaped by Congress. If the concept is not arbitrary, the states must yield. The Court went further in Buckley v. Valeo saying it is for Congress to decide which expenditures will promote the public welfare and "[a]ny limitations on the exercise of that granted power must be found elsewhere in the Constitution." In these decisions, the Supreme Court has adopted the views of Hamilton and Story, noted at § 18.1.1 n.9, that the General Welfare Clause is part of a general grant of power to tax and spend.

When combined with the Necessary and Proper Clause, the Spending Clause also provides the constitutional basis for federal laws dealing with bribery in the administration of a federal program. As the Court noted in Sabri v. United States, federal laws regarding bribery, such as 18 U.S.C. § 666, do not need to require that the bribe come from federal funds to be constitutional, only that the bribe take place in the context of a federal program, so that the federal law is connected to proper implementation of a program involving federal funds.

§ 18.3.2.2 Indirect Regulation of States by Conditions in Federal Spending Programs

The only whispers of states-rights' federalism with respect to spending are in two kinds of cases involving conditions placed by Congress on grants of money flowing to the states. The first kind of case is Pennhurst State School & Hospital v. Halderman. In Pennhurst, the Court held that if Congress intends to impose a condition on the grant of federal money to the states, it must do so unambiguously so that the states voluntarily and knowingly accept the terms of the grant. The second kind of case is South Dakota v. Dole. In Dole, the Court held that conditions on federal grants are unconstitutional if they are not rationally related to a federal interest in national projects, or if they create such powerful incentives that they are coercive, or if they are used to induce states to engage in unconstitutional activities.

In South Dakota v. Dole, the Court upheld congressional withholding of 5% of federal highway funds from any state in which the purchase or public possession of alcoholic beverages by any

---

159 301 U.S. 619, 640-45 (1937).
160 424 U.S. 1, 91 (1976).
person under 21 was lawful. This condition put pressure on the states to outlaw drinking by persons under 21, a result that Congress could likely not achieve directly under the Commerce Clause because of the 21st Amendment. After repealing Prohibition in § 1 of the 21st Amendment, § 2 of that Amendment appears to give the states an exclusive power to bar the delivery or use of intoxicating liquors. In *Dole*, Justice Rehnquist said the Court was not deciding whether the 21st Amendment would prohibit Congress from enacting a national minimum drinking age. The reason was that the conditional spending legislation was constitutional even if Congress could not directly regulate the drinking age. Congress can condition spending of funds on compliance with federal rules, subject to only a few limits on the conditional spending power.

In support of this conclusion, Chief Justice Rehnquist stated:

1. The spending must be for the General Welfare, although perhaps this limit is not a judicially enforceable restriction, but a political question, and the condition must be unambiguous, as required by *Pennhurst*. Here the money was spent for the General Welfare, that is, highway construction and safety, and the condition was unambiguous.

2. The condition could be challenged if it was unrelated to the federal interest in particular national projects or programs. Here, teenage drinking relates to safe interstate travel, a goal of Congress, because there is evidence that the lack of uniformity in drinking age has created an incentive to commute to border states where the drinking age is lower. So this condition on the receipt of funds was reasonably calculated to address a particular impediment to a purpose for which the funds were expended.

3. A financial inducement offered by Congress might in some circumstances be so coercive as to be compulsion, and thus would be unconstitutional. Here, however, only a small percentage of highway funds were being withheld and this was not coercive.

4. The condition must not violate a prohibition in the Constitution. In this case, the question was whether the 21st Amendment barred indirect achievement of objectives that Congress is not empowered to achieve directly. Rehnquist said that the rule is that the power to condition expenditures must not be used to induce states to engage in activities that would themselves be unconstitutional. Raising the drinking age to 21 does not violate anyone's constitutional rights.\(^{164}\)

Justice O'Connor, dissenting, said the condition was not reasonably related to spending federal funds. The condition in the law was overinclusive in that it stopped non-drivers from drinking, and it was underinclusive in that teenage drinkers were only part of the problem. It was simply an attempt to regulate the sale of liquor, a subject not within the power of Congress given the 21st Amendment. Justice Brennan, dissenting, agreed with Justice O'Connor regarding the 21st Amendment analysis, concluding that since states have power to set the drinking age, Congress cannot condition a federal grant to abridge this right. Justice Brennan did not address her Spending

\(^{164}\) *Id.* at 207-12.
The fact that only two Justices dissented in *Dole*, and only one dissented on a Spending Clause analysis, suggests that the Court will give Congress great leeway in terms of deciding on conditions in federal spending programs. For example, in the No Child Left Behind Act, Congress conditioned rather large federal educational grants to the states on the states adopting a panoply of educational testing requirements. It is likely the Court would find such conditions are reasonably related to the federal interest in an educated citizenry, and do not represent a coercive use of the spending power. In a recent case, the National Education Association and local school districts did not even challenge this aspect of the Act, but only whether the spending conditions were clear and unambiguous. Similarly, Congress could likely condition certain highway funds on states adopting uniform standards for driver’s licenses as part of a program of national identity cards.\footnote{School Dist. of the City of Pontiac v. Spellings, 2005 WL 3149545, 2005 U.S. Dist. LEXIS 29253 (E.D. Mich. 2005) (not reported in F. Supp. 2d).}

Some commentators have expressed concern that this broad spending power gives Congress too much power to affect matters of traditional state concern and undermines recent limits on federal power under the Commerce Clause, discussed at § 18.2.5; 10th Amendment, discussed at § 18.4.5; 11th Amendment, discussed at § 17.2.4.3; and Congress’ 14th Amendment enforcement power, discussed at § 28.3.\footnote{See, e.g., Lynn A. Baker, *The Spending Power and the Federalist Revival*, 4 Chapman L. Rev. 195 (2001).} However, that power is implicit in Court doctrine, and lower courts have similarly read *Dole* as giving Congress virtually unreviewable power in this area.\footnote{Rebecca E. Zietlow, *Federalism’s Paradox: The Spending Power and Waiver of Sovereign Immunity*, 37 Wake Forest L. Rev. 141 (2002) (Supreme Court cases); Lynn A. Baker & Mitchell N. Berman, *Getting Off the Dole: Why the Court Should Abandon Its Spending Doctrine, and How a Too-Clever Congress Could Provoke It to Do So*, 78 Ind. L.J. 459, 464-69 (2003) (lower courts).}

§ 18.3.3 Fiscal Powers

Under Article I, § 8, cl.s. 2, 4, 5 & 6, Congress has the power: “To borrow Money on the credit of the United States”; “To establish . . . uniform Laws on the subject of Bankruptcies throughout the United States”; “To coin Money, regulate the Value thereof, and of foreign Coin, and fix the Standard of Weights and Measures”; and “To provide for the Punishments of counterfeiting the Securities and current Coin of the United States.” Article I, § 10, cl. 1 provides, “No State shall . . . coin Money; emit Bills of Credit; [or] make any Thing but gold and silver Coin a Tender in Payment of Debts.” These provisions have been interpreted to give the federal government plenary power over the subjects of revenue, finance, and currency. That power is derived from the aggregate of all these congressional powers, also including the Necessary and Proper Clause.\footnote{See Norman v. Baltimore & Ohio R. Co., 294 U.S. 240, 303-06 (1935).}
§ 18.3.4 Naturalization & Regulation of Aliens

Under Article I, § 8, cl. 4, Congress is granted the power to “establish an uniform Rule of Naturalization.” Naturalization is a privilege aliens may claim only on terms imposed by Congress.\footnote{See United States v. Macintosh, 283 U.S. 605, 615-16 (1931).} As part of exercising this power, Congress also has the power over the immigration of aliens into the United States as a “necessary and proper” adjunct to the naturalization power, and as a natural concomitant of powers inherent in national sovereignty.\footnote{See generally Sarah H. Cleveland, Powers Inherent in Sovereignty: Indians, Aliens, Territories, and the Nineteenth Century Origins of Plenary Power over Foreign Affairs, 81 Texas L. Rev. 1, 81-163 (2002).} The Court has stated that over no other subject is Congress' power more complete.\footnote{Kleindienst v. Mandel, 408 U.S. 753, 765-68 (1972).} However, aliens are entitled to due process in the application of immigration and naturalization rules, as the Due Process Clause applies to any “person,” not only “citizens.”\footnote{Mathews v. Diaz, 426 U.S. 67, 77-80 (1976).} This aspect of Due Process is discussed at § 27.4.4.8 nn.381-84. Aliens also have limited rights under the Equal Protection Clause, discussed at § 26.2.2.2.

§ 18.3.5 Post Office, Copyright, and Patent Powers

Under Article I, § 8, cls. 7 & 8, Congress is granted the power “To establish Post Offices and post Roads” and “To promote the Progress of Science and useful Arts, by securing for limited Times to Authors and Inventors the exclusive Right to their respective Writings and Discoveries.” Under these clauses, combined with the Necessary and Proper Clause, Congress can provide for criminal and civil penalties for, among other things, mail fraud, copyright infringement, and patent infringement.\footnote{On mail and wire fraud, see generally Ryan Y. Blumel, Mail and Wire Fraud, 2 Am. Crim. L. Rev. 677 (2005). On the trademark and copyright powers, see generally Gerald N. Magliocca, From Ashes to Fire: Trademark and Copyright in Transition, 82 N. Car. L. Rev. 1009 (2004); Edward Lee, The Public’s Domain: The Evolution of Legal Restraints on the Government’s Power to Control Public Access Through Secrecy or Intellectual Property, 55 Hastings L.J. 91 (2003).}

In \textit{Eldred v. Ashcroft},\footnote{537 U.S. 186, 199-208 (2003).} the Court addressed whether Congress extending to authors copyrights for 70 years after the author’s death, rather than 50 years, complied with the “limited Times” language of the Copyright Clause. The Court followed the minimum rational review approach used for analyzing congressional power under Article I, § 8, and held that the 70-year provision was constitutional. The Court deferred greatly to the legislative and executive practice in extending copyright protection over the last 200 years, and also noted that the 70-provision was consistent with European copyright law. Congress adopting a similar provision was thus “rationally related” to a
legitimate interest in helping to create uniform copyright standards around the world. Additional cases have upheld broad congressional power under the Copyright Clause. 176

§ 18.3.6 Power Over the Federal Judicial Branch

Under Article I, § 8, cl. 9, Congress is granted the power to “constitute Tribunals inferior to the supreme Court.” As discussed at §§ 17.2.1 & 17.2.3.1, while the creation of a Supreme Court of the United States is required by Article III of the Constitution, Congress is granted the power to decide whether to create lower federal courts, and, for cases falling under the jurisdictional grant of the federal courts in Article III, can determine the jurisdiction of such courts based on the text in Article III to make “such Exceptions, and under such Regulations as the Congress shall make.”

§ 18.3.7 The Admiralty Power

Under Article I, § 8, cl. 10, Congress has the power to “define and punish Piracies and Felonies committed on the high Seas, and Offences against the Law of Nations.” This field is thus under federal control, but Congress may be restricted under this clause by traditional concepts of admiralty and maritime jurisdiction. 177 However, modern Commerce Clause power over commerce “with foreign nations, and among the several States” would likely sustain any regulations Congress would wish to make in this area in any event.

§ 18.3.8 The War Powers

Under Article I, § 8, cl. 11, Congress has the power “To declare War, grant Letters of Marque and Reprisal, and make Rules concerning Captures on Land and Water.” While the matter is not without dispute, the best understanding of the historical evidence suggests that military theory at the time of the Framing focused “on the theories of both declared and undeclared wars, with a declaration being regarded as necessary to commence an offensive war, but none being necessary for a purely defensive war. Further, military theory of the time had also developed the concept of ‘perfect’ and ‘imperfect’ war. A ‘perfect’ war was one which was complete, while an ‘imperfect’ war was more limited, and accomplished through use of ‘reprisals.’” 178 On this understanding, Congress is granted

---

176 See, e.g., Luck’s Music Library, Inc. v. Gonzales, 407 F.3d 1262 (D.C. Cir. 2005) (constitutional to restore copyright protection to foreign copyright holders whose works are protected in their country of origin, but which had fallen into the public domain in the United States); Kiss Catalog, Ltd. v. Passport Int’l Prod., Inc., 405 F. Supp. 2d 1169 (C.D. Cal. 2005) (anti-bootlegging statute constitutional). But see United States v. Martignon, 346 F. Supp. 2d 413 (S.D.N.Y. 2004) (anti-bootlegging statute unconstitutional as providing for “perpetual” copyright-like protection for “unfixed” live performances – that is, performances not intended to be memorialized in a “fixed recording” – contrary to “fixation” (“Writings and Discoveries”) and “durational” (“limited Times”) requirements of the Copyright Clause).

177 See, e.g., Detroit Trust Co. v. The Barlum, 293 U.S. 21, 42-45 (1934).

the power to initiate both major and minor military actions, not the President, because Congress is
granted both powers over “war” and “reprisal.” A conservative formalist separation of powers
argument, granting the President greater war-making power by restricting the “letters of marque and
reprisal” power of Congress to authorizing only private reprisals, not reprisals by the United States
government, which could then be authorized by the President alone, is discussed at § 19.3.3 nn.54-55.

Under Article I, § 8, cls. 12-16, Congress also has the powers: “To raise and support Armies, but
no Appropriation of Money to that Use shall be for a term longer than two Years”; “To provide and
maintain a Navy”; “To make Rules for the Government and Regulation of the land and naval
Forces”; “To provide for calling forth the Militia [today termed the state National Guards] to execute
the Laws of the Union, suppress Insurrections and repel Invasions”; and “To provide for organizing,
arming, and disciplining, the Militia, and for governing such Part of them as may be employed in
the Service of the United States, reserving to the States respectively, the Appointment of the
Officers, and the Authority of training the Militia according to the discipline prescribed by
Congress.” As a matter of purposive interpretation, and legislative practice, the provisions regarding
the army and navy also give Congress the power to provide for and maintain an air force and the
marines. Under the Necessary and Proper Clause, Congress also has the power to make all laws
which shall be necessary and proper for carrying into execution these powers.

Under Article II, § 1 of the Constitution, the President has “the executive Power.” This includes,
as listed in Article II, § 3, the duty to “take Care that the Laws be faithfully executed.” Under
Article II, § 2, cl. 1, the President is the “Commander in Chief of the Army and Navy of the United
States, and of the Militia of the several States, when called into the actual Service of the United
States.” Under Article II, § 2, cl. 2, the President has the “Power by and with the Advice and
Consent of the Senate to make Treatises, provided two thirds of the Senators present concur.”

The Constitution makes the war power almost exclusively federal. Under Article I, § 10, cls. 1 &
3, states cannot grant letters of marque and reprisal, cannot keep troops or ships of war in time of
peace, unless Congress consents; and cannot “engage in War, unless actually invaded, or in such
imminent Danger as will not admit of delay.” This language also suggests a distinction between
offensive military action, to which consent by Congress is needed, and the right, even absent a
declaration, to undertake defensive military action in emergency circumstances.

World War II restrictions on persons of Japanese ancestry were sustained under the war powers of
Congress and the President, including a curfew for American citizens of Japanese descent.179 The
Court said that the war power is all power needed to wage war successfully. It includes steps to
prevent espionage and sabotage and all other matters so related to war as substantially to affect its
conduct and progress. War powers do not end with the end of hostilities. Congress may deal with
continuing evils arising from a war, such as a federal rent control law upheld in 1948 because World

views of 17th and 18th century natural law philosophers, such as Hugo Grotius, Samuel Pufendorf,
and Emmerich de Vattel, on the subject of war).

As with other government powers, including the treaty power, discussed at § 18.3.9 n.188, and the property power, discussed at § 18.3.10 n.200, the war power is subject to Bill of Rights prohibitions, subject to a limited exception, recognized at the turn of the 20th century, initially in a 5-4 opinion, in *The Insular Cases*, for United States action involving “non-fundamental” constitutional rights over “recently” acquired territories, including the Philippines, Hawaii, and Puerto Rico, with “entirely different cultures and traditions” from the United States.\(^{181}\) While this exception was of greater importance during the formalist era, when fewer Bill of Rights provisions were viewed as “fundamental,” discussed at § 27.2.2, this exception has limited impact today given the fact that most Bill of Rights provisions became viewed as “fundamental” during the instrumentalist era, discussed at § 27.2.4, and remain “fundamental” today, discussed at § 27.2.5.1.

There has always been a debate over how much power the President has as Commander-in-Chief to order military personnel into action without first seeking a congressional declaration of war or other means of congressional support. In our Nation’s history, Presidents have called troops into action over 200 times, both for large-scale actions, such as in Korea in the 1950s and Vietnam in the 1960s and 1970s, or smaller-scale actions, such as invading Grenada in the 1980s. Congress has formally declared war only five times: the War of 1812, the Mexican-American War in 1846, the Spanish-American War in 1898, World War I in 1917, and World War II in 1941. Other military actions have been based on more limited congressional authorization, such as the Gulf of Tonkin Resolution in 1964, which provided authority for military personnel to defend themselves against attack in the Vietnam theater of operations, or have been based only on implied congressional authorization through Congress continuing to fund Department of Defense requests for money to continue the military action.

A classic example of this issue arising in the Supreme Court occurred in 1862 in *The Prize Cases*.\(^{182}\) Even though the 5-4 Court approved President Lincoln’s use of military force against rebels he considered to be belligerents after Fort Sumter was fired upon, it was unclear whether the power to act rested entirely on presidential power as Commander-in-Chief or whether it was authorized under Acts of Congress passed in 1795 and 1807. The point was not critical for the outcome, as the Court said that even if the President’s actions needed further congressional approval, it had been given by

ratification on July 13, 1861. Four Justices in dissent said that only Congress could declare war, and that the congressional ratification was invalid as applied to acts before July 13th.

It has been noted that Congress’ power over state Militias suggests the framers and ratifiers believed in a limited view of the President’s Commander-in-Chief power to authorize military action on his own, since if the President was not given the power to order the state Militias into action, it is even more unlikely the framers would have given the President the greater power to order the United States military into action. A similar separation of powers issue involves the War Powers Act of 1973, which was passed by Congress over the veto of President Nixon. That Act limits the President’s ability to commit military personnel into circumstances of “imminent hostilities” for more than a brief period of time. As a core separation of powers issue, the constitutionality of this Act is discussed at § 19.3.3 nn.51-53. A similar separation of powers issue regarding congressional versus presidential power over “enemy belligerents” as part of the war on terrorism after 9-11 is discussed at § 19.3.3 nn.56-57.

§ 18.3.9 The Treaty Power

Under Article II, § 2, cl. 2, the President has the power, with the approval of 2/3 of the Senate present in favor, to make treaties. With Senate “Advice and Consent” the President "shall appoint Ambassadors, other public ministers and Consuls." Also, in Article II, § 3, the President is to "receive Ambassadors and other public ministers." Congress can influence foreign affairs with its powers in Article I, § 8 to regulate commerce with foreign nations; to establish a uniform rule of naturalization; to refuse to ratify treaties; and to define and provide punishment for piracies and felonies committed on the high seas and offenses against the law of nations.

Under the Supremacy Clause of Article VI, § 2, treaties are part of the “supreme Law of the Land.” Thus, there is no 10th Amendment states’ rights limit on the treaty power. An executive agreement between the President and a foreign power also supersedes conflicting state policy. The Court has stated, “If state action could defeat or alter our foreign policy, serious consequences might ensue.” States have no right to enter into any “Treaty, Alliance, or Confederation” pursuant to Article I, § 10, cl. 1. State laws that conflict with federal foreign policy, including state laws that burden foreign commerce, such as barring state or local governments’ procurement of goods or services from persons doing business with pariah governments, are typically viewed as preempted by Congress, discussed at § 20.3.1.2, or violate a dormant commerce clause analysis, discussed at § 20.3.2.2.C. Under Article I, § 10, cl. 2, no state, without Congress' consent, may lay any impost or duty on imports or exports, except what may be absolutely necessary for executing inspection laws.

184 Missouri v. Holland, 252 U.S. 416, 432-35 (1920). See also Hauenstein v. Lynham, 100 U.S. 483 (1880) (a state cannot prevent aliens from inheriting land if a treaty protects that right).

In addition to these textual references to foreign power in the Constitution, even a formalist-era Court, which placed great emphasis on literal text, noted in 1936 that not all federal power over foreign relations depends on constitutional text. The Court said in dicta in United States v. Curtiss-Wright\textsuperscript{186} that federal power over matters of external sovereignty does not depend on affirmative grants in the Constitution because such power is a necessary aspect of nationality. Domestic powers were carved from powers the states had before the Constitution, but the states severally never possessed international powers. While arguments from history suggest some moderation in this broad statement, the broad statement does reflect Court precedents today.\textsuperscript{187}

The Court has made it clear that treaties or executive agreements, or laws enacted pursuant to treaties or executive agreements, will not be enforced in American domestic courts if they violate constitutional prohibitions. This is based on the Constitution being “the supreme Law of the Land,” and the view that the President and Congress have no authority to negotiate and ratify any treaty provision or executive agreement that is in conflict with the Constitution, such as providing for trial of civilian military dependents by court-martial in violation of the jury trial provisions of the Fifth and Sixth Amendments, as held in Reid v. Covert.\textsuperscript{188} Additionally, treaty or executive agreement obligations may be superseded by later federal legislation. Under well-established doctrine, treaties and executive agreements, like statutes, stand on the same constitutional footing, and in case of a conflict, whichever was passed last controls.\textsuperscript{189}

In determining whether a conflict exists, the Court has stated that “an act of Congress ought never to be construed to violate the law of nations if any other construction remains.”\textsuperscript{190} In addition, there is a maxim of construction that “courts should interpret treaties liberally and in good faith so as to preserve amity among nations.”\textsuperscript{191} Similar to court deference to agency interpretation of statutes,
courts typically give the *Skidmore* kind of deference, though not *Chevron* deference, that difference noted at § 9.2.2.1 nn.48-51, to executive interpretations of treaties.\(^{192}\)

Despite this doctrine applicable to United States domestic courts, for purposes of international law, such as decisions by the International Court of Justice at the Hague in the Netherlands, valid treaty obligations are superior to the domestic constitutional law of any nation.\(^{193}\) Thus, there is a possibility of conflicting rulings if a treaty provision enacted by the United States is viewed as violating the United States Constitution. In such a case, United States domestic courts will base their decision on the Constitution. The international court will base its decision on the treaty, although in interpreting the treaty international courts would take into account constitutional requirements in deciding what the United States government actually adopted in ratifying the treaty.\(^{194}\) Depending on what enforcement mechanism are present, and few direct enforcement mechanisms exists at international law,\(^{195}\) the United States government would have to decide how to proceed if met with conflicting rulings from the different tribunals. It would be good in theory to follow international law, but domestic political pressures might counsel a different practice.\(^{196}\)

Some commentators have questioned whether some delegations of sovereign power to international tribunals, such as the United Nations, the Organization for Economic Cooperation and Development, the International Labour Organization, or the World Trade Organization violate implied structural principles in the Constitution regarding federal sovereignty.\(^{197}\) The Supreme Court has never

indicated any interest in developing doctrine along those lines. In practice, many sovereignty concerns are mitigated, although not resolved, by viewing the treaties or executive agreements as non-self-executing, and thus enforceable only if Congress supports the delegation by passing enabling legislation. Particularly for executive agreements, where no Senate ratification by a 2/3 majority is required, such as many trade agreements, like NAFTA (North American Free Trade Agreement) and GATT (General Agreement on Tariffs and Trade), implementing legislation by Congress is usually essential.

To implement a treaty, the question has arisen whether Congress may pass a law it could not enact in the absence of the treaty. In Missouri v. Holland, per Justice Holmes, the Court appeared to say "yes," at least if the treaty does not violate any constitutional prohibition and is a good faith attempt to address a national problem with which the states cannot effectively cope. Of course, the Court’s jurisprudence with respect to treaties, discussed here at § 18.3.9, or the powers of Congress and the President regarding military matters, discussed at §§ 18.3.8 & 19.3.3, is circumscribed by the Court’s reluctance to decide political questions, discussed at § 17.3.4.

§ 18.3.10 The Property Power

Under Article I, § 8, cl. 17, Congress is granted power to exercise “exclusive Legislation in all Cases whatsoever, over such District (not exceeding ten Miles square) as may, by Cessation of particular States, and the Acceptance of Congress, become the Seat of the Government of the United States,” what became the District of Columbia, and “like Authority over all Places purchased by the Consent of the Legislature of the State in which the Same shall be, for the Erection of Forts, Magazines, Arsenals, dock-Yards, and other needful buildings.” Under Article IV, § 3, cl.2, Congress is also given the power to “dispose of and make all needful Rules and Regulations respecting the Territory or other Property belonging to the United States.” These clauses have been read as granting Congress plenary power over federal public lands, subject to the Bill of Rights or other constitutional limitations on government action, with the minor exception regarding such constitutional limitations recognized in The Insular Cases, discussed at § 18.3.8 n.181.

---

200 See, e.g., Kleppe v. New Mexico, 426 U.S. 529 (1976) (power over wildlife on federal lands); Banner v. United States, 428 F.3d 303, 310-12 (D.C. Cir. 2005) (Congressional ban on District of Columbia taxation of income of non-residents does not violate the Uniformity Clause of Art. I, § 8, cl. 1, because the legislation was passed as an aspect of Congress’ authority to exercise “exclusive Legislation” in the District of Columbia, and this ban was similar to what a state could do regarding state taxation of income and would not violate the Equal Protection Clause).
Despite this conclusion, at least one author has argued that a textual reading of the Constitution, supported by arguments of specific historical intent, support the view that Congress’ property power is more limited, and that the original understanding was that Congress would have the power under the Property Clause of Article I, § 8, cl. 17 over the District of Columbia, and isolated buildings and forts necessary for federal purposes, but that other federal property, including territories, would be turned over to the states, that is “disposed of” in a timely manner, under Article IV, § 3, cl. 2. The Supreme Court has never evidenced any support for this view, nor has this view been supported by federal legislative or executive practice. Currently, the United States owns some land in every state, and approximately 29% of the total land in the United States, with the largest acreage being 69.1% of Alaska. The United States also owns significant parts of other states, including: Arizona, 48.1%; California, 45.3%; Colorado, 36.6%; Idaho, 50.2%; Montana, 29.9%; New Mexico, 41.8%; Nevada, 84.5%; Oregon, 53.1%; Utah, 57.4%; Washington, 30.3%; and Wyoming, 42.3%.

§ 18.4 Tenth Amendment Limits on Congressional Power

§ 18.4.1 The Original Natural Law Era

The text of the 10th Amendment provides, “The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.” As stated in United States v. Darby, "The amendment states but a truism that all is retained which has not been surrendered. . . . From the beginning and for many years the amendment has been construed as not depriving the national government of authority to resort to all means for the exercise of a granted power which are appropriate and plainly adapted to the permitted end.”

On this understanding, the 10th Amendment was originally intended and understood to mean that states are free to legislate in areas not covered by prohibitions or the Supremacy Clause. However, the 10th Amendment did not create any state immunity from federal action or create any areas of exclusively state power. As stated in Darby, “There is nothing in the history of its adoption to suggest that it was more than declaratory of the relationship between the national and state governments as it had been established by the Constitution before the amendment or that its purpose was other than to allay fears that the new national government might seek to exercise powers not granted, and that the states might not be able to exercise fully their reserved powers.”

202 See Laurence M. Vance, This Land Is Not Your Land (internet site searched by using author’s name and words in the title) (referencing Federal Real Property Profile 2004).

203 312 U.S. 100, 124 (1941).

204 Id. On this understanding of the 10th Amendment, see generally Crosskey, supra note 1, at 675-708.
A similar understanding of the 10th Amendment appeared in an early 10th Amendment case, *Livingston v. Van Ingen*[^205] decided by a New York court in 1812. There the judge said that a grant of power to Congress does not, without more, take any power away from the states, but that the 10th Amendment does not limit federal power either. This was the same position taken by the Supreme Court in 1819 in *McCulloch v. Maryland*, discussed at § 18.1.2. In *Houston v. Moore*,[^206] in 1820, the Court reaffirmed this position in an opinion by Justice Story, noting also that if Congress legislates, any conflicting state laws must give way under the Supremacy Clause, a conclusion reaffirmed four years later in 1824 in *Gibbons v. Ogden*, discussed at § 18.2.1.1.

Despite this view, one could take the position that the 10th Amendment at least cautions the Court that states’ rights considerations should be taken into account in interpreting the other provisions of the Constitution. This was the position of Thomas Jefferson and other states’ rights supporters.[^207]

Beginning with the Taney Court in 1836, the Court’s language in cases implicitly raising 10th Amendment issues did focus more on the power of the states, rather than the power of Congress. For example, in 1837, the Court held in *Mayor, Alderman and Commonalty of City of New York v. Miln*[^208] that states have a field of exclusive power in their internal police. In 1851, the Court said in *Cooley v. Board of Wardens*[^209] that some subjects of regulation might be exclusively for the states. In *Lane County v. Oregon*,[^210] decided in 1869, the Court went further, saying, "In many articles of the Constitution, the independence of the states within their spheres is distinctly recognized. To them nearly all of the interior regulation is given and certainly all that is not expressly given to Congress." In *Texas v. White*,[^211] also decided in 1869, the Court stated, “The Constitution, in all its provisions, looks to an indestructible Union, composed of indestructible States.”

### § 18.4.2 The Formalist Era

Cases during the formalist era rarely raised the 10th Amendment explicitly. The formalist Court’s doctrine regarding the Commerce Clause, discussed at § 18.2.2, sufficiently limited federal power that typically no resort to the 10th Amendment was needed. Instead, the 10th Amendment served as a reminder of state sovereignty rights, those rights protected directly by Court decisions under the Commerce Clause, Taxing Clause, Spending Clause, and other formalist-era decisions.

[^205]: 9 Johns 507 (N.Y. 1812).
[^206]: 18 U.S. 1, 48-50 (1820) (Story, J., opinion).
[^207]: See generally James B. Staab, *The Tenth Amendment and Justice Scalia’s “Split Personality,”* 16 J.L. & Pol. 231, 244-51 (2000).
[^208]: 36 U.S. 102, 138 (1837).
[^210]: 74 U.S. 71, 76 (1869).
[^211]: 74 U.S. 700, 725 (1869).
Despite this approach toward the 10th Amendment, a moderate formalist majority did note in 1936 in *United States v. Butler*\(^{212}\) that Congress' taxing power may be adopted as a means, consistent with the Necessary and Proper Clause, to carry into operation another enumerated power. This suggested a willingness to broaden the powers that Congress could be held to have under the various provisions in the Constitution. However, certain subjects, such as intrastate commerce, which included agriculture, manufacturing, and mining, were at that time still thought to be exclusively for the states, as discussed at § 18.2.2.

\section*{§ 18.4.3 The Holmesian Era}

Cases after 1937 recognized such great federal commerce power that by 1941, in *United States v. Darby*,\(^{213}\) Justice Stone could say for the Court that the 10th Amendment merely states a truism that all is retained by the states that has not been surrendered. There is nothing in its history, he said, to suggest that it was more than declaratory of the relationships between the national and state governments that had been established by the Constitution before the Amendment.

The Holmesian-era Court applied this doctrine in cases like *Case v. Bowles*,\(^{214}\) which involved the federal Emergency Price Control Act applied to a sale of timber by the state of Washington. The Court thus appeared to return to the original understanding with respect to the powers of Congress and the 10th Amendment. This approach reflected the liberal Holmesian predisposition of President Roosevelt’s appointments to the Supreme Court to defer to the national government, as opposed to the conservative Holmesian predisposition to defer more to state governments, discussed at § 6.2.2.3.

\section*{§ 18.4.4 The Instrumentalist Era}

During the first part of the instrumentalist era, the Court followed *Darby* in holding that the 10th Amendment merely states a truism, with congressional power found under the instrumentalist approach to the Commerce Clause, discussed at § 18.2.4. Thus, in 1964, the Court held that Federal Employers’ Liability Act could be applied to a state-owned railroad in *Parden v. Terminal Ry., of Alabama State Docks Department*.\(^{215}\) In 1968, the Court upheld the wage and hour provisions of the Fair Labor Standards Act as applied to employees of public schools and hospitals in *Maryland v. Wirtz*.\(^{216}\) In 1975, in *Fry v. United States*,\(^{217}\) the Economic Stabilization Act was applied to limit wage increases of state employees.

\begin{itemize}
\item\(^{212}\) 297 U.S. 1, 65-70 (1936).
\item\(^{213}\) 312 U.S. 100, 124 (1941).
\item\(^{214}\) 327 U.S. 92, 101-03 (1946).
\item\(^{215}\) 377 U.S. 184, 190-93 (1964).
\item\(^{216}\) 392 U.S. 183, 193-99 (1968).
\item\(^{217}\) 421 U.S. 542, 547-48 (1975).
\end{itemize}
In *Fry*, however, Justice Marshall's majority opinion included a footnote, which stated, "The [10th] Amendment expressly declares the constitutional policy that Congress may not exercise power in a fashion that impairs the States' integrity or their ability to function effectively in a federal system."218 One year later, in 1976, Justice Rehnquist seized on Marshall's footnote in *Fry*, and was able to assemble a 5-Justice majority to overrule *Maryland v. Wirtz*, distinguish *Fry*, and hold that the minimum wage and maximum hours provisions of the federal Fair Labor Standards Act could not be applied to state and local employees.

In a departure from the instrumentalist approach, a 5-4 Court held in *National League of Cities v. Usery*219 that the 10th Amendment prohibits Congress, when exercising its Commerce Clause power, from directly displacing a state's freedom to structure integral operations in areas of traditional governmental functions. Joining conservative Holmesian Justice Rehnquist’s opinion unreservedly were conservative formalist Chief Justice Burger, conservative Holmesian Justice Stewart, and moderate conservative natural law Justice Powell who, as noted § 12.4.2, was always a strong supporter of states’ rights, a product perhaps of his Southern up-bringing in Virginia.

There were four dissents in *National League*. Liberal instrumentalist Justices Brennan and Marshall, along with liberal Holmesian Justice White, said the majority had returned to the early 1930s formalist-era jurisprudence by using the 10th Amendment as a cover for invalidating a congressional judgment with which they disagreed.220 Moderate liberal instrumentalist Justice Stevens also dissented, saying that he could not find a principled limitation on federal power that would not also invalidate federal regulation of state activities he considered unquestionably permissible.221

The critical fifth vote in *National League* belonged to Justice Blackmun. As noted at § 11.4, Justice Blackmun is perhaps the best example of a contemporary judge who began his service on the Court during the 1970s deciding cases more as a moderate natural law judge, but whose decisions in the 1980s and 1990s reflected more of a liberal instrumentalist approach. In *National League*, Justice Blackmun balanced the demands of federal versus state power, creating an area for state sovereignty, but noted that federal power should not be outlawed "in areas such as environmental protection, where the federal interest is demonstrably greater and where state facility compliance with imposed federal standards would be essential."222

This approach is reminiscent of Chief Justice Marshall’s approach in 1824 in *Gibbons v. Ogden*, where Justice Marshall also carved out an area for state sovereignty, but noted that federal power should not be outlawed unless the activity is “exclusively internal commerce,” which Marshall defined as “completely within a particular State, which do not affect other States, and with which

it is not necessary to interfere for the purpose of executing some of the general powers of the government.\footnote{223} Reflecting Justice Blackmun’s balancing approach, several later cases limited the potential impact of \textit{National League}.\footnote{224} Further, the \textit{National League} doctrine was never held to limit Congress’ power to spend for the General Welfare.\footnote{225} Nor was congressional power to enforce the 14\textsuperscript{th} Amendment limited by the 10\textsuperscript{th} Amendment.\footnote{226}

In 1985, nine years after \textit{National League}, Justice Blackmun abandoned his balancing approach in \textit{Garcia v. San Antonio Metropolitan Transit Authority}.\footnote{227} In \textit{Garcia}, he joined with liberal instrumentalists Justices Brennan, Marshall, and Stevens, and liberal Holmesian Justice White, to overrule \textit{National League} in favor of a strong pro-federal power decision. As discussed at § 7.3.3.1 nn.149-52, Justice Blackmun said in his opinion for the Court that it was unworkable to seek limits on Congress’ power in terms of particular governmental functions, whether "traditional," "integral," "ordinary," or "necessary." Such distinctions merely invite judges to decide on what state policies they favor or dislike. Blackmun noted that any 10\textsuperscript{th} Amendment limits on Congress' Commerce Clause power are in the procedural safeguards inherent in the structure and political processes of the federal system, including the lobbying ability of groups like the National Governors' Association, the National Conference of State Legislatures, the National Association of Counties, the U.S. Conference of Mayors, the National League of Cities, International City/County Management Association, and the Council of State Governments.\footnote{228}

Justice Powell dissented in \textit{Garcia}, joined by Chief Justice Burger, and Justices Rehnquist and O'Connor. Justice Powell said that the Court was improperly withdrawing from expected difficulties

\footnote{223}{223} \textit{22 U.S. (9 Wheat.)} 1, 195 (1824) (Marshall, C.J., for the Court).

\footnote{224}{\textit{See, e.g.,} Hodel v. Virginia Surface Mining and Reclamation Ass’n, Inc., 452 U.S. 264 (1981) (\textit{National League} does not apply to federal law which regulates individuals and not the States); United Transp. Union v. Long Island R. Co., 455 U.S. 687 (1982) (Federal Railway Labor Act can be applied to a state-owned railroad since running a railroad is not a traditional state function); Federal Energy Regulatory Comm’n v. Mississippi, 456 U.S. 742 (1982) (a federal statute may require state utility commissions to consider certain federal policies and follow specific procedures); Federal Employment Opportunity Comm’n v. Wyoming, 460 U.S. 226 (1983) (federal Age Discrimination Act can be applied to state and local employees). In the last two cases, there were dissents by Chief Justice Burger and Justices Powell, Rehnquist, and O’Connor. They argued that federal law in these situations was impairing state ability to structure integral operations.

\footnote{227}{\textit{Garcia v. San Antonio Metro. Transit Auth.}, 469 U.S. 528, 530-31 (1985) (Blackmun, J., for the Court) (Fair Labor Standards Act can be applied to city bus drivers).

\footnote{228}{\textit{Id.} at 547-54.
in drawing lines, was ignoring the essence of federalism which required federal respect for legitimate state interests, and was mistaken in its evaluation of the strength of state involvement in federal processes.\textsuperscript{229} Justice Rehnquist wrote separately to emphasize that his opinion in \textit{National League} did not call for a balancing of federal and state interests, and he predicted that one day it would again command a majority on the Court.\textsuperscript{230} In an attempt to save something of \textit{National League}, Justice Scalia later said in \textit{South Carolina v. Baker}\textsuperscript{231} that Blackmun's opinion in \textit{Garcia} had noted constitutional structure as the source of some limits on federal action affecting states.

Despite the 10\textsuperscript{th} Amendment doctrine of \textit{Garcia}, state rights have been indirectly enhanced after \textit{Garcia} in two ways. First, in \textit{Gregory v. Ashcroft},\textsuperscript{232} Justice O'Connor set forth policy reasons why the 10\textsuperscript{th} Amendment reflected a desire for states to have substantial reserved authority: to assure government sensitivity to diverse needs, increase opportunity for citizen involvement in democratic processes, allow for innovation and experimentation in government, make government more responsive, and check abuses of governmental power. This last reason makes federalism complement the separation of powers and gives to the people a power to make one side or the other preponderate. Based on this analysis, the Court held in \textit{Gregory v. Ashcroft} that Congress needs to make a clear statement in federal statutes for those statutes to apply also to states in their sovereign capacity. This opinion was joined unreservedly by conservative Holmesian Chief Justice Rehnquist, conservative formalist Justice Scalia, and the natural law Justices Kennedy and Souter.

States’ rights under the 10\textsuperscript{th} Amendment have also been indirectly enhanced after \textit{Garcia} by cases that have limited Congress’ power to impose remedies on states by exercise of power under § 5 of the 14\textsuperscript{th} Amendment. As noted at § 17.2.4.2 nn.217-24, in \textit{Seminole Tribe of Florida v. Florida},\textsuperscript{233} the Court overruled \textit{Pennsylvania v. Union Gas Co.} and held that Congress has no power under the Commerce Clause to abrogate a state’s 11\textsuperscript{th} Amendment sovereign immunity. Then, the Court held in \textit{City of Boerne v. Flores}\textsuperscript{234} that the power to abrogate immunity under § 5 of the 14\textsuperscript{th} Amendment required any statute to be congruent and proportional to the injury to be prevented or remedied. For example, in \textit{Kimel v. Florida Board of Regents},\textsuperscript{235} the federal Age Discrimination in Employment Act of 1967 could not abrogate state sovereign immunity because the legislative record did not show sufficient instances of unconstitutional state discrimination because of age.

\begin{itemize}
\item \textsuperscript{229} \textit{Id.} at 557-60 (Powell, J., joined by Burger, C.J., and Rehnquist & O’Connor, JJ., dissenting).
\item \textsuperscript{230} \textit{Id.} at 579-80 (Rehnquist, J., dissenting).
\item \textsuperscript{231} 485 U.S. 505, 528 (1988) (Scalia, J., concurring in part and concurring in the judgment).
\item \textsuperscript{232} 501 U.S. 452, 460-61 (1991).
\item \textsuperscript{234} 521 U.S. 507, 527-36 (1997).
\item \textsuperscript{235} 528 U.S. 62, 82-92 (2000).
\end{itemize}
As discussed at § 28.3, when considering Congress’ enforcement powers under the Civil War Amendments, each of these cases were decided on a 5-4 basis, with conservative Holmesian Chief Justice Rehnquist, and conservative formalists Justices Scalia and Thomas, being joined by conservative natural law Justices O’Connor and Kennedy. As discussed at § 6.2.2.3, during the modern Holmesian, instrumentalist, and natural law eras, conservative judges have had more of a predisposition to defer to states rights, while liberal judges have had more of a predisposition to defer to the federal government. Thus, not surprisingly, centrist natural law Justice Souter, and moderate liberal instrumentalists Justices Stevens, Ginsburg, and Breyer, dissented in each of these cases.

§ 18.4.5 Modern Doctrine: Ban On Federal Commandeering of State Legislative, Executive, or Administrative Agencies

Based upon the natural law style of interpretation’s great respect for precedent, it is likely that Garcia is still good law today, with only conservative formalist and Holmesian Justices being willing to vote to overrule its holding and reinstate the approach of National League. However, the modern natural law Justices have carved out some meaning for the 10th Amendment independent of National League and Garcia and whether Congress can directly regulate the states in their sovereign capacities by banning federal commandeering of state legislative, executive, or administrative agencies.

In New York v. United States,236 Justice O’Connor wrote for a 6-3 Court, including Justices Kennedy and Souter, that "Congress may not simply 'commandeer the legislative processes of the States by directly compelling them to enact and enforce a federal regulatory program.'" This doctrine is based upon the “dual theory of sovereignty.” Under that theory, as explained by Justice Kennedy in U.S. Term Limits, Inc v. Thornton,237 the genius of our founding generation was to split sovereignty in the United States system into two parts: states and federal government. As Chief Justice Marshall had noted in McCulloch v. Maryland, the founding generation established dual systems of government – states and federal government – each deriving its authority independently from the consent of the people. The Constitution, after all, was adopted, as stated in the first three words of the Constitution, by “We, the People,” not “We, the States.” Further the Constitution was ratified in special state conventions elected specially by the people for that purpose, not ratified by the existing state legislatures. Thus, in our system, there are two sovereign entities, the federal government and the states, which are linked by the Constitution’s Supremacy Clause of Article VI, § 2.

Under this dual theory of sovereignty, the federal government can regulate both individuals and states where constitutional power exists under the United States Constitution, and states can regulate individuals and the federal government under their own state constitutions and the United States Constitution consistent with doctrines of intergovernmental immunity, discussed at §§ 20.2.1-20.2.4. However, the federal government cannot tell the states in any manner how they should regulate their

own people because that would be infringing on the states’ reserved sovereign power. The rule in

*New York* was phrased a categorical barrier, not a balancing test depending on the extent of the

commandeering or the importance of the federal government’s interest involved. For this reason,

despite the strong federal interest involved, it can been argued that congressional statutes, first

passed in 1842, requiring states to elect members to Congress in single-member districts represent

a commandeering of state authority to determine how to elect members to Congress. Under the text

in Art. I, § 4, Congress could “make or alter” state regulations and draw single-member districts

itself, but Congress cannot tell the states how to organize their voters into districts. Of course, given

political realities, no state would likely wish to depart today from single-member districts, and such

congressional statutes may well be viewed as constitutional anyway as a matter of “settled law.”

Reflecting the liberal predisposition to favor more the federal government, Justice White, dissenting

with Justices Blackmun and Stevens, questioned how this case could be distinguished from

*Garcia*. He pointed out that in no previous case had the Court rested its holding on a distinction between a

federal statute's regulation of states and private parties for general purposes, as opposed to a

regulation solely on the activities of states. He continued, “An incursion on state sovereignty hardly

seems more constitutionally acceptable if the federal statute that "commands" specific action also

applies to private parties. The alleged diminution in state authority over its own affairs is not any

less because the federal mandate restricts the activities of private parties.” 239  This quote, however,

misses the point of *New York* that there is a difference between the federal government regulating

the states directly, and telling the states how they have to regulate their own people.

The theory of *New York v. United States* that there is a difference between commanding a state to
do something, and commandeering a state how to regulate its own citizens, was extended in the 5-4
case of *Printz v. United States*. 240  There the Court held that Congress could not require state officials
to conduct a background check on persons who had applied to purchase a gun. Relying on the dual
theory of sovereignty, history, and legislative and executive practice, the Court concluded that just
as Congress could not commandeer the state legislature in *New York*, Congress cannot commandeer
state executive or administrative officials. The holding has potentially broad applications, as it has
been used by state officials following *Gonzales v. Raich*, discussed at § 18.2.5 nn.121-25, for the
proposition that local law enforcement officers do not have to enforce federal marijuana laws, and
can acquiesce in medical marijuana use authorized under state laws.

Based upon history and practice, the Court suggested strongly in *dicta in Printz* that Congress can
commandeer state judges to enforce the United States Constitution. This is based on the view that
the framers and ratifiers’ expectations, given no federal court system under the Articles of
Confederation, and no requirement that Congress create lower federal courts, noted at § 17.2.1, was

238  *New York*, 505 U.S. at 161-66 (commandeering not phrased as a balancing test); Paul E.
McGreal, *Unconstitutional Politics*, 76 Notre Dame L. Rev. 519 (2004) (discussing the single-
member district requirement from the perspective of commandeering under *New York*).

239  *Id.* at 201-02 (White, J., joined by Blackmun & Stevens, JJ., concurring in part and
dissenting in part).

that state courts would be the primary initial enforcers of federal constitutional and statutory rights.\textsuperscript{241} In addition, Article VI, § 2 of the Constitution provides that “the Judges in every State shall be bound thereby.” Even without regard to these views, the change in the balance of power between the states and the federal government caused by the outcome of the Civil War, and represented in the Civil War Amendments, would mean that any states’ rights argument that state courts are not bound to follow federal law, which was raised in some Southern state courts before the Civil War, discussed at § 25.3 nn.56-62, would no longer be valid today, as the Court noted in 1947 in \textit{Testa v. Katt}.\textsuperscript{242}

The \textit{Printz} majority was made up of the same Justices who formed the majority in \textit{New York v. United States}, minus Justice Souter. In his dissent in \textit{Printz}, Justice Souter noted that while he agreed with Justices O’Connor and Kennedy regarding Congress’ lack of an ability to commandeer the state legislative process in \textit{New York}, Justice Souter read \textit{The Federalist Papers}, particularly language in Hamilton’s No. 27, to suggest that just as the framers and ratifiers assumed state judges could be commandeered for federal purposes, they assumed state executive officers could be commandeered. The passage from Hamilton stated that “the Legislatures, Courts, and Magistrates, of the respective members will be incorporated into the operations of the national government as far as its just and constitutional authority extends; and will be rendered auxiliary to the enforcement of its laws.” The majority in \textit{Printz} disagreed with this meaning, viewing the passages as only requiring state officials not to obstruct the operation of federal law, and permitting auxiliary aid, if they wished.\textsuperscript{243} The majority seems to have the better of this debate reading these passages against the backdrop of the “dual theory of sovereignty” and the lack of federal legislative or executive practice attempting to “commandeer” state executive or legislative officials for most of the Nation’s history.

Reflecting their moderate liberal instrumentalist approach, Justices Stevens, Ginsburg, and Breyer also dissented in \textit{Printz}. They limited their dissent to questioning the rationale of \textit{New York} as applied to state judicial or executive officers, thus inducing Justice Souter to join their dissent.\textsuperscript{244} In a later case it is likely that Justices Stevens, Ginsburg, and Breyer might be willing to question the entire rationale of the “commandeering” language in \textit{New York} and \textit{Printz}, just as Justice Stevens, along with Justices White and Blackmun, had questioned that rationale in \textit{New York}.

The Court has made it clear that the \textit{New York} and \textit{Printz} cases apply only where Congress attempts to “use” or “commandeer” state officials for federal purposes. These cases pose no 10th Amendment limit on Congress’ power to regulate states or individuals directly. Thus, in \textit{Reno v. Condon},\textsuperscript{245} a federal act barring unconsented disclosure of driver’s license information was applied to both the

\begin{itemize}

  \item \textsuperscript{243} 521 U.S. at 911-18; \textit{id}. at 970-76 (Souter, J., dissenting).
  \item \textsuperscript{244} \textit{Id}. at 939-40 (Stevens, J., joined by Souter, Ginsburg & Breyer, JJ., dissenting).
  \item \textsuperscript{245} 528 U.S. 141, 148-51 (2000).
\end{itemize}
states and private persons. The Court stated that New York and Printz did not apply where the federal exercise of Commerce Clause power regulated state activities directly, rather than seeking to control or influence the manner in which the states regulated private parties. In Condon, since the federal statute regulated state workers at the state’s Department of Motor Vehicles, and did not tell those workers how to regulate their own citizens, the federal act was constitutional. If the federal government attempted to tell states how to regulate their own citizens, such as requiring driver’s licenses to contain certain information or be done in a standardized manner, that would likely be viewed as commandeering, although, as noted at § 18.3.2.2 n.166, Congress could likely use its conditional spending power under the Spending Clause to induce states to adopt such uniform licenses.

Under Condon, the federal government presumably could tell local law enforcement officials to forward any information they have collected on their own regarding terrorist activity, as that would be regulating the officers directly, while the federal government could not require the local law enforcement officials to aid the federal government in collecting such information. In a case decided before Condon, in City of New York v. United States, the Second Circuit Court of Appeals refused to hold unconstitutional two federal statutes that preempted a city executive order prohibiting city officials from voluntarily providing federal authorities with information about the immigration status of aliens unless certain conditions were met. Since the federal statutes did intrude on the city’s management of its local officials regarding how to deal with aliens, they would likely be ruled unconstitutional under Printz. The Second Circuit case, however, upheld the statutes. On the other hand, the case involved a facial challenge to the federal statutes, in the absence of any showing of injury by the city of New York, despite the fact that the court “invited the city to inform us” of their “legitimate municipal functions” that might be impaired by the federal statute. The court specifically noted that had such justification been provided, it would have been a different case and “we offer no opinion on that question.”

In each of these cases, states, or cities, were parties to the litigation. In some cases, states, or cities, might choose not to challenge such federal regulation. They may want to conserve resources, they may not find the legislation sufficiently intrusive to warrant a constitutional challenge, or they may elect to enforce such regulations either to avoid antagonizing the federal government or because they approve of the legislation but do not want to face the political ramifications of enacting the statutory scheme themselves. Under any of these scenarios, private parties affected by the federal regulation may still wish to challenge the regulation in court. Cases have not made clear whether private parties have standing to challenge these laws when states decline to do so.

The Court made it clear in Printz that states can choose to aid the federal government in enforcement if states so wish, as was done under an Act of 1882 with respect to immigration matters, or in 1917 with respect to aspects of the draft during World War I. Thus, the better approach would seem

---

246 179 F.3d 29, 35-37 (2nd Cir. 1999).

247 Printz, 521 U.S. at 916-18. See generally Jim Rossi, Dual Constitutions and Constitutional Duels: Separation of Powers and State Implementation of Federally Inspired Regulatory Programs and Standards, 46 Wm. & Mary L. Rev. 1343, 1355 (2005) (“So long as some state or local official
to be to deny private parties any right to raise these issues in the absence of any official state
complaint. One author has noted, “Courts generally have recognized that a political subdivision of
a state has standing to raise a Tenth Amendment claim. At that point, however, some courts have
drawn the line, ruling that private plaintiffs not affiliated with the government may not raise such
a challenge. Other courts have extended standing to private plaintiffs begrudgingly, or have
assumed such standing while questioning whether it constitutionally can exist. A third set has
affirmatively recognized that private parties have standing to raise these claims.”

§ 18.5 Additional Limitations on Federal Power

Article I, § 9 of the Constitution contains eight clauses providing for specific textual limitations on
federal power. These clauses tend to be clear in their meaning, and thus have not provided the
source for many constitutional cases. These eight provisions provide:

1. No prohibiting aspects of the slave trade prior to 1808, discussed at § 25.1;
2. Writ of habeas corpus shall not be suspended, unless when in cases of rebellion or
invasion the public safety may require it, discussed at § 23.2.2.3;
3. No bill of attainder or ex post facto law shall be passed, discussed at §§ 23.2.2.1-
23.2.2.2;
4. No tax shall be laid unless in proportion to census or enumeration, amended by the 16th
Amendment to the Constitution, discussed at § 18.3.1;
5. No tax shall be laid on articles exported from any state;
6. No preference shall be given to any regulation of commerce or revenue to the ports of
one state over another, nor shall vessels bound from one state have to pay duties to enter
or leave any port of another;
7. No money shall be drawn from the treasury except by appropriation made by law, and
a regular accounting shall be published of all money spent from time to time, though
who would have standing to bring such a case is unclear, as discussed at § 17.3.1.2.D
n.373 concerning lack of standing for generalized grievances; and
8. No title of nobility shall be granted by the United States, and no person holding office
may accept any present, gift, or title from any King, Prince, or foreign state without
approval of Congress.

§ 18.6 Additional Limitations on State Power

A range of additional limitations on state power appear in the Constitution. These appear principally
in two places in the Constitution, Article I, § 10 and Article IV. The Article I, § 10 limitations are
discussed at § 18.6.1. The Article IV provisions dealing with Admittance of New States, State
Power over Property, and the Guarantee Clause, are discussed at § 18.6.2.

voluntarily attempts to assume federal duties, Congress has not forced state or local action, and no
commandeering threat is present.”).

248    Ara B. Gershengorn, Private Party Standing to Raise Tenth Amendment Commandeering
Challenges, 100 Colum. L. Rev. 1065, 1066 (2000).
The remaining provisions of Article IV are discussed in this book at the following places: Privileges and Immunities Clause, § 2, cl.1, discussed at § 20.3.3; Full Faith and Credit Clause, § 1, discussed at § 23.1.4; Extradition Clause, § 2, cl.2, discussed at § 23.2.2.4; and Fugitive Slave Clause, § 2, cl.3, discussed at § 25.1.

§ 18.6.1 Article I, § 10 Limitations on State Power

Article I, § 10 of the Constitutions contains three clauses providing for specific textual limitations on state power. As with the limitations on federal power in Article I, § 9, these clauses also tend to be clear in their meaning, and thus have not provided the source for many cases. These three provisions provide:

(1) No state shall enter into any treaty or alliance, discussed at § 18.3.9; coin money, discussed at § 18.3.3; pass any bill of attainder, discussed § 23.2.2.1, or ex post facto law, discussed § 23.2.2.2, or law impairing the obligation of contracts, discussed at § 22.1; or grant any title of nobility;

(2) No state shall, without the consent of Congress, lay duties on imports or exports, except what is absolutely necessary for inspection laws, noted at § 18.3.9, and the net profit from any duties shall be held for the federal treasury; and

(3) No state shall, without the consent of Congress, keep troops or ships in time of peace; enter into any agreement or compact with another state, or with a foreign power, discussed at § 20.3.2.1.A; or engage in war unless actually invaded, or in such imminent danger as will not admit of delay, discussed at § 18.3.8.

§ 18.6.2 Article IV Limitations on State Power

§ 18.6.2.1 Admittance of New States

Under Article IV, § 3, cl. 1, “New States may be admitted by the Congress into this Union; but no new State shall be formed or erected within the Jurisdiction of any other State; nor any State be formed by the Junction of two or more States, or Parts of States, with the Consent of the Legislatures of the States concerned as well as of the Congress.” The Court has never interpreted this clause, and given its text and subject-matter, any issues raised by it would probably be viewed by the Court as a political question. This would be particularly true for the first clause dealing with admission of new states into the Union being done by Congress, which seems a clear textually demonstrable constitutional commitment to Congress under Baker v. Carr, discussed at § 17.3.4.4.

Nevertheless, as a matter of literal textual analysis, two main issues are raised by the second and third clauses. The first issue is whether any state can be formed within the jurisdiction of any existing state with the appropriate consent given, or whether the consent clause, at the end, only applies to forming states from junctions of two or more states, or parts of states. Normal textual analysis would say the consent clause only modifies the last enumerated power under both the last antecedent maxim of grammatical construction, discussed at § 5.2.2.1.A n.37, and the use of semicolons, which separates the rule banning new states from being formed within the jurisdiction of any state from new states from being formed by junction of two or more states. Under this interpretation, no new state could be formed from parts of one existing state only. This would make
the states of West Virginia, Kentucky, Maine, and possibly Vermont, all unconstitutional.\textsuperscript{249} As has been noted:

This is perhaps not (quite) as crazy as it seems, if one considers the Philadelphia Convention's obsession with the rule of equal state representation in the Senate and the care the Framers took to build anti-circumvention rules into the Constitution to preserve this crucial compromise. If big States could somehow convince Congress to assent, couldn't they deal themselves more senators simply by dividing up into smaller States? (Imagine Utah today, divided into four, multiplying conservative Republican senators!)

But is Article IV, Section 3 really a reflection of such constitutional paranoia? And could Utah and Nevada not conspire to circumvent such an anticircumvention rule anyway, simply by conjoining pieces of their States to each other? For that matter, couldn't Pennsylvania lend an acre or two to West Virginia, in order to circumvent such a strict formal requirement? Or is the fact that an anti-circumvention rule is not conspiracy-proof of little probative value?\textsuperscript{250}

A similar problem exists with respect to the congressional joint resolution admitting Texas to the Union. In that provision, Congress authorized the Texas legislature to divide the state into as many as five states by creating four new states within its limits. As part of political maneuvering to curry favor with voters in Southern slaveholding states, both Democrats and Whigs supported a resolution which provided, "New States, of convenient size, not exceeding four in number, in addition to said State of Texas, and having sufficient population, may hereafter, by the consent of said State, be formed out of the territory thereof, which shall be entitled to admission under the provisions of the federal constitution."\textsuperscript{251}

Under this resolution, each new state would be automatically admitted into the Union, with no additional congressional action required. One author has noted:

Imagine that – five Texases! Eight additional senators and electoral votes. Four more stars on the flag. And all if the Texas legislature gets the itch to do so.

But, would this be constitutional? It seems just plain weird for a state to spontaneously divide, as if it were a political amoeba. While weirdness is not a constitutional standard, it should at least cause us to ask questions. . . .

The Texas five-state provision raises three interpretive questions. First, does the Clause allow

\textsuperscript{250} \textit{Id.} at 294-95.

\textsuperscript{251} Paul E. McGreal, \textit{There is No Such Thing a Textualism: A Case Study in Constitutional Method}, 69 Fordham L. Rev. 2393 (2001), \textit{citing} Joint Resolution for Annexing Texas to the United States, 28th Cong., 2d Sess., 5 Stat. 797, 798 (1845). This history surrounding the adoption of this provisions is well discussed at \textit{id.} at 2398-2401.
division of an existing state? The middle part of the Clause provides, "no new State shall be formed or erected within the Jurisdiction of any other State," which suggests that no division is allowed. But, the last part of the Clause . . . allows certain actions with the consent of Congress and the states involved. The interpretive question is whether the consent provision leaps back across the second semi-colon to allow division of a state with proper consent.

Second, if states can be divided, can Congress "consent" to division in the same legislative act that admits the state into the Union? The Statehood Clause speaks of creating new states "within the Jurisdiction of any other State." Until Congress approved the resolution admitting Texas into the Union, Texas was not yet "any other State" that could be divided. So, we must determine whether Congress could simultaneously create a state and consent to its division.

Third, is there any time limit within which Congress and a state must consent to division? Congress passed the five-state provision in 1845. One hundred fifty-six years later, however, the Texas legislature has yet to consent to the division. Is it too late for Texas to do so? Is there some statute of limitations on consent? If so, the five-state provision will have lapsed into history.252

Of course, these three questions are not ripe for judicial review, as the Texas legislature has never come close to dividing the state, and it is not under active consideration. Under non-formalist models of constitutional interpretation, considerations of legislative and executive practice, judicial precedents assuming the constitutionality of West Virginia, Kentucky, Maine, and Vermont, and prudential considerations would likely conclude that those states are constitutional, but that any power Texas had to divide into more than one state, if it ever existed, has long since passed. From a formalist model of interpretation, however, with its “static” concept of interpretation and great focus on literal text, verbal maxims of construction, and specific historical intent, and eschewing such later events as reflecting an “evolving” Constitution, as discussed throughout § 9.2, and summarized in Table 9.3, those other states may be unconstitutional, and Texas might still have the power to divide. Of course, even a formalist judge might nonetheless conclude that the issues surrounding these matters are “settled law,” discussed at § 9.2.2.2, or possibly “political questions” not appropriate for Court review, discussed at § 17.3.4.

The second issue raised by this clause would be that even if a state like West Virginia could be formed within the jurisdiction of Virginia alone, was actual “consent” properly given under the consent clause. As has been noted:

In the summer of 1861, following the outbreak of the Civil War, thirty-five counties of Virginia west of the Shenandoah Valley and north of the Kanawha River met in convention in the town of Wheeling, to consider seceding from secessionist Virginia. In short order, the Wheeling convention declared itself the official, lawful, loyal government of Virginia and organized a proposed new State of (what would come to be called) West Virginia. Then, in what must certainly rank as one of the great constitutional legal fictions of all time, the legislature of Virginia (at Wheeling) and the proposed government of the new State of West Virginia (at

252 *Id.* at 2395-96.
Wheeling), with the approval of Congress, agreed to the creation of a new State of West Virginia (at Wheeling), thereby purporting to satisfy the requirements of Article IV, Section 3 of the Constitution for admission of new States "formed or erected within the Jurisdiction of any other State."253

Of course, this issue of consent, if ever presented, might well be viewed as a political question for Congress to resolve. One could argue that addition of new states to the Union is similar to addition of new amendments to the Constitution, and that ratification of amendments are typically viewed as political questions, discussed at § 17.3.4.6, including ratification of the 14th Amendment, which raised similar concerns of whether meaningful consent was given, discussed at Chapter 25 nn.1-2.

§ 18.6.2.2 State Power over Property

Under Article IV, § 3, cl. 2, Congress is given the power to “dispose of and make all needful Rules and Regulations respecting the Territory or other Property belonging to the United States; and nothing in this Constitution shall be so construed as to Prejudice any Claims of the United States, or of any particular State.” The federal power over property is discussed at § 18.3.10. The language in this clause regarding claims of states not being prejudiced by the Constitution, and thus permitting states to sue under the Constitution to protect their property rights, is discussed here.

As noted at § 17.2.2.1.A nn.100-06, state versus state cases involving property rights are brought as a matter of original jurisdiction in the Supreme Court. Typically, the Court will refer the case to a special master, who will receive evidence and prepare a record, rather than the Court hearing the evidence itself. The Court's original jurisdiction has brought a variety of disputes between sovereign states within its reach, such as disputes over water apportionment and interstate commercial burdens, including controversies regarding the control of water rights and the diversion of state waters; burdensome commercial activities and restrictions imposed by another state or to collect sizable estate taxes, as when California and Texas battled over the right to tax Howard Hughes' estate; which state has the right to profits from unclaimed securities belonging to unidentified holders; and the apportionment of Civil War-era state debt following West Virginia's secession from the Commonwealth of Virginia to join Union forces.254

As noted at § 17.3.1.4.D, states also have the power under regular principles of standing to sue to support the state’s own property rights against individuals or the federal government, and to be sued by individuals consistent with state sovereign immunity principles, discussed at § 17.2.4, or by the United States, where no sovereign immunity applies. For example, in United States v. Louisiana,255 the United States sued Louisiana for a declaration that the United States was entitled to exclusive possession of and power over lands underlying the Gulf of Mexico more than three geographical

253 Kesavan & Paulsen, supra note 249, at 293-94.

miles from the coast, with cross motions for entry of judgment in favor of Louisiana. The Court concluded that the part of Louisiana's coastline which, under the Submerged Lands Act, consisted of the "line marking seaward limit of inland waters" was to be drawn in accordance with the Convention on the Territorial Sea and Contiguous Zone, and a Special Master was appointed to make a preliminary determination of submerged lands owned by Louisiana in Gulf of Mexico.

§ 18.6.2.3 The Guarantee Clause

The Guarantee Clause in the Constitution, Article IV, § 4, provides, “The United States shall guarantee to every State in this Union a Republican Form of Government, and shall protect each of them against Invasion; and on Application of the Legislature, or of the Executive (when the Legislature cannot be convened) against domestic violence.”

As discussed at §§ 17.3.4.1-17.3.4.3, the Court has usually held that questions under the Guarantee Clause regarding federal obligations are political questions not appropriate for Court review. As a corollary to the Guarantee Clause, however, the Court has noted that the Guarantee Clause assumes that each state enters the union with a republican form of government.256 It has similarly been noted:

The 1787 Northwest Ordinance required it for new states, and it was axiomatic for the Philadelphia Convention. Introducing the eleventh resolution of Virginia's plan for the proposed union, Governor Randolph stated that the resolution had "two objects: first, to secure a republican government [and] secondly, to suppress domestic commotions." Later, Randolph proposed, with James Madison's second, to state even more clearly that "no State be at liberty to form any other than a republican government," a principle that James Wilson then rephrased with their consent as a guarantee.257

Compliance with this duty falls principally to the officials who act for the state, including its governor, attorney general, and secretary of state, but can also involve the views of state judges. Some state judges have decided such cases, not viewing them as political questions. A number of these cases have involved whether provisions allowing citizens directly to vote for state initiatives or referendums violate the concept of a republican form of government. One author has noted:

Many states have in fact established and increasingly use citizen "initiatives" whereby the People at large directly pass laws or even amend their constitutions, rather than rely exclusively on their elected representatives.

On its face, the citizen initiative seems to embody democracy in action. But even as this popular method of lawmaking spreads, so does opposition to it. A chorus of legal scholars assails direct democracy, citing two primary (related) concerns: (i) that it will tyrannize minorities, and (ii) that it will produce short-sighted, selfish legislation rather than public-spirited deliberation.

No one argues that initiatives always work better than the ordinary legislative process, or that states should abandon lawmaking by legislatures in favor of lawmaking by initiative. Indirect lawmaking has major advantages, especially the benefit of specialization of labor. The legislature can set up committees, gather information, and develop expertise. There is much to be said for a system of government in which a relatively small number of citizens stand in for the polity as a whole in conducting day to day affairs.

But we don't confront an either/or proposition. We can benefit from the advantages of a representative system, subject to the availability of initiatives when citizens find representation inadequate. As Woodrow Wilson said, direct democracy is intended "to restore, not destroy, representative government." Even when they fail to produce laws, initiatives may put issues on the agenda that otherwise suffer neglect from politicians. Many landmark reforms, eventually enacted by national legislation or constitutional amendment, originated as initiatives in the states: women's suffrage, and abolition of poll taxes, among others.258

Without regard to the policy merits of any system of citizen referendum or initiative, in cases where courts have considered the issue, such referendums have not been held to violate the requirement of a republican form of government. A particularly influential case so holding is the Oregon Supreme Court’s decision in Kadderly v. City of Portland.259 As has been noted, “Other courts quickly cited Kadderly as the answer to attacks on direct legislation in their states. The California Supreme Court cited it in 1906 to observe that the federal Guarantee Clause did not necessarily confine initiatives to local uses. The Oklahoma and Kansas courts relied on Kadderly's holding that the initiative and referendum do not conflict with the Guarantee Clause.”260

Other concerns regarding a republican form of government are unrelated to initiatives. They may involve issues of separation of powers. Former Chief Justice of the Oregon Supreme Court, Hans Linde, has noted:

Thirty years ago, Kansas amended its constitution to reorganize executive departments subject only to legislative disapproval rather than prior authorization. The Kansas Supreme Court called squaring this change with the Guarantee Clause "the decisive question in the case," and it sustained the amendment after a lengthy review of James Madison's writings on the tests of republican government.

About the same time, the Wisconsin Supreme Court decided that republican government does not require a strict separation of executive and judicial powers. The same conclusion was announced in Colorado and in Rhode Island. In a 1991 opinion, Oklahoma's justices overcame their concern with republican government and allowed a constitutional proposal to refer all future revenue bills to the voters. These and other modern opinions faced and disposed of the

259 74 P. 710 (Or. 1903), reh'g denied, 75 P. 222 (Or. 1904).

260 Linde, supra note 257, at 958.
In a recent case, the issue arose whether the Massachusetts Supreme Court granting gays and lesbians the right to marry under the Equal Protection Clause of the Massachusetts Constitution, discussed at § 16.2.4 n.70, usurped “legislative prerogatives” to such an extent to deprive Massachusetts of a Republican form of Government under the Guarantee Clause. Not surprisingly, such a challenge failed. In so holding, the First Circuit Court of Appeals noted that the Guarantee Clause “does not require a particular allocation of power within each state so long as a republican form of government is preserved.” Since provisions exist in Massachusetts for the legislature and voters to amend the Constitution if they so wish, no Guarantee Clause issue was seriously presented on the facts of the case.262

261 Id. at 953 (citations omitted).

262 Largess v. Supreme Judicial Court for State of Massachusetts, 373 F.3d 219, 226-29 (1st Cir. 2004).
CHAPTER 19: THE SEPARATION OF POWERS

§ 19.1 The General Nature of the Separation of Powers Doctrine

The separation of powers doctrine combines two ideas. The first is that the Constitution identifies three distinct governmental functions: the legislative power, a power to make law; the executive power, a power to apply law or call for its application, subject to judicial review; and the judicial power, a power to declare authoritatively what the law is and to approve its application in specific cases. The second idea is that no one branch of government can exercise the central power of any other branch or substantially disrupt the operations of that branch. Thus, Congress may not impose core executive or administrative duties, that is, duties of a non-judicial nature, on judges holding office under Article III.1 Similarly, as discussed at § 19.2, the doctrine bars Congress from delegating to executive or judicial officers the legislative power to make rules without also creating standards by which the power is to be used.2

Lying behind the separation of powers doctrine is the notion of checks and balances. Checks and balances doctrine has two main principles. First, each branch must be given sufficient power to discharge its operations efficiently. Second, to prevent tyranny by any one branch, no branch should have unlimited power. As noted at § 8.1 n.2, James Madison wrote in The Federalist Papers No. 51, “In framing a government which is to be administered by men over men, the great difficulty lies in this: you must first enable the government to control the governed; and in the next place oblige it to control itself.”3

Designed in part to promote the goal of efficiency, the separation of powers doctrine does not prohibit one branch from ever exercising a power of the other branches. Indeed, the Constitution expressly authorizes certain blends. For example, Congress exercises a kind of judicial power when it engages in impeachment proceedings. The President exercises a kind of legislative power when vetoing a bill, and a kind of judicial power when granting a pardon. Courts exercised executive powers when, pursuant to the Appointments Clause, they appointed independent counsels under the Ethics in Government Act of 1978, discussed at § 19.4.3.1 nn.99-104. Justice Powell, concurring in INS v. Chadha,4 and quoting from Justice Jackson, said that the Constitution contemplates that "practice will integrate the dispersed powers into a workable government."

In one of the most notable statements on the doctrine of the separation of powers, Justice Story said in 1833 in his book Commentaries on the Constitution of the United States:

---

1 See, e.g., United States v. Ferreira, 54 U.S. 40, 49-51 (1851); Hayburn’s Case, 2 U.S. 408, 410 n.* (1792).

3 The Federalist Papers No. 51 (Madison).

[The separation of powers doctrine] is not meant to affirm, that [the three branches of government] must be kept wholly separate and distinct, and have no common link or connection or dependence, the one upon the other, in the slightest degree. The true meaning is, that the whole power of one of these departments should not be exercised by the same hands, which possess the whole power of either of the other departments. . . . [A]s a corollary, that, in reference to each other, neither of them ought to possess, directly or indirectly, an overruling influence in the administration of their respective powers.  

Modern natural law Justices agree that the framers and ratifiers were motivated by such a sharing of powers, checks-and-balances view of government, rather than a strict separation of powers approach. At the same time, of course, where the Constitution expressly provides for a particular allocation of power, that text should be followed. Reflecting these two principles, Justice Kennedy cautioned the Court in Public Citizen v. United States Department of Justice both against adopting a strict separation of powers approach and against rewriting the balance of power provided in the Constitution. He noted:

This is not to say that each of the three Branches must be entirely separate and distinct, for that is not the governmental structure of checks and balances established by the Framers. . . . But as to the particular divisions of power lines the Constitution does in fact draw, we are without authority to alter them, and indeed we are empowered to act in particular cases to prevent any other Branch from undertaking to alter them.

Instrumentalists share this view. However, consistent with their interpretive method, they will place greater weight on arguments of purpose and structure, and less weight on text, than do natural law judges. Instrumentalist judges thus tend to focus on whether the purposes lying behind the structural separation of powers doctrine would be advanced or retarded, especially the need to preserve checks and balances and prevent the tyranny of any one branch. But they are sensitive to text when the text is clear. Thus, in Bowshar v. Synar, discussed at § 19.4.3.2 n.120, instrumentalist Justices Marshall and Stevens joined other members of the Court to hold that Congress may not delegate power to formulate national policy to one of its two Houses, to a legislative committee, or to an individual agent of Congress, such as the Comptroller General, in violation of the Bicameralism Clause’s text.

Holmesian judges share the view that separation of powers doctrine should be based on a sharing of powers approach, and a balance between text and purpose. Indeed, because of their strong policy of deference to government, Holmesian judges are the most likely to defer to arrangements agreed-upon by the other branches, unless those arrangements clearly violate the Constitution. For example, in INS v. Chadha, discussed at § 19.4.2.1 nn.81-82, Holmesian Justice White dissented from the

---

5 J. Story, Commentaries on the Constitution of the United States § 525 (1833).

Court’s striking down legislative vetoes of executive actions. In Bowsher v. Synar,\(^9\) discussed at § 19.4.3.2 n.122, Justice White dissenting from the Court’s striking down provisions allowing the Comptroller General to determine what budget reductions were necessary to comply with the Gramm-Rudman budget bill. In Metropolitan Washington Airports Authority v. Citizens for the Abatement of Aircraft Noise,\(^10\) discussed at § 19.4.4 n.136, Justice White, joined by Chief Justice Rehnquist and instrumentalist Justice Marshall, dissented from the Court’s decision to hold invalid a Board of Review composed of members of Congress.

At the other extreme from these views, the formalist preference for literal interpretation and bright-line rules suggests a strict separation of powers approach, without any balancing, as noted at § 6.2.2.4. Under such a view, there should be strict separation of powers based on the literal text of the Constitution, which provides in Article I, § 1, “all legislative Powers herein granted” are vested in Congress; in Article II, § 1, “the executive Power” is vested in the President; and in Article III, § 1, the “judicial Power” is vested in “the Supreme Court and such inferior courts as Congress, from time to time, may establish.” Applied to issues of executive power, this view has been described as promoting a “Unitary Executive” model of government, with few checks and balances on executive action,\(^11\) although that view can be challenged on structural, historical, practice, and precedent grounds.\(^12\) Justice Scalia has called for a strict separation of powers approach, dissenting in Mistretta v. United States, discussed at § 19.2 nn.21-22, and dissenting in Morrison v. Olson, discussed at § 19.4.3.1 n.104.\(^S\)

\(\text{§ 19.2} \quad \text{Congressional Delegation of Legislative Power to the President, Administrative Agencies, or Special Commissions}\)

When Congress delegates legislative power to the President, administrative agencies, or special commissions, a separation of powers concern arises if Congress has delegated too much policymaking power from the legislative branch. To prevent this, the Court has required Congress to provide the delegated agent with congressionally developed standards or policies to guide application of the delegated power. This helps ensure that the ultimate policy choice is made by the legislature.

During the formalist era, this doctrine was applied in a relatively strict manner, with the Court requiring detailed congressional standards or policies. For example, in *Schechter Poultry Corp. v. United States*, the Court considered the constitutionality of that part of the Depression-era National Industrial Recovery Act which provided that the President was granted authority to approve or not various industry-adopted codes of fair labor practices, in this case the Code of Fair Competition for the Live Poultry Industry. The Act provided that as a condition of approval the President must find that the codes “impose no inequitable restrictions on admission to membership” and are not “designed to promote monopolies or to eliminate or oppress small enterprises and will not operate to discriminate against them.” In reviewing this Act, the Court noted that these restrictions “leave virtually untouched the field of policy,” do not undertake “to prescribe rules of conduct to be applied to particular states of fact determined by appropriate administrative procedure,” and set up “no standards, aside from the statement of the general aims.” In short, “the President in approving or prescribing codes, and thus enacting laws for the government of trade and industry throughout the country, is virtually unfettered. We think that the code-making authority thus conferred is an unconstitutional delegation of legislative power.”

Similarly, in *Panama Refining Co. v. Ryan*, the Court struck down as an impermissible delegation of legislative power a part of the National Industrial Recovery Act which granted to the President the authority to prohibit the transportation in interstate and foreign commerce of petroleum products in excess of the amount permitted under any state law. The Court noted, “Congress did not declare in what circumstances that transportation should be forbidden, or require the President to make any determination as to any facts or circumstances. Among the numerous and diverse objectives broadly stated, the President was not required to choose. The President was not required to ascertain and proclaim the conditions prevailing in the industry which made the prohibition necessary. The Congress left the matter to the President without standard or rule, to be dealt with as he pleased.”

Reflecting a moderate version of formalism, which had the controlling votes on the Court during the formalist era, as discussed at § 9.3.2, Chief Justice Hughes noted that, despite the unconstitutional delegation found in *Panama Refining,* the “Constitution has never been regarded as denying to the Congress the necessary resources of flexibility and practicality which will enable it to perform its functions in laying down policies and establishing standards, while leaving to selected instrumentalities the making of subordinate rules within prescribed limits and the determination of facts to which the policy as declared by the Legislature is to apply. Without capacity to give authorizations of that sort we should have the anomaly of a legislative power which in many circumstances calling for its exertion would be but a futility.” Reflecting this moderate approach, in each case during the formalist era other than *Schechter Poultry* and *Panama Refining,* delegations of legislative power were upheld on the ground that adequate standards were provided. For example, in *J.W. Hampton, Jr., & Co. v. United States,* the President was granted authority to

14 293 U.S. 388, 418 (1935).
15 *Id.* at 421.
16 276 U.S. 394, 401-02, 406-11 (1928), and cases cited therein.
adjust tariffs on products imported from other countries to equalize differences in the cost of production. Citing numerous cases, the Court held, “What the President was required to do was merely in execution of an act of Congress. It was not the making of law. He was the mere agent of the lawmaking department to ascertain and declare the event upon which its expressed will was to take effect.”

Since 1937, the Court has applied the doctrine regarding delegation of legislative power consistent with the non-formalist view that sharing of powers suggests that the Court should find that an “intelligible principle” was given by Congress to guide delegations, rather than to apply the doctrine in a relatively strict manner. For example, in *Mistretta v. United States*, the Court was faced with a challenge to the constitutionality of the United States Sentencing Commission, which was established to promulgate sentencing guidelines binding on the courts, subject to aggravating or mitigating factors. In discussing the doctrine regarding delegation, the 8 non-formalist Justices on the Court in 1989 stated:

> So long as Congress “shall lay down by legislative act an intelligible principle to which the person or body authorized to [exercise the delegated authority] is directed to conform, such legislative action is not a forbidden delegation of legislative power.”

Applying this “intelligible principle” test to congressional delegations, our jurisprudence has been driven by a practical understanding that in our increasingly complex society, replete with ever changing and more technical problems, Congress simply cannot do its job absent an ability to delegate power under broad general directives. Accordingly, this Court has deemed it “constitutionally sufficient if Congress clearly delineates the general policy, the public agency which is to apply it, and the boundaries of this delegated authority.”

In *Mistretta*, Congress charged the Commission with three goals: to assure meeting the purposes of sentencing set forth in the Act; to provide certainty and fairness in sentencing, while avoiding unwarranted sentencing disparities, but maintaining sufficient flexibility to permit individualized sentences; and to reflect, to the extent practicable, advancement in knowledge of human behavior as it relates to the criminal justice system. Congress also specified four purposes of sentencing: to reflect the seriousness of the offense, promote respect for the law, and provide just punishment; to afford adequate deterrence; to protect the public from further crimes; and to provide the defendant with needed correctional treatment. Congress also instructed the Commission that the sentencing ranges should be consistent with current provisions, not exceed current statutory maximums, and the current average sentence should be used as a starting point for structuring the sentencing guidelines. While such general aims might have raised a concern by the Court that decided *Schechter Poultry*, they raised no concern in *Mistretta*. Indeed, even formalist Justice Scalia in dissent acknowledged no problem with the “intelligibility” of the congressional standards in this case. As Justice Scalia stated, “What legislative standard, one must wonder, can possibly be too

---

18 *Id.* at 372 (citations omitted).
19 *Id.* at 374-75.
vague . . . , when we have repeatedly upheld, in various contexts, a ‘public interest’ standard.”

Under this approach, no federal statute since 1937 has been held invalid by the Court because of an excessive delegation of legislative power to an executive agency. Justice Scalia did dissent in *Mistretta*, however, based on the ground that the entire purpose of the Sentencing Commission was to exercise legislative power. Thus, unlike other cases, the delegated power was not being used as ancillary to executive or judicial discharge of their normal governmental functions, but instead was an example of a pure delegation of legislative power, which Justice Scalia said was unconstitutional under his strict separation of powers approach. Scalia noted, “Strictly speaking, there is no acceptable delegation of legislative power,” referring to language from John Locke’s *Second Treatise on Government* in 1790, which stated that “the legislative can have no power to transfer their authority of making laws, and place it in other hands.”

Locke’s approach, which focused on only two branches of government, the legislative and the executive, with the judiciary as part of the executive branch, predated the development in the 18th century by Montesquieu and others of the tripartite system of government, and a sharing of powers approach to separation of powers issues. In addition, while a number of state constitutions at the time the Constitution was framed did have language consistent with a strict separation of powers approach, the first Congress specifically rejected the inclusion of such a strict separation of powers amendment in the original Bill of Rights. For these reasons, it is not surprising that all non-formalist Justices on the current Court have rejected this part of Justice Scalia’s analysis, grounding the constitutional doctrine regarding delegation solely on the “intelligibility” principle stated above. Related questions concerning appointment, removal, and powers given under any particular delegation, are handled as general separation of powers concerns, and are discussed at § 19.4.

Of course, before the Court will find that Congress has made an excessive delegation, the Court will search for a clear indication that Congress intended the delegation to be so broad. For example, in *Solid Waste Agency v. Army Corps of Engineers*, Chief Justice Rehnquist, writing for the Court, said, “Where an administrative interpretation of a statute invokes the outer limits of Congress’ power, we expect a clear indication that Congress intended that result.” The Chief Justice continued,

---

20  *Id.* at 416 (Scalia, J., dissenting), *citing* National Broadcasting Co. v. United States, 319 U.S. 190, 216-17 (1943) (“public interest” regarding regulating radio and television licensing not too vague in the Communications Act of 1934, given the context of “the nature of radio transmissions and reception, by the scope, character, and quality of services” and by “the interest of the listening public in the ‘larger and more efficient use of radio’”); New York Central Securities Corp. v. United States, 287 U.S. 12, 24-25 (1932) (“public interest” not too vague in the Transportation Act of 1920, given context that it relates to “adequacy of transportation service, to its essential conditions of economy and efficiency, and to the appropriate provision and best use of transportation facilities”).

21  *Id.* at 419.

“This requirement stems from our prudential desire not to needlessly reach constitutional issues and our assumption that Congress does not casually authorize administrative agencies to interpret a statute to push the limit of congressional authorization.”

On the other hand, regarding agency practice, the Court held in *Whitman v. American Trucking Associations* that an agency cannot cure a perceived unlawful delegation by adopting in its discretion a limiting construction of the statute. The Court stated, “The idea that an agency can cure an unconstitutionally standardless delegation of power by declining to exercise some of that power seems to us internally contradictory. The very choice of which portion of the power to exercise—that is to say, the prescription of the standard that Congress had omitted—would itself be an exercise of the forbidden legislative authority. Whether the statute delegates legislative power is a question for the courts, and an agency’s voluntary self-denial has no bearing upon the answer.” Of course, in interpreting a statute, the Court will give some deference to agency interpretations under the *Chevron, Mead/Skidmore,* and *Auer* principles, discussed at §§ 6.2.3.1 nn.83-84 & 9.2.2.1 nn.48-51.

In addition to these kind of legislative delegations to other branches of the government, sometimes government delegates, or more properly speaking, “contracts out,” governmental functions to private parties. While some state courts have analyzed such delegations under state constitutional "vesting" clauses, vesting law-making power solely in the legislature not private parties, most state courts, and the federal courts, have typically analyzed such delegations under the Due Process Clause. The issues presented in such cases usually involve either: (1) a concern with conflicts of interest where the private delegate may have a personal or pecuniary interest that is inconsistent with or repugnant to the public interest to be served, or (2) the availability and extent of any agency or court review process of decisions initially made by the private actor. As an aspect of procedural due process, these issues are discussed at § 27.4.4.9. Related due process issues arise when a body of law has developed around the practice of legislatures or agencies incorporating or enacting a code or set of rules borrowed in its entirety from some outside group, such as local fire codes or licensing requirements for practicing medicine or law. This due process issue is discussed at § 27.4.4.10.

§ 19.3 Presidential Power Over National Policy

§ 19.3.1 General Observations

Under Article II, § 1, “The executive Power shall be vested in a President of the United States of

America. He shall hold his Office during the Term of four Years.” Under Article II, § 1, cl. 5, “No Person except a natural born Citizen, or a Citizen of the United States, at the time of the Adoption of this Constitution, shall be eligible to the Office of President; neither shall any Person be eligible to that Office who shall not have attained to the Age of thirty five Years, and been fourteen Years a Resident within the United States.” Other aspects regarding the election of Presidents, particularly right to vote for President and operation of the electoral college, are discussed at § 20.1.2.1.

After vesting “executive Power” in the President in Article II, § 1, Article II continues by enumerating a number of specific presidential powers. Under Article II, § 2, cl. 1, the President is named “Commander in Chief,” and is given the power to “Pardon” individuals for federal crimes. Under Art. II, § 2, cl. 2, the President is given the power, with the “Advice and Consent” of the Senate, to appoint “Ambassadors, other public Ministers and Consuls, Judges of the supreme Court, and all other Officers of the United States.” The President is also given power to “make Treaties, provided two thirds of the Senators present concur,” and the power to “receive Ambassadors and other public Ministers” from foreign countries. Under Article II, § 3, the President has the duty to “take Care that the Laws shall be faithfully executed,” and the President “shall from time to time give to the Congress Information on the State of the Union, and recommend to their consideration such Measures as he shall judge necessary and expedient.” Under Article I, § 7, cl. 2, after a bill is passed by both houses of Congress, it must be “presented to the President,” who may sign the bill or veto it, such veto capable of being overridden by a 2/3 majority in each House.

Unlike Article I, § 8, which lists the powers of Congress in some detail, Article II’s listing of powers, such as the “executive Power shall be vested in a President” or “Commander-in-Chief” power, are stated in broader terms. This has led to a number of cases where considerations other than literal text have predominated in the Court’s opinions. Perhaps the most famous of these cases is *Youngstown Sheet & Tube Co. v. Sawyer*, 28 decided in 1952. In *Youngstown Sheet*, the Court ruled that the President cannot make policy by seizing steel mills to avert a nation-wide strike during wartime. Adopting a formalist strict separation of powers approach, Justice Black said that the President cannot make national policy at all. Justice Black said that the President’s powers are limited to the textually enumerated powers, such as faithfully executing the laws and serving as Commander-in-Chief. Although acknowledging that the “theater of war” may be “an expanding concept,” Justice Black stated that the Commander-in-Chief power cannot be used to give the President power to take possession of private property to keep “labor disputes from stopping production. This is a job for the Nation’s lawmakers, not for its military authorities.” Further, the requirement that the President “faithfully execute” the laws “refutes the idea that he is to be a lawmaker. . . . The Founders of this Nation entrusted the lawmaking power to the Congress alone in both good times and bad.”

Based upon legislative and executive practice, and Court precedents, no other Justice agreed in *Youngstown Sheet* that the President's power was that limited. Focusing on arguments addressed to legislative and executive practice, Holmesian Justice Frankfurter noted in his concurrence, “A systematic, unbroken, executive practice, long pursued by the knowledge of Congress, and never before questioned, engaged in by Presidents who have also sworn to uphold the Constitution,
making as it were such exercise of power part of the structure of our government, may be treated as a gloss on ‘executive Power’ vested in the President.”

Holmesian Justice Jackson's analysis in the case also suggested that Presidential power is dependent upon a functional analysis based upon prior legislative and executive action. Jackson noted:

1. The President has maximum power when acting pursuant to an express or implied congressional authorization.
2. A “zone of twilight” occurs if the President acts when Congress is silent. In this area, "any actual test of power is likely to depend on the imperatives of events and contemporary imponderables rather than on abstract theories of law." Justice Clark added that the nature of the power probably depended on the gravity of the situation.
3. The President has least power when acting contrary to the expressed or implied will of Congress. Courts can then sustain the President's action only by finding that Congress' will was expressed in an unconstitutional manner or it has no power over the subject.

Cases have also discussed presidential power where Congress may not have approved the President’s action in advance, but subsequently ratified the President’s action, or may not have disapproved the President’s action in advance, but subsequently expressed their dissatisfaction with presidential decisionmaking. Indeed, as discussed below, at § 9.3.1 n.31, Justice Frankfurter discussed aspects of subsequent congressional ratification in his concurrence in Youngstown Sheet.

The general separation of powers concern with promoting efficiency, while protecting against tyranny, also has shaped court decisions. Specifically, Congress has frequently allowed the President to take the lead in foreign affairs to promote efficiency in foreign policy decisionmaking. Further, there are a few cases, particularly from the formalist era, that speak in terms of broad presidential power in the foreign affairs realm, as discussed at § 19.3.2 nn.40-44. Thus, in considering executive versus legislative powers, the Court tends to give the President more leeway in cases involving foreign affairs, than those involving domestic power, where Congress’ policymaking power is more dominant. For domestic policy, the concern with prevention of presidential tyranny has been viewed as the greater concern than governmental efficiency.

Based on these considerations, the following Table 19.3 summarizes these “Justice Jackson” factors that the Court considers under the post-1937 non-formalist approach to presidential powers, in addition to Justice Black’s formalist focus on literal text, and Justice Frankfurter’s focus on “glosses” on executive power, that focus on “glosses” shared by Holmesian, instrumentalist, and natural law judges. In Youngstown Sheet, Justice Frankfurter’s “gloss on meaning” use of legislative and executive practice did not provide President Truman with much help. Justice Frankfurter noted that while President Roosevelt had taken unilateral action in the events leading up to World War II 12 times, 6 of those times were pursuant to congressional approval, 3 times involved subsequent ratification by Congress, and thus only 3 times even remotely resembled President Truman’s action

29 Id. at 610-11 (Frankfurter, J., concurring).
30 Id. at 635-38 (Jackson, J., concurring); id. at 662 (Clark, J., concurring in the judgment).
Those facts did not demonstrate the kind of “consistent, unbroken, executive practice” necessary for triggering a strong “gloss on meaning” argument on these facts.\(^{31}\)

Where the case involves a category nearer the top of Table 19.3, the President’s authority to act will be greater than when the case involves a case near the bottom of the Table:

**Table 19.3**

In *Youngstown Sheet*, the President’s authority was near the bottom of this Table, as the case involved primarily a domestic issue, the seizure of steel mills, although it did have a foreign component, the proposed effect of a steel strike on the ability to provide military equipment for the Korean War. The case also involved action taken pursuant to implied congressional disapproval, as Congress had provided for alternative ways to resolve domestic strikes in times of emergency, such as the provision in the Taft-Hartley Act of 1947 for a 60-day cooling-off period with an injunction against a strike, followed by 20 days for a secret ballot upon the final offer of settlement, or referral of the controversy to the Wage Stabilization Board, which President Truman did, but whose recommendations were viewed as too favorable to the workers by steel management. Further, Congress had specifically rejected giving the President the power to seize plants unilaterally when considering the issue in the Taft-Hartley Act, as Justice Burton noted in his concurrence.\(^{32}\)

---

\(^{31}\) *Id.* at 612-13 (Frankfurter, J. concurring). Justice Frankfurter also provided an exhaustive Table summarizing executive seizures of private property in the past. *Id.* at 615 *et. seq.*

The dissenters in *Youngstown Sheet*, Chief Justice Vinson and Justices Reed and Minton, also resorted to arguments of legislative and executive practice. They merely balanced them differently than did Justice Jackson. They concluded that the President was attempting to execute defense programs for the Korean War, and thus was acting pursuant to implied congressional authorization. Justice Vinson's opinion also contained language focusing on the need for efficiency in government operations, suggesting that the President may have power where Congress is silent to deal with emergencies in ways that save legislative programs or which protect the country, at least where the President informs Congress and states an intention to abide by legislative will.

Chief Justice Vinson’s opinion reflects the general predisposition of more conservative judges, such as Chief Justice Vinson and Justices Reed and Minton, to resolve close cases in favor of presidential authority, and downplay concerns with presidential tyranny. As Chief Justice Vinson noted in his opinion, “A review of executive action demonstrates that on many occasions Presidents have exhibited the leadership contemplated by the Framers when they made the President Commander in Chief, and imposed upon him the trust to ‘take Care that the laws be faithfully executed.’”

In contrast, as discussed at § 6.2.2.4 n.62, and noted in Table 6.4.2, liberal judges tend to resolve close questions more in favor of the legislative branch, and to be suspicious of broad grants of power to the President. As liberal instrumentalist Justice Douglas noted in his concurrence in *Youngstown Sheet*, focusing on the policy behind the President’s action in this case and in other potential future cases, “Today a kindly President uses the seizure power to effect a wage increase [based on the Wage Stabilization Board’s recommendations] and to keep steel furnaces in production. Yet tomorrow another President might use the same power to prevent a wage increase, to curb trade unionists, to regiment labor as oppressively as industry thinks it has been regimented by this seizure.”

§ 19.3.2 International Matters

As a textual matter, presidential authority over foreign affairs is limited by the constitutional directive in Article I, § 3 that the President shall “take Care that the Laws be faithfully executed.” This insures that the President will not have the power of dispensation, i.e., the power to set laws aside, which the King had in England regarding foreign affairs at the time the Constitution was drafted.

33 343 U.S. at 670-72 (Vinson, C.J., joined by Reed & Minton, JJ., dissenting).

34 *Id.* at 682-83, 702-04.

35 *Id.* at 683.

This is important as many of the enumerated powers relating to foreign affairs are granted to Congress. As discussed at §§ 18.3.1-18.3.10, Congress has power to tax and spend for the common defense of the United States, deal with all aspects of rules and regulations for the armed forces, and declare war. Congress also has power to provide for the general welfare, regulate commerce with foreign nations, regulate foreign coin, deal with naturalization, and make all laws necessary and proper for executing those and all other powers vested in the government of the United States or any department. Under Article II, § 2, cl. 2, the Senate can refuse to consent to treaties by less than a 2/3 vote of those present.

In his treatise, *Politics and the Constitution*,37 Professor Crosskey argued that the purpose of enumerating these various powers in Congress relating to foreign affairs was not to vest a limited power in Congress in order to reserve power to the states, but rather to transfer to Congress a set of powers which in England were considered executive powers and, hence, belonged to the King. The most popular legal writer at the time, Blackstone, had written that all of the above powers relating to foreign affairs belonged to the King, as well as many other powers enumerated for Congress, e.g., the power to coin money, over patents, and to constitute inferior tribunals, discussed at § 18.1.1 n.8.

Although the President typically takes the lead in foreign affairs, the President cannot make policy in that realm contrary to congressional enactments because the President cannot set laws aside. Further, Congress always has the background power of impeachment, since the President's power to grant pardons does not extend to cases of impeachment, as discussed at § 19.3.5. It therefore seems that, in theory at least, Congress has more power than the President in cases involving foreign affairs.

In practice, Congress has frequently allowed the President to take the lead in foreign affairs. After all, the President “shall nominate, and by and with the Advice and Consent of the Senate, shall appoint Ambassadors” under Article II, § 2, cl. 2. The President is the repository for all information coming from United States Ambassadors, the Department of State, the Department of Defense, the National Security Council, the CIA, as well as other federal agencies. Under Article II, § 3, the President receives “Ambassadors and other public Ministers” of foreign countries. Under Article II, § 2, cl. 2, the President has the power to negotiate treaties, which then become ratified if “two thirds of the Senators present concur.”

In addition, it can be argued that the President enjoys a "residual" foreign affairs power under Article II, § 1's grant of "the executive Power." It has been noted, “the ordinary eighteenth-century meaning of executive power – as reflected, for example, in the works of leading political writers known to the constitutional generation, such as Locke, Montesquieu, and Blackstone – included foreign affairs powers. . . . To slight the foreign affairs meaning of executive power is to downplay Locke, Montesquieu, Blackstone, Washington, Jay, Jefferson, Hamilton, and even Madison.”38 On the other hand, it has been noted that Locke and other 18th-century natural law writers distinguished the

“executive power,” which was the power to execute laws, from the “federative” power, or other such term, which was a power over foreign affairs. While Article II did vest “executive” power in the President, the “federative” power was split between Congress and the President in various constitutional provisions dealing with declaring war, negotiating and ratifying treaties, nomination and confirmation of Ambassadors, and the like.39

In terms of judicial precedents, there are a few cases, particularly from the formalist era, that speak in terms of broad presidential power in the foreign affairs realm. For example, in 1936, in a case where Congress had in any event authorized the President to embargo arms sales to certain countries, the Court said in *United States v. Curtiss-Wright Export Co.*40 that the President has great power to negotiate with foreign countries even without congressional directive. The Court described the President as “the sole organ of the federal government in the field of international relations.”

Deference to presidential leadership in foreign affairs has continued since 1937. Based upon practice and precedent, the Holmesian-era Court held in *United States v. Belmont* and *United States v. Pink*41 that presidents have the constitutional power to enter into presidential executive agreements and other such international “compacts” with foreign nations without obtaining the Advice and Consent of the Senate, and that such agreements, like treaties, supercede contrary state laws. The language of these opinions reflect strong deference to President Roosevelt during the 1930s and 1940s.

Reflecting a slightly less deferential approach toward the executive than during the Roosevelt presidency, an instrumentalist Court stated in *Dames & Moore v. Regan*42 in 1981 that the President only has "some measure of power" to enter into executive agreements without obtaining the Advice and Consent of the Senate. The Court held very narrowly, “Critical to our decision today is the conclusion that Congress has implicitly authorized the practice of claim settlement by executive agreement. . . . Where, as here, the settlement of claims has been determined to be a necessary incident to the resolution of a major foreign policy dispute between our country and another, and where, as here, we can conclude that Congress acquiesced in the President's action, we are not prepared to say that the President lacks the power to settle such claims.”

Nonetheless, many cases from the instrumentalist era suggest broad Presidential power over foreign affairs matters.43 Even those commentators who tend to have a bias more toward the legislative

---

40 299 U.S. 304, 320 (1936).

41 *Pink*, 315 U.S. 203 (1942); *Belmont*, 301 U.S. 324 (1937).

branch in separation of powers issues acknowledge the growth of presidential power in foreign affairs and resulting changes as a matter of legislative and executive practice in constitutional practice.44 Of course, in terms of court decisions, many specific issues of congressional versus executive power concerning foreign affairs, including the difficult issue, never squarely litigated, of presidential authority to enter into executive agreements absent any congressional authorization, may be viewed as political questions, as a 4-Justice plurality of the Court concluded in Goldwater v. Carter regarding the President’s power unilaterally to terminate a treaty, as noted at § 17.3.4.4 nn.562-65. Resolution of such issues would then turn on non-judicial factors, like congressional control over appropriations for the Department of Defense or State, Senate control over confirmation of executive nominations, impact of public opinion, or, in extreme cases, the congressional impeachment power.

Regarding the President’s power unilaterally to terminate a treaty, scholars have predictably disagreed. The Restatement (Third) of Foreign Relations Law of the United States maintains that the President of the United States has the power, among other things, "[T]o suspend or terminate an agreement in accordance with its terms."45 In contrast, in 1979, Senator Goldwater's attorney in Goldwater v. Carter noted that "of 55 treaties terminated by the United States, 52 were broken with congressional approval."46 Reflecting the pro-Presidential power approach, on December 13, 2001,

---

the United States Ambassador to Moscow delivered a message to Russia that President Bush was giving 6 months notice of United States termination of the Anti-Ballistic Missile (ABM) Treaty, invoking Article XV of that document. The notice of termination came without the consent or concurrence of either house of Congress. 47

These foreign affairs separation of powers cases, of course, raise different issues than the Supreme Court’s role in deciding foreign affairs cases under international law, either law generated by United States ratification of treaties, discussed at § 18.3.9 nn.188-199, or the general law of nations, discussed at § 20.3.4.1.B nn.325-28.

§ 19.3.3 War and National Defense

As discussed at § 18.3.8 n.182, the 1863 opinion of the Supreme Court in the Prize Cases48 can be read as limited to holding that President Lincoln was authorized by early 1800s legislation to declare a blockade in the event of an insurrection or that, in any event, Congress could and did ratify the President's action by later legislation. Some of the reasoning of the majority opinion, however, can be interpreted to say that even without congressional approval the President has power to resist armed force with force, and that whether armed resistance calls for others to be treated as belligerents is a question to be decided by the President. Four dissenters said that the power to declare war cannot be delegated by Congress to the President and that the attempted ratification was an invalid ex post facto law.

When it came to dealing with the Vietnam hostilities, the Supreme Court manifested considerable reluctance to take a case in which the issue was whether, war not having been declared, the military action of the United States was "illegal."49 The Second Circuit Court of Appeals did decide in 1971 that Congress had sufficiently authorized the South-East Asian commitments of the United States, including the furnishing of manpower and materials of war for protracted military operations in Vietnam.50

In 1973, Congress passed the War Powers Act over the veto of President Nixon. Among other things, the law requires consultation between Congress and the President "in every possible instance" before introducing United States Armed Forces into situations where imminent involvement in hostilities is clearly indicated by the circumstances. That Act provides that the President may commit United States military personnel into circumstances of “imminent hostilities” for a brief period of time, but the Act also calls for a report within 48 hours on the introduction of armed forces in such a situation, and requires the termination of the use of such forces whenever

47 Id. at 226.

49 See, e.g., Mora v. McNamara, 387 F.2d 862 (D.C. Cir.) (case dismissed on political questions grounds), cert. denied, 389 U.S. 934 (1967).

Congress so directs by concurrent resolution (basically a two-house veto of the President’s action), or within 60 days unless Congress has declared war, or has extended by law such 60-day period, or is physically unable to meet as a result of an armed attack upon the United States. The President can trigger an additional 30-day grace period if “unavoidable military necessity respecting the safety” of the troops requires continued presence “in the course of bringing about a prompt removal of such forces.” The Act also provides that the President has authority to act in times of a “national emergency” created by a sudden attack on the United States, its territories and possessions, or its armed forces.\footnote{See Pub.L. No 93-148; H.J.Res. 542, 93rd Cong., 1st Sess., 97 Stat. 555 (1973), codified at 50 U.S.C. § 1541 et. seq.}

There is continuing controversy over the constitutionality of the War Powers Act of 1973, often termed the War Powers Resolution. Each President since the Act was passed has maintained the Act is an unconstitutional infringement on the President’s constitutional power as Commander-in-Chief, although each President has attempted to comply with the Act’s provisions in practice. Congress has always taken the view that the Act is constitutional as part of Congress’ power in Article I, § 8, cl. 11 to declare war.

Based upon the Chadha case, discussed at § 19.4.2.1 nn.76-86, the two-house legislative veto contained within this law is almost certainly invalid. However, the broader question of whether the other provisions of the War Powers Resolution are constitutional is more questionable. That issue has not come before the Court. Presidents have tended to avoid a direct conflict with Congress by reporting various use of the armed forces, but saying that action was taken in accord with a desire to inform Congress and “consistent with the War Powers Resolution.” Congress has also authorized presidential action in circumstances which might otherwise trigger the Act. For example, the presence of American troops in South Korea, Bosnia, Saudi Arabia, Kosovo, Afghanistan, and Iraq have been approved by Congress, so troop presence there does not raise serious constitutional questions.

Since 1973, the only technical failure to comply with the War Powers Act occurred in 1999, when President Clinton continued bombing Serbia for 19 days longer than permitted by the Act, as part of a response to Serbia’s pattern of ethnic cleansing in Kosovo. That continued bombing was not approved by the House of Representatives, based upon a 213-213 tie vote. When a member of the House brought suit against President Clinton challenging his actions, lower federal courts dismissed the complaint on grounds of standing, and the case was not appealed to the Supreme Court.\footnote{Campbell v. Clinton, 52 F. Supp. 2d 34, 40 (D.D.C. 1999), aff’d, 203 F.3d 19 (D.C. Cir. 2000), citing Raines v. Byrd, 521 U.S. 811 (1997), discussed § 17.3.1.4.D nn.482-84.}

Although the matter is not beyond dispute, probably the best analysis is that the major provisions of the War Powers Resolution are constitutional. In considering Congress’ power over military matters, the Framers’ first draft gave Congress the power to “make war.” At the suggestion of James Madison, this was amended to give Congress the power to “declare war” in order to make it clear that the President should have the power to repel sudden attacks, while Congress has the power to
“declare” war and reprisals, that is, to authorize major or minor offensive military action, as opposed to defensive military action. The shift in terminology also made it clear that the President had the Commander-in-Chief power to direct, or “make” war, while Congress had the power to trigger military action, that is, “declare” war. The War Powers Resolution provisions explicitly authorizing Presidential action to respond to sudden attacks is consistent with this understanding of congressional versus presidential constitutional powers.53

This view of the balance of power between Congress and the President is supported by reading the congressional power to grant “letters of marque and reprisal” in Article I, § 8, cl. 11 as including the power to authorize the President to undertake “reprisals” as a form of minor military action. As noted at § 18.3.8 nn.178-80, this is the traditional view of congressional power in this area, and is consistent with 18th-century political doctrine. For example, as phrased by Burlamanqui, “By reprisals then we mean that imperfect kind of war, or those acts of hostility which sovereigns exercise against each other, or, with their consent, their subjects, by seizing the persons or effects of the subjects of a foreign commonwealth, that refuseth to do us justice.”54

On the other hand, literally the power of “letters of marque and reprisal” involved the sovereign directing private parties, so-called “privateers,” to seize or destroy property or persons in the name of the sovereign. Famous English examples of that power included Sir Francis Drake being given that power regarding Spanish galleons. While that practice had diminished during the 18th century, and colloquially “reprisal” had come to have the broader meaning of limited offensive military action, it is possible to read the congressional grant of power over “letters of marque and reprisal” as limited to its core literal meaning of direction to private parties. So read, that would leave a gap between Congress’ power to initiate major military action through declaring “war,” and authorizing private “reprisals.” That gap would be filled by the President’s Commander-in-Chief power to initiate minor military action without congressional authorization.55

This formalist literal result would be consistent with a conservative predisposition to favor executive power, discussed at § 6.2.2.4. However, a fuller analysis would have to explain why the Constitution is properly read to create this gap in power, and then filled by unilateral Presidential action, without any specific textual language supporting that reading. Under a core literal meaning approach, the term “Commander-in-Chief” is a power to command when called into service by

54 On this view, see generally Charles A. Lofgren, War-Making Under the Constitution: The Original Understanding, 81 Yale L.J. 672, 689-702 (1972) (citing Burlamanqui, at 692 n.90).

Congress, not a power to initiate military action. Regarding the term “letters of marque and reprisal,” during the 19th century the 1856 Declaration of Paris banned letters of marque, defined as directed to private parties. Although the United States did not sign that treaty, the United States has abided by its terms.

Where the President commits armed forces in an effort to rescue American hostages, the President can invoke the Hostage Act of 1868. Codified at 22 U.S.C. § 2272, it provides:

Whenever it is made known to the President that any citizen of the United States has been unjustly deprived of his liberty by or under the authority of any foreign government, it shall be the duty of the President forthwith to demand of the government the reasons of such imprisonment; and if it appears to be wrongful and in violation of the rights of American citizens, the President shall forthwith demand the release of such citizens, and if the release so demanded is unreasonably delayed or refused, the President shall use such means, not amounting to acts of war, as he may think necessary and proper to obtain or effectuate the release, and all the facts and proceedings relating thereto shall as soon as practicable be communicated by the President to Congress.

The Act raises a number of unanswered questions. For example, in this context what are acts of war, as opposed to mere reprisals? How about President Carter’s attempt to rescue hostages in Iran? Was President Reagan’s invasion of Grenada, based on rescuing American citizens at a medical school there, an act of war? Probably both were limited military actions properly viewed as reprisals, not acts of war. A closer question, now moot, was raised when there was the possibility during the Clinton Administration of an invasion of Haiti to restore democratic government, end human rights abuses, and protect American citizens.

Even where the presence of troops in foreign countries does not raise serious constitutional concerns, collateral questions of executive power can arise from those occupations. One of the most serious of these concerns is the President’s ability to create military commissions to oversee the occupation and prosecute various individuals held by military forces. As in Dames & Moore v. Regan, discussed at § 19.3.2 n.42, the Court held in Rasul v. Bush that the military incarcerations following 9-11 and the War in Afghanistan were authorized by Congress, thus avoiding a separations of powers issue. The same conclusion would be reached regarding events in Iraq in 2003, and thereafter, based on congressional authorization for that military action.

For this reason, the primary questions involved in such detentions are statutory concerns (does the procedure comply with relevant congressional provisions, such as the Uniform Code of Military Justice (UCMJ)), Fifth Amendment Due Process Clause concerns (relating to procedural due process), and concerns with whether any treaty provisions apply (such as the Geneva Conventions). As discussed at § 27.4.4.8 nn.409-16, the Supreme Court held in 2006 in Hamdan v. Rumsfeld that

57 126 S. Ct. 2749 (2006). On the issues involved with such military commissions, see John R. Torruella, On the Slippery Slopes of Afghanistan: Military Commissions and the Exercise of
the initial set of procedures adopted by the Bush Administration to try detainees at Guantanamo Bay were not expressly authorized by any congressional act, did violate the UCMJ, and did not satisfy the Geneva Conventions, although a conservative formalist dissent by Justice Thomas, joined by Justices Scalia and Alito, would have granted greater deference to the President’s judgment that his actions were authorized by Congress, did comply with the UCMJ, and did satisfy the Geneva Conventions. This dissent is consistent with the conservative predisposition in separation of powers cases to favor broader grants of executive power, discussed at § 6.2.2.4.

Given the Supreme Court’s precedents in Dames & Moore through Hamdan, it is unlikely that any future President would attempt to try “enemy combatants” without congressional authorization. Similarly, unilateral action by a President to evade procedures regarding warrantless wiretaps in the Foreign Intelligence Surveillance Act of 1978 would raise serious constitutional concerns. These concerns would be solved, of course, by congressional action, which had not occurred as of October, 2006, but which in some form is likely to occur in the next session of Congress subsequent to the November, 2006 elections.

While President Lincoln did unilaterally suspend the writ of habeas corpus at the beginning of the Civil War, a district court held that suspension unlawful in Ex parte Merryman69 concluding that suspension is for Congress, not the President. This view is supported by the placement of the clause authorizing suspension of habeas corpus in Article I, rather than Article II.

§ 19.3.4 Domestic Policymaking

Presidential power in domestic policymaking cases is more circumscribed than in cases of foreign policy. Thus, unless Congress has delegated to the President the power to pass executive orders in various areas, the President has very limited inherent executive power to promulgate executive orders. The most important sources of inherent power would be executive orders related to the President’s “Commander-in-Chief” power or executive orders directed to other federal officials under the President’s duty to “take Care that the laws be faithfully Executed.” Of course, even these kind of executive orders must comply with the Constitution. Outside of these areas, presidential authority to promulgate executive orders would be substantially limited by the scope of any congressional delegation and preempted if in conflict with a federal statute.

An example of limited presidential power in this area is Sioux Valley Empire Electric Ass’n v. Butz.61

---

59 17 F. Cas. 144, 153 (1861).

In this 1973 case, a district court considered the constitutionality of the Secretary of Agriculture, on behalf of the President, impounding funds that were appropriated by Congress to support a low interest rural electric loan program. The President contended that he had the inherent power to impound funds in order to promote sound fiscal policy and reduce the budget deficit. In rejecting this contention, the court stated:

It may be true that Article II embraces a broad grant of executive power, as is contended by the Government. In the related areas of national defense and international relations, that power has been pushed to its hilt since the advent of the nuclear missile age. But that broad grant cannot be said to include the power to nullify Congressional action. It may be true, as contended by the Government, that Congress, as presently organized, is incapable of achieving sound fiscal planning – that necessity demands the President fill the void. Necessity might be the mother of invention, but it does not give birth to constitutional power. The dangers of following the dictates of “necessity” and permitting one branch to encroach upon the powers of another in the name of efficiency are vividly expressed by Justice Brandeis, dissenting in *Myers v. United States*:

The doctrine of separation of powers was adopted by the convention of 1787, not to promote efficiency, but to preclude the exercise of arbitrary power. The purpose was not to avoid friction, but, by means of the inevitable friction incident to the distribution of the government power among three departments, to save the people from autocracy.

. . . . If it is conceded that the President has the power to impound Congressionally-appropriated funds to promote sound fiscal policy, who is to determine whether the impoundment was purposed upon the achievement of sound fiscal policy or upon Presidential disapproval of the Congressional program for which the funds were appropriated. . . . The Constitution rests with Congress the power to declare policy and to appropriate money to carry out that policy.62

Given this decision, Congress decided to delegate to the President the power to impound certain congressionally-appropriated funds for one year according to certain procedures in the Congressional Budget and Impoundment Control Act of 1974. As a congressionally-approved delegation of power to the President, the Impoundment Act is likely constitutional, as discussed at § 19.4.2.2 nn.93-94.

More generally, Congress has been willing to countenance broad use of presidential executive orders in our Nation’s history. Thus, although theoretically presidential power in this area may be limited, practically presidential power to enact valid executive orders is great.63 Absent the substance of the executive order violating some other constitutional limitation, such as an equal protection, due process, or freedom of speech challenge, history suggests the only real limitations on presidential

executive orders rest on the political interplay between the President, Congress, and the states.\textsuperscript{64}

§ 19.3.5 The Pardon Power

Article II, § 2, cl. 1 provides the President with the “Power to grant Reprieves and Pardons for Offenses against the United States, except in Cases of Impeachment.” Naturally, reflecting the dual theory of sovereignty, this power applies by its literal text only to federal crimes, not state crimes. For state crimes, the Governor of each state will have a pardon power under the state constitution.

With respect to offenses against the United States, the text literally provides for no limitations on the President’s power to pardon, except for impeachment. However, based on the clear purpose behind the pardon power, and strong history surrounding the pardon power of the King in England, the Court has always interpreted the power to refer to pardoning for criminal offenses only, not civil liability. Even the literal-minded formalist-era Court held in 1925 in \textit{Ex parte Grossman}\textsuperscript{65} that the President could issue a pardon for criminal contempt, but not as to civil contempt. The Court stated:

\begin{quote}
[L]ong before our Constitution, a distinction had been recognized at common law between the effect of the king's pardon to wipe out the effect of a sentence for contempt in so far as it had been imposed to punish the contemnor for violating the dignity of the court and the king, in the public interest, and its inefficacy to halt or interfere with the remedial part of the court's order necessary to secure the rights of the injured suitor. . . . For civil contempts, the punishment is remedial and for the benefit of the complainant, and a pardon cannot stop it.\textsuperscript{66}
\end{quote}

With regard to criminal matters, the President’s pardon power is absolute. As the Court noted in \textit{Ex parte Garland}\textsuperscript{67}, the pardon power “extends to every offence known to the law, and may be exercised at any time after its commission, either before legal proceedings are taken, or during their pendency, or after conviction and judgment,” and may render the individual “as innocent as if he had never committed the offense.” Alternatively, the pardon may merely reduce the individual’s sentence,\textsuperscript{68} or may be granted subject to certain conditions, as long as those conditions reduce the individual’s punishment, and do not increase it.\textsuperscript{69}

\begin{itemize}
  \item \textsuperscript{64} See \textit{id.} at 298-324.
  \item \textsuperscript{65} 267 U.S. 87 (1925).
  \item \textsuperscript{66} \textit{Id.} at 111-12 (citations omitted).
  \item \textsuperscript{67} 71 U.S. (4 Wall.) 333, 380 (1866).
  \item \textsuperscript{68} Biddle v. Perovich, 274 U.S. 480 (1927) (death sentence reduced to life imprisonment).
  \item \textsuperscript{69} Schick v. Reed, 419 U.S. 256 (1974) (death sentence reduced to life imprisonment, with the condition the person would not be eligible for parole). For an article suggesting implied limitations on the President’s power to impose conditions if they would shock the conscience or violate other constitutional provisions, like the Equal Protection Clause or the First Amendment, see Harold J. Krent, \textit{Conditioning the President’s Conditional Pardon Power}, 89 Cal. L. Rev. 1665 (2001).
\end{itemize}
The pardon may be specific to an individual, or may cover a group of individuals, as did President Andrew Johnson when after the Civil War he pardoned “all who have borne any part therein” or when President Carter granted amnesty for draft dodgers of the Vietnam War. 70 Although the issue has never arisen, a President probably could not pardon himself on general separation of powers, conflict of interest grounds. 71 As a constitutional prerogative of the President, Congress cannot enact laws that deny effect to a presidential pardon. 72

The pardon power refers to reductions or forgiveness in the punishment of crimes. The President cannot provide compensation to an individual as part of a pardon, as appropriation of funds is a matter for congressional action. 73 Except for this limitation, the only real restraints on the President’s pardon power are the political ones of public opinion, continued effective relationships with Congress, including the possibility of impeachment for abuses of the pardon power, and a desire for a place in history. 74 Even with these restraints, many Presidents have made controversial pardons, such as President Ford pardoning in 1974 President Nixon for any crimes Nixon might have committed while President; President Bush pardoning in 1992, in the final days of his presidency, a number of individuals, including Secretary of Defense Caspar Weinberger, for any crimes arising out of the Iran-Contra investigation; and President Clinton pardoning in 2001, in the final days of his presidency, a number of individuals alleged to have been pardoned based on family, personal, or financial connections to Clinton, Clinton family members, or the Democratic Party. Occasionally there have been calls to restrict the President’s ability to pardon, but any such restriction would have to involve a constitutional amendment, and such an amendment is not likely to pass. 75

72 See United States v. Klein, 80 U.S. (13 Wall.) 128 (1872), discussed at § 17.2.3.1.

73 See Knote v. United States, 95 U.S. (5 Otto) 149, 154 (1877) (the pardon power “cannot touch moneys in the treasury of the United States, except expressly authorized by act of Congress.”).

75 For discussion of congressional attempts to oversee the pardon power, such as use of subpoenas to investigate the circumstances surrounding pardons, see Todd David Peterson, Congressional Power Over Pardon & Amnesty: Legislative Authority in the Shadow of Presidential Prerogative, 38 Wake Forest L. Rev. 1225 (2003).
§ 19.4 Legislative Power Over National Policy

§ 19.4.1 General Observations

Under Article I, § 1, “All legislative Powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives.” Under Article I, § 2, cl.1, “The House of Representatives shall be composed of Members chosen every second Year by the People of the several states.” Under Article I, § 3, cl. 1, “The Senate of the United States shall be composed of two Senators from each State, chosen by the Legislature thereof, for six Years; and each Senator shall have one Vote.”

Under Article I, § 2, cl.2, “No Person shall be a representative who shall not have attained to the Age of twenty five Years, and been seven Years a Citizen of the United States, and who shall not, when elected, be an Inhabitant of that State in which he shall be chosen.” Under Article I, § 3, cl.3, “No Person shall be a Senator who shall not have attained to the Age of thirty Years, and been nine Years a Citizen of the United States, and who shall not, when elected, be an Inhabitant of that State for which he shall be chosen.”

Additional aspects of the election of members of Congress, including discussion of Census Clause, Article I, § 2, cl. 3, which requires a census to be taken every 10 years, and affects the number of representatives each state gets to send to the House, and the 17th Amendment, which provides for the direct election of Senators by the people, ratified in 1913, are discussed at § 20.1.2.2. Provisions regarding the day-to-day running of the House and Senate, including provisions for the choosing of the Speaker of the House, designation of the Vice-President as President of the Senate, choice of President pro tempore of the Senate in the absence of the Vice President, and the requirement that “Each House shall keep a Journal of its Proceedings,” are also discussed at § 20.1.2.2.

With regard to how bills get passed, the Constitution provides in Article I, § 7, cl. 2, the Bicameralism Clause, that every bill “shall have passed the House of Representatives and the Senate.” By federal and state legislative practice, each bill must be passed by both houses during the same legislative session; otherwise, the bill dies. The Presentment Clause of Article I, § 7, cl. 2 provides that after such a bill is passed it must be “presented to the President,” who may sign the bill or veto it, such veto capable of being overridden by a 2/3 majority in both the House and Senate.

§ 19.4.2 Unconstitutional Attempts to Change the Veto Power

§ 19.4.2.1 The Legislative Veto

With the rise of the administrative state during the New Deal in the 1930s, Congress began to pass a number of laws delegating power to administrative officials whose action could be set aside by a later veto by both Houses of Congress, one House of Congress, or, occasionally, a legislative committee. By the 1980s, over 300 such statutes had been passed. This practice was declared unconstitutional in INS v. Chadha.76

---

Looking to text in the Constitution, Chief Justice Burger found that all legislation must result from the step-by-step deliberative process stated in the Constitution’s Bicameralism and Presentment Clauses. Chief Justice Burger noted that bicameralism was intended to lead to careful consideration of proposed laws and to allay fears of both small and large states by requiring both the House and Senate to pass the same bill. Presentment to the President was required to engraft a national perspective and to check any propensity to enact improvident laws. Based upon such text and purpose, the Court held in *Chadha* that the language of the Constitution should be interpreted to require all “legislative” action changing individuals’ legal rights to comply with bicameralism and presentment requirements.\(^77\)

In *Chadha*, the action of one House of Congress in setting aside the Attorney General’s suspension of Chadha's deportation order, pursuant to a recommendation from an Immigration and Naturalization Service (INS) administrative law judge, changed legal rights, duties, and relations of persons and, therefore, was “legislative” in purpose and effect. Thus, the one-House veto was unconstitutional as failing bicameralism and presentment requirements. Under this doctrine, “one-house resolutions” or “joint resolutions” of both Houses of Congress, which have no legal effect but merely state congressional views on a topic, do not have to comply with bicameralism or presentment, since they do not change anyone’s legal rights.\(^78\)

Because the decision was based on this ground, it applied to all congressional vetoes, whether two-house, one-house, or committee vetoes. The Court also noted that history at the time the Constitution was adopted supported the view that the framers and ratifiers took the bicameralism and presentment limitations imposed on legislative action quite seriously. Further, Chief Justice Burger noted that a one-house veto provision was particularly problematic, because related provisions in the Constitution provide only four specific circumstances where one House of Congress can act to change person’s legal rights by legislative action: the House power of impeachment, the Senate power to try impeachments; the Senate Advice and Consent power for appointments, and the Senate power to ratify treaties. Under the verbal maxim of *expressio unius est exclusio alterius*, discussed at § 5.2.2.1, the inclusion of these specific provisions in the Constitution would exclude additional one-house constitutional powers.\(^79\)

Justice Powell, concurring, said that a narrower ground for decision would be to hold that Congress, when it found that six persons, including Chadha, did not comply with statutory criteria, violated the principle of separation of powers by acting judicially, in violation of the Bill of Attainder Clause. Such legislative action is particularly dangerous, said Powell, because it was unchecked and not subject to procedural safeguards. This result would strike down the particular legislative veto in *Chadha*, but leave open the possibility that other legislative veto provisions more clearly legislative in nature, such as vetoing agency rule-making, could be held to be constitutional. In response, Chief Justice Burger noted that given the legislative delegation to the Attorney General and INS, with a

\(^77\) *Id.* at 946-51, 957-58.

\(^78\) *Id.* at 952-55.

\(^79\) *Id.* at 950-51, 955-56.
reserved congressional veto, the congressional veto was more legislative than judicial.  

Because the constitutional text was so clear on this point, the remaining Justices all joined Chief Justice Burger’s opinion, except Justice White. As a liberal Holmesian, which a strong penchant for deferring to Congress, Justice White looked for a way to make the congressional practice of legislative vetoes consistent with the text of the Constitution requiring bicameralism and presentment. Dissenting in *Chadha*, Justice White said that bicameralism and presentment applied only to new legislation. Congress had complied with those requirements in enacting the Immigration and Nationality Act and had merely delegated some legislative power to itself, as it might have given power to an administrative agency. Further, White added, there was the functional equivalent of bicameralism and presentment here, because for Mr. Chadha’s deportation suspension to be valid, both the President’s agents, the INS administrative law judge and Attorney General, and both houses of Congress, through not exercising a congressional veto, would have to agree.

In addition, focusing on the checks and balances concern of efficiency, Justice White noted that without the legislative veto, Congress must write more specific laws, abdicate its lawmaking function, or engage in oversight hearings and investigations, corrective legislation, or sunset laws – none of which are as satisfactory as the legislative veto. Justice Burger replied that administrative delegations are checked by legislative standards and judicial review, whereas there would be no such check here, thus raising a greater specter of legislative tyranny, the other checks and balances concern. Thus, any attempt by the legislative to delegate its lawmaking power to a part of itself, and thereby evade the Bicameralism and Presentment Clauses for later legislation, would be unconstitutional. Furthermore, where the text of the Constitution is so clear, it outweighs any checks and balances arguments of efficiency or of legislative and executive practice.

Chief Justice Burger also noted in *Chadha* that other mechanisms, such as durational limits on authorizations and reporting requirements, could be used to ensure efficient government action. In addition, congressional oversight, including either threatening to, or actually, holding hearings on agency action, including subpoena power to compel testimony, or using Congress’ appropriation power to reduce an agency’s budget, are steps Congress can take to affect the agency’s use of delegated power. Without regard to the efficiency of these indirect means of oversight, it has

been questioned whether in all circumstances such committee oversight will reflect accurately the view of Congress as a whole, particularly in cases where the executive branch chooses to withhold information from Congress that Congress thinks it needs to make an informed evaluation.

In 1995, Congress passed the Congressional Review Act (CRA), which allows any member of the House or Senate to introduce a resolution of disapproval against a final agency rule. If passed and signed by the President, a CRA resolution knocks out the rule. In addition, the CRA requires all rules to be submitted to Congress before they take effect. This mechanism has not often been used. For example, in 1999, it was noted, “To date, only a few CRA resolutions of disapproval have been introduced and none have been passed by either House. There are many reasons for this, including Congress' institutional hesitance to adopt the CRA’s new procedures and the fact that a resolution of disapproval requires the same groundwork as ordinary legislation or appropriations riders.” In particular, as for any bill, such action requires the President’s approval, or else his veto overridden by a 2/3 vote in each house of Congress. To the extent that the agency action reflects the President’s views, the President may well veto any attempted change by Congress, although if the change is attached to a general appropriations bill the President wishes to sign, a veto may be more unlikely.

In a concluding point in Chadha, the majority said the legislative veto of the Immigration and Nationality Act was severable from the rest of the Act, based upon language in the statute regarding severability, and, in any event, as discussed at § 17.4.2, there is a presumption of severability, which applies “if what remains after severance ‘is fully operative as a law.’” This presumption will only be overcome if “the Legislature would not have enacted those provisions which are within its power, independently of that which is not.” Justices Rehnquist and White, dissenting, said that Congress would never have intended administrative suspension of deportation without having a veto, thus overcoming the presumption of severability.

§ 19.4.2.2 Giving the President a Line-Item Veto

The Line-Item Veto Act of 1996 gave the President authority to "cancel in whole" three types of provisions that have been signed into law: "(1) any dollar amount of discretionary budget authority; (2) any item of new direct spending; or (3) any limited tax benefit." The Act set forth a detailed

88 Chadha, 462 U.S. at 931-34.

89 Id. at 932.

90 Id. at 1015 (Rehnquist, J., joined by White, J., dissenting).
expedited procedure for the consideration by Congress of a “disapproved bill.” These procedures basically involved re-passing the bill without giving the President a line-item veto power this time around.91 This “line-item” veto differs from the regular presidential veto, which is authorized by the Presentment Clause of Article 1, § 7, cl. 2, in that it occurs after the bill becomes law, and it cancels “in whole” only some of the provisions in the law. No constitutional text addresses explicitly such presidential action that repeals or amends parts of duly enacted statutes.

In Clinton v. City of New York,92 a 6-3 Court declared the law unconstitutional on the ground that the procedures specified in the Act were not authorized by the Constitution. The Court noted that the Constitution has clear language in Article 1, § 7, cl. 2 giving the President the power to veto entire bills, not exercise a line-item veto power. Constitutional text simply does not authorize Congress and the President to create a different law than one whose text was voted on by both Houses and presented to the President for signature, even if such a line-item veto power would be efficient for the President to have, a power which 43 of 50 Governors have under state constitutions. As in Chadha, the text of the Constitution was sufficiently clear that it outweighed any contrary arguments based on general structural efficiency versus prevention of tyranny concerns, or on legislative and executive practice.

An interesting mix of three Justices concluded that the textual arguments were not sufficiently clear, and that general separation of powers doctrine supported the Line-Item Veto Act. Justice Scalia’s dissent, joined by Justice O’Connor and Justice Breyer, said that the Court had been misled by the title of the law since the action it authorizes is, in fact, not a line-item veto that would trigger concerns of consistency with the presentment clause of Article 1, § 7, cl.2. Instead, Justice Scalia said, the statute was actually a form of executive impoundment of funds. Justice Scalia noted that an executive impoundment of funds, if authorized by Congress, as in the Congressional Budget and Impoundment Control Act of 1974, should be viewed as a proper legislative delegation of power to the President. There is no difference, Justice Scalia said, between authorizing the President to cancel a spending item, as in this Act, and authorizing that money be spent on a particular item or be impounded at the President’s discretion, which has been done since the founding. More generally, Scalia said, the Constitution does not any more categorically prohibit the executive reduction of congressional expenditures in the course of implementing statutes that authorize such reduction, as here, than it categorically prohibits the executive augmentation of congressional dispositions when implementing statutes by substantive rulemaking – a practice long approved by the Court.93 In response, the Court majority noted that unlike an impoundment of certain funds for a specified period of time, this Act permitted the President to cancel an appropriation of funds, and thus was more like an impermissible line-item veto, than a mere limited impoundment of funds.94

91 2 U.S.C. § 691a, d.
93 Id. at 464-69 (Scalia, J., joined by O’Connor, J., and joined in part by Breyer, J., concurring in part and dissenting in part), citing, inter alia, Train v. City of New York, 420 U.S. 35, 41 n.8 (1975) (discussing the Congressional Budget and Impoundment Control Act of 1974).
94 Id. at 442-47
Justice Breyer, dissenting, noted there was no violation of the delegation doctrine because the President did not create a new law. He simply executed a power conferred by Congress. The delegation contained an intelligible principle by which the President was authorized to act, i.e., the President had to consider fiscal accountability and the elimination of wasteful federal spending and special tax breaks, and whether preventing the item from having effect would reduce the federal budget deficit and not impair any essential government function. Justice Breyer said that because the law resembles past delegations of power and does not threaten the tripartite structure of government, it does not undermine individual liberty by raising a specter of presidential tyranny. Had Congress passed individual bills for each spending item, the President could clearly veto each individual bill the President opposed consistent with the literal text of Article I, § 7, cl.2. As a functional matter, Justice Breyer concluded that the President should have the constitutional authority to strike out individual items and not force Congress, if it wishes the President to have such a power, to pass thousands of individual spending bills.95 Justices Breyer and O’Connor’s decision in this case represents a good example of their occasional affinity for Holmesian deference to government, as noted at §§ 11.4 nn.107-09 (Breyer) & 12.4.2 (O’Connor).

Justice Kennedy wrote a concurrence explaining why he disagreed with Justice Breyer on whether the liberties of citizens were threatened in this case. Reflecting the natural law predisposition for analytic balancing of separation of powers concerns in every case, and rejecting the Holmesian strong deference to government interpretive model, Justice Kennedy said that the Constitution’s structure requires a stability which transcends the convenience of the moment. Building on this idea, Kennedy noted:

> The idea and the promise [of separation of powers] were that when the people delegate some degree of control to a remote central authority, one branch of government ought not posses the power to shape their destiny without a sufficient check from the other two. In this vision, liberty demands limits on the ability of any one branch to influence basic political decisions.

> . . . . The law established a new mechanism which gives the President the sole ability to hurt a group that is a visible target, in order to disfavor the group or to extract further concessions from Congress. The law is the functional equivalent of a line item veto and enhances the President’s powers beyond what the framers would have envisioned.

> . . . . That a congressional cessation of power is voluntary does not make it innocuous. The Constitution is a compact enduring for more than our time, and one Congress cannot yield up its own powers, much less those of other Congresses to follow. Abdication of responsibility is not part of the constitutional design.96

95 Id. at 469-73 (Breyer, J., joined in part by Scalia & O’Connor, JJ., dissenting).

96 Id. at 450-52 (Kennedy, J., concurring).
§ 19.4.3  Limited Legislative Control Over Appointment and Removal of Officers

§ 19.4.3.1  Limited Legislative Control Over Appointment of Officers

There is clear text in the Constitution regarding the appointment of officers of the United States. Article II, § 2 of the Constitution provides, in pertinent part: “[The President] shall nominate, and by and with the Advice and Consent of the Senate, shall appoint Ambassadors, other public Ministers and Consuls, Judges of the supreme Court, and all other Officers of the United States, whose Appointments are not herein otherwise provided for, and which shall be established by Law: but the Congress may by Law vest the Appointment of such inferior Officers, as they think proper, in the President alone, in the Courts of Law, or in the Heads of Departments.”

An officer of the United States is any appointee who exercises "significant authority" pursuant to the laws of the United States. For example, in *Buckley v. Valeo*, the Court held that Congress could not itself appoint members of the Federal Election Commission since those members were officers of the United States because they would be making rules, giving advisory opinions, and determining the eligibility of funds for federal elective offices. Under Article II, § 3, the President has the duty to “Commission all the Officers of the United States.”

As the text of the Appointments Clause indicates, the standard role of Congress in the appointment of executive officers is the Senate power of Advice and Consent. In a series of appointments cases since 1986, a majority of the Court has used a non-formalist balancing approach, reminiscent of Justice Story's analysis of the separation of powers, to determine whether certain non-traditional methods of appointment were in violation of the Appointments Clause or the doctrine of the separation of powers. For example, in *Morrison v. Olsen*, Chief Justice Rehnquist held, for a 7-1 Court, Justice Kennedy not participating, that the process for appointing an "independent counsel" did not violate the Appointments Clause, or general separation of powers concepts implicit in the President's authority under Article II of the Constitution, or judicial authority under Article III.

Under the Ethics in Government Act of 1978, which expired in 1998, the Attorney General, upon receipt of information that a federal official covered by the Act may have violated federal criminal law or on request by certain congressional committee members, had to investigate and report to a special court. The main individuals covered by the Act included Cabinet level officers and the President and Vice-President of the United States. If the Attorney General thought there were reasonable grounds for further investigation, the Attorney General had to request the appointment of an independent counsel from a special 3-judge court, the Special Division, the members of which were selected by the Chief Justice of the Supreme Court. The Special Division court selected the counsel and defined the counsel's jurisdiction. Counsel could investigate and prosecute or dismiss.

---

Counsel was removable by the Attorney General for good cause and could be terminated on request or on a finding by the Special Division that the investigation is so complete that it would be appropriate for the Justice Department to take over. Counsel had to keep Congress informed. The Act was a response to the “Saturday Night Massacre,” where President Nixon terminated the power of Archibald Cox to investigate Watergate wrongdoing, a power the president had at the time. Political pressure forced Nixon to appoint Leon Jaworski to continue the investigation and subsequent prosecutions.

Justice Rehnquist first held that an independent counsel is an “inferior officer” and, thus, could be appointed by a federal court. Factors leading to this conclusion were that the counsel was removable by the Attorney General, and had limited duties, jurisdiction, and tenure. According to the literal text of the Appointments Clause, therefore, Congress could vest appointment in “the courts of law.” Regarding general checks and balances concern of preventing tyranny, the Court held that the Act was not an attempt by Congress to increase its powers at the expense of the Executive Branch. The Attorney General need not grant a congressional request to appoint an independent counsel. Nor is there judicial usurpation of executive functions. Judges cannot appoint counsel sua sponte. And they cannot supervise or control. The Act merely recognized the inevitable conflict of interest that is created if the Attorney General were authorized to appoint a counsel to investigate another member of the Cabinet, or the President or Vice-President, and tried to provide an appropriate mechanism to ensure an unbiased appointment of that counsel.

The Court also held that the Act does not violate the separation of powers principle that it would be an impermissible delegation of power to impose significant executive or administrative duties of a non-judicial nature on Article III judges. Under Court precedents, as noted at § 19.1 n.1, Congress cannot impose significant extra duties on judges. The selection by the Chief Justice of 3 judges to serve on the Special Division in *Morrison*, who would then select the independent counsel, would clearly not fall into this category of significant extra duties. Many statutes provide for the Chief Justice to make selection among sitting federal judges to serve on special judicial bodies, such as the Foreign Intelligence Surveillance Court, which deals with government applications for electronic surveillance; the Alien Terrorist Removal Court, which hears alien removal proceedings; and the Judicial Panel on Multidistrict Litigation, which hears certain mass tort cases.

Regarding the administrative work actually done by the Special Division in *Morrison*, the Court noted that the appointment itself was authorized by the Appointments Clause; defining counsel's jurisdiction was incidental to the power to appoint; other miscellaneous powers were essentially ministerial; and the removal power, if given a narrow construction, and limited to situations where counsel's duties are truly completed or so substantially completed that there remains no need for

---

100 *Id.* at 670-73.

101 *Id.* at 674-77, 693-97.

further action, does not constitute a significant judicial involvement in exercising executive power to oversee the prosecutorial discretion of the independent counsel. Efficiency was advanced since courts are experienced in appointing private attorneys to act as prosecutors and they also appoint United States commissioners, who have certain prosecutorial powers. Thus, there was “no incongruity” between the functions normally performed by courts and carrying out this duty to appoint. The concern with tyranny was also addressed because the judges of the appointing court are ineligible to participate in any matters relating to the counsel they have appointed, and thus impermissible aggrandizement of power was not a concern.103

Adopting a formalist strict separation of powers approach, Justice Scalia, dissenting, said that it was wrong to extend this “balancing test” mode of analysis into interpreting plain language that "the executive power shall be vested in a President of the United States." Just as Justice Scalia concluded in Mistretta that, strictly speaking, no legislative power can be delegated by Congress, as discussed at § 19.2 nn.21-22, Justice Scalia’s view here was that no executive power can be exercised by any individual outside the executive branch. Further, Justice Scalia said that under the Appointments Clause Congress could not vest the appointment in the “courts of law” since the independent counsel is not an inferior officer, because the counsel is not really a subordinate of the Attorney General, but independent. Even if the independent counsel is an inferior officer, Justice Scalia stated that the text of the Clause should be read to mean that only the President or Heads of Departments can appoint executive officials, while the courts of law can only appoint inferior officials in the judicial branch. For Justice Scalia, a strict separation of powers approach should ban all attempts at interbranch appointments, even if the literal text of the Appointments Clause provides otherwise.104

In 1998, Congress declined to extend the provisions of the Ethics in Government Act. The Act was initially authorized in 1978 to run for 15 years, but was extended for 5 years in 1993 by a Democrat-controlled Congress. By 1998, support among both Democrats and Republicans had waned, in part because Republicans believed the Act gave Lawrence Walsh too much independent power in his Iran-Contra Investigation of the Reagan Administration during the 1980s, and Democrats believed the Act gave Kenneth Starr too much independent power in his investigation of President Clinton during the 1990s. With the Act no longer in force, investigations today of Cabinet-level officials, or the President or Vice-President, would likely be done by independent counsels appointed by the Attorney General, or appropriate designate, if the Attorney General’s actions were under review.

A second case involving use of a non-formalist approach to an appointments issue occurred in Mistretta v. United States.105 In addition to upholding the United States Sentencing Commission as a proper delegation of legislative authority, discussed at § 19.2 nn.17-22, the Court also upheld the Sentencing Commission on general separation of power grounds. The Sentencing Commission is composed of 7 members appointed by the President with the Advice and Consent of the Senate. At least 3 of the 7 members must be federal judges. Because Advice and Consent of the Senate was required for any appointment, the literal text of the Appointments Clause was clearly met.

---

103 487 U.S. at 676-85.

104 Id. at 703-23 (Scalia, J., dissenting).

Regarding general separation of powers concerns with efficiency versus the prevention of tyranny, the Court said, consistent with a non-formalist approach, that statutes could to some degree commingle the functions of the branches where that did not pose a danger of aggrandizement of the powers of one branch or encroachment on the functions of another. Congress could delegate non-adjudicatory functions to the judicial branch if that did not trench on the prerogatives of another branch and was appropriate to the central mission of the judiciary. The Court noted in *Mistretta* that efficiency was advanced because judicial participation would ensure that sentencing guidelines would be informed by judicial experience, and the limited service on the Commission would not undermine judicial effectiveness by exhausting the resources of the judicial branch, or undermine public perception of the impartiality of the judiciary, since rationalizing sentencing is an “essentially neutral endeavor.” With regard to tyranny, there was no impermissible aggrandizement of judicial power, since judges had determined criminal sentences in cases prior to the law.

Since *Mistretta* was decided, a district court has held that any attempt to alter the Sentencing Commission by providing that “not more than three federal judges” may sit on the 7-person Commission, but not ensuring that three federal judges sit on the Commission, would aggrandize executive power too much. It would deprive the Sentencing Commission of its judicial character and constitute executive encroachment on the judicial sentencing authority.106 Whether that balancing of executive versus judicial authority would be upheld on appeal is unknown, but the opinion does reflect sensitivity to general separation of powers concerns. The case also makes clear that in each case the courts consider not only specific textual language, like the Appointments Clause, but also general separation of powers concerns with (1) efficiency and the “no incongruity” principle between the functions normally performed and those carried out under any particular congressional act aspect of *Morrison* and (2) the prevention of tyranny and the no impermissible aggrandizement or impermissible delegation of power aspect of *Morrison* and *Mistretta*. A related problem with viewing the sentencing guidelines as mandatory in terms of the Sixth Amendment right to a jury trial, addressed by the Supreme Court, in *United States v. Booker*, is discussed at § 23.2.1.3.A.

Adopting a formalist strict separation of powers approach, Justice Scalia, dissenting in *Mistretta*, said that the Constitution did not permit a body, other than Congress, to exercise a power to make rules which have the effect of laws. He stated further that the improvisation of a constitutional structure on the basis of currently perceived utility will in the long run be disastrous.107

A third case regarding appointment is *Public Citizen v. United States Department of Justice*.108 In *Public Citizen*, the issue was whether the Federal Advisory Committee Act, which requires groups who advise the President on public affairs to hold open meetings and make their records public, called for the Justice Department to make public their reports on nominees for federal judicial nominees. The Court interpreted the statute not to apply to judicial nominations, thus avoiding

---

107 488 U.S. at 413, 422-26 (Scalia, J., dissenting).

constitutional difficulties. Justices Kennedy, Rehnquist and O'Connor thought the Act did apply, but was unconstitutional as interfering with the President's responsibility to nominate federal judges. Justice Kennedy noted that where there was no violation of express constitutional text, a “balancing test” was appropriate in cases like Morrison and Mistretta to deal with general separation of powers concerns. Here, however, the explicit text of the Appointment Clause grants to the President the power to nominate federal judges. The only textual limitation on that power is the Incompatibility Clause, which prevents Senators or Representatives from being appointed “to any civil Office under the Authority of the United States, which shall have been created, or the Emoluments whereof shall have been increased during such time” in office. Since the Act placed additional limits on the nomination process, the Act was unconstitutional as violating clear constitutional text. By the same reasoning, congressional statutory limitations on appointment, like Congress’ view that the head of the Women’s Bureau at the Department of Labor should be a woman, are unconstitutional limitations on whom the President can nominate to fill that position. Of course, if the President were to nominate a man for that position, the Senate could refuse to confirm under the Advice and Consent power.\textsuperscript{109}

In addition to this basic doctrine regarding appointment, Article II, § 2, cl. 3 provides, “The President shall have Power to fill up all Vacancies that may happen during the Recess of the Senate, by granting Commissions which shall expire at the End of their next Session.” It could be argued that this literal text only gives the President this “Recess” power if the vacancy is created during a period that the Senate is in Recess.\textsuperscript{110} Alexander Hamilton’s discussion of the clause in The Federalist Papers No. 67 supports this view. Hamilton wrote:

\begin{quote}
The relation in which [the recess appointments] clause stands to the [previous clause], which declares the general mode of appointing officers of the United States, denotes it to be nothing more than a supplement to the other for the purpose of establishing an auxiliary method of appointment, in cases to which the general method was inadequate. The ordinary power of appointment is confided to the President and Senate jointly, and can therefore only be exercised during the session of the Senate; but as it would have been improper to oblige this body to be continually in session for the appointment of officers, and as vacancies might happen in their recess, which it might be necessary for the public service to fill without delay, the succeeding clause is evidently intended to authorize the President, singly, to make temporary appointments "during the recess of the Senate, by granting commissions which shall expire at the end of their next session."\textsuperscript{111}
\end{quote}

By executive practice, however, Presidents have always interpreted this provision as a power to fill any vacant position that otherwise would require Senate confirmation by an appointment when the

\textsuperscript{109} See Donald J. Kochan, The Unconstitutionality of Class-Based Statutory Limitations on Presidential Nominations: Can a Man Head the Women’s Bureau at the Department of Labor?, 37 Loyola U. Chi. L.J. 43 (2005).

\textsuperscript{111} The Federalist No. 67 (A. Hamilton).
Senate is in recess, and congressional acquiescence has fixed this as the accepted view.  

Professor Michael Herz has noted:

Indeed, the matter lacks major controversy . . . . Why does the clause so clearly mean something it does not say? It can only be because the "arise" interpretation does not make sense in light of the clause's purpose. If the president needs to make an appointment, and the Senate is not around, when the vacancy arose hardly matters; the point is that it must be filled now. This represents a straightforward instance of purpose trumping, or at least informing our reading of, the text.

An implicit understanding of purpose comes into play in one other way in this argument. Attorney General Henry Stanbury once argued if "happen" meant "occurring during the recess," then the president could possess authority to make a recess appointment when the Senate is in session. This would happen if a position opened during the Senate's recess, triggering the recess appointment authority, but was still not filled when Senate returned; an appointment made then would still fill a vacancy that "happen[ed] during the recess of the Senate." Therefore, "happen during the recess" must mean "exist" rather than "occur." The force of this argument arises from the fact any interpretation that allows the president to make a recess appointment when there is no recess must be wrong, because it is so flatly at odds with the clause's purpose. . . .

Bowing to the political dynamic involved, even under the broader view of the recess power, Presidents have not used this recess power often. It has been used, however, occasionally for both non-Cabinet level executive appointments, such as John Bolton to be United Nations Ambassador in 2005, and appointment of lower federal court judges, as noted at § 7.4.2 following n.244. Presidents have used the recess power rarely for controversial Supreme Court or Cabinet-level appointments: President Washington used the recess power to appoint Chief Justice Rutledge in 1795 (his formal nomination later rejected by the Senate, 10-14); President Eisenhower used the recess power to appoint Lewis Strauss as Secretary of Commerce in 1958 (his formal nomination later rejected by the Senate, 46-49). Less controversial recess appointments have been made more frequently, such as President Eisenhower appointing Chief Justice Warren (1953), Justice Brennan (1956), and Justice Stewart (1958) in October to fill a vacancy on the Supreme Court at the start of the Court’s term (those nominees all easily confirmed by the Senate the following year), or President George H.W. Bush elevating Lawrence Eagleburger from Deputy Secretary of State to Secretary of State in 1992. By historical practice, no individual has ever been appointed to the same recess position twice, and under 5 U.S.C. § 5503(a) they would not be paid if they were. Under the clause’s text, the recess appointment “shall expire at the end of their [the Senate’s] next Session,” which under current practice would mean the end of the next calendar year.

---

114 See generally id. at 448-58.
An additional method of appointment for executive officials to fill positions without formal Senate Advice and Consent is represented by the Vacancies Act. The Vacancies Act, first passed in 1868, delegates to the President limited authority to temporarily fill certain vacancies in executive agencies or military departments. As provided at 5 U.S.C. § 3345, when a vacancy occurs by death, resignation, or other inability to perform duties, including illness, in a position whose appointment is not vested in the head of the department, but rather subject to Senate Advice and Consent, the “first assistant” to the office is designated to perform the functions of that office, unless the President directs another person who serves in a position subject to Senate Advice and Consent, or a person within the agency itself, whether subject to Senate Advice and Consent, to perform the functions and duties of the vacant office. This power is subject to certain specified limitations regarding length of service and rank of pay, and the time limitations of 5 U.S.C.§ 3346, which in general provide for service of a maximum of 210 days.115 For many Cabinet-level Departments, executive orders have been promulgated indicating a line of succession to be followed in the absence of contrary Presidential appointment.116

§ 19.4.3.2 Limited Legislative Control Over Removal of Officers

The Constitution contains no explicit text regarding the removal of executive officers, except for the provisions regarding impeachment. In the absence of explicit text, the Court has applied general separation of powers principles to determine the constitutionality of congressional acts regarding removal.

A debate ensued in the First Congress over whether the President had the right to remove, without congressional approval, members of the executive branch that had been appointed subject to Senate Advice and Consent. President Andrew Johnson’s removal of the Secretary of War (since 1947, named the Secretary of Defense) without Senate approval caused the House to impeach President Johnson in 1868, discussed at § 20.1.3 n.40. Later Court doctrine has upheld the President’s power to fire a member of his Cabinet “at will” without congressional interference in the decision.

The better separation-of-powers argument is that Congress can never exercise removal power over a member of the executive branch. This is consistent with the conclusion reached by the First Congress,117 and clear Supreme Court doctrine.118 Under Article III, there is no real debate regarding removal of federal judges, since Article III judges have life-tenure “during good Behaviour” and have never been removed except by impeachment. Regarding separation of power principles, Professor Saikrishna Prakash has noted:

115 On the Vacancies Act in general, see Brannon P. Denning, Article II, the Vacancies Act and the Appointment of “Acting” Executive Branch Officials, 76 Wash. U.L.Q. 1039 (1998).

[A] Senate removal role would transform the executive into a "two-headed monster." Officers could entrench themselves by serving the Senate's interests rather than satisfying the executive, "which is constitutionally authorized to inspect and control" their conduct. As a result, the president would be reduced to "a mere vapor" and the executive officers and the Senate would assume the executive power. Likewise, if the executive enjoyed the power to remove subject to the whim of Congress, that doctrine would set "the Legislature at the head of the Executive branch." Rather than the president directing his branch, Congress could parcel out the executive power to executive officers by providing that the president could not remove certain officers. Then the officers "who are to aid him in the duties of that department" would not be responsible to him. Either construction would give credence to complaints that the Constitution had failed to adequately separate powers and violate the Constitution's implicit bar against uniting any two of the three fundamental powers of government.\textsuperscript{119}

Applying these general principles, the Court held in 1986 in \textit{Bowsher v. Synar}\textsuperscript{120} that Congress could not authorize the Comptroller General, an official of the legislative branch and director of the Congressional Budget Office, to determine what budget reductions were necessary to comply with the Gramm-Rudman-Hollings Act budget guidelines. The Court noted that making the Comptroller General an executive officer for purposes of this Act created a problem since Congress had retained power to remove the Comptroller under several standards, such as "inefficiency" or "neglect of duty." The Court said that Congress can remove executive officials only by impeachment. Otherwise Congress would be executing the laws in violation of the principle of separation of powers, and could impede too greatly upon the President’s ability to manage effectively the executive branch.

Justice Stevens, joined by Justice Marshall, concurred in the result on the ground that Congress may not delegate power to formulate national policy to one of its two Houses, to a legislative committee, or to an individual agent of Congress, such as the Comptroller General. Unlike the majority, which viewed the Comptroller General’s role under the Gramm-Rudman-Hollings Act as executive, they viewed his role as making the legislative policy decision regarding the need for budget reductions. Under \textit{Chadha}, legislative actions must comply with bicameralism and presentment, as discussed at § 19.4.2.1. While in this case this alternative characterization led to the same result, probably the better argument is that in executing the provisions of the Act, the Comptroller General was exercising executive powers, as held by the majority.

On the question of removal, assuming the Comptroller General was exercising executive functions, Justices Stevens and Marshall agreed with Justices White and Blackmun in dissent that from a functional perspective there was no real danger that the Comptroller General would be rendered subservient to Congress. Thus, for them, the literal fact of a removal power was not sufficient to make the Act unconstitutional on this ground.\textsuperscript{121}

\textsuperscript{119} Prakesh, \textit{supra} note 117, at 795-96.

\textsuperscript{120} 478 U.S. 714, 721-32 (1986).

\textsuperscript{121} \textit{Id.} at 739-41, 748-53 (Stevens, J., joined by Marshall, J., concurring in the judgment).
Justice White, a Holmesian, dissented from the Court’s result. He agreed with the Court that the functions performed by the Comptroller General were “executive” in nature, but he complained that the Court did not adopt a sufficiently functional view of the removal issue. Justice White acknowledged that Congress retained, as an analytic matter, removal power over the Comptroller General, and that constitutional text and basic separation of powers principles suggest that Congress’ only power of removal over executive officials is by impeachment. Nonetheless, Justice White stated that Congress’ power to remove the Comptroller had only minimal practical significance and posed no threat to the basic scheme of separation of powers. Thus, from a functional perspective, Congress’ removal power should pose no constitutional problem.122 Similarly adopting a functional approach, instrumentalist Justice Blackmun, dissenting, said he would cure any constitutional problem by refusing to allow congressional removal of the Comptroller if it were ever attempted.123

In response to Bowsher, Congress repassed the Budget Act, but made the Director of the Office of Management and Budget the person responsible for implementing the Act. Since the Director of the OMB is a member of the executive branch, who serves at the pleasure of the President, there was no constitutional problem with this new statute with regard to the categorical rule stated in Bowsher that Congress can exercise no removal power over a member of the executive branch.

In Morrison v. Olsen,124 discussed at § 19.4.3.1 n.99, the Court was faced not with Congress attempting to exercise removal power, but with Congress limiting the President’s ability to remove an executive official. The limited interference with the President's power of removal in Morrison provided that the Attorney General could remove the Independent Counsel only for “good cause.” The Court said that this limited removal power is consistent with prior precedent, which allowed Congress to provide limited periods of office for independent agencies, and forbid removal in the meantime, except for good cause, the real issue being whether the removal restrictions are of such a nature that they “impede” the President's ability to perform his constitutional duties. Here, as with many independent agencies, such as the Securities and Exchange Commission, the Federal Communications Commission, the Food and Drug Administration, the Federal Election Commission, and others, the President's need to control the exercise of counsel's discretion was viewed as not so central to the functioning of the executive branch as to require that counsel be terminated at will by the President. Nor was the President's power to supervise impermissibly burdened because the Attorney General's power to terminate with good cause gives the President ample authority to assure that counsel is competently performing statutory duties.

In contrast, in cases involving individuals with more core executive functions, like Cabinet officers and their high-level subordinates, the Court has stated that Congress cannot limit the President’s ability to remove if that would impermissibly “impede” the President’s ability efficiently to run his administration. As the Court noted in Morrison, “[T]here are some ‘purely executive’ officials who

122 Id. at 769-76 (White, J., dissenting).
123 Id. at 776-87 (Blackmun, J., dissenting).
must be removable by the President at will if he is to accomplish his constitutional role." 125 This is particularly true for those policymaking positions typically viewed as part of the President’s team.

This post-1937 doctrine represents an evolution from the way in which removal issues were considered before 1937. Consistent with general observations that pre-1937 doctrine adopted more categorical tests, while post-1937 doctrine has been more functional in adopting balancing tests, discussed at § 4.2.1, the removal doctrine before 1937 adopted more rigid categorical distinctions. For example, in Myers v. United States, 126 the Court declared that “the President has the exclusive power of removing executive officers of the United States whom he has appointed by and with the advice and consent of the Senate.” In contrast, in Humphrey’s Executor v. United States, 127 the Court noted that for “quasi-legislative” or “quasi-judicial” officials, such as those working at administrative agencies with a mixture of rule-making, enforcement, or administrative law judge decisionmaking responsibilities, the authority of Congress “to require them to act in discharge of their duties independently of executive control cannot well be doubted; and that authority includes, as an appropriate incident, power to fix the period during which they shall continue in office, and to forbid their removal except for cause in the meantime.”

Consistent with post-1937 doctrine not being as predisposed to adopt such a categorical test as “executive” versus “quasi-legislative” or “quasi-judicial” to determine the outcome, the Court said in 1988 in Morrison that while considerations of the functions involved by the official is not irrelevant to the ultimate decision, they should not be determinative. The Court stated:

> We undoubtedly did rely on the terms "quasi-legislative" and "quasi-judicial" to distinguish the officials involved in Humphrey’s Executor . . . from those in Myers, but our present considered view is that the determination of whether the Constitution allows Congress to impose a "good cause"-type restriction on the President's power to remove an official cannot be made to turn on whether or not that official is classified as "purely executive." The analysis contained in our removal cases is designed not to define rigid categories of those officials who may or may not be removed at will by the President, but to ensure that Congress does not interfere with the President's exercise of the "executive power" and his constitutionally appointed duty to "take care that the laws be faithfully executed" under Article II.

> [T]he real question is whether the removal restrictions are of such a nature that they impede the President's ability to perform his constitutional duty, and the functions of the officials in question must be analyzed in that light. 128

125 Id. at 689-91.

126 272 U.S. 52, 106 (1926).

128 Morrison, 487 U.S. at 689-90.
Under *Morrison*, it would be an interesting question if Congress placed limits on the President’s ability to remove the Director of the FBI or CIA, whether that position would be viewed as part of the President’s team, or for other reasons constitutionally removable at will, or, perhaps less likely, similar to a Director, or one of a number of Commissioners, of an Independent Agency, and thus able to be protected from at-will removal by statute. While there is no current statutory protection for the Director of the FBI or CIA, in practice such Directors are not replaced at the start of a new presidency, as are Cabinet positions, but tend to survive from one administration to the next.

Applying a formalist, strict separation of powers approach, Justice Scalia said in dissent in *Morrison* that restrictions on removal for good cause should always be viewed as resulting in undue trammeling and impeding of executive power as applied to principal officers subject to Senate Advice and Consent, without the need for any balancing test regarding the extent of the intrusion on presidential prerogatives.\(^\text{129}\) However, in Justice Scalia’s view, restrictions on removal for good cause should always be permissible for inferior officers appointed without Advice and Consent, but subject to supervision by the President or Head of Department who appointed them, as long as the good cause limitation would permit the President or Head of Department to remove the individual for failure to accept supervision. Structured as a bright-line rule, Justice Scalia noted that this doctrine was consistent with the formalist-era cases of *Myers* and *United States v. Perkins*.\(^\text{130}\) It would also preserve great discretion in the executive branch, consistent with a conservative predisposition toward executive power, discussed at § 6.2.2.4.

For lower level federal employees, who are not in a policy-making role, Congress can provide civil service protection from at-will Presidential firing. Indeed, in a 1978 analysis, a Senate Committee estimated that there were 2.9 million civil employees on the federal payroll, of whom 93% were subject to civil service protection prohibiting suspension or removal of such employees,\(^\text{131}\) except as provided in 5 U.S.C. § 7503(a) for suspensions of 14 days or less, or, under 5 U.S.C. § 7513(a), for more serious action, including removal, "for such cause as will promote the efficiency of the service," which must be demonstrated at an administrative hearing. Civil service protection also typically applies to Administrative Law Judges and other Judges serving in Article I or II courts who do not have Article III protections of life-tenure and no diminution of salary while in office.\(^\text{132}\) Sometimes, however, there are proposals to restrict or amend such civil service protection, as in the

\(^{129}\) *Id.* at 723 (Scalia, J., dissenting).

Omnibus Patent Act of 1997 for patent examiners. Staff for federal judges, including secretaries and law clerks, do not have civil service protection under existing law.

§ 19.4.4 General Separation of Powers Concerns

The Court applies the same kind of separation of power analysis involving balancing concern with preventing tyranny versus the need for governmental efficiency to cases not directly involving appointment and removal issues. For example, because of a concern with legislative tyranny, and no strong arguments on the other side in terms of governmental efficiency, the Court confirmed in Bowsher v. Synar its long-held view that no executive functions can be performed by a member of the legislative branch. Thus, as an alternative ground for the decision in Bowsher, in addition to the problem with congressional removal, discussed § 19.4.3.2 n.120, the Court held that Congress could not authorize the Comptroller General to determine what budget reductions were necessary to comply with Gramm-Rudman-Hollings Act budget guidelines because this was an “executive function” that could not be exercised by a member of the legislative branch.

In Metropolitan Washington Airports Authority v. Citizens for the Abatement of Aircraft Noise, the Court held that Congress could not transfer United States airport property to a State Board where that board could make important decisions only upon approval of a Board of Review comprised of members of Congress serving on committees overseeing airport activities. The Court said that if the Board's power were executive, the Constitution would not permit an agent of Congress to exercise it, as that would transfer to the legislative branch executive responsibilities. A long line of precedents, including Bowsher v. Synar, noted above, had held that unconstitutional. If the Board’s power were legislative, it had to be exercised consistent with bicameralism and presentment, as in Chadha. The Court noted that if this Board were valid, Congress might use similar devices to retain control, outside the ordinary legislative process, of the activities of state grant recipients charged with executing federal policy.

In dissent, Holmesian Justices White and Rehnquist, along with instrumentalist Justice Marshall, said that South Dakota v. Dole, on conditional spending, placed this Board outside of separation-of-powers scrutiny. In any event, the power here was executive, not legislative, so Chadha did not apply. Bowsher was distinguished as involving greater congressional control. The Court responded that Dole involved only federalism issues of congressional power, not the separation of power issues involved here, and that Bowsher had reflected a categorical rule regarding agents of Congress.

---

134  See Williams v. McClellan, 569 F.2d 1031, 1033 (8th Cir. 1978).

exercising executive powers, not a balancing test.\textsuperscript{137}

The rule that seems to emerge from the separation of powers cases is that where constitutional text is clear, and supports a finding of unconstitutionality – such as issues surrounding the Bicameralism and Presentment Clauses, as in \textit{Chadha}, discussed at § 19.4.2.1 nn.76-86; or the President’s veto power, as in \textit{Clinton v. City of New York}, discussed at § 19.4.2.2 nn.91-96; or limitations on the President’s power to nominate, as in \textit{Public Citizen}, discussed at § 19.4.3.1 nn.108-09 – that text will prevail. In other cases, where the text is clear but supports the constitutionality of the government action, as with the Appointments Clause in \textit{Morrison}, discussed at § 19.4.3.1 nn.99-104, or the text is not clear or no text exists, as in \textit{Bowsher v. Synar}, discussed at § 19.4.3.2 nn.120-23, the Court will go beyond text and will use a balancing test to determine further whether there are any constitutional problems with the government action.

That balancing test will be based upon the twin separation of powers concerns of efficiency/no incongruity of action and the prevention of tyranny/no impermissible aggrandizement of power, along with consideration of legislative/executive practice and precedent, as was done in \textit{Morrison} and \textit{Mistretta}, discussed at § 19.4.3.1 nn.101-06. Under this approach, virtually all delegations of legislative power to the President or administrative agencies are viewed as constitutional today, as discussed at § 19.2 nn.17-22. In contrast, unilateral action by the President without express or implied congressional consent outside the core “Commander-in-Chief” power or the power to “take Care that the Laws be faithfully executed” raise more serious separation of powers issues, as discussed at § 19.3.1 nn.28-36 (\textit{Youngstown Sheet} case), § 19.3.2 nn.37-47 (international matters), § 19.3.3 nn.53-58 (war and national defense) & § 19.3.4 nn.60-64 (domestic policymaking).

Another issue that has arisen is the use of “presidential signing statements,” whereby a President signs a bill, but indicates his view that parts of the bill are unconstitutional, particularly provisions that are viewed as intruding on inherent presidential authority. As a constitutional matter, the President has the authority to express such views, and act upon them, subject to later judicial review, just as a President can view an existing statute passed before he took office as unconstitutional. Between 2001-06, President George W. Bush issued signing statements objecting to more than 700 distinct provisions of law – more than all previous presidents combined. This enhanced use has raised concern from Congress and other groups, such as the American Bar Association.\textsuperscript{S1} & \textsuperscript{S2}

\textsuperscript{137} \textit{Id.} at 270-71; \textit{id.} at 277-93 (White, J., joined by Rehnquist, C.J., and Marshall, J., dissenting).
CHAPTER 20: ADDITIONAL CHECKS AND BALANCES

As noted at § 5.2.2.2, there are four structural elements in the Constitution: judicial review, federalism, separation of powers, and checks and balances. Issues of judicial review, federalism, and core separation of powers concerns dealing with the legislative and executive branches were dealt with in Chapters 17, 18, and 19, respectively. This Chapter discusses the remaining checks and balances issues under the Constitution.

Checks and balances operate in part to improve the effectiveness and quality of governmental decisionmaking, as noted at § 19.1 text following n.2, including the quote from James Madison on enabling “the government to control the governed.” This can be done by providing the option of a broader perspective, such as the presidential power to veto legislation, which itself is subject to a 2/3 override by both Houses of Congress, or by requiring broadly-based consideration, such as the President can be impeached, but the House brings impeachment and trial is by the Senate. The second main function of checks and balances is to guard against abuse of power and tyranny, in Madison’s terms “oblige it to control itself.” For example, the President is Commander-in-Chief, but Congress controls the purse and can make rules for the armed forces.

Some checks and balances can be found in the express text of the Constitution, as when it divides federal power into three branches – legislative, executive, and judicial – and then further subdivides legislative power so that both the House and Senate must approve legislation under the Bicameralism Clause, discussed at § 19.4.2.1. Similar checks and balances are provided for in the process of amending the Constitution, discussed at § 20.1.1.3; the process of election of the President, discussed at § 20.1.2.1; the process of election, and rules regarding running of, the two houses of Congress, discussed at § 20.1.2.2; and the process of congressional impeachment, discussed at § 20.1.3.

In addition, as Justice Story noted in his Commentaries on the Constitution of the United States, discussed at § 19.1 n.5, the framers did not want one branch of government to perform core functions of any other branch, or intrude too greatly into the interworkings of another branch. In addition to the core separation of power examples, discussed at §§ 19.2-19.4, which reflect this principle and are summarized at § 19.4.4, the Court has recognized immunities from judicial action for members of Congress and their staff members under the Speech or Debate Clause of Article I, § 6, cl. 1; has protected the President and other federal executive officials from intrusive judicial review through executive immunities; has developed doctrines regarding judicial immunities; and has adopted sovereign immunity for the federal government. These issues are discussed at § 20.1.4.

Turning to checks and balances even more clearly created by the Court, rather than expressed in constitutional text, the Court has checked state power by recognizing a set of immunities for the federal government from taxation or regulation by the states and the Court has recognized some immunities for states from the federal government. These issues, based on general reasoning from the dual theory of sovereignty, are discussed at § 20.2.

Relationships among the states and the federal government are also checked and balanced by the preemption doctrine which provides, based on the text of the Supremacy Clause, Article VI, § 2, that federal law is supreme in case of a conflict between state and federal law, discussed at § 20.3.1.
National interests in free trade that the Court thinks Congress wants protected are insulated from state action by cases under the dormant commerce clause. These cases typically balance the impact of state action on interstate commerce with the state’s interests and the availability of alternatives which do not discriminate against interstate commerce, discussed at § 20.3.2. The Privileges and Immunities Clause of Article IV, § 2 protects residents of states from certain kinds of discrimination by other states. The clause is connected to the balance between federal and state governments because it applies predominantly to discrimination that has an impact on activities sufficiently basic to the livelihood of the Nation or interstate harmony, discussed at § 20.3.3. Issues regarding the existence of federal common law, which can preempt state law, are discussed at § 20.3.4.

Another balance between federal and state authority concerns determining the limits, if any, on the power given states by the 21st Amendment over the distribution of intoxicating liquors within state borders versus the federal government’s interest in free trade. This issue is discussed at § 20.4.

Cutting across all of these areas are three main issues that have framed Court doctrine regarding general checks and balances analysis under the Constitution. The first issue is whether to give clauses relating to checks and balances predominantly a literal interpretation, as would a formalist, or whether to read the clauses in light of their check and balance purposes. The second issue is the extent to which such clauses should be given a functional understanding, as would a Holmesian or instrumentalist, or whether analytic considerations should predominate. As discussed at § 4.2.1 nn.32-40 & 4.2.2 text following n.48, a functional approach has often meant, post-1937, replacement of a categorical approach involving elements to meet with a balancing test or factor weighing approach. The third consideration relates to the fact, discussed at §§ 6.2.2.3 & 6.2.2.4, that more conservative judges tend to prefer states and the President in checks and balances cases, while more liberal judges tend to prefer the federal government and the legislature. The issues are discussed below in the context of providing details on various kinds of checks and balances.

§ 20.1 Separation of Powers Checks and Balances

§ 20.1.1 Having Some Constitutional Government Structure in Place and Operating

§ 20.1.1.1 Ensuring the Continuity of Government

Prior to September 11, 2001, little attention was paid to ensuring the continuity of government in times of war or terrorist attack, other than ensuring a line of Presidential succession if the President dies of natural causes or is assassinated, becomes incapacitated, resigns, or is removed through the impeachment process. Following 9-11, greater attention has been focused on the fact that ensuring there is an ongoing federal government means ensuring three ongoing branches – legislative, executive, and judicial – each “with a different nature and structure and each with different constitutional, statutory, and administrative rules governing that structure and the continuity of its operations. . . . [T]here can be no continuity of the Federal Government, . . . unless there is continuity of all three branches, in particular both political branches to enact new legislation.”

Professor Wasserman has observed:

Continuity of Congress is an umbrella term for a three-stage process. The first stage is immediate continuity – the hours, days, and first week after a terrorist or military attack directed at Washington, D.C., and the Federal Government. The second stage is repopulation, focusing on filling seats rendered vacant by the deaths of members in both houses of Congress, restoring both houses to full working capacity, and allowing Congress to move forward as a fully functioning bicameral legislature. Repopulation can be divided into two parts: interim and final. Final repopulation is the end stage of continuity, the point at which vacant seats would be filled by replacements chosen by the ordinary means of selection for both houses, direct popular election. Congress is not repopulated in a manner that retains the populist nature of the body, especially the House of Representatives, if a substantial number of seats remain either vacant or occupied by members chosen by means other than popular election.

Interim repopulation bridges the gap between immediate continuity and final repopulation; it places someone in the vacant seat, but via a fundamentally different selection procedure. The importance of the interim repopulation stage turns on how quickly a popular election can be held in the aftermath of a terrorist attack; the more quickly elections can take place, the shorter the interim repopulation period and, perhaps, the less the need for that period. The model for two-stage repopulation is the Senate, where governors have the power to make appointments to vacant seats until an election can be held to fill the seat with a duly elected member. Unfortunately, no similar appointment provision exists in the House, where only a new election can fill a vacant seat.

Executive continuity involves a narrower focus, because the executive power of the United States is reposed in a single individual, the President. Regarding executive succession, Professor Wasserman has noted:

Presidential succession is a mix of constitutional and statutory procedures. The Constitution provides that, in the event of a vacancy in the presidency, the vice president becomes president. The Constitution then grants to Congress the power to provide by law for simultaneous vacancies in both offices by designating the "Officer" who is to "act as president" until the president is able to resume office or a new president is elected. The designation of an officer to "act as president" (as opposed to "becom[ing] President") derives from the Framers' refusal to grant the legislature the constitutional power to appoint the executive; Congress may choose someone to act as executive, to occupy the White House temporarily, but Congress may not appoint a president. The distinction largely is semantic, as it appears that the acting president assumes the whole of the constitutional executive power and may exercise the same Article II powers as a president.

The current succession statute, codified at 3 U.S.C. § 19, was [originally] passed in 1947; it provides for succession by the Speaker of the House of Representatives, followed by the President Pro Tempore of the Senate, followed by cabinet officers, beginning with the Secretary

---

2 *Id.* at 953.
of State and proceeding according to the age of the department [Treasury, Defense, Attorney
General – like State, part of Washington’s original cabinet (1789) – Interior (1849), Agriculture
(1862), Commerce (1903), Labor (1913), Health and Human Services (1953), Housing and
Urban Development (1965), Transportation (1966), Energy (1977), Education (1979), Veterans
Affairs (1988), and, with a 2006 amendment, adding the Department of Homeland Security
(2002) at the end]. The statute does not provide for any officer or individual beyond the
cabinet, likely on the 1940s assumption that the death of every cabinet officer was unlikely
and that at least one enumerated officer always would survive to become acting president.3

A useful summary of Cabinet Departments, with links to information about each of the
Departments, appears at “http://en.wikipedia.org/wiki/United_States_Cabinet.” This site also
notes that six officers currently have “cabinet-level” rank, which means they are entitled to
attend Cabinet meetings, although they do not head Cabinet Departments. These individuals
are the Vice President, the White House Chief of Staff, the Administrator of the Environmental
Protection Agency, the Director of the Office of Management and Budget, the Director of the
National Drug Control Policy, and the United States Trade Representative.

Some commentators have criticized the succession statute on both constitutional and policy
grounds because it permits members of the legislative branch to be in the line of succession
to the executive position of the Presidency. This criticism is based not only on general
separation of powers principles, which would be most prominently in play were the House
and Senate controlled by one political party to impeach and convict a President and Vice
President of the other party, but also the literal text of Article II, § 1, cl. 6, which provides
that in the event both the President and Vice President cannot serve through “Removal, Death,
Resignation, or Inability,” Congress may declare “what Officer shall then act as President.”
Under this view, “Officer” means executive officer, not elected member of Congress.4 On
the other hand, long-standing legislative and executive practice in the Speaker of the House
and President Pro Tempore of the Senate being in the line of succession might make this
provision constitutional. In any event, as with issues regarding impeachment, discussed at
§ 17.3.4.5 nn.571-73, the Court might view the issue as a political question not
appropriate for Court review.

There has also been criticism of the current statute in providing for the President Pro
Tempore of the Senate, rather than the majority leader of the Senate, be in the line of
succession. The President Pro Tempore is largely a ceremonial position, elected by the
Senate, to serve as Senate “president” when the Vice President is not presiding over the
Senate. By custom, the President Pro Tempore is the longest serving member of the Senate
from the majority party in the Senate, but that person does not wield primary responsibility
for the direction and control over the legislative agenda.5

3 Howard Wasserman, The Trouble with Shadow Government, 52 Emory L.J. 281, 284-85
(2003).

4 For discussion of all of these congressional succession issues, see John C. Fortier & Norman

5 See Wasserman, supra note 3, at 286 (discussing the President Pro Tempore issue).
One additional provision of the Presidential Succession Act of 1947 that involves congressional leaders is the "bumping procedure." Under the Act:

If the Presidency passes to a Cabinet member, then a newly elected Speaker of the House or a new President pro tempore of the Senate can replace a Cabinet member who has been serving as President. Congress put this provision into the 1947 succession act because of President Truman's belief that elected officials should take priority over nonelected officials in the line of succession.

Several scholars have persuasively argued that this provision is unconstitutional. Leaving aside the involvement of congressional leaders in the line of succession, the "bumping" procedure goes against the language of Article II that states that Congress may specify in law the successor: "declaring which Officer shall then act as President, and such Officer shall act accordingly until the Disability be removed, or a President shall be elected."

The language of Article II is clear that short of one of the two previously mentioned scenarios, the successor will remain in office. Therefore, the bumping procedure, whereby a Cabinet member succeeds to the Presidency only to be subsequently bumped from office by a [newly-elected] Speaker or President pro tempore, violates this provision.6

With regard to the judicial branch, issues of continuity are not as pronounced. Justice Kennedy has noted, "All . . . district and circuit judges are courts of general jurisdiction and can issue writs under the All Writs Act. So we are already dispersed nationwide."7 At the same time, uniformity of federal law depends on the continued functioning of the Supreme Court. As noted at § 7.4.3 n.24, under the current statute, 28 U.S.C. § 1, a quorum of 6 Justices is needed for the Court to function.

Of course, as discussed at § 7.4.2, the Constitution provides for filling vacancies on the Supreme Court – the Appointments Clause mechanism of Presidential nomination and Advice and Consent of the Senate, and, in rare cases, the Recess Appointments Clause. In the event of a disruption in the activities of the President and Congress, however, that process for filing vacancies might be delayed. On the other hand, it is questionable whether any delay in the Court reaching a final resolution on some issue would create or exacerbate a constitutional crisis. Nevertheless, at least one set of authors have proposed a statutory solution to the potential problem of a more significant delay in Supreme Court functioning. They have stated:

[We] recommend that Congress pass a statute creating an intermediate court drawn from any remaining Justices and the chief judges of the courts of appeals. This court would convene in times of national emergency when the Supreme Court lacks a quorum as a result of that emergency, and it would exercise limited discretionary jurisdiction over appeals from the courts of appeals and state supreme courts in cases of immediate, national importance. We believe

_____________________________

6 Fortier & Ornstein, supra note 4, at 1011-12.

creating an intermediate court with limited jurisdiction would not require a constitutional
amendment because Congress has the power to create inferior courts and, at least prospectively,
the nomination and confirmation of a court of appeals judge would encompass that judge's
potential service on this emergency court.8

§ 20.1.1.2 The 1781 Articles of Confederation and Their Replacement by the 1789
Constitution

On July 21, 1775, Benjamin Franklin presented to the second Continental Congress a draft for the
"Articles of Confederation and Perpetual Union [Between] the several Colonies." Consideration of
this plan was postponed for nearly six months, but on January 16, 1776, the Congress heard
arguments whether "a Day shall be fixed for considering the Instrument of Confederation formerly
brought in." That motion failed. On June 7, 1776, as the second part of his motion "[t]hat these
United Colonies are, and of right ought to be, free and independent States," Richard Henry Lee
moved "[t]hat a plan of confederation be prepared and transmitted to the respective Colonies for
their consideration and approbation." Five days later, a committee consisting of one member from
each colony was formed "to prepare and digest the form of a confederation." This committee
presented its draft on July 12, enjoining the delegates and printers not to disclose its contents.9

Congress worked steadily on the Articles throughout July and August. On August 20, 1776, a
revised version of the Articles was ordered to be printed, under the same conditions of secrecy.
Because of the absence of many delegates and the time demands that the war made on those present,
the subject was then dropped. Congress decided on April 8, 1777 to resume deliberations on the
Articles. The work proceeded during May, June, July, August, and September with little progress.
In the early morning hours of September 19, Congress fled from Philadelphia to Lancaster, and then
to York, Pennsylvania, before the advancing British army. This event increased the urgency with
which the members viewed confederation. They responded with a burst of activity during October
and November, with final agreement in Congress on November 15, 1777.10 The Document provided
that “The Stile of this Confederacy shall be ‘The United States of America.’” The Articles of
Confederation were sent to the states for ratification beginning in 1788, but were only ratified by
each of the 13 states, and thus entered into force, on March 1, 1781. Many Internet cites contain the
text of the Articles of Confederation. One such site is “http://www.usconstitution.net/articles.html.”

As Professor Freedman has noted:

The conventional view of the period between the Declaration of Independence and the
Constitution, . . . is that the country came to the very brink of dying in infancy. Deep
ideological splits over the amount of power that should be vested in the national government

9 See Eric M. Freedman, Why Constitutional Lawyers and Historians Should Take a Fresh
Look at the Emergence of the Constitution from the Confederation Period: The Case of the Drafting
of the Articles of Confederation, 60 Tenn. L. Rev. 783, 797-98 (1993), and sources cited therein.

10 Id. at 798-801.
accompanied the drafting of the Articles of Confederation. Those favoring a weak national government prevailed, but when put to the test of practice, their creation simply did not work. The national government lacked coercive power over individuals and a reliable revenue source, and depended on the voluntary (and often unobtainable) cooperation of the states. [There was no national executive branch; no federal court system; the powers over war, treaties, and coining money, among others, could only be used with consent of 9 states, not a simply majority; and amendment to the Articles could only be achieved by unanimous consent of all 13 states.] Because the national government could not function, the country was wracked by the alarming domestic insurgency known as Shay's Rebellion, and was unable to negotiate effectively abroad or stem protectionism at home. Eventually, the baleful effects of governmental impotence fed a centralizing reaction that enabled those favoring a stronger national government to triumph over their opponents by securing ratification of a radically different charter, the Constitution.\textsuperscript{11}

While this account may represent a slight exaggeration, and the Articles did vest significant federal power over Western lands and state boundaries, and regarding treaties with foreign nations,\textsuperscript{12} the weakness of the federal Congress became clear over time. Open hostilities with the British ended on October 19, 1981, with the British surrender in Yorktown, Virginia. The Treaty of Paris of 1783, which officially ended the Revolutionary War, was signed on September 3, 1783, and ratified by the Congress on January 14, 1784. It had been negotiated for the American side by John Adams, Benjamin Franklin, John Jay, and Henry Laurens. In the aftermath of the Revolutionary War, economic turmoil occurred, in part as the inevitable byproduct of economic dislocations caused by war on one’s own land, and in part by English efforts to restrict American trade after the War ended. This created demands for a stronger federal role over economic activity. As one author has noted:

\begin{quote}
The immediate aftermath of the war saw the U.S. economy expand. Demand for goods, especially English goods, led to rising prices. To supply this demand, American merchants took advantage of credit provided by English lenders to purchase these goods. Curtis Nettels noted that the U.S. purchased nearly 6 million worth of goods during 1784 and 1785, which resulted in price increases; between 1784 and 1786, nearly 8 million worth of goods were purchased, three-fourths to four-fifths of which were purchased on credit.

Two things occurred as a result: the flood of imported goods threatened the nascent domestic manufacturers that had grown up during the war, and specie flowed out of the country to merchants' English creditors. By 1784 this capital flight, combined with a glut of goods, restrictions the English placed on American merchants' access to overseas markets, and depressed prices, had plunged the new nation into its first economic depression [its first “boom and bust” cycle]. According to two economic historians, "something 'truly disastrous' happened to the American economy between 1775 and 1790." The performance of the economy during that period, they estimate, "fell by 46 percent." To offer a modern comparison, the gross national product during the Great Depression fell by forty-eight percent.
\end{quote}

\textsuperscript{11} \textit{Id.} at 785-87.

\textsuperscript{12} \textit{Id.} at 816-26.
In response, states began enacting protective tariffs seeking to raise revenue, curb imports, stop outflows of hard currency, and protect domestic manufacturers. The tariffs usually targeted (1) foreign "luxuries," (2) goods that could be supplied by state industries, (3) "useful" things not produced locally in sufficient quantities, like coaches, and (4) foreign liquor. The result was a confusing and conflicting skein of commercial regulations that lacked any coordination – one historian wrote that "occasional instances of harmony" were the result of "accident" not "design" – and sowed the seeds for interstate conflict.

During this period, according to one count, six states passed imposts, nine states discriminated against British goods, seven states imposed duties on British ship entrances and British commodities, and three states forbade export of American goods in British ships.13

As noted at § 18.1.1 n.13, faced with this reality, a meeting in Annapolis, Maryland was called and held in September, 1786 to focus on the need to amend the Articles to deal with economic problems and provide for “uniform rules regarding trade.” Only 5 States – New York, New Jersey, Pennsylvania, Delaware, and Virginia – sent a total of 12 delegates to that meeting. Among those 12 delegates were James Madison, Alexander Hamilton, and Edmund Randolph, who later became the first Attorney General. The problems raised at that meeting convinced the participants to petition the states for a broader Constitutional Convention the following year, in Philadelphia. A copy of the “Proceedings of Commissioners to Remedy Defects of the Federal Government,” signed September 14, 1786, appears at “http://www.yale.edu/lawweb/avalon/annapoli.htm.”

Following the Constitution Convention during the summer of 1787, discussed at § 18.1.1 nn.14-21, the proposed new Constitution was sent to the states for ratification. Article VII of the Constitution declares that "[t]he Ratification of the Conventions of nine States, shall be sufficient for the Establishment of this Constitution between the States so ratifying the Same." New Hampshire became the ninth state to ratify the Constitution on June 21, 1788. On one view, therefore, the Constitution took affect on June 21, 1788. As a historical matter, Virginia became the tenth state to ratify on June 25, 1788, and New York became the eleventh state on July 26, 1788. North Carolina and Rhode Island did not ratify the Constitution until after the spring of 1789, North Carolina on November 21, 1789, and Rhode Island on May 29, 1790.14

Following ratification by nine states, the Continental Congress under the old Articles of Confederation declared March 4, 1789 as the date the new Congress was to convene. Although Congress did convene that day, a quorum was not present in the House until April 1, and in the Senate until April 6. President Washington did not take office until April 30, 1789. The Judiciary Act of 1789 was passed on September 24, 1789, and the Supreme Court came into being on February 2, 1790.

---

14 See Vasan Kesavan, When Did the Articles of Confederation Cease to be Law?, 78 Notre Dame L. Rev. 35, 36 n.9 (2002).
In the case of Owings v. Speed,\(^{15}\) the Supreme Court held, per Chief Justice Marshall, that the Constitution became effective only on March 4, 1789, the date Congress was to convene, not June 21, 1988, the date the ninth state ratified the Constitution. Marshall stated, “It is apparent that the Government did not commence on the Constitution being ratified by the ninth State; for these ratifications were to be reported to [the] Congress [under the Articles of Confederation], whose continuing existence was recognized by the Convention, and who were requested to continue to exercise their powers for the purpose of bringing the new government into operation.”

This conclusion has been questioned by some formalist commentators today. Under one version, provisions of the Constitution that were self-executing, such as the Contracts Clause, the State Treaty Clause, and other provisions contained in Article I, § 10 that limit the power of the states, became effective once a ninth state ratified the Constitution. A second tier of provisions, such as many of those contained in Article I, Article II, and Article III, did not become effective until those branches of the federal government had legislative, executive, and judicial personnel to exercise those powers. During the transition period, the Articles of Confederation still controlled those matters.\(^{16}\) Under another version, the Articles of Confederation ceased on June 21, 1988 with ratification of a ninth state, but there was no federal government until after March 4, 1789, when the new Congress convened.\(^{17}\)

Resolution of this issue has little practical significance today, except for a case involving the Oneida Indian Nation. In Oneida Indian Nation v. New York,\(^{18}\) the Oneida Indian Nation sued New York in order to recover five million acres of land in upstate New York that it claimed were purchased by New York through an unconstitutional treaty made on September 22, 1788, after the Constitution was ratified by a ninth state on June 21, 1988 and after New York had ratified the Constitution on July 26, 1788. The State Treaty Clause of Article I, § 10 provides that “[n]o State shall enter into any Treaty, Alliance, or Confederation." The federal district court dismissed the Oneida Nation's claim that the treaty was unconstitutional on the strength of Chief Justice Marshall's declaration in Owings v. Speed that the Constitution, in all its aspects, including the State Treaty Clause, only became effective on March 4, 1789. Thus, the state of New York could enter into the treaty with a domestic Indian Nation under the existing Articles of Confederation. If one were to adopt the formalist view of the Constitution noted above, that New York state treaty would be unconstitutional under the State Treaty Clause, and the Oneida Indian Nation would presumably own five million acres of upstate New York property.

§ 20.1.3  

Amending the United States Constitution

The procedures for amending the Constitution represent the efforts of the framers and ratifiers to balance the need for change with the desire for stability in government. As noted by Professor Thomas E. Baker, in an article entitled, *Towards a “More Perfect Union”: Some Thoughts on Amending the Constitution*, James Madison stated in *The Federalist Papers* that the amending procedures are designed to "guard[] equally against that extreme facility, which would render the Constitution too mutable; and that extreme difficulty, which might perpetuate its discovered faults."19

Article V provides for two ways to amend the Constitution, each involving two steps. Amendments may be proposed either by a 2/3 majority in both houses of Congress or by a special convention called at the request of 2/3 of the state legislatures. Under either option, amendments are then ratified by 3/4 of the states, either by the existing state legislatures or by special state conventions, depending on which means are designated. By historic practice, ratified amendments are added at the end of the Constitution, rather than incorporated directly into the text they amend.

The two-step procedure was a compromise based on checks and balances concerns. Under Article V, neither Congress nor the states have the exclusive power over amendment. Amending the Constitution was made difficult, but not as difficult as under the then-existing constitution, the Articles of Confederation, which had required the unanimous consent of all states for amendments to be valid. Given 50 states and 435 members of the House of Representatives, 34 Senators, 146 Representatives, or 13 state legislative chambers can keep an amendment from becoming part of the Constitution. Thus, there must be a broad national consensus to amend the Constitution.

It has been noted, “The federal constitution is a product of the Enlightenment. It manifests a qualified optimism about the power of government to improve society . . . . The powers delegated to all three branches of the federal government can grow to meet future needs.”20 On the assumption that the document would be interpreted in light of a natural law style of interpretation, which would permit such growth in light of purpose, practice, and precedent kinds of arguments, drafting a formal amendment process that is relatively difficult makes sense.

In contrast, from a formalist perspective, the literal text of the Constitution would need to be much longer and more detailed. Provisions for formal amendment would likely be drafted to be somewhat easier, since formal amendment would be the primary means of adjusting the Constitution to new realities. For example, the State of Texas Constitution, drafted in 1876, during the formalist era, is long and detailed. It contains over 60,000 words, and thus is six times as long as the United States Constitution. As Professor Harold Bruff, of the University of Texas School of Law, has noted, “Designed for a largely rural, agrarian state with less than a million inhabitants and no oil industry,

the Texas Constitution has endured to govern [a] largely urban and industrialized state only because it is relatively easy to amend . . . , encrusted with 326 amendments [as of 1990, and still counting].” To amend the Texas Constitution, the amendment must be proposed by a joint resolution of the legislature, must receive a two-thirds vote in each house, but must carry only a simple majority of the voters at an election.21 From this perspective, to encrust a formalist, static model of interpretation, requiring greater resort to the formal amendment process, onto a document, like the United States Constitution, whose amendment provisions were not drafted with a formalist model of interpretation in mind, frustrates both the intent of the framers and ratifiers, and well as making little practical sense in terms of “consequentialist” arguments that might be used to support such a static model of interpretation, such as those made by Professor Randy Barnett, cited at § 8.4 n.59.

The Supreme Court has consistently ruled that since Article V places the primary responsibility for amending the Constitution with the legislative branches of the federal government and the states, courts should play virtually no role in the process of considering amendments. The Court has routinely deferred to the Congress to determine issues about its own procedures for proposing amendments and about the states' procedures for ratifying amendments. For example, Congress decided the 200-plus year delay between the proposal and the ratification of the 27th Amendment was permissible, as discussed at § 20.1.1.3 n.26. Although one author has suggested that there should be some limit on what proposals can qualify as valid “amendments” under Article V, as opposed to more radical proposals that would be transformative “unamendments” in the constitutional design,22 the Court has never indicated any such limitation on what amendments could be proposed or ratified. By historical practice, both houses of Congress must pass a proposed constitutional amendment during the same session of Congress for it to be valid, similar to the bicameralism rule for legislation.

Of the possibly more than 10,000 bills introduced in Congress to amend the Constitution at various times,23 only 33 have gotten the 2/3 vote in both houses of Congress and proceeded to the states, and only 27 have been ratified by 3/4 of the states. All but one of the 27 amendments have been ratified by the state legislatures. Only the 21st Amendment, which repealed the 18th Amendment regarding Prohibition, discussed at § 20.4, was ratified by state conventions upon the stipulation of Congress. There has never been a convention for proposing amendments, although, during the 1980s, 32 states had issued, at various times, a call for a constitutional convention to consider an amendment to require a balanced budget for the federal government.

As noted, of the 33 amendments that Congress has voted to propose to the states, 27 have been ratified, leaving six amendments that have failed to be ratified by the requisite 3/4 of the states. Professor Baker noted in his article:

> An amendment proposed along with the Bill of Rights would have set a population limit for congressional districts which, given today's population, would have required more than 5,000

21 Id. at 1339 & n.16.

23 See Baker, supra note 19, at 9.
members in the House of Representatives. In the early nineteenth century, an amendment was proposed that would have automatically expatriated anyone who accepted a title or honor from any foreign government without the consent of Congress, a measure that would have played havoc with Nobel prize winners and knighted former Presidents. There was a desperate and futile effort on the eve of the Civil War to appease the southern states by proposing to prohibit any future amendment that would eliminate slavery. As part of the progressive movement in the 1930s, a proposed amendment would have authorized Congress to regulate child labor in the face of an unwilling Supreme Court, but the Justices eventually got around to finding the power in the Commerce Clause. In the 1970s, a democrat-majority in Congress proposed to grant congressional representation to the District of Columbia, but the political reality that the measure would result in the election of at least three more democrats to Congress was enough for republicans to stall the measure in the statehouses.

The most important recent showdown over a proposed amendment was the ten years of debate whether to add an amendment for sex or gender equality – the Equal Rights Amendment. Congress proposed the ERA in 1972 with the usual seven-year deadline for ratifications, then extended the period for three more years. After some early momentum, however, in the end only thirty-five states ratified the measure – three short of the number needed – and some 14 states that had ratified the proposal went back to try to rescind their earlier ratifications.24

As discussed at § 26.3.1.2, the Court in the 1970s created an intermediate standard of review for cases involving gender discrimination. Had the ERA passed, the legal consequence would have been that gender discrimination cases would be tested under strict scrutiny, not intermediate review.

Of the 27 amendments that have been ratified, six amendments have been proposed and ratified directly against the backdrop of Supreme Court rulings. As Professor Baker noted:

The Eleventh Amendment (1795) promptly and decisively set aside the controversial 1793 holding in Chisholm v. Georgia that had interpreted Article III to authorize a federal court to entertain a suit brought against a sovereign state by a citizen of another state. The great Civil War Amendments – the Thirteenth Amendment (1865), the Fourteenth Amendment (1868), and Fifteenth Amendment (1870) – were proposed by the Reconstruction Congress and ratified by the states to restore the Union and to be rid of Supreme Court constitutional interpretations epitomized by the infamous Dred Scott v. Sandford decision. The Sixteenth Amendment (1913), for all intents and purposes, reversed Pollock v. Farmers' Loan and Trust Co. and granted Congress an expressly-enumerated power to tax individual income. Most recently, the Twenty-Sixth Amendment [1971] effectively reversed Oregon v. Mitchell to grant 18-year-olds the right to vote.25

A useful way to group the amendments is to note that most can be organized around four different historical concerns. As organized by Professor Baker:

24  Id. at 12-14.

25  Id. at 8-9.
Between 1789 and 1804, the "Anti-federalist" or "Jeffersonian" amendments were adopted. The first ten amendments, popularly known as the Bill of Rights (1791), secure the fundamental rights of the individual against the national government. The Eleventh Amendment (1795) prevents federal courts from entertaining lawsuits against the states. The Twelfth Amendment (1804) sought to harmonize political parties with the electoral college to avoid the problems the House of Representatives had with the election of 1800 between Thomas Jefferson and Aaron Burr.

The "Civil War Amendments," the Thirteenth, Fourteenth, and Fifteenth Amendments, were ratified during Reconstruction in the years 1865, 1868, and 1870, respectively. Ratified in the aftermath of a cataclysm that shook the constitutional structure to its foundations, those mighty provisions ended slavery, enforced due process and equal protection against the states, and guaranteed new freedmen the right to vote.

The populist and progressive movements at the beginning of the century produced four ratifications: the federal income tax in the Sixteenth Amendment (1913), the direct election of Senators in the Seventeenth Amendment (1913), the national Prohibition in the Eighteenth Amendment (1919), and women's suffrage in the Nineteenth Amendment (1920).

The most recent set of ratifications have dealt thematically with federal elections: the Twenty-Second Amendment (1951) set a two-term limit for the office of the President; the Twenty-Third Amendment (1961) awarded three electoral college votes to the District of Columbia; the Twenty-Fourth Amendment (1964) abolished poll taxes; the Twenty-Fifth Amendment (1967) revised the constitutional rules for presidential succession and devised a new procedure for presidential disability; and the Twenty-Sixth Amendment (1971) extended the franchise to 18-year-olds.

This patterning is not perfect, and a few amendments cannot be drawn into these four groupings: the Twentieth Amendment (1933) limited the lame duck session of Congress, and the Twenty-First Amendment (1933) repealed Prohibition. The Twenty-Seventh Amendment (1992) – which requires that any pay increase for members of Congress can go into effect only after the next regular election – has the most idiosyncratic ratification story. It was proposed by the first Congress as part of the original Bill of Rights and was all but forgotten for more than 200 years before it was dusted off and ratified by the requisite number of states – something that is not likely to happen again because the modern practice is for Congress to include a time limit, usually seven years, in proposed amendments.26

With regard to some of the thousands of bills proposed in Congress to amend the Constitution, Professor Baker noted in 2000:

Consider some of the amendments currently being considered by Congress. One proposal would effect a wholesale overruling of the Supreme Court's Establishment Clause jurisprudence. Another that has passed the House, but not the Senate, with the requisite

26 Id. at 11-12.
two-thirds majority would have given the Congress the power to prohibit and punish flag burning. Other bills currently before Congress include a proposal to authorize a line-item veto for the President, a proposal to require that federal judges be reconfirmed every ten years, a proposal to abolish the electoral college to provide for the direct election of the President, several proposals for various versions of term limits for members of Congress, and a proposed amendment to guarantee rights to victims of crimes. As with all things political, different people assign different value and importance to these various proposals to change the nation's fundamental law. The wisdom – or the folly – of a proposal to amend the Constitution often is in the eye of the beholder.

Some amendments go out of fashion while they are under consideration, disappearing from popular concern. For example, the balanced budget amendment was in the headlines and looked close to passing Congress just a few years ago, partly as a consequence of pressure felt from the calls of thirty-two states for a constitutional convention to consider it. But when the burgeoning economy began to yield consistent federal surpluses, the political pressure for passage lessened and the measure disappeared from view, at least for now. And by now, the bills introduced annually over the last so many years proposing amendments to permit prayer in public schools, to outlaw school busing, and to ban abortions have become more like symbolic rituals than realistic efforts to change the Constitution. They are rallying points for organizations on their side for purposes of direct mail fundraising and membership recruitment, but they are not perceived by the other side as a genuine political threat any more.

Constitution-amending certainly is no sport for the short-winded. According to the account of one of the historic champions of the Nineteenth Amendment, the effort to guarantee women the franchise took 72 years and included 56 state-referenda campaigns, 480 state-legislative campaigns, 47 state-constitutional conventions, 277 state-party conventions, 30 national-party conventions, and 19 campaigns before 19 successive Congresses – just to get the measure before the states for ratification.27

For the Civil War Amendments, and amendments in the 20th century dealing with voting rights, Congress provided an added power for Congress to enforce the amendments by appropriate legislation. That congressional power is discussed in Chapter 28.

§ 20.1.2 Issues in the Election of Members of the Federal Government

§ 20.1.2.1 Presidential Election

Under the provisions regarding presidential election in Article II, § 1, the selection of the President takes place indirectly through the electoral college system. Technically, when casting a vote for President, the individual is voting for presidential electors who select the President. Under Article II, § 1, cl. 4, election day “shall be the same throughout the United States,” which by historical practice is the second Tuesday in November. Typically, the voter casts his or her vote for a single slate of electors, nominated by the parties in each state, with the slate that receives the most popular

27 Id. at 15-17.
votes in the state going to the electoral college. Maine and Nebraska use a district system where two electors are chosen on an at-large basis, and one elector is selected per congressional district based upon receipt of the most popular vote in that district. Although election by popular vote is the method used throughout the Nation today, it is not required. Under Article II, § 1, cl. 2, the Constitution merely requires that the electors to be chosen "in such [m]anner as the [State] Legislature thereof may direct."

Under Article II, § 1, cl. 2, the Constitution assigns to each state a number of electors equal to its combined representation to Congress. Currently there are 538 total electors, based on 435 members of the House, 100 Senators, and 3 electors for the District of Columbia pursuant to the 23rd Amendment. A majority, 270 votes, is needed to elect the President and Vice President respectively. Any citizen may be appointed an elector except Members of Congress and individuals holding offices of "Trust or Profit" under the Constitution. Under current practice, electors assemble in their respective states on the Monday after the second Wednesday in December. They are pledged to a single candidate. However, in most states they are not legally required to vote for those candidates. The electors cast separate ballots for President and Vice President as provided for under the provisions of the 12th Amendment. An elector is prohibited from casting both votes for presidential and vice presidential candidates if both are "inhabitants" of the same state as the elector.

An issue arose in 2000 whether the electors for the state of Texas could cast their votes for both Presidential candidate George W. Bush, and Vice-Presidential candidate Dick Cheney, based on the argument that both were in fact "inhabitants" of Texas, since Cheney’s last job before becoming the Vice-Presidential candidate, as CEO of Halliburton, was based in Texas. In Jones v. Bush,28 the district court ruled that the plaintiff voters had no personal or irreparable harm, noting that the Court has held that "[a] general interest in seeing that the government abides by the Constitution is not sufficiently individuated or palpable to constitute such an injury." However, in the interest of appellate review, the court went on to address the merits of the plaintiffs' motion for preliminary injunction by holding that the term "inhabitant" under the 12th Amendment is coextensive with the legal concept of "domiciliary." The Court then ruled that Cheney had both a physical presence in Wyoming with the necessary intent to remain there indefinitely, despite his job with Halliburton. The key factors in the court's conclusion were the facts that Cheney was "born, raised, educated, and married in Wyoming," and served for six terms in the U.S. House of Representatives as the Member from Wyoming. On appeal, the Fifth Circuit Court of Appeals, after an hour-long oral argument followed by a short recess, unanimously agreed that Cheney was a Wyoming resident, and affirmed the district court's decision without further elaboration.29

Sometimes disputes arise over the validity of electoral votes cast. Through election laws passed in 1887, Congress has placed the initial power to settle controversies with the state. Under 3 U.S.C. § 5: “If any State shall have provided, by laws enacted prior to the day fixed for the appointment of

the electors, for its final determination of any controversy or contest concerning the appointment of all or any of the electors of such State, by judicial or other methods or procedures, and such determination shall have been made at least six days before the time fixed for the meeting of the electors, such determination made pursuant to such law so existing on said day, and made at least six days prior to said time of meeting of the electors, shall be conclusive, and shall govern in the counting of the electoral votes as provided in the Constitution, and as hereinafter regulated, so far as the ascertainment of the electors appointed by such State is concerned.”

This provision essentially states that as long as the state follows its procedures in a timely manner, the statute renders the state's judicial or regulatory determination of the outcome dispositive, and not subject to further challenge by Congress. Thus, if the state meets the deadline, its slate of electors reside in a "safe harbor," untouchable by those counting the electoral votes, the Congress. Where there are competing slates of electors, Congress resolves controversies as to which slate represents the state's electoral votes based upon the laws of the state in question. If both houses of Congress do not agree on how to interpret state law when deciding between or among competing slates of electors, then Congress looks to the governor of the state under 3 U.S.C. § 15, which provides, "[I]f the two Houses shall disagree in respect of the counting of such votes, then, and in that case, the votes of the electors whose appointment shall have been certified by the executive of the State, under the seal thereof, shall be counted."

Procedurally, the governor of the state is required to certify the electoral votes "as soon as practicable" after the final assessment of who have been selected to serve as electors, or after a controversy has been settled under the state's statutory procedures. The electoral votes are then certified at a joint session of Congress on January 6th of the year succeeding the election, though if January 6th falls on a Sunday, it takes place the following Monday. A concurrent resolution for a joint session of Congress, originating in the Senate, is passed in order for both Chambers to meet to count the electoral votes. The Vice President presides over the joint session as President of the Senate. The certificates for the electoral votes are opened in alphabetical order, passed to four tellers, two chosen by each chamber, who announce the results. The votes are then counted with the result announced by the President of the Senate.

Under this certification process, grounds for an objection are that the vote was not "regularly given" by an elector, or that the elector was not legally certified under the state's procedures. Title 3 U.S.C. § 15 states: "[N]o electoral vote . . . regularly given by electors whose appointment has been . . . received shall be rejected." Any objection to the validity of an electoral vote or votes "shall state clearly and concisely, and without argument, the ground thereof . . . ." At least one Senator and one Member of the House must sign a written objection. Upon receipt of an objection, the joint session goes into recess, and each chamber deliberates separately over the objection. Debate is limited to two hours. During debate, each Senator and Representative may speak for or against the objection for no more than five minutes, and may not address the chamber more than once. After the close of debate, each chamber votes separately whether or not to uphold the objection. After the two chambers have voted, they reconvene in joint session, and the President of the Senate announces the results. In order to sustain an objection, both chambers must vote to uphold. If the two chambers do not agree then the objection falls and the votes are counted. Also, under the statute, "[n]o votes or papers from any other State shall be acted upon until the objections previously made to the votes or papers from any State shall have been finally disposed of." These procedures were invoked in
1969, the only time since their enactment in 1887 when this has occurred. The objection concerned an elector from North Carolina who had cast his votes for Governor George Wallace for President and General Curtis E. LeMay for Vice President, the nominees of the American Independent Party, instead of President Nixon and Vice President Agnew, who had won the popular vote in the state. The vote was not critical to the election of President Nixon as President.30

Should no candidate receive a majority of the electoral votes cast, the House of Representatives chooses the President. The Senate chooses the Vice President. The newly elected Congress conducts the election. In the House of Representatives, the President is selected from the top three vote getters in the electoral college with each state delegation casting a single vote. An internal poll is taken by each delegation. If no single candidate receives a majority of the votes cast within the delegation, then, as a matter of legislative practice, the state's vote is counted as "divided" and barred from that round of voting. This was the practice in 1825, when John Quincy Adams was selected as President, despite Andrew Jackson receiving more electoral votes and popular votes, though not a majority of each, as discussed at § 14.3 nn.99-105. It has been adopted by Congress as non-binding precedent since that time, although it has never needed to be used. A majority of votes taken by the delegations is needed to win the presidency. The Senate selects from among the top two vote getters in the electoral college for Vice President. Each senator casts a single vote, with a simple majority needed to win. What is notable about this process is that it is placed entirely in the hands of the state legislature to appoint the electors by any manner of their choosing, for the governor of the state to certify the slate of electors, and for Congress to count the votes and resolve any and all disputes.

Prior to the 1804 presidential election, electors did not cast separate ballots for President and Vice President. The candidate receiving the most votes was elected President and the runner up, Vice President. To differentiate between the party's choices for each office, one elector was designated to cast an odd vote so that the two candidates would not receive identical totals. The latent difficulty with this practice became evident in 1800 when the Democratic-Republican nominees deadlocked because each state that had voted for that ticket believed it was the duty of another to cast the lone separate vote. As a result, the electoral college voted 73 for Thomas Jefferson, 73 for Aaron Burr, 65 for John Adams, 64 for Thomas Pinckney, and 1 for John Jay. It therefore ended in a deadlock between Jefferson and Burr that sent the decision to the House of Representatives.

At the time, the Congress that would be deliberating the choice for the next President and Vice President was not the incoming Congress, as it has been following the 20th Amendment that eliminated in 1933 the lame duck session of Congress and seats the new Congress at the beginning of the new year, but the outgoing Congress. In 1801, this meant it was not the incoming Congress, which was composed of a majority of Jeffersonian Republicans, but the outgoing Federalist Congress that was to make the decision. Given this fact, there was a great deal of concern about Federalist mischief-making, including the possibility of not having a President-elect by the time of the inauguration. The latter fears were put to rest when the House agreed on February 9, 1801 that they would go into continuous session until a new President was chosen. On February 17, after much deliberating and with some help from his Federalist rival Alexander Hamilton, Thomas

30 On these procedures surrounding counting and objections, see id. at 218-20, 257-61.

Page 828
Jefferson was elected, on the 36th ballot, President of the United States. The 12th Amendment was ratified four years later, and included an explicit provision that electors would cast separate ballots for President and Vice President.31

A separate kind of problem arose in 1876. In the 1876 Hayes/Tilden election, there was an electoral college deadlock. Democrat Samuel J. Tilden, Governor of New York, had a majority of the popular vote. Tilden was one vote away from winning the electoral vote. The Republican candidate, Rutherford B. Hayes, Governor of Ohio, needed every disputed electoral vote to prevail. There were four states that held the balance of power: Florida, Louisiana, South Carolina, and Oregon.32

In Florida, about 50,000 votes had been cast. Votes were reported by the various counties to a State Canvassing Board, and, on the "face of the returns," Tilden led Republican Rutherford B. Hayes by "only 80-some votes." The Canvassing Board, however, which had two Republicans and one Democrat, had the authority and "discretion to exclude returns that were 'irregular, false, or fraudulent.'" Exercising this discretion, sometimes unanimously and sometimes by a 2-1 vote along party lines, the Canvassing Board concluded that Hayes had won the state by 45 votes.

In Louisiana, Tilden appeared to have won the state by between 8000 and 9000 votes. The State Returning Board required that the Returning Board have five members with both parties represented, but there was only one Democrat on the Board, and he resigned prior to the 1876 election. The president of the Board had been Governor of Louisiana during Reconstruction, but had been removed as governor "for dishonesty." He remained on the Returning Board, however, and his three Republican colleagues were also not held in high regard by impartial observers. After taking testimony during 12 public sessions, the Board rejected more than 13,000 Democratic ballots, but only 2,500 Republican ballots. Hayes was declared the winner.

South Carolina saw illegal voting by both white Democrats and black Republicans. The Board of Canvassers certified Hayes as the winner. Courts in South Carolina, more sympathetic to the Democrats, held the members of the Board in contempt, fined them, and locked them up in the county jail. Nevertheless, Hayes prevailed.

It was accepted by both sides that the presidential electors pledged to Hayes had won in Oregon. One of the Republican electors, however, was not eligible to serve because he was a "fourth-class

postmaster and received an annual salary of $268,” an office of "Trust or Profit" under the Constitution. There was no disagreement about the postmaster's ineligibility, but Democrats and Republicans differed on how to interpret the state law governing how vacancies were to be filled. Republicans urged that the remaining electors should choose a replacement. This would have resulted in another Republican elector. Democrats argued that the candidate for elector with the next highest vote total should be elected. This interpretation would have led to a vote for Tilden.

While the House of Representatives possibly could have constitutionally elected the president because no candidate appeared to have won an electoral college majority, the prevailing uncertainty of the results in these four states, the almost certain existence of voting fraud, and the presence of violence on the streets by angry partisans, contributed to a very unstable political situation. Thus, members of Congress were apparently reluctant to exercise their constitutional prerogative to elect a president, and instead they created an ad hoc solution: a special Electoral Commission comprising of five congressional Democrats, five congressional Republicans, and five Supreme Court Justices.

The commission was created on January 29, 1877, when President Grant signed into law a bill creating a tribunal. Five of its members, or commissioners (three Democrats and two Republicans), would come from the House of Representatives and five (three Republicans and two Democrats) from the Senate. The remaining five would consist of Justices of the Supreme Court, including two Democrats (Clifford and Field) and two Republicans (Miller and Strong). These four Justices in turn were to select a fifth, the expectation being that they would agree on Justice David Davis who had once been a staunch Republican (and also Lincoln's campaign manager in the election of 1860), but whose recent vacillations left all unsure about his party loyalties. This arrangement thus provided for seven Democrats, seven Republicans, and one presumed independent.

Expectations were soon altered. William P. Pelton, Tilden's nephew, colluded with Democrats in the Illinois legislature to engineer Davis's election to the United States Senate. Perhaps their thinking was that Davis, out of gratitude to the Democrats, would favor Tilden. Or perhaps Tilden's supporters in Illinois wanted Davis off the Commission as he had been Lincoln's campaign manager in 1860. In any event, Davis announced his resignation from the Court to take effect on March 4, 1877, whereupon he would be sworn in as a senator. In the meanwhile, as a senator-elect, Davis could not sit as a judicial member on the Electoral Commission. The four judicial members of the commission then named Justice Bradley to take Davis' place. Justice Bradley was a Republican, but not an outspoken partisan. His political involvement over the years had been minimal, consisting of a single (and unsuccessful) campaign for a congressional seat in 1862.

In resolving the disputes from Louisiana and Florida, the commission's initial task was to decide whether it would look behind the officially certified election returns. Democrats argued that the official tallying of electoral votes in the presence of Congress made no sense if Congress could not be assured of the integrity of the votes. The question was critical and had not been answered by the statute setting up the commission. If the tribunal made its own independent assessment of validity, it would then have to consider evidence of voter intimidation and fraud, as well as the discounting

of Democratic ballots. Under that view, some of the electoral votes might be awarded to Tilden. On the other hand, if the commission decided it could not look behind the returns, then its role would be little more than assuring that the certifications had been presented in the proper form. Republicans argued that going behind the returns would place Congress in the unprecedented position of second-guessing state canvassing officials. They pointed to the specter of Congress making and unmaking election results from the states. On this and all other substantively important questions, members of the commission, including Justice Bradley, voted precisely according to party affiliation, accepting the Hayes electors from Louisiana and Florida by a vote of eight to seven.

Based upon similar reasoning, Democrats hoped to prevail in the Oregon dispute. If so, they would pick up the necessary and sufficient single electoral vote for Tilden. The state's governor (a Democrat) had certified that one Democratic and two Republican electors had been chosen. If the commission was not to look behind the official returns, Hayes seemed to face defeat. However, advocates for Hayes managed to turn things in his favor. Oregon state law made the Secretary of State (a Republican) the official canvassing authority. Refusal by the governor to sign that certificate of election did not undercut the validity of the conclusion of the canvassing authority. Members of the commission, again voting by party, decided eight to seven that the Secretary of State, not the Governor, spoke for the state. For later elections, that result was changed by 5 U.S.C. § 15, passed later in 1877, which makes the Governor the proper party to certify election returns.

By the same margin, the commissioners accepted the Hayes electors from South Carolina, in the last of the four cases they considered. These rulings favoring Republican electors in each state made it virtually certain that Hayes, not Tilden, would be the next president. The Republican Senate accepted the verdicts, and the Democratic House of Representatives rejected them. Under the terms of the statute that created the Electoral Commission, the Commission's judgments were to stand, unless a majority in both houses voted to discard them.

The outcome was costly to the Court. As stated by Professor Donald Stephenson:

Reflecting the consensus among Democrats that they had been duped into accepting the electoral commission . . . , [Justices] Field and Clifford conspicuously absented themselves from the inauguration of "His fraudulence," as critics had already begun to call the nineteenth president. A Republican paper decried their absence as "an act of discourtesy as discreditable and unworthy as it was uncalled for and undignified. . . ." Never one to keep opinions to himself, Field was believed to have started a rumor that Bradley changed his mind at the last minute on critical issues, after being visited by influential Republican leaders and railroad magnates. Bradley demanded that Field prove the accusation or retract it. Field insisted that he had been misquoted and misunderstood. Hard feelings between the two persisted. Moreover, the experience steeled Clifford to remain on the bench, incapacitated or not, until a Democrat again occupied the White House. While Garfield's election in 1880 made that hope impossible to realize, Clifford's mental deterioration soon posed a serious problem for Chief Justice Waite. With other members of the bench suffering various infirmities, a smaller number of Justices were left to shoulder an increasingly burdensome caseload.34

34 *Id.* at 472-73.
Despite this result, Field and Clifford performed a valuable public service in helping to resolve the electoral dispute. Nonetheless, participation by the Court in resolving the dispute meant that 5 Court members effectively decided the identity of the next president. Since 1877, this has happened only two other times: in 1974, when the Court’s decision in *United States v. Nixon* requiring President Nixon to turn over Watergate tapes to a special prosecutor, discussed at § 20.1.4.2.A, nn.60-61, precipitated Nixon’s resignation and made Vice President Gerald Ford president; and in 2000, when the Court’s decision in *Bush v. Gore* terminated the Florida Supreme Court’s recount order in Florida, which handed the White House to George W. Bush, discussed at § 26.5.3 nn.525-42.

In terms of who can run for President, under Article II, §1, cl. 5, “No Person except a natural born Citizen, or a citizen of the United States, at the time of the Adoption of this Constitution, shall be eligible to the Office of President; neither shall any Person be eligible to that Office who shall not have attained to the Age of thirty five years, and been fourteen Years a Resident within the United States.” The 12th Amendment provides that “no person constitutionally ineligible to the office of President shall be eligible to that of Vice-President of the United States.”

Under Article II, § 1, cl. 6, “In Case of the Removal of the President from Office, or of his Death, Resignation, of Inability to discharge the Powers and Duties of the said Office, the Same shall devolve on the Vice President,” with Congress providing by law for Presidential succession in the case both the President and Vice President cannot serve. The 12th Amendment (1804) contains provisions, never used, regarding the Vice President serving as President in case the President was not chosen by inaugural day, at that time, March 4th. The 20th Amendment (1933) changed inauguration time to noon of January 20th, and provided that the new Congress would be seated noon of January 3rd. Following President Franklin Delano Roosevelt being elected President 4 times (1932, 1936, 1940 & 1944), the only President elected for more than 2 terms, the 22nd Amendment (1951) provided that no individual could be elected to the Presidency more than twice, and that any individual serving more than two years of another President’s terms would be counted for purposes of this rule as having been elected to that position. The 25th Amendment (1967) provides more detailed rules regarding how to proceed in the event the President is removed from office or on death, incapacity, or resignation. As noted at § 20.1.1.1 n.3, under current law the order of succession is the Vice President, the Speaker of the House, the President Pro Tempore of the Senate, and then members of the Cabinet. No succession other than the Vice President has ever occurred.

§ 20.1.2.2 Congressional Elections

Article I, § 2, cl. 3 provides, “Representatives and direct Taxes shall be apportioned among the several States which may be included within this Union, according to their respective Numbers, which shall be determined by adding to the whole Number of free Persons, including those bound to Service for a Term of Years, and excluding Indians not taxed, three fifths of all other Persons.” The clause continues, “The actual Enumeration shall made within three Years after the first Meeting of the Congress of the United States, and within every subsequent Term of ten Years, in such Manner as they shall by Law direct.”

Under Article I, § 2, cl. 1, “The House of Representatives shall be composed of Members chosen every second Year by the People of the several States, and the Electors [voters] in each State shall have the Qualifications requisite for Electors of the most numerous Branch of the State Legislature.”
Under Article I, § 2, cl. 2, “No Person shall be a representative who shall not have attained to the Age of twenty five Years, and been seven Years a Citizen of the United States, and who shall not, when elected, be an Inhabitant of that State in which he shall be chosen.” Under Article I, § 2, cl. 5, “The House of Representatives shall chuse their Speaker and other Officers.”

Under Article I, § 3, cl. 1, “The Senate of the United States shall be composed of two Senators from each State, chosen by the Legislature therefore, for six Years. Article I, § 3, cl. 2, provided for dividing the seats of the Senators into three Groups, so that roughly 1/3 of the Senate is up for reelection every 2 years. Under Article I, § 3, cl. 3, “No Person shall be a Senator who shall not have attained to the Age of thirty Years, and been nine Years a Citizen of the United States, and who shall not, when elected, be an Inhabitant of that State for which he shall be chosen.” Article I, § 3, cl. 4 & 5 provide that the “Vice-President of the United States shall be President of the Senate, but shall have no Vote, unless they be equally divided” and the “Senate shall chuse their other Officers, and also a President pro tempore, in the Absence of the Vice-President.” Under Article V, “no State, without its Consent, shall be deprived of its equal Suffrage in the Senate.” These procedures for Senate election based on equal state representation, while the House membership is based on population, was part of the “Grand Compromise” between large and small states at the Constitutional Convention, and departed from the Articles of Confederation, which had a unicameral legislature with each state having one vote.

Under Article I, § 5, cl. 1, “Each House shall be the Judge of the Elections, Returns and Qualifications of its own Members, and a Majority of each shall constitute a Quorum to do Business; but a smaller Number may adjourn from day to day, and may be authorized to compel the Attendance of absent Members, in such Manner, and under such Penalties as each House may provide.” As discussed at § 17.3.4.4 n.556, the Court held in *Powell v. McCormack*35 that Congress cannot add qualifications to the constitutionally prescribed list of age, years of citizenship, and state residence to deny someone a seat in Congress, or expel a sitting member, by simple majority vote. Regarding exclusion, Article I, § 5, cl. 2 provides, “Each House may determine the Rules of its Proceedings, punish its Members for disorderly Behaviour, and, with the concurrence of two thirds, expel a member.” Under Article I, § 5, cl. 3, “Each House shall keep a Journal of its Proceedings, and from time to time publish the same, excepting such Parts as may in their Judgment require Secrecy; and the Yeas and Nays of the Members of either House on any question shall, at the Desire of one fifth of those Present, be entered on the Journal.” Under the 27th Amendment, noted at § 20.1.1.3 n.26, pay increases for members of Congress go into effect only after the next regular election.

The right to vote has been the subject of numerous constitutional amendments. Under the 15th Amendment (1870), the right to vote for federal or state offices shall not be denied “on account of race, color, or previous condition of servitude.” Under the 17th Amendment (1913), state legislature election of Senators was abandoned to provide for election of Senators by popular vote, subject to the same voting requirements as for the House of Representatives. Under the 19th Amendment (1920), the right to vote for federal or state offices shall not be denied “on account of sex.” Under the 23rd Amendment (1961), the District of Columbia was granted electoral votes for President as

---

if it were a state. Under the 24th Amendment (1964), the right to vote for federal officials shall not be denied “by reason of failure to pay a poll tax or other tax.” As discussed at § 26.5.3 n.515, in 1966 in Harper v. Virginia State Board of Elections, the Court extended the poll tax ban to state elections under a fundamental right, strict scrutiny analysis. Based in part of the fact that 18-year-olds were being drafted for the Vietnam War, under the 26th Amendment (1971), the right to vote for federal or state offices shall not be denied anyone of 18 years or older “on account of age.”

The only major constitutional issue represented by these provisions concerns the manner in which the Census Enumeration is to be taken under Article I, § 2, cl. 3. As discussed by Professor Thomas R. Lee, in an elaborate treatment of the issue, there is:

an extensive historical record – of both British and American origin – that supports the conclusion that the generation of the Framers understood that an "actual enumeration" would consist of an actual count and would not be based on statistical estimation. Specifically, . . . assessments of population on both sides of the Atlantic routinely contrasted methods of drawing "conjectural estimates" with the more costly approach of conducting an "actual enumeration." Moreover, . . . historical evidence [shows] that the Framers' generation was well aware of the principal "modern" objection to enumeration – that the inherent limitations of such an approach predictably lead to an undercount. Thus, . . . the Framers prescribed a census by "actual enumeration" not out of naiveté or unfamiliarity with methods of estimation, but to minimize the risk of political manipulation in what they knew would always be a politically charged decision – the apportionment of seats in the U.S. House of Representatives.36

Based in part over a concern with whether “sampling” would be constitutional, a 5-4 Court held in Department of Commerce v. United States House of Representatives37 that the current census statute requires an “actual enumeration.” On the other hand, in Utah v. Evans,38 the Court upheld a census practice known as “hot deck imputation,” which infers that the address or unit about which the Census Bureau is uncertain has the same population characteristics as those of its geographically closest neighbor of the same type. The Court held that such an imputation does not involve generalizations from a limited data base, as would “sampling,” but rather reflects a dwelling-by-dwelling approach, using reasonable inferences to arrive at the most accurate count possible.

37 525 U.S. 316, 343-44 (1999); id. at 357 (Stevens, J., dissenting, joined by Souter & Ginsburg, JJ., as to Parts I & II, and Breyer, J., as to Parts II & III).

38 536 U.S. 452, 457-58 (2002); id. at 488-90 (Thomas, J., joined by Kennedy, J., concurring in part and dissenting in part) (“hot deck imputation” authorized by statute, but unconstitutional as being an “estimated” enumeration, not “actual” enumeration); id. at 510-14 (Scalia, J., dissenting) (parties lack standing, because given the posture of the case the issue is not redressable by the courts). On the “census issue” generally, see Robert R. McCoy, Note, A Battle on Two Fronts: A Critique of Recent Supreme Court Jurisprudence Establishing the Intent and Meaning of the Constitution’s Actual Enumeration Clause, 13 Cornell J.L. & Pub. Pol’y 637, 643-59 (2004).
§ 20.1.3 Impeachment Power of Congress

Article II, § 4 of the Constitution provides, “The President, Vice President, and all civil Officers of the United States, shall be removed from Office on Impeachment for, and Conviction of, Treason, Bribery, or other high Crimes and Misdemeanors.” In Article I, § 2, cl. 5, the House of Representatives is granted “the sole Power of Impeachment.” In Article I, § 3, cl. 6, the Senate is granted “the sole Power to try all Impeachments,” with conviction by “two thirds of the Members present.” The Constitution provides in Article I, § 3, cl. 7, “Judgment in Cases of Impeachment shall not extend further than to removal from Office, and disqualifications to hold and enjoy any Office of honor, Trust, or Profit under the United States; but the Party convicted shall nevertheless be liable and subject to Indictment, Trial, Judgment, and Punishment, according to Law.”

The power to impeach has rarely been used in our Nation’s history. From 1789 to 2006, only one Justice out of the 110, Samuel Chase in 1804, had been impeached, and no Justice, including Chase in 1805, and no Court of Appeals judge had ever been convicted. Eleven district court judges have been impeached of out more than 2,000 who have served, and six have been convicted.39 Regarding Presidents, only two of 43 have been impeached, President Andrew Johnson in 1868 and President Bill Clinton in 1998. Neither were convicted by the Senate: Johnson’s impeachment for removing the Secretary of War without Senate approval, noted at § 19.4.3.2 nn.117-18, fell one vote shy of two thirds (35-19); votes on the two articles of impeachment for President Clinton regarding his actions in grand jury testimony denying a sexual relationship with an intern, Monica Lewinsky, growing out of a deposition given in Clinton v. Jones, discussed at § 20.1.4.2.A nn.69-74, were 45-55 (perjury), and 50-50 (obstruction of justice). President Richard Nixon resigned in 1974 before the House impeached him, but after a 27-9 vote of the House Judiciary Committee in favor of impeachment. Because lower federal officials typically are fired by the President or resign where credible evidence appears of an impeachable offense, only one lower federal executive official has ever been impeached, President Grant’s Secretary of War, William W. Belknap, in 1876. Even Belknap resigned once the House committee voted to impeach him. Congress continued the impeachment proceedings to try to impose the additional punishment, discretionary with the Senate, of disqualifying him from holding office again, but the Senate vote to convict (37-25) failed to achieve the required 2/3 majority.40

Two main questions remain open about the relationship between judicial power and actions of Congress regarding impeachment. The first question is whether the phrase "high Crimes and

Misdemeanors” is coextensive with violations of criminal law. The second issue is whether persons convicted and impeached may obtain judicial review on whether the charges were proven as true. It seems likely that answers to both questions are "no."

With regard to the first question, while there are no cases on point, historical evidence suggests that use of the phrase “Misdemeanors” means that some behavior, even if not a “crime,” could be viewed by Congress as worthy of impeachment. On the other hand, not all crimes would necessarily be viewed by Congress as worthy of impeachment. This is particularly true since the remedy of impeachment was likely intended to be focused more on official misconduct, than private moral failings.41 For example, proceedings surrounding the Senate’s refusal to convict President Clinton suggest that for some Senators even if the President had violated criminal law, some violations do not rise to the level of an impeachable offense, and alternatively, even if he had not violated the law, some behavior may be impeachable in any event.42 As an alternative to impeachment, Congress also could “censure” a President, a resolution by either House or both that would have no force of law, although one author has argued the “shame” of a censure is an unconstitutional Bill of Attainder.43

With regard to the second question, the Supreme Court held in *Nixon v. United States*44 that whether the entire Senate had to hear the evidence regarding impeachment, or whether only a committee of the Senate could hear the evidence, was a political question. As discussed at § 17.3.4.5 nn.571-73, the Court indicated that since the text of the Constitution states that the “Senate shall have the sole power to try all Impeachments,” the decisions how to try the impeachment, by Senate committee or the full Senate, was not reviewable by a court. Similarly, the language in the Constitution stating that the “House of Representatives . . . shall have the sole Power of Impeachment” would likely mean courts cannot review the House’s impeachment proceedings either.

§ 20.1.4 Immunities from Suit

§ 20.1.4.1 Congressional Immunities: The Arrest and Speech or Debate Clauses

Article I, § 6, cl.1 of the Constitution provides that “Senators and Representatives . . . shall in all
Cases, except Treason, Felony and Breach of the Peace, be privileged from Arrest during their
Attendance at the Session of their respective Houses, and in going to and returning from the same;
and for any Speech or Debate in either House, they shall not be questioned in any other Place.” The
main issues regarding the Privilege from Arrest and Speech or Debate Clauses concern whether to
give them a literal interpretation, or whether to read them in light of their purposes to support checks
and balances theory. The basic purpose of these clauses is to permit the legislative process to
function without the threat of executive-inspired and judicially-supported investigations.

Not surprisingly, the Court has rejected a formalist, literal interpretation of these clauses, and read
them in light of their evident purposes, an interpretation also supported by history. Regarding the
Arrest Clause, such an interpretation has resulted in a narrower interpretation of the Clause than
would be obtained from a literal interpretation. In 1972, the Court stated in Gravel v. United States:

History reveals, and prior cases so hold, that this part of the Clause exempts Members from
arrest in civil cases only. “When the Constitution was adopted, arrests in civil suits were still
common in America. It is only to such arrests that the provision applies.” “[T]he term treason,
felony, and breach of the peace, as used in the constitutional provision relied upon, excepts from
the operation of the privilege all criminal offenses . . . .” Nor does freedom from arrest confer
immunity on a Member from service of process as a defendant in civil matters, or as a witness
in a criminal case. . . . It is, therefore, sufficiently plain that the constitutional freedom from
arrest does not exempt Members of Congress from the operation of ordinary criminal laws, even
though imprisonment may prevent or interfere with the performance of their duties as Members.
Indeed, implicit in the narrow scope of the privilege of freedom from arrest is, as Jefferson
noted, the judgment that legislators ought not to stand above the law they create but ought
generally to be bound by it as are ordinary persons.45

With regard to the Speech or Debate Clause, the Court has similarly rejected a literal interpretation.
In this case, however, such an interpretation has expanded the scope of the Clause. For example,
while literally the Speech or Debate Clause only applies to “Senators and Representatives,” the
Court noted in Gravel that it also applies to the Senator’s or Representative’s staff, because without
staff the legislative process could not effectively function; further, while the Clause literally applies
only to “Speech or Debate in either House,” the Court has held that it applies equally to other
aspects of the legislative process, such as speech in Committee hearings.46  The Court has never
decided whether this immunity is personal to the individual, or could be waived institutionally by
the Congress, but concern with possible retaliation by one party in control of both houses of
Congress against the other party suggest that right should be personal to the member of Congress.47

This interpretation was adopted by cases during the early part of the natural law era, supported by
Justice Story in his 1833 Commentaries on the Constitution of the United States, and even adopted
by the Court during the formalist era in 1881, reflecting the moderate version of formalism that had

46 Id. at 616-18.

the controlling votes during the formalist era.48 The moderate version is more willing to consider purpose than the literalism of extreme formalism. Thus, when members of Congress act within their legitimate legislative sphere and participate in activities relating to the passage of legislation or other matters within Congress' jurisdiction, the Speech and Debate Clause is an absolute bar to judicial interference via civil or criminal process.49 A similar doctrine confers absolute immunity from liability under 42 U.S.C. § 1983 to state or local legislators, or regional legislators acting pursuant to interstate compacts, for their legislative activities.50

An issue has arisen, however, how broadly to define the activities of the legislative process to which the Speech or Debate Clause applies. Clear examples of legislative activity include authorizing an investigation or issuing a subpoena. On the other hand, does “legislative act” include the act of interviewing sources used to collect information in preparation for committee hearings? Is “informing the public” viewed as a “legislative act” for purposes of this analysis? A majority of the Court held in Gravel v. United States51 that the Speech or Debate Clause cannot be used to prevent questioning regarding sources used to collect information to prepare for a hearing, or to arrange for private publication of documents used at a hearing, in this case The Pentagon Papers relating to the Vietnam War, as those activities are not “legislative acts” under the Speech or Debate Clause. Reflecting the liberal predisposition to favor the legislative branch, three liberal instrumentalist Justices dissented from both of these conclusions. Even Justice Stewart dissented from the conclusion regarding inquiry into sources, noting that the “acquisition of knowledge through a promise of non-disclosure of its sources will often be a necessary concomitant of effective legislative conduct, if members of Congress are properly to perform their constitutional duty.”52

In Hutchinson v. Proxmire,53 the Court held that the Speech and Debate Clause does not immunize a Senator from suit for defamatory statements made in press releases or newsletters, as that kind of activity is also not part of the legislative process. In addition, while the Speech or Debate Clause might protect telephone calls from a member of Congress to an executive agency seeking information, it “does not protect attempts to influence the conduct of executive agencies or libelous comments made during the conversations.”54 Justice Stewart dissented from this part of the majority’s analysis. As he did in Gravel, Justice Brennan dissented from all of the majority’s

51 408 U.S. at 621-26.

54 Id. at 122 n.10.
reasoning, viewing each of Senator Proxmire’s acts as protected as part of his legislative responsibilities, and thus part of “Speech or Debate.”

Based upon the same kind of reasoning as in Gravel and Hutchinson, a member of Congress can be prosecuted for accepting a bribe in exchange for a promise to perform a legislative act in the future, as bribery is not part of the legislative process. Evidence relating to the member’s actual voting record is protected, however, since that involves legislative activities.

In applying the Speech or Debate Clause doctrine, the key question is the nature of the member’s activities, not the member’s motives. The Court does not inquire into a member’s motives, but focuses on whether the acts are part of the legislative process. It is an open question whether the Clause immunizes a congressional employer from suit for gender discrimination brought by a former employee, although after Clinton v. Jones, discussed at § 20.1.4.2.A, where the President was not given immunity in a sexual harassment lawsuit, immunity for members of Congress seems unlikely. Representative Dan Rostenkowski of Illinois contended during the proceedings against him that he was immunized from action for his activities in connection with the House Post Office because they related to his legislative duties, and because the power of the House to make rules, he said, is exclusive with respect to behavior covered by those rules. Since activities related to the House Post Office are not related to passage or enforcement of legislation, however, this argument seems weak.

§ 20.1.4.2 Executive Immunities

A. The President

There is no constitutional text dealing with the issue of presidential immunities from judicial process. Nevertheless, based upon general separation of powers and checks and balances concerns, the Court has developed a doctrine regarding presidential immunities.

Under this doctrine, confidences of the President are entitled to some protection from judicial intervention. When determining the extent of immunity from judicial process, the Court has engaged in standard separation of powers balancing to determine whether the claim of the President

55 Id. at 136 (Stewart, J., dissenting in part); id. at 136 (Brennan, J., dissenting).

58 See generally Fields v. Office of Eddie Bernice Johnson, 459 F.3d 1 (D.C. Cir. 2006) (en banc); Bastien v. Office of Senator Ben Nighthorse Campbell, 390 F.3d 1301, 1304 (10th Cir.2004), cert. denied, 126 S. Ct. 396 (2005) (Speech or Debate Clause bars judicial review of allegedly discriminatory personnel decision only when the plaintiff's claim "question[s] the conduct of official Senate legislative business.").

to be free from interference in order to promote efficient operations within the executive branch outweighs the interests of the judiciary in promoting justice and preventing governmental tyranny.

In *United States v. Nixon*, the President claimed an absolute immunity from a judicial subpoena of documents relating to presidential conversations concerning the Watergate cover-up. In applying a balancing test, an 8-0 Supreme Court drew a distinction between a specific need for confidentiality, as exists for military, diplomatic, or sensitive national security interests, and a general need for confidentiality in other kinds of circumstances. The Court also drew a distinction between a court’s specific need for material evidence which could not be adequately obtained from other sources and a general need for background information. In *Nixon*, the President’s claim of privilege was based on only a general need for confidentiality, not a specific need to protect military, diplomatic, or sensitive national security interests. However, the judicial need was for specific evidence that could not be obtained from another source. In such a circumstance, the Court held the President's interest in confidentiality was outweighed by the judicial need to do justice in criminal prosecutions with respect to turning over specific material to a judge for *in camera* inspection. The Court held that the President's generalized interest in confidentiality must yield to a demonstrated, specific need for evidence in a criminal trial. Justice Rehnquist did not participate because of his service as a deputy attorney general in the Nixon Administration before joining the Court.

Whether the result would have been the same had the balance of needs been different seems questionable. Thus, had the President been able to argue that he had a specific need for confidentiality in the case, or had the case involved a generalized need for confidentiality balanced against a generalized need for information at trial, the result in *Nixon* might have changed. Given only a generalized need by the President, and a special need by the court, the Court said there was not a sufficient risk that presidential advisers would temper their candor by the infrequent chance that presidential conversations would be called for in a criminal trial. Given less important interests at stake, Presidents have never been required to provide evidence in civil trials, although sometimes Presidents have done so voluntarily.

Presidential confidentiality was also limited by the Presidential Recordings and Materials Preservation Act of 1974. That Act directed the Administrator of General Services to take custody of ex-President Nixon's papers and tapes, to have archivists screen them, and to determinate conditions for public access. Nixon challenged the act under separation of powers doctrine, claiming he had an interest in presidential privacy which deserved protection. The Court affirmed a dismissal of Nixon's complaint. For the Court, Justice Brennan conceded in *Nixon v. Administrator of General Services* that the privilege of confidentiality could be claimed by ex-Presidents as well as by incumbent Presidents. However, the materials here remained in the executive branch and there was no reason to believe that the restrictions on public access ultimately to be established by regulations would not be adequate to preserve executive confidentiality. A

---

61 *Id.* at 713.

professional screening process, said the Court, was not a greater intrusion into confidentiality than the in camera inspection approved in United States v. Nixon. Balanced against the President’s claim of executive efficiency was the concern that the papers be preserved for history, particularly papers which might reveal abuses by the Nixon administration that would help keep the Nation on guard against governmental tyranny. Therefore, with respect to screening by archivists, the Act was not invalid on its face.

Presidential authority in the area of executive privilege was enhanced by Cheney v. United States District Court for the District of Columbia.63 In this case, the Court that held Vice President Cheney and other members of an National Energy Policy Development Group were not required to assert executive privilege before separation of powers arguments regarding Presidential confidentiality could be considered. The Court noted that executive privilege is an extraordinary assertion of power "not to be lightly invoked" and that “there is sound precedent in the District of Columbia itself for district courts to explore other avenues, short of forcing the Executive to invoke privilege, when they are asked to enforce against the Executive Branch unnecessarily broad subpoenas.”

On the merits, the Court noted that the balance here regarding the need for information versus the President’s need for confidentiality was different than in Nixon. The Court noted:

[W]hen compared against United States v. Nixon's criminal subpoenas, which did involve the President, the civil discovery here militates against respondents' position. The observation in Nixon that production of confidential information would not disrupt the functioning of the Executive Branch cannot be applied in a mechanistic fashion to civil litigation. In the criminal justice system, there are various constraints, albeit imperfect, to filter out insubstantial legal claims. The decision to prosecute a criminal case, for example, is made by a publicly accountable prosecutor subject to budgetary considerations and under an ethical obligation, not only to win and zealously to advocate for his client but also to serve the cause of justice. The rigors of the penal system are also mitigated by the responsible exercise of prosecutorial discretion. In contrast, there are no analogous checks in the civil discovery process here. Although under Federal Rule of Civil Procedure 11, sanctions are available, and private attorneys also owe an obligation of candor to the judicial tribunal, these safeguards have proved insufficient to discourage the filing of meritless claims against the Executive Branch. "In view of the visibility of" the Offices of the President and the Vice President and "the effect of their actions on countless people," they are "easily identifiable target[s] for suits for civil damages."

Finally, the narrow subpoena orders in United States v. Nixon stand on an altogether different footing from the overly broad discovery requests approved by the District Court in this case. The criminal subpoenas in Nixon were required to satisfy exacting standards of "(1) relevancy; (2) admissibility; (3) specificity." They were "not intended to provide a means of discovery." The burden of showing these standards were met, moreover, fell on the party requesting the information.64

64 Id. at 386-87 (citations omitted).
Numerous commentators have explored the separation of powers issues involved in these cases, whether or not executive privilege is officially invoked, as they arise in both Republican and Democratic Administrations. 65

With respect to damage claims for official presidential acts, even those within the "outer perimeter" of official responsibility, the Court adopted a test of absolutely immunity in *Nixon v. Fitzgerald,*66 rather than a balancing test. For a 5-Justice majority composed of conservative and centrist Justices, who tend to defer more to exercises of presidential authority, Justice Powell said that anything less might subject the President to lawsuits for practically everything done, thus undermining efficient operations of the executive branch, since the President, as the head of the executive branch, is a unique target for lawsuits. Regarding the concern with tyranny, Justice Powell said there remains enough protection against Presidential misconduct because of impeachment, other checks and balances, the power of the press, a desire to earn re-election, the need to maintain prestige, and a President's traditional concern for historical stature. Four functional, liberal Justices – Justices Brennan, White, Marshall, and Blackmun – favored only a qualified immunity in situations where there was no showing that the absence of absolute immunity would substantially impair the President's ability to carry out his constitutional functions.67 This dissent is consistent with the liberal predisposition to defer less to the executive.

The Court reserved the question whether Congress could create a damage action against the President on behalf of wronged individuals. In a concurrence, Chief Justice Burger indicated that he believed the question of whether Congress could create such a damage award was implicitly settled by the majority in the negative, since the decision in *Fitzgerald* was based on constitutional grounds and Congress cannot overrule a constitutional decision by statute. For a formalist judge, like Burger, who places little weight in constitutional decisionmaking on legislative and executive practice, this conclusion would appear warranted. His conclusion is also consistent with the conservative predisposition toward the executive branch in checks and balances cases. However, for non-formalist judges, if there were legislative practice supporting a damage award against the President, that practice would need to be considered in the Court’s constitutional analysis of the doctrine regarding presidential immunities. The natural law preference for deciding cases on narrow grounds, discussed at § 12.2.2.2 nn.65-66, caused Justice Powell to reserve this question in *Fitzgerald.*68

66 457 U.S. 731, 748-63 (1982).

67 Id. at 764-70 (White, J., joined by Brennan, Marshall & Blackmun, JJ., dissenting).

68 Id. at 748 n.27 (Powell, J., opinion); id. at 763 n.7 (Burger, C.J., concurring).
A further issue of presidential immunity involves the question whether the President has an immunity from having to defend, while President, civil damages in litigation arising out of events that occurred before he took office, or events while in office which are not part of his “official” responsibilities. In 1997, the Supreme Court considered *Clinton v. Jones*, a case involving both of these elements. As the alleged activity, sexual harassment, occurred before President Clinton became President, there was no question of ultimate presidential immunity from lawsuit. The only issue was whether President Clinton had immunity while President from being sued, as the lawsuit might distract the President from presidential obligations.

Writing for a unanimous Court, Justice Stevens said that because this action was against the President for non-official conduct, alleged sexual advances, there was no real possibility that the decision in this case might curtail the scope of the executive branch's official powers, nor the same likelihood of the President being a target for lawsuits as in *Fitzgerald*. Based on this language, it seems the critical point of difference between *Jones* and *Fitzgerald* in the *Jones* Court’s view was the official or non-official character of the activities being the subject of the lawsuit, rather than the activities in *Jones* occurring before Clinton became President. Under this interpretation, a sitting President who was alleged to engage in sexual harassment while President could also have this kind of lawsuit brought while serving as President.

Despite this conclusion, language in *Fitzgerald* indicated that it “would deprive absolute immunity of its intended effect” if the President could be subjected to trial on “virtually every allegation that an action was unlawful, or was taken for a forbidden purpose” and thus outside the President’s “official” responsibility. The Court in *Fitzgerald* thus indicated that a case, like *Fitzgerald*, which involved a claim of a retaliatory firing, could not be brought against the President even if there were a possible argument that the President’s decision was not based on official authority to act. A later Supreme Court wishing to limit the *Jones* decision predominantly to cases of activities that occurred before the President took office, the core holding of *Jones* given its facts, could use this language in *Fitzgerald* to limit inquiry into almost all activities of a sitting President, although such an interpretation would seem to be at odds with the general reasoning given in the *Jones* opinion that *Fitzgerald’s* reasoning “provides no support for an immunity for unofficial conduct.”

With respect to potential burdens the litigation might impose on the President, Justice Stevens concluded that “[m]ost frivolous and vexatious litigation is terminated at the pleading stage or on summary judgment, with little if any personal involvement by the defendant.” The accuracy of this statement is somewhat belied by the facts of *Clinton v. Jones*, which was dismissed by the district court on a summary judgment motion, and then settled by the parties while that summary judgment was on appeal to the Eighth Circuit Court of Appeals. Despite this truncated process, defending the case cost President Clinton more than $5 million in legal fees for which he was personally

responsible, since the case did not involve his official actions as President, and thus there was no real argument that the government should pay the cost of the litigation. Justice Stevens did note that burdens on the President are appropriate matters for the district court to evaluate in its management of the case, and underscored the respect owed the presidency that should inform the entire proceeding. Further, Justice Stevens noted that if Congress wished to pass a statute granting immunity from lawsuits to Presidents while in office, there was no apparent constitutional barrier to such a statute. Although the issue has never arisen, the predominant view is that the President cannot be indicted while in office, with a minority of commentators taking the opposing view.

B. Immunity for Lower Federal Officials

During the formalist era, federal officials were granted an absolute immunity from damages for official actions, similar to the immunity later granted to the President in *Nixon v. Fitzgerald*. Drawing upon principles of immunity developed by English courts at common law, the Court concluded in 1896 in *Spalding v. Vilas* that the “interests of the public” required a grant of absolute immunity so that executive officials would not hesitate to take bold action for fear of lawsuits that would “seriously cripple the proper and effective administration of public affairs.” The doctrine did not apply to actions that violated the Constitution, however, since an unconstitutional act could not be one the official was authorized to commit. These decisions reflected the conservative pro-executive mindset of the formalist-era Justices, as well as their preference for clear bright-line rules.

This doctrine of immunity was continued during the Holmesian era, based on the Holmesian posture of deference to government. Indeed, during the first part of the instrumentalist era, a four-Justice Holmesian plurality in 1959 followed *Spalding in Barr v. Matteo* to immunize an agency director from being sued for defamation. Formalist Justice Black concurred with the majority’s result, also citing *Spalding* as authority. Liberal instrumentalists Chief Justice Warren and Justices Douglas and Brennan dissented, foreshadowing the instrumentalist approach toward executive immunity of the 1970s. Holmesian Justice Stewart, while agreeing with the majority’s statement of the correct legal test, disagreed that the agency director was acting within the scope of his official responsibilities when he issued the press release on which the claim of defamation was based.

77 360 U.S. 564, 571-75 (1959) (plurality opinion of Harlan, J., joined by Frankfurter, Clark & Whittaker, JJ.); *id.* at 576 (Black, J., concurring).

78 *Id.* at 578 (Warren, C.J., joined by Douglas, J., dissenting); *id.* at 586 (Brennan, J., dissenting); *id.* at 586 (Stewart, J., dissenting).
During the 1970s, an instrumentalist-inspired majority in 1974 and 1978 rejected the categorical approach of *Spalding*, and instead adopted a functional test that grants to federal officials other than the President only a qualified immunity, except where it is shown that their functions are so sensitive as to require absolute immunity.79 As applied in 1978 in *Butz v. Economou*,80 the Court determines whether a function is so sensitive under the so-called “special functions” exception by weighing the factors of the historical or common-law basis for the immunity, asking whether the task is sufficiently analogous to judicial or quasi-judicial activity for which absolute immunity is granted, and whether other checks exist on official misconduct. Under *Butz*, if absolute immunity does not attach, there is only a qualified immunity from being sued for damages, which applies unless the official’s conduct was objectively unreasonable in light of clearly established statutory and constitutional law at the time the act was performed.81 Four Justices dissented in *Butz* and suggested adherence to *Spalding*: conservative Chief Justice Burger, and Justices Rehnquist and Stewart, reflecting conservative deference to the executive, noted at § 6.2.2.4, and moderate instrumentalist Justice Stevens, who also voted with the majority in *Fitzgerald* to give the President absolute immunity there, discussed at § 20.1.4.2.A nn.66-68.82 In applying the *Butz* test, conservative judges tend to favor a finding in close cases that the conduct was objectively reasonable or that the law was not clearly established, thus granting immunity to the executive official. Liberal judges tend to make the opposite findings, thus being more willing to impose liability.83

In applying the *Butz* test, the Court has had to decide whether “objective reasonableness” should be determined, as its plain meaning suggests, only by looking to objective evidence of whether a reasonable person would have known the actions violated statutory or constitutional requirements, or whether subjective evidence of the party’s actual mental state can be used to show that the party understood the actions violated statutory or constitutional law. In 1982, the Court acknowledged in *Harlow v. Fitzgerald*84 that prior Court opinions had stated that the test has both an “objective” and “subjective” component. However, because resolving evidence concerning the party’s mental state would often preclude the ability to decide the immunity issue at a summary judgment stage, and this would subject the executive branch to greater costs in defending such litigation, the Court held in *Harlow* that the test is a pure objective one concerning what “a reasonable person would have known” and that “allegations of malice” are not relevant to the qualified immunity analysis.

---

80 *Butz*, 438 U.S. at 508-17.

81 *Id.* at 506-08.

82 *Id.* at 517 (Rehnquist, J., joined by Burger, C.J., and Stewart & Stevens, JJ., dissenting).

In 2002, in *Hope v. Pelzer*, the Court phrased the *Harlow* test as whether the individual was objectively put on “fair notice” that the conduct was unlawful, rejecting any requirement that prior cases had established “fundamentally similar” or “materially similar” facts were unlawful. The Court noted, “[O]fficials can still be on notice that their conduct violates established law even in novel factual circumstances.” Reflecting the conservative predisposition to grant executive immunity, Chief Justice Rehnquist, and Justices Scalia and Thomas, dissented in *Hope* on the grounds that the executive officials could not reasonably have known their behavior of handcuffing an inmate to a hitching post for 7 hours as punishment for disruptive behavior, being shirtless all day while the sun burned his skin, given water only once or twice and no bathroom breaks, was a violation of his 8th Amendment rights to not endure cruel and unusual punishment.

Reflecting the liberal predisposition in favor of protecting individual civil rights, and less concern with executive immunities, a 3-Justice instrumentalist concurrence in *Harlow* noted that in their view even under *Harlow* “the official who actually knows that he was violating the law” will not escape liability “even if he could not ‘reasonably have been expected’ to know what he actually did know. Thus, the clever and unusually well-informed violator of constitutional rights will not evade just punishment for his crimes.” Whether this reading of *Harlow* is accurate or not has been left unresolved, as the unusual fact pattern of such a “clever and unusually well-informed violator” has not been presented to courts for review. It is clear, however, that if the law the official is alleged to have violated requires evidence of intent or purpose to trigger a violation of the law, evidence of mental intent is relevant to making the finding that a statutory or constitutional violation has occurred, that finding being a necessary predicate, of course, for the issue of a qualified immunity defense to such a violation to be relevant.

Regarding circumstances where absolute immunity might be appropriate under the “special functions” exception, prosecutors have been granted absolute immunity for actions taken in the course of the prosecutorial role, as have other executive officials with adjudicatory roles. However, this does not extend to immunity for criminal acts, like bribery, since those are not part of the prosecutorial role. Similarly, judges have been granted absolute immunity for actions taken in their official role, but can also be tried for bribery, which is not part of the judicial role.

In a case with important implications after 9-11, the Court held in 1985 in *Mitchell v. Forsyth* that the Attorney General does not have absolute immunity in authorizing a warrantless wiretap on grounds of national security. The Court stated:

---

85 536 U.S. 730, 741 (2002); id. at 752-58 (Thomas, J., joined by Rehnquist, C.J., and Scalia, J., dissenting).

86 Id. at 821 (Brennan, J., joined by Marshall & Blackmun, JJ., concurring).

88 See generally *Harlow*, 457 U.S. at 807; *Bust*, 438 U.S. at 510-11.
First, in deciding whether officials performing a particular function are entitled to absolute immunity, we have generally looked for a historical or common-law basis for the immunity in question. The legislative immunity . . . was rooted in the long struggle in both England and America for legislative independence, a presupposition of our scheme of representative government. The immunities for judges, prosecutors, and witnesses established by our cases have firm roots in the common law. Mitchell points to no analogous historical or common-law basis for an absolute immunity for officers carrying out tasks essential to national security.

Second, the performance of national security functions does not subject an official to the same obvious risks of entanglement in vexatious litigation as does the carrying out of the judicial or "quasi-judicial" tasks that have been the primary wellsprings of absolute immunities. The judicial process is an arena of open conflict, and in virtually every case there is, if not always a winner, at least one loser. It is inevitable that many of those who lose will pin the blame on judges, prosecutors, or witnesses and will bring suit against them in an effort to relitigate the underlying conflict. National security tasks, by contrast, are carried out in secret; open conflict and overt winners and losers are rare. Under such circumstances, it is far more likely that actual abuses will go uncovered than that fancied abuses will give rise to unfounded and burdensome litigation. Whereas the mere threat of litigation may significantly affect the fearless and independent performance of duty by actors in the judicial process, it is unlikely to have a similar effect on the Attorney General's performance of his national security tasks.

Third, most of the officials who are entitled to absolute immunity from liability for damages are subject to other checks that help to prevent abuses of authority from going unredressed. Legislators are accountable to their constituents, and the judicial process is largely self-correcting: procedural rules, appeals, and the possibility of collateral challenges obviate the need for damages actions to prevent unjust results. Similar built-in restraints on the Attorney General's activities in the name of national security, however, do not exist . . . . The danger that high federal officials will disregard constitutional rights in their zeal to protect the national security is sufficiently real to counsel against affording such officials an absolute immunity.89

Thus, only a qualified immunity protected the Attorney General, and it would not apply if there was a violation of clearly established statutory or constitutional rights. In Mitchell, the Attorney General was held not liable because the law was unclear when the action was taken.

In deciding these cases, the Supreme Court has created a two-step analysis. As stated in Brosseau v. Haugen,90 the court must first ask if “[t]aken in the light most favorable to the party asserting the injury, do the facts alleged show the officer’s conduct violated a constitutional right?” If a violation is shown, the court must then consider whether a reasonable person in the circumstances would have known that a clearly established constitutional right has been violated. The Court noted in Brosseau, “Qualified immunity shields an officer from suit when she makes a decision that, even if

---

constitutionally deficient, reasonably misapprehends the law governing the circumstance she confronted. . . . Because the focus is on whether the officer had fair notice that her conduct was unlawful, reasonableness is judged against the backdrop of the law at the time of the conduct. If the law at that time did not clearly establish that the officer’s conduct would violate the Constitution, the officer should not be subjected to liability or, indeed, even the burden of litigation.”

This two-step approach has been criticized by lower court judges and commentators as requiring courts to make an “unnecessary” initial decision, sometimes difficult, on whether a constitutional right was violated, even if it is clear, under the second part of the test, the court would grant immunity anyway because any violation, even if it exists, was not clearly established at the time of the violation.91 The Supreme Court’s approach does have the advantage, however, of helping to clarify constitutional doctrine for purposes of executive action in the future. It is thus consistent with a natural law concern for reasoned and predictable elaboration of the law.

Under the Harlow test, whether (1) the law was clearly established and (2) whether an objectively reasonable official should have known the behavior was unlawful, are questions of law for the court, not fact questions for a jury, and decisions regarding immunity are immediately appealable, so the government does not have to endure the costs of a trial before an adverse decision on immunity can be appealed.92 This qualified immunity for lower federal officials also applies to state officials, such as when such officials are sued for constitutional violations under 42 U.S.C. § 1983.93

As a special branch of executive immunity doctrine, in Feres v. United States94 the Court stripped service members of their ability to sue for injuries caused by gross negligence or even intentional torts. This immunity gives the military discretion over the levels of risk and precautions that are appropriate for service members. While this immunity was not the product of clear legislative intent in the Federal Tort Claims Act (FTCA), but rather a determination by the Court that such immunity was needed to maintain an effective military, Congress has acquiesced in this reading of the FTCA.

§ 20.1.4.3 Judicial Immunity and Congressional Interference with the Courts

Both federal and state court judges are immune from federal lawsuits, even if bad faith or malice is alleged, except for actions not taken in the judge's official capacity or actions taken in the complete

absence of all jurisdiction. For example, in *Mireles v. Waco*, the Court held there was no action under § 1983 even if the state court judge ordered police officers, in a criminal proceeding, to "forcibly and with excessive force seize and bring plaintiff into his courtroom." The Court reasoned that the judge's action was taken in aid of his jurisdiction over a matter before him. State supreme courts provide similar judicial immunity for state court judges when rendering decisions on state law.

Another aspect of judicial immunity is the immunity that judges have, pursuant to *Marbury v. Madison*, to be the authoritative interpreters of the Constitution, discussed at § 17.1.2.1. Thus, attempts by Congress to overrule judicial decisions on the meaning of the Constitution are void. For example, in *City of Boerne v. Flores*, discussed at § 28.3 n.47-51, the Court struck down the Religious Freedom Restoration Act. That Act purported to overrule *Employment Division v. Smith*, by requiring the Court to apply strict scrutiny in cases involving a state law that substantially burdens a person's free exercise of religion, rather than the rational basis scrutiny applied in *Smith* to a law of general applicability, which affected religious exercise only incidentally, and not in conjunction with other constitutional protections, such as freedom of speech. Justice Kennedy wrote that Congress cannot "define its own powers" by "altering" the Constitution as interpreted by the Court.

A third kind of protection that Article III federal judges have involves the life-tenure and salary protections of Article III. Under Article III, § 1, “the Judges, both of the supreme and inferior Courts, shall hold their Offices during good Behavior, and shall, at stated Times, receive for their Services, a Compensation, which shall not be diminished during their Continuance in Office.” Regarding the “no diminution in salary” provision, the Court held in *United States v. Will* that Congress could repeal a cost-of-living increase for judicial salaries that had not yet taken effect. This suggests that Congress does not have to account for the devaluation effects of inflation upon judicial compensation, at least in normal circumstances. In a time of hyperinflation, the Court might read the Clause in light of its purpose to provide a reasonable, non-punitive salary be paid. While proposals have occasionally been made to limit these constitutional protections, as discussed at § 17.1.4 nn.63-64, no serious momentum exists for any constitutional amendment along these lines. As noted at § 17.1.4 n.65, the life-tenure provision is relatively unique among countries in the world, with most European constitutional courts limiting appointment from 6-12 years.

Another congressional interference with the judicial process occurs where the legislature engages in the judicial function of defining individual punishment in violation of the Constitution’s Bill of Attainder Clause. That Clause is discussed at § 23.2.2.1.

§ 20.1.4.4 Sovereign Immunity of the United States from Suit

In a suit against the United States, a plaintiff must state not only a basis for the court's jurisdiction,
discussed at § 17.2; establish that the case is justiciable under the doctrines of standing, ripeness, mootness, and political questions, discussed at § 17.3; and indicate a valid cause of action, discussed at § 17.4, but also must demonstrate a waiver of the federal government's sovereign immunity. Absent such a waiver, the court lacks subject matter jurisdiction. Professor Kovacs has written:

[The Supreme Court has stated that] “waiver[s] of the Federal Government's sovereign immunity must be unequivocally expressed in statutory text”; they may not be implied or inferred. "Waivers of immunity must be construed strictly in favor of the sovereign, and not enlarge[d] . . . beyond what the language requires." [As with state sovereign immunity, noted at § 17.2.4.2 n. 210, because] any waiver must appear clearly in the statutory text, legislative history cannot be used to clarify an ambiguity.

While many federal statutes waive the government's immunity from suit, several are notable. The Tucker Act of 1887, one of the first broad waivers of the United States' sovereign immunity, authorizes suits seeking damages against the United States based on the Constitution, statutes, regulations, or contracts. The Federal Tort Claims Act of 1946 (FTCA) waives the United States' sovereign immunity from certain tort claims arising from the conduct of federal employees. The Quiet Title Act of 1972 (QTA) waives the government's immunity from "civil actions to adjudicate title disputes involving real property in which the United States claims an interest." The most notable of the many statutes that waive the United States' sovereign immunity, however, is the Administrative Procedure Act (APA). When Congress eliminated the amount in controversy requirement from suits against federal agencies and officers in 1976, it also added a waiver of sovereign immunity to § 702 of the APA. The APA now provides both a cause of action and a waiver of sovereign immunity in suits against federal agencies seeking relief other than money damages.98

In addition, as Professor Kovacs noted, the plaintiff must identify a cause of action – a "source of substantive law . . . [that] provides an avenue for relief."99 Also, the court must have subject matter jurisdiction, which is usually supplied by 28 U.S.C. § 1331, dealing with jurisdiction for federal questions.

Before 1976, § 1331 extended jurisdiction only to cases in which the amount in controversy exceeded $10,000. That created a problem for judicial review of administrative action where the right asserted could not be easily valued in dollars and cents. Thus, in 1976, Congress eliminated that monetary requirement in cases against the United States, federal agencies, and federal officials sued in their official capacities.100 As noted at § 17.2.2.1.B n.111, Congress eliminated a monetary requirement in all federal question cases in 1980.

100 Kovacs, supra note 98, at 83.
While Congress has enacted many statutory waivers of sovereign immunity, those waivers have holes through which a plaintiff might fall. The doctrine of “nonstatutory review” fills those gaps by allowing suits against officers of the United States for injunctive relief in the absence of a statutory waiver of sovereign immunity. For example, during the formalist era, the Court held in Noble v. Union River Logging Railroad Co.\textsuperscript{101} that a federal official may be enjoined where he has acted "ultra vires, and beyond the scope of his authority." In addition, "[i]f he has no power at all to do the act complained of, he is as much subject to an injunction as he would be to a mandamus if he refused to do an act which the law plainly required him to do." This doctrine was based on a traditional common law tort action against a federal officer.

Similar to the replacement of the common law “cause of action” requirement with a more separation-of-powers based “distinct injury” requirement in standing doctrine, discussed at § 17.3.1.2.C, the Holmesian era brought a change in terminology here also. The common law tort theory fell away and was replaced by the theory that a federal officer acting unlawfully is not acting on behalf of the sovereign and thus not protected by sovereign immunity. In Larson v. Domestic & Foreign Commerce Corp.,\textsuperscript{102} the Court explained that actions of a government officer that are ultra vires or unconstitutional "are considered individual and not sovereign actions," and hence, may be restrained.

Since the inclusion of a broad waiver of sovereign immunity in the APA in 1976, nonstatutory review has fallen into disuse, because it is rarely needed. But it still can apply. For example, in Chamber of Commerce of the United States v. Reich,\textsuperscript{103} the plaintiffs, advancing statutory and constitutional claims, challenged an executive order that authorized the Secretary of Labor to disqualify certain employers from federal contracts. Once the court concluded that the APA was not available because the complaint challenged presidential action, the District of Columbia Circuit Court of Appeals held that the plaintiffs did not need to cite a statutory cause of action because under Larson, "there is no sovereign immunity to waive – it never attached in the first place."

Given the importance of the “dual theory of sovereignty” in a modern natural law analysis, as noted at § 18.4.5 nn.236-38, regarding the Tenth Amendment, and at § 20.2.3, regarding federal immunities from state regulation, and the importance of sovereign immunity notions generally in terms of the current 11\textsuperscript{th} Amendment analysis, discussed at §§ 17.2.4.2-17.2.4.3, it can be predicted that the Supreme Court will limit the “nonstatutory review” doctrine today. Despite the wishes of those commentators who favor limited sovereign immunity, and a more expansive doctrine of nonstatutory review, the Court will likely ground any waivers of federal sovereign immunity in congressional action, as the Court did in Sosa v. Alvarez-Machain.\textsuperscript{104}

§ 20.2 Federalism Checks and Balances: Intergovernmental Immunities

§ 20.2.1 Federal Immunity from State Taxation

Reflecting the dual theory of sovereignty, it has been clear since *McCulloch v. Maryland*,\(^{105}\) decided in 1819, that states may not directly tax the federal government or any of its instrumentalities. The Court has said in a number of cases that activities of the United States remain free from state taxation or regulation unless Congress consents by declaring that its instrumentalities or property are subject to state regulation.\(^{106}\) For many decades the Court expanded *McCulloch* by holding that states could not tax income from working for or contracting with the United States because that might increase the cost of federal functions.\(^{107}\)

In 1939, however, the Holmesian Court abandoned in *Graves v. New York*\(^{108}\) the long-held theory that a tax on income was a tax on its source and, deferring to legislative judgments, held that states could tax the income of federal employees. The Court said that states could tax subjects that fell within the general application of non-discriminatory laws where no direct burden is laid on a federal instrumentality and there is only a remote influence on the exercise of government functions. Thus, states can now tax private parties with whom the United States does business unless the private party cannot realistically be viewed as a separate entity insofar as the activity being taxed is concerned.\(^{109}\) However, the Court has invalidated as discriminatory a state tax on retirement income which exempted retirement benefits paid by the state and its political subdivisions. Adopting a functional approach, the Court said this favored retired state and local employees over retired federal employees and, thus, discriminated against persons who had dealt with the federal government.\(^{110}\)

---

\(^{105}\) 17 U.S. (4 Wheat.) 316 (1819) (state attempted to tax a branch of the Second National Bank).

\(^{106}\) Van Brocklin v. Anderson, 117 U.S. 151 (1886) (Congress may permit taxation of federal property or authorize payments in lieu of taxation); Leslie Miller, Inc. v. Arkansas, 352 U.S. 187 (1956) (states may not bar unlicensed contractors from dealing with the federal government where federal law has its own criteria for identifying the lowest responsible bidder); Hancock v. Train, 426 U.S. 167 (1976) (no consent that state air pollution laws could apply to United States facilities).

\(^{109}\) United States v. New Mexico, 455 U.S. 720 (1982) (upholding a state tax on gross income that a private contractor, a manager of government property, received from the federal government, even though title for goods purchased passed directly from the vendor to the federal government).

The related issue of a state’s ability to tax individuals in ways that might burden interstate commerce is discussed as part of the dormant commerce clause analysis at § 20.3.2.4.A.

§ 20.2.2 State Immunity from Federal Taxation

During the formalist era, the Court held in Pollack v. Farmer’s Loan\textsuperscript{111} that any interest earned on a state bond was immune from federal taxation because it was a direct tax on the state and, thus, in violation of the 10\textsuperscript{th} Amendment. Similarly, the Court had earlier held that the United States could not tax the income of a state employee on income earned from the state.\textsuperscript{112}

In 1939, however, deferring once again to legislative judgments and adopting a functional approach, the Court held in Graves v. New York\textsuperscript{113} that the theory was no longer tenable that a tax on income is legally a tax on its source. After Graves, the Court gradually overruled the cases which immunized from federal taxation all income earned by dealings with a state. Today, Congress can tax state activities that earn revenue if it also lays a tax on similar private activities.\textsuperscript{114}

In 1988, in South Carolina v. Baker,\textsuperscript{115} the Court overruled the doctrine of Pollack that state bond interest is immune from a nondiscriminatory federal tax. Justice O’Connor, dissenting in South Carolina v. Baker, said that the Court had failed to enforce the constitutional safeguards of state autonomy and self-sufficiency that are found in the 10\textsuperscript{th} Amendment and the Guarantee Clause, as well as in the principles of federalism implicit in the Constitution.\textsuperscript{116} In reply, Justice Brennan pointed out that the state had not alleged that it was deprived of any right to participate in the political process or that it was singled out in a way that left it politically isolated and powerless.\textsuperscript{117} Three concurring opinions left open the possibility that there could be some federalism restriction on a federal tax scheme which undercut the ability of state or local governments to raise revenue.\textsuperscript{118}

\end{enumerate}
§ 20.2.3  Federal Immunity from State Regulation

Since *McCulloch v. Maryland*,\(^{119}\) decided in 1819, it has been clear that federal instrumentalities are immune from state control in the performance of their duties. For example, in 1956, in *Leslie Miller, Inc. v. Arkansas*,\(^ {120}\) the Court held that a state could not require a contractor to secure a state license before bidding on a federal job where the United States had its own specifications as to who was a responsible bidder. In *Hancock v. Train*,\(^ {121}\) decided in 1976, the Court held that states cannot require federal instrumentalities to comply with state laws regarding air contamination. The Court noted that Congress can authorize state regulation of federal activities, but there must be a clear and unambiguous declaration by Congress. In this case, reflecting their more conservative Holmesian posture of deference to states, only Justices Stewart and Rehnquist concluded that congressional intent to permit state enforcement of emissions regulations through a permit system was sufficiently clear to uphold the state regulatory scheme as applied to federal installations.\(^ {122}\)

In 1995, the Court struck down in *U.S. Term Limits v. Thornton*\(^ {123}\) state laws fixing term limits for members of Congress, whether done directly or by ballot-access procedures. Writing for the Court, Justice Stevens said the Constitution intended that neither Congress nor the states should possess the power to alter the exclusive qualifications set forth in constitutional text. This holding is consistent with the verbal maxim of *expressio unius est exclusio alterius* (expression of one thing excludes others), discussed at § 5.2.2.1.A n.34; the Court’s holding in *Marbury v. Madison* that Congress could not add to the Court’s original jurisdiction, discussed at § 17.2.2.1 n.101; and the Court’s holding in *Powell v. McCormack* that Congress cannot add to the qualifications of members for Congress, discussed at § 17.3.4.4 n.556. Justice Kennedy also noted, “Nothing in the Constitution or Federalist Papers . . . supports the idea of state interference with the most basic relation between the National Government and its citizens, the selection of legislative representatives.”\(^ {124}\)

Four Justices in dissent concluded that the Constitution’s qualifications for office were merely minimum requirements. For the dissent, the principle of states’ rights ratified in the 10\(^ {th} \) Amendment meant that because the Constitution does not expressly prohibit the states from enacting term limits, it raises no bar to such action.\(^ {125}\) The dissent was composed of the most conservative Justices on the Court, Chief Justice Rehnquist and Justices Scalia and Thomas, reflecting the conservative

\(^ {122}\) Id. at 199 (Stewart, J., joined by Rehnquist, J., dissenting).

\(^ {124}\) Id. at 842 (Kennedy J., concurring).

\(^ {125}\) Id. at 845 (Thomas, J., joined by Rehnquist, C.J., and O'Connor & Scalia, JJ., dissenting).
predisposition to defer to states, noted at § 6.2.2.3, as well as Justice O’Connor, who often also strongly supported states’ rights, as noted at § 12.4.2 nn.181-83.

§ 20.2.4 State Immunity from Federal Regulation

States have immunity from federal regulation in areas where the federal government does not have power to act. For example, modern limitations on federal power to act under the Commerce Clause are discussed at § 18.2.5. Minimal limitations under the other provisions of Article I, § 8 are discussed at §§ 18.3.1-18.3.10. Even where the federal government does have power to act, the 10th Amendment provides some state immunity from federal regulations which “commandeer” state legislative, executive, or administrative systems. This 10th Amendment limitation is discussed at § 18.4.5. Additional limitations on federal power are noted at § 18.5. Limitations on federal power because of the 21st Amendment, which repealed Prohibition, are discussed at § 20.4.

§ 20 Federalism Checks and Balances: Federal Power Trumps States

§ 20.3.1 The Supremacy Clause and the Preemption of State Law

§ 20.3.1.1 Historical Overview of Preemption Doctrine

If Congress enacts a law that is constitutional, all conflicting state law is invalid because of the Supremacy Clause. Article VI, § 2 provides: “This Constitution, and the Laws of the United States which shall be made in Pursuance thereof; and all Treaties made, or which shall be made, under the Authority of the United States, shall be the supreme Law of the Land.” When a state law conflicts with federal law, state law is said to be preempted by the federal law. Preemption is thus a statutory issue of congressional intent, not strictly speaking a constitutional doctrine.

In fact, Congress often does not consider the effects that its statutes may have on state law. It simply enacts legislation to achieve specific objectives. The Court is thus left to deal with situations in which state law may interfere with congressional purposes. This approach leaves room for judicial perspectives and judicial attitudes on specific subjects to influence decisionmaking. In every case, however, since the doctrine is based on statutory interpretation, if Congress wishes a different result, only a statutory amendment is required to clarify what is Congress’ preemptive intent.

During the original natural law era, between 1789-1873, the Court was not faced with many cases raising preemption issues, as the limited amount of federal regulation regarding domestic matters, discussed at § 14.2.1, meant that few areas of conflict arose. When such conflicts arose, the Court did not create any preemption nuances. Instead, as in Gibbons v. Ogden in 1824, the Court simply noted that if there is a collision between federal and state law, the state law must yield.

127 22 U.S. (9 Wheat.) 1, 210-11 (1824).
During the first part of the formalist era, 1873-1937, when Congress continued to do little to regulate commerce, the Court addressed few cases of federal preemption. Later, as the need for federal economic regulation became more evident and Congress gradually became more active, the Court tended to adopt a formalist, bright-line rule that if Congress regulated in an area, Congress should be taken to have occupied the field. Thus, congressional action would preempt all state laws in the area, even though there may have been no federal rule on the specific particular matter in question.  

The Holmesian Court, from 1937-1954, rejected this simple categorical approach to preemption doctrine, and instead adopted a more functional, weighing of factors analysis giving respect to both federal and state governmental entities. Thus, the Holmesian-era Court held in 1947 in *Rice v. Santa Fe Elevator Corp.* that if the states had traditionally occupied an area, the Court would assume that state law was not preempted by federal law unless Congress clearly so intended, as where the federal scheme was so pervasive as to leave no room for supplementation, the federal interest was dominant, or state policy produced results inconsistent with federal objectives.

The instrumentalist Court, from 1954-1986, continued this functional analysis, but added a policy component focused on the state’s purposes. If a state's purpose in regulating had protectionist overtones, the Court would more likely find preemption. For example, in *Campbell v. Hussey*, the Court held that provisions of the Georgia Tobacco Identification Act were preempted by the Federal Tobacco Inspection Act. The Georgia law required that tobacco of a certain type, grown principally in Georgia, be marked with a white identification tag when received in warehouses for sale, which had the result of enhancing the price of Georgia tobacco. The federal law merely required a label truthfully showing the tobacco's official federal type. Justice Douglas' opinion for the Court said that Congress had preempted the field so that all related state regulations were invalid. Dissenting Holmesians Frankfurter and Harlan joined in an opinion by formalist Justice Black which objected that there was no indication of congressional intent to preempt complementary state regulation.

On the other hand, where the state’s purpose did not appear to be protectionist in nature, and merely imposed higher standards on business, the liberal predisposition in favor of government regulation more often led to a finding of no federal preemption. For example, in *Florida Lime and Avocado Growers, Inc. v. Paul*, a majority said that California requirements on certifying avocados were not preempted by federal regulations requiring avocados to be certified as mature. For the majority, Justice Brennan said the federal law concerned minimum standards, not uniform standards. Here there was no clear congressional intent to exclude state regulation. Justice White, dissenting, with Justices Douglas, Black and Clark, concluded instead that there was no state health interest, and that

129 331 U.S. 218, 229-31 (1947).

130 368 U.S. 297, 300-02 (1961); id. at 302-13 (Black, J., joined by Frankfurter & Harlan, JJ., dissenting).

131 373 U.S. 132, 143-46 (1963); id. at 165-74 (White, J., joined by Douglas, Black & Clark, JJ., dissenting).
the California law was only to protect the good will of the avocado industry, a more protectionist motive. With that perception, the dissent viewed the state statute as preempted by federal law.

The approach of both the majority and dissent in Florida Lime favoring non-protectionist state laws is supported by the doctrine that the burden of proof is on persons who challenge a state law to prove it has been preempted. In Ray v. Atlantic Richfield Co., in an opinion by Justice White, the Court said that state police power laws are not superseded by federal law unless the Court can find a clear and manifest congressional purpose. That purpose may be evidenced by express words. It may also be implied from the pervasiveness of a federal regulatory scheme, the dominance of federal interest in a field, or the object sought and the character of the obligations imposed by federal law. However, even if Congress has not foreclosed state legislation in an area, state law is void if it conflicts with federal law. A conflict exists when compliance with both sets of regulations is impossible or the state law stands as an obstacle to accomplishing the purposes of Congress.

In Ray, the state of Washington first required that enrolled and registered oil tankers of at least 50,000 dead weight tons take on a pilot licensed by Washington. The Court unanimously agreed that this conflicted with a federal law which gave to the Coast Guard an exclusive authority regarding pilots on enrolled vessels. State pilot law, however, could apply to registered vessels for which there were no federal rules. Washington state next required that enrolled and registered tankers have certain safety features. The majority held that Congress intended uniform national standards on vessel safety and the marine environment. However, states can impose laws having other purposes, such as smoke abatement. Third, the majority agreed that Washington could require tug escorts for vessels over 40,000 DWT to protect its local environment. This was not the type of regulation that called for a uniform national rule. According to the record, it did not impede the free flow of commerce. Finally, Washington sought to exclude all vessels in excess of 125,000 DWT from Puget Sound. Justice White said that federal law, by allowing states to impose higher standards for "structures," implies that states shall not impose higher standards for "vessels." The federal law on vessel safety standards calls for factors to be considered by a single decisionmaker. The failure of federal law to ban all big tankers is like a regulation that they shall not be banned.

Justices Stevens and Powell dissented from the Court’s third conclusion. They said that requiring tug escorts on these vessels and not on others is invalid because of the need for uniform standards and the cost implications on interstate commerce. Regarding the fourth issue, Justice Marshall, joined by Justices Brennan and Rehnquist, dissented. They said that the federal law merely authorized federal regulations. None exist as to vessel size. State law should be displaced only to the extent needed to protect federal goals and, whenever possible, state and federal law should be reconciled. The tanker limit here, not shown to be irrational or a substantial burden on interstate commerce, does not violate the Commerce Clause. Justice Rehnquist probably was deferring to state decisionmaking; Justices Brennan and Marshall probably were concerned about the environment.

§ 20.3.1.2  Modern Preemption Doctrine

Since 1986, the Court has continued to use the Ray test for preemption, combined with the Rice presumption of no federal preemption in areas states have traditionally regulated. In applying these tests, however, the Justices do not always agree on: (1) when Congress has expressed an intent to preempt; or (2) whether the Court should find that the state law sufficiently obstructs federal law to be impliedly preempted. Under Ray, there are two types of implied preemption: (a) field preemption, which occurs where the scheme of federal regulation is so pervasive as to make reasonable an inference that Congress left no room for state supplementation; and (b) conflict preemption, which occurs either where (i) compliance with both state and federal regulations is physically impossible, an easy case for preemption,\(^{135}\) or (ii) where state law stands as an obstacle to accomplishing Congress' purposes.

Odd combinations of Justices sometimes occur in preemption cases because there are several cross-currents. The first involves differing views on how to determine congressional intent, particularly the extent to which legislative history can be used, discussed at § 6.2.3.1 nn.72-90. Second, there is a cross-current caused by the conservative predisposition to defer to states, but also to be skeptical of state business regulations. Third is the cross-current caused by the liberal predisposition to defer to the federal government, but also to be supportive of state business regulation.

The 1992 case of Cipollone v. Liggett Group, Inc.\(^ {136}\) involved an example of express preemption. There, the Court dealt with Section 5(b) of the Federal Cigarette Labeling and Advertising Act. It provided that "no requirement or prohibition based on smoking and health shall be imposed under State law with respect to the advertising or promotion of" lawfully labeled cigarettes. The Court held that this preempted state common law claims based on a failure to warn, to the extent the claims were based on showing that post-enactment ads should have included better warnings. Also preempted were fraudulent misrepresentation claims that manufacturers neutralized federally mandated warnings by other statements. However, the federal law was held not to preempt claims based on breach of express warranty, on fraudulent misrepresentation by way of false statements and concealment of material facts in ads, promotions, or other channels of communication, and on conspiracy to misrepresent or conceal material facts concerning health hazards of smoking. The Court explained that Congress had here considered the issue of preemption and, therefore, the Court need only identify the domain expressly preempted by the Act. The central inquiry based on Congress' language in the statute was to ask whether the legal duty that is the predicate of each of

\(^{135}\) See Florida Lime and Avocado Growers, Inc. v. Paul, 373 U.S. 132, 142-43 (1963) ("A holding of federal exclusion of state law is inescapable and requires no inquiry into congressional design where compliance with both federal and state regulations is a physical impossibility for one engaged in interstate commerce, cf. Union Bridge Co. v. United States, 204 U.S. 364, 399-401 (1907); Morgan v. Virginia, 328 U.S. 373 (1946); Bibb v. Navajo Freight Lines, Inc., 359 U.S. 520 (1959). That would be the situation [in Florida Lime, discussed supra note 131] if, for example, the federal orders forbade the picking and marketing of any avocado testing more than 7% oil, while the California test excluded from the State any avocado measuring less than 8% oil content.").

the possible common law damage actions constitutes a "requirement or prohibition based on smoking and health imposed under State law with respect to advertising or promotion."

As to breach of express warranty, a common law remedy for a contractual commitment voluntarily undertaken should not be regarded as a "requirement imposed under State law," within the meaning of 5(b). Claims relating to false representations are not predicated on a duty based on smoking and health, but rather on a more general obligation – the duty not to deceive. Justice Blackmun's dissent, joined by Justices Kennedy and Souter, but not by Justices Stevens or O'Connor, agreed that preemption of state common law claims should not be found in the absence of clear and unambiguous evidence that Congress intended that result, but found no intent to preempt state common-law damages actions in the language of the federal law. Such actions, Blackmun said, did not impose a "requirement or prohibition." In contrast, reflecting the conservative predisposition to protect business from regulation, Justices Scalia and Thomas would have found all the state law claims were preempted.

In 2000, in United States v. Locke, the Court unanimously applied field and conflict preemption doctrine to state regulation of oil-carrying vessels. The Court in Locke considered whether the state of Washington’s regulations for oil tankers were preempted by federal law. The Court noted that Title II of the Ports and Waterways Safety Act of 1972 covered the “design, construction, alteration, repair, maintenance, operation, equipping, personnel qualification, and manning” of tanker vessels. In this area the federal government has long been involved and has a concern for uniformity. Thus, Congress left no room for state regulation of these matters. As a result, field preemption applied and there was federal preemption of Washington’s requirements on crew training, English language proficiency, navigation watch requirements, and reporting requirements – all of which were not confined to the operation of vessels within Washington’s waters. To allow Washington law to apply to these matters would be to compromise the uniformity sought to be achieved by federal rules. The case was remanded for the trial court, applying field preemption analysis, to determine whether any other Washington regulations survived.

In contrast, Title I of the Oil Pollution Act of 1990 said that any state could impose additional liability with respect to the discharge of oil. The Court said this avoided preemption only with respect to liability rules and not regulations of ship design or operations. The federal law allowed state regulations based on the peculiarities of local waters, but not wide-ranging regulation of the at-sea operation of tankers. Applying conflict preemption analysis, Justice Kennedy said that states would be preempted when creating an obstacle to the accomplishment of the full purposes of Congress, such as when the Coast Guard had promulgated its own requirement on a subject or had

137 Id. at 531-44 (Blackmun, J., joined by Kennedy & Souter, JJ., concurring in part and in the judgment in part, and dissenting in part).

139 529 U.S. 89 (2000).

140 Id. at 96-116.
decided that no such requirement should be imposed at all. However, this would not be true as to local rules of Washington which pose only a minimal risk of innocent noncompliance, do not affect vessel operations outside the jurisdiction, do not require adjustment of systemic aspects of the vessel, and do not impose a substantial burden on the vessel’s operation within the local jurisdiction itself – as, for example, requiring a tug escort for certain vessels and requiring a registered vessel to take on a local pilot.141

Another good example of implied conflict preemption involving cross-currents of predispositions, and thus unusual combinations of Justices in the Court opinions, is Gade v. National Solid Wastes Management Association,142 decided in 1992. In this case, Justice O’Connor, joined by Chief Justice Rehnquist, and Justices White and Scalia, held that a state regulation of occupational safety and health matters, regarding which a federal OSHA standard was in effect, was impliedly preempted because it was in conflict with the full purposes and objectives of OSHA – among which was to have workers subjected to but one set of standards. Justice Kennedy agreed that there was preemption, but found it expressed in the terms of OSHA. Justice Kennedy objected to finding implied conflict preemption other than where state laws impose bars or obligations which directly contradict Congress' primary objectives. Justice Kennedy believed the dissent was wrong, however, in attributing to Congress an intent to allow a hodge-podge scheme of authority whereby federal standards could be supplemented by state standards. This disagreement between the majority and dissent seems to have been largely the result of whether a Justice perceived Congress to have been concerned primarily with minimum standards for worker safety, in which case there was no preemption, or uniform standards, in which case preemption would be found.143

Justice Souter dissented, with Justices Stevens, Blackmun, and Thomas. Justice Souter said the Court should presume that Congress did not intend to displace state law. He did not find express preemption and would hold here that as long as compliance with federal safety standards does not render obedience to state law impossible, enforcement of the state law should not be held barred by the Supremacy Clause. Justices Stevens and Blackmun probably joined this dissent based on a policy of supporting additional state regulations of business, while Justice Thomas may have joined the dissent based on his strong support for states’ rights.144

Four additional preemption decisions provide a glimpse into the Court’s current preemption analysis. These cases suggest that the liberal instrumentalist preference for additional state regulation of business not to be preempted, as in Florida Lime, no longer has resonance with a majority of the Court. For example, in Norfolk Southern Railway Co. v. Shanklin,145 the Court applied field preemption, finding that state law regarding what warning devices were required at a grade crossing

141 Id. at 116-17.
143 Id. at 110-14 (Kennedy, J., concurring in part and concurring in the judgment).
144 Id. at 114-122 (Souter, J., joined by Stevens, Blackmun & Thomas, JJ., dissenting).
145 529 U.S. 344, 352-59 (2000); id. at 360-61 (Ginsburg, J., joined by Stevens, J., dissenting).
was preempted by federal standards that applied whenever warning devices were installed by the use of federal funds. The Court refused to find an exception where the warning device provided only minimal protection, i.e., was the familiar black-and-white X-shaped sign with the words “Railroad Crossing.” The opinion was written by Justice O’Connor. Justice Ginsburg dissented with Justice Stevens. She said the outcome defied common sense and sound policy. She said the case gave the railroads a double windfall in that the federal government foots the bill for crossing signals and that same expenditure spares the railroads from state tort liability.

In *Crosby v. National Foreign Trade Council*, the Court held that a state law imposing penalties on United States or foreign companies doing business in Myanmar, formerly known as Burma, undermined the president’s ability to conduct foreign policy and were preempted by Congress, which has passed legislation to punish Myanmar. For the Court, Justice Souter said, “It is simply implausible that Congress would have gone to such lengths to empower the president if it had been willing to compromise his effectiveness by deference to every provision of state statute or local ordinance that might, if enforced, blunt the consequences of discretionary presidential action.”

In *Buckman Co. v. Plaintiffs’ Legal Committee*, the Court unanimously held that state common law claims for fraudulent representations made to the federal Food and Drug Administration (FDA) were preempted by the Act which created that agency. Chief Justice Rehnquist noted that policing fraud against federal agencies is hardly a field that the states have traditionally occupied such as to warrant a presumption under *Rice* against finding federal preemption. Further the relationship involved was inherently federal in character because it originates from, is governed by, and terminates according to federal law. Plaintiffs were injured by a medical device approved by the FDA after the FDA was told that it was substantially equivalent to an approved device. Rehnquist said that to allow a state action where the FDA had taken no action might discourage would-be applicants from seeking such approval for fear that they might be exposed to state-law claims. Further, to protect against such claims an applicant might submit a deluge of information that would create administrative burdens. Justice Stevens, concurring with Justice Thomas, said that if the FDA had determined that a fraud had been committed and had then removed the product from the market, a state damage remedy would not encroach upon, but rather would supplement, the federal enforcement scheme.

The Court was more divided in *Egelhoff v. Egelhoff ex rel. Breiner*. There the question was whether the federal ERISA Act, which deals with the administration of retirement plans, had pre-
emptied a Washington statute that provided that the designation of a spouse as the beneficiary of an asset not included in probate is revoked automatically upon divorce. The federal administrators wanted to distribute life insurance and pension proceeds to the woman designated by a decedent. However, his children by a previous marriage contended that they were statutory heirs under state law. As has been true of many cases involving ERISA, a majority of the Court concluded that the state statute was expressly preempted by the language of ERISA, which stated that ERISA “shall supersede any and all State laws insofar as they may now or hereafter relate to any employee benefit plan” covered by ERISA. Justice Thomas said that the Washington statute runs counter to ERISA’s command that a plan should specify the basis on which payments are made. The Washington statute did not do that and, if it were allowed to control, would interfere with nationally uniform plan administration. Thus, it “related to” the benefit plan and was preempted.

Justice Scalia, concurring with Justice Ginsburg, said that “relate to” should be interpreted as merely referring to the Court’s jurisprudence concerning field and conflict preemption, rather than anything else, since as a matter of abstract definition, everything “relates to” everything else. Justice Breyer, dissenting with Justice Stevens, said that he agreed with Justice Scalia’s approach to “relate to,” but that no plausible preemption principle leads to a conclusion that ERISA preempted the entire field of state law governing inheritance. He pointed out that the beneficiary’s plan provided that when a beneficiary designation is “invalid” the benefits will be paid to the children if there is no surviving spouse. The Washington statute merely filled the gap by providing that a designation is invalid when there is no longer such a person as X, wife. In the field of family property, a field of traditional state regulation, there is a strong presumption under Rice against preemption that should be applied. There is no substantial disruption with federal administration because the administrators already had to familiarize themselves with state law in order to deal with such situations as those existing when a beneficiary kills the employee.

An additional recent preemption case suggests that the Rice presumption is still strong in cases outside ERISA. In Bates v. Dow Agrosciences LLC, peanut farmers sued the supplier of a pesticide for claims such as breach of warranty, fraud, and negligent testing because it developed that on soils having pH levels of 7.2 or higher, as is typical in Western Texas, the pesticide severely damaged peanut crops while failing to control the growth of weeds. The defendant argued that plaintiff’s claims were preempted by 7 U.S.C. § 136v(b) of the Federal Insecticide, Fungicide, and Rodenticide Act, a comprehensive regulatory statute that includes many labeling requirements for pesticides. The section provides that states “shall not impose or continue in effect any requirements for labeling or packaging in addition to or different from those required under this subchapter.” A nearly unanimous Court reversed a lower court decision which found preemption because the new knowledge would induce a pesticide manufacturer to change its label. The Court held that this was not a “requirement” within the meaning of the federal law, saying, “An occurrence that merely

151 Id. at 153-61 (Breyer, J., joined by Stevens, J., dissenting).

motivates an optional decision does not qualify as a requirement.” The opinion by Justice Stevens continued, “In areas of traditional state regulation, we assume that a federal statute has not supplant ed state law unless Congress has made such an intention ‘clear and manifest.’”

Justice Thomas, joined by Justice Scalia, concurring in the judgment in part and dissenting in part, cautioned that states may not impose liability for labeling requirements predicated on distinct state standards of care. He also said that the Rice presumption should not apply when Congress, as here, has included within a statute an express preemption provision. Thus, the Court’s task was simply to determine which state law claims were preempted by § 136v(b), without slanting the inquiry in favor of either the federal government or the states. Nevertheless, Justice Thomas concluded by observing that in his view, “Today’s decision comports with this Court’s increasing reluctance to expand federal statutes beyond their terms through doctrines of implied preemption.”

§ 20.3.2 Dormant Commerce Clause Review of State Economic Regulations

§ 20.3.2.1 The Evolution of Standards for Dormant Commerce Clause Review

Dormant commerce clause review is not based upon any literal text in the Constitution. Nor is it based on the express purpose of the Commerce Clause, which is merely to grant commerce power to Congress. Rather, it is based on the Court’s view of an implied, or silent, purpose behind the Commerce Clause. That implied purpose is to ensure that the basic purpose of the Commerce Clause, identified as far back as 1824 in Gibbons v. Ogden as ensuring national economic solutions to national economic problems, as discussed at § 18.2.1.1 nn.48-54, is not frustrated by state or local parochial legislation. The doctrine has developed in common-law fashion, and its contours have shifted with each succeeding Court era.

A. The Original Natural Law Era

During the original natural law era, the Court was faced more with defining federal and state constitutional power to regulate, as discussed in Gibbons v. Ogden at § 18.2.1.1, rather than the interplay between federal and state power when both have the power to regulate. Reflecting a strong version of federalism, consistent with Professor Crosskey’s theory of strong federal supremacy, discussed at §§ 18.1 n.1 & 18.1.1 nn.7-8, Justice Johnson, concurring in Gibbons, had argued that where Congress has the power to regulate commerce, states have no power to regulate at all. As noted at § 18.2.1.1 n.59, the majority in Gibbons in 1824 acknowledged that this position “has some force,” but instead adopted the view, consistent with the “dual theory of sovereignty,” that even where Congress has the power to regulate commerce, states retain as well their own power to regulate commerce for local purposes. Similarly, the Marshall Court held in 1829 in Willson v. 

---

153 Id. at 455-59 (Thomas, J., joined by Scalia, J., concurring in the judgment in part and dissenting in part). On issues surrounding preemption in the context of state tort law, see generally Richard C. Ausness, Preemption of State Tort Law by Federal Safety Statutes: Supreme Court Preemption Jurisprudence since Cipollone, 92 Ky. L.J. 913 (2003-04).

154 22 U.S. (9 Wheat.) 1, 204 (1824).
that states are not barred by the Commerce Clause from interfering with free trade when legislating for local purposes, in this case placing a dam across a local river, unless the state law “under all the circumstances of the case, be considered as repugnant to the power to regulate commerce in its dormant state, or as being in conflict with any law passed on the subject.” The Court rejected the argument of the challenger that the state law was invalid because the dam obstructed navigation on the river and that an unfettered right of navigation “is necessary for the purpose of commerce to the whole people of the United States.”

The Taney Court clarified in 1837 that the power of the state to regulate derives from the state’s own police powers, not from a delegated grant of power from the Commerce Clause, although Justice Story dissented from this conclusion, reflecting Professor Crosskey’s theory of federal supremacy. The Taney Court noted in 1856 that while the Court will make an initial determination in dormant commerce clause cases whether a particular state statute impermissibly burdens commerce, Congress is the ultimate decisionmaker on whether a conflict exists between state and federal law. Thus, where Congress has constitutional power to regulate under the Commerce Clause, Congress can consent to any state regulation of commerce it wishes, and, as stated in Article I, § 10, cl. 3, with the consent of Congress, any state can enter into an interstate “Agreement or Compact” with other states. If Congress has consented, no dormant commerce clause challenge can be brought.

While the majority of the Taney Court could agree on these basic propositions about dormant commerce clause analysis, in terms of applying the dormant commerce clause test, a majority of the Taney Court could not agree on a single approach. As often happens in the initial stages of judicial development of a doctrine, different formulations of the same idea were advanced and supported by different judges, each seeking ultimately to convince the majority of the felicity of that judge’s phraseology. For example, in 1847 in The License Cases, six Justices penned separate opinions. In 1849 in The Passenger Cases, eight separate Justices wrote opinions.

Dormant commerce clause doctrine remained undeveloped during this period primarily because the major source of contention in these cases was the constitutional issue of federal versus state power

---

156 Mayor, Alderman and Commonalty of City of New York v. Miln, 36 U.S. (11 Pet.) 102, 132-38 (1837); id. at 153-61 (Story, J., dissenting).
158 46 U.S. (5 How.) 504 (1847) (state laws requiring a license to sell intoxicating liquor were unanimously sustained on different theories that congressional power was not exclusive, that the laws were not a regulation of commerce, or that they had been validated by long usage).
159 48 U.S. (7 How.) 283 (1849) (in a 5-4 opinion, state taxes imposed on alien passengers arriving from foreign countries were held invalid regulation of foreign commerce, with the dissenters arguing that Congress’ power was not exclusive, and this was a valid exercise of traditional state police power to raise revenue).
to regulate, not the dormant commerce clause of issue of conflict between state and federal statutes when both have the power to regulate. For example, as discussed at § 18.2.1.2 n.65, in *Cooley v. Board of Wardens*, 160 decided in 1851, the main focus of the Court’s analysis was the conclusion that “some subjects are in their nature national” and thus appropriate only for federal regulation, but that some subjects are so local that they are subject only to state regulation, and over some subjects there is concurrent state and federal power. Building on the *Cooley* theory, the Court held in 1852 in *Veazie v. Moor* 161 that Maine’s grant of an exclusive license of navigation on the upper part of the Penobscot River, which is located entirely within Maine, was a proper exercise of state regulation. On the other hand, based on the *Cooley* theory that some subjects are exclusively for Congress, the Court held in 1869 in *Woodruff v. Parham* 162 that a state may not regulate commerce purely external to the state, nor impose a discriminatory tax on an article brought into it from another state.

**B. The Formalist Era**

The Dormant Commerce Clause cases between 1873 and 1937 reveal another aspect of the judicial development of doctrine. Terminology used with respect to one doctrine often is borrowed by judges and used in a related context, particularly if no previous agreed-upon test is currently in use. As discussed at § 18.2.2, between 1873 and 1937 the Court adopted a “direct versus indirect” test to determine congressional power to regulate economic activity affecting commerce under the Commerce Clause. Similarly, between 1873 and 1937, the Court used a “direct versus indirect” test to determine which state laws excessively burden interstate commerce under dormant commerce clause doctrine.

Under this doctrine, states were able to enact safety regulations that only "indirectly" affected interstate commerce. 163 The Court held that states cannot directly burden interstate commerce even if Congress has not acted. 164 However, questions of degree were sometimes involved in drawing the line between "directly" or "indirectly" affecting interstate commerce.

A law was considered directly to affect interstate commerce if its purpose was to prohibit interstate competition. 165 Direct affects could also result from a law that had a substantial affect on interstate commerce.

---

161 55 U.S. 568, 571-75 (1852).
163 Erb v. Morasch, 177 U.S. 584 (1900) (speed ordinance which applied to all trains).
164 Hannibal v. Husen, 95 U.S. 465 (1877) (state ban on cattle driving); Crutcher v. Kentucky, 141 U.S. 47 (1891) (states cannot protect local citizens from unreliable businesses by requiring licenses for agents of foreign express companies engaged in interstate commerce, a right which every citizen is entitled to under the Constitution and laws of the United States).
165 Buck v. Kuykendall, 267 U.S. 307 (1925) (license denied highway common carrier on ground that a route was already served; such a bar on commerce was held to have a direct impact
commerce. Thus, a state speed-check law that affected 124 railroad crossings and increased running time was held invalid as a direct burden.166 A state regulation of the purchase of wheat for interstate shipment was similarly held a direct burden on interstate commerce.167 However, a state could refuse to issue a certificate to operate a motor carrier on an interstate run because of safety concerns about a congested route where the carrier had not applied for an alternative route and had not shown the unavailability of a feasible, less congested route.168

The pattern of case results indicates that the Court was making judgments on whether particular restraints on the import of goods were more than what was needed for reasonable protection of a local interest, such as health. For example, in Hannibal v. Husen,169 the Court held that it was unconstitutional for Missouri to bar the import of all Texas, Mexican, or Indian cattle from March to November, without regard to whether there was any possibility of the cattle being diseased, despite the state’s concern that some of these cattle may have the “Spanish or Texas fever.” However, in Mintz v. Baldwin,170 a state was allowed to require imported cattle to be from a herd certified free of Bang's disease. The Court also held that the Commerce Clause bars state laws whose purpose and effect is to suppress the consequences of competition between states, with Justice Cardozo saying, "The peoples of the several states must sink or swim together."171

As discussed at § 18.2.3, this “direct versus indirect” distinction became discredited with respect to Commerce Clause analysis after 1937. Similarly, modern formalist Justices are not likely to advocate a return to the “direct versus indirect” distinction under dormant commerce clause analysis today. However, the fact that dormant commerce clause review has no textual support in the Constitution, and the fact that it has evolved into a judicial balancing test today, would likely mean that formalist Justices would be skeptical of the doctrine, and want to apply it sparingly.

166 Seaboard v. Blackwell, 244 U.S. 310 (1917).

168 Bradley v. Public Utilities Comm’n, 289 U.S. 346, 349-52 (1933) (Buck, cited supra note 165, was distinguished on the ground that there the license was denied to prevent undesirable competition in interstate commerce, whereas here the effects on interstate commerce of a denial based on safety reasons were merely incidental). This type of problem regarding state regulation for economic reasons no longer arises in the transportation industry because the federal government now regulates all interstate transportation and communication. 49 U.S.C. § 301-327.

169 95 U.S. 465, 469-74 (1877).

For this reason, it is not surprising that Justices Scalia and Thomas have indicated a desire to abandon traditional scrutiny of state regulations under the dormant commerce clause. Initially, Justice Scalia took the view that he would find a state law invalid under dormant commerce clause review only if it accorded discriminatory treatment to interstate commerce in a respect not required to achieve a lawful state purpose. Moreover, his view, shared by Justice Thomas, is to strike down state statutes under dormant commerce clause review that involve “rank discrimination against citizens” or are indistinguishable as a matter of “settled law” from prior Court precedents. As Justice Scalia phrased this point in American Trucking Association, Inc. v. Michigan Public Service Commission, under dormant commerce clause review the Court should ask only whether the state law “facially discriminates against interstate commerce” or whether it is “indistinguishable from a type of law previously held unconstitutional by this Court.” Justice Thomas added in American Trucking that the Court’s modern dormant commerce clause review “has no basis in the text of the Constitution, makes little sense, and has proved virtually unworkable in application.”

C. The Holmesian Era

As the Court did with many doctrines at the beginning of the Holmesian era in 1937, the Court rejected a formalist analysis for dormant commerce clause doctrine. Instead, the Court adopted a functional test that depended upon the impact of the state regulation on the free flow of commerce. The groundwork for this change in approach was laid by Justice Stone in 1927, dissenting in Di Santo v. Penn. Justice Stone said that the “direct/indirect” test was too mechanical, too uncertain in its application, and too remote from actualities. He added, "It seems that those interferences with commerce that are not deemed forbidden are to be sustained, not because the effect on commerce is nominally indirect, but because a consideration of all the facts and circumstances, such as the nature of the regulation, its function, the character of the business involved and the actual effects on the flow of commerce, lead to the conclusion that the regulation concerns interests peculiarly local and does not infringe the national interest in maintaining the freedom of commerce across state lines." Stone thus helped pave the way for a new test, and was able to write a majority opinion overruling Di Santo in 1941 in California v. Thompson. As the Court began looking realistically at economic effects after 1937, it recognized several different ways that state laws may adversely affect interstate commerce. The underlying theory behind dormant commerce clause review was phrased as follows:

175 Id. at 439 (Thomas, J., concurring in the judgment).
176 273 U.S. 34, 44 (1927) (Stone, J., joined by Holmes & Brandeis, JJ., dissenting).
177 313 U.S. 109, 113-16 (1941).
The very purpose of the Commerce Clause was to create an area of free trade among the several states. . . . It is now established beyond dispute that the Commerce Clause was not merely an authorization to Congress to enact laws for the protection and encouragement of commerce among the States, but by its own force created an area of trade free from interference by the States. . . . [T]he Commerce Clause even without implementing legislation by Congress is a limitation upon the power of the States.178

The extent of this limitation will depend, of course, on how much deference is given to state legislative enactments. As discussed previously, Holmesian Justices give great weight to deferring to legislative and executive practice. In this case, however, the question is not whether to give deference to some governmental actor, but how much deference to give state action which has an effect on the federal interest in free trade.

On the one hand, a Holmesian Justice could give great deference to the state legislature’s interest. This would be consistent with the deference to government attitude reflected in rational basis review for congressional regulation of commerce and for determining whether laws violate the Due Process or Equal Protection Clauses, as stated in United States v. Carolene Products Co.,179 discussed at § 26.1.2.2. In South Carolina State Highway Department v. Barnwell Brothers,180 decided in 1938, the Court upheld a state law regulating truck width. The Court noted that Congress could determine whether the burdens imposed by a state on interstate commerce were too great. But without such legislation “the judicial function, under the commerce clause, as well as the Fourteenth Amendment, stops with the inquiry whether the state Legislature in adopting regulations such as the present has acted within its province, and whether the means of regulation chosen are reasonably adopted to the end sought.” As discussed at § 26.1.1.1 nn.22-24, under the 14th Amendment rational review analysis, the Court substantially defers to legislative judgment regarding the reasonableness of both legislative means and ends.

On the other hand, as noted in footnote 4 of Carolene Products,181 “deficiencies in the political process” may call for higher judicial review. It has been noted that state legislatures, because elected only by in-state citizens, may have a political predisposition for advancing local state parochial interests to the detriment of the national interest.182 As a result, the Court has increased the level of review for state commercial laws whose purpose is to protect local commerce from interstate competition by not deferring to legislative judgment regarding means and ends, as in H.P.

179 304 U.S. 144 (1938).

180 303 U.S. 177, 190 (1938).

181 304 U.S. 144, 152 n.4 (1938).

Hood & Sons, Inc. v. Du Mond, 183 and by stating, as in Dean Milk Co. v. Madison, 184 which involved a city ordinance discriminating against out-of-city and out-of-state milk refineries, that states, or cities as political subdivisions of the state, as in Dean Milk, must justify laws that discriminate against interstate commerce by showing that they serve a legitimate local purpose, unrelated to economic protectionism, that could not be served as well by reasonable nondiscriminatory means. This reflects the Holmesian view that deference to the government is not as appropriate where deficiencies exist in the political process, as discussed at § 10.2.1.2 n.18.

As in any common-law development of doctrine, earlier cases had to be limited, redefined, or overruled, to accommodate this shifting perspective. For example, in Southern Pacific Co v. Arizona, 185 the Court struck down a state limit on the maximum length of trains. The Court distinguished and limited Barnwell as a case involving state highways, a matter said to be "peculiarly of local concern." Candidly speaking, however, the Court's theory in Southern Pacific was at odds with what the Court had said in Barnwell. A more rigorous dormant commerce clause test emerged:

The matters for ultimate determination here are the nature and extent of the burden which the state regulation of interstate trains, adopted as a safety measure, imposes on interstate commerce, and whether the relative weights of the state and national interests involved are such as to make inapplicable the rule, generally observed, that the free flow of interstate commerce and its freedom from local restraints in matters requiring uniformity of regulation are interests safeguarded by the commerce clause from state interference. 186

The issue of how much deference to give state legislatures under the Southern Pacific case remains. As noted at § 10.3.3, in general conservative Holmesian Justices tend to give greater emphasis to deferring to state governments; more liberal Holmesian Justices tend to defer to the federal government. Thus, among Holmesian Justices on the Court since 1945, it has tended to be the more conservative Holmesian Justices, like Chief Justice Rehnquist, who have more often applied the dormant commerce clause doctrine to support state attempts at regulation, while more liberal Holmesian Justices, like Justice White, have more often found the state regulations invalid as too great burdens on interstate commerce. 187

185 325 U.S. 761, 783 (1945).
186 Id. at 770-71.
187 See, e.g., Kassel v. Consolidated Freightways Corp., 450 U.S. 662 (1981); Hughes v. Oklahoma, 441 U.S. 322 (1979). In West Lynn Creamery, Inc. v. Healy, 512 U.S. 186, 217 (1994), Chief Justice Rehnquist said in dissent, “The wisdom of a messianic insistence on a grim sink-or-swim policy of laissez-faire economics would be debatable had Congress chosen to enact it; but Congress has done nothing of the kind. It is the Court which has imposed the policy under the dormant Commerce Clause, a policy which bodes ill for the values of federalism . . . .” Id. at 217.
In an early case on interstate mobility, *Crandall v. Nevada*,\(^\text{188}\) decided in 1868, the Court spoke of a right to travel held by citizens of the United States, and a right in the United States not to have the states inhibit travel by United States citizens. During the Holmesian era, in 1941, a majority of the Court decided in *Edwards v. California*\(^\text{189}\) that a California law barring the import of a nonresident indigent was unconstitutional under the dormant commerce clause, citing *Baldwin v. G.A.F. Seelig, Inc.* Because the case involved people, not goods, four Justices said such a right was a privilege and immunity protected by the 14th Amendment, rather than a dormant commerce clause case.\(^\text{190}\) For each set of Justices, however, the basic doctrine was that the people of the several states must sink or swim together. The approach of the four Justices in *Edwards v. California* was adopted by a majority of the Court in 2000 in *Saenz v. Roe*.\(^\text{191}\) Thus, for discrimination against persons, 14th Amendment Privileges or Immunities Clause analysis applies today. As discussed at § 25.3, for substantial burdens that analysis adopts strict scrutiny review, rather than the second-order or third-order rational basis scrutiny under the dormant commerce clause, discussed next, at § 20.3.2.1. D.

**D. The Instrumentalist Era**

The instrumentalist-era Court between 1954 and 1986 continued the rigor of the *Southern Pacific* approach toward dormant commerce clause review. For example, in *Bibb v. Navajo*,\(^\text{192}\) the balancing test of *Southern Pacific* was used to invalidate an Illinois ban on straight mudflaps, which were held to have inconclusive safety benefits while being inconsistent with laws in 45 other states. In *Kassel v. Consolidated Freightways Corp.*,\(^\text{193}\) the Court struck down Iowa's ban on 65-foot doubles.

Like most judicially-created doctrines, the Court has elaborated the dormant commerce clause doctrine to respond to nuances presented by later factual cases coming before the Court. First, the Court has noted that there are four kinds of dormant commerce clause cases: (1) the state legislation burdens interstate commerce on its face; (2) the state legislation is the product of a purpose to discriminate against interstate commerce; (3) the state legislation has a discriminatory effect on interstate commerce; and (4) the state regulates in-state and out-of-state commerce even-handedly and only involves an incidental effect on interstate commerce. In the first three of these cases, the Court has stated that the burden is on the state to justify its regulation. For state regulation that burdens interstate commerce on its face, the Court places the burden on the state to establish the

---

\(^{188}\) 6 Wall. 35 (1868).

\(^{190}\) *Id.* at 177-80 (1941) (Douglas, J., joined by Black & Murphy, JJ., concurring); *id.* at 181-82 (Jackson, J., concurring).

\(^{191}\) 526 U.S. 489, 500-01 (2000).

validity of the enactment, as in *Maine v. Taylor*. In *Minnesota v. Clover Leaf Creamery Co.*, the Court stated that the same standard applies if the state law has either a discriminatory purpose or effect. With regard to the fourth kind of case, the Court held in *Pike v. Bruce Church, Inc.*:

> If a state statute has only indirect effects on interstate commerce and regulates evenhandedly, the dormant Commerce Clause is violated only if plaintiff shows that the burden on interstate commerce is clearly excessive in relation to local interests. When making that determination, the Court considers the nature of the local interest and whether it could be promoted as well by laws having a lesser impact on interstate activities.

Under the language of the instrumentalist-era cases, the balancing test is the same in all sets of cases, with only the burden shifting. In practice, however, the instrumentalist Court stated that there is “a virtual *per se* rule of invalidity” for state legislation facially discriminating against interstate commerce or involving a discriminatory purpose or effect.

As the “virtual *per se*” language suggests, it can prove very difficult for the state to meet its burden in cases of discriminatory legislation. For example, in *Wyoming v. Oklahoma*, Oklahoma legislation required that Oklahoma coal-fired electric generating plants producing power for sale in Oklahoma must burn a mixture of coal containing at least 10% Oklahoma-mined coal. Oklahoma's concern to lessen the state's reliance on a single source of coal delivered over a single rail line was held not to be adequate to justify the law in terms of the local benefits and the unavailability of nondiscriminatory alternatives, because the state was using the illegitimate means of attempting to isolate itself from the national economy. Further, Congress had not unambiguously manifested an intent to permit such a violation of the Commerce Clause as Oklahoma here attempted to justify. However, in *Maine v. Taylor*, the Court held that Maine could bar the import of baitfish in order to protect a fragile fishery environment from parasites, there being no available alternative testing mechanism to keep non-indigenous species from harming Maine’s rivers.

---

200 477 U.S. 131, 144-52 (1986).
As these cases suggest, though the instrumentalist Court tinkered with the dormant commerce clause tests, the Court did not reject the basic notion that the dormant commerce clause contains an implied negative prohibition against state laws that interfere with interstate commerce. This negative overrode for liberal instrumentalist Justices their predisposition to favor laws regulating businesses. Indeed, in 1977, the Court in *Boston Stock Exchange v. State Tax Commission*, reiterated the Holmesian-era statement:

> [W]e begin with the principle that '[t]he very purpose of the Commerce Clause was to create an area of free trade among the several states. . . . It is now established beyond dispute that 'the Commerce Clause was not merely an authorization to Congress to enact laws for the protection and encouragement of commerce among the States, but by its own force created an area of trade free from interference by the States. . . . [T]he Commerce Clause even without implementing legislation by Congress is a limitation upon the power of the States.' *Freeman v. Hewit*, 329 U.S. 249, 252 (1946).\(^{201}\)

Applying this policy, the Court has held that state laws that directly regulate interstate commerce, as by regulating transactions in other states, are invalid,\(^{202}\) as are laws whose purpose or primary effect is to favor local economic interests.\(^{203}\)

The instrumentalist Court noted that even the *Pike v. Bruce Church* test for even-handed state regulations, which nevertheless incidentally burden interstate commerce, is more stringent than the minimum rational review test used under the Equal Protection Clause. Under minimum rational review, as discussed at § 26.1.2.1 nn.22-24, courts should substantially defer to legislative judgment concerning the weight given to the statute’s conceivable purposes and the rationality of the statutory means to advance that end. Because of the suspicion of state legislative motives in cases involving dormant commerce clause review, no such deference is given under the dormant commerce clause.

\(^{201}\) 429 U.S. 318, 328 (1977).

\(^{202}\) Brown-Forman Distillers Co. v. New York State Liquor Authority, 476 U.S. 573 (1986) (invalid to bar distillers from selling in New York at prices higher than the lowest price to be charged elsewhere, per a posted price list for future sales); Healy v. The Beer Institute, Inc., 491 U.S. 324 (1989) (local prices tied to the lowest prices charged in other states had the illegitimate practical effect of controlling conduct beyond the state's borders; also, the statute was discriminatory on its face because it applied only to brewers and shippers of beer in interstate commerce and, thus, created a disincentive for companies doing business in the state to engage in interstate commerce).

\(^{203}\) Philadelphia v. New Jersey, 437 U.S. 617 (1978) (barring import of waste to preserve local landfill space, the Court noting that there was no other reason than their origin for treating them differently; the state was merely trying to isolate itself from a problem shared by all); New England Power Co. v. New Hampshire, 455 U.S. 331 (1982) (barring export of electricity until local users were served); Wyoming v. Oklahoma, 502 U.S. 437(1992) (resident coal-fired electric generating plans serving Oklahoma customers were required to burn at least 10% Oklahoma-mined coal).
Instead, the courts determine for themselves the extent of the legislature’s legitimate purposes, and whether the means adopted reflect a “clearly excessive” burden on interstate commerce.

In dormant commerce clause cases, as under minimum rational review, the Court will consider any conceivable purpose that could be used to support the statute, and will not restrict itself to “actual purposes,” despite an attempt by Justices Brennan and Marshall to support the “actual purpose” standard. The use of “legitimate” legislative goals to support state laws under dormant commerce clause review, as well as the “any conceivable purpose” approach, makes dormant commerce clause review a species of rational review. Because of the lack of substantial deference to the legislature, however, the *Pike v. Bruce Church* test reflects “second-order” rational review, as discussed at § 7.2.1 text following n.42, rather than minimum rational review. Because the burden shifts to the government in the other three kinds of dormant commerce clause cases, these cases reflect “third-order” rational review, as discussed at § 7.2.1 text following n.42.

In engaging in dormant commerce clause review, the district court will hear the evidence concerning the state’s alleged legitimate interest, as well as evidence concerning the burden on interstate commerce. The district court will then balance the extent of the state’s benefits against the degree of interference with interstate commerce. As a factual decision made by the district court, this conclusion will be entitled to deference on appeal, and subject to being reversed on appeal only if it is “clearly erroneous.”

§ 20.3.2.2    The Modern Standards for Dormant Commerce Clause Review

A. Basic Doctrine

The Court has continued the Holmesian and instrumentalist-era dormant commerce clause doctrine during the modern natural law era, which is consistent with the broad outlines of Chief Justice Marshall’s opinion in the 1829 *Willson v. Black Bird Creek Marsh Co.* case. The Court continues to use the various tests derived from *Pike v. Bruce Church* and *Maine v. Taylor*, echoing *Maine v.*

---

205  See, e.g., Kassel v. Consolidated Freightways Corp., 450 U.S. 662, 670-71 (1981). Reflecting their predisposition to favor states, conservative Holmesian Justices Stewart and Rehnquist, along with conservative formalist Chief Justice Burger, dissented from this conclusion in *Kassel*, stating that if a traffic safety law is not merely a pretext for discrimination the Court should ask only whether it is rational. *Id.* at 691-93 (Rehnquist, J., joined by Burger, C.J., and Stewart, J., dissenting). The rest of the Court, however, rejected this view.

207  See *id.* at 670-71.

In stating that a state law that discriminates against interstate commerce, as by putting burdens on interstate commerce not shared by local interests favored by the legislation, must be justified by the state through showing that the law serves a legitimate local interest, unrelated to economic protectionism, that cannot be served as well by reasonable nondiscriminatory means. Of course, federal law, if "unmistakably clear," can sanction state laws that burden interstate commerce in ways the Court would otherwise hold invalid because dormant commerce clause review, like preemption, is ultimately a matter of deciphering congressional intent. This Taylor test is also identified with Dean Milk v. Madison, Hunt v. Washington, and Hughes v. Oklahoma.

Cases from the instrumentalist era left unclear how tough the heightened scrutiny was in cases involving facial discrimination, or a discriminatory purpose or effect. The analytic bias of a natural law judicial decisionmaking approach has pressed for greater clarity regarding the level of review. The instrumentalist-era cases spoke of “a virtual per se rule” and “the strictest scrutiny,” which suggest an approach akin to a strict scrutiny approach. However, the cases did not require the states to advance “compelling governmental interests” to support their laws. They only adopted the rational review standard of “legitimate interests.” Further, the cases never made clear whether the “less discriminatory alternatives” component of dormant commerce clause review is the strict scrutiny “least restrictive alternatives” test, or rather simply a rational review balancing of benefits and burdens in light of available nondiscriminatory alternatives.

In the Equal Protection context, facial discrimination based upon race, discussed at §§ 26.2.1.1, or a discriminatory intent to engage in racial discrimination, discussed at § 26.2.1.2, triggers a strict scrutiny approach. Mere discriminatory effects, however, without a finding of discriminatory intent, do not trigger strict scrutiny, discussed at § 26.2.1.2. It would be somewhat anomalous for mere discriminatory effects to trigger strict scrutiny in the dormant commerce clause context, but not in the context of racial discrimination. Further, given the difficult line to draw between a state law, even-handed on its face, which has discriminatory effects on interstate commerce (to which the more stringent Maine v. Taylor dormant commerce clause review applies), and a state law, even-handed on its face with only incidental effects on interstate commerce (to which the Pike v. Bruce Church test applies), it would be somewhat anomalous for that difficult line-drawing task to result in a shift from the “second-order” rational review of Pike to a strict scrutiny approach.

For these reasons, probably the better analysis of the instrumentalist-era cases is that cases involving facial discrimination against interstate commerce, or discriminatory purpose or effects, trigger a “third-order” rational review approach, as defined at § 7.2.1 text following n.42. That level adopts the same kind of rational review balancing test as “second-order” rational review, but shifts the burden from the challenger to the state, as is true of the Taylor test. The “virtual per se rule of invalidity” would then reflect that when the state is engaged in such discrimination against interstate commerce.
commerce, the state’s interests would likely be sufficiently weak, and the burden on interstate commerce sufficiently great, that almost inevitably the burden on interstate commerce would be “clearly excessive,” a conclusion that could be reached without any extensive court analysis. In reaching this conclusion, the Court would apply not the strict scrutiny “least restrictive alternative” analysis, but would merely consider less discriminatory alternatives in the context of deciding whether the state’s statute represented a clearly excessive burden on interstate commerce.

This would be consistent with the way some lower federal courts are applying the dormant commerce clause test. For example, in McNeilus Truck & Manufacturing, Inc. v. Ohio, the Sixth Circuit Court of Appeals cited Supreme Court opinions suggesting that in both Pike and Taylor kinds of cases the “critical consideration is the overall effect of the statute on both local and interstate activity.” The McNeilus court also noted that in a Taylor kind of case, which involves discrimination against interstate commerce, the burden that falls on the state requires the state to justify their statute “both in terms of the local benefits flowing from the statute and the unavailability of nondiscriminatory alternatives adequate to preserve the local interests at stake,” and related that part of the analysis to the similar focus on less discriminatory alternatives in Pike.

Despite this conclusion, some lower courts, based on the “strictest scrutiny” and “virtual per se rule of invalidity” language have begun to apply a version of strict scrutiny, as did the Fourth Circuit Court of Appeals in Waste Management Holdings, Inc. v. Gilmore. Interestingly, though applying strict scrutiny, the Gilmore court would have permitted the state to satisfy the first prong of strict scrutiny based not on showing a compelling governmental interest, the normal strict scrutiny standard, but rather only by showing a “legitimate” governmental interest “other than economic protectionism.” This rational review kind of approach is supported by Supreme Court precedents, as the Gilmore court acknowledged. Regarding the “less restrictive alternative” analysis, the Fourth Circuit did apply a rigorous, strict scrutiny “least discriminatory alternative” analysis.

At some point, the Supreme Court will need to decide whether to ratify this Fourth Circuit approach, or adopt the suggested analysis proposed above and reflected in the Sixth Circuit opinion. If the Court decides to go with the strict scrutiny approach, it would probably be best to clarify the standards for proving discriminatory purpose versus effect, and perhaps make the doctrine more similar to that under the Equal Protection Clause, where only discriminatory purpose triggers strict scrutiny, not mere discriminatory effects, if a similar strict scrutiny standard is going to be used.

216 On this issue of discriminatory purpose versus effect in dormant commerce clause cases, see Julian Cyril Zebot, Awakening a Sleeping Dog: An Examination of the Confusion in Ascertaining
B. The Market Participant Exception

Because dormant commerce clause review, like preemption, is based on implied congressional intent, Congress can use its Commerce Clause power to overturn any Court decision under the dormant commerce clause, either ratifying a state law that the Court struck down, or preempting a state law that the Court held valid. This is true even though one author has argued that the Court should view dormant commerce clause doctrine not as implied congressional intent, but as a categorical constitutional rule denying states ability to regulate, as under the Cooley approach that some things “are in their nature national.”217 As a separate exception, under Article I, § 10, cl. 3, with the consent of Congress, states can “enter into any Agreement or Compact with another State,” even one that might involve burdening interstate commerce. The 1996 Northeast Dairy Compact, which permits the 6 New England states power to regulate the price of milk, is a prime example.

In addition, the Court has created an additional exception to dormant commerce clause review under the “market participant” exception. Beginning in 1976, in Hughes v. Alexandria Scrap Corp.,218 the Court decided that there is no dormant commerce clause review at all if a state acts as a participant in the marketplace, rather than as a regulator or taxing authority. The analytic justification for this development was that a state should be treated equally as a business when the state is running a business. Since private businesses can choose to discriminate against interstate commerce in their choice of customers or choice of business partners, states should not be put to a competitive disadvantage in such an enterprise. The specific facts in Hughes v. Alexandria Scrap involved the state of Maryland paying bounties for every Maryland-titled junk car converted to scrap. Maryland used higher document requirements for out-of-state processors. Rejecting a dormant commerce clause challenge, Justice Powell wrote for the Court that the state's action, as a market participant, was not the kind of action with which the Clause is concerned.

The Hughes opinion was decided 6-3, with an opinion authored by natural law Justice Powell. He was joined by Justices whose decisionmaking style all shared the analytic leanings of either a natural law or formalist approach: Justice Stewart, a conservative Holmesian with natural law leanings; Justice Rehnquist, a conservative Holmesian with formalist leanings; Justice Blackmun, a moderate instrumentalist with natural law leanings; and Chief Justice Burger, a moderate formalist. Thus, although the doctrine was created during the instrumentalist era, it was adopted over the dissents of the most functional Justices on the Court at the time, instrumentalist Justices Marshall and Brennan, and liberal Holmesian, Justice White. Moderate instrumentalist Justice Stevens concurred in the majority’s result, but he indicated that he did not think the market participant doctrine would have much practical effect on dormant commerce clause review generally.219

---

219 Id. at 814-15 (Stevens, J., concurring); id. at 817-23 (Brennan, J., joined by White & Marshall, JJ., dissenting).
The market participant theory was elaborated further in 1980 in *Reeves, Inc. v. Stake*,\(^\text{220}\) where the Court held that South Dakota could prefer its residents in the sale of cement from a state-owned cement plant. For a 5-4 Court, Justice Blackmun said that the framers did not intend to limit the ability of states to operate freely in the open market. Moreover, state proprietary activities often are burdened with the same restrictions imposed on private business. Justice Powell, dissenting, with Justices Brennan, White, and Stevens, said the market participant doctrine should be limited to procuring goods and services for government operations.

In *White v. Massachusetts Council of Construction Employers, Inc.*,\(^\text{221}\) Justice Rehnquist, writing for a 7-2 Court in 1983, upheld an order that all city construction projects should be performed by a work force consisting of at least one-half bona fide city residents. Rehnquist explained that the city was a market participant when spending its own funds because every one affected by the order was, in a sense, working for the city. Justices Blackmun and White agreed that Congress approved the favoritism but said that the city, in using its own money, went beyond *Reeves* to govern private economic relationships, a form of regulation.

The following year, an outer limit to the market participant doctrine was noted in *South Central Timber Development, Inc. v. Wunnicke*.\(^\text{222}\) In this case, the Justices most skeptical of the market participant doctrine, Justices White, Brennan, Blackmun and Stevens (though not Justice Marshall who took no part in the decision of the case), joined in a plurality opinion, which concluded: (1) Congress did not implicitly authorize Alaska to require that timber taken from state lands and sold by the state be processed within the state prior to export; (2) in making such a rule Alaska was a regulator rather than a market participant; and (3) the Commerce Clause barred the local-processing requirement. Justice White distinguished *Hughes* on the ground that Alaska participated in the timber market, but imposed conditions "downstream" in a different market – the timber-processing market. Also, while the state had a market participant interest as a private trader in the immediate sales transaction, the antitrust laws place limits on vertical restraints, and downstream restrictions have a greater regulatory effect than do limits on the immediate transaction.

In *Wunnicke*, Justices Powell and Chief Justice Burger agreed with the “regulator/market participant” distinction, but would have remanded the case to the district court to apply that test in the first instance. Justices Rehnquist and O’Connor, dissenting, said Alaska was only doing indirectly what it could do directly, *i.e.*, sell only processed logs.\(^\text{223}\)

Page 877
In another case to comment on the market participant doctrine, the Court held in 1988 that an Ohio motor vehicle fuel sales tax, which gave a tax credit for the sale of ethanol produced in Ohio, was regulatory rather than proprietary government activity, even though the purpose and effect of the credit was to subsidize a local industry. Therefore, the market participant doctrine did not apply to protect the tax from Commerce Clause scrutiny. The Court has also had to consider whether to extend the market participant exception to other constitutional doctrines, such as the Article IV, § 2 Privileges and Immunities Clause, which the Court so far has declined to do. The Court has also never really considered that while private businesses have strong profit incentives not to engage in discrimination against interstate commerce, except in unusual circumstances, and thus court review of their activities is not particularly necessary, a state-run business entity does not have the same kind of profit incentive. Thus, a doctrine based on the equivalence of state-run and private businesses may be a doctrine not based on adequate empirical premises.

C. New Areas for Dormant Commerce Clause Review

One new area where dormant commerce clause doctrine may have some affect is with respect to the Internet. Over the last few years, state governments have taken a variety of steps within their borders to regulate Internet content flows, including regulating users, hardware and software, Internet service providers, and financial institutions within their territory. In a leading case in this area, American Libraries Association v. Pataki, a federal district court in New York was confronted with a New York statute that prohibited the intentional use of the Internet "to initiate or engage" in certain pornographic communications deemed to be "harmful to minors." As two authors have noted, in enjoining enforcement of the law, the court reasoned:

Because it is difficult for content providers to control access to their websites and communications, a content provider outside New York might inadvertently send proscribed content into New York. Fear of liability in New York thus might chill the activities of a content provider operating legally in California, thereby affecting legitimate commerce wholly outside New York. Moreover, because states regulate pornographic communications differently, "a single actor might be subject to haphazard, uncoordinated, and even outright inconsistent regulation by states that the actor never intended to reach and possibly was unaware were being accessed." These extraordinary burdens on Internet communication were said to outweigh any regulatory benefit in New York. In sum, "the Internet is one of those areas of commerce that must be marked off as a national preserve to protect users from inconsistent legislation that, 

taken to its most extreme, could paralyze development of the Internet altogether.\footnote{228}

The reasoning of *American Libraries Ass'n* extends far beyond the regulation at issue in that case, and threatens to invalidate most state regulation of Internet communications. The decided cases to date have mostly involved pornography regulations and anti-spam statutes, but the logic of the case, and other cases that follow its reasoning,\footnote{229} extend to state anti-gambling laws, computer crime laws, various consumer protection laws, libel laws, licensing laws, and many more. Many academic commentators support the emerging conventional wisdom among courts that the dormant commerce clause requires invalidation of many state Internet communication regulations.\footnote{230} Others have suggested the dormant commerce clause principles, properly applied, “leaves states with much more flexibility to regulate Internet transactions than is commonly thought.”\footnote{231}

In *State v. Heckel*,\footnote{232} the Washington Supreme Court rejected a dormant commerce clause challenge to a commercial electronic mail act, which prohibited misrepresentation in the subject line or transmission path of unsolicited commercial e-mail (UCE) messages. The Court noted that in contrast to the statute in *American Libraries Ass'n*, which could reach “all content posted on the Internet and therefore subject individuals to liability based on unintended access, the Act [in *Heckel*] reaches only those deceptive UCE messages directed to a Washington resident or initiated from a computer located in Washington; in other words, the Act does not impose liability for messages that are merely routed through Washington or that are read by a Washington resident who was not the actual addressee.” Under *Pike*, based on this less severe burden on interstate commerce, summary judgment in favor of the challenger was improper.

Another area where dormant commerce clause doctrine might have some applicability concerns state laws that affect aspects of foreign relations and foreign commerce. Even in the absence of finding such a state law is implied preempted by an Act of Congress, as was the case in *Crosby v. National*
Foreign Trade Council, discussed at § 20.3.1.2 n.146, or similarly preempted by Presidential or administrative agency action pursuant to delegated power from Congress, discussed at § 19.2, or any direct Presidential action under the President’s foreign affairs power, discussed at § 19.3.2, there is an argument that general dormant commerce clause principles should render such state laws invalid as impermissible burdens on foreign commerce.233 There is also an argument that certain of such state laws, in the unusual case that they would not be rendered invalid under preemption or dormant commerce clause principles, could be viewed as invalid as in conflict with the power of the President and Congress to deal with foreign affairs through the Treaty Power, discussed at § 18.3.9, or preempted pursuant to federal common law, discussed at § 20.3.4.1.B.234

§ 20.3.2.3 Analysis of Dormant Commerce Clause Cases Generally

A majority of the Supreme Court Justices appear to believe that after decades of close judicial review, congressional silence manifests an intent that the Court's free trade policy as implemented by dormant commerce clause review should be maintained. Or they may believe that without the Court's review of state commercial laws, Congress might overreact to state laws that burden interstate commerce and thus produce negative results for state "sovereignty." Or, they may be working from implications. Justice Kennedy said in Carbone v. Clarkstown,235 "The Commerce Clause presumes a national market free from local legislation that discriminates in favor of local interests." The Court has recently turned down a request that it reconsider its dormant commerce clause jurisprudence.236

The current two-level system is an improvement over the pre-1937 doctrine represented by Cooley v. Board of Wardens. Under the current approach, state laws that regulate transactions in other states or which discriminate against interstate commerce are subjected to a heightened level of scrutiny under Maine v. Taylor. Such “rank discrimination” against interstate commerce clearly violates the purpose behind the Commerce Clause, and is not the subject of much debate. Applying the Pike v. Bruce Church balancing test to evenhanded legislation has caused some Justices greater concern.

---

236 South Central Bell Telephone Co. v. Alabama, 526 U.S. 160, 171 (1999) (request not made until a brief was filed on the merits); id. (O’Connor, J., concurring) (no reason given to reconsider or abandon the Court’s well-established body of Commerce Clause jurisprudence).
For example, concurring in *Bendix Autolite Corp. v. Midwesco Enterprisers, Inc.*, Justice Scalia said the Court should engage in dormant commerce clause review only if a state statute is discriminatory, and thus the *Taylor* test applies, or creates an impermissible risk of inconsistent regulation by more than one state, and thus implied preemption principles would apply. Justice Scalia charged that determining whether interstate commerce is excessively burdened by state law, as called for by the *Pike* balancing test, is an inquiry ill-suited to the judicial function because it is like asking whether a particular line is longer than a particular rock is heavy. Justice Thomas has joined Justice Scalia in his criticism of *Pike*.

On the other hand, it may be a justifiable system for Congress to rely on the Supreme Court as the first line of defense against excessive state regulation of interstate commerce. The institutional mechanisms and inertia associated with Congress are ill-suited to review thousands of state statutes that get passed each year relating to commercial matters. A more effective institutional response may well be the current system where individual litigants, if burdened by a state law, choose to bring that complaint to a court for initial review. Congress, of course, can always overturn any court decision on dormant commerce clause grounds if Congress so wishes, since the doctrine is ultimately based not on a constitutional requirement, but rather on court attempts to determine implied congressional intent where Congress has been silent. If there was no such dormant commerce clause review, states might vigorously regulate commerce and Congress either might not react at all, or might be goaded into a strong counter-reaction that could deprive the states of all independence in the matter.

Chief Justice Rehnquist has not joined with Justices Scalia and Thomas in their rejection of the *Pike v. Bruce Church* test. However, his conservative preference for states’ rights meant that he was reluctant to invalidate state laws under the Commerce Clause. His reasoning techniques included pushing for greater use of minimum rational basis scrutiny in cases of traditional local concern, such as highway safety cases, and overlooking an appearance of discrimination if the state could have reached the same result by using nondiscriminatory means.

For example, in *Bendix Autolite Corp. v. Midwesco Enterprisers, Inc.*, Justice Kennedy wrote that an Ohio statute that tolled a 4-year statute of limitations on breach of contract and fraud cases for persons or corporations who are not “present” in the state failed post-1937 dormant commerce clause review balancing as an excessive burden on interstate commerce. Justice Scalia concurred in the result because the Ohio tolling statute, applying only to out-of-state corporations, was discriminatory on its face and Ohio had not shown the absence of reasonable nondiscriminatory alternatives, since the Ohio tolling statute applied even to corporations fully able to be sued in Ohio. Chief Justice Rehnquist dissented on the ground that Ohio could have required Bendix to appoint

---

240 *Bendix*, 486 U.S. 888, 891-95 (1988); *id.* at 895-98 (Scalia, J., concurring in the judgment).
an agent to receive process before allowing it to install a furnace in Ohio. Thus, Rehnquist concluded that there was no discrimination against interstate commerce in the case.\textsuperscript{241}

The question remains whether Justice Scalia is correct in his criticism of the \textit{Pike} balancing test. Would his view better contribute to constructive long-run systemic consequences? One's answer may depend on evaluating cases that have invalidated state laws by using \textit{Pike} balancing and whether one believes it is important for states to be free to experiment when Congress has not acted. If Justice Scalia's view had been used, the following representative sample of post-1937 cases, in which state laws were struck down by \textit{Pike}-like balancing, would likely have been decided the other way:

\begin{enumerate}
\item \textit{Southern Pacific} (1945) (Arizona train length rules).\textsuperscript{242}
\item \textit{Bibb} (1959) (Illinois mud-guard law).\textsuperscript{243}
\item \textit{Pike} (1970) (Arizona ban on export of cantaloupes unless marked "Packed in Arizona," as applied to a shipper who would have had to spend $200,000 to build a packing plant).\textsuperscript{244}
\item \textit{Kassel} (1981) (Iowa ban on 65-foot doubles).\textsuperscript{245}
\item \textit{Edgar v. Mite} (1982) (Illinois Business Takeover Act required prior registration of takeover offers where residents owned 10\% of a company's securities, and the Act limited offeror communication with shareholders).\textsuperscript{246}
\end{enumerate}

On balance, the Nation's interests appear to have been advanced by striking down the state laws in these cases. Thus, there is at best an uneasy case for \textit{Pike} review. Without \textit{Pike} review, Congress would be forced to become more regularly involved in reviewing state legislation that interfered with free trade. In addition to the concerns with the institutional mechanisms and inertia of Congress discussed above, whether that would be a good idea also depends upon whether Congress’ performance in considering trade legislation and free trade issues supports the view that Congress would do a better job than the Court in considering these issues, or rather is too greatly influenced by political considerations. Under dormant commerce clause doctrine, of course, if Congress disagrees with any Court decision under the dormant commerce clause, Congress can enact corrective legislation. Indeed, Congress could direct the Court to stop engaging in dormant commerce clause review, or to adopt Justice Scalia’s version of dormant commerce clause doctrine, if Congress so wished. Congress has shown no interest to do either.

§ 20.3.2.4 Different Subject Areas of Dormant Commerce Clause Review

Because dormant commerce clause doctrine is so fact specific, predicting applications of the doctrine requires study of the specific applications that the Court has decided over time. To predict any particular result, it is useful to ask what kind of government regulation is involved (e.g., a tax case, a subsidy case, a price-fixing case, a health or safety measure); what area is being regulated (e.g., a milk case, a waste disposal case, a transportation case); and how the regulation operates (e.g., does it involve in-coming commerce or out-going commerce). To provide some insight into this kind of fact-specific analysis, a review of four sample areas of dormant commerce clause review follows.

A. Commerce Clause Review of State Taxation

It has long been clear that the Import/Export Clause of Article I, § 10, cl. 2 prevents states from enacting taxes that discriminate against goods from abroad.247 During the formalist period, the Court invalidated a number of state taxes for bearing "directly" upon interstate or foreign commerce. During the Holmesian era, however, the Court allowed state taxes on net income attributable to activity within a state, provided that not all of the activity within the state was interstate commerce.248

During the instrumentalist era, the Court created in Complete Auto Transit, Inc. v. Brady249 a four-part test that sustains a state tax against Commerce Clause challenge if the tax: (1) applies to an activity with a substantial nexus with the taxing state; (2) is fairly apportioned; (3) does not discriminate against interstate commerce; and (4) is fairly related to services provided by the state. With respect to the policy underlying this rule, the Court explained that the Commerce Clause balance tips against the tax only when it unfairly burdens commerce by exacting more than a just share from the interstate activity, i.e., under Pike is a "clearly excessive" burden.250

In the three other kinds of dormant commerce clause cases, the tax will likely be unconstitutional. Thus, the Court has held that a tax may violate the Commerce Clause "if it is facially discriminatory, has a discriminatory intent, or has the effect of unduly burdening interstate commerce."251 The Court has upheld the imposition of a Louisiana use tax on catalogs printed outside the state for a Louisiana department store that were delivered to customers in Louisiana without sales tax having been imposed by the state where they were printed.252 The Court has also upheld a 5% Illinois tax on

---

interstate phone calls where the state had a similar tax on intrastate calls. The Court there noted that the economic burden of the tax fell on Illinois telecommunications users, and commented, "It is not a purpose of the Commerce Clause to protect state residents from their own taxes."253 Similarly, the Court held in Oklahoma Tax Commission v. Jefferson Lines, Inc.,254 that Oklahoma could impose a sales tax on the full price of a bus ticket for travel from Oklahoma to another state. Only one state, said Justice Kennedy, could be the site of the agreement, payment, and delivery of some of the services.

Other dormant commerce clause decisions have struck down state taxes. For example, a state cannot require a non-resident to collect a use tax on purchases of goods outside the state where the seller's only connection with customers in the state is by mail or common carrier.255 Also, a state may not tax a value earned by the taxpayer outside its borders unless there is some minimum connection between the state and the transaction.256

In 1988, this area of law was reviewed by Justice Scalia in New Energy Co. of Indiana v. Limbach.257 In Limbach, Ohio allowed a tax credit against its motor vehicle fuel sales tax for each gallon of ethanol sold by fuel dealers, if the ethanol was produced in Ohio or in a state that granted similar tax advantages to ethanol produced in Ohio. The Court held this limited credit to be an invalid discrimination against interstate commerce. Depriving products made elsewhere of a generally available tax credit was discriminatory, despite the reciprocity provision and that only one out-of-state manufacturer was disadvantaged. States may not place out-of-state products at a disadvantage to force other states into reciprocity. Nor had Ohio validated this discrimination by showing that it advanced a legitimate purpose that could not be adequately served by a reasonable nondiscriminatory alternative. Health and commercial reasons advanced by Ohio were merely implausible speculation because health concerns were only incidentally benefitted by the favorable tax treatment for Ohio-produced ethanol. Further, the economic activity encouraged by the credit was not ethanol subsidies in general, but only favorable treatment for Ohio-produced ethanol. Justice Scalia added that direct subsidization of domestic industry ordinarily would not violate the prohibition against a state giving its residents an advantage in the marketplace in connection with regulation of interstate commerce.

256 Allied-Signal, Inc. v. Director, 504 U.S. 768 (1992) (a state cannot include in a corporation's apportionable tax base the capital gain from an arms-length stock investment in another corporation which was not in the same business and did not result in a management role by the investor).

A similar result was reached in *Associated Industries of Missouri v. Lohman*,\(^{258}\) where the Court held in 1994 that a state tax system is invalid in localities where residents who buy an item from a local seller pay a sales tax which is lower than the use tax imposed on neighbors who buy the same item through the mail from a vendor in another state. Justice Thomas wrote for the Court that this was a form of discrimination against interstate commerce that had not been adequately justified. A further such holding, with similar reasoning, was the unanimous 1999 decision in *South Central Bell Telephone Co v. Alabama*.\(^{259}\) There the Court held that a state could not allow only local corporations to reduce their franchise tax by reducing the par value of their stock where that reduction was not shown to offset other taxes imposed solely on domestic corporations.

**B. Requiring Business Operations to be Done in the Home State**

During the formalist era, the Court invalidated without balancing several laws requiring local processing.\(^{260}\) In 1970, the Court formulated the oft-used *Pike* balancing test. It applies where a law is evenhanded on its face and affects interstate commerce only indirectly and incidentally.\(^{261}\) Where the law discriminates in purpose or has more than an incidental effect on interstate commerce, the Court applies the *Taylor* test.

Application of either of these tests can be tricky given the complexity of the factual circumstances faced by the Court. Thus, in some cases, even Justices sharing a similar judicial decisionmaking style can have different views on how the case should be resolved. For example, in *C & A Carbone v. Town of Clarkstown*,\(^{262}\) the Court invalidated a so-called "flow control" ordinance. It required all solid waste to be processed at the city's transfer station before leaving the city. All solid waste handled within the town had to be handled at the town's transfer station. The purpose was to gain processing fees to amortize the cost of the facility. A majority of the Court held that because the law deprived out-of-state businesses of access to a local market it discriminated against interstate commerce. Yet the city had not demonstrated there were no other means to advance its legitimate local interest. For 5 Justices, Justice Kennedy applied the *Taylor* test and said the city had a number of nondiscriminatory alternatives for addressing its health and environmental problems, *e.g.*, uniform safety regulations enacted without any purpose to discriminate. He noted that revenue generation is not a local interest that can justify discrimination against interstate commerce.\(^{S}\)

\(^{258}\) 511 U.S. 641 (1994).

\(^{259}\) 526 U.S. 160 (1999). On the limits on a state’s ability to tax consistent with the dormant commerce clause, see generally Ronald Rotunda, Modern Constitutional Law: Cases and Notes 157-67 (7th ed. 2003) (“An Introductory Note on Commerce Clause Limitations on State Taxation”).

\(^{260}\) See, *e.g.*, Minnesota v. Barber, 136 U.S. 313 (1890) (ban on sale of meat not from locally inspected animals); Foster-Fountain, 278 U.S. 1 (1928) (ban on export of unprocessed shrimp).

Justice O'Connor, concurring in the judgment only, said the ordinance did not involve the kind of discrimination against interstate commerce calling for the *Taylor* test to be used because the ordinance required in-town processors to use the city's transfer station, as well as out-of-town and out-of-state processors. All were treated equally under the ordinance. Even under the *Pike* test for incidental burdens on interstate commerce, however, she noted that the ordinance favored local interests over out-of-state enterprises since the city's garbage sorting monopoly was to be achieved at the expense of all competitors, be they local or non-local. Further, the law imposed an excessive burden on interstate commerce since the city's purpose of insuring the financial viability of the local facility could be achieved by means that would have a less dramatic impact on the flow of goods. Considering what would happen if similar laws were enacted in other states, she said that "pervasive flow control would result in the type of balkanization the Clause is primarily intended to prevent."{263}

In dissent, Justice Souter said the law bestowed no benefit on a class of local private actors, but instead directly aided the government in satisfying a traditional governmental responsibility. Souter then said that the law satisfied the *Pike* test. He said the record did not show any disruption in the flow of trash from Clarkstown to landfills in other states. Its sole effect, he said, was to cause local residents to pay more for trash disposal services.{264}

C. **Preserving Resources for In-State Consumption**

Using the formalist categorical approach, in 1923 the Court invalidated a ban on the export of natural gas in *Pennsylvania v. West Virginia*.{265} The Court reached a similar result under the Holmesian functional approach in 1949 when New York, to protect its local economy, refused to license the sale of milk destined for export. In *H.P. Hood & Sons, Inc. v. Du Mond*,{266} Justice Jackson said:

> Our system, fostered by the Commerce Clause, is that every farmer and every craftsman shall be encouraged to produce by the certainty that he will have free access to every market in the Nation, that no home embargoes will withhold his export, and no foreign state will by customs or duties or regulations exclude them.

In 1978, in *Philadelphia v. New Jersey*,{267} the instrumentalist Court similarly said that New Jersey was being "protectionist" when it barred import of waste because it was running out of landfill space. There a state-authorized ban on accepting out-of-county waste was held unambiguously to discriminate against interstate commerce so the state had the burden of proving that it furthered health and safety concerns which could not adequately be served by nondiscriminatory alternatives.

---

{263} *Id.* at 405-07 (O'Connor, J., concurring in the judgment).

{264} *Id.* at 421-30 (Souter, J., joined by Rehnquist, C.J. and Blackmun, J., dissenting).

{265} 262 U.S. 553 (1923).

{266} 336 U.S. 525, 539 (1949).

The Court said that the state had not met this burden because it provided no valid health and safety reason for limiting the amount of waste that a landfill operator may accept from outside the state, but not the amount the operator may accept from inside the state.

In 1979, the Taylor discrimination standard was applied in Hughes v. Oklahoma.\textsuperscript{268} In Hughes, the Court invalidated a state ban on export of minnows seized within the state. Justice Brennan explained that the state had chosen the most discriminatory means without showing that nondiscriminatory methods were unfeasible. In 1982, in New England Power Co. v. New Hampshire,\textsuperscript{269} a ban on export of electricity generated within a state was struck down as "simple economic protectionism." However, a ban on export of ground water was sustained in Sporhase v. Nebraska.\textsuperscript{270} The Court said that the state was not discriminating since it also controlled intrastate transfer of water. Using the Pike balancing test, the Court said that the burden on interstate commerce was not excessive because: (1) the state was taking reasonable measures to protect a vital resource in a time of shortage, (2) its purpose was protecting health, (3) some precedents recognized state power to restrict transfer of water, (4) a state's claim to ownership of groundwater might support a limited preference to its own citizens, and (5) where a conservation program is in place, groundwater is something like the state-produced cement in Reeves. A reciprocity requirement, however, was invalid, and the Court remanded for Nebraska courts to decide on severability.\textsuperscript{271}

In 1992, the Court reaffirmed Philadelphia in Fort Gratiot Landfill v. Michigan Department.\textsuperscript{272} The Court held that the Commerce Clause was violated when a state imposed an additional fee upon interstate hazardous waste disposed of in the state, absent evidence that waste generated outside the state was more dangerous than waste generated in the state. The Court noted that attempting to isolate a state from the national economy is an "illegitimate means." The Court also referenced the long-standing rule that economic discrimination, which is a finding that leads to a virtual \textit{per se} rule of invalidity, applies not only to laws motivated by a purpose to protect local industries from out-of-state competition, but also to laws that respond to legitimate local concerns by discriminating means or effects against interstate trade. Here the state could have responded in a non-discriminatory fashion by imposing (1) additional fees on all hazardous waste disposed of within the state, (2) an even-handed cap on total tonnage landfilled, or (3) a per-mile tax on all vehicles transporting hazardous waste within the state.

Chief Justice Rehnquist, dissenting, said that the Court had the facts exactly backwards because the states who have isolated themselves are the 34 states that have no hazardous waste facility and the 15 states that have smaller facilities than Michigan. He suggested that Michigan might avoid the consequences of the decision by subsidizing local industries that generate hazardous wastes or,

\textsuperscript{268} 441 U.S. 322 (1979).

\textsuperscript{269} 455 U.S. 331 (1982).

\textsuperscript{270} 458 U.S. 941, 954-57 (1982).

\textsuperscript{271} Id. at 957-58.

under the market participant doctrine, open its own facility but cater only to local customers. \textsuperscript{273} Indeed, reflecting the strong interest that states have in this matter, Justice Rehnquist has noted that nearly 80\% of the nation’s landfills receiving municipal solid waste are now run by state entities, and thus exempt from dormant commerce clause review under the market participant exception. \textsuperscript{274} With congressional consent, of course, states could also enter into multi-state compacts, as provided in Article I, § 10, cl. 3 of the Constitution, to deal with trash disposal problems in their region of the country.

Beyond subsidies, another way to preserve resources for in-state consumption is to deny otherwise applicable tax exemptions to persons whose operations primarily benefit non-residents. The Court considered this in \textit{Camps Newfound/Owatonna, Inc. v. Town of Harrison}. \textsuperscript{275} There the state of Maine, which exempted from property tax all property owned by charitable institutions, argued that dormant commerce clause review was inapplicable to excluding from that exemption all organizations operated principally for the benefit of non-residents, including petitioner's non-profit summer camp. The state gave six reasons to justify their statute: (1) campers are not articles of commerce; (2) the camp's product is delivered and consumed entirely within Maine; (3) the services provided by petitioner do not have a substantial effect on interstate commerce; (4) dormant commerce clause review does not apply to real estate taxes; (5) functionally, the exemption was a subsidy and the state should be viewed as a market participant; and (6) different rules apply to charitable tax exemptions.

Justice Stevens, joined by Justices Kennedy, O'Connor, Souter, and Breyer, rejected each of these six contentions. Stevens replied that dormant commerce clause review should be applied to state action that affects interstate commerce because of \textit{stare decisis} and to preserve the nation’s economic solidarity. The camp’s operations, which generate transportation of persons across state lines, are in commerce. Exempting taxes from dormant commerce clause review would destroy the barrier against protectionism. The discriminatory feature of this tax has not been justified by a lack of alternatives and there is no reason why nonprofit character should exclude an enterprise from coverage of either the affirmative or negative aspects of the Commerce Clause. \textsuperscript{276}

\textbf{D. Limits on Business Entry}

Cases on business entry during the instrumentalist era, as well as the modern era, illustrate use of the \textit{Pike} balancing test and a tendency to create narrow rules for dealing with particular situations. For example, in \textit{Lewis v. BT Investment Managers}, \textsuperscript{277} the Court invalidated in 1980 a Florida law

\textsuperscript{273} \textit{Id.} at 369-72 (Rehnquist, J., joined by Blackmun, J., dissenting).

\textsuperscript{275} 520 U.S. 564 (1997).

\textsuperscript{276} \textit{Id.} at 572-83.

\textsuperscript{277} 447 U.S. 29 (1980).
that barred out-of-state bank holding companies from furnishing investment advice in Florida. Though the law displayed local favoritism or protectionism, Justice Blackmun said the Court need not decide whether this made the law per se invalid because the law could not even pass the Pike test. Applying that test, he said that discouraging economic concentration and protecting citizens against fraud were legitimate interests, but did not justify burdening out-of-state companies since there was no basis to infer that they are more likely to possess monopoly power or to engage in sharp practices. Nor was a barrier, rather than some other control, shown to be the only effective method for protecting against the evils. The state's interest in promoting local control perhaps was not legitimate, but in any event was not well served because the statute did not prevent out-of-state ownership of local bank holding companies who could enter the investment counseling business. Finally, the Court noted that Congress had not consented to this burden on interstate commerce.

By similar reasoning, in Edgar v. Mite,278 the Court struck down in 1982 an Illinois law which required takeover offers for shares in an Illinois corporation to be registered 20 days before the offer became effective and let the target company, but not the offeror, talk to shareholders during those 20 days. Five Justices agreed that the law flunked the Pike test because the Act burdened some out-of-state transactions, but its legitimate purpose of protecting local shareholders was not much advanced because: (1) the Act's disclosure requirement may not substantially enhance shareholder ability to make informed decisions, (2) the Act exempts corporate acquisition of its own shares, and (3) there is an increased risk that tender offers will fail solely because of defensive tactics employed by incumbent management during the 20-day period.

Similar reasoning can be found in the 1989 case of Bendix Autolite Corp. v. Midwesco Enterprises, Inc.279 Justice Kennedy wrote for the Court that an Ohio statute excessively burdened interstate commerce by giving out-of-state corporations the choice of consenting to the general jurisdiction of Ohio courts or having the statute of limitations tolled indefinitely. The state's interest in protecting residents was not much advanced since out-of-state corporations which did business in Ohio could be sued under its long arm statute. Justice Kennedy noted that the statute might have been invalidated under the “virtual per se rule of invalidity,” but said the Court chose to engage in a fuller balancing test anyway. Justice Scalia, concurring, said that a state statute violates the Commerce Clause if and only if, like the Ohio statute, it discriminates against interstate commerce in a respect not required to achieve a lawful state purpose. Otherwise, balancing should be done by Congress.280

On the other hand, again applying Pike, the Court in 1987 sustained an Indiana law protecting shareholders of Indiana corporations from hostile takeovers by allowing control shares to acquire voting rights only if approved by the shareholding resolution. In CTS Corp. v. Dynamics Corp. of America,281 Justice Powell wrote for the Court that the law was not discriminatory because it had

---

280 Id. at 895-98 (Scalia, J., concurring in the judgment).
the same effect on tender offers whether the offeror was resident in Indiana or not. Nor did the Act create an undue risk of inconsistent regulation by different states. Finally, applying *Pike*, the law did not create an excessive burden on interstate commerce because the states have long had power to regulate rights in corporations they create and Indiana has a substantial interest in preventing the corporate form from becoming a shield for unfair dealing. Justice Scalia concurred because he would not apply even a balancing test if a state law was neither discriminatory nor created an impermissible risk of inconsistent regulation by different states. Justices White, Blackmun, and Stevens, dissenting, said the law undermined the policy of the Williams Act by burdening the interstate securities market.

During the 2004 Term, the Court upheld a flat $100 fee that Michigan charged trucks engaged in intrastate commercial hauling. The Court concluded in *American Trucking Association, Inc. v. Michigan Public Service Commission*,\(^\text{282}\) that the $100 fee did not violate the dormant commerce clause because it did not facially discriminate against interstate activities or enterprises, did not burden or discriminate against interstate commerce, was applied evenhandedly to all carriers making domestic journeys, and did not reflect an effort to tax activity taking place out of the state.

§ 20.3.3 The Article IV, § 2 Privileges and Immunities Clause

§ 20.3.3.1 Background History: The Natural Law Era

The Privileges and Immunities Clause of Article IV, § 2 provides: "The Citizens of each State shall be entitled to all Privileges and Immunities of Citizens in the several States." Two issues have dominated interpretation of this provision. The first is defining what are the “privileges and immunities” that the Clause protects. The second is what does it mean for the citizens of each state to be “entitled to” such privileges and immunities “of Citizens in the several States.”

With respect to the first issue, in 1823 Justice Washington wrote, on circuit, in *Corfield v. Coryell*,\(^\text{283}\) that the Privileges and Immunities Clause of Article IV, Section 2, applies only to privileges and immunities that are "fundamental" to the citizens of all free governments, *e.g.*, rights to pass through, reside in, own property in, engage in common occupations, and be exempt from higher taxes than paid by citizens of the state. *Corfield* was followed in 1871 by the Court in *McCready v. Virginia*,\(^\text{284}\) where the Court held that the Privileges and Immunities Clause does not require a state to allow non-residents to share in the common property of the state's citizens, such as the state's wild animals and fishes, and a state may limit to its own citizens the right to plant oysters in public waters.

The Court formally adopted the *Corfield* approach in 1873 in the *Slaughter-House Cases*,\(^\text{285}\) holding that Justice Washington’s approach was correct in limiting the Privileges and Immunities Clause

\(^{282}\) 125 S. Ct. 2419, 2423-26 (2005).

\(^{283}\) 6 F. Cas. 546, 4 Wash. C.C. 371 (1823).

\(^{284}\) 94 U.S. 391 (1871).

\(^{285}\) Slaughter-House Cases, 83 U.S. (16 Wall.) 36 (1873).
protection to fundamental rights. Thus, under this interpretation, states are not required to refrain from all discrimination between local citizens and citizens of other states. This is consistent with the practice of most Western industrialized countries with federal systems of government.286

The Court has never adopted an even more limited interpretation of the Privileges and Immunities Clause that would restrict the privileges and immunities to those dealing with economic rights like trading. Such a more limited theory might have been appropriate under the Articles of Confederation. The Articles prefaced its Privileges and Immunities Clause language by saying its purpose was “the better to secure and perpetuate mutual friendship and intercourse among the people of the different States in this Union.”287

With respect to the second issue, Chief Justice Taney wrote in Dred Scott v. Sandford288 that the Clause gave the citizens of each state, who were also thereby citizens of the United States, an equality in personal and property rights in each other state that such citizen might enter without becoming a resident and, thus, becoming a citizen of that state. The areas of equality were those privileges and immunities granted generally by a state to its own citizens as a group. However, the Clause did not grant equal protection comprehensively because a state was not barred from creating inequalities in rights among its own citizens or between them and outsiders who were not citizens of another state.

Given this interpretation, before the Civil War the Privileges and Immunities Clause did not protect freed slaves from discrimination by states in which they then resided, such as a requirement that they post a bond if they wanted to reside in the state. On more pedestrian matters, it did not protect non-residents against the New York steamboat monopoly in Gibbons v. Ogden.289 One solution to this problem was the Equal Protection Clause of the 14th Amendment, ratified in 1868, which provides, "No state shall deny to any person within its jurisdiction the equal protection of the laws.”290

The Supreme Court has never explicitly acknowledged a connection between the Article IV, § 2 Privileges and Immunities Clause and the Equal Protection Clause. However, one relationship between the two clauses is reflected in Supreme Court doctrine that while the term “citizen” in the Privileges and Immunities Clause also includes "residents,” that is, persons lawfully residing in the

---

289 22 U.S. 1 (1824).

state, the term “citizen” does not include aliens or corporations, while both aliens and corporations are “persons” under the Equal Protection and Due Process Clauses.

§ 20.3.3.2 Modern Privileges and Immunities Clause Doctrine

The modern test under the Article IV, § 2Privileges and Immunities Clause was first stated by a Holmesian Court in 1948 in Toomer v. Witsell. Under Toomer, as further explained in United Building and Construction Trades Council v. Camden, the plaintiff must show that a state or municipal law discriminates against citizens of other states and that the discrimination relates to a fundamental privilege or immunity, one bearing on the vitality of the nation as a single entity. If the plaintiff makes this prima facie case, and thus triggers the Privileges and Immunities Clause, the burden then shifts to the state. The Court will presume the state has violated the Clause, unless the state can show that substantial reasons exist for the difference in treatment, and the discrimination is closely related to those reasons, considering the availability of less discriminatory means.

As applied by modern courts, this “substantial reasons/close relationship” test is a version of the “substantial or important” governmental interest and “substantial relationship/narrowly drawn” test of intermediate scrutiny under the Equal Protection Clause, discussed at §§ 21.2.2.1 & 26.1.1.2. This similarity underscores the practical connection between Privileges and Immunities Clause and Equal Protection Clause doctrine. Such a substantial reason may be established by showing that non-residents are a peculiar source of the evil at which the law is aimed. The close relation does not exist, however, if the state could achieve its ends by substantially less discriminatory means.

Applying the Toomer test, the Court held in Baldwin v. Montana Fish and Game Commission that a state may charge nonresidents a higher fee to hunt elk as a sport without violating the Clause. The reason is that although states cannot impede interstate commerce by hoarding resources, the Privileges and Immunities Clause protects only interests which are “fundamental,” that is, interests “sufficiently basic to the livelihood of the nation,” and hunting elk for sport is not such an interest.

296 Id. at 222.
297 Toomer, 334 U.S. at 398.
Justice Brennan, dissenting with Justices White and Marshall, said that discrimination against nonresidents on "any" matter, whether substantial or not, should trigger the Clause.\textsuperscript{299}

Determining whether a right is "fundamental" tracks the substantive due process doctrine of "fundamental" rights, discussed at § 27.3, as well as being related to the conclusion under modern Contracts Clause doctrine that only "substantial" impairments of contract rights trigger that doctrine, discussed at § 22.1.4 n.27, or in cases of regulations which diminish property values only "substantial deprivations" trigger a Takings Clause analysis, discussed at § 22.2.5.2 n.104-09. Justice Brennan’s view that "any" effect should trigger Privileges and Immunities Clause review is similar to the instrumentalist position under the Commerce Clause that "any" affect on interstate commerce should give Congress constitutional power to act, rather than the current majority view that only "substantial affects" on interstate commerce give Congress power under the Commerce Clause, as discussed at § 18.2.5. In later cases, Justice Brennan acquiesced in the "sufficiently basic" or "fundamental" language of \textit{Baldwin}. In \textit{Hicklin v. Orbeck},\textsuperscript{300} Justice Brennan wrote that Alaska cannot require oil and gas pipelines to prefer residents as employees because: (1) engaging in a common calling is fundamental to the national economy and interstate harmony, (2) discrimination against such a privilege is barred without a substantial supporting reason, and (3) such reason does not exist unless nonresidents are the source of the problem and the discrimination bears a substantial relationship to the problem.\textsuperscript{S}

Writing for the Court in \textit{United Building and Construction Trades Council v. Camden},\textsuperscript{301} Justice Rehnquist did not require nonresidents to be "the" source of the problem. It was enough if they were "a" source of the evil. In \textit{United Building}, the Court considered whether the Clause was violated by a municipal ordinance which, as part of a state-wide affirmative action program, required that at least 40% of the employees of contractors and subcontractors working on city construction projects be local residents. The Court first held that the Privileges and Immunities Clause applies to city ordinances since cities are merely subdivisions of a state. Second, the ordinance was not immune from review simply because some in-state residents were disadvantaged. Citizens not residing in the city cannot be counted on to protect the interests of out-of-state residents. This result is consistent with \textit{Dean Milk}, where the city of Madison’s discrimination against both out-of-city and out-of-state milk refineries raised problems under the dormant commerce clause, discussed at § 20.3.2.1.C n.184. Third, the ordinance burdened the pursuit of a common calling, and that is a privilege sufficiently basic for interstate harmony to fall within the clause. Thus, the city had to show a substantial reason for the difference in treatment, and a trial should be held on its claim that (1) persons who "live off" the city without living in it are a source of the economic and social ills against which the ordinance was aimed and (2) the law is closely related to that end.

Justice Blackmun, dissenting, said that an extension of the clause to discrimination based on municipal residence has little practical justification and no historical or textual support. New Jersey residents living outside Camden can protect themselves by state political processes and this will

\textsuperscript{299} \textit{Id.} at 398-402 (Brennan, J., joined by White & Marshall, JJ., dissenting).

\textsuperscript{300} 437 U.S. 518 (1978).

further the interest of residents in other states.\textsuperscript{302} However, just as the Equal Protection Clause, discussed at § 26.1 nn.1-4, and the dormant commerce clause, as in \textit{Dean Milk}, discussed at § 20.3.2.1.C n.184, apply to state and local action, so does the Privileges and Immunities Clause.

In applying the \textit{Toomer} test, the Court has not allowed a state to discriminate against nonresidents regarding employment in the oil industry, as in \textit{Hicklin v. Orbeck}\textsuperscript{303}; has refused to allow states to deny nonresidents access to medical services, as in \textit{Doe v. Bolton}\textsuperscript{304}; and has refused to allow a state to deny nonresidents the right to engage in commercial shrimp fishing, as in \textit{Toomer v. Witsell}\textsuperscript{305}

Three recent applications of the Clause were in the context of nonresident admission to practice law. Those cases make clear that the required “substantial reason/close relationship” test is a version of intermediate scrutiny, discussed at § 7.2.1 text following n.42, requiring the state to prove its action: (1) advances important or substantial government interests; (2) is substantially related to advancing those interests; and (3) is not substantially more discriminatory than it needs to be.

In \textit{Supreme Court of New Hampshire v. Piper},\textsuperscript{306} Justice Powell wrote that denying admission to nonresidents who have passed a state's bar exam triggers a Privileges and Immunities Clause analysis, since practicing law is an activity sufficiently basic to the livelihood of the Nation. The first goal advanced by the state, having lawyers be familiar with local law, was dismissed by the Court because the state, which has the burden of proof, presented no evidence that nonresident attorneys would be any less likely to keep abreast of the law than resident attorneys. A second state concern with ensuring ethical practice was dismissed because there was no reason to believe that a nonresident lawyer would conduct his practice in a more dishonest manner than a resident lawyer. These two reasons thus failed the “substantial relationship” part of the intermediate scrutiny.

The state’s third reason for the discrimination, having lawyers available for court proceedings, while perhaps related to the in-state residency requirement, could be reached by the substantially less discriminatory means of requiring local counsel if availability proved to be a problem. The fourth reason, promoting \textit{pro bono} work, could also be advanced by a substantially less discriminating mean, requiring all licensed attorneys to do \textit{pro bono} work. These two reasons thus failed the third “substantially more discriminatory than necessary” part of intermediate scrutiny. Reflecting his conservative predisposition to defer to states, Justice Rehnquist dissented in the case.

In \textit{Supreme Court of Virginia v. Friedman},\textsuperscript{307} Justice Kennedy, for a 7-2 Court, invalidated the

\textsuperscript{302} \textit{Id.} at 223-35 (Blackmun, J., dissenting).
\textsuperscript{303} 437 U.S. 518 (1978).
\textsuperscript{304} 410 U.S. 179 (1973).
\textsuperscript{305} 334 U.S. 385 (1948).
\textsuperscript{306} 470 U.S. 274 (1985); \textit{id.} at 289-90 (Rehnquist, J., dissenting).

condition in Virginia's reciprocity admissions procedure that a lawyer otherwise qualified for admission "on motion" be a permanent resident of Virginia. It was irrelevant that Virginia could require all applicants to pass the bar. The question was whether Virginia could discriminate among otherwise equally qualified applicants solely because of residence, which, for analytic purposes, is equal to citizenship. Justice Kennedy wrote that the state could as well pursue its goals with adequate nondiscriminatory means. First, the Court could not say that nonresidents were less likely to respect the bar and be familiar with Virginia law, especially since Virginia requires an oath of intention to maintain an office and a regular practice in the state. Second, requiring attorneys to keep up-to-date on the law can be accomplished by requiring attendance at periodic continuing legal education courses. Finally, the law's office requirement is fully adequate to protect whatever interest the state may have in requiring its lawyers to practice full-time. Reflecting their conservative predisposition to defer to states, Chief Justice Rehnquist and Justice Scalia dissented in this case, saying that the states should be free to consider residence when admitting lawyers.

In the third case, *Barnard v. Thorstenn*, the Court held that after Congress by statute made the Privileges and Immunities Clause of Article IV apply to the Virgin Islands, those islands could not make residence a requirement for admission to the bar. The Court found no substantial relationship to legislative goals because adequate non-discriminatory alternatives were available. For example, the interest in assuring that counsel will be available on short notice for unscheduled proceedings could be served by associating with local counsel. And, as in the previous cases, excluding residents as a class was not required to solve the problems of conflicting appearances, keeping knowledge current, or supervising lawyer ethics. The Court explained that the underlying policy was an understanding that our Founders "thought it important to our sense of nationhood that each State be required to make a genuine effort to treat nonresidents on an equal basis with residents." Chief Justice Rehnquist dissented, joined by Justices White and O'Connor, on the ground that the conditions of practice in the distant and isolated Virgin Islands justified a residence requirement.

§ 20.3.4 Federal Common Law

The ability of states to regulate certain areas may be affected by "federal common law." As noted at § 17.2.1, under Article III, § 1 of the Constitution, "The Judicial Power of the United States shall be vested in one supreme Court, and in such inferior Courts as Congress may from time to time ordain and establish." Under Article III, § 2, cl. 1, "The Judicial Power shall extend to all Cases, in Law and Equity, arising under this Constitution" and in other cases. At the time the Constitution was adopted, and consistent with a natural law understanding of judicial power, the term "Judicial Power" would have contemplated that the federal courts would have common law powers, including powers of both "law and equity," similar to the common law power of state courts.

The major difference between federal common law power and state common law power would have been that while state courts have general common law power, co-extensive with the state legislative

---

308 489 U.S. 546, 559 (1989); id. at 559-60 (Rehnquist, C.J., joined by White & O'Connor, JJ., dissenting)

power to legislate on any matter, the federal common law power was limited to those areas over which federal power existed. This is a consequence of the fact that the federal government is a government of limited powers. Federal judges' jurisdiction is limited to what Congress has granted, and Congress can grant only what the Constitution permits. In contrast, state governments have general legislative power, and state judges have general jurisdiction and power to make common law, as long as that law is consistent with federal and state statutory and constitutional law.310

Consistent with the initial period of natural law being based more on Stage 3 concrete operational thought, rather than formal operational thought and its abstract reasoning capabilities, discussed at § 15.4.1, the areas over which federal courts exercised judicial powers derived from concrete customary judicial notions of power without regard to any overarching theoretical structure. For example, as St. George Tucker noted in his 1803 Annotated Edition of Blackstone's Commentaries:

In short, as the matters cognizable in the federal courts, belong . . . partly to the law of nations, partly to the common law of England; partly to the civil law; partly to the maritime law, comprehending the laws of Oleron and Rhodes; and partly to the general law and custom of merchants; and partly to the municipal laws of any foreign nation, or of any state in the union, where the cause of action may happen to arise, or where the suit may be instituted; so, the law of nations, the common law of England, the civil law, the law maritime, the law merchant, or the lex loci, or law of the foreign nation, or state, in which the cause of action may arise, or shall be decided, must in their turn be resorted to as the rule of decision, according to the nature and circumstances of each case, respectively.311

With regard to which law should apply, the Rules of Decision Act, § 34 of the 1789 Judiciary Act, provided that “the laws of the several states . . . shall be regarded as rules of decision in trials at common law in the courts of the United States in cases where they apply.” Professor William Fletcher has noted about this provision, it was “generally understood to be merely declaratory of existing law; that is, even if the section had never been enacted, the federal courts would have followed the local law of the states in cases where it applied.” For other cases, the court would follow “general law,” that which “existed by common practice and consent among a number of sovereigns.” As an example, Professor Fletcher discussed the law of marine insurance, noting that federal courts, even when sitting in diversity, felt free to develop a general law of marine insurance, irrespective of local law on the subject.312

A more important example of this general common law during the original natural law era concerns commercial transactions and the law of contracts. In his treatment of early federal common law, Professor Stewart Jay observed:

312 Id. at 1554-75.
Justice Wilson, in his charge to the grand jury in *Henfield's Case*, expounded this theory by distinguishing matters subject to “local laws” from those decided under “the law of nations” or “the law of merchants.” Far from being extraordinary, Wilson's view was shared by persons of diverse sympathies, such as St. George Tucker and James Sullivan. The latter wrote in 1801:

> It seems to be the opinion of the best writers, ancient and modern, that as contracts arose from commerce, they ought to be governed by the *jus gentium*, the law of nations, known and established over the commercial world. . . . There is no act of any particular legislature, for the recovery of money due on policies, bills of exchange, charter parties, freight, &c. but we find the same form of contract, the same manner of construction, and the same remedies, all over the world.

Sullivan was exaggerating the actual uniformity of commercial law, but the idea of bringing the law of merchants under the rubric of the law of nations was accepted. Similarly, the body of legal rules and principles that we now call the “law of conflict of laws” or “private international law” would have been included within the law of nations.

Accordingly, Lord Mansfield could write, concerning a point of marine insurance law, that “[t]he mercantile law, in this respect, is the same all over the world.” By this he meant that merchants behaved similarly everywhere, and their practices would be applied universally to define norms of behavior. Again, this may not have stated the actual truth of uniformity; rather, he referred to a process by which all courts were to investigate international customs and practices. Consistent with this view, Chief Justice Marshall would state in *Gibbons v. Ogden* that the right to engage in commerce “derives its source from those laws whose authority is acknowledged by civilized men throughout the world.”

During the original natural law era, this principle was adopted by the Supreme Court most famously in the 1842 case of *Swift v. Tyson*, discussed at § 20.3.1.4.1.D.

The *Swift* doctrine of a “federal general common law” of contracts was continued during the formalist era based on the literal holdings of cases following *Swift v. Tyson*. It also was supported by the pro-business, conservative policy of the federal courts during this era, discussed at § 14.2.2, as the *Swift* approach permitted the federal courts to ensure contract and commercial law decisions under diversity jurisdiction reflected appropriate pro-business policies elaborated by the federal judiciary.

This understanding of “federal common law” came to an end in 1938. Reflecting the Holmesian deference-to-government positivist perspective on the law, where law derives from positive acts of

---

the sovereign, the Supreme Court stated in 1938 in *Erie Railroad Co. v. Tompkins*\(^\text{315}\) that there is "no federal general common law." The Court noted in *Erie* that the common law of contracts and commercial law derives not from some natural law “brooding omniscience in the sky,” acknowledged by all civilized men throughout the world, but rather from sovereign entities. Since states are the appropriate sovereign entities for purposes of state contract and commercial law, state law should be applied in such state cases that are in federal court pursuant to diversity jurisdiction. As for which state law would apply when the parties reside in different states, and thus diversity jurisdiction applies, the answer derives, as it would for such cases if heard in state courts, from general choice of law principles. While those principles were more categorical before 1937, and, like personal jurisdiction in *Pennoyer v. Neff*, discussed at § 17.2.3.2 n.165, based more exclusively on physical concrete presence, reflecting Stage 3 concrete operational thought considerations, a balancing test is typically used today to determine which state has the most significant relationship to the transaction, based on such factors as the locus of the place of contracting, the place of negotiation of the contract, the place of performance, the location of the subject matter of the contract, and the domicile, residence, nationality, place of incorporation, and place of business of the parties.\(^\text{316}\)

Despite this rejection of “federal general common law” over state law matters in federal court for purposes of diversity jurisdiction, the Holmesian-era Court recognized the appropriateness, the need, and the authority for "federal common law" in areas where federal sovereignty was present.\(^\text{317}\) This understanding of federal common law has been followed by the Supreme Court during the instrumentalist and modern natural law era. The Supreme Court summed up the doctrine in 1981 in *Texas Industries, Inc. v. Radcliff Materials*:

> These instances are "few and restricted,"and fall into essentially two categories: those in which a federal rule of decision is "necessary to protect uniquely federal interests," and those in which Congress has given the courts the power to develop substantive law.

> The vesting of jurisdiction in the federal courts does not in and of itself give rise to authority to formulate federal common law, nor does the existence of congressional authority under Art. I mean that federal courts are free to develop a common law to govern those areas until Congress acts. Rather, absent some congressional authorization to formulate substantive rules of decision, federal common law exists only in such narrow areas as those concerned with the rights and obligations of the United States, interstate and international disputes implicating the conflicting rights of States or our relations with foreign nations, and admiralty cases. In these

\(^{315}\) 304 U.S. 64, 78 (1938).

\(^{316}\) See Harold P. Southerland, *A Plea for the Proper Use of the Second Restatement of Conflict of Law*, 27 Vt. L. Rev. 1, 1-8, 17-18 (2002). For discussion of the various balancing tests in use by various states to determine choice of law issues, and an analysis that some of them should be viewed as raising “due process” or “full faith and credit” constitutional issues as not giving sufficient respect to which state has the greater interest in the underlying litigation, see Scott Fruehwald, *Constitutional Constraints on State Choice of Law*, 24 U. Dayton L. Rev. 39 (1998).

instances, our federal system does not permit the controversy to be resolved under state law, either because the authority and duties of the United States as sovereign are intimately involved or because the interstate or international nature of the controversy makes it inappropriate for state law to control.\textsuperscript{318}

In applying this doctrine, the Court stated in 1997 in \textit{Atherton v. FDIC}:

"Whether latent federal power should be exercised to displace state law is primarily a decision for Congress," not the federal courts. Nor does the existence of related federal statutes automatically show that Congress intended courts to create federal common-law rules, for "Congress acts . . . against the background of the total \textit{corpus juris} of the states. . . ." Thus, normally, when courts decide to fashion rules of federal common law, "the guiding principle is that a significant conflict between some federal policy or interest and the use of state law . . . must first be specifically shown." Indeed, such a "conflict" is normally a "precondition."\textsuperscript{319}

This modern doctrine, rejecting the approach of \textit{Swift v. Tyson}, is consistent with a reasoned elaboration of the law. Federal common law power should be related to areas of federal authority, not state authority. While the modern natural law concept of “equal concern and respect,” discussed at § 16.2.1, would support a general obligation that “promises should be kept,” that principle does not determine every aspect of contract and commercial law, as noted by Professor Fried at § 4.2.3 n.61. Elaboration of details of contract law are thus properly subject to other sovereign entities to develop – state, federal, and international law and treaties – not general federal common law.

\textbf{§ 20.3.4.1 Areas of Uniquely Federal Interest}

A. Rights and Obligations of the United States

One area of federal common law concerns the rights and duties of the United States on the commercial paper which it issues. The Court has acknowledged a strong interest in having those rights governed by a rule uniform across the Nation. In terms of the content of federal law, the Court noted in \textit{Clearfield Trust Co. v. United States},\textsuperscript{320} “[W]hile the federal law merchant developed for about a century under the regime of \textit{Swift v. Tyson} represented general commercial law rather than a choice of a federal rule designed to protect a federal right, it nevertheless stands as a convenient source of reference for fashioning federal rules” regarding commercial paper.

A second area of federal common law applies to contracts entered into by parties with the federal government. Where no federal statute or administrative regulation governs the issue before the court, the Supreme Court has stated that the interests of uniformity require there be one law applicable to federal contracts, rather than federal contracts being governed by 50 different state standards depending on the location of contract performance. As the Court stated in \textit{United States

\textsuperscript{319} 519 U.S. 213, 218 (1997) (citations omitted).

\textsuperscript{320} 318 U.S. 363, 366-67 (1943).
v. Seckinger,\textsuperscript{321} “The validity and construction of contracts through which the United States is exercising its constitutional functions, their consequences on the rights and obligations of the parties, the titles or liens which they create or permit, all present questions of federal law not controlled by the law of any state.' In fashioning a federal rule we are, of course, guided by the general principles that have evolved concerning the interpretation of contractual provisions such as that involved here.”

A third area where the Court has been willing to have “federal common law” displace otherwise governing state law has been in the federal acquisition of property within a state. Thus, in United States v. Little Lake Misere Land Co.,\textsuperscript{322} the Court noted that the right of the United States to seek legal redress for proprietary transactions is a federal right, so that the courts of the United States may formulate a rule of decision according to their own standards. The Court reached this conclusion despite acknowledging that the great body of law which controls acquisition, transmission, and transfer of property is found in the statutes and decisions of the state courts, and that, discriminatory state action aside, state law governed generally the federal government’s proprietary relations with the state. The Court noted, however, that “even assuming in general terms the appropriateness of 'borrowing' state law, specific aberrant or hostile state rules do not provide appropriate standards for federal law.”

B. Interstate and International Disputes

The Supreme Court has consistently held that cases involving boundary disputes and other matters of resolving the conflicting rights of states are governed by federal common law. Many of these cases come to the Supreme Court under the Court’s original jurisdiction for cases involving states versus states.\textsuperscript{323} Other cases, however, even if not directly involving boundary disputes, are handled in the same fashion. As the Court noted in Hinderlider v. La Plata River & Cherry Creek Ditch Co.,\textsuperscript{324} “Jurisdiction over controversies concerning rights in interstate streams is not different from those concerning boundaries. These have been recognized as presenting federal questions.”

Cases involving international relations, not governed directly by the federal Constitution, statutes, or treaties, are also an area of federal common law. As the Court noted in Banco Nacional de Cuba v. Sabbatino,\textsuperscript{325} “If federal authority, in this instance this Court, orders the field of judicial competence in this area for the federal courts, and the state courts are left free to formulate their own rules, the purposes behind the doctrine could be as effectively undermined as if there had been no federal pronouncement on the subject. . . . [W]e are constrained to make it clear that an issue

\begin{itemize}
  \item \textsuperscript{321} 397 U.S. 203, 209-10 (1970) (citations omitted).
  \item \textsuperscript{324} 304 U.S. 92, 110 (1938).
  \item \textsuperscript{325} 376 U.S. 398, 424-25 (1964).
\end{itemize}
concerned with a basic choice regarding the competence and function of the Judiciary and the National Executive in ordering our relationships with other members of the international community must be treated exclusively as an aspect of federal law.”

In a comprehensive discussion of federal court litigation concerning foreign affairs matters during the first 50 years of the Constitution’s history, Professor Ariel N. Lavinbuk noted:

Under Chief Justices Jay and Marshall, the Court heard more than 1300 cases between 1791 and 1835. . . . 323 of these cases, or one in four, involved the foreign affairs of the United States. Nearly two in five cases heard by the Jay Court involved international issues. During John Marshall's thirty-five-year term as Chief Justice, only one year, 1803, failed to see a single foreign relations case reach the Supreme Court.

More than half of all foreign affairs cases involved a foreign party or transaction. . . . A larger number involved foreign or international laws, though international laws outnumbered foreign ones almost five to one. Cases involving the extraterritorial application of U.S. law reached the Supreme Court 110 times. The vast majority of these cases involved nonintercourse or embargo acts or the prohibition against slave trading.326

In addition, Article I, § 8, cl. 10 grants to Congress the power, among other things, "[t]o define and punish . . . Offenses against the Law of Nations . . . ." This clause grants Congress power to incorporate international law into federal law, even when such norms infringe upon areas otherwise regulated by the states.327 Further, as the Court noted in Sosa v. Alvarez-Machain,328 where Congress has passed a jurisdictional statute, such as the Alien Tort Claims Act, which creates on its own new no causes of action, the reasonable inference is that the statute was intended to have practical effect the moment it became law and the common law would provide some causes of action for international law violations with a potential for personal liability. The Sosa Court noted that no development in the last two centuries has categorically precluded federal courts from “recognizing a claim under the law of nations as an element of common law." Nevertheless, there are “good reasons for a restrained conception of the discretion a federal court should exercise in considering a new cause of action of this kind . . . [C]ourts should require any claim based on the present-day law of nations to rest on a norm of international character accepted by the civilized world and defined with a specificity comparable to the features of the 18th-century paradigms.”

This notion of federal common law also applies to cases involving the propriety rights of Native Americans, and questions such as the role of the federal judiciary in determining the proper extent of jurisdiction of state courts over aliens.

C. Admiralty and Maritime Cases

A third area of federal common law concerns cases involving admiralty and maritime jurisdiction. As has been noted, general maritime law is probably the oldest body of federal common law. During the original natural law era, the Supreme Court noted in *American Ins. Co. v. 356 Bales of Cotton*, “A case in admiralty does not, in fact, arise under the Constitution or laws of the United States. These cases are as old as navigation itself; and the law, admiralty and maritime, as it has existed for ages, is applied by our Courts to the cases as they arise.”

Similarly, during the formalist era, in *Southern Pacific Co. v. Jensen*, the Court said that “in the absence of some controlling statute, the general maritime law, as accepted by the Federal courts, constitutes part of our national law, applicable to matters within the admiralty and maritime jurisdiction.” Federal admiralty law thus displaces state law that "works material prejudice to the characteristic features of the general maritime law, or interferes with the proper harmony and uniformity of that law in its international and interstate relations." Since 1937, consistent with the focus in *Erie* on federal and state sovereign interests, and the “restricted” nature federal common law, in the language of the 1981 *Texas Industries* case, cited at § 20.3.4 n.318, greater attention has been paid in admiralty and maritime law to congressional statutes and state rights. Thus, much modern admiralty law is an elaboration of various congressional statutes in the area, such as the Carriage of Goods by Sea Act, the Jones Act, the Death on the High Seas Act, the Longshore and Harbor Workers' Compensation Act, the Outer Continental Shelf Lands Act, and other such statutes. With regard to the extent of preemption of state law in this area, commentators have worked to limit the broad language of the 1917 *Jensen* opinion. So have some Circuit Courts of Appeals. For example, the Court of Appeals for the

---

333 244 U.S. 205, 215-16 (1917).

Fifth Circuit has tried to refine the \textit{Jensen} test into more workable criteria. As summarized by Professor Robert Force, under the Fifth Circuit approach:

(1) "state law is not preempted when it contains a detailed scheme to fill a gap in maritime law"; 
(2) "state law is not preempted when the law regulates behavior in which the state has an especially strong interest"; 
(3) "maritime law preempts [state law] whenever a uniform rule will facilitate maritime commerce, or, conversely, when non-uniform regulation will work a material disadvantage to commercial actors"; 
(4) "maritime law preempts state law when the state law impinges upon international or interstate relations"; 
(5) the final factor, which the court admitted to be stated "badly" [actually “badly” in the Fifth Circuit’s opinion] is "that plaintiff should win personal injury or death maritime tort claims." While far from perfect, this approach lends itself more towards balancing state interests with the interests that ultimately underlie the need for federal maritime law.336

D. The Original Natural Law Era Doctrine of \textit{Swift v. Tyson}

In 1842, the Supreme Court held in \textit{Swift v. Tyson} that the Rules of Decision Act of 1789 did not preclude federal courts from creating common law in areas outside the federal area of competence. The Court said that the Act was limited to statutory law, and, therefore, did not include common law created by state courts. After \textit{Swift}, federal courts created what came to be known as "general law" or "general federal common law" to govern diversity cases involving contract and commercial law. General law differed from federal common law because, although both were created by federal courts, general law referred to common law outside the scope of direct federal regulatory control, such as state contract and commercial law.337

This doctrine was rejected in 1938 as part of the Holmesian rejection of natural law understood as a “brooding omniscience in the sky,” particularly as based on general customary practices, as discussed at § 3.4 n.92. Thus, in state contract, commercial law, tort, and other cases heard today in federal courts pursuant to federal diversity jurisdiction, the federal court applies state substantive law. It has been noted, "\textit{Erie} left to the states much of the necessary modern private law development in torts and contracts through case law and statutes and avoided the necessity of ad hoc decisions in this area by federal courts not particularly well qualified to develop private substantive law."338 However, as discussed at § 20.3.4.2.D, in these cases, the court applies federal procedural law, pursuant to congressional delegated power to the federal courts to apply their own rules of procedure.

§ 20.3.4.2 Congressionally Granted Power to Develop Law

A. Antitrust Laws

The first two sections of the Sherman Act, 15 U.S.C. §§ 1, 2, forbid, in part, "Every contract, combination . . ., or conspiracy, in restraint of trade" and "monopoliz[ing], or attempt[ing] to monopolize, . . . any part of the trade or commerce." The Court noted in National Society of Professional Engineers v. United States,339 "Congress, however, did not intend the text of the Sherman Act to delineate the full meaning of the statute or its application in concrete situations. The legislative history makes it perfectly clear that it expected the courts to give shape to the statute's broad mandate by drawing on common-law tradition [including] the existing law of monopolies and restraints on trade."

In Texas Industries, Inc. v. Radcliff Materials,340 the Court cautioned, “It does not necessarily follow, however, that Congress intended to give courts as wide discretion in formulating remedies to enforce the provisions of the Sherman Act or the kind of relief sought through contribution. The intent to allow courts to develop governing principles of law, so unmistakably clear with regard to substantive violations, does not appear in debates on the treble-damages action created . . . . [T]he power of federal courts under the Act suggests a sharp distinction between the lawmaking powers conferred in defining violations and the ability to fashion the relief available to parties claiming injury.” Thus, the Court noted that in contrast to the sweeping language of §§ 1 and 2 of the Sherman Act, the remedial provisions defined in the antitrust laws “are detailed and specific: (1) violations of §§ 1 and 2 are crimes; (2) Congress has expressly authorized a private right of action for treble damages, costs, and reasonable attorney's fees; (3) other remedial sections also provide for suits by the United States to enjoin violations or for injury to its "business or property," and parens patriae suits by state attorneys general; (4) Congress has provided that a final judgment or decree of an antitrust violation in one proceeding will serve as prima facie evidence in any subsequent action or proceeding; and (5) the remedial provisions in the antimerger field, not at issue here, are also quite detailed.”

B. Laws Relating to Collective Bargaining

Federal common law also may come into play when Congress has vested jurisdiction in the federal courts and empowered them to create governing rules of law. For example, in Textile Workers v. Lincoln Mills,341 the Court read § 301(a) of the Labor Management Relations Act, 29 U.S.C. § 185(a), not only as granting jurisdiction over defined areas of labor law, but also as vesting in the courts the power to develop a common law of labor-management relations within that jurisdiction. The Court concluded that “the substantive law to apply in suits under § 301(a) is federal law, which the courts must fashion from the policy of our national labor laws.”

C. Congressional Statutes that Incorporate Non-Federal Law

Another kind of congressionally authorized federal common law occurs when Congress incorporates by reference non-federal law as part of the statutory criteria. With respect to the circumstances where such incorporation may apply, as for applicable statute of limitations under various federal statutes, including § 1983 actions, Professor Tribe has observed:

Although Congress sometimes intends that a statutory term be given content by the application of state law, “the meaning of [a] term . . . as used in . . . a federal statute is by definition a federal question,” and the Court usually starts “with the general assumption that in the absence of a plain indication to the contrary, . . . Congress when it enacts a statute is not making the application of the federal act dependent on state law.” The Court has noted that “federal statutes are generally intended to have uniform nationwide application,” and, “[a]ccordingly, the cases in which we have found that Congress intended a state-law definition of a statutory term have often been those where uniformity clearly was not intended.” In addition, “a second reason for the presumption against the application of state law is the danger that ‘the federal program would be impaired if state law were to control.’”

On the basis of this presumption against state-law incorporation in federal statutes, the Court has often found that Congress intended to refer federal courts to long-standing common-law principles, thereby creating a species of federal common law in the process of statutory interpretation [discussing the term “domicile” under the Indian Child Welfare Act of 1978 and the term “burglary” under the Career Criminals Amendment Act of 1986].

D. Issues of Procedures and Remedies

The Supreme Court has long defined "inherent powers" as those which "cannot be dispensed with . . . because they are necessary to the exercise of all others." It has identified some examples, such as managing litigation, imposing sanctions, and supervising the administration of criminal justice.

Federal trial courts have used this docket-management power to employ various pressure tactics, such encouraging settlements, ordering litigants to submit to summary jury trials, exercising discretion over sanctioning, and discretionary assessment of attorney’s fees. Federal judges have justified such applications of inherent authority by references to Article III, traditional equitable or common law practices, efficiency, prudence, or separation of powers. Sometimes these powers have

---

been “abused throughout history, especially against those perceived as socially threatening (e.g.,
labor leaders, Communists, and civil rights activists).”  

In addition, the Court has recognized that when Congress creates rights under a statutory scheme,
judicially derived federal law governs remedial issues left unaddressed in the statutory text. In
resolving such cases, the Court indicated in *Semtek International, Inc. v. Lockheed Martin Corp.*
that a court should:

> endeavor to fill the interstices of federal remedial schemes with uniform federal rules only when
> the scheme in question evidences a distinct need for nationwide legal standards, or when
> express provisions in analogous statutory schemes embody congressional policy choices readily
> applicable to the matter at hand. Otherwise, we have indicated that federal courts should
> "incorporat[e] [state law] as the federal rule of decision," unless "application of [the particular]
> state law [in question] would frustrate specific objectives of the federal programs." The
> presumption that state law should be incorporated into federal common law is particularly
> strong in areas in which private parties have entered legal relationships with the expectation that
> their rights and obligations would be governed by state-law standards [such as commercial law,
> property law, and family law because of primary state responsibility].

This federal reference to state law will not obtain, of course, in situations in which the state law is
incompatible with federal interests. Thus, although a federal court may look to state law for
guidance, there is no constitutional obligation to adopt state law as the federal common law rule.
Federal courts may borrow state law rules when the state law provides an appropriate federal rule,
but no state can claim that, as a matter of state sovereignty, federal common law must incorporate
state law.

With regard to procedural rules applicable in federal courts, the Supreme Court has long recognized
that Congress may delegate to the Court authority to promulgate procedural rules. As early as 1825,
in *Wayman v. Southard*, the Court held that Congress had full authority to regulate procedure in
the federal courts, but that Congress had delegated to the Court procedural rulemaking authority
under the Judiciary Act of 1789. Since 1825, courts have held that Congress has the authority to
delegate procedural rulemaking authority to the Supreme Court, and that Congress has delegated that
authority to the Supreme Court, most recently pursuant to the Rules Enabling Act of 1934, codified

---

346 *Id.* at 738-39.

349 *See generally* Paul Lund, *The Decline of Federal Common Law*, 76 Boston U.L. Rev. 895,

350 23 U.S. (10 Wheat.) 1, 43-45 (1825).
Professor Bernadette Bollas Genetin has noted:

The prevailing view of scholars and legislators who supported adopting the Rules Enabling Act of 1934 was that, although the Rules Enabling Act would effect a shared rulemaking authority, the Supreme Court would be the superior procedural and, therefore, primary rulemaker. The assumption that the Court possessed an institutional superiority in procedural rulemaking proceeded from the following factors: (1) Congress was busy with issues of public policy and was ill-suited to determine the details of court procedure; (2) judges, directly involved with procedural issues on a day-to-day basis, had more expertise than Congress in procedural issues; (3) the Court's involvement and expertise would enable it to discover more readily inadequacies in the procedural Rules; (4) the Court could more easily remedy perceived inadequacies in Federal Rules because its promulgation process would not be as slow or cumbersome as statutory revision; and (5) the Court, as opposed to Congress, would be less partisan and less influenced by special interest groups; thus, it would be better situated to promulgate neutral rules.\[^{351}\]

While Congress has substantially deferred to the Supreme Court following the Court's promulgation of the Federal Rules of Civil Procedure in 1938, Congress retains the power to recall that delegation subject to two constitutional limitations. The Court has recently underscored that there are at least two constitutional limits on Congress' authority to enact rules to govern the federal courts: (1) a congressional standard cannot establish a standard or supersede a rule that articulates a constitutional requirement, and thus violates the Court's power to "declare what the law is" under *Marbury v. Madison*, discussed at § 17.1.2.1; and (2) a congressional provision cannot infringe on core judicial functions in a manner that diminishes the courts' ability to decide cases effectively.\[^{352}\]

\section*{§ 20.4 Federalism Checks and Balances: State Regulations That Trump Federal Law Under the 21st First Amendment}

\subsection*{§ 20.4.1 Relationships Between the 21st Amendment and the Dormant Commerce Clause}

The 18th Amendment, ratified in 1919, brought prohibition to the United States and its territories. It provided: "After one year from the ratification of this article the manufacture, sale, or transportation of intoxicating liquors within, the importation thereof into, or the exportation thereof from the United States and all territory subject to the jurisdiction thereof for beverage purposes is hereby prohibited." By 1933, that social experiment was judged a failure, and the 18th Amendment was repealed through the ratification of the 21st Amendment.

\[^{352}\] See generally id. at 685, citing, Dickerson v. United States, 530 U.S. 428, 437 (2000) (Congress may not legislatively supersede Court decisions interpreting and applying the Constitution); Miller v. French, 530 U.S. 327, 349-50 (2000) (noting possibility of congressional impairment of core judicial functions in a manner that threatens the independence of the judiciary).
The 21st Amendment, read literally, appears to give each state virtually complete control over whether to permit the importation or sale of liquor within its territory, whether to allow liquor manufacture, and how to structure any distribution system. After repealing the 18th Amendment in § 1 of the 21st Amendment, § 2 of the 21st Amendment provides: "The transportation or importation into any State, Territory, or possession of the United States for delivery or use therein of intoxicating liquors, in violation of the laws thereof, is prohibited." That being so, the Amendment appears to eliminate any negative implications from the dormant commerce clause. The Court has held, though, that although the 21st Amendment gives authority to the states that might otherwise be reserved to the federal government, the 21st Amendment places no limit on other constitutional provisions, including the dormant commerce clause, or regulations of commercial speech involving liquor sales under the First Amendment, as in 44 Liquormart, Inc. v. Rhode Island, discussed at § 30.3.2.1 nn.246-48, or other clauses of the Constitution, including the Import/Export Clause, the Establishment Clause, the Equal Protection Clause, and the Due Process Clause.

Early Holmesian-era cases did suggest that there was no dormant commerce clause review of state statutes involving liquor. For example, the Holmesian era cases sustained great state power in making clear that a state could prevent the import of liquor for consumption, that it could tax imported liquor, and that it could prevent import on the basis of reciprocity – all being barriers that would likely violate the dormant commerce clause but for the 21st Amendment.

Of course, § 2 of the 21st Amendment also gives the federal government broad power to regulate liquor in property controlled by the federal government. For example, in Collins v. Yosemite Park & Curry Co., decided in 1937, the Court held that the United States could ship liquor into Yosemite Park over California's objection, but only because the liquor was not intended for "use" in California. It was for "use" in an area under the exclusive power of the United States. Looking back on Collins, the Court said in Carter v. Virginia that shipments through a state were not "transportation or importation" into the state within the meaning of the 21st Amendment, even though a state may regulate such shipments to prevent diversion or use within the state.

Decisions in the instrumentalist era have qualified the broad Holmesian-era dicta that the states were released from the negative implications of the dormant commerce clause. Under these decisions, the Court reviews state liquor laws much as when it is engaged in dormant commerce clause review of state commercial regulations under the Pike balancing test, i.e., it weighs and accommodates constitutional policies that potentially conflict: the free trade policy implicit in the dormant commerce clause that gives great power to Congress versus the power assured to states by the 21st Amendment of promoting temperance by barring the import and controlling the distribution of

---

354 See Granholm v. Heald, 544 U.S. 460, 486-87 (2005), and cases cited therein.
liquor. The result is that the Court has struck down state liquor laws if they do not relate to temperance policy, but instead have the purpose and effect of promoting local industry, or are an attempt to control prices in other states, or to regulate the sales of liquor in other states.

The cases provide a useful study in how the Court engages in a balancing analysis. The cases attempting to harmonize the conflicting policies began in 1964 with Hostetter v. Idlewild Bon Voyage Liquor Corp. In Hostetter, New York had attempted to regulate retail liquor dealers by requiring an entrance from street level and a location on a public thoroughfare. The plaintiff dealer sold bottled liquor at an airport for delivery on arrival in other countries. The United States Bureau of Customs had approved this method of doing business. The Court noted that New York had not sought to regulate passage of the liquor in the interest of preventing its diversion into interstate commerce. Instead, said the Court, the state sought to prevent transactions carried on under the aegis of a law passed by Congress in the exercise of its power to regulate commerce with foreign nations. This the state could not do. The Court pointed out that the Commerce Clause was not totally repealed by the 21st Amendment, or Congress would be left with no power to regulate interstate or foreign commerce in liquor. Thus, the two clauses should be read together, and accommodated in the context of the issues and interests at stake in concrete cases.

The Court’s decision in 1980 in California Retail Liquor Dealers Association v. Midcal Aluminum, Inc. is also instructive. In Midcal, the Court held that California’s resale price maintenance and price posting statutes for the wholesale wine trade were preempted by the Sherman Act. Past decisions, said Justice Powell, recognized both that states have a "wide latitude" in state liquor regulation and that important federal interests in regulating liquor matters survived the 21st Amendment. Hostetter and other decisions demonstrate, he said, that there is no bright line between federal and state power over liquor. States have virtually complete control over whether to permit importation or sale of liquor and how to structure the distribution system. But these controls are subject to federal commerce power "in appropriate situations." Competing federal and state concerns are to be reconciled in concrete cases. Justice Powell concluded that since the record did not show that California's wine pricing system helped sustain small retailers or inhibited consumption of alcohol by residents, California's asserted state interests in price fixing were less substantial than the national policy in favor of competition.

Four cases in the 1980s, one in 1990, and one in 2005 have carried forward this balancing approach and have helped develop a jurisprudence that assigns relative weights to various state policies. Two of the 1980 cases, and the 2005 case, involved the dormant commerce clause. The other two cases

from the 1980s, and the 1990 case, involved the question of whether a state liquor law had been preempted by a federal law.

The first of the 1980s dormant commerce clause cases was *Bacchus Imports, Ltd. v. Dias.*\(^{363}\) In an opinion by Justice White, the Court held that the Commerce Clause was violated when Hawaii exempted “okolehao” and locally produced fruit wine from its tax on imported liquor with the purpose and effect of promoting a local industry. The Court said that the central purpose of the 21st Amendment was not to empower states to favor local liquor industries by erecting barriers to competition. The Commerce Clause, in contrast, was intended to further strong federal interests in preventing economic balkanization. State economic protectionism is therefore not entitled to the same deference as laws enacted to combat the perceived evils of an unrestricted traffic in liquor. The state here did not seek to justify the tax on the ground that it promoted temperance or any other central purpose of the 21st Amendment. Justice Stevens dissented, with Justices Rehnquist and O’Connor. Stevens said that under the 21st Amendment a state could prohibit the import of all intoxicating liquors. It could do so without prohibiting the local sale of liquors produced within the state. If the state has the power to create a total local monopoly, it could also engage in a less extreme form of discrimination by providing a special benefit, perhaps in the form of a subsidy or tax exemption, for locally produced alcoholic beverages. Justice Stevens noted that the language of the 21st Amendment was clear, so it was not necessary to consider its history, as White had done.\(^{364}\)

The second dormant commerce clause case was *Brown-Forman Distillers Corp. v. New York State Liquor Authority,*\(^{365}\) decided in 1986. The question was whether the 21st Amendment validated a New York statute that required liquor distillers to sell liquor in the state at a price no higher than the lowest price they would charge for similar sales in other states. The state argued that the 21st Amendment gave it wide latitude to regulate the distribution of liquor. The Court held, however, that one effect of the statute was to regulate sales in other states of liquor that would be consumed there, and the 21st Amendment confers no authority to control sales in other states. Justice Stevens again dissented, joined this time by Justices White and Rehnquist joined. In their view, “The serious discriminatory effects of § 9 alleged by appellants on their business outside New York are largely matters of conjecture. It is by no means clear, for instance, that § 9 must inevitably produce higher prices in other States, as claimed by appellants, rather than the lower prices sought for New York.”\(^{366}\)

The 21st Amendment was also involved in the 2005 case of *Granholm v. Heald.*\(^{367}\) In *Granholm,* a 5-4 Court struck down state laws which, as described by Justice Kennedy, were designed “to allow

\(^{364}\) *Id.* at 278-87 (Stevens, J., joined by Rehnquist & O’Connor, JJ., dissenting).

\(^{365}\) 476 U.S. 573, 578-86 (1986).

\(^{366}\) *Id.* at 587 (Stevens, J., joined by White & Rehnquist, JJ., dissenting).

in-state wineries to sell wine directly to consumers in that state but prohibited out-of-state wineries from doing so or, at the least, to make direct sales impractical from an economic standpoint.” Justice Kennedy reasoned that the states had triggered the high level of review required under the dormant commerce clause for state laws that discriminate against interstate commerce; that the states were not immunized from this rule by the 21st Amendment; and that the states had not met the heightened standard of review because they did not show by concrete record evidence that any non-discriminatory alternatives would prove unworkable in relation to their goals of policing underage drinking, avoiding tax evasion, facilitating orderly market conditions, protecting public health and safety, and ensuring regulatory accountability.

Regarding the question of whether the states had been allowed by Congress to discriminate against interstate commerce in liquor by the Webb-Kenyon Act of 1913, Justice Kennedy said that its ban on shipments or transportation of liquor in violation of state law did not include state laws that discriminated against out-of-state goods. For that interpretation he relied on cases decided before 1913; the fact that Webb-Kenyon did not purport to repeal the Wilson Act of 1890 that had been held not to allow states to discriminate against interstate commerce; and Bacchus, which in 1984 struck down an Hawaiian tax on liquor that exempted locally produced products from the tax.368 Justice Thomas, dissenting, joined by states’ rights advocates Chief Justice Rehnquist and Justices O’Connor, and Justice Stevens, reflecting his view regarding the clear intent of the 21st Amendment, noted that the Webb-Kenyon Act prohibited interstate shipment of liquor into a state in violation of any law of such state, and that meant “any law, including a ‘discriminatory’ one.” Thomas added that the Bacchus case should be overruled, as it was the only decision of the Court holding that the 21st Amendment does not authorize the in-state regulation of imported liquor free of the dormant commerce clause. Thomas observed that the 21st Amendment and the Webb-Kenyon Act had taken policy choices regarding liquor from the judges and returned them to the states, and that the majority had done the nation no service by ignoring the text of the Constitution and the Acts of Congress.369

§ 20.4.2 Preemption of State Liquor Laws by Federal Law

Since the 21st Amendment does not entirely deprive Congress of an ability to regulate interstate commerce in liquor under the Commerce Clause, the Court has several times been faced with deciding whether a particular state law was preempted by federal law. Preemption has been found where:

---

368 Id. at 481-84. On interstate sales of alcohol through the Internet, see generally Brannon P. Denning, Smokey and the Bandit in Cyberspace: The Dormant Commerce Clause, the Twenty-First Amendment, and State Regulation of Internet Alcohol Sales, 19 Const. Comm. 297 (2002).

369 Id. at 1909-19, 1925-27 (Thomas, J., joined by Rehnquist, C.J., and Stevens & O’Connor, J., dissenting).
(1) state regulation of liquor sales to overseas airline passengers was not designed to prevent diversion into local commerce and there was a conflict with federal law relating to foreign commerce;  
(2) state resale price maintenance and price posting statutes conflicted with the federal antitrust policy embodied in the Sherman Act; and  
(3) there was a conflict between a state bar against cable television ads for alcoholic beverages contained in out-of-state signals retransmitted to subscribers and federal policy to promote the widespread development of cable communications.

Despite cases such as these, states still have substantial control over whether to permit importation or sale of liquor and how to structure the distribution system. Thus, a state can apply its registration and labeling requirements to imported liquor destined for United States military bases because the state laws, enacted to promote temperance and ensuring orderly marketing, fall within the core of state power under the 21st Amendment and do not discriminate against the United States.

The 1984 preemption case of Capital Cities Cable, Inc. v. Crisp is instructive of modern preemption analysis regarding the 21st Amendment. The Court held in Crisp that FCC rules preempted an Oklahoma law requiring cable television operators in that state to delete all ads for alcoholic beverages contained in out-of-state signals retransmitted to subscribers. The Court said that federal policy was to promote the widespread development of cable communications. The state law interfered with that policy. Justice Brennan said that the 21st Amendment did not justify what would otherwise be an unconstitutional interference with federal policy. The Amendment primarily creates an exception to the normal operation of dormant commerce clause analysis.

Under this doctrine, the federal government retains authority to regulate interstate commerce in liquor. When a state has not attempted directly to regulate the sale or use of liquor within its borders – the core power given by the 21st Amendment – a conflicting exercise of federal power may prevail. Justice Brennan read Midcal Aluminum, discussed § 20.4.1 n.362, as holding that because the state's interest in promoting temperance through the program was not substantial, the state interest was outweighed by the important federal objective of the Sherman Act. The central question is whether the interests implicated by the state regulation are so closely related to the powers reserved by the 21st Amendment that the regulation may prevail, notwithstanding its conflict with express federal policies. Resolving the question requires a pragmatic effort to harmonize state and federal interests.

Applying that approach to the facts, Brennan said that the means chosen by Oklahoma to discourage consumption of intoxicating liquor are very limited since the state permits other kinds of print and broadcast advertising for liquor. The selective approach taken here limits the substantiality of the interests asserted by the state. Thus it engages only indirectly the central power reserved by the 21st Amendment. When this limited interest is measured against the significant interference with the federal objective, the state's interest can be seen not to be of the same stature. As in Midcal Aluminum, the Court held that the balance between state and federal power tips in favor of the federal law when a state law conflicts with the accomplishment and execution of the purposes of federal law, and the state has not implicated its central power under the 21st Amendment of regulating the times, places, and manner under which liquor may be imported and sold.375

Another instructive liquor preemption case is 324 Liquor Corp. v. Duffy.376 In Duffy, the Court held that the Sherman Act preempted state law where there were no adequate state interests to support a New York liquor price discrimination statute that required retailers to charge at least 112% of the posted wholesale price but permitted wholesalers to sell at less than the posted price.

In 1990, a plurality of four Justices said in North Dakota v. United States377 that a state could require reporting of imported liquor even when sold directly to federal enclaves within the state, and require such liquor to be labeled "for domestic consumption only." The four Justices said the law fell within the core of state power over temperance or establishing an orderly market. Thus it did not violate the Commerce Clause, nor did it violate intergovernmental immunity or discriminate against the United States. Congress had not clearly preempted the state law by conferring an immunity from state regulatory law to the involved military bases. Justice Scalia, concurring, said that the 21st Amendment abolished any federal immunity from state liquor import regulation. Four other Justices disagreed on immunity and said that the labeling regulation was invalid for substantially obstructing federal operations and discriminating against it and its chosen business partners.

A recent discussion of preemption in the context of the 21st Amendment occurred in 44 Liquormart, Inc. v. Rhode Island,378 decided in 1996. There the Court held that Rhode Island's statutory prohibition on retail price advertising of alcoholic beverages violated the First Amendment, as discussed at § 30.3.2.1 nn.246-48, and was not shielded from constitutional scrutiny by the 21st Amendment. For the Court, Justice Stevens said that "while it [the 21st Amendment] grants the States authority over commerce that might otherwise be reserved to the Federal Government, it places no limit whatsoever on other constitutional provisions." Justice Stevens noted that since the 21st Amendment does not diminish the force of the Supremacy Clause, the Establishment Clause,

377 495 U.S. 423, 431-44 (1990) (plurality opinion of Stevens, J., joined by Rehnquist, C.J., and White & O'Connor, JJ.); id. at 444-48 (Scalia, J., concurring in the judgment); id. at 448-71 (Brennan, J., joined by Marshall, Blackmun & Kennedy, JJ., concurring in part in the judgment and dissenting in part).
and the Equal Protection Clause, the Court saw no reason why the First Amendment should not also be included in the list. Thus, the 21st Amendment could not save Rhode Island's ban on liquor price advertising.

**SUB-PART TWO: INDIVIDUAL RIGHTS DOCTRINES GENERALLY**

Sub-Part One of Part IV of this book, Chapters 17-20, detailed the constitutional doctrines involving structural issues: judicial review, federalism, separation of powers, and checks and balances. The remainder of this book considers constitutional protections involving individual rights.

Sub-Part Two of Part IV, in Chapters 21-24, considers the general doctrines applied in judicial review of individual rights, including the protection given economic and non-economic rights by sources other than the First Amendment, Fifth Amendment Due Process Clause, and Civil War Amendments, that is, the 13th, 14th, and 15th Amendments. These named provisions have triggered much litigation in our Nation’s history, and thus require treatment in separate chapters.

Sub-Part Three of Part IV, Chapters 25-28, considers the Civil War Amendments, including the 14th Amendment’s Due Process and Equal Protection Clauses, which are directly applicable only against the states, but which are applicable against the federal government through the Fifth Amendment Due Process Clause, considered along with the 14th Amendment Due Process Clause in Chapter 27.

Sub-Part IV of Part IV, in Chapters 29-32, considers the First Amendment, which is directly applicable against the federal government, but which is applicable against the states as part of the 14th Amendment Due Process Clause analysis, discussed at § 27.2.

All of these constitutional protections apply to government action, with the exception of the 13th Amendment, which protects against both governmental and private acts of slavery or involuntary servitude, discussed at § 25.1. Determining what actions constitute government action is addressed by the state action doctrine, discussed at § 21.1. Chapter 21 continues by considering the structure of judicial reasoning that is used once state action is found, that is, the importance of government interests involved, the fit between government means and ends, and the severity of the burden on individual rights. Also considered is whether the Court uses a categorical approach or a balancing test, and whether either calls for considering elements or factors. The issues are discussed at § 21.2.

Following this, Chapter 22 deals with individual rights protections involving economic interests other than those protected by the First Amendment, such as the protection for commercial speech, the Fifth Amendment Due Process Clause, and the Civil War Amendments. This involves the Contracts Clause of Article I, § 10, cl. 1, discussed at § 22.1, and the Fifth Amendment Takings Clause, discussed at § 22.2. Individual rights protection involving non-economic rights other than those protected by the named provisions are discussed in Chapter 23. This discussion addresses the initial eight Amendments to the Constitution, other than the First Amendment and Fifth Amendment Due Process and Takings Clauses. Those Amendments involving civil rights are discussed at § 23.1. This section also addresses the Full Faith and Credit Clause of Article IV, § 1. Those Bill of Rights provisions involving criminal rights are discussed at § 23.2. This section also addresses the criminal rights provisions in Article I, § 9 of the Bill of Attainder Clause, Ex Post Facto Clause, and Habeas Corpus Clause, along with the Extradition Clause of Article IV, § 2, cl. 2. Chapter 24 discusses the Ninth Amendment’s provision that the “enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people.” The issue regarding which of these constitutional rights can be waived (“alienable”) and which cannot be waived (“inalienable” rights) is discussed at § 24.1 text following n.14. The Tenth Amendment is discussed at § 18.4.
CHAPTER 21: INDIVIDUAL RIGHTS PROTECTION UNDER THE CONSTITUTION

§ 21.1  The State Action Requirement

§ 21.1.1  Introduction

With the exception of the 13th Amendment’s ban on slavery or involuntary servitude, discussed at § 25.1, other rights protected by the Constitution are protected only against government infringement, not infringement by private actors. This is indicated by the literal text of most constitutional provisions. For example, the First Amendment provides, “Congress shall make no law abridging the freedom of speech.” The 14th Amendment provides, “No State shall deprive any person of life, liberty, or property without due process of law, nor deny to any person equal protection of the laws.” Thus, the Court held in 1883, in the Civil Rights Cases,1 that the 14th Amendment does not bar the invasion of rights by individuals, but only authorizes courts and Congress to redress the operation of state laws and the actions of state officials that deprive people of federal rights. Even in the absence of literal text, other constitutional protections, like the Fifth Amendment protections against double jeopardy or self-incrimination, only make sense in the context of the government action of arrest and prosecution. As the Court stated in the 2001 case of Brentwood Academy v. Tennessee Secondary School Athletic Association:

The judicial obligation is not only to “‘preserv[e] an area of individual freedom by limiting the reach of federal law’ and avoid[d] the imposition of responsibility on a State for conduct it could not control,” . . . but also to assure that constitutional standards are invoked “when it can be said that the State is responsible for the specific conduct of which the plaintiff complains.”2

Where an individual is burdened by the operation of a state statute enforced by a state official, such as a district attorney or an administrative agency official, state action is naturally found. Where action is done purely by a private individual, such as an individual determining what speech will go on in the individual’s own home, state action is not found. The difficult cases involve circumstances involving actions that have elements of both state and private action. The Court noted in Brentwood Academy,3 “[S]tate action may be found if, though only if, there is such a ‘close nexus between the State and the challenged action’ that seemingly private behavior ‘may be fairly treated as that of the State itself.’” In deciding whether such a “close nexus” exists, the Court has considered a myriad of factors, and has used different terminology and tests at different times in order to determine whether state action exists. Despite the terminology of “state action,” the key question in each case is whether sufficient “government action” exists, so that either the individual rights protections involving federal action, like the original Bill of Rights, or individual rights protections involving state or local action, such as the 14th Amendment, can be said to apply. In all cases of federal, state, or local action, the terminology and tests can be organized around three basic factors:

3 Id. (citations omitted).
(1) The extent to which the individual is burdened by “overt official involvement,” whether by operation of a federal, state, or local law; federal, state, or local executive or administrative agency action; or involvement by a federal, state, or local judge in judicial enforcement of a constitutional, statutory, or common-law right;

(2) The extent to which the individual and the government are “entwined,” whether by (a) individual participation in “joint activity” with the government, either “overt or covert,” e.g., a joint venture, partnership, or conspiracy, or in some other way shared “management and control,” including government control through regulation “authorizing” the private activity; or (b) financial connections of support, such as direct grants or subsidies, or tax breaks, between the government and private actor; or (c) some symbiotic relationship between the two, so that the government has placed its “power, property, and prestige” behind the private activity, or in some other fashion has “encouraged” the activity to occur; and

(3) The extent to which the individual is performing an activity considered by the Court to be a “public function.”

Differences among the four decisionmaking styles influence how, in practice, the Justices go about defining each of these three factors. As discussed at § 21.1.2.5 nn.38-43, these three considerations are best understood as factors to be weighed together, although a formalist approach would prefer to view them as elements to meet, meaning at least one of them must be met on its own, without aggregating the cumulative affects of all three factors, to support a finding of state action.

§ 21.1.2  Historical Development of the State Action Doctrine

§ 21.1.2.1  The Original Natural Law Era

The Court decided no explicit state action cases during the original natural law era. All cases dealing with constitutional rights involved federal, state, or local governmental action. There were very few state cases during this period, since the first eight Amendments were not applicable to the states until after the 14th Amendment was ratified in 1868, as discussed at § 27.2. The few state cases involving individual rights, as opposed to federalism concerns, involved cases such as those under the Contracts Clause, discussed at § 22.1. Few federal cases existed because of sparse federal legislation touching on individual rights. The cases decided involved issues such as those under the Takings Clause, discussed at § 22.2, or whether the Ex Post Facto Clause applies only to criminal legislation, discussed at § 23.2, all examples of clear federal, state, or local government action.

§ 21.1.2.2  The Formalist Era

As might be expected, a formalist approach to state action looks for examples which clearly, that is, literally, involve “overt official involvement”; or shared control because the private organization

---

is clearly “created, coerced, or encouraged by the government,” or is in a “symbiotic relationship with the government”; or the organization is performing a clear “public function.” Under this approach, “mere entwinement” of some kind is not sufficient to trigger a finding of state action.5

For example, during the formalist era in 1927, the Supreme Court held in *Nixon v. Herndon*6 that a Texas statute excluding blacks from Democratic primaries was unconstitutional as race discrimination by the state. Similarly, in 1932, in *Nixon v. Condon*,7 a state law excluding blacks from a Democratic primary by the party's executive committee was found to be state action where a state statute delegated power to determine party membership. Thus, there was overt official involvement, as well as aspects of a public function. In contrast, in 1935, in *Grovey v. Townsend*,8 the Court held that a political party could exclude blacks from membership since that action, taken without the benefit of a statute, was done literally by a private group.

§ 21.1.2.3 The Holmesian Era

Based upon its more functional approach to law, discussed at § 3.2 nn.23-25, 43-50, the Holmesian-era Court took a more functional view of the state action doctrine. It extended the state action doctrine beyond the literal application of state law by state officials to actions of private persons where there were sufficient connections with the state.

For example, in *Smith v. Allwright*,9 the Court overruled *Grovey v. Townsend* because the state's allowing a private political party to deny in their primary election the eligibility of blacks to vote was the functional equivalent of excluding blacks from the primary based upon the state statutory permission that occurred in *Nixon v. Condon*. Similarly, in *Terry v. Adams*,10 the Court held that excluding blacks from a private group's pre-primary straw vote was state action because the winners of that primary ran unopposed in formal Democratic primaries. Functionally, therefore, it was indistinguishable from *Herndon* and *Condon*.

Since *Allwright* and *Terry* did not literally involve “overt official involvement,” as did *Herndon* and *Condon*, from these cases emerged the “public function” aspect of state action doctrine. Where

---

5 See, e.g., *Brentwood Academy*, 531 U.S. at 305 (Thomas, J., joined by Rehnquist, C.J., and Scalia & Kennedy, JJ., dissenting).

7 286 U.S. 73, 88-89 (1932).

10 345 U.S. 461, 462-70 (1953) (Black, J., announcing the judgment of the Court, joined by Douglas & Burton, JJ.); *id.* at 482-84 (Clark, J., joined by Vinson, C.J., and Reed & Jackson, JJ., concurring in the judgment); *id.* at 472-79 (Frankfurter, J., opinion, but disagreeing with the Court as to the appropriate remedy).
private individuals perform a public function, such as choosing candidates to run for public office, the Court indicated that it will find that state action exists independent of overt official involvement.

A second example of the operation of the public functions doctrine during the Holmesian era occurred in *Marsh v. Alabama.* *Marsh* involved a “company town,” which provided, among other things, its own downtown business district; its own police and fire protection; its own sewage system and sewage disposal plant; its own residential area; and its own mail delivery system. Because this literally private company town operated functionally as a regular public municipality, the Court held that under the “public function” doctrine the town was the equivalent of a state actor, and thus had to comply with the First Amendment.

The functional emphasis of the Holmesian approach can also be seen in the famous case of *Shelley v. Kraemer.* *Shelley* involved the attempt by a private party to have a court enforce a racially restrictive covenant in a private land deed. Because a court was being asked to cooperate in enforcing racial discrimination, the Supreme Court held that such action would constitute state action, which then was viewed as unconstitutional racial discrimination under the Equal Protection Clause. In terms of contemporary state action terminology, *Shelley* reflects the view that sufficient “overt official involvement,” whether by statute, executive or administrative actor, or judicial actor, can constitute state action. The Court in *Shelley* made that point by noting many references to state action by the operation of state laws and the action of state executive or judicial officials, and it said that in many previous opinions the Court had given “specific recognition to the fact that judicial action is to be regarded as action of the State for the purposes of the Fourteenth Amendment.”

Under *Shelley,* if judicial enforcement of private action always constitutes state action, then logically enforcement of a will in court would trigger an Equal Protection Clause analysis, or a private citizen asking a judge for enforcement of trespass laws to remove a loud-mouthed guest would trigger a First Amendment free speech analysis. The Supreme Court has never said that it does, nor do other courts reach that conclusion. A court more focused on logic and analytic development of the law, as are formalist and natural law jurists, as noted at Table 2.4 and §§ 3.1 & 3.4, would have attempted to state in *Shelley* some clear limiting principles to the doctrine. The functional perspective of the Holmesian and instrumentalist courts, however, placed little emphasis on that issue, preferring instead to adopt pragmatic results on a case-by-case basis that prevented courts from being used for racially discriminatory reasons, but permitted sensible enforcement of probate and trespass laws to go forward uninhibited.13 One author has suggested that judicial enforcement of the racially

---

12 334 U.S. 1, 14-18 (1948). Although *Shelley* involved the equitable remedy of injunctive relief, the Court extended the *Shelley* rationale to a claim for damages in *Barrows v. Jackson,* 346 U.S. 249 (1953).

restrictive covenant in *Shelley* should be viewed as a “badge or incident of slavery,” and thus barred by the 13th Amendment, which applies to private action, without the need for a finding of state action. Once so viewed, distinguishing *Shelley* would not be necessary for lower state and federal courts that typically, though not always, find no state action in judicial enforcement of non-racially based land-use restrictions, such as those requiring single family residences, or age restrictions, or excluding houses of worship, or banning the posting of “for sale” signs, or judicial enforcement of confidentiality provisions in settlement agreements that limit individual free speech rights.14

During this period, the Court did not explore explicitly the split between a conservative and liberal Holmesian state action doctrine. The conservative position would reflect traditional Holmesian deference to government, and thus be less likely to find state action. The liberal predisposition, even among a Holmesian judge, would be to have enforceable remedies if clear constitutional violations exist. The split was reflected, however, in cases like *Marsh v. Alabama*,15 with liberal Holmesian Justice Frankfurter joining in the majority liberal formalist Justice Black, and liberal instrumentalist Justices Douglas, Rutledge and Murphy, finding state action, while conservative Holmesians Chief Justice Vinson, and Justices Reed and Burton, were in the dissent.

§ 21.1.2.4 The Instrumentalist Era

In a case still used as a starting point for reasoning in state action cases, in *Burton v. Wilmington Parking Authority*16 the Court generalized from earlier opinions to conclude that it must weigh circumstances to determine whether a state is involved with private action "to some significant extent" – the forerunner of the modern “entwinement” language in *Brentwood Academy*. *Burton* found significant involvement where a state had leased property to a restaurant operated as an integral part of a public building. The Court concluded that the state had placed its “power, property and prestige” behind the operation of the racially discriminatory restaurant. “Entwinement” was

---

15 326 U.S. 501, 501 (1946) (Black, J., opinion for the Court); *id.* at 510 (Frankfurter, J., concurring); *id.* at 513-17 (Vinson, C.J., joined by Reed & Burton, JJ., dissenting).

also found in *Evans v. Newton*, where newly-installed private trustees of a park could not engage in racial discrimination because “maintenance” of the park—which is “municipal in nature,” although by itself not a “public function,” since private parks, like Disney World, are private entities—was done by municipal employees, and for many years “control” of the park had been overseen by public trustees of the city.

Particularly during the core instrumentalist period of the Court, 1963-69, the Court extended its analysis of “public function” and “overt official involvement” quite broadly to reach findings of state action. For example, with regard to the “public function” doctrine, the Court held in *Amalgamated Food Employees Union Local 590 v. Logan Valley Plaza, Inc.*, that a large privately-owned shopping center was the equivalent of the company town in *Marsh*. The Court reached this conclusion despite the fact that the shopping center was the equivalent of only the business district in *Marsh*. There was no showing in the case that the shopping center had its own residential area, police and fire protection, mail delivery system, or other aspects of a city that existed in *Marsh*.

As noted at § 11.2.2.2, once Chief Justice Warren retired and was replaced by Chief Justice Burger in 1969, at most only four instrumentalists remained on the Court from 1969-86. State action cases from this period indicate a more balanced approach with respect to each of the three factors: overt official involvement, entwinement, and public function. For example, with respect to whether a private shopping center, by itself, can constitute a “public function,” the Burger Court overruled *Logan Valley in Hudgens v. NLRB,* and held that running a large privately-owned shopping center was not a “public function.” Thus, speakers had no First Amendment free speech rights of access to the center. Only Justices Marshall and Brennan dissented. Some state Supreme Courts, under state constitutions, have continued to find state action in these, and similar, circumstances.

With respect to “entwinement,” no state action was found in *Moose Lodge No. 107 v. Irvis,* which involved race discrimination by a private club that had a liquor license. *Burton* was distinguished as involving joint participation, particularly since in *Burton* the restaurant was leased from the government, not merely licensed by the government. Justices Douglas, Brennan, and Marshall dissented in *Moose Lodge.*

---

21 407 U.S. 163, 172-78 (1972); id. at 181-83 (Douglas, J., joined by Marshall, J., dissenting); id. at 184-90 (Brennan, J., joined by Marshall, J.J., dissenting).
With respect to “overt official involvement,” no state action was found in *Flagg Bros., Inc. v. Brooks*.

*Flagg Bros.* involved an unpaid warehouseman who made private sales of stored property to satisfy a debt. Despite the fact that the action was authorized by a Uniform Commercial Code provision approving a private self-help remedy for creditors, UCC § 7-210, the Court majority concluded that this situation involved a “private self-help” remedy. Liberal instrumentalist Justices Marshall and Stevens, and liberal Holmesian Justice White, dissented in *Flagg Bros.*, concluding that the UCC provision constituted state action. Justice Brennan took no part in the consideration or decision of the case.

In contrast, in *Lugar v. Edmondson Oil Co., Inc.*, the Court did find state action based on “overt official involvement.” In *Lugar*, the creditor needed to ask a court for help in getting a pre-judgment writ of attachment, and asked for executive assistance in having the sheriff come out to help attach the debtor’s property. The key vote in *Lugar* was provided by Justice Blackmun, who switched from his position in *Flagg Bros* that no state action existed. He found *Lugar* a different case because the private party had received help from a judge who authorized a writ of attachment, which was executed by a sheriff. The other Justices on the Court decided *Flagg Bros.* and *Lugar* the same way, with the more liberal Justices (White, Marshall, and Stevens in *Flagg Bros.* and Brennan, White, Marshall, and Stevens in *Lugar*) finding state action in each case, and the more conservative Justices (Chief Justice Burger and Justices Rehnquist and Powell in both cases, and Justice Stewart in *Flagg Bros.* replaced by Justice O’Connor in *Lugar*) finding no state action.

As indicated by the decisions in *Flagg Bros.* and *Lugar*, with Justice Blackmun being the swing vote in each case, the debate on the Court during this period was mostly between a conservative formalist and Holmesian approach to overt official involvement, entwinement, and public function versus a liberal instrumentalist approach. The term “conservative Holmesian” approach is used because the more liberal Holmesian approach, represented by judges such as Justice White, is more focused on broader use of federal governmental power, including the full power of the courts to order remedies for constitutional violations. As discussed at § 10.3.3 n.64, in state action cases, Justice White often joined with Justices Brennan, Marshall, and Stevens to support a liberal instrumentalist result.

Under the conservative formalist and Holmesian approach, as represented by Justice Rehnquist’s opinion in *Flagg Bros.*, a public function should only be found for activities “traditionally exclusively reserved to the states.” That approach rejects the liberal instrumentalist view in *Flagg Bros.* that public functions can be found in any activity “traditionally and historically associated” with public entities, with no requirement of exclusivity. Under a conservative formalist and Holmesian approach, entwinement should be found only for circumstances where the state has

---

22 436 U.S. 149, 157-65 (1978); *id*. at 168-73 (Stevens, J., joined by White & Marshall, JJ., dissenting); *id*. at 166 (Brennan, J., took no part in the consideration or decision of the case).

24 436 U.S. at 159 (Rehnquist, J., opinion for the Court).

literally compelled the act to occur, or the private party and the state are involved in a conspiracy. Merely authorizing private action, setting up a legislative scheme for enforcement, or licensing the activity, should not be viewed as enough joint participation to lead to a finding of state action. The liberal instrumentalist position would be more accommodating in finding many of these activities enough to constitute “entwinement,” particularly if race discrimination were involved, as in Moose Lodge No. 107 v. Irvis. Regarding “overt official involvement,” the differences between the two approaches are in the amount of involvement necessary to trigger a finding of state action, with the conservative formalist and Holmesian position finding no state action in both Flagg Bros. and Lugar, and the liberal instrumentalist position finding state action in both cases.

For many cases between 1969 and 1986, the conservative Holmesian approach was ascendent, as Justices Blackmun and Powell, who tended to follow a moderate natural law approach during this period, as discussed at § 11.4 nn.93-99 for Justice Blackmun, and § 12.4.2 nn.189-97 for Justice Powell, joined with this approach more times than not. For example, regarding “entwinement,” state action was not found in Jackson v. Metropolitan Edison Co., a case involving electric utility service terminated without due process under a tariff filed with the state which had not given the consumer a hearing or other scrutiny. Despite the state’s heavy regulation of the utility industry, the Court held that the decision to terminate service was an independent decision of the private utility company, and not subject to any joint management or control by the state. Nor was state action found in Blum v. Yaretsky, a case of nursing home physicians transferring patients to another level of care, thus reducing Medicaid benefits. Despite the financial connections between the hospital and the state under the Medicaid program, the Court found the transfer decision to be an independent decision of the hospital, not subject to joint management or control by the state.

In both of these cases, the fact that the action forming the basis for the litigation was an independent decision of the private actor was important to the outcome of the case. A similar result was reached in Polk County v. Dodson. In Dodson, the Court held that a public defender, despite being paid by the state, and officially a state employee, was not a state actor when representing a criminal defendant, since in that role the public defender was an adversary of the state’s district attorney. In contrast, a public defender is a state actor for purposes of employment decisions, since in that role the public defender, like the district attorney, is a state employee.

26 Id. at 164 (Rehnquist, J., opinion for the Court).

The Court did find state action during this period where the state assisted private race discrimination by lending textbooks to a racially discriminatory private school. Such lending of textbooks was held to be impermissible encouragement of the private school’s discriminatory practices. For a unanimous Court, Chief Justice Burger wrote in *Norwood v. Harrison*, “A state may not grant the type of tangible financial aid here involved if that aid has a significant tendency to facilitate, reinforce, and support private racial discrimination.”

A final aspect of state action doctrine during the instrumentalist era was the phrasing of the state action doctrine as a two-part test in *Lugar v. Edmondson Oil Co, Inc.* In that case, Justice White stated:

> First, the deprivation must be caused by the exercise of some right or privilege created by the State or by a rule of conduct imposed by the state or by a person for whom the State is responsible. . . . Second, the party charged with the deprivation must be a person who may fairly be said to be a state actor. This may be because he is a State official, because he has acted together with or has obtained significant aid from state officials, or because his conduct is otherwise chargeable to the State.

The second part of this test – may the person “fairly be said to be a state actor” – is determined by the familiar three-factor analysis of state action, focusing on “overt official involvement” of state officials, aspects of “entwinement” in terms of “acting together” or “obtaining aid” from the state, and activity “otherwise chargeable to the State” because a “public function.” From an analytic perspective, the first part of this test turns out to be a truism, that to have a case in court you need to have a cause of action based on some rule of law, whether a constitutional provision, statute, or common-law right. Thus, this first part has not formed the basis for later decisions on state action, and cases in the modern natural law era since 1986 have focused on the three-factor state action test.

§ 21.1.2.5 The Modern Natural Law Era

Today’s post-instrumentalist Court has resisted both the extremes of the general reasoning of the limited state action doctrine of the conservative formalist and Holmesian approach, and the expansive state action doctrine of the liberal instrumentalist approach. Following the received precedents of earlier cases, the Court has continued to judge state action according to the three basic factors of overt official involvement, entwinement, and public function.

Sometimes this balance results in a finding of no state action. A typical case is *NCAA v. Tarkanian*. In *Tarkanian*, the critical question was whether the University of Nevada-Las Vegas’ actions in the case, disciplining basketball coach Jerry Tarkanian in compliance with NCAA rules and regulations, transformed the NCAA’s rules and regulations into state action. The Court noted that the NCAA is comprised of roughly 960 public and private universities from all 50 states.

---

32 413 U.S. 455, 466 (1973).

Roughly half of these institutions are private universities. The Court also noted that the NCAA’s membership is not comprised of institutions created primarily by any one state entity. Against this factual background, the Court concluded:

It would be ironic indeed to conclude that the NCAA’s imposition of sanctions against UNLV – sanctions that UNLV and its counsel, including the Attorney General of Nevada, steadfastly opposed during protracted adversary proceedings – is fairly attributable to the State of Nevada. It would be more appropriate to conclude that UNLV has conducted its athletic program under the color of policies adopted by the NCAA, rather than that those policies were developed and enforced under color of Nevada law.35

In contrast, Justice White’s dissent, joined by Justices Brennan, Marshall, and O’Connor, concluded:

On the facts of the present case, the NCAA acted jointly with UNLV in suspending Tarkanian. First, Tarkanian was suspended for violations of NCAA rules, which UNLV embraced in its agreement with the NCAA. . . . Second, the NCAA and UNLV agreed that the NCAA would conduct the hearings concerning violations of its rules. . . . Third, the NCAA and UNLV agreed that the findings of fact made by the NCAA . . . would be binding on UNLV.36

With respect to the “public function” analysis, the Court held in San Francisco v. United States Olympic Committee,37 that where the United States Olympic Committee had been granted by Congress exclusive commercial use of the word "Olympic," the Committee was not a government actor because “neither the conduct nor the coordination of amateur sports has been a traditional government function” so as to make the activity a “public function.” The mere granting of a trademark to the Olympic Committee by Congress, and then acquiescing in how the Committee enforced those trademark rights, did not create sufficient connections under the “entwinement” part of the state action analysis. Justices Brennan, Marshall, Blackmun, and O’Connor dissented from this state action conclusion.

Other times the facts of a case have supported a finding of state action. For example, in Edmonson v. Leesville Concrete Co., Inc.,38 the Court noted that there is state action if a deprivation of federal rights results from a rule or claim of right to act whose source is state authority and the actor can fairly be deemed a state actor, considering any “governmental assistance and benefits” (entwinement), whether a “traditional government function” is involved (public function), and whether the “incidents of governmental authority” serve to “aggravate” the injury (overt official involvement). All three factors were present in Edmonson, which included judicial involvement in the peremptory challenge part of the public function of picking a jury to resolve a private tort case,

35 Id. at 199.

36 Id. at 200-01 (White, J., joined by Brennan, J., Marshall, J. & O’Connor, J., dissenting).

37 483 U.S. 522, 544-48 (1987); id. at 548 (O’Connor, J., joined by Blackmun, J., concurring in part and dissenting in part); id. (Brennan, J., joined by Marshall, J., dissenting).

and where government assistance occurred in the form of a judicial summons to individuals for jury duty. In *Edmonson*, it is likely that it was only the cumulative effect of all three factors aggregated together that led to the finding of state action. For example, prior precedents, like *Flagg Bros.*, 39 had held that private dispute resolution, by itself, is not enough to trigger a finding of state action. Nor does judicial involvement trigger a finding of state action in every case, as discussed at § 21.1.2.3 nn. 13-14. The majority opinion noted this fact in *Edmonson*. 40 Similarly, it was probably only the combined effects of the “entwinement” of maintenance of a park, which has aspects of a “public function,” since even private parks are “municipal in nature,” with prior “overt official involvement” of public trustees, that led to a finding of state action in *Evans*, discussed at § 21.1.2.4 n.17.

Conservative formalist and Holmesian Justices dissented in the case, and disputed the majority’s analysis on all three grounds. First, *Flagg Bros.* had held that mere dispute resolution, by itself, was not a public function. Second, on the question of governmental assistance/entwinement, the dissent noted that it was the private attorneys who actually decided which potential jurors to strike in using the peremptory challenges. Thus, the state did not compel or conspire with the attorneys in their making the decision, and the decisions were made independently by the private actors. Third, according to the dissent, peremptory challenges should be viewed like the private self-help remedy in *Flagg Bros.*, rather than as the product of overt official involvement by the judge, who merely dismisses the juror based on the attorney’s independent decision. 41

Justice O’Connor authored this dissent, although typically she decided cases according to the natural law model of judicial decisionmaking. However, as discussed at § 12.4.2, occasionally she displayed an infinity for the Holmesian mode of analysis. She was not a consistent Holmesian with respect to state action, however, as revealed by her joining dissents in *Tarkanian* and *Olympic Committee*, discussed above at § 21.2.5 nn.36-37, and Justice Souter’s majority opinion in *Brentwood Academy*, discussed below at § 21.2.5 nn.42-43.

An additional modern case finding state action is *Brentwood Academy v. Tennessee Secondary School Athletic Association*. 42 In this case, the Court held that a state-wide, not-for-profit athletic association that regulated interscholastic sports among Tennessee public and private high schools was a state actor because of the pervasive entwinement with public institutions and officials. Fully 84% of the members of the organization were public schools, and each of these public schools, of course, owed their creation to the same sovereign entity, the state of Tennessee. These facts distinguished the case from *Tarkanian*.

The conservative formalist and Holmesian dissent in the case disputed that this entwinement, by itself, could give rise to a finding of state action. Justice Thomas, joined by Chief Justice Rehnquist,

39 *Flagg Bros.*, 436 U.S. at 162.

41 *Id.* at 637-38 (O’Connor, J., joined by Rehnquist, C.J., & Scalia, J., dissenting).

and Justices Scalia and Kennedy, adopted a phrasing of state action doctrine more in terms of elements to meet, stating, “[W]e have found a private organization’s acts to constitute state action only when the organization performed a [traditional] public function; was created, coerced, or encouraged by the government; or acted in a symbiotic relationship with the government.” Justice Thomas added, “I am not prepared to say that any private organization that permits public entities and public officials to participate acts as the State in anything or everything that it does . . . . The state-action doctrine was developed to reach only those actions that are truly attributable to the State, not to subject private citizens to the control of federal courts hearing § 1983 actions.”43 As discussed at § 12.4.1, Justice Kennedy occasionally has displayed an infinity for the formalist mode of analysis. Justice Kennedy is not a consistent formalist with respect to the state action doctrine, however, as indicated by his authoring the majority opinion in Edmonson, discussed above at § 21.1.2.5 nn.38-40.

On balance, although occasionally Justices O’Connor or Kennedy have decided a particular case differently, in general the modern natural law approach rejects both the predisposition against state action found in the conservative formalist and Holmesian approaches, and the predisposition in favor of finding state action of the liberal instrumentalist approach. Consistent with the mainstream precedents of the Holmesian and instrumentalist eras, the modern natural law approach follows a straight-forward balancing of the three state action factors of overt official involvement, entwinement, and public function to determine whether in any individual case the private behavior is sufficiently connected to the government—“fairly attributable” in the language of Brentwood Academy44—that state action should be found.

§ 21.1.2.6 "State Action" Based on Laws that Repeal Existing Laws or Restrict Future Legal Change

A state is not required by the federal Constitution to forbid private race discrimination, and it can repeal anti-discrimination laws in order to take a neutral position. However, if the state does something more than repeal existing anti-discrimination legislation, it may be found to have violated the Constitution. In these cases, state action is not really the question, since the passing of a state law or state constitutional amendment, whether by legislative action or referendum, is state action. The real question in these cases is whether the state action involves a purpose to discriminate against individuals on grounds of race, and thus triggers strict scrutiny under the Equal Protection Clause, discussed at § 26.2.1.2, or does not involve such a purpose, and thus triggers only rational review. The cases are mentioned here because the lack of analytic rigor in some functional instrumentalist opinions meant that most of these cases were discussed by the Court as involving the question of state action, even though analytically that was not the issue on which the decision turned. Since the cases really involve the Equal Protection Clause issue of whether discriminatory purpose or intent.

43 Id. at 305, 315 (Thomas, J., joined by Rehnquist, C.J., and Scalia & Kennedy, JJ., dissenting).

44 Brentwood Academy, 531 U.S. at 295 (finding of state action depends ultimately on determining that the private action is “fairly attributable to the State.”).
can be established, as in *Reitman v. Mulkey*,\(^{45}\) which involved repealing existing state anti-discrimination laws in housing, or *Washington v. Seattle School Dist. No. 1*,\(^{46}\) which involved barring local school boards from requiring students to attend schools other than those nearest the students’ homes, unless ordered by a court of competent jurisdiction for adjudicating constitutional issues, these cases are discussed in Chapter 26 on the Equal Protection Clause, at § 26.2.1.2 nn.164-68.

§ 21.2 Structure of Individual Rights Doctrine Once State Action is Established

§ 21.2.1 General Considerations

§ 21.2.1.1 Categorical Approaches versus Balancing Tests in Individual Rights Doctrine

As noted at § 4.2.1 nn.17-18, one conception of rights is that they are absolute for the area covered by the right. Under this conception, rights “trump” all other considerations; they are not balanced against other considerations. This approach has been called a categorical approach. The alternative concept of rights is that they are balanced against governmental interests to determine which prevails – the individual right or the government’s action. As noted at § 4.2.1 nn.23-24, a balancing test involves a cost-benefit analysis of means and ends – “a head-to-head comparison with competing interests.”\(^{47}\) The logic of this cost-benefit analysis means that in every balancing test there are three basic components of the test. First, there is a question of what principles or policies are involved, that is, what are the ends to be achieved by the government action. Against the backdrop of these ends, the means of the action under review are examined both for the benefits achieved by the means (the benefit) and the burdens imposed by the means (the cost) as part of a cost-benefit analysis.

As discussed at § 4.2.2 nn.47-48, this means-end balancing test can either be structured in terms of a weighing of factors, with some of those factors focused on ends, and others on means. Alternatively, means-ends considerations can be phrased as separate elements of a balancing test. Similarly, categorical approaches also involve consideration of ends, benefits, and burdens. Specific examples of each of these kinds means-end reasoning are discussed below at § 21.2.2.

As noted at § 4.2.1 n.32, analytic approaches to law, like formalism and natural law, have a predisposition for categorical rules based on elements to meet. Balancing doctrines or categorical rules derived from a weighing of factors are reflective of the pragmatic, functional theories of Holmes, Cardozo, and Llewellyn, and triumphed on the Supreme Court after 1937 during the Holmesian and instrumentalist eras.\(^{48}\) In modern times, however, the natural law judge’s great respect for precedent, and willingness to consider background moral principles embedded in the law,

\(^{45}\) 387 U.S. 369 (1967).

\(^{46}\) 458 U.S. 457 (1982).

\(^{48}\) *Id.* at 952-72.
discussed at § 3.4 nn.93-106, have pushed natural law judges in the direction of a willingness to accept balancing tests and weighing of factors approaches. As noted at § 4.2.1 nn.33-34, the precedents and background moral principles embedded in doctrine since 1937, during the Holmesian and instrumentalist eras, are filled with more balancing tests and weighing of factors approaches than were the precedents and doctrine considered by natural law judges between 1789-1873.

In applying these balancing tests and weighing of factor approaches, the analytic predisposition of the modern natural law approach calls for a more systemic, logical elaboration of the various balancing tests and factors approaches used under current law. This aspect of modern natural law doctrine is discussed at § 21.2.3 (regarding burdens to trigger a particular standard of review) and § 21.2.4 (regarding determining the content of the various standards of review).

§ 21.2.1.2 Economic Versus Non-Economic Rights Cases

An additional aspect of individual rights adjudication remains to be noted. As the cases throughout Chapters 22-32 attest, in general conservative judges tend to be particularly sensitive to claims of deprivations of economic rights. Liberal judges tend to be more sensitive to claims of deprivations of non-economic personal or civil rights. This may be a by-product of the standard conservative predisposition for the status quo, and thus sensitivity to existing contract and property rights, while the progressivism of liberal judges makes them more sensitive to the claims of the unempowered, which usually involves personal or civil rights matters, as Justice Brennan noted at § 11.2.1.2 n.19.

For a number of individual rights doctrines, these predispositions appear to play an even more significant role than usual. On the conservative side, such predispositions are particularly important to keep in mind for doctrines such as the Contracts Clause, discussed at § 22.1; the Takings Clause, discussed at § 22.2; the Lochner-era liberty of contract doctrine, discussed at § 27.3.2.1; constitutional protection for commercial speech under the First Amendment, discussed at § 30.3.2; issues of the constitutionality of monetary limits on contributions and expenditures in political campaigns, discussed at § 30.4.2.1; and permissible rights of advocacy, and thus permissible kinds of advertisements, on behalf of candidates in elections to judicial office, discussed at § 30.4.2.4. On the liberal side, such predispositions are particularly important to keep in mind for doctrines such as the Fourth Amendment ban on “unreasonable searches and seizures,” discussed at § 23.2.1.1; the Eighth Amendment ban on “cruel and unusual punishment,” discussed at § 23.2.1.4; and what speech constitutes advocacy of illegal conduct under the First Amendment, discussed at § 30.1.1.1.

§ 21.2.2 Means/End Reasoning in Categorical and Balancing Tests Involving Elements to Meet or Factors to Weigh

As noted at § 21.2.1.1 n.47, balancing tests involve a three-part consideration of: (1) governmental ends; (2) how the means of government action achieve benefits; and (3) how the means of government action distribute burdens. Upon closer analytic examination, categorical tests equally involve consideration of ends, benefits, and burdens. This fact is discussed next for the four kinds of possible individual rights doctrines: balancing tests phrased in terms of elements to meet, at § 21.2.2.1; balancing tests phrased as factors to weigh, at § 21.2.2.2; categorical tests phrased as factors to weigh, at § 21.2.2.3; and categorical tests phrased as elements to meet, at § 21.2.2.4.
§ 21.2.2.1 Means/End Reasoning in Balancing Tests Involving Elements to Meet

The classic means/end balancing test involving three elements to meet is rational review under the Equal Protection Clause. As noted at § 26.1.1.1 n.12, the Court stated in Nordlinger v. Hahn,49 “[U]nless a classification warrants some form of heightened review because it jeopardizes exercise of a fundamental right or categorizes on the basis of an inherently suspect characteristic, the Equal Protection Clause requires only that the classification rationally further a legitimate state interest.”

To determine whether a statute “rationally furthers a legitimate state interest,” the Court considers three things, as discussed at § 26.1.1.1 nn.13-31. The first inquiry is what governmental ends, or interests, support the statute’s constitutionality. Under rational basis review, the governmental ends supported by the statute must be “legitimate.” Legitimate ends are those within the usual “police power” of the state, that is, they involve the health, safety, or general welfare of the people. In practice, the Court presumes the legislature is motivated by legitimate interests, leaving the burden on the challenger to prove that the legislature was motivated by illegitimate interests. Once it is determined that the statute is advancing a “legitimate state interest,” the next inquiry is whether the statute “rationally furthers” that interest or instead is irrationally underinclusive. The third inquiry then asks whether the statute’s means impose an irrational burden, that is, is irrationally overinclusive. As with the legitimate ends inquiry, in practice the Court presumes the statute’s means are “rationally related” to furthering its ends, leaving the burden on the challenger to prove the existence of irrational underinclusiveness or overinclusiveness.50

In addition to this minimum rational review balancing test, the Court uses a more searching standard of review than rational basis under the Equal Protection Clause if governmental action has a significant impact on a constitutional right that the Court has designated as “fundamental” or includes a classification whose legislative basis may be “suspect,” such as race, or “quasi-suspect,” such as gender. In such cases, as discussed at § 26.1.1.2 nn.32-56, the Court has developed in general two different versions of heightened scrutiny: intermediate review and strict scrutiny.51

These two versions of heightened scrutiny track the three means/end inquiries that the Court uses at rational review, but at each level increase the difficulty for the government to satisfy each inquiry. Thus, with respect to governmental interests, while at rational review the government need only advance “legitimate” government interests for the governmental action to be constitutional, at intermediate review the government must advance “important” or “substantial” governmental interests. At strict scrutiny, the governmental interests must be not only important or substantial, but “compelling.” Once the governmental interest part of the inquiry is finished, the attention then turns, as at rational basis review, to the way in which the statute’s means further these ends. At

49 505 U.S. 1, 10 (1992).

50 On all these aspects of rational review, see, e.g. Heller v. Doe, 509 U.S. 312, 320 (1993).

51 Occasionally, the term “mid-level review” has been used to refer to the intermediate level of scrutiny. See, e.g., Michael M. v. Superior Court, 450 U.S. 464, 497 n.4 (1981) (Stevens, J., dissenting) (contrasting “mid-level review” from “strict scrutiny”). The more common term, however, and the term used in this book, is “intermediate review.”
intermediate scrutiny, the statute must be “substantially related” to advancing its ends, and not be “substantially” more burdensome than necessary.\textsuperscript{52} Under strict scrutiny, the statute must be “necessary” to further the statute’s ends, which means, in part, that the statute must be the “least restrictive” or “least burdensome” way of advancing the governmental ends.\textsuperscript{53} As discussed at § 26.2.1.1 nn.54-56, at strict scrutiny the statute must also be “directly related” to advancing the government’s ends, not merely “substantially related,” as at intermediate scrutiny.

By using these different levels of scrutiny, the Court balances the respective interests of the individual versus the government differently depending upon whether rational review, intermediate scrutiny, or strict scrutiny is used. The higher level of scrutiny that is used, the greater protection that is given to the individual right involved, both in terms of the importance of the government ends necessary to support government regulation (legitimate, important or substantial, or compelling), and in terms of how narrowly tailored the means of the statute must be in advancing the government’s ends (rational relationship, substantial relationship, or necessary).

While these three standards of review are clearly identified in modern Supreme Court doctrine, two other standards of review have been used in modern times. These standards reflect variations on the three inquiries of governmental interests, relationship to benefits, and burdens. As noted at § 7.2.1 nn.36-37, the first additional level continues the intermediate level of scrutiny of important government ends and burdens not substantially greater than necessary, but increases the level of scrutiny under the second prong from the intermediate level of substantial relationship to the strict scrutiny level of direct advancement. This “intermediate scrutiny with bite” test is used to determine the constitutionality of commercial speech regulations under the First Amendment, as in \textit{Central Hudson Gas & Electric Corp. v. Public Service Commission},\textsuperscript{54} discussed § 30.3.2.1 nn.228-32.

The second additional level of review adopts the strict scrutiny requirement for compelling interests and direct advancement, but continues the intermediate level of scrutiny for burdens not substantially greater than necessary, rather than the strict scrutiny requirement of least burdensome alternative. As noted at § 7.2.1 nn.38-43, this “loose strict scrutiny” standard of review occurred in the Equal Protection case dealing with racial redistricting in \textit{Bush v. Vera},\textsuperscript{55} discussed § 26.2.1.5 nn.278-85. All of these standards of review are summarized in Table 7.2.

\textsuperscript{52} \textit{See generally} Erwin Chemerinsky, \textit{ Constitutional Law: Principles and Policies} 645 (2d ed. 2002) (“Under intermediate scrutiny, a law is upheld if it is substantially related to an important government purpose. . . . The means used need not be necessary, but must have a ‘substantial relationship’ to the end being sought.”).

\textsuperscript{53} \textit{See id.} (“Under strict scrutiny a law is upheld if it is proved necessary to achieve a compelling government interest. The government . . . must show that it cannot achieve its objective through any less discriminatory alternative.”).

\textsuperscript{54} 447 U.S. 557, 566 (1980).

\textsuperscript{55} 517 U.S. 952 (1996).
21.2.2.2 Means/End Reasoning in Balancing Tests Involving Factors to Weigh

A second kind of balancing test structures these three considerations of ends, benefits, and burdens as factors to weigh. This is a balancing test where the consideration of ends, benefits, and burdens are thrown together and weighed one against the other. As noted at §§ 4.2.2 nn.28-30, the procedural due process cases based upon the Mathews v. Eldridge analysis of what procedures are “appropriate” to satisfy due process, and the dormant commerce clause cases involving Pike v. Bruce Church’s “clearly excessive” burden analysis, are classic examples of factor balancing tests.

In applying this kind of balancing test, there is an issue of whether the challenger has the burden of establishing that the governmental action is unconstitutional, or whether the government has the burden of establishing that the action is constitutional. Sometimes, such as in each of the two cases cited above, the burden is on the challenger to establish the unconstitutionality of the governmental action. As noted at § 7.2.1 n.22, cases under the Contracts Clause that involve the government substantially impairing the contract obligations of their own contracts have a similar structure, as indicated by United States Trust Co. v. New Jersey, discussed § 22.1.4 nn.29-30.

However, sometimes the burden shifts to the government, as noted at § 7.2.1 nn. 23-26. As cited there, under the Dorman Commerce Clause, where state regulation facially discriminates against interstate commerce, such as in Maine v. Taylor, discussed § 20.3.2.1.D. n.194, the Court weighs (1) the state’s legitimate interest in the regulation; (2) whether the benefits could be achieved as well by available non-discriminatory means; and (3) the burden on interstate commerce, but the burden shifts to the government to establish constitutionality. Under the First Amendment, when considering the right of government workers to speak on matters of public concern, the government has the burden to establish in cases like Pickering v. Board of Education of Will County, Illinois, discussed § 30.2.2.1 nn.178-81, that (1) the government’s “legitimate” ends; (2) given the means by which the governmental action achieved these benefits, including whether the ends “could be promoted through less drastic action”; (3) “outweigh” the “burden” on the individual’s First Amendment rights. The Fifth Amendment Takings Clause balancing test in Dolan v. City of Tigard, discussed § 22.2.5.1 n.97-103, requires the government to establish a “rough proportionality” between the government’s burden on the individual and the individual’s burden on society. As the Court noted in Dolan, this test is similar to the kind of balancing done in search and seizure cases under the Fourth Amendment, where, as discussed at § 23.2.1.1 n.59, the government has the burden to show that any search and seizure is “reasonable” under the circumstances.

56 431 U.S. 1, 22, 31 (1977).
60 See id. at 391. See generally Aleinikoff, supra note 47, at 965 (describing the range of cases in modern doctrine that use balancing under Fourth Amendment search and seizure doctrine).
Means/End Reasoning in Categorical Tests Involving Factors to Weigh

Categorical tests also involve the same kind of three-part means/ends reasoning. This is easiest to see in the context of categorical tests in involving factors to weigh. For example, as noted at § 21.1.1 n.4, the state action doctrine, phrased as a categorical requirement of state action before constitutional rights are triggered, involves weighing three factors of “overt official involvement,” “entwinement,” and “public function.” One way to view these factors is to note that the “overt official involvement” factor involves government officials advancing government ends; the “entwinement” factor focuses on the means by which governmental benefits (regulatory, financial, and symbolic) are provided to private individuals; and the “public function” factor focuses on whether the burdens of the private action are similar to burdens usually imposed by public actors. Thus, the three state action factors track an end, benefits, and burdens analysis.

Other factor weighing categorical approaches similarly track an ends, benefits, and burdens analysis. For example, as discussed at § 17.3.4.4 n.555, under the political questions doctrine, the six factors in Baker v. Carr can be organized around three groupings, as Justice Powell did in his concurrence in Goldwater v. Carter: (1) is the issue committed by the text of the Constitution to a coordinate branch of government; (2) the core separation of powers concerns whether there are judicially manageable standards or whether the issues calls for an initial non-judicial policy decision; and (3) general separation of powers concerns dealing with whether prudential considerations counsel against judicial intervention, such as a need for finality, a special concern with expressing lack of respect for a coordinate branches of government, or potential embarrassment from multifarious pronouncements if the court second-guessed how the coordinate branch has acted. The first of these factors is focused on the end of following constitutional meaning, as revealed in clear text; the second of these factors is focused on the benefits of following reasoned elaboration of the law where judicially manageable standards exist; the final set of factors is concerned with whether there are any special burdens of judicial review that counsel that an issue be viewed as a political question.

Any test involving factors to weigh can similarly be understood as focused on constitutional ends, benefits, and burdens. For example, as discussed at § 27.1.4 nn.84-87, based on a substantive due process analysis, the Court stated in BMW of North America, Inc. v. Gore, that “excessive punitive damages” are unconstitutional. The decision on “excessiveness” was based on a weighing of three factors: the degree of reprehensibility of the wrongful conduct; the relationship between the punitive damage award and civil penalties authorized or imposed by law in comparable cases; and the ratio between the harm or potential harm suffered by the plaintiff in terms of compensatory damages and the punitive damages award. The first factor focuses on the governmental end to deter reprehensible misconduct through punitive damage awards. The second factor focuses on the benefits achieved in terms of deterrence by civil penalties imposed by law, and the extent to which the punitive damage award aids a similar beneficial end. The third factor focuses on the extent of the burden of the punitive damage award, and whether the ratio of punitive damages to compensatory damages is so high as to constitute an excessive burden weighing all three factors together.

---

61 444 U.S. 996, 998-1002 (1979) (Powell, J., concurring in the judgment).

§ 21.2.2.4  Means/End Reasoning in Categorical Tests Involving Elements to Meet

Categorical tests involving elements to meet also involve the same focus on ends, benefits, and burdens of governmental action. For example, as discussed at § 17.3.1.1 nn.280-84, to have standing to bring a lawsuit a plaintiff needs to establish an injury-in-fact, caused by the challenged conduct, redressable by the court. The first element, injury-in-fact, is focused on the government end of providing individuals with injury relief – the natural law maxim of “where there is a right, there should be a remedy, discussed at § 12.3.3 n.136. The redressability element is focused on whether the court can provide the individual with beneficial relief. The causation element is focused on the burden created by the challenged conduct. Each is part of standing analysis, although as discussed at § 17.3.1.3.C, because courts can usually redress constitutional injuries caused by the challenged conduct, the redressability element adds little to the requirement of causation.

A second example of a categorical rule seen from the perspective of ends, benefits, and burdens is the prohibitions on Bills of Attainder, discussed at § 23.2.2.1. To be a Bill of Attainder, a law must constitute “legislative punishment of an identifiable individual.” Thus, as stated in Nixon v. Administrator of General Services,63 the act must be “legislative”; it must be directed against “an identifiable individual”; it must constitute “punishment.” The first element focuses on determining whether the end of the governmental action is “legislative”; the second element focuses on whether the benefit to be achieved by the government regulation is directed against an “identifiable individual”; the third elements focuses on whether the burden of the government action involves “punishment” within the constitutional proscription against Bills of Attainder.

Even the requirement under the Commerce Clause that the government be regulating “commerce among the states” reflects the perspective of ends, benefits, and burdens. The end in this case is the regulation of commerce. The means elements of benefit and burdens are reflected in the requirement that the regulation be related, as noted at § 18.2.5 n.100, to some burden caused by the use “of the channels of interstate commerce,” as in the lottery case, Champion v. Ames; or the benefit of protecting “the instrumentalities of interstate commerce, or persons or things in interstate commerce, even though the threat may come only from intrastate activities,” as in The Shreveport Rate Cases; or the benefit of regulating “those activities that substantially affect [burden] interstate commerce.”

§ 21.2.3  The Effect of Burdens in Triggering Levels of Review

Another issue requiring greater clarification in the modern natural era involves the issue of what kind of burden triggers what standard of review under various individual rights doctrines, including fundamental rights analysis. For example, the Court has applied strict scrutiny in cases involving significant burdens on the fundamental right to marry, as in Zablocki v. Redhail.64 The Court has also applied strict scrutiny for significant burdens on the right to travel in Shapiro v. Thompson65 and

Memorial Hospital v. Maricopa County. However, in cases involving less than substantial burdens on these fundamental rights, the Court has applied some version of rational review, but seemingly without the usual deference to the legislative branch typical of minimum rational review, as in Turner v. Safley, involving a ban on the right to marry of a prisoner which was found unreasonable, or Sosna v. Iowa, where Iowa’s decision to impose a one-year residency requirement before individuals could obtain a divorce in Iowa was viewed as reasonable. Similarly, in cases involving the right to vote, the Court has applied strict scrutiny for more severe burdens on the right to vote, as in Kramer v. Union Free School District No. 15, while only applying rational review to less severe burdens, such as restrictions on voting for a water reclamation district in Ball v. James, or limitations on the voting rights of prisoners, in Richardson v. Ramirez, or ballot access issues in the context of the freedom of association in Timmons v. Twin Cities Area New Party. The marriage cases are discussed at § 27.3.3.1.A; the right to travel cases at § 26.5.1; the access to court cases at § 26.5.2; the right to vote and access to the ballot cases at § 26.5.3; and the freedom of association at § 31.2.1.

Candid acknowledgment of the role the level of burden may play in determining the proper standard of review may also help explain the rationality review seemingly given in another case of a less than substantial burden on a fundamental right, the parental notification issue in Hodgson v. Minnesota, discussed at § 27.3.4.1. Similarly, in Planned Parenthood v. Casey, not every regulation of abortion was constitutionalized under a strict scrutiny approach, as discussed at § 27.3.4.1. Courts have also applied an undue/substantial burden versus less than undue/substantial burden analysis in the context of the unenumerated fundamental right of raising one’s children, as discussed at § 27.3.3.1.C, and the right not to have private medical information disclosed, as discussed § 27.3.3.4.

Given the Court’s recent cases, it can be predicted that concern for reasoned elaboration of the law will mean that every area involving unenumerated fundamental rights, discussed at §§ 26.5 & 27.3, and the unenumerated freedom of association, related to the textually specific right to assembly,

71 497 U.S. 417, 458-61 (1990) (O’Connor, J., concurring in part and concurring in the judgment in part) (abortion rights case dealing with parental notification, where constitutionality depended on a judicial by-pass option for the minor).
72 505 U.S. 833, 879-901 (1992) (joint opinion in Casey) (rational review applied to less than undue burdens on abortion choice; strict scrutiny applied only to the spousal notification provision which was held to constitute an undue burden on abortion choice).
discussed at § 31.2, will eventually be structured in terms of substantial or undue burdens triggering strict scrutiny, and less than substantial or undue burdens triggering some form of rational basis scrutiny. Indeed, in 2006, in *Beard v. Banks*, discussed at § 30.2.1.2, the Supreme Court extended the rational basis scrutiny used in *Turner v. Safley* to a case involving burdening a prisoner’s enumerated First Amendment right of freedom of speech, on the grounds that prisoners generally lose some rights when incarcerated. Presumably, the Court had in mind that under the normal First Amendment doctrine content-neutral regulations that even minimally burden First Amendment rights trigger intermediate scrutiny, discussed at § 29.2 nn.62-71, which the Court did not apply in the case. As discussed at § 30.2.1.2, probably the better analysis of the case would have been to recognize that prisons are “non-public” forums, and thus under standard First Amendment doctrine, discussed at § 29.5.1 nn.76-80, rational review of some kind, and more sensibly the 2nd-order rational review of *Turner v. Safley*, was the appropriate standard to apply.

As noted at § 16.4 nn.97-102, the doctrine applying some form of rational review in these cases is consistent with a Stage 6 approach to constitutional law, with the Court adopting an impartial spectator approach, rather than sitting as a super-legislature. Under this approach, basic principles of liberty and equality will be protected, but a number of collateral decisions regarding persons living together in peace and harmony will be made by democratically elected officials, and reviewed only under rational review.

In each of these cases, the Court will have to consider what form of rational review analysis should be applied. Although the Court has suggested it was applying minimum rational review in some of the cases cited above, as noted in discussing each decision at §§ 26.5 & 27.3, the reasoning in the opinions suggests more the “second-order” factor balancing rational review approach, discussed in § 7.2.1 text following n.42, and summarized in Table 7.2.73 Since these cases do involve burdening a “fundamental” right, even only minimally, something more than minimum rational review would be appropriate given the Court’s usual approach to determining what level of review to apply, discussed at § 26.1.2.1, where “fundamental” rights usually trigger a high level of scrutiny than burdens on “non-fundamental” rights.

In addition, sometimes a doctrine is not triggered unless a particular level of burden exists. For example, under Contracts Clause doctrine, discussed at discussed at § 22.1.4 n.28, it takes a substantial impairment of contract right to trigger analysis under the Contract Clause. Under the Takings Clause, discussed at § 22.2.5.2 nn.98-103, it takes substantial deprivation of property rights to trigger a regulatory takings analysis. Under the Article IV, § 2 Privileges and Immunities Clause

---

analysis, discussed at § 20.3.3.2 nn.298-300, only burdens on rights “sufficiently basic to the livelihood of the Nation” trigger a privileges and immunities clause analysis.

§ 21.2.4 A Natural Law Focus on Making the Standards of Review More Analytically Coherent

Under the Court’s current approach, the various balancing tests regarding individuals rights under the Equal Protection Clause, Due Process Clause, First Amendment, Contracts Clause, Takings Clause, and other doctrines involving individual rights technically are phrased as involving different tests. When combined together, the number of tests number more than 40. An approach more focused on analytic rigor, however, would note that there are really just 7 different kinds of balancing tests used in all of these doctrines: the base level of minimum rational review, plus 6 heightened kinds of scrutiny, the “base plus six” model discussed at § 7.2.1, and summarized in Table 7.2.

A Court committed more to the analytic side of reasoned elaboration of the law would note that a danger of increased confusion and unpredictability exists if proliferation of levels continues past these 7 levels of review. This could happen if: (1) the Court adopts additional kinds of inquiries different than the three basic inquiries used under rational review, intermediate scrutiny, and strict scrutiny, discussed at § 21.2.4.1; (2) additional mixings and matchings occur for different kinds of scrutiny for the governmental interests, relationship to benefits, and burden inquiries, discussed at § 21.2.4.2; or (3) the "base plus six" standards are not clearly acknowledged, discussed at § 21.2.4.3. Increased confusion and unpredictability can also result if (4) juries are given too much leeway in the application of these tests in individual cases, discussed at § 21.2.4.4.

§ 21.2.4.1 The Problem of Adopting Additional Kinds of Inquiries

Two cases underscore the kind of problem created by the possible proliferation of additional kinds of inquiries. First, in the context of reviewing the constitutionality of a court injunction, the Court adopted in Madsen v. Women’s Health Center, Inc., discussed at § 29.6.1.2 nn.219-24, an analysis under the burden element of heightened scrutiny that was described as being somewhere between the intermediate “not substantially more burdensome” test and the strict scrutiny “least restrictive alternative” test. The Court stated that where basic intermediate review requires that the restriction be “narrowly tailored to serve a significant government interest,” the new standard requires that the restriction “burden no more speech than necessary to serve a significant government interest.” From the opinion, it is not clear exactly how much more stringent this test is than traditional intermediate scrutiny, nor are other precedents of any help, since the standard is not used in any other case.

As noted at § 7.2.1 text following n.42 & summarized in Table 7.2, the “base plus six” model gives the Court three well-formed options higher than intermediate review from which to choose – intermediate review with bite, loose strict scrutiny, or strict scrutiny. As discussed at § 29.6.1.2

74 See Kelso, Gaps, supra note 73, at 497 n.16.

n.227, the dissent in Madsen opted for strict scrutiny, concluding that “speech-restricting injunction[s]” should always be given strict scrutiny. As discussed at § 29.6.1.2 n.228-30, the majority could have achieved basically the same result it reached by adopting intermediate review with bite. Where the injunction at issue in Madsen was constitutional, it was because it was directly related to the perceived harms and was a close enough fit to satisfy the intermediate “not substantially more burdensome than necessary” test. Where the injunction was unconstitutional, it was because it was not directly related to perceived harms, or not a close enough fit, and thus substantially overbroad. In terms of predictable and stable levels of scrutiny, it would have been better if the majority in Madsen had cast the increased scrutiny for court injunctions as a case involving intermediate review with bite, rather than the new, unclear version of the narrowly drawn analysis which the majority actually adopted in Madsen.

The gender discrimination case of United States v. Virginia, discussed at § 26.3.1.2 nn.379-81, is another case of increased proliferation of inquiries leading to a confused result. Justice Ginsburg’s majority opinion initially cited the standard intermediate review doctrine that applies in a gender discrimination case, concluding that the state must show “at least that the [challenged] classification serves ‘important governmental objectives and that the discriminatory means employed’ are ‘substantially related to the achievement of those objectives.’” However, the opinion then seemed to require that Virginia show an “exceedingly persuasive justification” for its gender discrimination at the Virginia Military Institute (VMI), not merely a substantial relationship to important government interests. As Chief Justice Rehnquist noted in his concurring opinion, adoption of the phrase “exceedingly persuasive justification . . . introduces an element of uncertainty” and “potential confusion” into the appropriate test, and is unnecessary to strike down the gender discrimination in VMI. If the Court wanted to adopt a higher level of scrutiny for gender discrimination cases than traditional intermediate review, it would be preferable to adopt one of the heightened standards under the “base plus six” model – intermediate review with bite, loose strict scrutiny, or strict scrutiny – rather than add into the mix another uncertain level of review, exceedingly persuasive analysis.

Just as the Court should remain predictable about the basic test to apply, the Court should remain predictable about the determination of what governmental interests are appropriate to consider in determining the constitutionality of legislation. As discussed at § 26.1.3 nn.83-99, under the Court’s usual approach, the Court uses any conceivable government interest to support a statute under rational review, the Court considers any actual or plausible governmental interest under intermediate review, and the Court considers only actual governmental purposes under strict scrutiny. To the extent Justice Ginsburg’s opinion in Virginia suggested that at intermediate review the Court will

---

77 Id. at 534.

78 Id. at 559 (Rehnquist, C.J., concurring).

consider only actual governmental interests,\textsuperscript{80} the opinion was a departure from the Court’s traditional analysis, as discussed at § 26.3.1.2 n.382.

§ 21.2.4.2 Problems of Mixing and Matching Levels of Scrutiny

In addition to the three versions of rational review discussed earlier, it would be possible for the Court to add levels of review that mix inquiries currently used for rational review and intermediate scrutiny. For example, the Court could suggest that to be constitutional some governmental action must have a rational relationship to an important or substantial government interest. The Court appeared to do this in the voting rights case of \textit{Timmons v. Twin Cities Area New Party}.\textsuperscript{81} In \textit{Timmons}, the Court stated, “[A] State’s ‘“important regulatory interests”’ will usually be enough to justify ““reasonable, nondiscriminatory restrictions.”’ . . . [T]he burdens Minnesota’s fusion ban imposes on the New Party’s associational rights are justified by ‘correspondingly weighty’ valid state interests in ballot integrity and political stability.” The \textit{Timmons} case is discussed at § 31.2.1 nn.6-7. Similarly, in \textit{Plyler v Doe},\textsuperscript{82} the Court stated that a statute denying free public education to the children of illegal immigrants could “hardly be considered rational unless it furthers some substantial goal of the State.” Later cases, however, have indicated that the intent in \textit{Plyler} was to apply a standard intermediate scrutiny kind of test.\textsuperscript{83} The \textit{Plyler} case is discussed at § 26.2.2.1.B nn.337-43.

Alternatively, the Court could suggest that the government action must have a substantial relationship to a legitimate government interest. The Court had done this in a number of Takings Clause cases, including \textit{City of Monterey v. Del Monte Dunes at Monterey, Ltd.}, citing \textit{Agins v. City of Tuburon},\textsuperscript{84} where the Court stated, “[A]lthough this Court has provided neither a definitive statement of the elements of a claim for regulatory taking nor a thorough explanation of the nature of applicability of the requirement that a regulation substantially advance legitimate public interests outside the context of required dedications or exactions, . . . [g]iven the posture of the case before us, we decline the suggestions of \textit{amici} to revisit these precedents.”

Each of these decisions is troublesome. In addition to creating additional levels of review without a demonstrated need for them, these cases violate the certainty gained under the “base plus six” model of knowing that each different level of review represents a step-ladder increase in the rigor of scrutiny over the previous level. For example, which level of scrutiny is more rigorous – the \textit{Timmons} rational relationship to important government interest test, the \textit{Agins/Del Monte Dunes} substantial relationship to legitimate government interest test, or the related Taking Clause case of \textit{Dolan v. City of Tigard}’s “rough proportionality” standard. Presumably \textit{Dolan} is more rigorous than

\begin{itemize}
  \item \textsuperscript{80} 518 U.S. at 535-36.
  \item \textsuperscript{81} 520 U.S. 351, 358, 369 (1997).
  \item \textsuperscript{82} 457 U.S. 202, 224 (1982).
  \item \textsuperscript{83} \textit{See} Kadrmas v. Dickinson Public Schools, 487 U.S. 450, 459 (1988).
  \item \textsuperscript{84} \textit{Del Monte Dunes}, 526 U.S. 687, 704 (1999), \textit{citing} Agins, 447 U.S. 255, 260 (1980).
\end{itemize}
In the case of Timmons or Agins/Del Monte Dunes, since the burden is on the government to justify the constitutionality of its action in Dolan, but the burden seems to be on the challenger in Timmons and Del Monte Dunes. Further, in Del Monte Dunes, the Court refused to apply the Dolan test outside the Dolan context of required dedications or exactions, suggesting it is a more rigorous approach. However, it is not clear from the ordinary meaning of words that the “substantial relationship” required in Nollan is less rigorous than the “reasonable proportionality” of Dolan. This aspect of the law would be considerably clarified by recasting Timmons and Agins/Del Monte Dunes as versions of second-order rational review, while casting Dolan as third-order rational review, since the government bears the burden in Dolan.

In Timmons, both the majority and the two dissenting opinions agreed that for “severe” burdens on an individual’s First Amendment associational rights a strict scrutiny standard is appropriate. For less than severe burdens, however, the majority did not adopt any traditional standard of review. Since none of the opinions in Timmons demonstrated the traditional minimum rational review deference to governmental decisionmaking, as even the majority opinion that upheld the state law in Timmons did so only after a careful and detailed analysis of the government’s interests, the real choice that must be made in Timmons is whether to adopt a version of heightened rational review, either second-order or third-order, or to adopt intermediate review.

Justice Souter’s dissent in the case clearly opted for intermediate review, and thus has the advantage of clarity. By considering only those interests put forward by the government in litigation, Justice Stevens’ dissent also appeared to adopt an intermediate form of review. Because of its willingness to consider conceivable governmental interests, the majority opinion is best viewed as either second-order or third-order rational review under the “base plus six” model discussed at § 7.2.1. Since the Court appeared to adopt the view that the challenger had the burden of

85 512 U.S. 374, 388-91 (1994) (government bears the burden of proving “rough proportionality,” which is a different, more vigorous, level of review than minimum rationality).

86 Del Monte Dunes, 526 U.S. at 700-01 (jury instructions required challenger to demonstrate that the government action was unconstitutional); Timmons, 520 U.S. at 365-66 (analysis phrased in terms of what “[p]etitioners contend” and “petitioners urge”).

87 Del Monte Dunes, 526 U.S. at 704-05.

88 520 U.S. 351, 358 (1997); id. at 374 (Stevens, J., joined by Ginsburg, J., & Souter, J., dissenting); id. at 382 (Souter, J., dissenting).

89 Id. at 363-70.

90 Id. at 383 n.2 (Souter, J., dissenting).

91 Id. at 377-78 (Stevens, J., joined by Ginsburg, J., & Souter, J., dissenting). For discussion of considering interests put forward in litigation and intermediate review, different than the any conceivable basis approach of rational review, see § 26.1.3 nn.92-99.
establishing the constitutionality of the government action, the approach is best viewed as an example of second-order review. The majority’s language in *Timmons* about the government needing “important” interests to regulate, rather than merely “legitimate” interests – an intermediate requirement regarding government interests, rather than rational review – appears to be completely unnecessary to the case, and to serve no useful purpose. Indeed, when cataloguing the state’s interests, the majority noted that “[s]tates certainly have an interest in protecting integrity, fairness, and efficiency of their ballots and election processes,” without any further finding that those interests were important or substantial.

The language in the *Timmons* opinion about the state’s interests needing to be “correspondingly weighty” given the statute’s burdens underscores that the *Timmons* analysis is a factor balancing test, not an minimum rational review element balancing test. Thus, it is best understood as adopting the kind of overall balancing of benefits versus burdens which takes place at second-order review. For this reason, the Court should recast the majority opinion in *Timmons* as an example of second-order rational review, instead of creating a new, rationally related to important government interest test, unused in any other context, and unnecessary to resolve the *Timmons* case.

The use in *City of Monterey v. Del Monte Dunes at Monterey, Ltd.* of a substantial relationship to a legitimate government interest test is similarly a mistake. As with the term “correspondingly weighty” in *Timmons*, the greater than minimal rational review scrutiny required by use of the phrase “substantial relationship” in *Del Monte Dunes* is best handled by the factor balancing test of benefits and burdens of governmental action which takes place at second-order rational review. As discussed at § 22.2.5.1 nn.87-94, in 2005 in *Lingle v. Chevron USA, Inc.*, the Supreme Court unanimously rejected the “substantially advance” language in Takings Clause cases, viewing standard regulatory takings cases like *Penn Central Transportation Co. v. City of New York* as adopting a rational review balancing approach, consistent with the analysis suggested here.

Admittedly, the view adopted here that the Court should stick with the “base plus six” model for seven levels of review is somewhat arbitrary. For example, instead of two levels of heightened rational review being the second-order and third-order factor balancing tests, one could suggest that two levels of heightened rational review should be the substantially related to legitimate interests test of *Del Monte Dunes*, and then a substantially related to important government interests, but not irrationally burdensome analysis, an approach not used in any current case.

Such an approach would mirror the two heightened review levels between intermediate review and strict scrutiny, which increase the level of rigor on succeeding elements of the three basic inquiries of governmental ends, relationship to benefits, and burdens. If one dispensed with the factor balancing tests, it would also be consistent with the “step-ladder” approach of each succeeding level

---

92 *See Del Monte Dunes*, 526 U.S. at 365-66; *Timmons*, 520 U.S. at 369-70 (citing to the similar voting rights case of *Burdick v. Takushi*, 504 U.S. 428, 437-38 (1992), and discussing whether the Court “rejected the petitioner’s argument,” suggesting that the challenger had the burden of proof).

93 520 U.S. at 364.

of review being clearly more rigorous than the earlier level. If one kept all these versions of heightened rational review, then there would be the muddle of whether the second-order factor balancing test is or is not more rigorous than the second-order element balancing test of being substantially related to legitimate government interests.

The advantage of the “base plus six” approach is that it builds on existing case law, adopting levels of scrutiny which appear in numerous existing precedents. Only a few cases, therefore, like Del Monte Dunes or Timmons, require reconceptualization. Further, given the number of second-order and third-order factor balancing tests in use, as summarized at § 21.2.2.2, the Court clearly has demonstrated its view of the utility of such factor balancing tests in many circumstances. In the absence of strong reasons to the contrary, the lessons of the common law support building on such existing precedent, where possible.95

As with rational review, as a theoretical matter the Court could also adopt levels of heightened scrutiny between intermediate review and strict scrutiny in addition to the intermediate review with bite and loose strict scrutiny standards, discussed at § 7.2.1 nn.36-42, and summarized in Table 7.2. For example, the Court could require, as a version of intermediate review with bite, the government to have a compelling government interest to regulate, but only require a substantial relationship between means and ends, and that the action not substantively burden more persons than necessary. Alternatively, as a version of loose strict scrutiny, the Court could require compelling government interests, a least restrictive alternative test, but only a substantial relationship, rather than a direct relationship, between means and ends.

Adoption of such tests, however, would only add uncertainty to the law in terms of rigor in the standards of review. Which version of intermediate review with bite is more rigorous – the current Central Hudson test (which adds to basic intermediate review only the strict scrutiny direct relationship requirement), or the version suggested just above (which adds to basic intermediate scrutiny only the strict scrutiny compelling government interest test)? Which version of loose strict scrutiny is more rigorous – Bush v. Vera (which only waters down the least restrictive alternative requirement of strict scrutiny), or the version suggested just above (which onlywaters down the direct relationship requirement of strict scrutiny)? By having only one kind of intermediate review with bite and one kind of loose strict scrutiny, the “base plus six” model preserves a system where each succeeding level of scrutiny is clearly more rigorous than the preceding level.

§ 21.2.4.3 Acknowledging the Six Standards of Heightened Review Under the “Base Plus Six” Model Discussed at § 7.2.1

In addition to these observations, it would help certainty and predictability in the law if the Court explicitly acknowledged the existence in current doctrine of the seven levels of scrutiny – the “base plus six” model of § 7.2.1 and Table 7.2. Explicit acknowledgment of only the three basic levels of element balancing tests – minimum rational review, intermediate scrutiny, and strict scrutiny – and no clear structured categorization of the various factor balancing tests in use, promotes neither certainty nor predictability in the law.

At rational review, this would mean acknowledging the role that "second-order" and "third-order" rational review, as defined at § 7.2.1, play in constitutional analysis. This would mean that the Court should squarely face that in some cases a real choice exists between whether to apply minimum rational review or either second-order or third-order rational review. For example, such a choice was faced in the 1985 Equal Protection case of *City of Cleburne v. Cleburne Living Center*.96 In that case dealing with discrimination against the mentally impaired, the majority opinion phrased its approach in terms of minimum rational review. Three Justices concurred in the judgment, but suggested that something more rigorous than minimum rational review was being applied.

Many commentators have likewise suggested that traditional minimum rational review was not applied in *Cleburne*. For example, Professor Tribe has noted that in *Cleburne* the Court did not substantially defer to the legislature’s judgment concerning the rationality of the statute as is usual under minimum rational review, but rather determined for itself “whether the policies hypothesized to save the challenged action were actually supported by fact.”97 Ninth Circuit Court of Appeals Judge Alex Kozinski has called this standard of review “robust and realistic rational basis review” rather than the minimum rational review applicable to standard social and economic regulations.98

More importantly, some of the conclusions reached in *Cleburne* suggest that the Court was implicitly engaged in a factor balancing inquiry, weighing the extent of the government’s benefit against the burden of the statute, rather than engaging in a separate element inquiry into whether there was any rational connection between the statute and its ends, or any rational justification for the burdens imposed by the statute. For example, the Court concluded that concern that the home for the mentally impaired was to be located on a flood plain could not rationally support banning the home since “nursing homes, homes for convalescents or the aged, or sanitariums” could all have been located on the spot.99

Applying traditional minimum rational review, one could argue that a legislator could have rationally concluded that the evacuation problems posed for persons who are mentally impaired, and thus not as able to appreciate the danger of a flood and follow orders, are different and greater than the problems posed by the evacuation of individuals with only physical ailments which limit their mobility, as in nursing homes or homes for the convalescent. Under traditional minimum rational review, that would make the statute constitutional. Under a second-order factor balancing approach, however, one could conclude that the burden on the mentally impaired was “unreasonable” or “clearly excessive” given whatever slight benefit the government might have in a slightly easier evacuation for nursing home members than members of a home for the mentally impaired.

99 473 U.S. at 450.
In 1993, a five-Justice majority ducked this issue in *Heller v. Doe*, suggesting that only minimum rational review exists. A four-Justice dissent supported the *Cleburne* kind of rational review. With the changing membership of the Court after 1993, the dissent may have had five votes for its position between 1994-2005, but possibly not today. Three of the dissenters in *Heller*, Justices Stevens, O’Connor, and Souter, were still on the Court in 2005 at the time of Justice O’Connor’s retirement. They would likely have been joined in a similar case between 1994-2005 by the two Clinton appointees to the Court, Justices Ginsburg and Breyer. However, on grounds of faithfulness to precedent, it is not certain that all five of these Justices would have supported the dissent in *Heller* had a case raising that issue come before the Court during that time. For example, Justice O’Connor joined a 5-Justice majority opinion in *Board of Trustees of the University of Alabama v. Garrett* which made reference, in passing, to *Cleburne* adopting the “minimum ‘rational basis’ review.” The make-up of the Court after Chief Justice Rehnquist’s death and Justice O’Connor’s retirement leaves this issue still somewhat speculative, though perhaps only the votes of Justices Stevens, Souter, Ginsburg, and Breyer would exist for second-order rational review today.

If a majority of the Court did decide that a *Cleburne*-kind of case justifies higher than minimum rational review, it would be useful if that Court explicitly adopted second-order rational review, with the elements of that standard of review as defined at § 7.2.1. Such an acknowledgment would not represent an additional proliferation in the levels of review. Because of skepticism of the legislative agenda, the Court currently does not substantially defer to state legislative judgments under dormant commerce clause analysis, discussed at §§ 20.3.2.1.C nn.181-84 & 20.3.2.1.D. nn.204-08, or under the Contract Clause when the state is altering its own contractual obligations, discussed at § 22.1.4 nn.29-33. Thus, this level of review already exists in the Court’s individual rights jurisprudence. Such an acknowledgment in *Cleburne*, or if not in *Cleburne* in other appropriate cases, would only mean that the Court would be candid in stating that for one or more of the reasons the Court usually gives for heightened scrutiny, discussed at § 26.1.2.1, the same lack of deference routinely applied in dormant commerce clause cases and some Contract Clause cases is appropriate to apply in this Equal Protection Clause case. As discussed at § 27.1.2.1 n.40, some substantive due process cases,

101 *Id.* at 336-37 (Souter, J., joined by Blackmun, J., Stevens, J., & O’Connor, J., dissenting).

103 *See, e.g.*, Brian B. v. Commonwealth of Pennsylvania Dep’t of Educ., 230 F.3d 582, 588, 590 (3rd Cir. 2000), *cert. denied*, 532 U.S. 972 (2001) (majority applied minimum rational review to hold there was no violation of equal protection where a Pennsylvania statute limited the education to youths convicted as adults and incarcerated in adult, county correctional facilities, but did not so limit education to youths incarcerated in state facilities; dissent applied a *Cleburne*-like rational review because “isolation of this particular group of school-age inmates awakens my skepticism.”). Even incarcerated persons, of course, have constitutional rights. *See, e.g.*, Turner v. Safley, 482 U.S. 78, 84-91 (1987) (ban on the right of a prisoner to marry failed rational review as not “reasonable” even given the government’s legitimate interest in prison security and general deterrence).
like United States Department of Agriculture v. Murry, are also suggestive of a “second-order” factor balancing approach, although the Court claimed to be applying only minimum rational review.

A second area where acknowledgment of the variations of rational review would aid clarification of the law involves Boerne v. Flores and Florida Prepaid Postsecondary Education Expense Board v. College Savings Bank. In these cases, the Supreme Court required that when Congress legislates pursuant to its § 5 enforcement power under the 14th Amendment that “[t]here must be a congruence and proportionality between the injury to be prevented or remedied and the means adopted to that end.” Given the level of scrutiny in both cases concerning whether Congress had satisfied this test, it is reasonably clear that these cases were not adopting the substantial deference standard of minimum rational review. Furthermore, the requirement of “congruence and proportionality” seems similar to the requirement of “rough proportionality” in Dolan, and thus tracks a factor balancing approach, rather than a minimum rational review element balancing approach. In both cases, however, it is unclear whether the challenger or the government has the burden of demonstrating whether “congruence and proportionality” exist. Explicit acknowledgment of the seven standards of review would raise the visibility of this question.

To the extent that the two cases themselves provide any guidance, they seem to point in opposite directions. Boerne seems to suggest that the burden is on the challenger, as the Court acknowledged the “broad” power of Congress under § 5 of the 14th Amendment. On the other hand, Florida Prepaid seems to put the burden on Congress to demonstrate congruence and proportionality. The Court stated in Florida Prepaid, “[F]or Congress to invoke § 5, it must identify conduct transgressing the Fourteenth Amendment’s substantive provisions, and must tailor its legislative scheme to remedying or preventing such conduct.” The burden also seems to be placed on Congress in Board of Trustees of the University of Alabama v. Garrett, where the Court stated, “Once we have determined the metes and bounds of the constitutional right in question, we examine whether Congress identified a history and pattern of unconstitutional . . . discrimination by the States.”

As a final point regarding variations in rational review, the statement that at second-order or third-order rational review the Court does not give the same kind of “substantial deference” to legislative judgments that the Court gives at minimum rational review does not mean that the Court gives no deference. Despite the Court determining for itself whether the underlying policies are actually supported by fact, some deference to governmental judgment is still given. For example, the Court

106 Florida Prepaid, 527 U.S. at 640-44; Boerne, 521 U.S. at 530-34.

107 521 U.S. at 536 ("broad" power entitled to "much deference").

108 527 U.S. at 639.

stated in Boerne v. Flores\textsuperscript{110} that Congress’ “conclusions are entitled to much deference.” In Mathews v. Eldridge,\textsuperscript{111} the Court stated that under procedural due process analysis “substantial weight [will] be given to the good-faith judgments of the individuals charged by Congress with the administration of . . . programs.” In Thornburgh v. Abbott,\textsuperscript{112} the Court stated that while the Turner v. Safley “reasonableness” standard for determining marriage rights of prisoners “is not toothless,” “[i]n the volatile prison environment, it is essential that prison officials be given broad discretion to prevent . . . disorder.”

Explicit acknowledgment of the seven levels of scrutiny would also help clarify various aspects of heightened scrutiny. As discussed in Chapters 29-30, the Court has struggled with the appropriate standard of review to apply to various kinds of free speech cases: content-based versus content-neutral regulations in both public and nonpublic forums; reasonable time, place, and manner regulations; regulations of commercial speech; and regulations of television and radio versus cable television regulations. As one example, during the 1990s the Court failed to produce any majority clearly adopting one standard of review in cable television cases, as discussed at § 30.3.1 nn.210-16. As discussed at § 30.4.1 nn.253-57, part of the problem may lie in the Court’s official focus only upon intermediate review or strict scrutiny as the only two heightened scrutiny choices. Some members of the Court perhaps think that strict scrutiny, applicable to newspapers and books, is too rigorous, while other members of the Court may feel that intermediate review, applicable to over-the-air radio and television, is too loose. Under the “base plus six” model, perhaps cable television regulation may be an appropriate area for intermediate review with bite, like regulations of commercial speech in Central Hudson, or loose strict scrutiny, following Bush v. Vera.

There are additional advantages to explicit acknowledgment of the “base plus six” model for standards of review. For example, in City of Erie v. Pap’s A.M.,\textsuperscript{113} both the plurality opinion of Justice O’Connor, and Justice Souter’s dissent, purported to apply to Erie’s regulation of nude dancing the content-neutral regulation of free speech test of United States v. O’Brien.\textsuperscript{114} However, because of a lack of attention to the elements of this test in both O’Brien and Justice O’Connor’s plurality opinion, the plurality opinion failed to apply O’Brien properly, and instead adopted a “watered-down” version of the O’Brien test. This fact is discussed at § 29.4.4.3 nn.160-75.

In this respect, the plurality opinion in Pap’s A.M. is similar to the Court’s opinion in the commercial speech case of Posadas de Puerto Rico Associates v. Tourism Co. of P.R. As discussed at § 30.3.2.1 nn.246-48, in Posados the Court watered-down the commercial speech test of Central Hudson. Eventually, in 44 Liquormart, Inc. v. Rhode Island, a majority of the Court, including the

author of Posadas, Chief Justice Rehnquist, acknowledged that Posadas represented an improper application of Central Hudson, and to that extent was overruled.115

An example of the benefits of paying close attention to means versus ends involves race-based affirmative action in education. As discussed at § 26.2.1.4.D nn.252-57, although Justice Powell’s concurrence in Regents of the University of California v. Bakke concluded there is a compelling government interest in a diverse student body, the more precise way to phrase the issue is whether having a diverse student body is directly related to a compelling interest in successful education.

§ 21.2.4.4 The Issue of Jury Unpredictability in Application of Legal Doctrine

Under the traditional common law in England, and as part of the colonial practice in America, juries determined law as well as fact in the cases that came before them. As Professor William Nelson noted in an article entitled, The Province of the Judiciary:

[Juries] were free to ignore judges' instructions on the law, for it was "not only [every juror's]
right but his Duty in that Case to find the Verdict according to his own best Understanding,
Judgment and Conscience, tho [sic] in Direct opposition to the Direction of the Court." The
jury system was valued precisely because it introduced into the "executive branch . . . a mixture
of popular power;" as a result, "the subject . . . [was] guarded in the execution of the laws," and
"no Man [could] be condemned of Life, or Limb, or Property or Reputation, without the
Concurrence of the Voice of the People." On the eve of the American Revolution, the power
of the jury to control the law was recognized up and down the Atlantic Coast, from Georgia to
New Hampshire, and was fundamental to the democratic order existing on the western shore
of the Atlantic.116

As Professor Nelson noted, this power of juries to determine law as well as fact persisted throughout the Revolutionary era and emerged with fervor during the debates on ratification of the Constitution, particularly among anti-Federalists who expressed concern that a powerful federal judiciary would infringe on the power of juries to determine law as well as fact. Throughout the 1790s, this pre-Revolutionary understanding of the jury's ultimate power to determine law as well as fact persisted not only in state courts, but in the newly established federal courts as well.117

In an article entitled, The Law-Finding Function of the American Jury, Professor Matthew Harrington noted:

115 44 Liquormart, Inc., 517 U.S. 484, 509-10 (1996) (Stevens, J., joined by Kennedy, J.,

117 Id. at 326-28.
At least three factors influenced the Framers' decision to curtail the jury's influence in the new national government. First, there was the belief that the jury was no longer integral to protecting the populace against the arbitrary actions of royal judges. The Revolution ensured that judges were responsible to the people through election by the people themselves or their legislatures. Second, the jury's power to review and nullify oppressive legislation was thought to be less important than before. The Revolution guaranteed that statutes would be enacted by democratically-elected legislatures. Finally, the ad hoc nature of jury verdicts made strong federalists wary of the jury's influence on the development of the legal environment. Most recognized that a stable legal regime was a prerequisite to the growth of American commerce.118

An emerging class of entrepreneurs agreed, as discussed at § 13.1 n.15. Professor Nelson noted:

Businesses were disturbed at having their rights and liabilities determined by "the fluctuating estimates of juries" whose "utterly indefinite and uncertain" behavior provided investors with "no rule for their future conduct." Counsel accordingly argued "that juries ought by the court to be restrained and kept within the proper and established rules." . . .

Under the system adopted in the early nineteenth century, judicially administered common law became a default norm that civil juries could not surmount. Certainty and stability thus were preserved, and elites routinely remained in a position to guide the direction of society. But the people could change law through politics if they organized and made the necessary effort to change it.119

This increased court control over the law was ensured in practice by courts beginning to overturn jury verdicts under the familiar standard today of courts ruling "as a matter of law" that "no reasonable juror could find otherwise," the "clearly erroneous" standard of review, discussed at § 4.2.4.120 The increased control was also aided by the increased professionalism of the bar, and by more systematic reporting of decisions that occurred in the 19th century. In contrast, during the 18th century, as Professor Harrington noted:

The jury's power over law was aided by the fact that few judges in the colonial period had formal legal training; many were simply administrative or legislative officers whose position gave them the right to adjudicate disputes, or prominent members of the community. Knowledge of the law was not a prerequisite to being a judge. As a result, the judge who presided at the trial did not look all that much different from the jury." In background, experiences, and outlook [juries] were much like the litigants whose disputes they determined, and not very different from the judges who oversaw them." They were neighbors from nearby towns, who shared the same common beliefs and assumptions as the parties before them. Their

120 See id. at 340-49.
lack of formal training meant that colonial judges did not usually instruct the jury on the law. Even when they did, judges were quick to advise the jury that they were not bound by the judge's view of the law as stated in the charge.121

By the 1820s, the jury's power over law had all but disappeared in civil cases. The jury's law-finding function in criminal cases was to survive much longer, however. Professor Harrington noted:

Adherence to the view of the jury as a bulwark of liberty meant that many judges were more reluctant to intrude upon the jury's power to bring in a general verdict in criminal trials. Constitutional prohibitions on double jeopardy also meant that the power to grant new trials in criminal cases was severely limited. The inability to order a new trial in cases where the jury brought in a verdict of acquittal made it difficult to enforce complete compliance with the court's instructions. The jury's power to acquit "in the teeth of both law and facts" meant that it would always retain some variant of its earlier law-finding function. Nonetheless, by the end of the nineteenth century, judges shed their earlier hesitance and took upon themselves the power to grant new trials in cases of conviction [where they concluded the jury had not properly applied the law to the facts]. More importantly, judges also began to instruct juries that they were bound by the law as stated in the charge. They increasingly sought to prevent counsel from advising the jury of its right to nullify and prohibit lawyers from making . . . legal argument to the jury.

Nonetheless, allowing juries to bring in a general verdict still puts courts in a difficult position. The only way to really prevent a jury from taking upon itself the power to declare law is to require it to bring in a special verdict. Otherwise, as Justice Story was forced to admit in [United States v.] Battiste, the jury would always retain a residual – and essentially unreviewable – power over law. A general verdict is, after all, "necessarily compounded of law and of fact; and includes both." Therefore, a verdict of acquittal always raises the possibility that the jury has completely ignored the charge and nullified the law. The Constitution's protection against double jeopardy means that a verdict of acquittal is unassailable. The law thus recognizes in the jury a power to declare the law while, at the same time, denying that it has the right to exercise it. To some degree, therefore, instructing juries that they must follow the law as stated in the charge is of symbolic effect, to the extent a criminal jury might still bring in a verdict of acquittal against its instructions. The principle of non-coercion combined with the power to bring in a general verdict makes complete supervision of the jury impossible.122

By the early part of the twentieth century, the modern role of judge and jury had been established in most state and federal courts. That role has been established in England earlier toward the end of the 18th century, where English judges had made progress toward establishing their monopoly over legal questions, as well telling jurors what they thought of the evidence and questioning the

121 Harrington, supra note 118, at 378-79.

122 Id. at 379-80, 434, citing, inter alia, United States v. Battiste, 24 F. Cas. 1042, 1043 (C.C.D. Mass. 1835).
jury on its reasoning if disagreeing with the verdict. In England today, trial by jury has almost disappeared from civil litigation except where a person's reputation is at stake, for example in suits for libel.\footnote{See generally Jonathan T. Molot, \textit{An Old Judicial Role for a New Litigation Era}, 113 Yale L.J. 27, 66-68 (2003) (role of English judge in 18\textsuperscript{th} century); Hein Kötz, \textit{Civil Justice Systems In Europe and the United States}, 13 Duke J. Comp. & Int'l L. 61, 73-76 (2003) (English practice today).}

Over time, most judges and lawyers have come to believe that allowing juries to be the ultimate arbiters of the law invites inconsistent and arbitrary results. While the role of the jury in colonial America reflected a State 3 moral reasoning commitment to customary practice, discussed at § 15.4.1 nn.50-56, the modern approach of the role of judge versus jury is more consistent with a Stage 6 commitment, discussed at § 15.4.1 nn.77-81, to reasoned elaboration of the law and ensuring that all individuals, in each case, are treated with equal concern and respect consistent with the rule of law, with reasoned principled application of the law done by judges, subject to judicial review.
CHAPTER 22: ECONOMIC RIGHTS: THE CONTRACTS AND TAKINGS CLAUSES

Some provisions in the Constitution involving economic rights are structural protections. The Commerce Clause places limits on federal regulation of commerce, although, as interpreted today, these are modest limits, as noted at §§ 18.2.5 & 18.5. The Constitution also limits the ability of states to discriminate against interstate economic activity. In addition to specific limitations, like duties on imports and exports, discussed at § 18.6.1, the Court has developed the dormant commerce clause doctrine to prevent states from “excessively burdening” interstate commerce, discussed at § 20.3.2. The Article IV, § 2 Privileges and Immunities Clause requires states to provide nonresidents the same rights given to residents for activities “sufficiently basic to the livelihood of the Nation” unless the state has a “substantial reason” for the difference in treatment, discussed at § 20.3.3.

Other protections involving economic rights provide direct protection to individuals and flow from the First Amendment, the 13th Amendment, or the Fifth and 14th Amendments. The 13th Amendment’s ban on slavery or involuntary servitude is discussed at § 25.1. The economic rights protected against state infringement by the 14th Amendment’s Privileges or Immunities Clause are discussed at § 25.3. Economic rights protected against state infringement by the 14th Amendment’s Equal Protection Clause, and against federal infringement by the Equal Protection component of the Fifth Amendment’s Due Process Clause, are discussed at §§ 26.1.1 & 26.4.1. Economic rights protected against infringement by the states under the 14th Amendment Due Process Clause, and against federal infringement by the Fifth Amendment Due Process Clause, are discussed at §§ 27.1.2.1 & 27.1.2.4. The First Amendment protection for commercial speech is discussed at § 30.3.2.

The remaining protections in the Constitution for economic rights are the Article I, § 10, cl. 1 Contracts Clause, which prevents states from passing any “Law impairing the Obligation of Contracts,” and the Fifth Amendment Takings Clause, which provides “nor shall private property be taken for public use, without just compensation.” It is applied to the states by the 14th Amendment Due Process Clause. The Contracts Clause is discussed at § 22.1, and the Takings Clause at § 22.2.

§ 22.1 The Contracts Clause

As discussed at § 22.1.1, Chief Justice John Marshall laid the foundation for the Contracts Clause to become a significant restraint upon state action by holding that the Clause not only covered state interference with private contracts, but also various contractual dealings with the states themselves. During the first part of the formalist era, from 1873 to 1900, the Contracts Clause continued as a significant limit on state power. Between 1900 and 1937, however, the clause was less frequently applied for two main reasons: (1) the states more carefully defined and protected the extent of their regulatory police powers, and (2) the Court began to rely primarily on substantive due process as a restraint of state action affecting contract or property interests, as discussed at § 27.3.2.1.

During the Holmesian era, from 1937-1954, reasonableness review of economic legislation under equal protection or substantive due process theories was replaced with minimum rational review, with the result that those clauses became only slight restraints on state power, as discussed at §§ 26.1.1.1 & 27.1.2.1. Similarly, the Contracts Clause review took on the deference to government aspects of minimum rational review.
This situation continued during most of the instrumentalist era, from 1954-1986. Near the end of that era, however, when several particularly severe retroactive adjustments of contract rights were enacted without emergency justification, the Contracts Clause was brought back to life to a limited extent. By the end of the instrumentalist era, the Court had developed a formulaic methodology for Contracts Clause analysis, which in some cases constitutes a level of review more exacting than minimum rational review. The steps in this Contracts Clause analysis follow modern 3-part means/end reasoning (ends, benefits achieved, burdens imposed), discussed at § 21.2.2.2, with a substantial burden requirement before the Clause is triggered, noted at § 21.2.3 text following n.73. The relevant questions are:

(1) Has a state law, in fact, operated as a substantial impairment of a contractual relationship (preliminary substantial burden requirement).

(2) If so, the state must have a legitimate public purpose (the end requirement).

(3) If that is shown, the next inquiry is whether the adjustment of rights and responsibilities of contracting parties is of a character appropriate to the public purpose justifying the legislation's adoption (the means requirement). As discussed at § 22.1.4, this test mirrors minimum rational review under the Equal Protection and Due Process Clauses, including a focus on both the benefits achieved by the statute and the statute’s burdens. In contrast, if the subject-matter of the state law raises special concerns, such as when the state is impairing the contract obligations of the state’s own contracts in a manner that favors the state, or if the legislation is not one of general application, but only touches a more narrowly defined group of individuals in society, less deference is given to the state's action and the Court will apply a “second-order” kind of rational review analysis, as defined at § 7.2.1 and summarized in Table 7.2. As is true of both minimum and “second-order” rational review, the challenger has the burden to establish that the law is unconstitutional.1

§ 22.1.1 The Original Natural Law Era

In an opinion by Chief Justice Marshall, the Court held in 1810 in Fletcher v. Peck2 that the Contracts Clause limits the power of states to modify their own contracts, as well as contracts already existing between private parties. The Georgia legislature had made a land grant to certain investors, which the legislature sought to repeal upon discovery that fraud and bribery influenced passage of the legislation. A remote grantee, Fletcher, demanded rescission and restitution from his grantor, Peck, because, said Fletcher, Peck could not convey a good title after repeal of the land grant statute. Peck responded that he was a purchaser in due course and the state could not retroactively affect his title. The Supreme Court agreed with Peck that the land grant was a contract within the meaning of the Contract Clause and could not be retroactively altered.

In reaching this conclusion, the Court did not limit its analysis to the specific intent of the framers and ratifiers. As Professor Jefferson Powell has noted:

2 10 U.S. (6 Cranch) 87 (1810).
The clause was included in the 1787 Constitution because of the Philadelphia framers’ dislike of state legislation that interfered with contractual relationships between private creditors and debtors, a fact of which the Court’s early membership was well aware. . . . Marshall argued that property grants were a form of contract in that the grantor necessarily made an implicit promise not to reassert the property rights it was granting; he then pointed out that nothing in the Constitution’s wording excepted grants generally or grants by legislatures from the protection of the contracts clause. Since the moral evil of legislative interference with “the lives and fortunes of individuals” was the same, whether worked by a bill of attainder, an ex post facto law (both clearly unconstitutional), or a law revoking a prior grant, Marshall concluded that the attempted revocation was unconstitutional. . . . The fact that the clause’s framers only intended to protect private contracts from interference did not limit the Constitution’s effect when reasoning from “general principles” revealed that revocation of public grants produced an “analogous moral evil.”3

Thus, the general background moral principle against unjust interference with the “lives and fortunes of individuals” implicit in several cited constitutional provisions determined the outcome in the case. In terms of interpretation styles, this reflects a natural law approach to constitutional interpretation, and its focus on general principles, discussed at §§ 12.2.1.3 & 12.2.2.3, and reasoning by analogy, discussed at § 12.2.2.2, rather than a formalist approach, which involves greater focus on specific historical intent, discussed at § 9.2.1.3.

In several additional cases, the Marshall Court underscored the breadth of what is a protected contract. For example, in New Jersey v. Wilson,4 it invalidated a New Jersey statute that repealed a tax exemption that the legislature had granted certain lands fifty years earlier. In Dartmouth College v. Woodward,5 Chief Justice Marshall wrote for the Court that a state legislature could not change the provisions of the corporate charter issued to Dartmouth College because that charter was a contract. As Professor Powell noted, “Again, Marshall considered the moral and political implications of permitting a state legislature to intervene in settled expectations, and again he concluded for the Court that the protection contemplated by the contracts clause should be extended to a situation not envisaged by the clause’s framers.”6 Adopting a natural law focus on both literal meaning and the purpose, or spirit, of the text, discussed at § 12.2.1.1, as well as reliance on background moral principles and reasoning by analogy, as opposed to the formalist greater reliance on literal meaning and specific historical intent alone, discussed at §§ 9.2.1.1 & 9.2.1.3, Marshall stated:

It is more than possible, that the preservation of rights of this description [rights under corporate charters] was not particularly in the view of the framers of the constitution, when the clause under consideration was introduced into that instrument . . . . [But to exclude such rights, it] is

4 11 U.S. (7 Cranch) 164 (1812).

5 17 U.S. (4 Wheat.) 518 (1819).

6 Powell, supra note 3, at 98.
not enough to say, that this particular case was not in the mind of the Convention, when the article was framed, nor of the American people, when it was adopted. . . . The case being within the words of the rule, must be within its operation likewise, unless there be something in the literal construction, so obviously absurd or mischievous, or repugnant to the general spirit of the instrument, as to those who expound the constitution in making it an exception.7

However, the Marshall Court did create some limitations on the Contracts Clause. With respect to whether the Contracts Clause applies not only to contracts made before the enactment of a law, or whether it also applies to laws affecting future contracts, the Court struck down in Sturges v. Crowninshield8 a New York law that discharged debtors' obligations if they surrendered their property. Chief Justice Marshall's opinion most easily could be read to deny any state power to pass laws regulating insolvency, but it could also be read to suggest that the only defect with the New York law was that it was retroactive, that is, it released debtors from contracts entered into before its passage. Eight years later, in 1827, in a 4-3 decision in Ogden v. Saunders,9 the Court adopted the narrower interpretation and upheld a debtor relief law that applied only to contracts entered into after its passage. Chief Justice Marshall, joined by Justices Duvall and Story, entered a rare dissent.10

Subsequent to Marshall's death, the Taney Court continued the path laid out in Ogden v. Saunders of being more protective of states’ rights than would have been Chief Justice Marshall, mostly by weakening the restraining power of the Contracts Clause by strict interpretation of state grants of power to corporations. Under such strict interpretation, much later state legislation was consistent with an earlier limited state grant of power, because the later state legislation did not “impair” any “obligation” under that limited corporate grant, thereby not triggering the Contracts Clause. The Taney Court also held in West River Bridge Co. v. Dix11 that a state legislature could not convey away the power of eminent domain. However, the Taney Court used the Contracts Clause to strike down state legislation 18 times in cases where such limited interpretation of state grants of power, or the power of eminent domain, were not involved.12

In applying the Contracts Clause doctrine, courts during the natural law era distinguished between direct impairments of contract rights, where any impairment, no matter how small, triggered Contracts Clause problems, and state statutes focused on remedies for breach of contract, where only substantial impairments of rights would trigger an objection. For example, in 1823, the Court stated

---

10 Id. at 332-34 (Marshall, C.J., joined by Duvall & Story, JJ., dissenting).
in *Green v. Biddle*, 13 “The objection to a law on the ground of its impairing the obligation of contract can never depend upon the extent of the change which the law effects in it. Any deviation from its terms by postponing or accelerating the period of performance which it prescribes, imposing conditions not expressed in the contract, or dispensing of those which are, however minute or apparently immaterial in their effect upon the contract of the parties, impairs its obligation.” On the other hand, with regard to alteration in contract remedies, the Court stated in 1866 in *Von Hoffman v. City of Quincy*, 14 “It is competent for the States to change the form of a remedy, or to modify it otherwise, as they may see fit, provided no substantial right secured by the contract is thereby impaired.” This doctrine followed the prevailing model of the natural law era of phrasing doctrine as a categorical test, rather than as a balancing inquiry, with the key distinction being whether the impairment concerned the contract terms directly, or only remedial issues. The preference of original natural law doctrine for categorical tests is discussed at § 4.2.1 nn.32-33.

**§ 22.1.2 The Formalist Era**

The formalist-era Court continued the Taney Court’s deference toward states in *Dix* and other cases by holding in 1880 in *Stone v. Mississippi* 15 that a state is without power to enter into binding contracts not to exercise its police power in the future. More generally, as stated in 1908 in *Hudson County Water Co. v. McCarter*, 16 “One whose rights, such as they are, are subject to state restriction, cannot remove them from the power of the State by making a contract about them.” Even so, from 1873 to 1900, the Court used the Contracts Clause to invalidate state laws in 39 cases. 17

Thereafter, use of the clause declined. States had begun in more cases to reserve the right to alter charters that they granted, and charters were drafted more carefully to preserve state flexibility. Further, the Court began to rely on substantive due process review under *Lochner v. New York* and its progeny to invalidate legislation that “unreasonably” impinged on contract or property rights, as discussed at § 27.3.2.1. This precluded the need for Contracts Clause review.

An important change occurred in 1934. A 5-4 Court held in *Home Building & Loan Association v. Blaisdel* 18 that a state could enact a 2-year moratorium on foreclosures of real estate mortgages to deal with the financial crisis caused by the Great Depression. The statute allowed mortgagors in default to remain in possession during the 2-year period by paying a reasonable rental value to the mortgagee. As noted at § 9.3.2 n.75, looking predominantly to literal text and specific historical intent, four extreme formalists said in dissent, “A candid consideration of the history and

13 21 U.S. (8 Wheat.) 1, 84 (1823).
14 71 U.S. 535, 553 (1866).
16 209 U.S. 349, 357 (1908).
17 Wright, supra note 12, at 64.
18 290 U.S. 398 (1934).
circumstances which led up to and accompanied the framing and adoption of this clause will demonstrate conclusively that it was framed and adopted with the specific and studied purpose of preventing legislation designed to relieve debtors especially in time of financial distress.\textsuperscript{19} The dissent emphasized the formalist view that contemporaneous sources should dominate constitutional interpretation, because the Constitution should have a fixed, static meaning at the time it is adopted.

In contrast, the moderate formalist majority, in an opinion penned by Chief Justice Hughes, noted, “While emergency does not create power, emergency may furnish the occasion for the exercise of power.”\textsuperscript{20} Looking to prior Court opinions from the founding era, the majority noted that those opinions had given greater weight in interpreting the Contracts Clause to the overall purpose of the clause, and not to a rigid literalism. Thus, the Court noted that Justice Johnson had stated in 1827 in \textit{Ogden v. Saunders}, “It appears to me, that a great part of the difficulties of the cause, arise from not giving sufficient weight to the general intent of this clause in the constitution, and subjecting it to a severe literal construction . . . [T]o assign to contracts, universally, a literal purport, and to exact from them a rigid literal fulfilment, could not have been the intent of the constitution.”\textsuperscript{21}

In \textit{Blaisdell}, the two moderate formalists on the Court, Chief Justice Hughes and Justice Roberts, joined the 3 non-formalists on the Court, Justices Brandeis, Stone, and Cardozo, to form a majority upholding the state statute based on consideration of 5 factors. As with all factor approaches, as discussed at §§ 21.2.2.2-21.2.2.3, these 5 factors reflected a 3-part means/end analysis (ends, benefits achieved, burdens imposed). Under \textit{Blaisdell}, the statute was constitutional because it advanced “legitimate” ends of society, given the emergency created by the Depression (factors 1 and 2 in \textit{Blaisdell}); the means adopted in the moratorium statute reflected “reasonable” conditions appropriately tailored to advance its ends (factors 3 and 4); and the statute was not “unreasonably” burdensome because it was temporary in duration and limited to the exigency which called it forth (factor 5).\textsuperscript{22}

On the other hand, reflecting the view that unreasonable substantial impairments of the rights of contract remedies were not permissible, the Court held a year later in \textit{W.B. Worthen Co. v. Kavanaugh}\textsuperscript{23} that a state could not impair a contractual obligation where the state statute “cut down the security of a mortgage without moderation or reason or in the spirit of oppression. . . . . With studied indifference to the interests of the mortgagee or to his appropriate protection [the state] has taken from the mortgagee the quality of an acceptable investment for a rational investor.” The decision in \textit{Worthen} was unanimous.

§ 22.1.3 The Holmesian Era

During the Holmesian era, the Blaisdell holding, and its focus on reasonable state regulation, was initially followed in cases like Honeyman v. Jacobs. In 1939, the Court applied in Jacobs the approach that only substantial infringement of contract rights will trigger Contracts Clause review where the state is merely altering the form of a contract remedy. The Court also indicated that where the Clause was triggered, review would be for the “reasonableness” of the state action as in Blaisdell.

After Jacobs, however, Contracts Clause review for “reasonableness” began to follow the minimum rational review test of “rationality” that emerged on the Court during the Holmesian era for economic and social legislation challenged under the Equal Protection Clause and Due Process Clause. Those Equal Protection and Due Process cases are discussed at §§ 26.1.1.1 & 27.1.2.1. As discussed there, the minimum rational review test, with its substantial deference to government, requires the challenger to meet a burden of showing either that the government is not advancing a legitimate government end, or there is no rational relationship between the government action and advancing the government end, or the action imposes an irrational burden.

As discussed at § 7.2.1, this kind of three-part element inquiry of minimum rational review differs from the “second-order” factor-balancing review of Blaisdell, where no substantial deference is given to the government, and all the means/end considerations are weighed together in an overall determination of “reasonableness,” not mere “rationality,” but with the burden still on the challenger to establish the unconstitutionality of the government action. It is also different than the “third-order” factor-weighing “reasonableness” review of Lochner, discussed at § 27.3.2.1, where the burden was on the government to justify its action. Holmesian-era Contracts Clause cases like East New York Savings Bank v. Hahn in 1945 more clearly adopted the substantial deference to government approach of minimum rational review, with only brief consideration of legitimate government interests, rational relationship between means and ends, and no irrational burden, although Hahn cited Blaisdell, despite Hahn not adopting a factor balancing approach. In Hahn the Court noted that the state could advance “the sovereign right of the government to protect the . . . general welfare of the people,” whether by state ability to reform contract remedies, state ability to restrict a party to gains reasonably to be expected, or state power to react to an emergency.

§ 22.1.4 The Instrumentalist Era

Contracts Clause cases during the instrumentalist era continued the low level of Contracts Clause review for state statutes regulating contracts generally. Indeed, the Court limited Contracts Clause review even more than during the Holmesian era. In El Paso v. Simmons, the Court upheld a state law cutting to 5 years the reinstatement rights of an interest-defaulting purchaser of land from the state. Referring to earlier cases that required a substantial impairment to trigger Contracts Clause

analysis for alteration of contract remedies, the Court extended that principle to conclude that only those modifications of contract rights that “substantially impair” contract rights would trigger Contracts Clause review.27 Further, the Court continued a minimum rational review approach, and held that it was not an irrational burden to "restrict a party to those gains reasonably to be expected from the contract."28 This decision reflects the liberal predisposition to be not so concerned with state regulation of economic activity in the public interest, noted at §§ 11.3.3 n.61 & 21.2.1.2.

Two cases during the 1970s, however, breathed some new life into the Contracts Clause. Without specifying that they were applying a higher level of scrutiny, the Court held in United States Trust Co. v. New Jersey29 that states are bound by their own financial contracts and can modify them only if reasonable and necessary to serve a legitimate public purpose. The state had sold toll bridge bonds on a promise not to finance deficits of other future mass transit facilities with revenue pledged to pay the bonds. The state legislature later broke that financial promise in a law which permitted greater use of bridge and tunnel tolls to subsidize mass transit. The Court declared the law invalid, saying it was not “necessary,” because other means were available to discourage auto use and encourage mass transit, and was not made “reasonable” by changed circumstances, because the likelihood of commuter deficits was well known when the bonds were sold. In this case, no substantial deference was given to the government’s action, and the Court applied the Blaisdell kind of overall factor weighing approach to determine overall “unreasonableness” of the action. This reflects a “second-order” kind of rational basis scrutiny.

Reflecting their stronger liberal predisposition to be not so concerned with state economic regulation, Justice Brennan, dissenting, with Justices Marshall and White, urged a unified interpretation reflecting minimum rational review of all constitutional provisions that protect private property. The dissent wanted greater deference to legislative decisions when undertaking Contracts Clause review, as is done in substantive due process cases, concluding that the bondholders' welfare was adequately policed by political processes and the bond marketplace.30 However, this view did not prevail.

In Allied Structural Steel Co. v. Spannaus,31 the Court invalidated a law that required private employers who provided pension benefits to pay a pension funding charge if they terminated the plan or closed a local office and the pension funds did not cover full benefits for all employees who had worked at least 10 years. The Court said the law imposed a substantial impairment of a contractual relationship, an impairment that was retroactive, immediate, and severe, and applied here only because a state office was being closed by an employer who had voluntarily created a pension plan, and not because of a broad, generalized economic or social problem. Further, the law imposed

27 Id. at 503-04.
28 Id. at 515.
30 Id. at 33 (Brennan, J., joined by White & Marshall, JJ., dissenting).
an unexpected liability in a field not before subject to regulation. Using Blaisdell as its model for analysis, the Court held that the challenger had met the burden to overcome the presumption of “necessity and reasonableness” of the government’s action.

Justice Brennan, again dissenting with Justices Marshall and White, would have limited the Contracts Clause to legislation that dilutes obligations rather than imposes new duties. In addition, he again argued for a unitary approach that would test all economic regulations by the minimum rational review test of what is rationally related to promoting the general welfare. The majority’s approach, he said, vested it with broad discretion to protect interests that appeal to the Court. Yet there is no reason to give contract-rooted expectations greater protection than property rights.32

The precise circumstances in which the Court would apply the higher, non-deferential Blaisdell factor standard of review toward state laws that retroactively modify existing contracts was left rather vague in Allied Structural Steel. Justice Blackmun attempted to remedy this situation in Energy Reserves Group, Inc. v. Kansas Power & Light Co.33 In Energy Reserves, the buyer of intrastate gas contended that in accord with a new Kansas law, price escalation under a pre-existing purchase contract was limited by § 109 of a federal act to $163 per million Btus. The seller argued that Kansas could not apply its law retroactively, so that prices under the contract could escalate to the upper federal limit of $2.078 per million Btu. The Court upheld the Kansas law, thus allowing a state-imposed contract modification.

The Court first held that the law did not substantially impair a contract relationship, and thus did not even pass the threshold inquiry. In addition, the Court noted that the law was a reasonable means to accomplish legitimate state purposes, and the seller's reasonable expectations were not impaired because the parties were operating in a heavily regulated industry. Thus, even if the state regulation had constituted a substantial impairment, the challenger had not met its burden of showing that the law did not have a legitimate public purpose, or that the modification was not rationally related to that public purpose given the substantial deference to the government appropriate for the case. The stricter standard of United States Trust and Allied Structural Steel, where the Court gives less deference to state justifications, did not apply, because Kansas did not impair (1) its own contractual obligations or (2) the obligations of a narrow class of contract actors, but was a law of general applicability. Thus, the kind of non-deferential “second-order” factor balancing test concerning “necessity and reasonableness” of United States Trust and Allied Structural Steel did not apply.

§ 22.1.5 The Modern Natural Law Era

In recent years the Court has followed the precedents of the instrumentalist era. They are viewed as reflecting an appropriate balance between the needs of state regulation and the protection of individual contract rights. This doctrine is now established in the law, even though the approach reflects a balancing test, different than the categorical approach of the original natural law era. In the only few Contracts Clause cases considered since 1986, the Court has not found a violation.

32 Id. at 251 (Brennan, J., joined by White & Marshall, JJ., dissenting).

For example, in *Keystone Bituminous Coal Association v. DeBenedictis*, the Court sustained a statute that barred the extraction of a percentage of coal owned by persons who held the mining estate, even though owners of the surface estate had entered contracts waiving damage claims resulting from removal of the coal. The Court found a substantial contract impairment, but said that restraining the companies was rationally related to protecting the environment under a substantial deference approach. The Court explicitly acknowledged that the Contracts Clause is not to be read literally, but, as under a natural law approach, in light of its purpose, context, history, and precedents.

In *General Motors Corp. v. Romein*, the Court found no substantial contract impairment because no contract term was burdened in the case. The Court sustained a 1987 Michigan statute that required employers to reimburse disabled employees for workers' compensation benefits withheld because the workers could receive wage-loss compensation from other employer-funded sources – even with respect to injuries which occurred before the effective date of the law. The Court said there was no contractual agreement regarding the workers' compensation terms because Michigan law did not incorporate into employment contracts a right of the employer to rely on past disability compensation periods as "closed." Thus, the Contracts Clause did not apply at all.

§ 22.1.6 Federal Impairment of Contracts

There is no federal Contracts Clause. However, if federal law applies to private or government contracts, the Court will engage in review under the Due Process Clause of the Fifth Amendment. Under a substantive due process analysis for economic regulations, as discussed at § 27.1.2.1, the Court applies a presumption of constitutionality and requires a challenger to show under minimum rational review that the legislature acted in an arbitrary and irrational way. This use of minimum rational review under the Due Process Clause mirrors the minimum rational review used for general regulations substantially impairing contract rights under the Contracts Clause.

The Court considered another avenue for reviewing impairment of contracts by federal legislation in *Eastern Enterprises v. Apfel*. In *Apfel*, the Court said that Congress may impose retroactive liability to some degree, particularly if confined to short and limited periods required by the practicalities of producing national legislation. However, Justice O'Connor said for the Court. “Our decisions have left open the possibility that legislation might be unconstitutional if it imposes severe

---

34 480 U.S. 470, 502-06 (1987). The Court also refused to find that there had been a compensable "taking". *Id.* at 498-502, discussed at § 22.2.5.1 n.93.

35 503 U.S. 181, 187-88 (1992). The Court also held that the 1987 statute did not violate substantive due process because it was a rational means toward a legitimate legislative purpose of equalizing payments made by employers who thought such coordination payments were not authorized for injuries prior to 1982 with those who thought they were authorized. *Id.* at 191-92.

retroactive liability on a limited class of parties that could not have anticipated the liability, and the extent of that liability is substantially disproportionate to the parties' experience.”

Giving more specific content to this general observation, a four-Justice plurality concluded that such a substantial impairment resulted in a taking under Takings Clause analysis. They held that a taking had occurred when the government purported to change the worker benefit plan of a mining company which had been out of the coal business for many years in order to require guarantees of lifetime benefits to the widows of deceased coal miners. In doing so, they applied the *Penn Central* Takings Clause test, discussed at § 22.2.4, which is a “second-order” factor-weighing approach focusing on the economic impact of the regulation, its interference with reasonable investment backed expectations, and the character of the government action. Justice Kennedy, concurring in the judgment, would have invalidated the Act as a violation of the Due Process Clause, using standard minimum rational review, rather than under the Takings Clause. He said that in all previous cases of a regulatory taking a specific property right or interest had been at stake. He said, "The difficulties in determining whether there is a taking of a regulation even where a property right or interest is identified ought to counsel against extending the regulatory takings doctrine to cases lacking this specificity.”

Justice Breyer dissented with Justices Stevens, Souter, and Ginsburg. Breyer opened by agreeing with Justice Kennedy that the Takings Clause did not apply. Thus, this additional kind of review of the four-Justice plurality opinion in *Apfel* does not command majority support. In his dissent, Justice Breyer, differing with Justice Kennedy, concluded that under minimum rational review it was not unconstitutional under the Due Process Clause for Congress to impose on Eastern a liability for the future health care of minors whom it long ago employed. The reasons were: (1) the liability extends only to minors whom Eastern itself employed, (2) the company had led its employees to believe that they would continue to receive medical benefits, and (3) Eastern continued to obtain profits from the coal mining industry for many years after it discontinued mining. Thus, Eastern could not show that the law was an irrational burden that unfairly upset legitimately settled expectations of Eastern that it would remain free of future health care liability for the workers whom it employed.

§ 22.2 The Takings Clause

The Takings Clause of the Fifth Amendment provides, “[N]or shall private property be taken for public use, without just compensation.” As this literal text indicates, there are four issues that potentially could arise in every Takings Clause case: (1) is property involved; (2) is there a taking; (3) is it for a public use; and (4) how to measure just compensation.

---

38 Id. at 528-29.

39 Id. at 522-29.

40 Id. at 542 (Kennedy, J., concurring in the judgment and dissenting in part).

41 Id. at 550 (Stevens, J., joined by Souter, Ginsburg & Breyer, JJ., dissenting).
Regarding whether property is involved, while the ultimate issue of whether something is a property interest under a Takings Clause analysis is a federal question, the Court predominantly looks to state property law to determine property interests, and only departs from that if it appears the state law on property is an attempt to evade federal law through a strained interpretation of what is property, or in cases where a federal statute creates a federal property interest on its own.\footnote{See generally United States v. Powelson, 319 U.S. 266, 279 (1943).} For example, in \textit{Phillips v. Washington Legal Foundation},\footnote{524 U.S. 156, 165 (1998) (citations omitted).} the majority held that interest earned on client’s funds held in a state-created IOLTA program was property of the client under Texas law. The majority stated, “The rule that ‘interest follows principal’ has been established under English common law since at least the mid-1700’s. Not surprisingly, this rule has become firmly embedded in the common law of the various States.” Also focusing on state property law, the 4-Justice dissent held that under Texas law since “‘absent the [state-created] IOLTA program’ no ‘interest’ could have been earned” on the trust funds, “the interest earned is \textit{not} the client’s ‘property.’”\footnote{Id. at 183 (Breyer, J., joined by Stevens, Souter & Ginsburg. JJ., dissenting).}

As for what constitutes a taking, it has always been the law that when the United States takes physical possession of private property through the power of "eminent domain" the government must pay just compensation, unless the property constitutes a public nuisance or another exception exists, discussed at § 22.2.5.3. Reflecting existing understandings, the United States was specifically held to have the right of eminent domain in 1875.\footnote{Kohl v. United States, 91 U.S. (1 Otto) 367, 371-77 (1876).} The Court has also held states have eminent domain power.\footnote{See, e.g., Contributors to Pennsylvania Hospital v. Philadelphia, 245 U.S. 20, 23-24 (1917).} More difficult issues of determining whether a taking exists in non-eminent domain cases are discussed at §§ 22.2.1-22.2.5.

A taking must be for a public use. If not, a taking of property violates due process, even if compensation is provided. Such was the case in \textit{Missouri Pacific Railway Co. v. Nebraska},\footnote{164 U.S. 403, 416-17 (1896).} where the Court held that a statute providing that a railroad had to permit private individuals the right to store grain on its property was not for a public use. The Supreme Court has never held, however, that any government eminent domain proceeding was not for a public use. As Justice O’Connor noted in her dissent in 2005 in \textit{Kelo v. City of New London, Conn},\footnote{125 S. Ct. 2655, 2673 (2005) (O’Connor, J., joined by Rehnquist, C.J., and Scalia and Thomas, JJ., dissenting).} a controversial case of eminent domain to aid a private developer to build a waterfront project, easy cases for public use involve transferring “private property to public ownership – such as for a road, a hospital, or a military base” or transferring “private property to private parties, often common carriers, who make the property available for the public’s use – such as with a railroad, a public utility, or a stadium.”

\footnotesize{\textsuperscript{42} See generally United States v. Powelson, 319 U.S. 266, 279 (1943).}  
\footnotesize{\textsuperscript{43} 524 U.S. 156, 165 (1998) (citations omitted).}  
\footnotesize{\textsuperscript{44} Id. at 183 (Breyer, J., joined by Stevens, Souter & Ginsburg. JJ., dissenting).}  
\footnotesize{\textsuperscript{45} Kohl v. United States, 91 U.S. (1 Otto) 367, 371-77 (1876).}  
\footnotesize{\textsuperscript{46} See, e.g., Contributors to Pennsylvania Hospital v. Philadelphia, 245 U.S. 20, 23-24 (1917).}  
\footnotesize{\textsuperscript{47} 164 U.S. 403, 416-17 (1896).}  
\footnotesize{\textsuperscript{48} 125 S. Ct. 2655, 2673 (2005) (O’Connor, J., joined by Rehnquist, C.J., and Scalia and Thomas, JJ., dissenting).}
O’Connor noted, however, that these two categories of “public ownership” and “use-by-the-public” are “sometimes too constricting and impractical” and that the Court has permitted “in certain circumstances and to meet certain exigencies, takings that serve a public purpose also [to] satisfy the Constitution [even] if the property is destined for subsequent private use.”

In his dissent in *Kelo*, consistent with a formalist focus on literal meaning, Justice Thomas indicated that in his view this third category was improper in its entirety, since these cases involve “public purposes,” not literally “public use.” Justice Thomas concluded that related provisions in the Constitution and early legislative practice also indicated the framers adopted the phrase “use” to limit the grounds on which eminent domain could proceed. Justice O’Connor indicated in her dissent that the “public purpose” category should apply, but only where “extraordinary precondemnation use of the targeted property inflicted affirmative harms on society – in *Berman* [v. *Parker*] through blight resulting from extreme poverty and in [*Hawaii Housing Authority v.*] *Midkiff* through oligopoly resulting from extreme wealth.” In such cases, a legislative taking was warranted to eliminate the harmful use and directly achieve a public benefit, even if the property was turned over to private use.

The Court majority in *Kelo* read the third category of “public purpose” takings more broadly. They noted, “Without exception, our cases have defined that concept broadly, reflecting our longstanding policy of deference to legislative judgments in this field. . . . Promoting economic development is a traditional and long accepted function of government.” Despite this broad language, in his concurrence, which was the critical fifth vote in the case, Justice Kennedy observed:

This Court has declared that a taking should be upheld as consistent with the Public Use Clause, as long as it is “rationally related to a conceivable public purpose.” This deferential standard of review echoes the rational-basis test used to review economic regulation under the Due Process and Equal Protection Clauses. The determination that a rational-basis standard of review is appropriate does not, however, alter the fact that transfers intended to confer benefits on particular, favored private entities, and with only incidental or pretextual public benefits, are forbidden by the Public Use Clause.

A court applying rational-basis review under the Public Use Clause should strike down a taking that, by a clear showing, is intended to favor a particular private party, with only incidental or pretextual public benefits, just as a court applying rational-basis review under the Equal Protection Clause must strike down a government classification that is clearly intended to injure a particular class of private parties, with only incidental or pretextual public justifications.

---

49 *Id.* at 2677-82 (Thomas, J., dissenting).

51 *Id.* at 2663.

52 *Id.* at 2669 (Kennedy, J., concurring).
Finally, if property has been taken for public use, just compensation must be provided. In determining the amount of that compensation, the Court has often noted that compensation is measured in terms of the reasonable market value loss to the owner at the time of the taking, rather than any gain to the taker. The Court has noted, however, that the government does not need to pay for any increase in the market value that occurred solely because the proposed taking had the effect of increasing market values. In Brown v. Legal Foundation of Washington, the follow-up case to Phillips v. Washington Legal Foundation, cited at § 22.2 nn.43-44, the Court had to decide what compensation was due from the attorney keeping a client’s property in the IOLTA account. In Brown, Justice O’Connor joined the four dissenters in Phillips to hold that since no net interest could have been earned on the funds deposited in the IOLTA account, no compensation was due.

The Fifth Amendment Takings Clause initially applied only to the federal government, as did all of the Bill of Rights provisions, discussed at § 27.2.1 n.95. In 1897, in Chicago, Burlington & Quincy Railroad v. Chicago, the Takings Clause became the first clause in the Bill of Rights incorporated into the Due Process Clause of the 14th Amendment and thus made applicable against the states under the “selective incorporation” doctrine, as discussed at § 27.2.2 n.107. Actually, three years earlier, the Court had applied the Takings Clause against the states under an Equal Protection Clause analysis in Reagan v. Farmers’ Loan & Trust Co. Following 1897, incorporation against the states under the Due Process Clause became the standard Court doctrine.

By 1897, most state constitutions had similar Takings Clause provisions. Incorporation thus meant only a national minimum approach towards Takings Clause doctrine would now apply, not that a new obligation was being imposed upon most states. In contrast, at the time of ratification of the Bill of Rights in 1791, only Massachusetts and South Carolina had similar kinds of Takings Clauses in their state constitutions, and the provision in Massachusetts was limited to personal property, not real property. Indeed, during the 18th century, both colonial and state governments appropriated land for economic development ventures without always providing compensation, and many colonies and states provided that land would be forfeited if not used for a productive use during some period of time, like 3 years. Even when compensation was paid, it was often paid in paper currency which

56 166 U.S. 226, 241 (1897).
sometimes turned out to be virtually worthless.  

Toward the end of the 18th century, and after the adoption of the Takings Clause applicable against the federal government, state court judges began to use more frequently the principle of just compensation to restrain legislative takings, either based on the increasing number of provisions in state constitutions on point, or court imposition of a compensation requirement out of a sense of "natural justice" or "equity."  

Today, state constitutional provisions are usually read to provide similar protection as the federal Takings Clause. They can be read, of course, by state Supreme Courts to provide greater protection than the federal Constitution.  States and the federal government can also enact various "assessment" or "compensation" statutes to limit governmental activity infringing on individual property rights that would not be a constitutional taking, and can statutorily ban themselves from taking property to promote private development as in *Kelo*.  

The wisdom of using eminent domain to promote private development is, of course, separate from the constitutional issue. Such development has been done with some regularity since the 1950s in terms of slum clearance, particularly of poor minority neighborhoods, often to build highways to ease commuting from the predominantly white suburbs to downtown offices. In *Kelo*, the waterfront development affected a predominantly white community, and perhaps for that reason got greater media attention. In *Kelo*, as of 6 months after the decision, the controversy surrounding the development project stopped the project even though the city won the lawsuit and could proceed.

---

62 On the constitutional and public policy issues surrounding *Kelo* from the perspective of individual property owners, including discussion of the use of eminent domain for slum clearance, see Gideon Kanner, *The Public Use Clause: Constitutional Mandate or "Horatory Fluff"?*, 33 Pepp. L. Rev. 335 (2006); *Kelo*, 125 S. Ct. at 2677 (O’Connor, J., joined by Rehnquist, C.J., and Scalia and Thomas, J.J., dissenting); 125 S. Ct. at 2686-87 (Thomas, J., dissenting).
§ 22.2.1 The Original Natural Law Era

From the beginning of the Constitution’s ratification, the Court enforced the Takings Clause when the case involved physical invasions of property. This was clear from Justice Chase's 1798 statement in *Calder v. Bull*[^63] that it would be unconstitutional to "take property from A and give it to B."

The Court would also find a taking where a regulatory act had direct physical consequences. For example, in *Yates v. Milwaukee*,[^64] decided in 1870, a city declared in an ordinance that a particular riparian owner's wharf was a nuisance, and therefore subject to physical removal. The city was held to have taken property from the riparian owner whose wharf was thereby declared illegal. The city could not avoid paying compensation simply by a declaration that the owner's wharf was a nuisance. Reflecting the natural law focus on purpose, discussed at § 12.2.1.1, the Court said that a usage had actually to qualify as a nuisance, and thus support the purpose behind the nuisance exception, before it could be prohibited without compensation.

A similar result was reached in *Pumpelly v. Green Bay Co.*[^65] There, a state-constructed dam flooded a riparian owner’s fields. The dam, though not on the private owner’s property, had direct physical consequences of causing flooding on the owner’s property. The Court said that the state had to pay for a destructive taking as well as one brought about by actual physical occupation because the Takings Clause was “adopted for protection and security of the rights of the individual against the government.” A statute cannot “inflict irreparable and permanent injury” on property and “subject to total destruction” without providing just compensation. As in *Yates*, the purpose behind the Takings Clause, rather than whether there literally was a physical taking, controlled the outcome.

In each of these cases, there were direct physical effects of the government regulation on the private owner’s property. In none of these cases were regulatory acts that had only indirect effects on a property’s owners use of the property or its property value held to be a taking. This focus on actual physical occupation or direct physical effects is consistent with Stage 3 concrete operational thought and its focus on concrete events, discussed at § 15.4.1 nn.50-56.

§ 22.2.2 The Formalist Era

After the Civil War, as states increasingly sought to achieve public objectives by regulating the use of property, rather than by taking exclusive possession of it, the Court was increasingly faced with determining when, if ever, such regulations would amount to a taking. In a series of decisions from 1877 to 1900, the Court backed away from reading the Takings Clause in light of its purpose and focused more on literal physical occupation.

[^63]: 3 U.S. (3 Dall.) 386, 388 (1798).
[^64]: 77 U.S. (10 Wall.) 497, 504-07 (1870).
[^65]: 80 U.S. (13 Wall.) 166, 177-78 (1872).
In 1877, in *Railroad Co. v. Richmond*, a city had barred a railroad from operating on a particular street, even though this appeared to violate the railroad's charter. Without citing *Pumpelly* or *Yates*, the Court gave a more literal reading to the language of the Takings Clause. The Court said, "All property within the city is subject to the legitimate control of the government, unless protected by 'contract rights,' which is not the case here. Appropriate regulation of the use of property is not 'taking' property, within the meaning of the constitutional prohibition." The Court retreated even further a year later in *Transportation Co. v. Chicago*, where it held that government action that devalues private property, but does not directly impinge upon it, is not a taking. Justice Strong restricted *Pumpelly* to its core holding involving a situation where there was a permanent and physical invasion of property and not merely a temporary inconvenience with respect to its use.

Professor Kris Kobach has speculated that this change was at one with a broader judicial current—a gradual withdrawal by the Court in its willingness to enforce national rights against the states. He pointed out that a few years later, in 1887 in *Mugler v. Kansas*, the Court stated that state actions falling under the broad umbrella of "police powers" to ban property uses "prejudicial to the public interests" were free of the compensation requirement. Consistent with this comment, the Court also decided in *Mugler* that banning the manufacture of liquor did not constitute a taking from a manufacturer even though its machinery and buildings were much reduced in value. The Court said, in an opinion by Justice Harlan, "[A] prohibition simply upon the use of property for purposes that are declared, by valid legislation, to be injurious to the health, morals, or safety of the community, cannot in any sense, be deemed a taking or an appropriation of property for the public benefit."

Still, the Court had not overruled *Yates*. However, the Court gave the case a new characterization in 1900 in *Scranton v. Wheeler*. In *Scranton*, the federal government had built a pier that ran laterally along a bank, extending entirely across the front of plaintiff's land. The Court distinguished *Yates*, saying that it was a case in which a city had arbitrarily and capriciously attempted to destroy or remove a wharf that was not an obstruction to navigation. In *Scranton*, however, government action had resulted only indirectly and incidentally in the loss of a citizen's right of access to navigation—a right never exercised before the Government constructed its wharf. Three Justices dissented, saying that the Court in *Yates* had held that riparian rights, when recognized as existing by state law, are a valuable property, and the subject of compensation when taken for public use.

---

66 96 U.S. 521, 529 (1878).
68 123 U.S. 623, 669-70 (1887).
71 179 U.S. 141, 157-58 (1900); id. at 177-79 (Shiras, J., joined by Gray & Peckham, JJ., dissenting).
The Court's discussion of the relative arbitrariness or reasonableness of the government's action mirrored what was happening in its substantive due process cases. As discussed at § 27.3.2.1 nn.148-56, three years earlier, in 1897, the Court had invalidated a state law on substantive due process grounds in *Allgeyer v. Louisiana*.\(^\text{72}\) Eight years later, in 1905, the Court struck down a maximum-hours law on the ground that it was an unreasonable interference with the right to contract in *Lochner v. New York*.\(^\text{73}\) In contrast to these decisions, most state regulations raising takings issues were held to be reasonable by the formalist-era Court.

For this reason, absent a substantive due process argument, after *Scranton* the states seemed to be required to award just compensation only when state action resulted literally in a physical taking and not merely a devaluation. Justice Holmes disagreed with this view. For a Holmesian, the focus of Takings Clause doctrine should be on the functional consequences of regulation, rather than whether literally there was a physical taking.

In 1922, Justice Holmes was able to express those views when writing for the Court in *Pennsylvania Coal Co. v. Mahon*.\(^\text{74}\) A state law banned coal mining that threatened surface structures. A mining company challenged application of that law as a taking where the company, before enactment of the legislation, had sold the surface rights to certain land and in the deed had retained a right to cause damage to the surface. Justice Holmes said that when regulation reaches a certain magnitude, then in most if not all cases, "there must be an exercise of eminent domain and compensation to sustain the act." It was a question of whether the regulation went "too far." The Court decided in *Mahon* that the Pennsylvania law did go too far since there was a complete destructive of the ability to mine coal. Narrowly speaking, *Mahon* was consistent with *Pumpelly* and *Transportation Co.* because there was a complete destruction of value. Thus, formalist and Holmesian Justices joined in an 8-1 result in the case.

Despite recitation of this Holmesian functional analysis in *Mahon*, later case results during the formalist era were more consistent with the earlier formalist-era analysis. Thus, the magnitude of a regulation's impact could be quite substantial without causing a taking. For example, in *Village of Euclid v. Ambler Realty Co.*,\(^\text{75}\) the application of a city zoning plan which caused a 75% loss in value of an owner's property was not held to be a taking. In *Miller v. Schoene*,\(^\text{76}\) when government officials cut down cedar trees to save an apple crop, it was not held a taking but, rather, the removal of a nuisance. Thus, the formalist Court reached results consistent with the viewpoint it had attributed to *Yates* and *Pumpelly* in *Transportation Co.*, *Scranton*, and *Mahon*.

\(^{76}\) 276 U.S. 272, 277-81 (1926).
§ 22.2.3 The Holmesian Era

Under a pure Holmesian approach, the deference-to-government posture of the Holmesian view can lead to a view that significant impacts on a person’s property are not substantial enough to be a taking under the *Mahon* approach. This would be particularly true for liberal Holmesians, who, like liberal instrumentalists, have a predisposition to defer to government regulation over economic matters. For example, liberal Holmesian Justice Brandies was the sole dissenter in *Mahon*.77

In addition, the Holmesian-era Court stated in 1945 that the determination of whether the taking is for a public use is basically a legislative function.78 However, the Court did retain the power to decide when a regulation or other government action went "too far" under *Mahon*, and thus constituted a taking. Applying this test, the Court found a taking in *United States v. Causby*,79 when the government used a flight path less than 100 feet over a chicken farm. The impact of those flights caused substantial economic damage and the closing of the chicken farm, due to death of about 150 chickens who flew into building walls because of the fright caused by the sound, and less production of eggs by those chickens still alive. The vast majority of Takings Clause cases during the Holmesian era, however, involved the unquestioned case of a taking by eminent domain.80

§ 22.2.4 The Instrumentalist Era

During the instrumentalist era, the Court made several efforts to clarify the law on regulatory takings, while continuing to make it as easy as during the Holmesian era for governments to regulate without paying compensation. The leading case is *Penn Central Transportation Co. v. City of New York*.81 In that 1978 case, the Court held that application of the New York City Landmarks Preservation Law to the Grand Central Terminal building was not a taking. The City had refused permission to build a 50-story office building atop the terminal. However, Penn Central Transportation was free to apply for another form of development and its air rights over the terminal could be used on other nearby parcels to build office floors there.

In deciding the case, Justice Brennan focused on the character of the City's action and on the nature and extent of interference with rights in the parcel as a whole. This focus on the economic impact on the property as a whole, and not just on the particular piece being regulated, is standard in

77 260 U.S. at 416-22 (Brandeis, J., dissenting).
78 United States ex rel. TVA v. Welch, 327 U.S. 546, 551 (1946).
79 328 U.S. 256 (1946).
Takings Clause doctrine. The Court noted that even if the land use law had “significantly diminished the value of the Terminal site” that was just the beginning of the analysis. In deciding whether that diminution constituted a taking, Justice Brennan pointed to the special significance of three factors: the economic impact of a regulation, its interference with reasonable investment backed expectations, and the character of the governmental action.

Applying this approach, the Court concluded that the restrictions were reasonably related to promotion of the general welfare. Indeed, the Court noted that the landmarks law applied to all buildings in 31 historical districts and to over 400 individual landmark buildings. The law was also viewed as being not arbitrary or unduly harsh, in that it permitted reasonable beneficial use of the Terminal and a reasonable rate of return with chances to enhance the Terminal and other nearby properties. This approach is reflective of a “second-order” rational review approach, as discussed at § 22.2.5.1 nn.91-94, in that the Court balanced all the factors of ends, benefits, and burdens together to determine whether the regulation was “reasonable” or a “taking” occurred, rather than the minimum rational review approach of separate elements requiring only the minimal showing of legitimate ends, rational promotion of benefits, and no irrational burden.

Justice Rehnquist, dissenting with Justices Burger and Stevens, said the lost opportunity of using the air rights above the railroad station should be given greater weight in this balancing approach. Focusing on the profits lost by being denied the ability to use the air rights to build the 50-story tower, the dissent concluded that the regulation went “too far” and there was a taking of those rights from the property owner that was not offset by the ability to use the air rights on other buildings or the increase in value of Grand Central Terminal attributable to similar land-use restrictions on neighboring properties.

This difference between the majority and dissenting opinion in Penn Central underscores an important aspect in the application of the Penn Central factor-balancing test. Typically, Court majorities during the instrumentalist era downplayed lost investment represented by lost opportunities to use property in a more profitable manner, and focused more on whether the individual was being deprived of a reasonable rate of return on existing investment uses. Based on straight-forward economic theory, conservative jurists typically view lost economic opportunities equally as lost returns on current investments. The Court majority in Penn Central, and later cases, however, have typically given lost opportunities much less weight in terms of deciding whether a particularly diminution in value goes “too far” to constitute an “unreasonable” action, and thus is a taking.

---

83 Id. at 138-40 (Rehnquist, J., joined by Burger, C.J., and Stewart, J., dissenting).

§ 22.2.5  The Modern Natural Law Era

Since 1986, in the post-instrumentalist era, the Court has attempted to find ways to clarify when a taking will be found. In general, the Court has given owners somewhat greater protection than provided by the deference-to-government use of the Mahon test during the Holmesian era and the Penn Central test of the instrumentalist era, while not substantially departing from the Mahon/Penn Central framework. Four main issues frame the Court’s recent Takings Clause cases. Those issues are: (1) what is the appropriate standard of review to apply to the case, discussed at § 22.2.5.1; (2) how and when to establish when a substantial deprivation of property rights takes place to trigger some form of Takings Clause review, discussed at § 22.2.5.2; (3) what exceptions exist, such as the exception for public nuisances, where just compensation does not have to be paid despite what otherwise would be viewed as a taking of property rights, discussed at § 22.2.5.3; and (4) how to deal with the problem of temporary takings, where the government diminution of property rights comes to an end after some period of time, discussed at § 22.2.5.4.

§ 22.2.5.1  Standards of Review in Modern Takings Clause Cases

Three different standards of review exist in modern Takings Clause cases. These standards vary depending upon whether the government action is: (1) a physical occupation of property; (2) a general government regulation affecting property rights; or (3) a government exaction of property rights tailored for a specific individual.

Based upon cases going back to Calder v. Bull in 1798 that it would be unconstitutional to "take property from A and give it to B," discussed at § 22.2.1 n.63, the Court applies a per se rule that any physical occupation of property, no matter how minor, constitutes a taking of property. For physical occupations, including the power of eminent domain, the only question is determining how much compensation must be paid. For example, in Loretto v. Teleprompter Manhattan CATV Corp.,85 the Court held that the mere placement of a cable box on the roof of an apartment building constituted a taking. In Hodel v. Irving,86 the Court held that Congress took the property of Indians when it provided that undivided fractional interests in a tribal reservation could not descend by intestacy or devise but, instead, should escheat to the tribe if the interest represented 2 percent or less of the total acreage in the tract and earned for its owner less than $100 in the preceding year. The Court thus protected the right of an owner to just compensation even involving devising very small interests in land.

The second category of Takings Clause cases involves general government regulations, such as zoning laws or environmental regulations, that affect property rights. For these cases, to trigger Takings Clause review, the challenger seemingly must show that there is a “substantial deprivation” of property rights, as discussed at § 22.2.5.2, similar to the “substantial impairment” requirement under the Contracts Clause, discussed at § 22.1.4 n.27. Once such a substantial deprivation is proved, the question then becomes what is the test to determine whether a taking has occurred.

The modern natural law era for the Takings Clause in terms of the appropriate standard of review began in 1987 with *Nollan v. California Coastal Commission.* In *Nollan,* the Court held that the California Coastal Commission took the property of beachfront owners when it conditioned a grant of permission to rebuild their house on their transferring to the public an easement across their beachfront property. The Commission justified the condition on the ground that the new house would increase blockage of a view of the ocean and would increase private use of the shore front. The Court said that requiring an uncompensated conveyance of an easement on these facts would be a taking and that requiring it as a condition for issuing a land use permit was also a taking.

Justice Scalia explained for the Court that land use regulation does not effect a taking if it does not deny an owner economically viable use of the land and substantially advances legitimate state interests, which may include scenic zoning, landmark preservation, and residential zoning. The Court assumed, *arguendo,* that the Commission could refuse to issue a permit or issue it on condition that the public continue to be able to see the beach, as by requiring a height limit, a width restriction, or a ban on fences. Here, however, the condition did not further the end advanced in justification because the easement did not improve the public view of the beach. If California wants an easement across the Nollan's property, Justice Scalia said, it must pay for it.

By phrasing the test as “substantially advancing a legitimate government interest,” Justice Scalia adopted language that had appeared in earlier instrumentalist-era cases. For example, in *Penn Central Transportation Co. v. City of New York,* the Court had talked about the government having a “substantial public purpose” and the government regulation not being “unduly burdensome.” In *Agins v. Tiburon,* the Court cited opinions referring to whether the government action “substantially advances legitimate state interests” or “denies an owner economically viable use of this land.” However, the Court also noted in *Agins* that the Takings Clause decision “necessarily requires a weighing of public and private interests.”

From the perspective of the “base plus six” model of standards of review, discussed at § 7.2.1, the *Nollan* test created a mixed standard of review, adopting the “legitimate” government interest language of rational basis review, but the “substantial relationship” language of intermediate scrutiny. Further, on one hand, the phrasing ignored the “substantial public purpose” language in *Penn Central* by referring in *Nollan* to mere “legitimate” interests. On the other hand, the phrasing ignored the fact that *Agins* said the relevant test involved “weighing of public and private interests,” not an element balancing test like minimum rational review or intermediate scrutiny.

In addition, it is clear that, despite reference to the existence of “substantial public purposes” in *Penn Central,* the liberal instrumentalist majority that decided *Penn Central* thought they were adopting a version of rational basis review, not a version of intermediate scrutiny. Indeed, in *Nollan* itself, Justice Brennan, joined by Justice Marshall in dissent, said that the Court was imposing a discredited standard of precision. It is enough that the state could rationally have decided that the measure

---

might achieve the state's objective. Thus, it was not a taking that the new house blocked visual access while the condition sought to preserve lateral access. Further, the lateral access condition served to dissipate the impression that the beach which lay behind the wall of homes along the shore is for private use only. It was merely a reasonable property use restriction to provide that any project which intensifies development along the crowded coast must be offset by gains in public access. Justice Blackmun, also dissenting in *Nollan*, said the Court should not impose a “close nexus” or “substantial relationship” requirement because ordinarily a state's exercise of its police power need be no more than rationally based, and the easement was rationally related to public access to the beach.\(^{90}\)

As discussed at § 21.2.4.2, phrasing doctrine in terms of mixed standards of review adds unnecessary unpredictable and complexity to the law. Some instrumentalist Justices, such as Justices Brennan, Marshall, and Blackmun in *Nollan*, tended to minimize Takings Clause review by adopting language similar to a minimum rational review standard. The next level up in terms of the “base plus six” model of review is the “second-order” standard of review that involves a 3-part factor balancing of governments end, benefits, and burdens, which is used, for example, under the Contracts Clause in *United States Trust Co.* and *Allied Structural Steel*, as discussed at § 22.1.4 n.29-33, or the *Pike v. Bruce Church* dormant commerce clause analysis, discussed at § 20.3.2.1.D n.204.

This “second-order” factor balancing approach actually reflects what the Court has been doing in applying the *Penn Central* test in recent cases. For example, in *Palazzolo v. Rhode Island*,\(^{91}\) the Court called for using the general *Penn Central* test of determining whether there has been a taking by considering the oft-cited factors of whether fairness requires compensation in view of “a complex of factors including the regulation’s economic effects on the landowner, the extent to which the regulation interferes with reasonable investment-backed expectations, and the character of the government action.”\(^{92}\) The character of the government action reflects a concern with government ends, the regulation’s economic effects focuses on both the benefits and burdens of the statutory means, and interference with investment-backed expectations focuses on burdens on the landowner.

From this perspective, the language in cases focusing on “substantial” governmental interests and “substantial advancement” merely reflect the fact the government is likely to win the 3-part “second-order” factor balancing approach when such substantial interests and advancement are present. Similarly, the language about “denial of economically viable uses” reflects the greater likelihood that the challenger will prevail the more economically viable uses are denied. All of these considerations are weighed one against the other. None are determinative on their own. As stated in *Agins*, cited at § 22.5.2.1 n.89, the test involves a “weighing of public and private interests.”

\(^{90}\) *Id.* at 842 (Brennan, J., joined by Marshall, J., dissenting); *id.* at 865 (Blackmun, J., dissenting).

\(^{92}\) *Id.* at 617.
A similar totality-of-the-circumstances approach appeared in *Keystone Bituminous Coal Association v. DeBenedictis*. In an opinion by Justice Stevens, the Court held that the Pennsylvania Subsidence Act, which required 50% of the coal beneath certain structures to be kept in place, was not a taking. The reason was that the coal companies had not shown, based on a totality of the circumstances, that the law did not substantially advance the state's legitimate interest in protecting dwellings, public buildings, and cemeteries from actions that are tantamount to a public nuisance, or that the law denied the companies an economically viable use of their land. Instead, the Act protected dwellings, public buildings, and cemeteries by minimizing subsidence in certain areas. Also, it was not shown that the Act made it impossible for coal operators to engage profitably in their business or that there was an undue interference with investment-backed expectations. There was no evidence as to how much coal was left in the ground solely because of the Act, nor was there evidence that mining in any specific area became unprofitable.

In *Lingle v. Chevron USA, Inc.*, a unanimous Supreme Court rejected the “substantially advance” language of *Nollan, Agins*, and other cases. The Court specifically noted that this kind of intermediate, heightened scrutiny used under the Equal Protection and Due Process Clauses in some cases was inappropriate for the issue involved in Takings Clause cases of the extent of the impairment on individual property rights. The Court noted that the “substantially advance” language had crept into Takings Clause cases without any clear justification provided by the Court, and it was inconsistent with the purposes of Takings Clause analysis to focus on the deprivation to the individual, not the extent of the relationship between the government’s action and advancing the government’s ends. Thus, the Court held that, in the future, such cases of general government regulation affecting property rights should be analyzed only under the *Penn Central* factor-balancing approach with no “substantial advancement” requirement.

In applying the *Penn Central* test, the Court has held that where a complete deprivation of economically viable uses exist, a taking occurs. For example, in *Lucas v. South Carolina Coastal Council*, a statute, as applied, barred a property owner from erecting any permanent habitable structures on beachfront property. The Court held that this would be a taking if it deprived the owner of all economically beneficial uses of the property. The Court reaffirmed this *per se* rule that a taking will occur for complete deprivations of property value in *Lingle*, as a complete deprivation is the equivalent of a physical occupation.

---

96 *Lingle, 544 U.S. at 538.* Justice Blackmun, dissenting in *Lucas*, noted that the *per se* rule departed from the case-by-case nature of takings cases, and was unsupported by precedent and history. Justice Stevens, also dissenting in *Lucas*, said that the new *per se* rule was unsound in
The third kind of government case involves a government exaction of property rights tailored for a specific individual. This kind of case occurred in Dolan v. Tigard.\textsuperscript{97} There the Court held that where a city makes an adjudicative decision to condition the approval of a building permit on an individual parcel on the owner giving up some property rights, the city must show not only that there is a nexus between a legitimate state interest and the permit condition, as called for in Nollan, but also that the degree of the exaction demanded by the city bears a "rough proportionality" to the projected impact of the proposed development.\textsuperscript{98} The Court said, "No precise mathematical calculation is required, but the city must make some sort of individualized determination that the required dedication is related both in nature and extent to the impact of the proposed development."\textsuperscript{99} The Court was not satisfied with the city's findings, and remanded for consideration.

The Court justified its Dolan decision in terms of consistency with related constitutional law doctrines. The Court noted that when the government singles out an individual for a search and seizure under the Fourth Amendment,\textsuperscript{100} or singles out a government worker for discipline because of speaking on a matter of public concern under the First Amendment,\textsuperscript{101} the Court does not apply a deferential minimum rational review standard. Instead, it applies a real balancing of individual versus governmental interests, and the burden is on the government to show that its action, in this balance, is constitutional. Noting that the Takings Clause is "as much as part of the Bill of Rights as the First Amendment or Fourth Amendment," the Court held that a similar standard of rational review balancing, with the burden on the government, should be applied where an individual property owner is singled out for a permit condition.\textsuperscript{102} In the terminology of the "base plus six" model of review, discussed at § 7.2.1 text following n.42, this level of review reflects the "third-order" rational review balancing test, since the burden has shifted to the government to justify their action.

Four Justices dissented in Dolan. Both the dissent of Justice Stevens, joined by Justices Blackmun and Ginsburg, and the dissent of Justice Souter, disagreed with the majority that the burden should

have been shifted in this case. Both dissents would have just applied the standard *Penn Central* analysis even to a case of a government exaction tailored to a specific individual.  

§ 22.2.5.2 What Burdens Trigger Takings Clause Analysis

In cases involving general government regulations, analyzed under the *Penn Central* test, as discussed at § 22.2.4 n.81-82, the Court typically requires that the government action constitute a “significant” or “substantial” deprivation of property to trigger Takings Clause analysis. This is similar to the requirement of a “substantial impairment” to trigger the Contracts Clause, discussed at § 22.1.4 n.27, or an impairment of a right “sufficiently basic to the livelihood of the Nation” to trigger the Article IV, § 2, Privileges and Immunities Clause, discussed at § 20.3.3.2 nn.298-300. As noted at § 22.2.5.1 nn.85-86, in cases of physical occupations there is no such inquiry, since any physical occupation is a taking. In cases like *Dolan*, discussed at § 22.2.5.1 nn.97-103, the “rough proportionality” test applies to any diminution in property rights, whether substantial or not. The question of how to determine whether a “substantial deprivation” exists to trigger Takings Clause analysis thus only applies to modern regulatory cases.

Naturally, as in *Lucas v. South Carolina Coastal Council*, where there is a complete deprivation of economically viable uses of land, a substantial deprivation exists. However, even for lesser deprivations, the Court will find a “substantial restriction” on property rights. As indicated in *Penn Central Transportation Co. v. City of New York*, such a finding is not the end of the Takings Clause analysis, it is only the beginning. In *Penn Central*, once such a “substantial restriction” was assumed, Justice Brennan tested whether New York’s Landmarks Preservation Law, as applied, was a regulatory taking, by asking whether the property owner proved that the effects on its rights in a parcel, considered as a whole, were not sufficiently related to the general welfare or were unduly harsh. As discussed at §§ 22.2.4 nn.81-82 & 22.2.5.1 nn.91-94, this involves weighing the factors of the economic impact of a regulation, its interference with reasonable investment backed expectations, and the character of the governmental action.

In other cases, no substantial deprivation of property rights has been found. For example, in *FCC v. Florida Power Corp.*, an FCC order requiring a reduction in what power companies could charge cable operators under pole attachment agreements was held to be analogous to a rate regulation, and subject to the substantial deprivation analysis, and not a physical occupation. The case was unlike *Loretto*, where requiring landlords to permit tenants to hook up for $1 was a physical occupation, since the power company here was not required to enter the pole contracts. In

106 *Id.* at 128-38.

Bowen v. Gilliard, there was no substantial deprivation of a property interest where a child’s support entitlements were reduced when a parent applied for family aid under the Aid to Families with Dependent Children Act. The reason was that Congress, having instituted a social welfare program, is not bound to continue it at all, much less at the same benefit level. Congress merely made an adjustment in a welfare program.

There is a question, however, whether under current doctrine the three-factor Penn Central balancing test must always be done, even for minor deprivations of property rights, or whether in fact a substantial deprivation requirement is necessary to trigger the Penn Central test. For example, in Bowen v. Gilliard, the Court stated, “Whatever the diminution in the child’s right to have support funds used for his or her ‘exclusive benefit’ may be, it is not so substantial as to constitute a taking under our precedents.” However, despite this seeming categorical statement, the Court then considered the other Penn Central factors of reasonable investment-backed expectations and the character of the government action, which also supported the finding that no taking had occurred in the case.

Clear resolution of this issue may make little difference in practice, as minor deprivations of property rights have never supported a finding of a taking under the Penn Central analysis. Thus, for a litigant to have any real chance of success under Penn Central a substantial deprivation of property rights is essential, whether or not necessary to “trigger” the Penn Central test. A Stage 6 concern with reasoned elaboration of the law, however, would support such a “substantial deprivation” triggering requirement to make Takings Clause doctrine similar to the requirement of a “substantial impairment” of contract rights to trigger the Contracts Clause, discussed at § 22.1.4 n.27, or an impairment of a right “sufficiently basic to the livelihood of the Nation” to trigger analysis under the Article IV, § 2, Privileges and Immunities Clause, discussed at § 20.3.3.2 nn.298-300.

§ 22.2.5.3 Exceptions to Takings Clause Analysis

Even when a taking is found, the Court has developed a few categories where the government does not have to pay compensation. In Lucas v. South Carolina Coastal Council, a statute, as applied, barred a property owner from erecting any permanent habitable structures on beachfront property. The Court held that this would be a taking if it deprived the owner of all economically beneficial uses of the property, unless the state's use restriction simply made explicit limits based upon: (1) nuisance law; or (2) other principles of the state's law of property already placed on land ownership when titled was acquired. Inquiry into those limits, Justice Scalia noted, ordinarily entails analysis of, among other things, the harm to public lands or adjacent private property posed by the owner's proposed use, the social value of the proposed use, and the ease with which harm can be avoided by the owner and the government or adjacent owners. Justice Scalia stated:

---

109 Id. at 607.
As it would be required to do if it sought to restrain Lucas in a common-law action for public
nuisance, South Carolina must identify background principles of nuisance and property law that
prohibit the uses he now intends in the circumstances in which the property is presently found.
Only on this showing can the State fairly claim that, in proscribing all such beneficial uses, the
Beachfront Management Act is taking nothing.111

A third exception recognized by the Court where no compensation needs to be paid is for (3)(a)
property taken or destroyed in time of war. As the Court noted in United States v. Caltex, Inc.,112
“[I]n wartime many losses must be attributed solely to the fortunes of war, and not the sovereign.”
This is especially true, the Court noted, when the “property, due to the fortunes of war, had become
a potential weapon of great significance to the invader. It was destroyed, not appropriated for
subsequent use. It was destroyed that the United States might better and sooner destroy the enemy.”
In cases where property was appropriated for military use, just compensation has more often been
provided,113 although as the Court noted in Caltex, “No rigid rules can be laid down to distinguish
compensable losses from noncompensable losses. Each case must be judged on its own facts.” A
similar doctrine (3)(b) applies under the “navigational servitude” doctrine, where the superior right
of the federal government over “navigable waters” has traditionally meant an individual landowner’s
regulatory taking claim concerning such waters effectively receives no consideration by the court.114

A fourth possible exception to a requirement to pay just compensation was discussed by Justice
Kennedy, concurring in the judgment, in Lucas. Justice Kennedy agreed with the exceptions arising
from nuisance law or existing state law, as stated by Justice Scalia, but also added an additional
exception, that is, (4) no reasonable investment-backed expectation of ability to use the property in
a particular way, based not only on the initial grant of title, but on later foreseeable regulatory
initiatives, such as environmental concerns for a fragile land system.115

Among Justices who joined Justice Scalia’s majority opinion in Lucas, only Justice Thomas remains
on the Court. The liberal predisposition of Justices Stevens, Souter, Ginsburg, and Breyer on
Takings Clause issues suggests they might agree with Justice Kennedy on this fourth exception to
Takings Clause analysis. Thus, this fourth category of an exception to normal Takings Clause
analysis might be adopted by the majority of the Supreme Court in the future.

Navigational Servitude in Regulatory Takings Claims After Lucas v. South Carolina Coastal

115 Lucas, 505 U.S. at 1032-35 (Kennedy, J., concurring in the judgment).
A case exploring the contours of the second exception regarding background principles of state law already in place is Palazzolo v. Rhode Island. In Palazzolo, the state created a coastal resources Council which, in 1971, designated all salt marshes as coastal wetlands which could be developed only by obtaining a special exception on showing a compelling public purpose which provides benefits to the public as a whole as opposed to individual or private interests. In 1978, petitioner acquired title to some upland and some salt marshes as sole shareholder of a corporation whose charter was revoked for failure to pay corporate income taxes. In 1985, petitioner asked for a special exception to build a private beach club by filling 11 acres. The Council denied the application and the Rhode Island courts affirmed the decision. The Rhode Island Supreme Court held that petitioner’s claim was not ripe, that he had no right to challenge regulations adopted before he acquired title, and that his claim of being denied all beneficial use was contradicted by evidence that he had $200,000 in development value remaining on part of his property. Finally, the court said that petitioner could not recover under the more general Penn Central test because, in view of when he acquired title, he had no reasonable investment-backed expectations affected by the regulation.

Writing for the Court, Justice Kennedy said first that the claim was ripe because it had become clear by a final decision of the Council that it would bar petitioner from engaging in any filling or development activity on the wetlands. On the merits, the petitioner’s claim was not barred by the fact that he acquired title after the regulations were in place. The state should not have power thus to insulate particular exercises of its regulatory power from claims that they are so unreasonable or onerous as to compel compensation. Justice Kennedy said that it would be illogical and unfair to bar a regulatory takings claim because of the post-enactment transfer of ownership where the steps necessary to make the claim ripe could not have been taken, or as here were not taken, by the previous owner. Concluding, he said that “a regulation that otherwise would be unconstitutional absent compensation is not transformed into a background principle of the State’s law by mere virtue of the passage of title.” The case was remanded to the Rhode Island courts for examination of the facts in light of the Penn Central analysis that had not been undertaken by those courts. As to how that should be done, Justice Kennedy said only that the claim was not barred by the mere fact that title was acquired after the effective date of the state-imposed regulation.

Justice O’Connor, concurring, provided advice on how the Penn Central claim should be considered. She said that, in determining what fairness requires, a court should consider how the time at which petitioner acquired title helped shape the reasonableness of his investment-backed expectations. No set formula should be used. Justice Scalia, also concurring but disagreeing with Justice O’Connor, said that a restriction that does not form part of the background principles of the state’s law of property and nuisance should have no bearing on the determination of whether a restriction is so substantial as to constitute a taking. Putting it another way, the investment-backed expectations of which the law should take account do not include the assumed validity of a restriction that in fact deprives property of so much of its value as to be unconstitutional.

---

117 Id. at 639-40.

118 Id. at 632 (O’Connor, J., concurring); id. at 636 (Scalia, J., concurring).
Justice Ginsburg, joined by Justices Souter and Breyer, said she agreed with Justices O’Connor that the transfer of title can impair a takings claim. However, she thought that the petitioner’s claim was not ripe because it was still uncertain what development could occur on petitioner’s land. Justice Breyer, dissenting, was concerned that changes in land ownership could be made for the sole purpose of producing a nonusable portion and, thus, strategically creating a takings claim. Justice Stevens agreed with Justice Kennedy that the claim was ripe, but said that the taking, if any, occurred before petitioner acquired title and, therefore, petitioner lacked standing to contend that promulgation of the regulations constitute a taking of any part of the property he subsequently acquired.119

The net result of the myriad opinions is that the lower courts have to speculate a bit on the extent to which petitioner’s expectations should be regarded as reduced or eliminated by the fact that the regulations had been passed before he acquired title. Since Justice O’Connor’s view had the support of Justices Souter, Ginsburg, and Breyer, and was mentioned favorably in passing by Justice Stevens, it would seem reasonable for the lower courts to adopt that approach.120 With Justice Alito replacing Justice O’Connor in 2006, however, there may be a 5-Justice majority now on the Court for Justice Kennedy’s approach, to the extent that approach is different than Justice O’Connor’s, which is not clear from the opinions in Palazzolo, since Kennedy and O’Connor both agreed that the Penn Central test should be applied on remand, both agree that Penn Central is a case-by-case inquiry, and both agree that the quality of investment-backed expectations is part of the test.

§ 22.2.5.4 Cases Involving Temporary Deprivations of Property Rights

The Court has addressed the appropriate standard to be applied to government action that only temporarily deprives the owner of property rights. These cases have followed the approach laid out in Penn Central and Lucas. For example, in First English Evangelical Lutheran Church of Glendale v. County of Los Angeles,121 the Court held that the Fifth and 14th Amendments require compensation for the time that a landowner's property has been taken by a land-use regulation that denies the property owner "all use of the property," consistent with Lucas. Here, a church was prevented from rebuilding its facilities by an interim flood protection ordinance. Justice Rehnquist said that temporary takings which, as here, deny a landowner all use of his property, are not different in kind from permanent takings. They involve the same kind of substantial deprivations that fall within the Takings Clause, since the Clause is designed to bar government from forcing some people alone to bear public burdens which should borne by the public as a whole.

Justice Stevens dissented in the case, joined by Justices Blackmun and O’Connor. He said that the enactment of a flood protection plan could not itself be a taking, and thus the Court wrongly assumed that the complaint alleged an unconstitutional taking. Second, the dissent stated that not

120  Id. at 654 n.3 (Ginsburg, J., joined by Souter & Breyer, JJ, concurring); id. at 643-45 (Stevens, J., concurring).

all ordinances that would constitute a taking if permanent also constitute takings if they are in effect for only a limited time. The reason is that repeal will, in most cases, mitigate the diminution in value to the point where it is not a taking. In addition, the dissent stated that the Court erred in concluding that the Takings Clause, rather than the Due Process Clause, is the primary constraint on unfair procedures in land-use cases, and due process does not require compensation because of delays in property development caused by fairly conducted administrative or judicial proceedings.122

In Tahoe-Sierra Preservation Council, Inv. v. Tahoe Regional Planning Agency,123 the Court remanded for a lower court to consider whether a taking occurred in light of the factors made relevant by Penn Central. The narrow holding, stated by Justice Stevens, was that a temporary building moratorium on development while a planning agency creates a plan, is not per se a taking of property even though it may deprive the property of all viable economic use during moratorium time, provided the agency is not in bad faith and the state interests are substantial. In accord with Justice O’Connor’s opinion in Palazzo, the court should make a careful examination and weighing of all of the relevant circumstances in light of fairness and justice to determine whether there has been a temporary taking. Justice Stevens added, “It may well be true that any moratorium that lasts for more than one year should be viewed with special skepticism.”124 However, no set rule should be established and the duration of the restriction is simply one of the important factors to consider. The Court should avoid the temptation to adopt a per se rule favoring either owner or government.

Chief Justice Rehnquist dissented, with Justices Scalia and Thomas. The Chief Justice rested his dissent on Lucas v. South Carolina, where the Court had held that there is a taking when the government deprives owners of all economically viable use of their land. The Chief Justice admitted that this principle did not apply in the case of normal delays in obtaining building permits, changes in zoning ordinances, variances, and the like.125 These kinds of short-term delays are a long-standing feature of state property law and part of a landowner’s reasonable investment-backed expectations. However, here the respondent had caused petitioner’s total inability to use his land for nearly 6 years. Such action was held compensable when the government condemned leasehold interests to pursue a war effort.126 Justice Thomas said in a separate dissent, joined by Justice Scalia, that he would support a rule that regulations prohibiting all productive uses of property are subject to the Lucas per se rule, regardless of whether the property so burdened retains a theoretically useful life and value if, and when, the “temporary” moratorium is lifted.127

The end result of these temporary regulation cases is that landowners are given an opportunity to claim a taking when their property is affected for a limited time. In these situations neither the government nor the owner is to be affected by a *per se* rule. The outcome will depend on a close look at all circumstances in terms of the factors outlined in *Penn Central*.

### § 22.2.6 An Overview and Review

As these cases indicate, determining how much regulation is "too far" has not been an easy task for the Court. In his treatise on American constitutional law, Professor Tribe said that the problem has "predictably plagued the Court for over six decades, and the attempt to differentiate ‘regulation’ from ‘taking’ has become ‘the most haunting jurisprudential problem in the field of contemporary land-use law . . . one that may be the lawyer’s equivalent of the physicist’s hunt for the quark.”

The difficulty of resolving taking issues is perhaps one reason why the Court has not adopted a single unitary test under the Takings Clause, much less a single approach for judicial review of economic regulations under the Due Process Clause, Contracts Clause, and Takings Clause. While judicial review of most economic regulations under the Due Process Clause has proceeded under minimum rational review since 1937, as discussed at § 27.1.2.1, the Court majority clearly believes that a slightly higher level of “second-order” or “third-order” rational review is appropriate in many cases for protecting contract and property interests via judicial review under the Contracts Clause and Takings Clause.

Similar approaches to Takings Clause issues are reflected in most developed countries regarding eminent domain, and to a lesser extent for regulatory takings, as well as at international law for the protection of aliens owning property in other countries. Many developing countries have adopted Takings Clause doctrines, although others still reflect, either in doctrine or in practice, the colonial-era American view, noted at § 22.2 n.58, of limited or no protection from government appropriation.

Under current law, unless one of the exceptions to takings analysis applies, such as background principles of a state’s law of property or nuisance law place limits on intended uses, discussed at § 22.2.5.3, there is a taking of private property if the government, by its actions:

---

1. acquires physical possession of all or a part of an owner's property, as in *Loretto*;\(^\text{131}\)
2. denies all actual use of property, as in *First English Evangelical Lutheran Church*,\(^\text{132}\) or all economically viable use of property, as in *Lucas*;\(^\text{133}\)
3. regulates the use of property where it  
   (a) creates a substantial deprivation of property rights; and  
   (b) is unduly harsh so the owner is forced to bear burdens which, in fairness, should be born by all, under the *Penn Central* test;\(^\text{134}\) or
4. requests a dedication of some property from a specific individual in return for consent to develop the rest of the property, as opposed to a generally applicable government statute or zoning ordinance, and the government cannot show a "rough proportionality" between the harm caused to the public by the individual’s proposed development and the burden on the individual of the government-imposed dedication, as in *Dolan*.\(^\text{135}\)

Five consequences of a taking are: (1) compensation is due, even if the taking is temporary; (2) value is determined at the time the taking occurs; (3) value is measured by the owner's loss, not the taker's gain; (4) fair market value is the normal measure of recovery – what a willing buyer would pay in cash to a willing seller at the time of the taking; and (5) if a temporary taking has occurred, the government must provide just compensation for the period during which the taking was effective.\(^\text{136}\)

A taking has been found in circumstances where: (1) the government acquired possession of property permanently or temporarily\(^\text{137}\); (2) the government activity made private use of the property

\(^{136}\) These five consequences are noted in *First English Evangelical Lutheran Church of Glendale v. County of Los Angeles*, 482 U.S. 304, 314-22 (1987).

impracticable or impossible\textsuperscript{138}; (3) the government barred a use, creating a commercial impracticability\textsuperscript{139}; (4) government regulation did not sufficiently advance a legitimate interest\textsuperscript{140}; or (5) the government imposed retroactive liability on a limited class of parties that could not have anticipated the liability, and liability was substantially disproportionate to the parties' experience.\textsuperscript{141}

A taking was not found in which a public purpose was sufficiently furthered or economically viable uses remained where: (1) part of the property was destroyed as a nuisance\textsuperscript{142}; (2) particular uses were prohibited\textsuperscript{143}; (3) use was regulated to achieve a public benefit\textsuperscript{144}; (4) price or rent control was imposed\textsuperscript{145}; or (5) entitlement payments were terminated.\textsuperscript{146}

Florida Power Corp., 480 U.S. 245 (1987) (reasonable reduction in rates power companies could charge cable operators under pole attachment contracts).

As a final aspect of Takings Clause Doctrine, under abstention principles the Court has held that a plaintiff asserting a takings claim based on the final decision of a state or local government entity must first seek compensation in state courts, discussed at § 17.2.4.4 nn.274-77.
CHAPTER 23: NON-ECONOMIC INDIVIDUAL RIGHTS

All individuals rights protections in the Constitution involving non-economic rights other than the First Amendment, Fifth Amendment Due Process Clause, or Civil War Amendments are included in the original Constitution or the initial ten Amendments, the Bill of Rights. To ensure ratification, the supporters promised the states that they would draft a Bill of Rights. It has been noted:

The omission of a Bill of Rights proved to be one of the most formidable stumbling blocks for the ratification of the Constitution and it became the unifying force of the anti-Federalists who were opposed to a strong central government and wished to defeat the Constitution. Faced with this development, the supporters of the Constitution pledged that if the Constitution were adopted, the adoption of a Bill of Rights would be the first order of business for the new Congress. If the pledge were not kept, a new constitutional convention would be convened that could once again reargue the issue of redistribution of powers between the states and the national government.¹

On this issue, Jefferson similarly insisted that "a bill of rights is what the people are entitled to against every government on earth . . . and what no just government should refuse, or rest on inference." Jefferson further noted that a written Bill of Rights would place a "legal check . . . into the hands of the judiciary," a body that merited "great confidence" if "rendered independent, and kept strictly to their own department."²

The first eight of these Amendments provide for a range of civil liberties protections. Each of these Amendments is discussed in Chapter 23, with the exception of the Fifth Amendment Takings Clause, discussed at § 22.2, the Fifth Amendment Due Process Clause as applied to civil matters, discussed in Chapter 27, and the First Amendment, discussed in Chapters 29-32. The Ninth Amendment is discussed in Chapter 24. The Tenth Amendment is discussed at § 18.4.

The first eight Amendments involving civil rights – the Second, Third, and Seventh Amendments – are discussed at § 23.1. This section also addresses the civil rights provision of the Full Faith and Credit Clause, Article IV, § 1. Those Bill of Rights provisions involving criminal rights – the Fourth, Fifth, Sixth, and Eighth Amendments – are discussed at § 23.2. This section also addresses the criminal rights provisions in the original Constitution of the Bill of Attainder Clause, Ex Post Facto Clause, Habeas Corpus Clause, and the Extradition Clause.

¹ Elizabeth F. Defeis, A Bill of Rights for the European Union, 11 ILSA J. Int'l & Comp. L. 471, 472 (2005). Professor Defeis noted that the “inclusion of the Charter of Fundamental Rights in the Draft Treaty Establishing a Constitution for Europe has a curious history that in some ways is similar to the history of the Bill of Rights of the United States Constitution.” Id. at 471.

§ 23.1 Civil Rights Protections: The Second, Third & Seventh Amendments & The Full Faith and Credit Clause of Article IV, § 1

§ 23.1.1 The Second Amendment: Right to Bear Arms

The Second Amendment provides: “A well regulated Militia, being necessary to the security of a free State, the right of the people to keep and bear arms, shall not be infringed.” As with other provisions of the Bill of Rights considered in 1833 in Barron v. Baltimore, discussed at § 27.2.1 n.95, the Court held in 1875 in United States v. Cruikshank,3 that the Second Amendment has “no other effect than to restrict the powers of the National Government.” For state legislation, however, 44 states have “right to arms” provisions in their state constitutions that almost always are read to provide an individual some right to own guns, and thus limit state legislation to some extent. Only California, Iowa, Maryland, Minnesota, New Jersey, and New York do not have such provisions in their state constitutions. Only Massachusetts treats its provision as referring to the right to bear arms as part of a state militia, not an individual right to own guns.4

This Cruikshank holding was reaffirmed on several occasions during the 19th century.5 However, all of these cases were decided before the Court began to hold that provisions in the first eight Amendments were incorporated into the Due Process Clause of the 14th Amendment, beginning in 1897 with the Taking Clause, discussed at § 27.2.2 n.107. Thus, it is not likely that the current Court would consider these holdings as binding precedents. The modern doctrine by which most Bill of Rights provisions have been incorporated into the 14th Amendment, and thus made applicable against the states, discussed at § 27.2.4 nn.120-27, seems equally applicable to the Second Amendment, as noted at § 27.2.5.1 text following n.128. The Cruikshank doctrine is thus inconsistent with modern doctrine regarding incorporation. Inconsistency with related doctrines is one of the additional reasons that justifies overruling a precedent from a natural law tradition, as noted at § 12.2.2.2 nn.67-70. Nevertheless, based on the doctrine that lower courts should follow Supreme Court precedents directly on point until the Court decides otherwise, noted at § 4.3.4 n.100, lower courts properly continue to hold that the Second Amendment has no applicability against the states.6

The major Supreme Court case to consider possible limits on the right of the people protected by the Second Amendment is United States v. Miller,7 decided during the Holmesian deference-to-government era in 1939. That case upheld the constitutionality of a federal statute that made it

3 92 U.S. 542, 552-53 (1875).
criminal to transport in interstate commerce a shotgun with a barrel less than 18 inches in length. The Court said this law did not violate the Second Amendment because: (1) there was “no evidence” in the record that such a gun has a “reasonable relation to the preservation or efficiency of a well regulated militia,” and (2) the Court understandably refused to hold as a matter of “judicial notice” that a sawed-off shotgun was part of “ordinary military equipment or that its use would contribute to the common defense.” Reflecting the Holmesian emphasis on purpose in addition to literal text, the Court explained, “With obvious purpose to assure the continuation and render possible the effectiveness of such forces [i.e., the militia] that declaration and guarantee of the Second Amendment was made. It must be interpreted and applied with that end in view.” Despite this language in Miller, it has been noted that dicta in other Supreme Court cases, both before and after Miller, can be used to support an individual right to keep and bear arms.³

Three possible ways of interpreting the Miller case were explored by the Fifth Circuit Court of Appeals in 2001 in United States v. Emerson.⁹ In Emerson, the Fifth Circuit noted that the Fourth, Sixth, Seventh, and Ninth Circuits had decided cases holding that the Second Amendment merely recognizes the right of a state to arm its militia. This has been called a “collective rights” interpretation of the Amendment. The First and Third Circuits have found an individual right to bear arms, but only for members of the militia, and then only if the federal and state governments fail to provide the firearms necessary for such military service. This has been referred to as the “sophisticated collective rights” model. The majority opinion in Emerson rejected both of these theories in favor of a third approach, the “individual rights” model. Under this approach, the Second Amendment recognizes the right of individuals to keep and bear arms regardless of whether they are actually a member of a militia. This right, however, is subject to reasonable regulation (e.g., the possession of guns may be denied to minors, incompetent persons, and felons). The majority then applied these principles to hold that an injunction against the possession of a weapon by an individual under a restraining order was a reasonable regulation, in the particular case a restraining order granted to the wife against the husband in the context of a divorce proceeding.

The method of interpretation used by the majority in Emerson included reference to each of the kinds of interpretation materials that are considered appropriate by the natural law approach to decisionmaking. For the sources of text, context, and history, there are competing interpretations as between some version of the “collective rights” model and the “individual rights” model.

Regarding text, the literal text of the Second Amendment refers to the “right of the people to keep and bear arms.” This reference to the right of the “people,” rather than the right of the “states,” to keep and bear arms, supports the individual rights model. On the other hand, reference to the right to “bear arms,” rather than the right to “own firearms,” suggests that the Second Amendment is more about “bearing arms” for military use in a state militia. The first clause of the Second Amendment, referring to the purpose of the provision – “A well regulated Militia, being necessary to the security of a free State” – also supports the collective rights model, as the Supreme Court noted in Miller.

The context of the Second Amendment supports the individual rights model. The Second Amendment is part of the Bill of Rights. As the district court noted in *Emerson*, "Of the first ten Amendments to the Constitution, only the Tenth concerns itself with the rights of the states, and refers to such rights in addition to, not instead of, individual rights. Thus the structure of the Second Amendment, viewed in the context of the entire Bill of Rights, evinces an intent to recognize an individual right retained by the people."

Arguments of history point in both directions. Regarding specific historical arguments surrounding the drafting and ratification of the Second Amendment, inferences can be drawn in both directions. As the district court noted in *Emerson*:

Madison's original plan was to designate the amendments as inserts between specific sections of the existing Constitution, rather than as separate amendments added to the end of the document. Madison did not designate the right to keep and bear arms as a limitation of the militia clause of Section 8 of Article I. Rather, he placed it as part of a group of provisions (with freedom of speech and the press) to be inserted in "Article 1st, Section 9, between Clauses 3 and 4." Such a designation would have placed this right immediately following the few individual rights protected in the original Constitution, dealing with the suspension of bills of attainder, habeas corpus, and ex post facto laws. Thus Madison aligned the right to bear arms along with the other individual rights of freedom of religion and the press, rather than with congressional power to regulate the militia.

On the other hand, it has been noted that Madison’s original draft of the Second Amendment also included a clause concerning conscientious objectors. This clause only makes sense in the context of viewing the Amendment as focused on service in militias. While Congress deleted this provision on the grounds that allowing judges to define conscientious objectors under such a clause would interfere with the right of states to determine military eligibility, that deletion does not affect viewing the rest of the Amendment as focused on state militia matters.

While there is little specific historical evidence during the ratification of the Second Amendment, statements made during the ratification debates of the original Constitution, and thereafter, tend to support an individual rights model. As the district court noted in *Emerson*:

The framers thought the personal right to bear arms to be a paramount right by which other rights could be protected. Therefore, writing after the ratification of the Constitution, but before the election of the first Congress, James Monroe included "the right to keep and bear arms" in a list of basic "human rights" which he proposed to be added to the Constitution.

---

11 *Id.* at 606.

The Massachusetts convention . . . ratified the Constitution with an attached list of proposed amendments. . . . Samuel Adams proposed that the Constitution:

[B]e never construed to authorize Congress to infringe the just liberty of the press, or the rights of conscience; or to prevent the people of the United States, who are peaceable citizens, from keeping their own arms; or to raise standing armies, unless when necessary for the defence of the United States, or of some one or more of them; or to prevent the people from petitioning, in a peaceable and orderly manner, the federal legislature, for a redress of their grievances: or to subject the people to unreasonable searches and seizures.13

On the other hand, the Pennsylvania convention debated 15 amendments, one of which concerned the right of the people to be armed. As the district court noted in Emerson, that amendment on the right to bear arms read:

That the people have a right to bear arms for the defence of themselves and their own State, or the United States, or for the purpose of killing game; and no law shall be passed for disarming the people or any of them, unless for crimes committed, or real danger of public injury from individuals; and as standing armies in time of peace are dangerous to liberty, they ought not to be kept up; and that the military shall be kept under strict subordination to and be governed by the civil power.14

The Second Amendment, as eventually drafted, focused only on the right to bear arms, and not for the purpose of killing game. This suggest that the Second Amendment was intended to be narrower than the Pennsylvania proposed amendment, and only focused on militia matters.

Arguments of general history also point in both directions. A review of both English history, and the history of the colonial experience, indicates attention was focused predominantly on possessing arms in the context of obligation to serve in government-run militias. As noted by the district court in Emerson:

A review of English history explains the founders' intent in drafting the Second Amendment. As long ago as 690 A.D., Englishmen were required to possess arms and to serve in the military. This obligation continued for centuries, requiring nobility, and later commoners, to keep arms and participate in the militia. The obligation to keep arms was not simply to provide military service in the king's army; English citizens were also required to provide local police services, such as pursuing criminals and guarding their villages. . . .

As in England, the colonial militia played primarily a defensive role, with armies of volunteers organized whenever a campaign was necessary. Statutes in effect bore evidence of an individual right to bear arms during colonial times. For example, a 1640 Virginia statute required "all masters of families" to furnish themselves and "all those of their families which

13 46 F. Supp. 2d at 604-06 (citations omitted).
14 Id. at 605 (citations omitted).
shall be capable of arms . . . with arms both offensive and defensive." A 1631 Virginia law required "all men that are fittinge to beare armes, shall bring their pieces to church . . . for drill and target practice."\footnote{Id. at 602-03 (citations omitted).}

On the other hand, some aspects of the general historical background support the individual rights position. For example, it has been noted:

\footnote{Id. at 602, 604 (citations omitted).}

\begin{quote}
[B]y the middle of the seventeenth century, however, the sovereign jeopardized the individual right to bear arms. Charles II, and later James II, began to disarm many of their Protestant subjects. James II was an unpopular king whose policies stirred great resentment among both the political and religious communities of England. Eventually, James II fled England during what was later termed the Glorious Revolution. In the aftermath of the Glorious Revolution, Parliament passed the English Bill of Rights in 1689, codifying the individual right to bear arms. The Bill of Rights provided that "the subjects which are Protestant may have arms for their defense suitable to their conditions and as allowed by law."

The framers also saw an armed populace as the safeguard of religious liberty. Zachariah Johnson told the Virginia convention their liberties would be safe because “the people are not to be disarmed of their weapons. They are left in full possession of them. The government is administered by the representatives of the people, voluntarily and freely chosen. Under these circumstances should anyone attempt to establish their own system [of religion], in prejudice of the rest, they would be universally detested and opposed, and easily frustrated. This is the principle which secures religious liberty most firmly.”\footnote{Id. at 602, 604 (citations omitted).}

Arguments regarding practice and precedent are more on the side of the collective rights model of interpretation. The Supreme Court, and no federal Court of Appeals until the Fifth Circuit in \textit{Emerson}, has ever ruled in favor of the individual rights model. Legislative and executive practice also does not suggest much support for the individual rights model, although the minimal amount of gun control legislation actually passed does suggest legislative reluctance to regulate in this area. In 2001, Attorney General John Ashcroft indicated his view that the Second Amendment constitutionalized an individual right to own guns, a position at odds with the official view of the Justice Department in every preceding Administration.

Even if the Second Amendment were viewed as creating a fundamental individual right to own guns, and thus the “pure collective rights” model were rejected, that right would not be absolute. Under \textit{Miller}, it could be argued that even if an individual right were recognized, it would protect only the possession of weapons suitable for use in a situation where the militia might be called upon to act. This would follow the “sophisticated collective rights” view of the Second Amendment.

Even if one adopted a pure “individual rights” model of the Second Amendment, that understanding might be affected by the modern view regarding unenumerated fundamental rights that only
substantial or undue burdens trigger strict scrutiny, while less than substantial burdens only trigger some version of rational review, as discussed at § 21.2.3. Although the Second Amendment is a textually specific enumerated right, not an unenumerated fundamental right, this approach was implicitly adopted by the Fifth Circuit in Emerson,\(^n\) which applied only rational review to the federal statute limiting gun possession for a person under a restraining order to stay away from another individual. Indeed, as a concurring opinion noted in Emerson, the majority’s discussion of Second Amendment theories was merely \textit{dicta} since the majority held that the gun owner’s right of possession could be limited, a result appropriate under any of the three theories.

For these reasons, even though there has been much recent academic commentary on the Second Amendment,\(^n\) it is unclear from a practical perspective what difference it makes. Legislatures rarely pass gun control legislation. Even under the Fifth Circuit approach, that which is passed would almost inevitably be viewed as a less than substantial burden on whatever gun right exists, and thus would trigger a rational review kind of approach anyway in virtually every case under the individual rights model. Even if one rejected that analysis, considerations similar to those under First Amendment free speech doctrine regarding secondary effects, reasonable time, place, or manner regulations, or prior restraints, discussed at §§ 29.4.4.1-29.4.4.2 & 29.6.1.1, might be used to limit any Second Amendment right that was held to exist, particularly for reasons of national security and concern with activities of possible terrorists.\(^n\) As of October, 2006, no federal or state statute ultimately has ever been struck down as unconstitutional under the Second Amendment.\(^s\)

Nevertheless, from a conservative formalist perspective, Justice Thomas supplied some relevant observations in his concurring opinion in \textit{Printz v. United States}.\(^n\) He said in a footnote, “In \textit{Miller}, we determined that the Second Amendment did not guarantee a citizen a right to possess a sawed-off shotgun because that weapon had not been shown to be ‘ordinary military equipment’ that could ‘contribute to the common defense.’” Justice Thomas then observed that the Court in \textit{Miller} had not attempted to define the substantive right protected by the Second Amendment. He observed in a subsequent footnote, “Marshaling an impressive array of historical evidence, a growing body of scholarly commentary indicates that the ‘right to keep and bear arms’ is, as the Amendment’s text suggests, a personal right.” Justice Thomas’ formalist predisposition to give heavy weight to implications from literal text and historical intent would lead him to conclude that a personal right had been granted or acknowledged – at least unless very strong historical evidence could be found to the contrary.

\(^{17}\) 270 F.3d at 261-65; \textit{id.} at 272-74 (Parker, J., specially concurring).

\(^{18}\) \textit{See, e.g.}, Symposium: The Second Amendment and the Future of Gun Regulation: Historical, Legal, Policy, and Cultural Perspectives, 73 Fordham L. Rev. 475-730 (2004), and sources cited therein.

\(^{19}\) \textit{See, e.g.}, David G. Browne, \textit{Treating the Pen and the Sword as Constitutional Equals: How and Why the Supreme Court Should Apply its First Amendment Expertise to the Great Second Amendment Debate}, 44 Wm. & Mary L. Rev. 2287, 2303-18 (2003).

Of course, without regard to direct gun control legislation, there is a related question of whether the Second Amendment could be used as a barrier to state tort litigation against the gun industry, to the extent that state or federal legislation, such as the proposed federal Protection of Lawful Commerce in Arms Act, does not effectively limit such lawsuits. The theory would be that the Second Amendment limits such lawsuits, just as there are First Amendment limitations on state defamation lawsuits under *New York Times Co. v. Sullivan*, discussed at § 30.2.1.1 nn.149-58.

§ 23.1.2 The Third Amendment: Protection Against Quartering of Soldiers In Individuals’ Homes

The Third Amendment provides: “No Soldier shall, in time of peace be quartered in any house, without the consent of the Owner, nor in time of war, but in a manner to be prescribed by law.” The Supreme Court has never interpreted or applied this Amendment. The Second Circuit has said that the Third Amendment is part of the right of privacy protected by the Due Process Clause of the 14th Amendment. Applying that theory, it ruled that a claim under the Third Amendment was stated by prison officers who were displaced during a strike from rented quarters in the prison by state military and law enforcement officers who operated the prison during the strike. No right of action ultimately arose, however, because the court upheld dismissal of the suit on the ground that the governor and state offices who acted to remove the guards had a “good faith” immunity defense to prosecution under the civil rights acts that formed the basis of the lawsuit. Qualified immunity applied, the Second Circuit concluded, because appellants’ Third Amendment rights were not clearly established at the time of the events in question, consistent with qualified immunity doctrine, discussed at 20.1.4.2.B nn.90-93.

§ 23.1.3 The Seventh Amendment: Right to Jury Trial in Actions At Common Law

The Seventh Amendment provides: “In Suits at common law, where the value in controversy shall exceed twenty dollars, the right of trial by jury shall be preserved, and no fact tried by a jury, shall be otherwise re-examined in any Court of the United States, than according to the rules of the common law.” By its terms, this Amendment applies only to suits “at common law,” not suits in equity or admiralty or maritime jurisdiction. In interpreting the Seventh Amendment, the Court has adopted a natural law approach, focusing on purpose, history, practice, and precedent, with an evolving meaning, not a formalist, literal, static interpretation. The Court noted in *Curtis v. Loether*:

Although the thrust of the Amendment was to preserve the right to jury trial as it existed in 1791, it has long been settled that the right extends beyond the common-law forms of action recognized at that time. Mr. Justice Story established the basic principle in 1830:

———

“The phrase ‘common law,’ found in this clause, is used in contradistinction to equity, and admiralty, and maritime jurisprudence. . . . By common law, (the Framers of the Amendment) meant . . . not merely suits, which the common law recognized among its old and settled proceedings, but suits in which legal rights were to be ascertained and determined, in contradistinction to those where equitable rights alone were recognized, and equitable remedies were administered . . . . In a just sense, the amendment then may well be construed to embrace all suits which are not of equity and admiralty jurisdiction, whatever might be the peculiar form which they may assume to settle legal rights.”

Petitioner nevertheless argues that the Amendment is inapplicable to new causes of action created by congressional enactment. . . . Although the Court has apparently never discussed the issue at any length, we have often found the Seventh Amendment applicable to causes of action based on statutes. See, e.g., Dairy Queen, Inc. v. Wood, 369 U.S. 469, 477 (1962) (trademark laws); Hepner v. United States, 213 U.S. 103, 115 (1909) (immigration laws); cf. Fleitmann v. Welsbach Street Lighting Co., 240 U.S. 27 (1916) (antitrust laws), and the discussion of Fleitmann in Ross v. Bernhard, 396 U.S. 531, 535-36 (1970). Whatever doubt may have existed should now be dispelled. The Seventh Amendment does apply to actions enforcing statutory rights, and requires a jury trial upon demand, if the statute creates legal rights and remedies, enforceable in an action for damages in the ordinary courts of law.23

For statutory rights that are not the equivalent of a common law action for damages, or for which at common law a jury trial would not be required, such as where the subject matter outruns the competence of the normal jury, as in the construction of a patent, including terms of art within its claim, a jury trial is not required.24 The basic test is whether "the jury must shoulder this responsibility as necessary to preserve the 'substance of the common-law right of trial by jury.'”25 An important aspect of this doctrine is that cases under 42 U.S.C. § 1983, the main statute for bringing cases of constitutional violations against states, are viewed as presumptively triggering Seventh Amendment protection.26

By its literal text, the Seventh Amendment only applies to preserve the right of jury trial for issues of “fact.” Thus, even in federal court, questions of law, such as the right to equitable remedies, as for specific performance or an injunction, or some defenses, such as illegality or unconscionability in contract law, are still decided by the court. Again adopting a natural law style of interpretation, and particularly the natural law focus on following precedent, the Court has noted, “We look to history to determine whether the particular issues, or analogous ones, were decided by judge or by jury in suits at common law at the time the Seventh Amendment was adopted. Where history does

not provide a clear answer, we look to precedent and functional considerations.27 Like most constitutional rights, the right to a jury trial can be waived by the individual, as long as that waiver is knowing and voluntary, as in contractual provisions providing for mandatory binding arbitration.28 The issue regarding which constitutional rights can be waived (“alienable”) and which cannot (“inalienable” rights) is discussed at § 24.1 text following n.14.

While most of the Bill of Rights provisions have been incorporated into the Due Process Clause of the 14th Amendment, and thus made applicable against the states, discussed at § 27.2.4 nn.120-27, the Supreme Court has not incorporated the Seventh Amendment into the 14th Amendment, as noted at § 27.2.5.1 text following n.128. Although there seems little chance that the Court would rethink this view, principally on the grounds that the current view reflects appropriate deference to state procedural practices, one set of commentators have argued that the Seventh Amendment should be viewed as incorporated into the 14th Amendment, like most of the other Bill of Rights provisions.29

Because the Seventh Amendment has not been incorporated into the 14th Amendment, states can permit traditional common-law factual issues to be decided by a state court judge, not a jury, as long as that is consistent with any provisions in their own state constitutions on the right to a jury trial.30 Such judicial determination would not be permitted if the case were heard in federal court under diversity jurisdiction. For example, in Byrd v. Blue Ridge Rural Electric Co-op., Inc.,31 the Supreme Court held that while the question of whether the claim of an injured workman is within a state Industrial Commission's jurisdiction under a state Worker’s Compensation statute may be a matter for decision by the state court trial judge under state law, because of the Seventh Amendment it was a question for the jury to determine in a case in federal court under diversity jurisdiction.

The Seventh Amendment does not apply to suits against the United States. As the Court noted in Lehman v. Nakshian:

27 Id. at 718-21.

When Congress has waived the sovereign immunity of the United States, it has almost always conditioned that waiver upon a plaintiff’s relinquishing any claim to a jury trial. Jury trials, for example, have not been made available in the Court of Claims for the broad range of cases within its jurisdiction under 28 U.S.C. § 1491 . . . And there is no jury trial right in this same range of cases when the federal district courts have concurrent jurisdiction. See 28 U.S.C. §§ 1346(a)(2) and 2402. Finally, in tort actions against the United States, see 28 U.S.C. § 1346(b), Congress has similarly provided that trials shall be to the court without a jury. 28 U.S.C. § 2402.32

§ 23.1.4 The Full Faith and Credit Clause

Article IV, § 1 of the United States Constitution provides, "Full Faith and Credit shall be given in each State to the public Acts, Records, and judicial Proceedings of every other State. And the Congress may by general Laws prescribe the Manner in which such Acts, Records and Proceedings shall be proved, and the Effect thereof." In 1790, Congress enacted the first version of the full faith and credit statute. That statute provided:

That the acts of the legislatures of the several states shall be authenticated by having the seal of their respective states affixed thereto: That the records and judicial proceedings of the courts of any state, shall be proved or admitted in any other court within the United States, by the attestation of the clerk, and the seal of the court annexed, if there be a seal, together with a certificate of the judge, chief justice, or presiding magistrate, as the case may be, that the said attestation is in due form. And the said records and judicial proceedings authenticated as aforesaid, shall have such faith and credit given to them in every court within the United States, as they have by law or usage in the courts of the state from whence the said records are or shall be taken.33

Predominantly, this statute provided how state statutes and judicial records and proceedings are to be authenticated so that they may be admitted into evidence in other states, but did not literally require the effect that those proceedings would be given res judicata or collateral estoppel effect. Chief Justice John Marshall stated for a United States Circuit Court, while riding circuit in 1813 in Peck v. Williamson,34 “To us it appears very clear that the constitution makes a pointed distinction between the faith and credit, and the effect, of a record in one state when exhibited in evidence in another. With respect to the former, the Constitution is peremptory that it must have full faith and credit; with respect to the latter, it provides that congress may prescribe the effect thereof. Unless Congress had prescribed its effect, it should be allowed only such as it possesses on common-law principles. In our opinion Congress have not prescribed its effect. To suppose that they have is to believe that they use the words ‘faith and credit’ in a sense different from that which they have in the clause of the Constitution upon which they were legislating.” In reaching this conclusion, Chief Justice Marshall noted that other Justices, in their circuit opinions, had reached a different result.

33 Act of May 26, 1790, ch. 11, 1 Stat. 122.

34 19 F. Cas. 85, 85 (C.C.N.C. 1813).
Based on the natural law focus on purpose, as well as literal text, the Supreme Court held soon after *Peck* that *res judicata* and *collateral estoppel* were part of Congress’ intent in 1790. Speaking for the Court in *Mills v. Duryee*, Justice Story noted, “It is argued that this act provides only for the admission of such records as evidence, but does not declare the effect of such evidence when admitted. This argument cannot be supported. The act declares that the record duly authenticated shall have such faith and credit as it has in the state Court from whence it is taken. If in such Court it has the faith and credit of evidence of the highest nature, viz. record evidence, it must have the same faith and credit in every other Court. Congress have therefore declared the effect of the record by declaring what faith and credit shall be given to it.” Five years later, in 1818, Chief Justice Marshall acknowledged the *Mills* precedent and wrote for the Court in *Hampton v. M’Connel*, “[T]he judgment of a state court should have the same credit, validity, and effect, in every other court in the United States, which it had in the state where it was pronounced.”

In 1948, Congress amended the full faith and credit statute, which now provides, at 28 U.S.C. § 1738, that "judicial proceedings . . . shall have the same full faith and credit in every court within the United States and its Territories and Possessions as they have by law or usage in the courts of such State." This statute has been held to encompass the doctrines of *res judicata*, or "claim preclusion," and *collateral estoppel*, or "issue preclusion." Under this doctrine, there still is an important difference between a formal judgment and giving “faith and credit” to one state’s laws that may differ from another state. The Court stated in *Franchise Tax Board of California v. Hyatt*:

As we have explained, "[o]ur precedent differentiates the credit owed to laws (legislative measures and common law) and to judgments." Whereas the full faith and credit command "is exacting" with respect to "[a] final judgment . . . rendered by a court with adjudicatory authority over the subject matter and persons governed by the judgment," it is less demanding with respect to choice of laws. We have held that the Full Faith and Credit Clause does not compel "a state to substitute the statutes of other states for its own statutes dealing with a subject matter concerning which it is competent to legislate."

. . . . We have recognized, instead, that "it is frequently the case under the Full Faith and Credit Clause that a court can lawfully apply either the law of one State or the contrary law of another." We thus have held that a State need not "substitute the statutes of other states for its own statutes dealing with a subject matter concerning which it is competent to legislate."
With respect to other states’ laws in cases involving multi-state elements, the Court held in *Allstate Insurance Co. v. Hague*\(^{39}\) that the test under the Full Faith and Credit Clause and the Due Process Clause is the same: whether the state has a sufficient contact or aggregation of contacts creating state interests that would make the application of its law neither arbitrary nor fundamentally unfair. In *Sun Oil v. Wortman*,\(^{40}\) the Court held that the *Allstate* test only applied to "nontraditional" choice-of-law rules. When a state is applying a traditional choice-of-law rule – *i.e.*, one that was accepted at the time that the Full Faith and Credit and Due Process Clauses were ratified and whose acceptance has continued into the present – that choice-of-law rule is validated by its history and practice without regard to the *Allstate* test.

As might be expected, based on the limitations of Stage 3 concrete operational thought, discussed at § 15.4.1 nn.50-56, traditional choice-of-law rules during the original natural era focused on concrete presence or activity in the state, particularly for contract or tort issues.\(^{41}\) Similar to modern doctrine regarding Due Process limits on personal jurisdiction, discussed at § 17.2.3.2, modern choice of laws, based on the abstract reasoning capabilities of formal operational thought, follows a broader factor-weighing approach in terms of fundamental fairness and general state interest in the litigation.\(^{42}\) In either case, the Court's repeated statements that a state is not compelled to substitute the statutes of other states for its own statutes dealing with the same subject matter, leave little room for vigorous use of the Full Faith and Credit Clause to impose one state’s law on another.

A classic example of Full Faith and Credit Clause applied to such issues involves workers’ compensation law. In these cases, the issue is whether to apply the workers compensation law where the individual resides, and typically sues; the law of the state where the injury occurred; the law of the state where the employer, if a corporation, is incorporated; or some other choice. The Supreme Court has indicated that the choice of law decision made by a state in such a case rarely

\(^{39}\) 449 U.S. 302, 312-313 (1981) (Brennan, J., plurality opinion); *id.* at 332 (Powell, J., joined by Burger, C.J., and Rehnquist, J., dissenting). In *Allstate*, only Justice Stevens appeared to view the test under the two Clauses as somewhat different. *Id.* at 320 (Stevens, J., concurring in the judgment).

\(^{40}\) 486 U.S. 717, 728-29 (1988).

will implicate the Full Faith and Credit Clause. In this, and many other areas, state legislatures have moved in to fill gaps. As had been noted:

However, the prevailing assumption that legislatures are extremely reluctant (or worse incapable) to enact choice-of-law rules is not based on reality. As illustrated earlier, during the last fifty years, state legislatures have been routinely enacting unilateral choice-of-law rules interspersed with substantive rules in areas such as insurance contracts, franchises, dealerships, consumer protection, construction contracts, workers’ compensation, public contracts, and other densely regulated areas. But choice-of-law legislation is not confined to those areas, nor is it confined to unilateral rules. Although only one state has enacted a comprehensive choice-of-law codification [perhaps not surprisingly Louisiana with its civil law Code tradition], many other states have enacted statutes dealing with major and significant choice-of-law questions. In addition to the choice-of-law provisions in the Uniform Commercial Code, which are too numerous to cite and which are in force in all states, several states have enacted choice-of-law rules on matters such as contractual choice of law and forum, statutes of limitation, interstate arbitration, decedents estates, marital property, premarital agreements, partnerships; wrongful death; notice and proof of sister-state and foreign law, child and spousal support, child custody, and even the discipline of members of the bar.

Perhaps the greatest area of contemporary concern under the Full Faith and Credit clause involves issues of marriage and divorce, in particular the issue of whether gay marriages or civil unions performed in those states permitting such arrangements must be given full faith and credit in other states. Historically, the divorce cases have been treated differently than the marriage cases, since divorce judgments, including property and custody decisions, are judgments of the court entitled to greater weight under the Full Faith and Credit Clause than marriage ceremonies, which do not involve formal court judgments. It has been noted:

The most common situation in which a divorce court faces the fact that the law of a state other than the forum is . . . eligible to have its law applied is where one spouse has left the marital domicile and moved to a new state, leaving the other spouse – and much or even all the divisible property – in the marital domicile. The court in the new domicile may grant a divorce on grounds not recognized in the domicile of the other spouse and, if personal jurisdiction is obtained over the spouse who did not change domicile, divide the property in a manner contrary to the division law of the other involved state. The new domicile's judgment is, of course, entitled to full faith and credit under the Article IV Clause and § 1738 despite the rendering court's inability, as a matter of local practice, to apply any law other than that of the forum.

---

45 William A. Reppy, Jr., The Framework of Full Faith and Credit and Interstate Recognition of Same-Sex Marriages, 3 Ave Maria L. Rev. 393, 454 (2005).
Regarding marriages, the classic full faith and credit cases involved interracial marriages, when some states permitted them and some states did not, before the Supreme Court ruled in *Loving v. Virginia* in 1967 that bans on interracial marriages were unconstitutional. It has been noted about these cases:

Three classes of choice-of-law problems arose involving interracial marriages. The first were cases in which parties had traveled out of their home state for the express purpose of evading that state's prohibition of their marriages, and thereafter immediately returned home. Despite some early Northern authority to the contrary, Southern courts always invalidated these marriages. Second were cases in which the parties had not intended to evade the law, but had contracted a marriage valid where they lived, and subsequently moved to a state where interracial marriages were prohibited. These were the most difficult cases, and the Southern authorities were evenly divided on how to deal with them. Finally, there were cases in which the parties had never lived within the state, but in which the marriage was relevant to litigation conducted there. Typically, after the death of one spouse, the other sought to inherit property that was located within the forum state. In these cases, the courts invariably recognized the marriages.46

With respect to other kinds of marriage issues, some courts have recognized out-of-state marriages even when the marriage “violated the domicile's restrictions on underage marriages, on incestuous marriages (such as first cousin or uncle/niece marriages), on adultery or when divorced persons could remarry, and even on polygamous marriages for some limited purposes,”47 such as recognizing a polygamous marriage from India for inheritance purposes, but not for cohabitation purposes. On the other hand, other courts have refused to recognize such marriages.48

With respect to the issue of same-sex marriages, the issue is complicated by the provision in the federal Defense of Marriage Act of 1996, codified as 28 U.S.C. § 1738C, dealing with the obligation to recognize same-sex marriages. It provides: “No State, territory, or possession of the United States, or Indian tribe, shall be required to give effect to any public act, record, or judicial

48 See, e.g., Catalano v. Catalano, 170 A.2d 726 (Ct. 1961) (refusing to recognize an uncle/niece marriage entered into in Italy because the Connecticut criminal incest statute expressed a strong public policy against recognition); Whelan v. Whelan, 105 N.E.2d 314 (Ill. App. Ct. 1952) (refusing to recognize Kentucky marriage between Illinois residents who were first cousins); Wilkins v. Zelichowski, 140 A.2d 65 (N.J. 1958) (refusing to recognize marriage by underage New Jersey residents in Indiana); Maurer v. Maurer, 60 A.2d 440 (Pa. Super. Ct. 1948) (refusing to recognize marriage in Maryland for express purpose of evading Pennsylvania's paramour law, which provided an adulterer cannot marry his accomplice in adultery); In re Vetas' Estate, 170 P.2d 183 (Utah 1946) (refusing to recognize a common law marriage entered into in Idaho).
proceeding of any other State, territory, possession, or tribe respecting a relationship between persons of the same sex that is treated as a marriage under the laws of such other State, territory, possession, or tribe, or a right or claim arising from such relationship.” Given Congress’ ability under the text of the Full Faith and Credit Clause to prescribe the “effect” of proceedings in another state, this would make it more difficult to justify giving such same-sex marriages in one state preclusive effect in another state. In 2005, in Wilson v. Ake, a federal district court upheld the Defense of Marriage Act as not violating full faith and credit, due process, or equal protection principles.

Despite extensive commentary both supporting giving such same-sex marriages full faith and credit, and denying it, the likely reality, as discussed at § 26.4.6 nn.47-86, is that the Northern “Blue States” are likely to recognize same-sex marriages or civil unions in the near future, with the examples of Vermont, Massachusetts, and Connecticut likely joined in the near future by New Jersey, California, and other such states; the “Midwest, Plains, and Western” Red States will grant equal kind of rights in terms of health, pension, medical visitation, and other such rights, but not civil union or marriage status; and the “Deep South” Red States will limit rights generally. Response to the full faith and credit issue in these states may well mirror this receptiveness, with some “Blue States” giving full faith and credit to marriages legal in other states, prior to recognizing such marriages in their own states.

Eventually, as with the issue of interracial marriages, where the full faith and credit issue was mooted by the Supreme Court in Loving v. Virginia, discussed at § 26.2.1.1.D n.132, which struck down all bans on interracial marriages, the Supreme Court will likely eventually join the educated, enlightened view of Western Europe and Canada, discussed at §§ 16.1 text following n.5 & 16.2.4, which supports equal rights for gays and lesbians. This will moot the full faith and credit issue with respect to same-sex marriages as well.

---

52 388 U.S. 1, 9-11 (1967).
§ 23.2 Criminal Defendants’ Rights

The subject of defendant’s constitutional rights in criminal proceedings is detailed in a number of treatises specifically devoted to criminal law.\textsuperscript{53} These rights include those in the Fourth, Fifth, Sixth and Eighth Amendments to the Constitution, as well as provisions in Article I, § 9 concerning no Bill of Attainder, no Ex Post Facto Laws, and a right of Habeas Corpus, and the Article IV, § 2, cl. 2 Extradition Clause. These clauses are typically not covered in the standard first year Constitutional Law course, but are reserved for an upper-level course on Criminal Procedure. For this reason, given the focus of this book, as stated in § 1.3.4, the intent in this book is not to provide a detailed analysis of these provisions. Rather, by providing several examples from cases recently decided, the point is made that the same decisionmaking styles and eras can be observed in cases on criminal procedure as in other areas of constitutional law.

There is, of course, the preliminary decision whether a particular punishment is criminal or civil. As has been noted, “The Bill of Rights affords important procedural protections to those subjected to criminal investigation, indictment, or prosecution that are not available to defendants in civil actions. That the Framers of the Constitution and Bill of Rights incorporated these protections indicates their belief that society holds a unique interest in limiting the state's power to stigmatize and punish and, to this end, that criminal procedures should guarantee protections transcending those offered to citizens subjected to civil suit or regulation.”\textsuperscript{54}

In 1963, in \textit{Kennedy v. Mendoza-Martinez},\textsuperscript{55} the Court weighed seven factors to determine whether a sanction is civil or criminal whenever there is any doubt: “Whether the sanction involves an affirmative disability or restraint, whether it has historically been regarded as a punishment, whether it comes into play only on a finding of scienter, whether its operation will promote the traditional aims of punishment – retribution and deterrence, whether the behavior to which it applies is already a crime, whether an alternative purpose to which it may rationally be connected is assignable for it, and whether it appears excessive in relation to the alternative purpose assigned.”  In 1997, in \textit{Hudson v. United States}, the Court underscored that whether:

\begin{quote}
    a particular punishment is criminal or civil is, at least initially, a matter of statutory construction. A court must first ask whether the legislature, "in establishing the penalizing mechanism, indicated either expressly or impliedly a preference for one label or the other." Even in those cases where the legislature "has indicated an intention to establish a civil penalty, we have inquired further whether the statutory scheme was so punitive either in purpose or effect," as to "transfor[m] what was clearly intended as a civil remedy into a criminal penalty."
\end{quote}

\textsuperscript{54} Aaron Xavier Fellmeth, \textit{Civil and Criminal Sanctions in the Constitution and Courts}, 94 Geo. L.J. 1, 7-8 (2005).

\textsuperscript{55} 372 U.S. 144, 167-68 (1963) (citations omitted).
In making this latter determination, the factors listed in *Kennedy v. Mendoza-Martinez* provide useful guideposts . . . . It is important to note, however, that "these factors must be considered in relation to the statute on its face," and "only the clearest proof " will suffice to override legislative intent and transform what has been denominated a civil remedy into a criminal penalty.56

In short, the Court reaffirmed in *Hudson* a presumption that a sanction is whatever Congress said it was for purposes of determining whether the criminal procedure protections in the Constitution apply. The Court noted, however, that Congress could be mistaken. If the defendant can show that the sanction is more like a criminal one, judged by factors enumerated in *Mendoza-Martinez*, then the protections would apply notwithstanding Congress's intent that they should not.

§ 23.2.1 The Fourth, Fifth, Sixth, and Eighth Amendments

With respect to criminal defendant’s rights, the liberal instrumentalist predisposition to protect the unempowered in society, noted at §§ 11.2.1.2 nn.19-20 & 11.3.3 n.61, has meant that in construing the protections of the Fourth, Fifth, Sixth, and Eighth Amendments, liberal instrumentalist judges have been at the forefront in terms of ensuring vigorous protection for the rights of the accused. In contrast, Holmesian judges, with their deference-to-government predisposition, noted at § 10.2.1.2 nn.16-18, and formalist judges, based on fixed, static interpretation grounded in literal text and specific historical intent, noted at §§ 9.2.1.1 nn.4-6, 9.2.1.3 nn.35-36 & 9.2.2.1 nn.37-39, tend to embrace more limited readings of these constitutional provisions. Natural law judges tend to reach conclusions intermediate between these two extremes based on arguments of text, context, history, practice, precedent, and interpretive prudential considerations, without preconceived predispositions.

§ 23.2.1.1 The Fourth Amendment: Protection Against Unreasonable Searches and Seizures

The Fourth Amendment provides: “The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrants shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.”

The first issue under the Fourth Amendment is whether a “search” or “seizure” has in fact occurred. The burden is on the challenger to establish that in fact a search or seizure, which could include an arrest, has taken place to trigger the Amendment. For example, in *Florida v. Riley*, 57 the plurality opinion of Justice White, joined by Chief Justice Rehnquist, and Justices Scalia and Kennedy, noted that “there is nothing in the record or before us to suggest that helicopters flying at 400 feet are sufficiently rare in this country to lend substance to respondent's claim that he reasonably anticipated

that his greenhouse would not be subject to observation from that altitude.” Thus, the observation of an individual’s greenhouse by the police from a helicopter was not constitutionally a “search” or “seizure” because the defendant had not shown that the greenhouse was not in “plain view.” Justice O’Connor, concurring in the judgment, similarly placed the burden of proof on the defendant to establish that a “search” had occurred because the greenhouse was not in “plain view.”

Once the defendant meets the burden of establishing that a search, seizure, or arrest has occurred, the burden shifts to the government to establish the “reasonableness” of the action, both as to the initial stop, and whether later actions were “reasonably related” to the circumstances that justified the stop. In determining whether any particular search, seizure, or arrest is “reasonable,” the Court uses a “third-order” rational review balancing test. The Court weighs the government’s interest and needs in law enforcement against individual privacy rights and the availability to the government of less burdensome means of operation.

This use of third-order rational review is similar to other cases of third-order rational review where the government has singled out individuals for direct regulation, such as the government regulating the speech of government employees on matters of public concern under the First Amendment Pickering doctrine, discussed at § 30.2.2.1 nn.178-81, or, as the Court noted in Dolan, comparing the Dolan test to the Fourth Amendment, singles out individuals for exactions under Takings Clause doctrine, discussed at § 22.2.5.1 nn.97-103.

In deciding whether a search has occurred, the Court considers the issue from both the subjective perspective of whether an individual in fact had an expectation of privacy and an objective perspective of whether a reasonable person would have a legitimate expectation of privacy. As phrased initially by Justice Harlan concurring in Katz v. United States,60 the touchstone of the analysis is whether a person has a “constitutionally protected reasonable expectation of privacy.” As restated in Smith v. Maryland,61 “Katz posits a two-part inquiry: first, has the individual manifested a subjective expectation of privacy in the object of the challenged search? Second, is society willing to recognize that expectation as reasonable?”

---

In practice, the second part of this inquiry does most of the work. This is consistent with most constitutional doctrines, such as the objective test for determining executive officials’ immunity from prosecution for damage actions based upon objective belief in the reasonableness of the conduct, discussed at § 20.1.4.2.B nn.84-87. It is also consistent with much contracts, torts, and statutory interpretation doctrine, which uses objective reasonable person standards to resolve issues, noted at §§ 3.2 nn.27-31 & 6.2.1.1 nn.9-23. Such an approach is not only easier in terms of proof, since determining subjective mental states is difficult, but is also consistent with a natural law focus on reasoned elaboration of the law, discussed at § 12.2.2.2 nn.60-70, and the principle that “persons should behave reasonably under the circumstances,” noted at § 12.2.2.3 text following n.81.

Like most constitutional rights, as discussed at § 24.1 text following n.14, the Fourth Amendment protection against search and seizures can be waived, as long as that waiver is “voluntary.” As the Court noted in *Schneckloth v. Bustamonte*, the burden is on the government to establish the voluntariness of the consent based upon a totality of the circumstances approach. The Court stated in *Schneckloth*, “Some of the factors taken into account have included the youth of the accused; his lack of education; or his low intelligence; the lack of any advice to the accused of his constitutional rights; the length of detention; the repeated and prolonged nature of the questioning; and the use of physical punishment such as the deprivation of food or sleep.” Justice Douglas, Brennan, and Marshall dissented in *Schneckloth*, and would have required a higher standard of a “knowing and intelligent” waiver. The standard usually requires the government to advise the person of the right, rather than the “lack of any advice” being merely a factor in the decision regarding “voluntariness.”

As discussed at §§ 23.2.1.2 n.101 & 23.2.1.3 n.157, the “knowing and intelligent” waiver standard is used for the waiver of most Fifth and Sixth Amendment rights, which involve “the validity of a defendant's decision to forego a right constitutionally guaranteed to protect a fair trial and the reliability of the truth-determining process.” In contrast, as the Court noted in *Schneckloth*, the “protections of the Fourth Amendment are of a wholly different order, and have nothing whatever to do with promoting the fair ascertainment of truth at a criminal trial. Rather, . . . the Fourth Amendment protects the 'security of one's privacy against arbitrary intrusion by the police.’”

In *Georgia v. Randolph*, the Court was faced with co-occupants, one of whom consented to a search, and the other did not. The Court noted that while the Fourth Amendment “recognizes a valid warrantless entry and search of premises when police obtain the voluntary consent of an occupant who shares, or it reasonably believed to share, authority over the area in common with a co-occupant who later objects to the use of evidence so obtained,” where the co-occupant is physically present at the scene, and refuses to consent, “a physically present co-occupant’s stated refusal to permit entry prevails, rendering the warrantless search unreasonable and invalid as to him.” Chief Justice Roberts and Justices Scalia dissented on the ground that one shares the risk that a co-occupant will consent to a search. Justice Thomas dissented, noting that the co-tenant could have turned over the evidence to the police himself. Justice Alito took no part in the decision or consideration of the case.

62 412 U.S. 218, 222-27, 236-42 (1973) (citations omitted); id. at 275-76 (Douglas, J., dissenting); id. at 276-77 (Brennan, J., dissenting); id. at 277-80 (Marshall, J., dissenting).

63 126 S. Ct. 1515, 1518-19 (2006); id. at 1534-35 (Roberts, C.J., joined by Scalia, J., dissenting); id. at 1541-43 (Thomas, J., dissenting).
Consistent with the literal text of the Fourth Amendment, for most searches a warrant and probable cause to search are required, and that warrant must describe with particularity the place to be searched and the person or things to be seized.\textsuperscript{64} However, consistent with a natural law focus on purpose and practicality, in addition to literal text, the Court has permitted “anticipatory” search warrants based upon affidavits establishing probable cause that at some future time certain evidence of a crime will be located at a particular place, and that anticipatory warrant does not itself need to specify what the “triggering” condition will be for that warrant to be executed.\textsuperscript{65} Further reflecting a concern with purpose and practicality, the Court has created the “emergency aid” doctrine that permits warrantless entry of premises when officers are presented with circumstances that would lead a reasonable officer to believe that one or more occupants of the home are seriously injured or in danger of being seriously injured, such as a threat of on-going violence in the home.\textsuperscript{66}

Based on the same reasons of purpose and practicality, the Court has permitted exceptions to the warrant and probable cause requirements when “special needs, beyond the normal need for law enforcement” make those requirements impracticable, as noted in \textit{Griffin v. Wisconsin}.\textsuperscript{67} Consistent with an instrumentalist predisposition to be sensitive to potential criminal defendant’s rights, in many of these cases instrumentalist Justices, like Justices Brennan, Marshall, and Stevens, have been in dissent, having a more limited view of when special needs exist.

For example, over the dissents of Justices Brennan, Marshall, and Stevens, the Court upheld in \textit{Michigan Department of State Police v. Sitz}\textsuperscript{68} the use of a sobriety traffic checkpoint. The Court concluded that the state's checkpoint program was constitutional, adopting a standard third-order rational review 3-part means/end balancing test, focused on the state's interest in preventing drunk driving (end), the extent to which that could be accomplished through the checkpoint program (benefit of the means), and the degree of intrusion the stops involved (burden). Over the dissents of Justices Brennan and Marshall, the Court upheld in \textit{United States v. Martinez-Fuerte}\textsuperscript{69} the brief, suspicionless seizures of motorists at a fixed Border Patrol checkpoint designed to intercept illegal aliens. Without dissent, the Court suggested in \textit{Delaware v. Prouse}\textsuperscript{70} that a similar type of roadblock with the purpose of verifying drivers' licenses and vehicle registrations would be permissible.

\end{itemize}
In contrast, in *Indianapolis v. Edmond*, the Court held that a drug interdiction checkpoint violated the Fourth Amendment. Despite illegal narcotics traffic, the Court majority explained that a “general interest in crime control” did not justify the stops. The Court distinguished the sobriety checkpoints in *Sitz* on the ground those checkpoints were designed to eliminate an “immediate, vehicle-bound threat to life and limb” from drunk driving. Consistent with his Holmesian predisposition for deference to government, Chief Justice Rehnquist dissented, refusing to distinguish this roadblock from those in *Sitz* and *Martinez-Fuerte*. Based on literal application of those precedents, Justices Scalia and Thomas joined this dissent in part, although Justice Thomas noted in a separate dissent, “I rather doubt that the Framers of the Fourth Amendment would have considered ‘reasonable’ a program of indiscriminate stops of individuals not suspected of wrongdoing.”

In *dicta*, the Court noted in *Edmond* that despite their conclusion that a generalized interdiction checkpoint looking for drugs was unconstitutional, “[T]he Fourth Amendment would almost certainly permit an appropriately tailored roadblock set up to thwart an imminent terrorist attack.” Focused on the issue of “imminence” in a case decided after 9-11, the Eleventh Circuit struck down in *Bourgeois v. Peters* a city policy requiring all persons wishing to participate in a protest near a military base to submit to a magnetometer search before entering the protest site. The court stated, “While the threat of terrorism is omnipresent, we cannot use it as the basis for restricting the scope of the Fourth Amendment's protections in any large gathering of people. In the absence of some reason to believe that international terrorists would target or infiltrate this protest, there is no basis for using September 11 as an excuse for searching the protestors.” In *MacWade v. Kelly*, the Second Circuit upheld a program of random, suspicionless searches of subway riders’ belongings to look for explosives to protect New York subways from terrorist attack.

The Court has used the special needs exception to uphold certain kinds of drug testing programs at schools, drug testing programs in employment, or for administrative inspections for a variety of

---

71 531 U.S. 32, 43-44 (2000); id. at 48 (Rehnquist, C.J., joined in part by Scalia & Thomas, JJ., dissenting); id. at 56 (Thomas, J., dissenting).

72 387 F.3d 1303, 1311 (11th Cir. 2004).

73 460 F.3d 260, 267-75 (2nd Cir. 2006).

administrative reasons, provided those searches are appropriately limited. In a case focusing on drug searches at schools, an Eighth Circuit panel distinguished the Supreme Court’s cases dealing with student-athletes or students in competitive extracurricular activities, cited at § 23.2.1.1 n.74, to hold that a public school’s practice of subjecting all students to random, suspicionless searches of their persons and belongings because of concerns with drug use and violence was not justified by the “special needs” exception. On the other hand, because of the diminished expectation of privacy that students have in the school context, it has been argued that the Court should adopt a more flexible standard regarding whether “anonymous tips” should be viewed as giving the government “reasonable suspicion” to search students and their belongings in the school context.

In Ferguson v. City of Charleston, the Court considered a city policy setting forth procedures for maternity patients suspected of drug use to be identified, and their urine tested for the presence of illegal drugs, including cocaine. Patients with positive drug screens could avoid prosecution by entering a substance abuse clinic. The policy contained detailed procedures concerning the chain of custody and the particular offenses with which the women could be charged, and allowed for interrogation regarding the source of their drugs. Consistent with Edmond, the Court held that a “general interest in crime control” could not justify the searches, and that, as the program had been structured, even if the “ultimate goal” was the health and well-being of the mother and her fetus, the “immediate objective” and “primary purpose” of the program was an interest in crime control.

Concurring in the judgment only, Justice Kennedy rejected the distinction between “immediate” and “ultimate” goals as inconsistent with the Court’s precedents, and not useful, since “[b]y very definition, in almost every case the immediate purpose of a search policy will be to obtain evidence.” He did embrace the concept of looking to the “primary purpose” of the government action, however, noting, “The special needs cases we have decided do not sustain the active use of law enforcement, including arrest and prosecutions, as an integral part of a program which seeks to achieve legitimate, civil objectives. . . . Under these circumstances, while the policy may well have served legitimate needs unrelated to law enforcement, it had as well a penal character with a far greater connection to law enforcement than other searches sustained under our special needs rationale.”

77 Doe v. Little Rock Sch. Dist., 380 F.3d 349, 354-57 (8th Cir. 2004).

79 532 U.S. 67, 79-86 (2002); id. at 88-89 (Kennedy, J., concurring in the judgment).
Chief Justice Rehnquist, and Justices Scalia and Thomas, dissented in Ferguson, and would have upheld the policy based on the “special need” to facilitate “treatment and protect both the mother and unborn child.” Justice Scalia also dissented on the ground that in his view the patient voluntarily consented to the urine sample, and thus no Fourth Amendment issue was raised. Given that Chief Justice Roberts and Justice Alito would likely vote with Justices Scalia and Thomas in such a case today, Justice Kennedy’s approach probably represents the current controlling doctrine on this issue.

That approach may have some relevant for the issue of data collection of DNA. All fifty states have enacted laws authorizing the use of DNA databases to store the genetic profiles of those convicted of certain criminal offenses. Under the DNA Identification Act of 1994, the FBI established the Combined DNA Index System (CODIS), allowing local and state forensic laboratories to exchange and compare DNA profiles electronically. Under the DNA Analysis Backlog Elimination Act of 2000 (DNA Act), federal government officials were granted the authority to collect DNA samples from persons convicted of certain federal offenses for inclusion in CODIS. It has been questioned whether such collection is constitutional, since the “primary purpose” of such collection is a “generalized interest in law enforcement.” However, at a minimum, unlike Edmond or Ferguson, the purpose is not to collect the information to prosecute an individual for some immediate offense, where the individual’s privacy interest would be stronger, but to aid future law enforcement efforts, including helping to prove that the individual is not the perpetrator of some later crime. In any event, either on grounds of “special needs,” or as consistent with third-order rational review balancing for “reasonableness,” federal Circuits have uniformly upheld suspicionless collection of DNA samples from convicted felons for inclusion in a law enforcement database.

The formalist focus on fixed constitutional meaning at the time of ratification can occasionally yield results more protective of individual rights than judges in the Holmesian or natural law tradition. For example, in Kyllo v. United States, a combination of formalist and instrumentalist-leaning Justices joined forces to conclude that thermal imaging aimed at a private home to detect relative amounts of heat was an unconstitutional search within the meaning of the Fourth Amendment. The

80 Id. at 92-99 (Scalia, J., joined by Rehnquist, C.J., and Thomas, J., as to Part II, dissenting).

votes of formalist Justices Scalia and Thomas can be explained by noting that the result in *Kyllo*
“assure[d] preservation of that degree of privacy against government that existed when the Fourth
Amendment was adopted,” and thus supported a static, fixed interpretation of the Fourth
Amendment. For the instrumentalist or instrumentalist-leaning Justices Souter, Ginsburg, and
Breyer, the case fit the general reasoning of the instrumentalist-era case of *Katz v. United States*, where electronic eavesdropping by means of a listening device placed on the outside of a telephone
booth was held to be a search. In dissent, Justices Stevens, joined by Chief Justice Rehnquist and
Justices O’Connor and Kennedy, concluded that the thermal imaging was aimed at a house in plain
view, and thus the doctrine that observation of objects in “plain view” are not searches should apply.

Despite *Kyllo*, the Court has decided that use of a dog to sniff out drugs, or other illegal contraband
contained in objects, is not a search within the Fourth Amendment. Using a balancing approach,
the Court concluded in *Illinois v. Caballes* that individuals do not have the same expectation of
privacy from that kind of activity that they do from the use of thermal imaging technology. Justice
Souter and Ginsburg dissented from this conclusion.

In *Atwater v. City of Lago Vista*, Justice Souter, joined by Chief Justice Rehnquist and Justices
Scalia, Kennedy, and Thomas, held that traditional common-law history and more recent legislative
and executive practice support the view that it is constitutional for the police to make a warrantless
arrest for a minor criminal offense, such as a misdemeanor seat-belt violation punishable only by
a fine. Justice O’Connor, departing from her usual voting pattern, joined Justice Stevens, Ginsburg,
and Breyer in dissent, concluding that under instrumentalist-era precedents such an arrest would be
“unreasonable” and thus in violation of the Fourth Amendment.

A similar result regarding a warrantless investigatory stop occurred in *Illinois v. Wardlow*. In
*Wardlow*, the individual’s presence in an area of heavy narcotics trafficking, combined with his
unprovoked flight upon noticing the police, gave the police “reasonable suspicion” to conduct a brief
investigatory *Terry* stop, so-called after the famous case of *Terry v. Ohio*. Justice Stevens, joined
by Justices Souter, Ginsburg, and Breyer, agreed that the decision on whether “reasonable
suspicion” exists is a case-by-case inquiry, but concluded on these facts that no “reasonable
suspicion” existed.

A particularly troublesome set of areas for Fourth Amendment doctrine concerns its application to
modern technology, computers, the Internet, and the war on terror. For example, a tricky issue exists
regarding the extent to which “encryption” technology should be viewed as creating a “reasonable

expectation of privacy” that would require a warrant based upon probable cause to decipher. A second set of issues involve the particularity requirement when searching materials stored on computers. A third set of issues involve electronic surveillance of various types and when those constitute a search. A fourth set of issues involve the warrant requirement in the context of searches connected to the war on terror. However, the major issue there does not involve the warrant procedures of the Foreign Intelligence Surveillance Court (FISA Court), pursuant to the Foreign Intelligence Surveillance Act of 1978 (FISA), whose proceedings are kept secret on grounds of national security. Rather, the major issue is the extent to which the President can evade that statutory alternative based on inherent executive power. Based on the Court failing to uphold an argument for inherent executive authority to constitute military tribunals to try enemy combatants in Hamdan v. Rumsfeld in 2006, discussed at § 27.4.8 nn.409-16, the Court would be unlikely to grant the President inherent executive authority to depart from the procedures of the FISA Act, as noted at § 19.3.3 n.58.

For searches in violation of the Fourth Amendment, the Court applies an exclusionary rule to deny the fruits of that search in most later criminal proceedings. This doctrine was discussed and defended in the famous 1961 case of Mapp v. Ohio, which extended application of the exclusionary rule in federal court proceedings, which had existed at least since 1914 in Weeks v. United States, to state court proceedings. Mapp was decided over the dissents of Holmesian Justices Frankfurter, Harlan, and Whittaker, who counseled continued adherence to the Holmesian-era case of Wolf v. Colorado that had not applied the exclusionary rule to the states, over the dissents of instrumentalist Justices Douglas, Murphy, and Rutledge. The Court has indicated, however, that exclusionary rule only applies for “bad faith” violations of the Fourth Amendment. The Court held in United States

---

v. Leon\textsuperscript{94} that the exclusionary rule would not apply where officers in “good faith” rely on a search warrant issued by a detached and neutral magistrate, even if that warrant is ultimately found to be unsupported by probable cause. The Court indicated that the test for “good faith” is one of “objective reasonableness,” based on what a reasonably well-trained officer would have known\textsuperscript{95}

In \textit{Pennsylvania Board of Probation v. Scott},\textsuperscript{95} the Supreme Court was faced with the question whether to apply the exclusionary rule to bar the introduction at parole revocation hearings of evidence seized in violation of the parolees’ Fourth Amendment rights. The split seen in other cases between the conservative concern with states’ rights versus the liberal emphasis on individual civil rights, noted at § 4.4.2, was evidenced in the reasoning of the Justices. So, too, was the difference between natural law judges who tend to follow only the core holdings of precedents, like Justices O’Connor and Kennedy, versus a natural law judge who tends to follow the general reasoning of instrumentalist-era precedents, like Justice Souter, discussed at § 12.3.2.

In \textit{Scott}, Justices O’Connor and Kennedy joined Justice Thomas’ majority opinion which noted that no core holding of any prior precedent had explicitly addressed the applicability of the exclusionary rule in parole revocation hearings, and that in terms of structural arguments regarding our federal system the Court has “long been adverse to imposing federal requirements upon the parole systems of the States.” In contrast, Justice Souter, joined in dissent by Justices Ginsburg and Breyer, argued that the deterrent function of the exclusionary rule is implicated just as much in a parole revocation proceeding as in a criminal trial. Thus, the reasoning of prior Court precedents applying the exclusionary rule to criminal trials despite the loss of potentially reliable evidence should be extended to apply the exclusionary rule to parole revocation hearings.\textsuperscript{96}

Regarding the general reasoning of the instrumentalist-era cases, Justice Souter noted that cases involving the ordinary administration of the criminal law, such as criminal trials or parole hearings, implicate different kinds of concerns than noncriminal cases, such as civil tax proceedings or deportation proceedings, or specialized kind of criminal proceedings, such as habeas petitions or grand jury proceedings. Thus, it is understandable that in these other contexts the Court’s precedents had held that the benefits of the exclusionary rule “would be so marginal as to be outweighed by the incremental costs.” In contrast, “a revocation proceeding often serves the same function as a criminal trial, and the revocation hearing may very well present the only forum in which the State will seek to use evidence of a parole violation, even when that evidence would support an independent criminal charge. The deterrent function of the exclusionary rule is therefore implicated as much by a revocation proceeding as by a conventional trial.”\textsuperscript{97}

\textsuperscript{94} 468 U.S. 897, 918-25 (1984).

\textsuperscript{96} \textit{Id.} at 369 (Thomas, J., opinion for the Court); \textit{id.} at 370 (Souter, J., joined by Ginsburg, J., & Breyer, J., dissenting).

\textsuperscript{97} \textit{Id.} at 370-72 (Souter, J., joined by Ginsburg, J., & Breyer, J., dissenting).
In a stronger instrumentalist dissent, Justice Stevens urged the Court to view the exclusionary rule as constitutionally required, and thus no balancing of the value of its deterrent effect versus the loss of reliable evidence need be done.98 The conservative majority on the Court naturally disagreed.

In terms of trends in criminal justice law generally, including the Fourth Amendment, the increased conservative predisposition of a majority of members on the Supreme Court has resulted in more case outcomes reflective of a conservative, law-and-order perspective, although clearly balanced by the natural law perspective usually reflecting the controlling votes in decided cases.99 Faced with Fourth Amendment doctrine not as protective of individuals since 1986 as during the instrumentalist era from 1954-86, and in particular the “core” liberal instrumentalist era from 1963-69, as noted at §§ 7.3.2 nn.128-30 & 11.2.2.2, some state Supreme Courts have interpreted their state Constitutions to grant individuals greater protection from searches and seizures than under federal law.100

§ 23.2.1.2 The Fifth Amendment: Grand Jury Indictment, Double Jeopardy, Privilege Against Self-Incrimination, and Due Process of Law

Regarding criminal matters, the Fifth Amendment provides for four separate protections: grand jury indictment for most crimes, the double jeopardy protection from being tried twice for the same crime, the privilege against self-incrimination, and the right to due process of law. Specifically, the Fifth Amendment provides, “No person shall be held to answer for a capital, or otherwise infamous crime, unless on a presentment or indictment of a Grand Jury, except in cases arising in the land or naval forces, or in the Militia, when in actual service in time of War or public danger; nor shall any person be subject for the same offense to be twice put in jeopardy of life or limb; nor shall be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property without due process of law; nor shall private property be taken for public use, without just compensation.” The protections of the Fifth Amendment concerning the Due Process Clause as applied to civil matters are discussed in Chapter 27, and the Takings Clause is discussed at § 22.2.

The Supreme Court noted in Schneckloth v. Bustamonte,101 “Almost without exception, the requirement of a knowing and intelligent waiver has been applied . . . to those rights which the Constitution guarantees to a criminal defendant in order to preserve a fair trial.” Thus, a “knowing and intelligent” waiver is required to waive “the right to be free from twice being placed in jeopardy” and “rights in trial-type situations, such as the waiver of the privilege against compulsory self-incrimination before an administrative agency or a congressional committee.” Rule 7(b) of the Federal Rules of Criminal Procedure permits a defendant charged with a noncapital offense to

98 Id. at 369-70 (Stevens, J., dissenting).

waive the right to a grand jury indictment and allow prosecution by information,102 and the failure to assert a defect in grand jury indictment in a pretrial motion can waive the right to raise that defense.103 Because of the heightened concern in capital cases, for which the death penalty could be imposed, the requirement of a grand jury indictment cannot be waived in such cases. Similarly, most due process rights can be waived, except for the core rights to life, liberty, or property, such as due process protections in a capital murder case or the “beyond a reasonable doubt” standard in criminal cases.104 The general issue regarding which constitutional rights can be waived (“alienable” rights) and which cannot (“inalienable” rights) is discussed at § 24.1 n.15, including the extent to which an implicit waiver of a right can occur through the individual refusing to sue for violations of that right.

A. Requirement of Grand Jury Indictment

The Fifth Amendment requires a legally constituted and unbiased grand jury for felony indictments. A federal district court is authorized to summon "legally qualified" citizens for grand jury service. Once impaneled, the grand jury serves until discharged by the court, generally for a term no longer than 18 months. Under current federal law, the grand jury must be composed of 16 to 23 members, but an indictment requires only 12 votes. Jurors voting to indict do not need to be present at every grand jury session, and any number of jurors may be replaced upon a showing of cause. The prosecutor may also resubmit evidence to succeeding grand juries if unable to obtain an indictment from a previous grand jury.105

As has been noted, “The Attorney General, or any attorney authorized by the Attorney General, may conduct grand jury proceedings in the federal courts. There is no general obligation to present exculpatory evidence to the grand jury. In addition, the prosecutor is under no obligation to give the grand jury legal instructions. The prosecutor is, however, obligated to refrain from certain improper conduct in bringing and presenting the government's case. For instance, the prosecutor may not deliberately delay bringing an indictment to gain a tactical advantage, and preindictment delay may not prejudice the defendant. Nevertheless, there is a strong presumption that the prosecutor has behaved properly in conducting the grand jury proceedings. A motion alleging

102 Fed. R. Crim. P. 7(b). See United States v. Ferguson, 758 F.2d 843, 850 (2nd Cir. 1985) (just as defendant can waive trial by jury, defendant can waive similar right of indictment by grand jury).

103 United States v. Ramirez, 324 F.3d 1225, 1227-28 (11th Cir.) (per curiam), cert. denied, 540 U.S. 881 (2003).

104 See, e.g., David J. D’Addio, Note, Sentencing After Booker: The Impact of Appellate Review on Defendant’s Rights, 24 Yale L. & Pol'y Rev. 173 (2006) (“should a defendant chose to waive [the right to a jury trial] (in a plea, for instance), due process still requires a judge to find those ‘essential’ aggravating facts beyond a reasonable doubt, rather than by a preponderance of the evidence.”).

defects in an indictment usually must be raised prior to trial.\textsuperscript{106}

The grand jury determines whether there is probable cause to believe that a crime has been committed. This is intended to protect citizens against unfounded prosecutions. In terms of operating procedures, Rule 6(e)(2) of the Federal Rules of Criminal Procedure prohibits grand jurors, government attorneys, and government personnel assisting in the grand jury process from disclosing grand jury matters. To preserve secrecy, only jurors, witnesses, and the prosecuting attorney are permitted in the grand jury room. A stenographer, recording device operator, or interpreter, if necessary, may also be present. While the grand jury is deliberating or voting, only the jurors may be present. Neither a target nor a witness has the right to counsel in the grand jury room, although a witness may leave the grand jury room to consult with counsel.\textsuperscript{107}

The government or the defendant may challenge a grand jury on the grounds that the jurors were improperly selected or not legally qualified. The Jury Selection and Service Act of 1968 and the Sixth Amendment require that jurors be selected from a fair cross-section of the population, as discussed at § 23.2.1.3 n.169. Absent a showing of prejudice to the defendant, federal courts generally may not dismiss an indictment for errors in grand jury proceedings. If a trial results in a conviction, previous errors in grand jury proceedings will be deemed harmless because the trial jury's subsequent guilty verdict is viewed as ratifying the grand jury’s finding of probable cause to indict. Accordingly, a post-conviction appeal of a violation of grand jury procedures will result in neither reversal of the conviction nor dismissal of the indictment.\textsuperscript{108}

As noted at § 27.2.5.1 text following n.128, along with the Seventh Amendment right to a jury trial in civil cases, the Supreme Court has not incorporated the Fifth Amendment requirement of grand jury indictment into the 14\textsuperscript{th} Amendment and made it applicable against the states.\textsuperscript{109} This preserves state flexibility to charge individuals through means other than grand jury indictment, such as filing an “information” with the court and then submitting the case to an “arraignment” hearing conducted by a judge or magistrate. Nevertheless, about half the states, through their respective state constitutions or by state statutes, guarantee a right to grand jury indictment in felony criminal cases. Commentators are split over whether the grand jury requirement is an effective bulwark against government abuse and tyranny.\textsuperscript{110}

\textsuperscript{107} Id. at 247-48 (citations omitted).

\textsuperscript{108} Id. at 233-34 (citations omitted).

B. Protection Against Double Jeopardy

The text of the Fifth Amendment provides that no person shall “be subject for the same offense to be twice put in jeopardy of life or limb.” Under a long line of Court precedents, the Double Jeopardy Clause protects against re-prosecution after acquittal, re-prosecution after conviction (which might be attempted to get conviction of a greater offense or imposition of a longer sentence), or multiple punishments for the same crime.\(^{111}\) Although the text of the Clause mentions only harms to “life or limb,” it is well settled that the Double Jeopardy Clause covers imprisonment and monetary penalties. This is based on the purpose behind the Clause to protect individuals from unfair, onerous prosecutions, and specific historical evidence surrounding its drafting – including an early draft of the Clause which provided that “[n]o person shall be subject, except in cases of impeachment, to more than one punishment or one trial for the same offence.”\(^{112}\) In *Benton v. Maryland*,\(^{113}\) the Court held that this guarantee "represents a fundamental ideal in our constitutional heritage, and that it should apply to the States through the Fourteenth Amendment." However, reflecting the “dual theory of sovereignty,” the Double Jeopardy Clause does not prevent independent prosecutions by the federal government and a state, or by two or more states, for the same offense. Since such prosecutions would be by different government entities, they would not involve any one government entity placing the person in “double jeopardy.”\(^{114}\)

In terms of deciding whether two counts of an indictment represent the “same” offense, the Court has long held, pursuant to the formalist-era case, *Blockburger v. United States*,\(^{115}\) that the Double Jeopardy Clause prohibits successive prosecutions for the same act under two criminal statutes unless “each provision requires proof of an additional fact which the other does not.” Under this doctrine, if two statutes involve the “same elements,” such that one is a “lesser-included” offense of the other, in the sense that each element of one statute is included in the other statute, multiple prosecutions cannot take place.\(^{116}\)

\(^{111}\) See Department of Revenue v. Kurth Ranch, 511 U.S. 767, 769 n.1 (1994), and cases cited therein.

\(^{115}\) 284 U.S. 299, 304 (1932).

A majority composed of functional liberal Holmesians and liberal instrumentalists held in *Grady v. United States*\(^{117}\) that the Double Jeopardy Clause also bars a subsequent prosecution if, to establish an essential element of an offense charged in that prosecution, the government will prove “conduct” that constitutes an offense for which the defendant has already been prosecuted. Their view was that the prosecution involving the “same conduct” should be viewed as equivalent to a prosecution involving the “same elements” under *Blockburger*. Once Justices Brennan and Marshall left the Court in the early 1990s, the more conservative, less instrumentalist Court overruled this expansion of the Double Jeopardy Clause in *United States v. Dixon*.\(^{118}\) The Court noted that unlike the *Blockburger* analysis, whose definition of what prevents two crimes from being the same offence has deep historical roots and has been accepted in numerous precedents, *Grady* lacked constitutional roots. The Court noted that the "same-conduct" rule announced in *Grady* is “wholly inconsistent with earlier Supreme Court precedent and with the clear common-law understanding of double jeopardy.” Inconsistency with related holdings and substantial error are two of the additional grounds to overrule precedent from the natural law perspective, as discussed at §§ 7.3.3.2 & 7.3.3.4.

The Double Jeopardy Clause only prevents multiple criminal proceedings and punishments for the same crime, not two independent proceedings, one criminal and one civil. As discussed at § 23.2 nn.55-56, in determining whether a particular proceeding is civil or criminal, the Court weighs a number of factors to determine whether the “civil” sanction serves the purposes of retribution and deterrence, and thus should be viewed as “criminal,” as opposed to furthering non-punitive objectives.\(^{119}\) Not surprisingly, in reaching decisions on this question, liberal instrumentalist Justices tend to find more statutory provisions are “criminal” and thus trigger the protections of the Double Jeopardy Clause, while conservative formalist and Holmesian Justices tend to find more provisions are “civil,” with the natural law Justices often split in the middle.\(^{120}\)

As an additional aspect of double jeopardy law, it should be noted that formalist Justices Scalia and Thomas have indicated their view that while the Double Jeopardy Clause prohibits re-prosecution after acquittal or conviction, its literal text does not prohibit multiple punishments. Such multiple punishments should therefore be analyzed only under the Eighth Amendment Cruel and Unusual

\(^{118}\) 509 U.S. 688, 704 (1993), citing, inter alia, Gavieres v. United States, 220 U.S. 338, 345 (1911) (in a subsequent prosecution, "[w]hile it is true that the conduct of the accused was one and the same, two offenses resulted, each of which had an element not embraced in the other." ) (Justices White, Blackmun, Stevens & Souter disagreed with this conclusion to overrule *Grady*).

\(^{119}\) For a case involving the determination whether a statute is “civil” or “criminal” in the context of the Double Jeopardy Clause, see United States v. Halper, 490 U.S. 435, 446-51(1989).

\(^{120}\) See, e.g., Department of Revenue of Montana v. Kurth Ranch, 511 U.S. 767, 776-82 (1994) (majority opinion of Stevens, J., joined by Blackmun, Kennedy, Souter & Ginsburg, JJ.) (tax on possession and storage of dangerous drugs criminal); id. at 785 (Rehnquist, J., dissenting); id. at 792-93 (O’Connor, J., dissenting); id. at 805-08 (Scalia, J., joined by Thomas, J., dissenting) (tax civil).
Punishments and Excessive Fines Clauses, and a Due Process Clause limitation that the punishments be properly authorized by law.\textsuperscript{121} At least one recent commentator has supported this position.\textsuperscript{122}

\textbf{C. Privilege Against Self-Incrimination}

The Fifth Amendment provides that no person “shall be compelled in any criminal case to be a witness against himself.” Two main consequences flow from this: (1) except in limited circumstances, such as to impeach the testimony of an accused who testifies at trial, no “testimonial” evidence of an accused can be used by the government at trial without the accused’s consent; and (2) the accused failure to testify cannot be used against the accused to raise an inference of guilt.

As stated in \textit{Schneckloth v. Bustamonte}, discussed at § 23.2.1.2 n.101, as an aspect of trial procedure, a “knowing and intelligent” waiver is required to waive the privilege against self-incrimination. To ensure that any waiver of the right is “knowing,” the Court stated in \textit{Miranda v. Arizona}:

Prior to any questioning, the person must be warned that he has a right to remain silent, that any statement he does make may be used as evidence against him, and that he has a right to the presence of an attorney, either retained or appointed. The defendant may waive effectuation of these rights, provided the waiver is made voluntarily, knowingly and intelligently. If, however, he indicates in any manner and at any stage of the process that he wishes to consult with an attorney before speaking there can be no questioning. Likewise, if the individual is alone and indicates in any manner that he does not wish to be interrogated, the police may not question him. The mere fact that he may have answered some questions or volunteered some statements on his own does not deprive him of the right to refrain from answering any further inquiries until he has consulted with an attorney and thereafter consents to be questioned.\textsuperscript{123}

This \textit{Miranda} right applies to any “custodial interrogation.” The Court stated in \textit{Miranda} that by “custodial interrogation, we mean questioning initiated by law enforcement officers after a person has been taken into custody or otherwise deprived of his freedom of action in any significant way.”\textsuperscript{124}

As with the Fourth Amendment, subject to limited exceptions, the Court applies an exclusionary rule to prevent evidence from being used in court gained by means of a violation of \textit{Miranda}.\textsuperscript{125}

\textsuperscript{121} \textit{Id.} at 798-99 (Scalia, J., joined by Thomas, J., dissenting).

\textsuperscript{123} 384 U.S. 436, 444-45 (1966).

\textsuperscript{124} \textit{Id.} at 444.

\textsuperscript{125} \textit{See generally} Kirsten Lela Ambach, \textit{Note, Miranda’s Poisoned Fruit Tree: The Admissability of Physical Evidence Derived from an Unwarned Statement}, 78 Wash. L. Rev. 757,
Holmesian Justices Clark, Harlan, Stewart, and White dissented in *Miranda* on the grounds the *Miranda* rule should not be imposed on the criminal justice system, reflecting their Holmesian deference-to-government predispositions.126

Although it was not clear in *Miranda* whether the *Miranda* right was constitutionally compelled, or adopted as a matter of prudential judgment by the Court, the Court held in *Dickerson v. United States*127 that *Miranda* was a constitutional doctrine. This conclusion reflects a natural law concern with reasoned elaboration of the law, since if *Miranda* were merely prudential, it could not properly be applied by the Court against state criminal proceedings, since the United States Supreme Court has no prudential supervisory authority over the states under the “dual theory of sovereignty.” As a constitutional doctrine, it can be applied against the states, like most Bill of Rights provisions, as discussed at § 27.2.4. Further, as a constitutional right, it cannot be altered by congressional statute. Without regard to whether he would have adopted *Miranda* as an original matter, Holmesian Chief Justice Rehnquist noted for the Court in *Dickerson* that considerations of *stare decisis* support continued adherence to *Miranda*, including the fact that *Miranda* has “become embedded in routine police practice to the point where the warnings have become part of our national culture” and no “special justifications” exist to warrant the overruling of *Miranda*,128 consistent with the natural law approach to precedents discussed at § 12.2.2.2 nn.67-68, and elaborated at § 7.3.3.

Dissenting in *Dickerson*, formalist Justices Scalia and Thomas noted that language in *Miranda*, and holdings of court precedents since *Miranda*, had viewed *Miranda* as based on prudential considerations. Thus, Congress should be permitted to modify its waiver provisions by statute,129 just as Congress can modify any of the Court’s prudential doctrines, such as those regarding standing, noted at § 17.3.1.4. Justice Scalia also noted that given this understanding that *Miranda* was not constitutionally required, the Court’s doctrine in *Miranda*, as applied by the majority in *Dickerson*, “has come to stand for the proposition that the Supreme Court has power to impose extraconstitutional constraints upon Congress and the States.”130 If Justice Scalia’s understanding of *Miranda* and its progeny were correct, such a power would be inconsistent with the *Marbury v. Madison* theory of judicial review, and entitled to no *stare decisis* effect, as inconsistent with related doctrines on the limits of judicial review.

757-69 (2003), and sources cited therein.

126 384 U.S. at 499-501 (Clark, J., dissenting); id. at 504 (Harlan, J., joined by Stewart & White, JJ., dissenting).

128 Id. at 443-44.

129 Id. at 450-57 (Scalia, J., joined by Thomas, J., dissenting).

The decision whether some evidence is “testimonial” or “non-testimonial” has created some difficult issues of drawing lines. For example, the Court has held that a handwriting exemplar, voice exemplar, drawing of blood for testing, or compelling a defendant to try on clothes are “non-testimonial,” but subjecting a defendant to heart rate, blood pressure, breathing, and electrodermal responses of a lie-detector test is “testimonial,” even if the accused remains silent during the test. Similarly, there are also issues whether in any particular case the individual is in “custody” because the individual has been deprived of “freedom of action in any significant way” to trigger application of *Miranda*, and the issue whether the accused has “waived” the privilege against self-incrimination, through words or conduct. There are also issues of whether physical evidence derived from “voluntary” statements, which were nonetheless obtained in violation of *Miranda*’s higher requirement of a “knowing and intelligent” waiver, should be able to be used at trial, or can “voluntary” statements obtained in violation of *Miranda* be used at a sentencing hearing, even if not at trial. In such cases, conservative formalist and Holmesian Justices tend to permit such evidence to be used, while liberal instrumentalist Justices tend to vote to exclude such evidence. The Court has held that interrogations in violation of *Miranda* will not support a claim for damages under § 1983, because there is no violation unless evidence is used at trial.

The second aspect of the privilege against self-incrimination is that the accused can refuse to testify at trial, and this refusal cannot be used to argue that such a refusal raises an inference of guilt. Historically, the rule was different in many European countries, whose “inquisitorial” model of the criminal justice system, rather than the American “adversary” model, permitted such an inference to be drawn. That doctrine has changed in many European countries today to reflect the American rule. Further, the general right against compelled self-incrimination regarding use of non-voluntary

---

131 See, e.g., California v. Byers, 402 U.S. 424, 431-32 (1971) (requiring driver involved in an accident to stop at the scene and give his name and address is no more “testimonial” than requiring a person in custody to stand or walk in a police lineup, to speak prescribed words, or to give samples of handwriting, fingerprints, or blood) (Justices Black, Douglas, Brennan & Marshall in dissent); Ronald J. Allen & M. Kristin Mace, *The Self-Incrimination Clause Explained and Its Future Predicted*, 94 J. Crim. L. & Criminology 243, 248-49, 259-66 (2004), and cases cited therein.

133 Id. at 171-86, and cases cited therein.

134 See generally Ambach, supra note 125, at 769-94.

135 See, e.g., United States v. Patane, 542 U.S. 630, 639-44 (2004) (failure to give suspect *Miranda* warnings does not require suppression of “physical evidence” which were fruits of suspect's unwarned but voluntary statements) (Justices Stevens, Souter, Ginsburg & Breyer in dissent); United States v. Nichols, 438 F.3d 437 (4th Cir. 2006) (statements obtained in violation of *Miranda*, if they are otherwise voluntary, may be considered at sentencing).

confessions has roots in European law, and the European Court of Human Rights has developed a jurisprudence of self-incrimination from the European Convention on Human Rights' Article 6 right to a fair hearing. International documents, such as the United Nations International Covenant on Civil and Political Rights, also include protection against compelled self-incrimination.\textsuperscript{137}

As discussed at §§ 27.2.2 nn.109-10 & 27.2.3 nn.116-19, the historical difference between European and American models helped support the refusal to incorporate the privilege against self-incrimination into the 14\textsuperscript{th} Amendment during the formalist and Holmesian eras, given their approach to incorporation. This right was incorporated against the states and made applicable to the states in 1964 under the instrumentalist approach to incorporation, discussed at § 27.2.4 n.124.

\textbf{D. Requirement of Due Process of Law}

Relying on the Due Process Clause, the Court has held that a number of protections apply in criminal cases that are not specifically enumerated in the Constitution, as are the protections regarding grand jury indictment, double jeopardy, and the privilege against self-incrimination. For example, in 1970, the Court held in \textit{In re Winship}\textsuperscript{138} that the Due Process Clause protects the accused against conviction except on proof beyond a reasonable doubt. This protection is nowhere mentioned in the Bill of Rights, but was determined by the Court to be part of "liberty" in the Fifth and 14\textsuperscript{th} Amendments. Although, as discussed at § 27.2.5.2 n.133, this right was viewed as an "enumerated" liberty right, \textit{i.e.}, based directly on "liberty," and distinguished from "unenumerated" rights "implicit in the concept of ordered liberty," discussed at § 27.3.3, this aspect of \textit{In re Winship} is consistent with the Court's development of a range of "unenumerated" substantive due process rights involving civil liberties matters. Justice Black dissented in \textit{In re Winship}, saying that the Court "has no power to add to or subtract from the procedures set forth by the Founders." Reflecting his formalist approach, he insisted that the Court should be guided by the literal text of the Constitution, and not the Justices' own concepts of what is fair, decent, and right, because that approach would lead to shifting day-to-day standards of fairness held by individual judges.

Despite Justice Black's formalist argument, the \textit{In re Winship} approach that some additional due process rights regarding the criminal justice system are part of "the concept of ordered liberty" is the current approach of the majority of the Supreme Court. For example, the Court has created some liberty interests for prisoners while they are incarcerated in jail. For example, in 1974, in \textit{Wolff v. McDonell},\textsuperscript{139} a prisoner was viewed as having a constitutionally protected liberty interest by a state statute that bestowed mandatory sentence reduction for good behavior, subject to change for serious misconduct, because the interest conferred by the law was one of "real substance." In 1983, the

\textsuperscript{138} 397 U.S. 358 (1970); \textit{id.} at 377-78 (Black, J., dissenting).

\textsuperscript{139} 418 U.S. 539, 557 (1974).
Court held in *Hewitt v. Helms* that in determining whether prison regulations created a protected liberty interest, the courts should ask whether the state had issued merely procedural guidelines, which would not create a liberty interest, or had used language of “mandatory character,” which would create a liberty interest. As discussed at § 27.4.2.3 nn.319-24, in 1995, in *Sandin v. Conner*, a 5-4 Court drew back from the *Wolff* “real substance” approach, and the *Hewitt* “mandatory character” approach, to ask instead only whether some prison management decision imposed an “atypical and significant hardship” on the inmate. Despite this change in content, it is clear that prisoners still have some additional liberty rights not textually specific in the Due Process Clause.

In addition to these liberty interests, the Court has also stated that government actions which “shock the conscience” can give rise to a deprivation of a life, liberty, or property interest. The classic case of this kind occurred in *Rochin v. California*, in which the Court held that the forced pumping of a suspect’s stomach to obtain evidence “shocked the conscience.” A situation that was held not to “shock the conscience” occurred in *County of Sacramento v. Lewis*. That case involved a high-speed automobile chase aimed at apprehending a suspected offender that resulted in one of the suspect’s death following a crash. The Court said in *Lewis* that “only a purpose to cause harm unrelated to the legitimate object of arrest will satisfy the element of arbitrary conduct shocking to the conscience, necessary for a [substantive] due process violation.” As discussed at § 27.4.1, only intentional government action, or government action indicating “deliberate indifference” to an individual, will trigger a deprivation of due process. Mere negligent government action harming an individual does not count as a denial of due process. The Court has stated that this conscience-shocking standard is an issue of law for the judge, not a question of fact for the jury.

In general, the Court has been reluctant in the modern natural law, non-instrumentalist era to expand the list of criminal defendant’s due process rights. For example, in 1992, in *Medina v. California*, the Court held that a state could require a defendant to carry the burden of proving his incompetence by a preponderance of the evidence. More recently, in 2006, the Court held in *Dixon v. United States* that the government could require the defendant to prove duress to excuse criminal liability for knowing or willful violations of federal firearms laws. The reluctance in the modern natural law era to create new rights under the Due Process Clause in both criminal and civil matters is discussed generally at § 27.2.5.2.

---

The split among Justices O’Connor, Kennedy, and Souter, noted at § 12.3.2, with Justice Souter remaining more faithful to the general reasoning of instrumentalist-era precedents, and Justices O’Connor and Kennedy more faithful to their understanding of text, purpose, structure, history, and practice, while still following the core holdings of instrumentalist-era precedents, appears in case after case involving the criminal justice system. Of course, in cases where the reasoning in instrumentalist-era precedents do not point strongly in one direction, or where an instrumentalist precedent should be overruled consistent with even a strong natural law approach to precedent, Justice Souter has been willing to join Justices O’Connor and Kennedy and reach a result consistent with the other natural law sources of interpretation: text, purpose, structure, history, and practice.

The same split occurs in death penalty cases raising issues of due process. For example, in Ramdass v. Angelone, the issue was whether to extend Justice Blackmun’s opinion in Simmons v. South Carolina, which had held that where the state puts the defendant’s future dangerousness in issue in a death penalty case, due process requires the jury to be informed if a life sentence would be without the possibility of parole. The defendant had not yet become parole ineligible because a separate court had not yet entered judgment on a jury’s verdict which would make the defendant parole ineligible. With Justices Ginsburg and Breyer, Justice Souter joined Justice Stevens’ dissent, which argued the “acute unfairness in permitting the State to rely upon a recent conviction to establish a defendant’s future dangerousness while simultaneously permitting the State to deny that there was such a conviction when the defendant attempts to argue that he is parole ineligible” and that “[e]ven the most miserly reading of the opinions in Simmons” supports the defendant’s argument in this case. In contrast, the majority, which included Justices O’Connor and Kennedy, noted that technically the defendant was not parole ineligible at the time the jury instruction was

See, e.g., Ohler v. United States, 529 U.S. 753, 759-60 (2000) (a testifying defendant who preemptively introduces evidence of a prior conviction on direct examination after an adverse in limine ruling admitting the prior convictions for impeachment purposes may not appeal that ruling after trial) (Justices Stevens, Souter, Ginsburg & Breyer in dissent); Smith v. Robbins, 528 U.S. 259 (2000) (a statement by court-appointed counsel that an appeal would have no merit, coupled with an appellate court's endorsement of that conclusion, satisfies right to counsel, even if less vigorous than previously approved approach where counsels’ brief must refer to anything in the record that might arguably support the appeal) (Justices Stevens, Souter, Ginsburg & Breyer in dissent).

See, e.g., Hopkins v. Reeves, 524 U.S. 88, 94-101 (1998) (state trial courts, in capital cases, are not constitutionally required to instruct juries on offenses that are not lesser-included offenses; instrumentalist Justice Stevens dissenting); United States v. Scheffer, 523 U.S. 303, 308-17 (1998) (rule against admission of polygraph evidence in a court martial proceeding does not violate Fifth or Sixth Amendment rights to present a defense; instrumentalist Justice Stevens dissenting).

530 U.S. 156 (2000).

530 U.S. at 177-78.

Id. at 182-83 (Stevens, J., joined by Souter, J., Ginsburg, J., & Breyer, J., dissenting).
given, and thus the Simmons precedent did not directly govern resolution of the case. Structural arguments suggested to the majority that “state trial judges and appellate courts [should] remain free, of course, to experiment,” and thus this aspect of criminal procedure should not be imposed on all 50 States as a constitutional requirement. The majority did note that Virginia had amended their procedures to permit a Simmons instruction to be given on the Ramdass facts.

This split among Justices O’Connor, Kennedy, and Souter appears in many other cases involving the death penalty. Of course, in cases where a natural law approach would differ from a formalist approach – often because the natural law approach weighs arguments of precedent and arguments from a text’s purpose more strongly than the formalist focus on literal text – Justices O’Connor, Kennedy, and Souter usually can be found on one side of the opinion, with Justices Scalia and Thomas on the other side.

§ 23.2.1.3 The Sixth Amendment: Right to a Speedy and Public Trial by an Impartial Jury, Confrontation of Witnesses, and Assistance of Counsel

The Sixth Amendment provides for three basic protections: a right to a speedy and public trial by an impartial jury; a right to confront witnesses; and a right to compulsory process for obtaining witnesses, and to assistance of counsel. Specifically, the Sixth Amendment provides: “In all criminal prosecutions, the accused shall enjoy the right to a speedy and public trial, by an impartial jury of the State and district where in the crime shall have been committed, which district shall have been previously ascertained by law; and to be informed of the nature and cause of the accusation; to be confronted with witnesses against him; to have compulsory process for obtaining witnesses in his favor, and to have the Assistance of Counsel for his defence.”

---

153 Id. at 177-78.

154 Id. at 178.

155 See, e.g., Weeks v. Angelone, 528 U.S. 225 (2000) (majority opinion holds that a jury verdict of death cannot be set aside by a slight possibility, rather than reasonable likelihood, that the jury felt compelled by the jury instructions not to consider mitigating evidence); Jones v. United States, 527 U.S. 373 (1999) (majority opinion unwilling to impose in a death penalty case a constitutional requirement that a trial judge must instruct the jury as to the legal consequence of jury deadlock); Calderon v. Thompson, 523 U.S. 538 (1998) (considering whether the Ninth Circuit abused its discretion in ordering a belated en banc vote on a death penalty case when two judges, because of administrative mistakes, did not request an en banc vote in a timely manner; majority held granting the habeas petition to ensure the votes of all judges are counted would be an abuse of discretion).

156 See, e.g., Dickerson v. United States, 530 U.S. 428, 443 (2000) (principles of stare decisis weigh heavily against overruling Miranda) (Justices Scalia and Thomas in dissent); Bousley v. United States, 523 U.S. 614, 623-24 (1998) (petitioner who can make a showing of actual innocence entitled to have his defaulted claim of an unintelligent plea considered on the merits, despite the fact that the claim was literally defaulted) (Justices Scalia and Thomas in dissent).
As with Fifth Amendment rights regarding the criminal justice system, discussed at § 23.2.1.2 n.101, for Sixth Amendment rights the Court noted in Schneckloth v. Bustamonte, \( ^{157} \) “[T]he standard of a knowing and intelligent waiver has . . . been applied to test the validity of a waiver of counsel, either at trial, or upon a guilty plea. And the Court has also applied that criteria to assess the effectiveness of a waiver of other trial rights such as the right to confrontation, to a jury trial, and to a speedy trial . . . . Guilty pleas have been carefully scrutinized to determine whether the accused knew and understood all the rights to which he would be entitled at trial, and that he had intentionally chosen to forgo them. And the Court has evaluated the knowing and intelligent nature of the waiver of trial rights in trial-type situations, such as . . . the waiver of counsel in a juvenile proceeding.”

\[A. \quad \text{Right to a Speedy and Public Trial by an Impartial Jury}\]

The Sixth Amendment guarantees to an accused a right to a speedy and public trial by an impartial jury. Regarding the right to speedy trial, the Court has held that the right attaches at the time of arrest or formal charge, whichever comes first. The remedy for violation of this right is to dismiss the indictment or vacate the sentence. To determine whether a defendant has been deprived of this right, the Court indicated in Barker v. Wingo\( ^{158} \) that courts should consider the defendant's and the prosecution's conduct by balancing four factors: (1) the length of the delay; (2) the reason for the delay; (3) whether, when, and how the defendant asserted his right to a speedy trial; and (4) whether the defendant was prejudiced by the delay. This test is a version of third-order rational review, since “the primary burden [is] on the courts and the prosecutors to assure that cases are brought to trial,” and the factors focus on governmental ends (reason for the delay) and the benefits and burdens of the delay (length of the delay, when the defendant asserted the right, and prejudice to the defendant).

For federal prosecutions, the Speedy Trial Act of 1974 established specific time limits for completing key stages of a federal criminal prosecution. Under the current version of this Act, “The information or indictment must be filed within thirty days of arrest or the service of a summons on the defendant. The trial must begin within seventy days of the filing of the information or indictment, or within seventy days of the date the defendant first appears before a judicial officer, whichever is later. Trial must begin within ninety days of the government detaining a defendant who is solely awaiting trial. If a released person awaiting trial has been designated by the government attorney as being of "high risk," the trial must similarly begin within ninety days of that designation. To provide a defendant an adequate opportunity to prepare, a trial may not begin earlier than thirty days after the defendant first appears through counsel or expressly waives counsel and elects to proceed pro se, unless the defendant consents in writing to an earlier date.”\( ^{159} \)

\( ^{158} \) 407 U.S. 514, 529-32 (1972).

The right to a speedy trial applies only to a criminal prosecution. Issues involving the right to detain illegal immigrants while a decision is made on deportation,160 sex offenders deemed dangerous to themselves or the community,161 or enemy combatants,162 raise issues only under the Due Process Clause, which are discussed at § 27.4.4.8, not the Sixth Amendment.

Regarding the right to a public trial, the Court has held that normally all procedures in criminal cases must be done in open court, unless compelling reasons, sufficient to satisfy strict scrutiny, justifying closing the proceedings. The Court noted in Globe Newspaper Co. v. Superior Court,163 the Court’s precedents have “firmly established” that “the press and general public have a constitutional right of access to criminal trials,” and closing court proceedings will be allowed only if that were “necessitated by a compelling government interest, and is narrowly tailored to serve that interest.” As this protection is viewed predominantly through the lens of the First Amendment rights of free speech, and of the press, cases involving this right are discussed at § 29.6.2.4.

This right has been viewed as only guaranteeing the right to physical access to the courtroom, not a right to televise court proceedings.164 Indeed, a number of commentators have noted that allowing televised access might affect the proceedings in a manner that would comprise the right to an impartial jury.165 Nevertheless, the prevailing doctrine is that in most circumstances proceedings may be televised if authorized by law, with all 50 states having some provision for televised access in some circumstances, although there is no obligation to do so, and televised access is limited in many cases.166 A few other countries have similar provision for televised access.167 Televising jury

---

162 See generally Tung Yin, Ending the War on Terrorism One Terrorist at a Time: A Noncriminal Detention Model for Holding and Releasing Guantanamo Bay Detainees, 29 Harv. J.L. & Pub. Pol'y 149 (2005).

deliberations raises even more concern with compromising the integrity of the judicial process.\textsuperscript{168} In the federal system, the Supreme Court has never permitted its proceedings to be televised, and only in rare circumstances, such as for cases of special public interest, like the oral arguments in the 2000 election case of\textit{Bush v. Gore}, discussed at §\textsuperscript{26.5.3 nn.525-42}, has the Court permitted audio transcripts of its proceedings to be made. Only a few Circuit Courts of Appeals have rules providing for limited audio or video televising of their proceedings.\textsuperscript{169} Beginning with the 2006 Term, the Supreme Court will make same-day written transcripts available of all oral arguments.

Regarding the right to an impartial jury, it has been noted, “To establish a violation of the fair cross-section requirement of the Sixth Amendment, a defendant must show that: (1) the group alleged to be excluded is a distinctive group in the community; (2) the representation of this group is not fair and reasonable; and (3) the underrepresentation was due to a systematic exclusion of the group in the selection process.”\textsuperscript{170} A challenge can also be brought on equal protection grounds, as for racial or gender discrimination in the use of peremptory challenges, discussed at §\textsuperscript{26.2.1.6.A.}

In\textit{Apprendi v. New Jersey},\textsuperscript{171} a 5-4 Court held that any fact that increases the penalty for a crime beyond the prescribed statutory maximum must be submitted to a jury and proved beyond reasonable doubt – other than the fact of a prior conviction, which would already have been based on a prior jury decision based on a “beyond a reasonable doubt” standard. This conclusion was based on the Sixth Amendment right to a “jury” trial, and the Fifth Amendment requirement of proof in criminal cases of guilt “beyond a reasonable doubt.” The majority was composed of liberal instrumentalist Justices Stevens and Ginsburg, instrumentalist-leaning natural law Justice Souter, and formalist Justices Scalia and Thomas. Justices Scalia and Thomas joined the majority based upon a literal application of a right to jury trial and the due process requirement of proof beyond a reasonable doubt. Holmesian Chief Justice Rehnquist, occasional Holmesian-leaning Justices O’Connor and Breyer, and natural law Justice Kennedy dissented in\textit{Apprendi}. In their view, legislative and executive practice, and a reasoned elaboration of court precedents, had permitted sentencing decisions to be viewed differently than the determination of guilt, and thus the requirement of jury decisionmaking based on a beyond a reasonable doubt standard should not apply to sentencing decisions.\textsuperscript{172}

\textsuperscript{171} 530 U.S. 466, 490 (2000); \textit{id.} at 499-500 (Thomas, J., joined by Scalia, J., as to Parts I & II, concurring).

\textsuperscript{172} \textit{id.} at 523-39 (O’Connor, J., joined by Rehnquist, C.J., and Kennedy & Breyer, JJ., dissenting).
Apprendi was followed in Blakely v. Washington and United States v. Booker,\textsuperscript{173} where the Court held that state sentencing guidelines and the United States Sentencing Guidelines were unconstitutional if viewed as mandatory, since factual conclusions that trigger some of the guidelines are found by a judge in a sentencing hearing, not a jury under a beyond a reasonable doubt standard. Following Booker, the Sentencing Guidelines must be viewed as merely suggestive, not mandatory, with judges permitted to exercise their traditional discretion in sentencing.

B. Right to Confrontation of Witnesses

The Sixth Amendment provides for the right “to be confronted with witnesses against him.” The major issue raised by cases dealing with the right to confront witnesses is whether certain departures from face to face confrontation of witnesses in court can be permitted. Historically, as a matter of legislative and executive practice, and a reasoned elaboration of court precedents, the Court permitted departures from a strict, literal requirement of confrontation. This occurred in cases such as Maryland v. Craig,\textsuperscript{174} which involved a child witness in a child abuse case testifying against the defendant at trial, outside the defendant's physical presence, by a one-way closed circuit television, and in Ohio v. Roberts,\textsuperscript{175} which conditioned the admissibility of hearsay evidence on whether it falls under a "firmly rooted hearsay exception" or bears "particularized guarantees of trustworthiness."

As in Apprendi, where a combination of formalist and instrumentalist Justices have imposed since 2000 a strict requirement of jury fact-finding under a beyond a reasonable doubt standard, discussed at § 23.2.1.3.A nn.171-73, in Crawford v. Washington,\textsuperscript{176} in 2004, a combination of formalist and instrumentalist Justices overruled Roberts and adopted a strict requirement that “testimonial” statements of witnesses absent from trial can be admitted “only where the declarant is unavailable, and only where the defendant has had a prior opportunity to cross-examine.” Reflecting an objective evidence approach, the Court stated in Davis v. Washington\textsuperscript{177} that statements are “nontestimonial when made in the course of police interrogation under circumstances objectively indicating that the primary purpose of the interrogation is to enable police assistance to meet an ongoing emergency [such as statements made to a 911 dispatcher]. They are testimonial when the circumstances objectively indicate that there is no such ongoing emergency, and that the primary purpose of the interrogation is to establish or prove past events potentially relevant to later criminal prosecution.”

\textsuperscript{177} 126 S. Ct. 2266, 2273-74 (2006).
The *Crawford* decision has raised questions about its impact in cases where emotional trauma, physical safety concerns, or other factors historically have suggested some flexibility in terms of face-to-face confrontation in court. Such cases include testimony of children in sexual child abuse cases, cases involving battered spouses, cases involving physical safety of witnesses or compromising natural security secrets, such as in terrorist prosecutions, or even cases where ensuring the physical presence of witnesses would be costly, such as for foreign witness testimony. There is also a concern with the impact of the *Crawford* rule regarding dying declarations.

A second issue raised by the Confrontation Clause concerns whether prohibitions on asking certain kind of questions at trial violates the Confrontation Clause. For example, the Court held in *Delaware v. Van Arsdall* that a trial court's ruling prohibiting the defendant's inquiry into the possibility that a witness was biased because the state had dismissed his pending public drunkenness charge violated defendant's rights secured by the Confrontation Clause. Decisions have also been reached that certain rape shield laws, intended to prevent victims of rape from being cross-examined about their sexual past, violate the Confrontation Clause.

Regarding the appropriate remedy for a violation of the Confrontation Clause, the Court typically applies a “harmless error” analysis, which holds that “an otherwise valid conviction should not be set aside if the reviewing court may confidently say, on the whole record, that the constitutional error was harmless beyond a reasonable doubt.” While some constitutional errors in the criminal justice system are “structural,” in that they are so fundamental that they require reversal without regard to the facts or circumstances of the particular case, such as denying a defendant the assistance of counsel at trial, discussed next, at § 23.2.1.3.C nn.186-91, or the absence of an impartial judge,

---

181 See, e.g., United States v. Yates, 438 F.3d 1307 (11th Cir. 2006) (Confrontation Clause prohibits presentation of foreign witness testimony via two-way video teleconferencing when such use is justified only by prosecutor’s general interest in resolving case expeditiously).

most errors in the criminal justice system are subject to “harmless error” analysis.185

C. Right to Compulsory Attendance of Witnesses and Assistance of Counsel

The Sixth Amendment right “to have compulsory process for obtaining witnesses in his favor” grants the defendant the right to offer the testimony of favorable witnesses and to compel their attendance at trial through the subpoena process. Reflecting a concern with purpose and practicality, to exercise the compulsory process right, a defendant must show that the testimony would be material, favorable to the defendant, and not merely cumulative. As with other rights, the defendant may waive the right to compulsory process. A violation of the Compulsory Process Clause is subject to the harmless error analysis and will constitute harmless error if it is established beyond a reasonable doubt that the violation did not affect the verdict. The right is not absolute and may yield to other interests.186

The Sixth Amendment also guarantees the right “to have the Assistance of Counsel” for the accused’s defense. In Johnson v. Zerbst,187 the Court held in 1938 that the Sixth Amendment requires the government to provide indigent defendants with counsel in all felony cases. Reflecting a Holmesian deference-to-government approach, the Court concluded in 1942 in Betts v. Brady188 that this right was not fundamental, and thus not incorporated into the 14th Amendment and applicable against the states. During the instrumentalist era, however, in 1963, the Court overruled

186 On all these matters, see generally Thirty-Fifth Annual Review of Criminal Procedure, III. Trial, Sixth Amendment at Trial, 35 Geo. L.J. Ann. Rev. Crim. Proc. 608, 636-41 (2006), and cases cited therein, including, inter alia, DiBenedetto v. Hall, 272 F.3d 1, 8-9 (1st Cir. 2001) (compulsory process not violated when court refused to allow defendant to present evidence of victim's ties to prior murder because evidence was unreliable, disparaged victims, and threatened to distract jury from case at hand); United States v. Moussaoui, 365 F.3d 292, 312-14 (4th Cir.) (compulsory process not violated when government refused to produce witnesses shown to be plausibly favorable to defendant because of national security interests and prosecution's offered substitutions), amended by 382 F.3d 453, 477-81 (4th Cir. 2004) (government's rightful exercise of its prerogative to protect national security interests by refusing to produce the witnesses warrants use of written summaries of the witness' statements made over the course of several months in lieu of their deposition testimony); United States v. Gonzales, 79 F.3d 413, 425 (5th Cir. 1996) (per curiam) (compulsory process not violated when court refused to issue subpoena of witness because testimony could confuse jury); United States v. Jenkins, 4 F.3d 1338, 1340-41 (6th Cir. 1993) (compulsory process not violated when court refused to disclose identity of government's confidential informant because of government's interest in protecting identity of informants).

188 316 U.S. 455, 461-65 (1942).
Betts and held in Gideon v. Wainwright that the Sixth Amendment right to counsel was fundamental. The Court made clear in Scott v. Illinois that this right to counsel applies to all felony cases and any misdemeanor cases where the accused is sentenced to any term of imprisonment. It does not apply to misdemeanor cases where only a fine is imposed. The constitutional line between misdemeanors and felonies, consistent with common-law doctrine and statutory provisions, is whether the crime has a maximum possible term of one year or less, which is a misdemeanor, or a possible sentence of more than one year, which is a felony.

In deciding right to counsel cases, the same split occurs among the modern natural law Justices, with Justice Souter remaining more faithful to the general reasoning of instrumentalist-era precedents, and Justices O'Connor and Kennedy more faithful to their understanding of text, purpose, structure, history, and practice. For example, in Texas v. Cobb, a majority, composed of Chief Justice Rehnquist, and Justices Scalia, O'Connor, Kennedy, and Thomas, held that the Sixth Amendment right to counsel attaches only to charged offenses or offenses that, even if not charged, would be considered the same offense under the Blockburger test for double jeopardy purposes, discussed at § 23.2.1.2.B nn.115-16. The dissent of Justices Stevens, Souter, Ginsburg, and Breyer followed the reasoning of instrumentalist-era precedents in the Courts of Appeals and state courts to hold that the Sixth Amendment right to counsel should also attach for criminal acts that are “closely related to” or “inextricably intertwined with” the particular crime charged.

The Sixth Amendment right to counsel will be infringed, even if the accused is provided with counsel, if that counsel is deemed “ineffective.” To prove “ineffective assistance,” the Court set forth in Strickland v. Washington a two-part test: “First, the defendant must show that counsel's performance was deficient. . . . Second, the defendant must show that the deficient performance prejudiced the defense. This requires showing that counsel's errors were so serious as to deprive the defendant of a fair trial, a trial whose result is reliable.” In deciding on deficiency, “the proper standard for attorney performance is that of reasonably effective assistance. . . . When a convicted defendant complains of the ineffectiveness of counsel's assistance, the defendant must show that counsel's representation fell below an objective standard of reasonableness.”

In practice, proving “ineffective assistance of counsel” has been difficult. As the Court noted in Strickland, "Judicial scrutiny of counsel's performance must be highly deferential. It is all too tempting for a defendant to second-guess counsel's assistance after conviction or adverse sentence.
A fair assessment of attorney performance requires that every effort be made to eliminate the distorting effects of hindsight, to reconstruct the circumstances of counsel's challenged conduct, and to evaluate the conduct from counsel's perspective at the time. Because of the difficulties inherent in making the evaluation, a court must indulge a strong presumption that counsel's conduct falls within the wide range of reasonable professional assistance.” The government can also create an “ineffective counsel” by interfering with the ability of counsel to make independent decisions, as might occur when communications between inmates and attorneys are monitored too closely, although this would also be difficult to prove. While the failure to provide counsel is a “structural error,” “ineffective assistance” claims are subject to “harmless error” rule, discussed at § 23.2.1.3.B n.185.  

§ 23.2.1.4 The Eighth Amendment: Protection Against Cruel and Unusual Punishment, Excessive Fines, and Excessive Bail

The Eighth Amendment provides: “Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.” In determining the content of “cruel an unusual punishment,” formalist Justices have argued for a static interpretation fixed at the time of ratification. Among the other decisionmaking styles, which permit some notion of an evolving Constitution, there have been differences in how that evolution is to take place.

For example, as positivists who believe that all law emanates from the sovereign will, Holmesian judges have been reluctant to permit evidence of social practice determine constitutional meaning, as discussed at § 10.2.2.1 nn.35-37. Formalist judges, of course, are even more reluctant to use practice arguments, discussed at § 9.2.2.1 nn.44-45. Thus, formalist Justice Scalia, and Holmesian Chief Justice Rehnquist and Justice White, were among the four Justices in Stanford v. Kentucky who concluded that establishing traditions under 14th Amendment substantive due process analysis depended upon whether the tradition was established from consideration of legislative enactments and their application (executive practice), and not from other indicia, such as “public opinion polls, the views of interest groups, and the positions adopted by various professional associations.”

Similarly, in Atkins v. Virginia, a case striking down the death penalty for mentally retarded criminals, Chief Justice Rehnquist, joined by Justices Scalia and Thomas, noted in dissent, “[T]he Court’s decision to place weight on foreign laws, the views of professional and religious organizations, and opinion polls . . . finds little support in our precedents and, in my view, is antithetical to considerations of federalism, which instruct that any ‘permanent prohibition upon all units of democratic government must [be apparent] in the operative acts (laws and the application of laws) that the people have approved.’” Consistent with this premise, Chief Justice Rehnquist’s view was that only legislative and executive practice, in the form of “the work product of

---

legislatures and sentencing jury determinations,” should be “the sole indicators by which courts ascertain the contemporary American conceptions of decency for purposes of the Eighth Amendment.”

Despite this view, there is an argument, discussed at § 10.2.2.1 n.36, that a true Holmesian would reject the view in Stanford v. Kentucky that evidence of practice should be limited to "laws and the application of laws" for purposes of determining our societal traditions, not social practice. This approach would follow Justice Holmes' view in Lochner v. New York that our tradition derives from both "our people and our laws." Nevertheless, perhaps because of the Holmesian posture of deference to government, as represented in constitutional adjudication by the views of Professor Thayer and others, noted at § 6.2.2.2 nn.53-54, Holmesian jurists like Chief Justice Rehnquist and Justice White adopted the Stanford limitation of looking only to the governmental acts of legislative and executive practice to determine traditions.

Natural law and instrumentalist jurists, as followers of a normative approach to law, are more willing to consider normative considerations from whatever source, including social practice, as discussed at § 6.3.3 text following n.123. In Atkins v. Virginia, the 6-3 Court majority, composed of natural law and instrumentalist Justices, discussed social practice, in addition to evidence of legislative and executive practice, raising concerns about the constitutionality of the death penalty for mentally retarded criminal. The Court stated:

Additional evidence makes it clear that this legislative judgment reflects a much broader social and professional consensus. For example, several organizations with germane expertise have adopted official positions opposing the imposition of the death penalty upon a mentally retarded offender. In addition, representatives of widely diverse religious communities in the United States, reflecting Christian, Jewish, Muslim, and Buddhist traditions, have filed an amicus curiae brief explaining that even though their views about the death penalty differ, they all “share a conviction that the execution of persons with mental retardation cannot be morally justified.” Moreover, within the world community, the imposition of the death penalty for crimes committed by the mentally retarded is overwhelmingly disapproved. Finally, polling data shows a widespread consensus among Americans, even those who support the death penalty, that executing the mentally retarded is wrong.

The Court added, “Although these factors are by no means dispositive, their consistency with the legislative evidence lends further support to our conclusion that there is a consensus among those who have addressed the issue.”

199 198 U.S. 45, 75-76 (1905) (Holmes, J., dissenting).

201 Id.
It should be noted that Justice Kennedy joined the majority in *Akins*, despite his having joined with Justices Scalia and White, and Chief Justice Rehnquist, in *Stanford v. Kentucky*. As discussed at § 12.4.1, Justice Kennedy has an occasional inclination for the formalist style of interpretation. In *Akins*, however, he returned to the traditional natural law interpretive methodology. In his majority opinion in *Lawrence v. Texas*, Justice Kennedy also relied in part upon broader arguments of social practice, including the “values we share with a wider civilization” and opinions of “the European Court of Human Rights.” As noted at § 6.3.1 n.107, when considering the constitutionality of Congress creating a national bank, even James Madison, while President in 1815-16, relied in part on the social practice of “indications, in different modes, of a concurrence of the general will of the nation.”

A similar pattern of voting occurred in 2005 in *Roper v. Simmons*, a case where the Court ruled that the execution of persons under 18 was cruel and unusual punishment. *Roper* overruled the decision in *Stanford v Kentucky* to permit persons under 18 to be executed in some circumstances. As in *Akins*, the majority looked to an evolving standard of decency. The Court noted that among the 50 states, 12 bar executions altogether and 18 bar executions of all persons under 18 years of age. Thus, only 20 states permit executions of juveniles in some circumstances, and even in those states “imposition of the juvenile death penalty has become truly unusual over the last decade.” Further, since 1989, no state had changed their law to impose the death penalty on juveniles, and 5 states had banned it either by legislation or state constitutional law. The Court also noted that no other country on earth permits the death penalty to be imposed on juveniles. Even before *Stanford*, the Court had ruled in *Thompson v. Oklahoma* that it was unconstitutional for persons under 16 to be executed.

The dissent noted that among the states imposing the death penalty, 20 permit it to be applied to some juveniles, and 18 do not. Based in part on faithfulness to precedent, Justice O’Connor was unprepared to overrule *Stanford v. Kentucky*. She concluded that no national consensus had emerged against the death penalty for juveniles since *Stanford* was decided that would justify overruling that case. In her view, some 17-year-old murderers may be sufficiently mature to deserve the death penalty, and the majority’s concerns with the decisionmaking capabilities of many juveniles could be addressed not by a categorical rule preventing the execution of all persons under 18, but by “individualized sentencing in which juries are required to give appropriate mitigating weight to the defendant’s immaturity, his susceptibility to outside pressures, his cognizance of the consequences of his actions, and so forth.” Justice Scalia was even more blunt, concluding, “Words have no meaning if the view of less than 50% of death penalty States can constitute a national consensus.”

---

205 543 U.S. at 599-605 (O’Connor, J., dissenting).
206 *Id.* at 607-12 (Scalia, J., joined by Rehnquist, C.J., and Thomas, J., dissenting).
The greater respect for precedent in the natural law approach than in the formalist approach is reflected in the Court’s doctrine regarding the principle of proportionality in Eighth Amendment law. In *Harmelin v. Michigan*, without regard to whether a natural law approach would apply a principle of proportionality, as it likely would, Justices O’Connor, Kennedy, and Souter concluded that in any event principles of *stare decisis* counsel the Court to follow its precedents and apply a proportionality principle as part of determining what is “cruel and unusual punishment” under the Eighth Amendment. In contrast, Justice Scalia’s emphasis on literal text and specific intent led him to conclude that the framers and ratifiers rejected any proportionality requirement under the Eighth Amendment, and thus later Supreme Court cases adopting that requirement, like *Solem v. Helm*, should be overruled, since those precedents are not “settled law.”

Regarding the death penalty, in 1972, the end result from a range of concurring and dissenting opinions in *Furman v. Georgia* was that any death penalty statute had to provide clearly specific crimes for which the death penalty could be imposed and factors to be weighed and procedures to be followed in deciding when to impose the death penalty. Four years later, in response to *Furman*, the Court noted in *Gregg v. Georgia*, “The legislatures of at least 35 States have enacted new statutes that provide for the death penalty for at least some crimes that result in the death of another person. And the Congress of the United States, in 1974, enacted a statute providing the death penalty for aircraft piracy that results in death. . . . [A]ll of the post-*Furman* statutes make clear that capital punishment itself has not been rejected by the elected representatives of the people.”

Since *Furman*, only instrumentalist Justices have concluded that the death penalty constitutes cruel and unusual punishment in all circumstances. The remainder of the Court has upheld the death penalty for certain categories of murder, provided appropriate heightened procedural safeguards are met in the trying of such capital cases. While the international trend is clearly in the direction of

208 *Id.* at 964-65 (Scalia, J., joined by Rehnquist, C.J., announcing the judgment of the Court), discussing *Solem*, 463 U.S. 277, 284-86 (1983).

209 408 U.S. 238 (1982) (per curiam opinion) (all nine Justices wrote concurring or dissenting opinion in the case).

211 *Furman*, 408 U.S. at 257 (Brennan, J., concurring); *id.* at 314 (Marshall, J., concurring); *Callins v. Collins*, 510 U.S. 1141, 1145 (1994) (Blackmun, J., dissenting from denial of certiorari). Justice Stevens has also been a vocal critic of the death penalty, although he has not taken the position that it is unconstitutional in all circumstances. See generally James S. Liebman & Lawrence C Marshall, *Less is Better: Justice Stevens and the Narrowed Death Penalty*, 74 Fordham L. Rev. 1607 (2006).

abolition of the death penalty,\textsuperscript{213} it is likely the death penalty will remain constitutional in the United States for the foreseeable future, based upon arguments of history, legislative and executive practice, and long-standing precedents. In reaching decisions on whether certain procedures satisfy the Eighth Amendment, the same split exists as in other cases involving the criminal justice system, with conservative formalist and Holmesian Justices tending to favor the prosecution, liberal instrumentalist Justices tending to favor the accused, and natural law Justices tending to be in the middle.\textsuperscript{214}

The Excessive Fines Clause of the Eighth Amendment has provoked few cases. In \textit{United States v. Bajakajian},\textsuperscript{215} a 5-4 Court held that forfeiture of the entire $357,144 that respondent failed to declare under a federal law requiring the individual to report that he was transporting more than $10,000 in currency was grossly disproportional to the gravity of his offense. In other cases, however, courts routinely approve large fines and forfeitures will little extended discussion.\textsuperscript{216}

\end{flushright}

\begin{flushright}
\textsuperscript{216} See, e.g., United States v. Emerson, 107 F.3d 77, 81 (1\textsuperscript{st} Cir. 1997) (penalty of $185,000 for federal aviation violation not excessive because one-half size permitted by statute and less than government recommends), \textit{cert. denied}, 522 U.S. 814 (1997); United States v. One Parcel Property, 106 F.3d 336, 339 (10\textsuperscript{th} Cir. 1997) (forfeiture of $47,700 for cocaine conviction not excessive because fine authorized by Congress allowed up to $2,000,000); United States v. 38 Whalers' Cove Dr., 954 F.2d 29, 39 (2\textsuperscript{nd} Cir. 1992) (punitive forfeiture of $145,000 condominium, even if fine, not excessive because within scope of Comprehensive Drug Abuse Prevention and Control Act of

Page 1036
Because the Excessive Fines Clause only applies to criminal punishment, the issue of the excessiveness of punitive damage awards in civil litigation is handled under the Due Process Clause, discussed at § 27.1.2.4.\textsuperscript{217}

The prohibition of Excessive Bail in the Eighth Amendment has provoked even fewer cases. Bail becomes excessive when a court sets it higher than is reasonably necessary either to ensure a defendant's appearance at trial or to promote other compelling governmental interests, such as denying bail to persons "charged with serious felonies who are found after an adversary hearing to pose a threat to the safety of individuals or to the community which no condition of release can dispel."\textsuperscript{217} Only in rare cases has imposition of bail been deemed excessive.\textsuperscript{218}

\textbf{§ 23.2.2 Article I, § 9 Criminal Defendants' Rights & The Extradition Clause}

Article I, § 9 of the Constitution includes three provisions dealing with criminal defendant’s rights. They are the prohibition against bills of attainder, the prohibition against ex post facto laws, and the privilege of habeas corpus. Article IV, § 2, cl. 2 involves the Extradition Clause of the Constitution.

\textbf{§ 23.2.2.1 Prohibition of Bills of Attainder}

Article I, § 9, cl. 3 provides, “No Bill of Attainder or ex post facto Law shall be passed.” As defined by the Court, the categorical rule against Bills of Attainder requires that the act constitute

\textsuperscript{218} See, e.g., Stack v. Boyle, 342 U.S. 1, 5 (1951) ($50,000 bail excessive because defendants were charged with violation carrying maximum penalty of 5 years and $10,000 fine and government's only justification for bail was that 4 unrelated prisoners charged with same offense had previously forfeited bail); United States v. Leisure, 710 F.2d 422, 425-26 (8th Cir. 1983) (bail over $1,000,000 excessive because defendants had lived in the area for many years, had family in the area, had real property and employment in the area, and no record of prior failure to appear in court). But see United States v. Mantecon-Zayas, 949 F.2d 548, 550 (1st Cir. 1991) (bail of $400,000 not excessive, although defendant unable to pay, if amount reasonably necessary to ensure defendant's presence at trial); United States ex rel. Garcia v. O'Grady, 812 F.2d 347, 352-55 (7th Cir. 1987) (bail of $607,000 not excessive because defendant charged in drug prosecution posed risk of flight and allegedly earned $14 million annually from drug sales); United States v. Bobrow, 468 F.2d 124, 126-27 (D.C. Cir. 1972) (bail of $100,000 reasonably necessary to ensure defendant's appearance because he was foreign citizen charged with narcotics crime and had prior criminal record).
“legislative punishment of an identifiable individual.” Thus, the act must be “legislative”; it must be directed against “an identifiable individual”; it must constitute “punishment.”219 Each of these elements must be met independently of the others for the act to be unconstitutional. The first element focuses on determining whether the end of the governmental action is “legislative”; the second element focuses on whether the benefit to be achieved by the government regulation is directed against an “identifiable individual”; the third element focuses on whether the burden of the government action involves “punishment” within the constitutional proscription against Bills of Attainder.

In determining whether an act constitutes “punishment” under the Bill of Attainder Clause, the Court has rejected a literal approach, in favor of considering purpose, history, practice, and precedent. Thus, the Court asks whether the law can be said reasonably to further punitive or non-punitive purposes. The Court considers whether any particular punishment is similar to the historical punishments of “imprisonment, banishment, and the punitive confiscation of property by the sovereign, [or] a legislative enactment barring designated individuals or groups from participation on specified employments or vocations, a mode of punishment commonly employed against those legislatively branded as disloyal.”220 The Court also looks to legislative motivation and the existence of less burdensome alternatives by which the legislature could have achieved non-punitive goals, to determine whether any particular act is appropriately viewed as punitive in nature.221

In United States v. Brown,222 the Court held that a federal statute which made it a crime for a member of the Communist Party to serve as an officer or as an employee of a labor union, except in a clerical or custodial position, was an unconstitutional Bill of Attainder. For the liberal instrumentalist majority, Chief Justice Warren noted, “The best available evidence, the writings of the architects of our constitutional system, indicates that the Bill of Attainder Clause was intended not as a narrow, technical (and therefore soon to be outmoded) prohibition, but rather as an implementation of the separation of powers, a general safeguard against legislative exercise of the judicial function, or more simply – trial by legislature.” In this case, Congress did not merely promulgate a rule “to the effect that persons possessing characteristics which make them likely to incite political strikes should not hold union office,” but rather Congress determined for itself that members in the Communist Party are more likely to incite political strikes. The Court concluded, “In a number of decisions, this Court has pointed out the fallacy of the suggestion that membership in the Communist Party, or any other political organization, can be regarded as an alternative, but equivalent, expression for a list of undesirable characteristics.” Reflecting a Holmesian predisposition to defer to government unless the unconstitutionality of the action is clear, discussed at § 10.2.1.2 nn.16-18, Holmesian Justices White, Clark, Harlan, and Stewart dissented in Brown on the grounds that there was not clear proof to establish that Congress' purpose in enacting the

220 Id. at 474.

221 Id. at 475-83.

statute was punitive rather than regulatory.\textsuperscript{223}

In \textit{Nixon v. Administrator of General Services},\textsuperscript{224} the Court was confronted with the question whether the Presidential Recordings and Materials Preservation Act of 1974, which authorized the Administrator of General Services, an official of the Executive Branch, to take custody of the Presidential papers and tape recordings of former President Richard M. Nixon, but no other President, was a Bill of Attainder. In resolving this issue, the Court noted that “Congress' action to preserve only appellant's records is easily explained by the fact that at the time of the Act's passage, only his materials demanded immediate attention. The Presidential papers of all former Presidents from Hoover to Johnson were already housed in functioning Presidential libraries. Congress had reason for concern solely with the preservation of appellant's materials, for he alone had entered into a depository agreement, the Nixon-Sampson agreement, which by its terms called for the destruction of certain of the materials. . . . In short, appellant constituted a legitimate class of one . . . .”

In addition, the Court held that the Act was not punishment in any event. The Court noted that the Act “must be held to be an act of nonpunitive legislative policymaking. Legislation designed to guarantee the availability of evidence for use at criminal trials is a fair exercise of Congress' responsibility to the 'due process of law in the fair administration of criminal justice,' and to the functioning of our adversary legal system which depends upon the availability of relevant evidence in carrying out its commitments both to fair play and to the discovery of truth within the bounds set by law. Similarly, Congress' interest in and expansive authority to act in preservation of monuments and records of historical value to our national heritage are fully established [and not punitive]."\textsuperscript{225}

\textbf{§ 23.2.2.2 Prohibition on Ex Post Facto Laws}

Article I, § 9, cl. 3 of the Constitution provides, in its other part, “No . . . ex post facto Law shall be passed.” In 1798, in \textit{Calder v. Bull}, the Supreme Court held that this clause applied only to criminal laws. Justice Chase gave the classic definition of an ex post facto law. He stated:

\begin{quote}
I will state what laws I consider ex post facto laws, within the words and the intent of the prohibition. 1st. Every law that makes an action, done before the passing of the law, and which was innocent when done, criminal; and punishes such action. 2nd. Every law that aggravates a crime, or makes it greater than it was, when committed. 3rd. Every law that changes the punishment, and inflicts a greater punishment, than the law annexed to the crime, when committed. 4th. Every law that alters the legal rules of evidence, and receives less, or different, testimony, than the law required at the time of the commission of the offence, in order to convict the offender.\textsuperscript{226}
\end{quote}

\textsuperscript{225} \textit{Id.} at 477-78.

\textsuperscript{226} 3 U.S. 386, 390 (1798).
In reaching this conclusion, Justice Chase acknowledged that a literal interpretation of “ex post facto” would hold that any law, civil or criminal, that had any retroactive application would be banned by this clause. However, Chase stated that the clause was not to be given a literal reading, but to be read in light of its purpose, the maxim of construction that technical words are to be interpreted in light of their textual meaning, and history. He noted:

The expressions 'ex post facto laws,' are technical, they had been in use long before the Revolution, and had acquired an appropriate meaning, by Legislators, Lawyers, and Authors. The celebrated and judicious Sir William Blackstone, in his commentaries, considers an ex post facto law precisely in the same light I have done. His opinion is confirmed by his successor, Mr. Wooddeson; and by the author of the Federalist, who I esteem superior to both, for his extensive and accurate knowledge of the true principles of Government.

I also rely greatly on the definition, or explanation of Ex Post Facto Laws, as given by the Conventions of Massachusetts, Maryland, and North Carolina; in their several Constitutions, or forms of Government. In the declaration of rights, by the convention of Massachusetts, part 1st. sect. 24, “Laws made to punish actions done before the existence of such laws, and which have not been declared CRIMES by preceding laws, are unjust, etc.” In the declaration of rights, by the convention of Maryland, art. 15th, “Retrospective laws punishing facts committed before the existence of such laws, and by them only declared criminal, are oppressive, etc.”

In the declaration of rights by the convention of North Carolina, art. 24th, I find the same definition, precisely in the same words, as in the Maryland constitution.

The same split between the natural law approach’s greater focus on purpose versus the formalist greater focus on literal meaning has also been evident in many cases decided under the Ex Post Facto Clause. For example, in Rogers v. Tennessee, Justice O’Connor wrote for the Court that the purpose behind the Ex Post Facto Clause and Due Process Clause to assure “fair warning” to attaching criminal penalties to what previously had been innocent conduct would not be violated by permitting the Tennessee Supreme Court to abolish retroactively the common law “year and a day rule” which provided that no defendant could be convicted of murder unless his victim had died by the defendant's act within a year and a day of the act. In dissent, Justice Scalia noted that literally this result permitted the Court to approve “the conviction of a man for murder that was not murder (but only manslaughter) when the offense was committed.” Justice Scalia’s dissent was joined not only by Justice Thomas, but also by Justices Stevens and Breyer, in part, as their separate dissents point out, because of instrumentalist social policy reasons that “the majority has undervalued the threat to liberty that is posed whenever the criminal law is changed retroactively,” and by failing to consider “considerations of convenience, of utility, and of the deepest sentiments of justice.”

227 Id. at 391-92.

229 Id. at 467 (Scalia, J., joined by Stevens, Breyer & Thomas, JJ., dissenting); id. at 467 (Stevens, J., dissenting); id. at 481 (Breyer, J, dissenting), citing Benjamin Cardozo, The Nature of the Judicial Process 148-49 (1921).
A case involving whether the law altered a “rule of evidence” under the Ex Post Facto Clause is *Carmell v. Texas*. In this case, a 5-Justice formalist and instrumentalist majority (the same four Justices who were in dissent in *Rogers*, joined by instrumentalist-leaning Justice Souter) concluded that a retroactive change permitting conviction for sexual assault or sexual abuse of a minor based on the uncorroborated testimony of the minor alone was an ex post facto law. A Holmesian and natural law dissent concluded that the law did not change the rule of evidence necessary to convict, but merely allowed the testimony of a minor between 14-18 to be considered credible, and thus was a mere procedural change not altering the rule of evidence.

In *Doe v. Miller*, an Eighth Circuit Court of Appeals panel concluded that an Iowa statute, which prohibited a person convicted of certain sexual offenses against minors from establishing a residence within 2,000 feet of a school or registered child care facility existing on that date, was not an unconstitutional ex post facto law when applied to individuals whose convictions for sexual offenses took place before the law was passed. The Court concluded that the purpose of the Iowa General Assembly in passing this law was regulatory to protect the health and safety of Iowa citizens, rather than punitive. Given its operations, the court also concluded that the law was unlike banishment, which would be punitive, since it did not prevent the individual from finding living arrangements that would comply with the statute. Thus, since the law was not punitive in its intent or effect, the Ex Post Facto Clause did not apply.

§ 23.2.2.3 Right to Habeas Corpus

Article I, § 9, cl. 2 provides, “The privilege of the Writ of Habeas Corpus shall not be suspended, unless when in Cases of Rebellion or Invasion the public Safety may require it.” As part of Article I of the Constitution, this suggests that only Congress can suspend the writ, not the President by unilateral action, unless an emergency situation exists where Congress cannot meet and act in time. As noted at § 19.3.3 n.59, while President Lincoln did suspend the writ of habeas corpus at the beginning of the Civil War, a district court held that suspension unlawful in *Ex parte Merryman* concluding that suspension is for Congress, not the President. This view is supported by the placement of the clause authorizing suspension of habeas corpus in Article I, rather than Article II.

Not surprisingly, there is a difference between instrumentalist and non-instrumentalist approaches to the writ of habeas corpus. As has been noted:

In the early 1960s, the Supreme Court adopted generous standards governing federal habeas petitions by state prisoners. At that time, the Court suggested, rather surprisingly, that its solicitude toward such petitions might be constitutionally mandated by the Suspension Clause, the only provision in the Constitution that explicitly refers to the “Writ of Habeas Corpus.” Now, thirty years later, the Court has essentially overruled those expansive rulings, and

---

230 529 U.S. 513 (2000) (Stevens, J., joined by Scalia, Souter, Thomas & Breyer, JJ., for the Court); id. at 553-54 (Ginsburg, J., joined by Rehnquist, C.J., and O’Connor & Kennedy, JJ., dissenting).

231 405 F.3d 700, 718-23 (8th Cir. 2005), cert. denied, 126 S. Ct. 757 (2005).
Congress has considered, though not yet enacted, further limitations on the availability of the writ. Despite these significant assaults on the habeas forum, the constitutional argument appears to have been entirely abandoned. The liberal minority on the Court has not mentioned the Suspension Clause in over a decade, and legislative as well as academic supporters of habeas have scarcely alluded to the Constitution as a bulwark against the writ's further demise.232

In recent cases, the Court has deferred to legislative judgments concerning the extent of habeas relief. For example, in *Daniels v. United States,*233 federal post-conviction relief was not available to a prisoner through a motion to vacate on the ground that the current sentence was enhanced based upon an allegedly unconstitutional prior conviction for which the petitioner was no longer in custody. In *Lackawanna Cty. District Attorney v. Coss,*234 federal post-conviction relief was similarly not available through a petition for a writ of habeas corpus. Regarding the extent of Congress’ power over the writ of habeas corpus, it has been noted:

> If, as Chief Justice Marshall stated in his famous dictum in *Ex parte Bollman,* federal habeas jurisdiction exists only to the extent that Congress so provides, the protection of the Suspension Clause would be quite minimal; absent congressional action, "the privilege itself would be lost, although no law for its suspension should be enacted."

. . . Indeed, in its first effort to establish federal habeas jurisdiction, the Judiciary Act of 1789, Congress emphatically limited habeas review to prisoners in federal custody. Over forty years later, in the wake of states' resistance to federal taxes, Congress permitted federal courts to issue writs for federal officers held in state custody. But it was not until 1867, more than three-quarters of a century after the Framers adopted the Constitution and the First Congress gave life to the federal judiciary, that Congress chose to extend the writ generally to state prisoners. Given this history, a proponent of broad federal habeas review of state criminal convictions faces seemingly insurmountable obstacles in asserting a constitutional basis for such jurisdiction.235

Under current federal law, 28 U.S.C. § 2254(d), an application for a writ of habeas corpus “on behalf of a person in custody pursuant to the judgment of a State court shall not be granted with respect to any claim that was adjudicated on the merits in State court proceedings unless the adjudication of the claim – (1) resulted in a decision that was contrary to, or involved an unreasonable application of, clearly established Federal law, as determined by the Supreme Court of the United States; or (2) resulted in a decision that was based on an unreasonable determination of the facts in light of the evidence presented in the State court proceeding.” In applying this test,

---

conservative formalist and Holmesian Justices are more likely to defer to state proceedings, while liberal instrumentalist Justices are more likely to conclude some decision was “unreasonable.”

Where the issue involves purpose versus literalism, Justices O’Connor, Kennedy, and Souter usually can be found on one side of the case, and Justices Scalia and Thomas on the other side. For example, in *Stewart v. Martinez-Villareal*, the majority held that petitioner’s claim, raised for a second time after the first claim was dismissed as not ripe for resolution, was not a “second” application barred by the Antiterrorism and Effective Death Penalty Act, because the first application was not heard on the merits. Following a literal approach would have produced a “perverse” result.

In *Hamdi v. Rumsfeld*, the Court considered the power of Congress or the President to limit habeas corpus rights. A plurality of natural law and Holmesian or Holmesian-leaning Justices concluded that, consistent with legislative and executive practice, Congress had a power to alter the writ, and that Congress can impliedly delegate that authority to the President. Justices Souter and Ginsburg required a clear statement from Congress to alter the writ, which they said did not exist in this case. Justice Scalia read the clause literally to give the Congress no independent power absent suspension of the Writ, a position joined by Justice Stevens. Justice Thomas would have given the President blanket power, reflecting the conservative predisposition to defer to the President.

§ 23.2.2.4  The Extradition Clause

Article IV, § 2, cl. 2 provides, “A Person charged in any State with Treason, Felony, or other Crime, who shall flee from Justice, and be found in another State, shall on Demand of the executive Authority of the State from which he fled, be delivered up, to be removed to the State having Jurisdiction of the Crime.” The states’ rights Taney Court held in 1861 in *Kentucky v. Dennison* that the federal courts could not enforce the obligation of a state to comply with the Extradition Clause. In contrast, the Court held in 1987 in *Puerto Rico v. Branstad* that the *Dennison* doctrine, whether rightly or wrongly decided at the time, was inconsistent with Court doctrine after 1868 regarding the ability of federal courts to require states to comply with constitutional obligations, such as complying with the 14th Amendment in *Brown v. Board of Education*, discussed at § 26.2.1.3. Thus, *Dennison* was overruled.

CHAPTER 24: CONSTITUTIONAL IMPACT OF THE NINTH AMENDMENT

The Ninth Amendment provides, “The enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people.” This text, taken literally, does not itself create rights. Instead, the text states a rule of constitutional interpretation that calls upon those who construe the Constitution to recognize that the people have retained some rights not specified by the Constitution. As with other provisions in the Constitution, there are natural law, formalist, Holmesian, and instrumentalist ways of interpreting the Ninth Amendment.

§ 24.1 The Natural Law Approach

The first way of construing the Ninth Amendment is that it means just what it says, that the enumerated of certain rights in the Constitution should not be construed to deny or disparage others retained by the people. From this perspective, the Ninth Amendment is a reminder of the background natural law theory that animated the Constitution’s drafting that individuals have natural rights that the government is created to protect. As has been noted, “The Founding generation disagreed about many things, but the existence of natural rights was not one of them. From James Madison to Roger Sherman, from The Federalist Papers to the Antifederalist papers, both supporters and opponents of the Constitution repeatedly affirmed their shared belief in natural rights. Virtually all commentators agree that the [framers and ratifiers of the Bill of Rights believed in natural rights as a general matter.” This natural law background is also discussed at §§ 8.4.1 & 12.3.3.

Against this background, one concern that Madison and others had in drafting the Bill of Rights was that under the maxim of construction, expressio unius est exclusio alterius (the expression of one thing implies exclusion of others), the enumeration of certain rights in the Bill of Rights might suggest that the federal government had plenary power over all other matters. Since that view was inconsistent with the intent of the framers and ratifiers that the federal government be a government of limited, delegated power, the Ninth Amendment was an attempt to craft language to prevent federal governmental power from being construed in any broader way. Based on an exhaustive look at the history and precedents of the Ninth Amendment, Professor Kurt Lash noted:

One of the original purposes of the Ninth Amendment was to prevent the Bill of Rights from being construed to suggest that congressional power extended to all matters except those expressly restricted. As Joseph Story would later write in his Commentaries on the Constitution:

2 Jeff Rosen, Was the Flag Burning Amendment Unconstitutional?, 100 Yale L.J. 1073, 1974-75 (1991) (citations omitted).
[The Ninth Amendment] was manifestly introduced to prevent any perverse, or ingenious misapplication of the well known maxim, that an affirmation in particular cases implies a negation in all others; and é converso, that a negation in particular cases implies an affirmation in all others. The maxim, rightly understood, is perfectly sound and safe; but it has often been strangely forced from its natural meaning into the support of the most dangerous political heresies. The amendment was undoubtedly suggested by the reasoning of the Federalist on the subject of a general bill of rights.3

From this perspective, the Ninth Amendment is a reminder that in interpreting the Constitution, including the first eight Amendments, a natural law theory of interpretation should be used, which supports background natural rights and, as noted at §§ 2.4 & 3.4, rejects the “positivism” of the formalist and Holmesian approaches that rights only derive from positive legal affirmations.

There are two ways to view this limitation: a libertarian perspective and a federalist perspective. The history surrounding the Ninth Amendment suggests that both perspectives were part of the concerns of the framers and ratifiers. Consistent with the Supreme Court’s focus on federalism matters in many of its earlier cases, noted at §§ 18.1.1-18.1.2, 18.2.1 & 18.4.1, the federalism concern was most prominent in the 19th century. The libertarian concern has been more prominent in the 20th century.

Reflecting the federalism concern, Professor Lash noted, “The Ninth Amendment itself seems particularly responsive to concerns that the enumeration of certain rights might undermine the theory of limited enumerated authority. Early drafts of the Ninth contain language that not only speaks of retained rights, but also of limiting the construction of federal power. Madison himself described the Ninth’s language regarding the disparagement of rights as amounting to the same thing as a rule preventing the enlargement of federal power.”4

This is the way the Ninth Amendment predominantly was used during the 19th century. For example, in Houston v. Moore,5 an issue arose over the power of the states to regulate on matters involving militias. The text of Article I, § 8, cl. 16, after granting Congress power to organize and discipline the militia, reserved to the states "the Appointment of the officers, and the Authority of training the Militia according to the discipline prescribed by Congress." Professor Lash has noted:

[Under the expressio unius maxim.] this reservation implied that all power not expressly reserved to the states was exclusively in the hands of Congress. Story rejected this argument, applying the rule of construction he believed declared by the Ninth Amendment:

---

It is almost too plain for argument, that the power here given to Congress over the militia, is of a limited nature, and confined to the objects specified in these clauses; and that in all other respects, and for all other purposes, the militia are subject to the control and government of the State authorities. Nor can the reservation to the States of the appointment of the officers and authority of the training the militia according to the discipline prescribed by Congress, be justly considered as weakening this conclusion. That reservation constitutes an exception merely from the power given to Congress "to provide for organizing, arming, and disciplining the militia," and is a limitation upon the authority, which would otherwise have developed upon it as to the appointment of officers. But the exception from a given power cannot, upon any fair reasoning, be considered as an enumeration of all the powers which belong to the States over the militia.

Having announced that determining the scope of exclusive federal power must be guided by the letter and spirit of the Ninth Amendment, Story then applied the rule of construction he describes in Commentaries as mandated by the Ninth. That rule forbids construing a reservation of rights to suggest that all other rights are surrendered. In this case, the enumeration of certain rights – the state's right to appoint officers – must not be construed to deny or disparage other rights retained by the states – the right to create courts martial.

Story's opinion in Houston describes the Ninth Amendment as limiting the interpreted scope of federal power in order to preserve state regulatory autonomy. This echoes James Madison's description of the Ninth as "guarding against a latitude of interpretation" of federal power to the injury of the people's retained rights. Federal power is thus prevented from intruding into matters retained by the people who remain free to delegate that power to their state government as they see fit.

The libertarian theory of the Ninth Amendment is also supported by arguments of text, context, and history. Libertarian scholars point out that the framers and ratifiers held a conception of rights that went well beyond those few listed in the first eight amendments to the Constitution. For example, as Professor Lash noted:

Such rights, declared James Iredell in the North Carolina ratifying convention, were incapable of exhaustive enumeration:

[I]t would be not only useless, but dangerous, to enumerate a number of rights which are not intended to be given up; because it would be implying, in the strongest manner, that every right not included in the exception might be impaired by the government without usurpation; and it would be impossible to enumerate every one. Let any one make what collection or enumeration of rights he pleases, I will immediately mention twenty or thirty more rights not contained in it.

---

6 Lash, supra note 3, at 619-21, citing Houston, 18 U.S. (5Wheat.) at 4 (Story, J., opinion).
Members of Congress who participated in the drafting of the Ninth Amendment also declared their belief in natural rights retained by the people. [For example,] Roger Sherman, who served with Madison on the House drafting committee, suggested an amendment declaring that "[t]he people have certain natural rights which are retained by them when they enter into Society." Both Sherman and Madison were members of the House Select Committee appointed to review Madison's drafts for the Ninth and Tenth Amendments. Reflecting language suggested by numerous state ratifying conventions, Madison's draft of the Ninth Amendment provided, "The exceptions, here or elsewhere in the constitution, made in favor of particular rights, shall not be so construed as to diminish the just importance of other rights retained by the people, or as to enlarge the powers delegated by the constitution; but either as actual limitations of such powers, or as inserted merely for greater caution." Madison's draft of the Tenth Amendment provided, "The powers not delegated by this constitution, nor prohibited by it to the States, are reserved to the States respectively."

The final drafts of these two amendments made two significant changes. With respect to the Ninth Amendment, the new draft no longer contained Madison's reference to constructive enlargement of federal power. With respect to the Tenth Amendment, at the last minute the phrase "or to the people" was added, so it read, "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people." Regarding this change in language in the Tenth Amendment, Professor Lash noted:

Why then did the Committee add the phrase "or to the people?" The answer lies in the Founders' conception of popular sovereignty. A theory of popular government developed in the period between the Revolution and the adoption of the Constitution, popular sovereignty maintained that sovereign power remains with the people, not with their government. The people delegated powers to their government, but could "alter or abolish" those powers as they saw fit. The delegation of power, however, could occur at either of two levels. For example, powers not delegated to the federal government could be delegated by the people to their own state government. As New York's suggested amendment put it:

That every Power, Jurisdiction and right, which is not by the said Constitution clearly delegated to the Congress of the United States, or the departments of the government thereof, remains to the People of the several States, or to their respective State Governments to whom they may have granted the same.

The final version of the Tenth Amendment expresses this idea that the people retain the right to delegate reserved powers to their respective state governments or not to delegate them to either level of government. Grounding the Tenth in the theory of popular sovereignty linked

---

7 Lash, supra note 4, at 343-44 (citations omitted).

8 For citations to these drafts and other aspects of the history surrounding the drafting of the Ninth Amendment, see id. at 348-70.
it to the Ninth. Together, the two amendments reserve to the people all retained rights and powers.9

The reasons behind the removal of the "enlargement of power" language from the final version of the Ninth Amendment is less clear. At the same time this language, and other language, respecting the Bill of Rights was being debated, Congress was also considering the bill to create a National Bank. As discussed at §§ 7.1 & 18.1.2, there was a real debate between most Federalists, supported by Hamilton, that viewed such a bank as constitutional under normal rules of construction, and Jefferson and Madison and most anti-Federalists, who viewed that such a National Bank could only be constitutional under a constructive enlargement of federal power approach.

Against this background, Madison explained that the removal of the “enlargement of power” language was not intended to change the Ninth Amendment, but was merely removed on the grounds that the constructive enlargement of power language was redundant with language already contained in the Ninth Amendment. Since the Federalists controlled Congress, however, and were in the process of also rejecting Madison’s views regarding the constitutionality of the National Bank, a more plausible explanation is that they were concerned that had the language remained, that would have undercut their arguments in support of a National Bank, and that their focus, as that of Federalist Roger Sherman, was more on limiting government abuses through protecting rights reserved to the people, rather than a cramped view of legitimate federal government power.

The broader view of legitimate government power was the view adopted by the Supreme Court in McCulloch v. Maryland, discussed at § 18.1.2. So understood, this understanding of the drafting of the Ninth Amendment is similar to understanding the drafting of the 11th Amendment from the perspective of the Federalist Congress, discussed at § 17.2.4.3 nn.237-41.

Whether the Ninth Amendment was intended to reflect more federalism or libertarian concerns, virtually every draft proposed by the states, and well as drafts considered by Congress, focused on limitations on congressional power, or sometimes, as in the New York proposal cited above at § 24.1 n.9, departments of the federal government, meaning executive departments, but not limitations on courts. Consistent with the emerging views regarding judicial review and courts being protectors of individual liberty, discussed at § 17.1.2.1, it is likely that the framers and ratifiers expected courts to apply the Ninth and Tenth Amendment limitations on federal and state authority in terms of rights retained by the people against both governmental entities.

For example, in his famous opinion in Calder v. Bull,10 Justice Chase noted that the United States Supreme Court could protect the people against both federal and state invasion of their retained rights. He stated, “I cannot subscribe to the omnipotence of a state legislature, or that it is absolute and without control; although its authority should not be expressly restrained by the constitution,

9 Id. at 370 (citations omitted).

10 3 U.S. (3 Dall.) 386, 387-88 (1798).
or fundamental law, of the State. . . . There are acts which the federal, or state, legislature cannot do, without exceeding their authority. There are certain vital principles in our free republican governments, which will determine and overrule an apparent and flagrant abuse of legislative power; as to authorize manifest injustice by positive law; or to take away that security for personal liberty, or private property, for the protection whereof of the government was established. An act of the legislature (for I cannot call it a law), contrary to the great first principles of the social compact, cannot be considered a rightful exercise of legislative authority.”

Similarly, in *Society for the Propagation of the Gospel v. Wheeler*, Justice Story applied natural rights retained by the people under the law of nations to determine the legal rule in a case involving state law. Referencing the Ninth Amendment, Justice Story indicated, “Where a remedy should be sought in the courts of the United States, under circumstances, in which the state laws could afford no remedy, it is a general rule of the law of nations, recognised by all civilized states, that rights and remedies respecting lands are to be regulated and governed by the law of the place, where the land is situated. Huber. tom. 2, lib. 1, tit. 3; Vatt. Law Nat. bk. 2, c. 7, § 85; Id. bk. 2, c. 8, §§ 109, 110. Independent, therefore, of the act of congress of September 24, 1789 (chapter 20, § 34), which declares, 'that the laws of the states, except where the constitution, treaties, or statutes of the United States, shall otherwise require or provide, shall be regarded as rules of decision, in trials at common law, in the courts of the United States, in cases where they apply,' the laws of the state regulating titles and remedies to real estate, must, in the absence of other regulations by the United States, be, upon general principles, the rules of decision equally between foreigners and between citizens.”

In addition, as discussed at § 25.3 nn.56-62, at the time of drafting of the 14th Amendment, the principal sponsor, Representative John Bingham, viewed the Privileges or Immunities Clause as incorporating the first eight Amendments to the Constitution, thus applying them against the states. This was necessary given the Court’s decision in *Barron v. Baltimore*, discussed at § 27.2.1 n.95, and likely correct, that the first eight Amendments did not apply to the states. There was no need to incorporate the Ninth or Tenth Amendments, however, since they applied to both the federal government and the states anyway. After all, the text of the Ninth Amendment refers to rights “in the Constitution,” not merely the Bill of Rights, and this includes Art. I, § 10 limitations on states.

In any event, without regard to the questions of whether the Ninth Amendment (1) was originally intended to reflect federalist or libertarian limitations on government, and (2) was intended only to limit the federal government, consistent Supreme Court precedents in the 20th century, based on ratification of the 14th Amendment in 1868, have supported the view that unenumerated rights exist against both federal and state governments, as discussed at § 27.3. As for what rights are part of the “rights retained by the people,” it has been noted:

[T]hree groups of rights are repeatedly called natural or unalienable in the Revolutionary declarations and state ratifying conventions: the individual right to "worship God according to the dictates of conscience"; the individual right of "defending life and liberty, acquiring,

---

11 22 F. Cas. 756, 766-67 (1814).
possessing and protecting property, and pursuing and obtaining happiness and safety”; and the right of a majority of the people to "alter and abolish" their government [discussed in this book at § 24.3 n.20-21]. Three other rights are also called natural in the documentary sources: the right to emigrate or to form a new state, the rights of assembly, and the freedom of speech.

If the Founders' conception of which rights were natural is clear, their conception of which natural rights were alienable and which were unalienable is less so. The rights of religious conscience and the right of revolution are consistently called unalienable in the documentary sources and in the social compact theories on which the sources relied. The status of the rights to defend life, liberty, and property is fuzzier: social compact theory suggests that the power to control them is alienable rather than unalienable, and should be surrendered to the state which promises, in exchange, to authorize deprivations only by due process of law. George Mason, the author of the 1776 Virginia Declaration of Rights, had called the rights to defend life, liberty, and property not unalienable but "inherent" (a familiar synonym for natural). Jefferson, writing the Declaration of Independence months later, took care to remove property from his list of unalienable rights, and to call the rights of life and liberty themselves (not the right to defend them) unalienable.  

Regarding unenumerated rights, the Court noted in 1923 in *Meyer v. Nebraska*, discussed at § 27.3.2 n.141, that among the unenumerated rights are “the right of the individual to contract [and] to engage in any of the common occupations of life, to acquire useful knowledge, to marry, establish a home and bring up children, to worship God according to the dictates of his own conscience, and, generally, to enjoy those privileges long recognized at common law as essential to the orderly pursuit of happiness by free men.” This libertarian view is also reflected in Justice Goldberg’s concurrence in 1965 in *Griswold v. Connecticut*, discussed at § 16.3 nn.71-75. Joined by Chief Justice Warren and Justice Brennan, Justice Goldberg stated that the Ninth Amendment, while not an independent source of rights, is a reminder that in interpreting other provisions in the Constitution, such as the liberty component of the Fifth and 14th Amendment Due Process Clauses, the Court should interpret those provisions understanding that the framers believed individuals had background rights against the government, even if those rights were not stated in specific constitutional text.

Regarding the issue of which constitutional rights are “alienable,” and which are “inalienable,” most constitutional provisions regarding individual rights are “alienable” under either a “voluntary”

12 Rosen, supra note 2, at 1178-80 (citations omitted).
13 262 U.S. 390, 399 (1923).
waiver standard, such as for Fourth Amendment search and seizure rights, discussed at § 23.2.1.1 n.62, or the higher standard of a “knowing and intelligent” waiver, used for most Fifth and Sixth Amendment criminal defendant’s rights, discussed at § 23.2.1.2 nn.101-03 & 23.2.1.3 n.157. As discussed at § 23.1.3 n.28, the Seventh Amendment right to a jury trial can be waived by a “knowing and intelligent” waiver. As noted at 29.6.1.1 n.214, even the First Amendment right to freedom of speech can be waived by a “knowing and intelligent” waiver, such as in agreements by employees of the Central Intelligence Agency to waive free speech rights and submit for pre-publication review any book concerning secrets learned while working for the CIA. Almost certainly, any Second Amendment right to own guns, or Third Amendment right not to have soldiers quartered in one’s homes, could be waived, under either a “voluntary” or “knowing and intelligent” waiver standard.

On the other hand, certain rights are “inalienable.” Most constitutional rights that are “structural” protections, discussed in Chapters 17-20, are “inalienable,” since they exist to protect broader structural imperatives. For example, as indicated by INS v. Chadha, discussed at § 19.4.2.1 nn.76-86, Congress and the President cannot waive the requirements of the Bicameralism and Presentment Clauses to create a one-house veto procedure for power delegated to an administrative agency. Nor can Congress and the President alter by statute the Presidential veto power, as indicated in Clinton v. City of New York, discussed at § 19.4.2.2 nn.92-96. On the other hand, as noted at § 17.2.4.2 n.189, a state can waive its state sovereign immunity under 11th Amendment and related state sovereign immunity principles, and the federal government can waive its sovereign immunity from lawsuits, as noted at § 20.1.4.4. Among those “structural” individual rights in the criminal justice system to which the “harmless error” rule does not apply, discussed at § 23.2.1.3.B. n.185, an individual cannot waive the right to an impartial judge, but the individual can waive the right to counsel and appear pro se, as long as that waiver is “knowing and intelligent.”

Regarding other individual rights protections, the First Amendment right of free exercise of religion, and the background “right of revolution” to “alter or abolish” a tyrannical regime, are typically regarded as “inalienable,” as noted at § 24.1 n.12. In addition, the 13th Amendment provision banning slavery or involuntary servitude cannot be waived, as discussed at § 25.1. Also, the Fifth Amendment due process requirement of proof “beyond a reasonable doubt” in criminal cases and the Fifth Amendment requirement of grand jury indictment in capital cases cannot be waived, as discussed at § 23.2.1.2.n.104. Almost certainly, the Eighth Amendment bans on “excessive bail,” “excessive fines,” and “cruel and unusual punishment” cannot be waived, nor could an individual formally waive the heightened due process protections that apply in capital cases.

Despite this lack of formal waiver, in practice individuals can waive the protections of some of these rights by failing to sue. For example, in Gilmore v. Utah,15 convicted murder Gary Gilmore chose not to pursue habeas corpus relief in federal court to challenged his death penalty sentence. The Court denied third-party standing to Gilmore’s mother to sue on his behalf, and ruled that Gilmore had made a valid “knowing and intelligent” waiver of his “right to appeal” by refusing to sue. Similarly, as a practical matter, an individual could “waive” even 13th Amendment protections and

---

15 429 U.S. 1012, 1013 (1976); id. at 1014-15 (Burger, C.J., joined by Powell, J., concurring).
enter into a “master/slave” relationship with a partner. Any such “contract” or “registration” of that relationship would have no legal effect, of course, and any monetary exploitation, such as the selling of individuals or their services, could result in prosecution for prostitution, which could be brought without the exploited parties’ consent. In that sense, the “waiver” would not be effective.16

§ 24.2 The Formalist Approach

In Griswold v. Connecticut,17 Justice Black elaborated in his dissent a formalist approach toward the Ninth Amendment. Consistent with a formalist emphasis on the importance of literal text, Justice Black noted that there was nothing in the text of the Ninth Amendment to determine what rights it was intended to protect. Focusing on the literal text of rights “retained by the people,” Justice Black concluded that the Ninth Amendment served as a reminder that the federal government was a government of limited powers, and that this admonition should be viewed as applying not only to the legislative and executive branches, but to the judicial branch as well. Although arguments of context and history suggest otherwise, noted at § 24.1 nn.8-12, the literal text of the Ninth Amendment draws no distinction among branches of government. Thus, for Justice Black, the Ninth Amendment was a reminder that any “extra-textual” interpretation, such as the “unenumerated” fundamental rights analysis, discussed at § 27.3, should be viewed as illegitimate.

As discussed at § 27.3, the moderate formalist majority between 1873 and 1937 did not embrace this more extreme formalist view of the illegitimacy of any unenumerated fundamental rights doctrine. During those years, the Court recognized, as in Meyer v. Nebraska, unenumerated fundamental rights to contract and engage in the common occupations of life; to acquire knowledge; and to marry, establish a home, and raise children. However, a moderate version of Justice Black’s formalist insight does caution the Court to be careful in advancing any such “unenumerated” fundamental rights analysis. As noted by the Court in 1986 in Bowers v. Hardwick:

The Court is most vulnerable and comes nearest to illegitimacy when it deals with judge-made constitutional law having little or no cognizable roots in the language or design of the Constitution. That this is so was painfully demonstrated by the face-off between the Executive and the Court in the 1930’s which resulted in the repudiation of much of the substantive gloss that the Court had placed on the Due Process Clause of the Fifth and Fourteenth Amendments. There should be, therefore, great resistance to expand the substantive reach of those Clauses, particularly if it requires redefining the category of rights deemed to be fundamental.18

18 478 U.S. 186, 194-95 (1986). For an argument embracing the view that the Ninth Amendment provides little, if any, support for unenumerated rights analysis, see Thomas B. McAffee, Inalienable Rights, Legal Enforceability, and American Constitutions: The Fourteenth Amendment and the Concept of Unenumerated Rights, 36 Wake Forest L. Rev. 747 (2001).
§ 24.3  The Holmesian Approach

Being an approach that emphasizes deference to the legislative and executive branches of government, the Holmesian approach toward the Ninth Amendment would naturally share the formalist concern, discussed at § 24.2, with expansive court interpretations of constitutional rights through any form of unenumerated fundamental rights analysis. Holmesian Justice White actually drafted the passage from Bowers at § 24.2 n.18. Similarly, in Washington v. Glucksberg, a case concerning whether there exists a fundamental right for physician-assisted suicide, Chief Justice Rehnquist said for the Court:

We “ha[ve] always been reluctant to expand the concept of substantive due process because guideposts for responsible decisionmaking in this uncharted area are scarce and open-ended.” By extending constitutional protection to an asserted right or liberty interest, we, to a great extent, place the matter outside the arena of public debate and legislative action. We must therefore “exercise the utmost care whenever we are asked to break new ground in this field,” . . . lest the liberty protected by the Due Process Clause be subtly transformed into the policy preferences of the members of this Court.  

Although Chief Justice Rehnquist was addressing his cautionary language to the meaning of “liberty” under a 14th Amendment substantive due process analysis, as discussed at § 27.3.4.3 n.280, it appears clear that an equal or greater reluctance would restrain a majority of the Court today from finding that a right was retained by the people and, thus, fell within the Ninth Amendment.

Looking to general historical sources of interpretation, as a Holmesian is more willing to do than a formalist, discussed at § 10.2.1.3, can help support this view. The Ninth Amendment states that the people "retain" rights outside those specifically enumerated. However, the manner for protecting these rights may not be in the courts, as it is for the enumerated rights provisions, such as the first eight Amendments, or the "privileges or immunities," "equal protection," and "due process" provisions of the 14th Amendment. Instead, the Ninth Amendment may best be understood as the textual reflection of the belief by the framers and ratifiers in Locke's doctrine of the people's reserved right of revolution, discussed at § 12.2.2.3 n.80.

As commentators have noted, underlying the Declaration of Independence was a belief by the framers and ratifiers on the importance of justifying the people’s right of revolution against a tyrannical government. Under this view, the Ninth Amendment is, in part, a textual commitment that the people of the United States were reserving a right of revolution if their government became as tyrannical as they perceived the government of England to be in 1776. This reserved right of

---

revolution can also be connected to the Second Amendment right to keep and bear arms.\textsuperscript{21}

\section*{\textsuperscript{\textsection 24.4} \textbf{The Instrumentalist Approach}}

A final way of thinking about the Ninth Amendment would be to consider it an independent source of constitutional rights that judges can appeal to when no other provision of the Constitution seems to grant individuals such a right. Since the text of the Ninth Amendment does not provide any specific limitations on what those rights would be, such an approach would enable a judge more easily than any of the other approaches to read that judge’s policy values into the Constitution under the guise of interpreting the Ninth Amendment.

This approach has never been adopted by any Justice on the Supreme Court, not even the liberal instrumentalists of the Warren Court between 1963 and 1969. As noted at \textsuperscript{\textsection 24.1 n.14}, instrumentalists such as Chief Justice Warren, and Justices Goldberg and Brennan, have been willing to interpret the Ninth Amendment in natural law fashion, using it as a mere interpretive guidance in interpreting other constitutional provisions, particularly the unenumerated rights analysis of substantive due process doctrine, discussed at \textsuperscript{\textsection 27.3}. Similarly, concurring in \textit{Roe v. Wade},\textsuperscript{22} Justice Douglas said that the “Ninth Amendment obviously does not create federally enforceable rights.” However, he noted that a catalog of rights retained by the people “includes customary, traditional, and time-honored rights, amenities, privileges, and immunities that come with the sweep of ‘the Blessings of Liberty’ mentioned in the preamble to the Constitution. Many of them in my view come within the meaning of the term ‘liberty’ as used in the Fourteenth Amendment.”

Occasionally, however, a lower federal court has embraced the Ninth Amendment as an independent source of rights, as did the lower federal court in \textit{Roe v. Wade} and other state and lower federal courts in the years leading up to \textit{Roe v. Wade}.\textsuperscript{23} Some commentators, who are not satisfied with the list of rights the Court has developed under the unenumerated fundamental rights branch of substantive due process doctrine, discussed at \textsuperscript{\textsection\textsection 27.3.3-27.3.4}, such as Professor Randy Barnett, have also occasionally suggested the Court should embrace the Ninth Amendment as a way to give support to that commentator’s favorite additional right.\textsuperscript{24}

  \item \textsuperscript{22} 410 U.S. 113, 210 (1973) (Douglas, J., concurring).
  \item \textsuperscript{23} See \textit{Roe v. Wade}, 314 F. Supp. 1217, 1222 (D.C. Tex. 1970) (“Freedom to choose in the matter of abortions has been accorded the status of a 'fundamental' right in every case coming to the attention of this Court where the question has been raised. Babbitz v. McCann, 312 F. Supp. 725 (E.D. Wis.1970); People v. Belous, 80 Cal. Rptr. 354, 458 P.2d 194 (Cal. 1969); State v. Munson, (South Dakota Circuit Court, Pennington County, April 6, 1970). Accord, United States v. Vuitich, 305 F. Supp. 1032 (D.D.C. 1969).”).
  \item \textsuperscript{24} See, e.g., The Rights Retained by the People, Volume I (Randy Barnett ed. 1991); The Rights Retained by the People, Volume II (Randy Barnett ed. 1993).
\end{itemize}
The modern Supreme Court is not likely to adopt any doctrine along these lines. Instead, the Court is more likely to continue to view the Ninth Amendment in natural law terms, with perhaps an acknowledgment that it does also reflect, in part, the people’s reserved right of revolution against tyrannical regimes, discussed at § 24.3 nn.20-21. As discussed at § 24.1, such a natural law view embraces both a libertarian natural rights model and a federalism model. Such a view is consistent with long-standing views of Professor Randy Barnett regarding the Ninth Amendment.25

Following the Civil War, three amendments were added to the Constitution: the 13th, 14th, and 15th Amendments. These Amendments provide a number of important protections for individuals. Those protections are discussed in Sub-Part Three of Part IV, Chapters 25-28. For ease of presentation, the Due Process Clause of the Fifth Amendment, on which the Due Process Clause of the 14th Amendment is based, is also discussed in Sub-Part Three.

The two provisions in the Civil War Amendments that have spawned the most litigation are the Equal Protection and Due Process Clauses of the 14th Amendment. For ease of presentation, the other provisions in the Civil War Amendments are discussed first in Chapter 25. Then, the Equal Protection Clause is discussed in Chapter 26. The Due Process Clause of the Fifth and 14th Amendments are discussed in Chapter 27. Chapter 28 discusses congressional power to enforce the Civil War Amendments, a power used to supplement judicial power to enforce the Amendments.

CHAPTER 25: THE CIVIL WAR AMENDMENTS GENERALLY

In addition to the Equal Protection and Due Process Clauses of the 14th Amendment, the Civil War Amendments provide four major individual rights protections. These are the 13th Amendment ban on slavery or involuntary servitude, discussed at § 25.1; the 14th Amendment Citizenship Clause, discussed at § 25.2; the 14th Amendment Privileges or Immunities Clause, discussed at § 25.3; and the 15th Amendment ban on race discrimination in the right to vote, discussed at § 25.4.

The circumstances surrounding the ratification of the Civil War Amendments is relatively unique. As one author has noted:

When it proposed the Thirteenth Amendment on January 31, 1865, and the Fourteenth Amendment on June 13, 1866, Congress lacked the full representation of the eleven southern states. The Thirty-Eighth Congress that proposed the Thirteenth Amendment denied seats to southern delegates except to senators and representatives from West Virginia. As for the proposal of the Fourteenth Amendment, it received 33 votes in the Senate, and 120 votes in the House, but had the Southern states been fully represented in the Thirty-Ninth Congress, 48 votes in the Senate and 162 votes in the House would have been needed to meet the two-thirds requirement.

. . . Secretary of State William H. Seward certified on December 18, 1865, that twenty-seven out of thirty-six states had ratified the Thirteenth Amendment and that it was therefore valid. According to this count, no state had ever left the Union of thirty-six, yet among the twenty-seven ratifying states were the loyalist legislatures of Virginia, Louisiana, Tennessee, and Arkansas. Alabama (which ratified on December 2), North Carolina (December 4), and Georgia (December 6) acted following indications that the President viewed ratification as necessary to restore their full participation in the Union.

Ratification of the Fourteenth Amendment came about through plain coercion. The March 2, 1867 Military Reconstruction Act required ten of the former confederate states, as conditions to readmission to the Union, to form new republican governments with suffrage extended
without regard to race, and to ratify the Fourteenth Amendment. [Based on this Act, ratification of the 15th Amendment banning race discrimination in voting rights was a foregone conclusion.] By July 1870, all of the former confederate states had been readmitted.\footnote{Jason Mazzone, Unamendments, 90 Iowa L. Rev. 1747, 1806-07 (2005). For more extended discussion of the unusual circumstances surrounding drafting and ratification of the Civil War Amendments, see Bruce A. Ackerman, 2 We the People: Transformations 99-119 (1998).}

Despite these irregularities, it can be argued that the drafting and ratification of the Civil War Amendments met the technical procedural requirements of the Article V constitutional amendment process.\footnote{See John Harrison, The Lawfulness of the Reconstruction Amendments, 68 U. Chi. L. Rev. 375 (2001).} In any event, the Court has routinely viewed questions of the proper ratification of constitutional amendments as political questions, as noted at §§ 17.3.4.2 & 17.3.4.3, and the validity of the Civil War Amendments is also confirmed as a matter of “settled law.” Settled law is defined at § 4.3.2 nn.79-85.

\section{The Thirteenth Amendment}

Passed in Congress by January 31, 1865, and declared ratified by 3/4 of the states on December 18, 1865, the 13th Amendment provides: “Section 1. Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their protection. Section 2. Congress shall have power to enforce this article by appropriate legislation.” By its text, which provides “[n]either . . . shall exist,” this provision bans public and private conduct that involves slavery or involuntary servitude, and makes this right “inalienable.” Any attempt to waive this right would be unenforceable.

The background to the 13th Amendment was the practice of slavery in the American South before the Civil War, and the practice in the North during the colonial period of indentured servitude. These practices were justified at the time as consistent with pre-Enlightenment classic and Christian natural law doctrine. It has been noted, “Throughout most of the colonial period, opposition to slavery among white Americans was virtually nonexistent. Settlers in the 17th and 18th centuries came from sharply stratified societies in which the wealthy savagely exploited members of the lower classes. Lacking a later generation’s belief in natural human equality, they saw little reason to question the enslavement of Africans.”\footnote{The Bible, Christianity, and Slavery 3-4 (www.religioustolerance.org/chr_salv1.htm) (access using search engine and key phrases in quote).} During the period surrounding the United States Civil War in the 1860s, Jefferson Davis, President of the Confederate States of America, stated, “[Slavery] is sanctioned in the Bible, in both Testaments, from Genesis to Revelation. . . . It has existed in all ages, has been found among the people of the highest civilization, and in nations of the highest proficiencies in the arts.” A prominent reverend at the time, Reverend R. Furman, D.D., Baptist, of South Carolina, reflecting the view of many Southerners, similarly noted, “The right of holding
slaves is clearly established in the Holy Scriptures, both by precept and example.\textsuperscript{4} More generally:

The religious defense of slavery was rooted in the Bible, and apologists found numerous references there to justify slavery. Mosaic law was said to authorize the buying, selling, holding, and bequeathing of slaves as property. Abraham and other prophets held slaves, and the New Testament failed to condemn slavery. The Apostles were said to have received slaveholders into the church. But the most important Biblical reference Southerners pointed towards was Genesis 9:25, Noah's curse on Ham, father of Canaan, for Ham's indiscretion towards Noah, which clerics read as specifically authorizing African-American slavery.

In the Bible's words, Noah became drunk and lay "uncovered inside his tent." Ham "saw his father's nakedness and told his two brothers outside." But the brothers, Shem and Japheth, walked into the tent backwards and covered their father with a garment without ever looking at him. When Noah awoke and discovered what his youngest son had done, he said: "Cursed be Canaan! The lowest of slaves will he be to his brothers . . . . Blessed be the LORD, the God of Shem! May Canaan be the slave of Shem . . . . May God extend the territory of Japheth; may Japheth live in the tents of Shem, and may Canaan Be his slave."

A Georgian in 1844 summarized the masters' interpretation of this passage thus: "From Ham were descended the nations that occupied the land of Canaan, and those that now constitute the African or Negro race." J.B. Thrasher of Mississippi added that blacks "are the lowest and most degraded of the descendants of Canaan." And South Carolinian Iveson L. Brookes explained that Ham deserved "decapitation" for his crime, but a merciful God chose to punish him "by flattening his head, kinking his hair, and blackening his skin, thereby making him black and subject to slavery.\textsuperscript{5}

Of course, as noted at § 8.4.1 nn.77-80, this analysis is inconsistent with the basic biblical imperative that all individuals are created by God, and thus entitled to equal natural rights, and with Jesus’ and St. Paul’s general statements concerning love, the equality of all persons, and the “Golden Rule” (treating one’s fellow humans as one expects to be treated by others). It is also inconsistent with the modern ban on slavery in the 1948 United Nations Universal Declaration of Human Rights.\textsuperscript{6}

As part of the compromise to get approval from all state delegations at the Constitutional Convention in 1787, a number of constitutional provisions acknowledged slavery. The Constitution states in Article I, § 2, cl. 3, “Representatives and direct Taxes shall be apportioned among the several States which may be included within this Union, according to their respective Numbers, which shall be determined by adding to the whole Number of free Persons, including those bound to Service for a Term of Years, and excluding Indians not taxed, three fifths of all other Persons

\textsuperscript{4} \textit{What the Bible Says About Human Slavery} 1 (www.religioustolerance.org/sla_bibl.htm) (citing quotes from Jefferson Davis and Reverend Furman).

\textsuperscript{6} \textit{See U.N. Universal Declaration of Human Rights} Art. 4 (www.un.org/Overview/rights.html).
[slaves].” Under Article I, § 9, cl. 1, “The Migration or Importation of such Persons as any of the States now existing shall think proper to admit, shall not be prohibited by the Congress prior to the Year one thousand eight hundred and eight, but a Tax or duty may be imposed on such Importation, not exceeding ten dollars for each Person.” Under Article IV, § 2, cl. 3, the Fugitive Slave Clause, “No Person held to Service or Labour in one State, under the Laws thereof, escaping into another, shall, in Consequence of any Law or Regulation therein, be discharged from such Service or Labour, but shall be delivered up on Claim of the Party to whom such Service of Labour may be due.”

Congress passed the first Fugitive Slave Law in 1793. The 1793 law dealt generally with fugitives from justice, but it was applied primarily to fugitive slaves. In 1818 and 1820, Congress passed laws that punished participants in the importation of slaves, although by that time children born to slaves in the United States predominantly satisfied Southern economic needs. In 1820, Congress passed the Missouri Compromise, which limited slavery predominantly to Southern states, by providing that "slavery and involuntary servitude . . . shall be, and is hereby forever prohibited" in all of the territory acquired from France in the Louisiana Purchase, which lies “north of thirty-six degrees and thirty minutes north latitude,” as long as the fugitive laws were enforced in those territories and states. In 1850, as part of a grand Compromise between Northern and Southern interests, California entered the Union as a free state; the slave trade ended in the District of Columbia; the rest of the land in the West other than California acquired from Mexico after the Mexican-American War of 1848 was open to both slave and free states; and there was a new, more vigorous Fugitive Slave Law.

Under the Fugitive Slave Act of 1850, it was not only criminal for the fugitive to run away, but also for others to hinder the arrest or assist in the escape, either directly or indirectly. It has been noted:

The new Fugitive Act also increased the fines for committing the prohibited acts, from five hundred dollars to one thousand dollars, and required payment to the claimant. Moreover, section eight of the bill stipulated that if the commissioner found for the claimant a ten-dollar fee was to be paid to the commissioner, but if the finding was for the defendant, then there was only a five-dollar payment. This obviously gave an incentive to the judge or commissioner hearing the case to find in favor of the claimant and raised numerous constitutional questions.

The initial effect of the Fugitive Slave Law was more far reaching than might first be supposed. There was a great migration of blacks into Canada. Even the city of Boston, which was presumed as safe as Canada, no longer was, for the state laws that had protected fugitives were now overshadowed by federal laws. The second effect that the Fugitive Slave Law had was that it radically changed the dynamic of the abolitionists. For years, the abolitionists had to fight indirectly at a distance, but with the new Fugitive Slave act, they now had an immediate object to face head on. People who had been disinterested were now forced to get involved. Because of these developments, the abolitionists became more organized. In several cities they started what were called Vigilance Committees. The sole purpose of these organizations was to hinder the efforts of the bounty hunters and commissioners operating under the new law . . . .

---

Soon after the Compromise of 1850, Congress amended the Missouri Compromise to provide in the Kansas-Nebraska Act of 1854 that the settlers of new territories could decide for themselves whether to make slavery legal or illegal. This Act led to an outbreak of fighting in the Kansas-Nebraska territories among pro-slavery and anti-slavery forces. Against this backdrop, in 1857 in *Dred Scott v. Sandford*, the Supreme Court attempted to resolve this issue for not only all new territories, but also suggested as a matter of constitutional law that slaves could be brought into existing Northern states and yet remain slaves and the property of the owner. In *Dred Scott*, Chief Justice Roger Taney wrote that “an act of Congress which deprives a citizen of the United States of his liberty or property, merely because he came himself or brought his property into a particular Territory of the United States, and who had committed no offence against the laws, could hardly be dignified with the name of due process of law.” Taney's views reflected the opinions of many Southerners. As has been noted, “during debates on the Kansas-Nebraska Bill, Senator Albert G. Brown declared, ‘negroes are not men, within the meaning of the Declaration [of Independence]. If they were, Madison, and Jefferson, and Washington, all of whom lived and died slaveholders, never could have made it, for they never regarded negroes as their equals, in any respect.”

Of course, the opinions of Madison, Jefferson, and Washington were much more ambivalent with respect to slavery, viewing it as against natural law, but promoting a gradual program of abolition in the Southern states, usually with compensation, and often coupled, as was also Lincoln’s initial position, with a utopian view of return of freed blacks to Africa. On the other hand, with regard to the view in antebellum America more generally, it has been noted, “In the sixty-two years between Washington's election and the Compromise of 1850, . . . slaveholders controlled the presidency for fifty years, the Speaker's chair for forty-one years, and the chairmanship of House Ways and Means for forty-two years. The only men to be reelected president – Washington, Jefferson, Madison, Monroe, and Jackson – were all slaveholders. The men who sat in the Speaker's chair the longest – Henry Clay, Andrew Stevenson, and Nathaniel Macon – were slaveholders. Eighteen out of thirty-one Supreme Court justices were slaveholders.”

This dominance was partly the product of the Three-Fifths Clause of Article I, § 2, cl. 3. As noted at § 25.1 text following n.6, this Clause provided that the number of representatives to which each state was entitled in the House of Representatives was calculated by “the whole Number of free Persons, including those bound to Service for a Term of Years, and excluding Indians not taxed, 

---

11 *See generally* Roger Wilkins, *Jefferson's Pillow* (2001) (discussing the founding fathers' ownership of slaves, while they promoted United States as a land of freedom).

three fifths of all other Persons [slaves].” This provision enabled the South to obtain greater representation in the House than if representation had been based on the number of free individuals alone. That also had a direct effect on presidential elections, as Article II, § 1, cl. 2 provides that each state’s presidential electors are equal to “the whole Number of Senators and Representatives to which the State may be entitled in the Congress.” For example, if slaves had not been counted as three-fifths of a person, thus increasing the electoral college votes of Southern states, John Adams would have won the electoral college vote in 1800, not Thomas Jefferson.

Based upon the slavery provisions in the Constitution, the Supreme Court reached three major conclusions in 1857 in Dred Scott v. Sandford, each wrong in terms of a faithful interpretation of the Constitution, from either a natural law or the soon-to-be-emerging formalist perspective. Each conclusion was consistent, however, with Southern pro-slavery attitudes: (1) the core holding of the case that a free state could not define citizenship to include slaves taken as property into that state, discussed at § 25.2, and thus Dred Scott could not sue in federal courts under diversity jurisdiction applicable to diverse citizens from different states; (2) in any event, Dred Scott had not attained his freedom from residence on free soil, and maintained that freedom upon his return to Missouri; and (3) as dicta in the case, the Missouri Compromise of 1820, which had limited slavery predominantly to Southern states, was an unconstitutional infringement upon the property rights of slave holders under the Due Process Clause of the Fifth Amendment. The 7-2 majority in Dred Scott was composed of Chief Justice Taney, and Justices Campbell, Catron, Daniel, and Wayne, each from slaveholding states, and Justices Grier and Nelson, two Democrats from Northern states. Only Justice Curtis, a Whig from Massachusetts, and McLean, a Democrat from Ohio, dissented.

With regard to whether Dred Scott’s stay in the free state of Illinois and the territory of Minnesota had given him his freedom, most state and federal court doctrine from the Constitution through the early 1830s held that as long as the move was a change of residence and not just mere transit through, it gave the slave freedom. Dred Scott’s case involved residence in Illinois and the territory of Minnesota for a number of years. It has been noted:

"It is significant that most of these decisions were made by Southern state courts, or by the federal courts in the Southern states, for the sentiment before 1831 is directly at variance with Dred Scott in 1857, though the conditions were identical." However, [the Dred Scott Court’s] position was not a mere aberration, but instead, reflected the progression of Supreme Court rulings which occurred in the intervening years and represented the developments in the several states. Indeed, the Court's apparent deviation from previous decades' jurisprudence on this issue exhibited the continual process of Southern imperialism's expanding control.13

With regard to the Missouri Compromise, nothing in the original Constitution, with its carefully crafted set of compromises to permit the institution of slavery to exist in the South, supported the Court’s view in Dred Scott that the Due Process Clause of the 5th Amendment was intended to give slave owners the right to move into Northern states and continue the practice of slavery there. No Court opinion prior to 1857, and consistent legislative and executive practice regarding the institution of slavery, in Acts like the Missouri Compromise of 1820, the Compromise of 1850, and

13 Hornaday, supra note 7, at 269 (citations omitted).
the Kansas-Nebraska Act of 1854, all supported the view that the Constitution did not resolve the issue of where slavery must exist as a matter of constitutional imperative.

The precise history of Dred Scott’s life, including his marriage to Harriet Robinson, when he was around 38 years old and she around 17, is a complex and fascinating tale. Dred Scott was born a slave in Virginia, around 1800. In 1818, Scott's master, Peter Blow, moved from Virginia to Alabama, and then in 1830 to St. Louis, Missouri. Blow died in 1832, and by the fall of 1833, Dr. John Emerson, a surgeon in the United States Army, had purchased Scott. From December 1833 until May 1836, Emerson served as a physician at Fort Armstrong, which was located in Illinois near the present-day city of Rock Island. Throughout this period Scott lived at the Fort.14

Illinois was a free state, and Scott might have claimed his freedom there. The two and a half years that Dred Scott spent in Illinois would have been sufficient to emancipate him. In 1836, the army evacuated Fort Armstrong, and Dr. Emerson, with Scott, relocated to Fort Snelling, in what is today Minnesota. The Missouri Compromise had "forever prohibited" slavery in this region. Thus, when Dr. Emerson and Dred Scott crossed the Mississippi River north of Missouri, they entered territory where slavery had been prohibited by Congress.

Dred Scott remained at Fort Snelling from May 1836 until April 1838. During this time he met and married Harriet Robinson, a slave owned by Major Lawrence Taliaferro, an Indian Agent stationed near Fort Snelling.15 She eventually bore Dred Scott two sons, who died in infancy, as well as two daughters – Eliza and Lizzie – who became parties in the lawsuit. Taliaferro was also a justice of the peace, and in that capacity he performed a formal wedding ceremony. Under the laws of Southern states, slaves could never be legally married, as that would undermine in various ways the property interests of the master. However, the Scotts were living in a free jurisdiction and with the consent of their owners were married in a civil ceremony. That could have been used as proof that they were free. Such an analysis would have been: only free people were entitled to a civil marriage; Dred Scott and Harriet Robinson had a civil marriage; thus, they were free.

In November 1837, Dr. Emerson received new orders. The Army sent him to Fort Jesup in Louisiana. There Dr. Emerson met and married Eliza Irene Sanford. Their legally-valid wedding ceremony took place on February 6, 1838. Emerson now sent for his slaves, and in April they joined him in Louisiana. When the Scotts arrived, they might have sued for their freedom. Louisiana courts had upheld the freedom of slaves who had lived in free jurisdictions. Even more curious is why the Scotts came to Louisiana at all. Dr. Emerson had left them in Minnesota, which was part of a free territory. They likely could have found help if they had sued for their freedom or simply tried to escape. The trip down the Mississippi River to Louisiana took them by Iowa and Illinois,

14 This summary of Dred Scott’s life is substantially based upon, with minor stylistic edits, an account given in Paul Finkelman, *The Dred Scott Case, Slavery and the Politics of Law*, 20 Hamline L. Rev. 1, 11-21 (1996).

15 For detailed discussion of the role Harriet Robinson played in the case, and viewing the case through the lens not just of slave owner and slave, but impact on family life, see Lea Vandervelde & Sandhya Subramanian, *Mrs. Dred Scott*, 106 Yale L.J. 1033 (1997).
where they might have escaped. Instead, they traveled over a thousand miles to reach Dr. Emerson, unaccompanied by him, or apparently any other person with authority over them. Given their subsequent attempts to become free after Emerson's death, it may be that the Scotts found their bondage to him to be relatively mild and their lives reasonably happy. After all, Emerson had let them marry, had kept them together as a couple, and treated them well enough so they did not seek their freedom. Dr. Emerson may also have told them that eventually he would free them, and the Scotts may have not only believed him, but thought that gaining such a clear legal freedom was worth the wait.

In December 1843, Emerson died suddenly at the age of 40. His widow, Irene, inherited his estate, and for the next three years, the Scotts worked as hired slaves with the rent going to Irene Emerson. During part of this time an army captain rented Dred Scott and took him to Texas. Scott returned to St. Louis in early February 1846 and tried to purchase freedom for himself and his family. Irene Emerson refused his offer, and in April 1846, Scott filed suit for his freedom and that of his wife and two children.

It is unclear why in 1846 Dred Scott tried to purchase his freedom, and when refused, decided to sue for his freedom, when he had failed to sue while living in free jurisdictions and had failed to try to escape when Emerson had left him at Fort Snelling. Perhaps Dr. Emerson had promised Scott his freedom – or at least the right to purchase his freedom – and when he died suddenly, Scott felt it was time to seek another route to freedom. It is also possible that it was only in 1846 that Scott discovered he had a legal claim to freedom. He may have learned this from local whites, including the sons of his former master, Peter Blow. Sometime after returning to St. Louis, Scott had renewed contact with the Blows, who began to provide financial aid for his litigation. It is also possible that Harriet Scott became aware of the family's claim to liberty. While in St. Louis, she had joined Reverend John R. Anderson's Second African Baptist Church. Reverend Anderson had been born a slave, but later purchased his freedom and became a typesetter for Elijah P. Lovejoy, an anti-slavery editor in Illinois. Reverend Anderson, or someone else in the church, may have informed Mrs. Scott that she and her family were legally entitled to their freedom. When Dred and Harriet Scott understood that they should be entitled to their freedom, they found attorneys to take their case.

Although the jury in the district court found in favor of Dred Scott and his freedom, based upon his residency in free states, legal maneuvers kept the case in the state courts, and then the federal courts, for the next decade, with the United States Supreme Court's decision 11 years later in 1857. By that time, Irene Emerson had remarried, to an anti-slavery Republican from Massachusetts, but her brother, John F.A. Sanford, had taken charge of the litigation in her name. As had Irene, John F.A. Sanford spelled his name with only one “d.” However, the Supreme Court reporter mistakenly thought his name was “Sandford.” Hence, the case is called Dred Scott v. Sandford.

As should have been expected, the Dred Scott ruling significantly affected Northern public opinion and led to fiercer opposition to the expansion of slavery. This decision became a rallying cry for abolitionists and critical both in Abraham Lincoln's run for the presidency in 1860, and in his earlier historic "House Divided" speech during the Lincoln-Douglas debates in the 1858 Illinois Senate
race. In that speech, Lincoln stated, “A house divided against itself cannot stand. I believe this government cannot endure permanently half slave and half free. I do not expect the Union to be dissolved – I do not expect the house to fall – but I do expect it will cease to be divided. It will become all one thing, or all the other. Either the opponents of slavery, will arrest the further spread of it, and place it where the public mind shall rest in the belief that it is in the course of ultimate extinction; or its advocates will push it forward, till it shall become alike lawful in all the States, old as well as new – North as well as South.”

The 1860 Republican platform asserted that freedom was the normal state of United States' territory. This was an advance from the Republican Party's 1856 platform that "all men are endowed with inalienable right[s]," but which only committed the Party to preventing the spread of slavery into the Western territories. Once the Civil War commenced, the Republican-controlled Congress took action against slavery. On March 13, 1862, Congress forbade all Union army officers from returning fugitive slaves, thus effectively annulling the Fugitive Slave Law of 1850. On April 10, 1862, Congress declared that the federal government would compensate slave owners who freed their slaves. All slaves in the District of Columbia were freed in this way on April 16, 1862. On June 19, 1862, Congress prohibited slavery in United States territories. This Act rejected that aspect of Dred Scott which had stated that Congress was powerless to regulate slavery in the territories.

In his decision leading up to declaration of the Emancipation Proclamation, issued on September 22, 1862, with January 1, 1863 as its effective date, Lincoln told his cabinet, “As you know, I have said, more than once, if I could preserve the Union by freeing all of the slaves everywhere, I would do so. If I could preserve the Union by freeing none of the slaves, I would do so. If I could preserve the Union by freeing some of the slaves but not others, I would do so. Well, I have not the political power to do the first. I have not the inclination nor the need to do the second. So I shall now do the third, as a military necessity.” The major military impact of the Proclamation was to limit aid from England or France to the South, as those governments did not want to be seen intervening on behalf of the South, despite their desire for Southern cotton, once the North made the abolition of slavery a central issue in the war.

The Emancipation Proclamation freed slaves only in the Southern states that had seceded from the Union, not in the border states which remained in the Union, or states, or parts of states, which had seceded but were under Union control by January 1, 1863. Thus, omitted from the Proclamation were Maryland and Delaware (which had never seceded), Missouri and Kentucky (with factional governments that had been accepted to the Confederacy, but had not officially seceded), Tennessee (already under Union control), and specific exemptions for the 48 counties designated to become the state of West Virginia, along with several other named counties of Virginia, and also New Orleans and several named parishes in Louisiana already under Union control.

---

With the end of the Civil War, the more radical form of complete abolitionism, rejecting in its entirety the "White Supremacy" premise lying behind the *Dred Scott* decision, came to dominate Congress. Regarding the background to the 13th Amendment, it has been noted:

Senator Charles Sumner's arguments during the debates on the Kansas-Nebraska Bill were representative of the ideas he also espoused during the Senate debates on the Thirteenth Amendment. "Slavery," he stated in one speech, "is an infraction of the immutable law of nature, and, as such, cannot be considered a natural incident to any sovereignty, especially in a country which has solemnly declared, in its Declaration of Independence, the inalienable right of all men to life, liberty, and the pursuit of happiness."\(^{18}\)

This more radical form of complete abolitionism was also reflected in § 4 of the 14th Amendment, ratified in 1868, which provided that “neither the United States nor any State shall assume or pay any debt or obligation incurred in aid of insurrection or rebellion against the United States, or any claim for the loss or emancipation of any slave; but all such debts, obligations and claims shall be held illegal and void.” The 14th Amendment also banned in § 3 former members of federal or state governments who “shall have engaged in insurrection or rebellion against the [United States], or given aid or comfort to the enemies, thereof,” from holding federal or state office, unless such disability be removed by Congress “by a vote of two-thirds of each House.”\(^{19}\)

Ratified in 1865, the 13th Amendment was first interpreted by the Supreme Court in the *Slaughter-House Cases*,\(^ {20}\) decided in 1873. The Court said the purpose of the 13th Amendment was to forbid "all shades and conditions of African slavery."\(^ {21}\) Ten years later, a more extensive interpretation was given in *The Civil Rights Cases*.\(^ {22}\) There the Court held that the Amendment nullified all state laws upholding slavery and gave Congress power to pass all laws necessary and proper to abolish all "badges and incidents of slavery."\(^ {23}\) These badges and incidents, said the Court, are disabilities relating to fundamental rights that form the essence of civil freedom: the same rights as enjoyed by white citizens to make and enforce contracts; to sue, be a party, and give evidence; and to inherit, purchase, lease, sell, and convey property. However, the Court held that Congress' power did not

extend to adjusting "social rights," as by providing federal remedies for a refusal of service on racial grounds by the owner of an inn, a public conveyance, or a place of amusement.24

The "social rights" limit on congressional power was reinforced in 1896 by Plessy v. Ferguson.25 The Court agreed in Plessy that the 14th Amendment was not intended to enforce "social" equality, as distinguished from "political" equality.26 Further, even in cases of “political” equality, in determining what race classifications were reasonable, the Court would take into account the established usages, customs, and traditions of the people.27 As discussed at § 26.2.1.1.B, in Plessy this meant that “separate, but equal” railway cars for whites and blacks were constitutional, based on customs of racial segregation, which included at that time separate school systems for white and black students even in many Northern States and the District of Columbia.28 As a result, protection from public as well as private race discrimination largely disappeared for many decades.

During the remaining years of the formalist era, the Court fleshed out the meaning of "slavery" and "involuntary servitude" by holding that the 13th Amendment did not bar federal or state governments from requiring individuals to perform duties owed the government, such as service in the army, or state militia, or a jury.29 However, the Court held that neither the federal government nor state governments could compel one person to work for another in payment of a debt.30

Formalist precedents remained largely untouched during the Holmesian era. The Court continued to protect debtors from forced labor,31 but it excluded other events from coverage by finding them not to be involuntary servitude, such as an injunction in a labor dispute preventing interference with a business.32 Also, the Court continued to weaken the early civil rights statutes by holding, as in

24 Id. at 22-25.

25 163 U.S. 537 (1896).

Collins v. Hardyman,\(^3^3\) that 42 U.S.C. § 1985(3), which creates a damage action for private conspiracies to deprive a person or a class of persons of equal protection, applies only to conspiracies under color of state law, \textit{i.e.}, there must be state action.

Despite this deference-to-government approach, the Holmesian Court did weaken slightly the "separate, but equal" theory of \textit{Plessy}. As discussed at § 26.2.1.1.C, based on a functional analysis of whether separate facilities were in fact equal, rather than the formalist-era analysis, which focused predominantly on whether facilities literally existed for both races, Holmesian-era courts struck down some separate programs of race discrimination in graduate school education.\(^3^4\) However, here, as in so many areas of constitutional law, substantial changes in the scope of both the 13\(^{th}\) and 14\(^{th}\) Amendments did not occur until the instrumentalist era.

As discussed at § 26.2.1.1.D, instrumentally inspired changes began in 1954 with \textit{Brown v. Board of Education},\(^3^5\) where a unanimous Court held that race discrimination in public education was inherently unequal, overruling \textit{Plessy} on this point. In 1964, Congress joined the drive against race discrimination by passing the Civil Rights Act of 1964, upheld as a valid exercise of congressional power under the Commerce Clause in \textit{Heart of Atlanta Motel v. United States} and \textit{Katzenbach v. McClung},\(^3^6\) discussed at § 18.2.4 nn.93-99.

In 1968, the Court considered in \textit{Jones v. Alfred H. Mayer Co.}\(^3^7\) the meaning and validity of 42 U.S.C. § 1982, which had been enacted in 1866 but remained largely dormant after the \textit{Civil Rights Cases}. Section 1982 provides, “All citizens of the United States shall have the same right, in every State and Territory, as is enjoyed by white citizens thereof to inherit, purchase, lease, sell, hold, and convey real and personal property.” In \textit{Jones}, the Court held that § 1982 bars all race discrimination, private as well as public, in the sale or rental of property, and that it was within Congress' power to enforce the 13\(^{th}\) Amendment. As discussed at § 28.2 nn.20-22, abandoning its apparently exclusive claim in the \textit{Civil Rights Cases} to define the "badges and incidents of slavery," the Court said that Congress has the power rationally to determine what are the badges and incidents of slavery, limited only by the test of \textit{McCulloch v. Maryland}\(^3^8\) that “the end be legitimate, \ldots within the scope of the constitution, and all means which are appropriate, which are plainly adapted to that end, which are not prohibited, but consist with the letter and spirit of the constitution, are constitutional," and to translate its understanding into effective legislation.

\item \(^3^5\) 347 U.S. 483 (1954).
\item \(^3^6\) \textit{Katzenbach}, 379 U.S. 294 (1964); \textit{Heart of Atlanta Motel}, 379 U.S. 241 (1964).
\item \(^3^7\) 392 U.S. 409, 420-36 (1968).
\item \(^3^8\) 17 U.S. (4 Wheat.) 316, 421 (1819).
\end{itemize}
The Court also noted that in the Civil Rights Cases it had said that the burdens and disabilities of slavery included restraints on fundamental rights, such as the same right to purchase property as is enjoyed by white citizens. Dissenting in Jones, Justice Harlan, joined by Justice White, both Holmesians, said that the statute's words suggested a right to equal status under law and, thus, created a right only against state-sanctioned discrimination.\textsuperscript{39} This result – requiring state action under § 1982 – is consistent with the Holmesian-era case of Collins v. Hardyman, discussed at § 25.1 n.33, requiring state action under § 1985(3).

In 1971, the Court overruled Collins v. Hardyman in Griffin v. Breckenridge\textsuperscript{40} and held that §1985(3), an exercise of power under § 2 of the 13\textsuperscript{th} Amendment, extended to private conspiratorial violence based on "racial, or perhaps otherwise class-based, invidious discriminatory animus." In 1976, in Runyon v. McCrory,\textsuperscript{41} the Court extended Jones to § 1981 and the right protected by that section to make contracts. For these statutes to apply, however, proof of intent to discriminate is required, not mere discriminatory effects.\textsuperscript{42}

The Court has not yet decided whether exemptions in the Civil Rights Act of 1964 relating to private clubs or other private establishments should be read as an implied repeal of the unqualified provisions of §§ 1981 & 1982. Also open are questions of whether these sections should be read as not applicable to certain private relationships, such as relationships which may be protected by the First Amendment freedom of association, discussed at § 31.2.2. Concurring in Runyon, Justice Powell said that private choices that are not part of a commercial relationship offered generally or widely, and which reflect the selectivity exercised by individuals entering into a personal relationship, were not intended to be restricted by the 19th century Civil Rights Acts.\textsuperscript{43}

Based on the natural law great respect for precedent, the modern post-instrumentalist Court has not reversed or limited the instrumentalist precedents. But it has not used them to expand federal remedies for discrimination. For example, it has confined §§ 1981 & 1982 to "racial" discrimination and has not extended them to discrimination for national origin or religion.\textsuperscript{44} The Court has also not decided whether § 1985(3) is limited to cases involving racial animus, but there is no evidence that the present Court will exceed that limit. These cases are discussed at § 28.2 nn.23-30.

\textsuperscript{43} 427 U.S. at 186-89 (Powell, J., concurring).

The Citizenship Clause of § 1 of the 14th Amendment provides: “All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside.” The central purpose of this clause was to overrule that part of the 1857 holding in *Dred Scott v. Sandford*\(^{45}\) that blacks were not and could not be citizens. Having citizenship is an important right because, among other things, a citizen may not be deported or excluded from the United States.\(^{46}\) Nor may Congress take away an American’s citizenship without his assent.\(^{47}\) Further, a citizen may chose to reside in any state and thus become a citizen of the state, with the same right as every other citizen in that state.\(^{48}\)

Article III, § 2 of the Constitution grants federal courts jurisdiction over "Controversies . . . . between Citizens of different States." In *Dred Scott v. Sandford*,\(^ {49}\) the Supreme Court declared that even free blacks could never be "Citizens" within the meaning of this provision. Speaking for the Court, Chief Justice Taney purported to base this decision on the original understanding of the Constitution. However, rather that determine the meaning of the diversity provision by examining the words or deeds of the framers and ratifiers concerning it, Taney relied upon his perception of the general racial views of white Americans from early colonial times until 1857. Taney stated:

> [I]t cannot be believed that the large slaveholding States regarded them [African-Americans] as included in the word citizens, or would have consented to a Constitution which might compel them to receive them in that character from another State. For if they were so received, and entitled to the privileges and immunities of citizens, it would exempt them from the operation of the special laws and from the police regulations which they considered to be necessary for their own safety. It would give to persons of the negro race, who were recognized as citizens in any one State of the Union, the right to enter every other State whenever they pleased, singly or in companies, without pass or passport, and without obstruction, to sojourn there as long as they pleased, to go where they pleased at every hour of the day or night without molestation, unless they committed some violation of law for which a white man would be punished . . . .\(^{50}\)

However, cases from the late 18th century refute this understanding of the framers and ratifiers’ intent. In a pair of interracial diversity cases captioned *Elkay v. Moss & Ives*, federal courts did permit free blacks to sue as citizens, and the cases were widely reported and did not cause any

\(^{50}\) Id. at 417.
consternation in either the North or South at the time.51 These cases demonstrate that free blacks could count for the purposes of federal diversity jurisdiction under the original Constitution.

In any event, without regard to whether Dred Scott was rightly or wrongly decided on this point in 1857, the 14th Amendment Citizenship Clause extended citizens to all persons born or naturalized in the United States, including former slaves as well as free blacks. An interesting question arose in 1870 whether a free black, Hiram Revels, clearly granted citizenship in 1868 by ratification of the 14th Amendment, could serve in the Senate, since under Article I, § 3, cl. 3, as noted at § 20.1.2.2, a person must be a citizen for at least 9 years to be a Senator. The Senate decided to seat Mr. Revels, rejecting the holding of Dred Scott, which would have meant Mr. Revels had only been a citizen for 2 years in 1870. The Senate instead viewed the 14th Amendment Citizenship Clause as merely restating the proper view that the person should have been considered a citizen all along.52

Under 8 U.S.C. § 1401, Congress has added three additional situations in which citizenship exists from birth: (1) persons born in the United States to members of Indian, Eskimo, Aleutian, or other sovereign aboriginal tribes, (2) persons born outside the United States to parents who are both citizens, where one of them has had a residence in the United States prior to the birth, and (3) persons born outside the United States where only one parent is a citizen and that person resides in the United States for a prescribed period of time. In Rogers v. Bellei,53 the Court upheld this third category against a challenge that the provisions in the 14th Amendment granted that person citizenship as a constitutional matter. For the Court, Justice Blackmun stated that 14th Amendment citizenship extends only to persons “born or naturalized in the United States,” and thus does not include an individual naturalized according to congressional statutes, but born outside the United States. For such an individual, Congress has the power to determine conditions on citizenship under the standard minimum rational review test that the condition is not an unreasonable, arbitrary, or unlawful application of Congress’ power over immigration and naturalization, as discussed at § 18.3.4.

Under 8 U.S.C. § 1401, Congress has provided that citizens have a right to renounce their United States citizenship. However, in Vance v. Terrazas,54 an instrumentalist-era precedent did not allow Congress legislatively to presume an intent to renounce citizenship upon the doing of certain acts, such as swearing allegiance to a foreign country. Even in that situation the government must prove that the act was done with the intent to relinquish citizenship. That intent can be proved, however, by only a preponderance of the evidence.

This area of law has remained stable in recent years as the post-instrumentalist Court has not decided any case that has significantly affected the attainment of citizenship. However, a number of recent cases have affected the rights of citizens versus aliens, discussed at § 26.2.2.

§ 25.3 The Fourteenth Amendment’s Privileges or Immunities Clause

The Privileges or Immunities Clause of § 1 of the 14th Amendment provides: “No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States.” The initial debate over this clause involved how to read the clause in concert with the Privileges and Immunities Clause of Article IV, § 2, against the backdrop of the 14th Amendment’s provisions regarding United States and state citizenship.

The first sentence in the 14th Amendment, the Citizenship Clause, clearly rejected Justice Taney’s analysis in Dred Scott that United States citizenship depended upon a person being a citizen of a state first, a status controlled by states, not the federal government. Instead, the Citizenship Clause said that “any person born or naturalized in the United States” is by that fact a “citizen of the United States and of the State wherein they reside.” Citizenship thus now depends upon federal protection in the 14th Amendment, and is not a state-created right.

Based upon this observation, one way to read the 14th Amendment Privileges or Immunities Clause would be to say that all the “fundamental” privileges and immunities which had been based upon state citizenship in the Article IV, § 2 Privileges and Immunities Clause, discussed at § 20.3.3, were now transferred to all United States citizens as defined by the 14th Amendment’s Citizenship Clause. This would include those rights recognized in Corfield v. Coryell as “fundamental,” e.g., rights to pass through, reside in, own property in, make contracts in, and engage in common occupations in a state on equal terms with citizens of that state. A second way to read the 14th Amendment Privileges or Immunities Clause would be to say that these “fundamental” rights are still protected only under Article IV, § 2, and thus determined by state practice, and that the 14th Amendment clause only protects rights uniquely a product of United States citizenship, not state citizenship.

General historical evidence surrounding the passage of the 14th Amendment suggests that the framers of 14th Amendment intended to adopt the first approach. For example, as has been noted, “[T]he 1866 campaign was a referendum on the congressional plan for Reconstruction, the centerpiece of which was the Fourteenth Amendment. Republicans reminded voters of Southern denials of free speech and other basic liberties and insisted that the Fourteenth Amendment would protect the

fundamental rights of American citizens.”

The 14th Amendment was also drafted against the backdrop of Northern attitudes toward Southern nullification of federal laws that had existed from 1830-1860. As has been noted:

The South Carolina Ordinance of Nullification barred compliance with the Federal Tariff Acts of 1828 and 1832, prohibited appeals to the United States Supreme Court, and declared that federal coercion would provoke secession. When the South Carolina Governor called for raising an army of 12,000, President Jackson countered by threatening to hang the leading nullifiers as traitors, and reinforced the military stationed in and around Charleston as evidence of his resolve. Congress defused the crisis by engineering a compromise that gave South Carolina much of the tariff reform it had sought. Although the congressional compromise resolved the immediate crisis, it merely postponed the Civil War, while fueling resentments leading up to that conflict.

In yet another challenge to federal authority, South Carolina officials seized and imprisoned black seamen who entered Charleston harbor. On behalf of the seamen, Judge Samuel Hoar traveled as an emissary from Massachusetts to Charleston to argue that the Privileges and Immunities Clause of Article IV protected all Massachusetts citizens, regardless of race. Shortly after his arrival, state officials informed Hoar that his life could not be protected, and the South Carolina legislature ordered his expulsion. In response to this affair, other southern states, including Georgia and Louisiana, rose to defend South Carolina’s efforts to protect "the exercise of their sovereign rights."

The confrontation in Charleston fueled congressional debates. Congressman Hudson added that he was angered not only by the fact that South Carolina had imprisoned a Massachusetts citizen, but also because the State of South Carolina had blocked appeal of that decision to the United States Supreme Court. From the beginning, references to the Hoar affair implicated not only the substantive rights of a black seaman and the Massachusetts judge who traveled to defend him, but also the underlying issue of national government authority to protect those rights.

Members of Congress who supported the Fourteenth Amendment began their political careers immersed in the series of state sovereignty claims that had provoked constitutional crises in the years leading up to the Civil War.

In contrast to viewing the 14th Amendment through the lens of this history of federal concern over state actions denying civil rights, the Supreme Court held in the Slaughter-House Cases that the Privileges or Immunities Clause protects only a short list of rights relating primarily to relationships between citizens and the federal government. This decision reflects more a formalist emphasis on

---

57 Curtis, supra note 56, at 1134.

the literal text in the 14th Amendment Citizenship Clause distinguishing “citizens of the United States” and citizenship “of the State wherein they reside,” and the fact the Privileges or Immunities Clause applies to citizens of the United States, not citizens of a state, rather than the natural law greater focus on general historical evidence like the 1866 congressional campaign.

In determining what are the privileges and immunities of United States citizenship, the Court mentioned in the *Slaughter-House Cases* the rights: (1) to come to the seat of government and there do business with it, (2) to have free access to seaports through which all operations of foreign commerce are conducted, and to the subtreasuries, land offices, and courts of justice in the several States, (3) to demand protection from the federal government while on the high seas or within the jurisdiction of a foreign government, (4) peacefully to assemble and petition government for redress of grievances, (5) to have the privilege of the writ of habeas corpus, (6) to use the navigable waters of the United States, (7) to become a citizen of any State of the Union by *bona fide* residence therein, with the same rights as other citizens of that State, and (8) to be protected by the 13th, 14th, and 15th Amendments. The Court concluded the list by saying that “a citizen of the United States can, of his own volition, become a citizen of any State of the Union by a *bona fide* residence therein, with the same rights as other citizens of that state.” The individual would then also have the privileges and immunities belonging to state citizenship in that state.

As some authors have noted, if the First Amendment right peaceably to assemble and petition for redress of grievances is included as a federal privilege or immunity, it is not clear why other rights protected by the First Amendment or, indeed, the entire Bill of Rights, are not also considered privileges and immunities of citizens of the United States. Thus, the Court’s decision in the *Slaughter-House Cases* did not have to be read as narrowly as the Court did in the years following the case. An interpretation of the *Slaughter-House Cases* more faithful to the natural law base of the 14th Amendment is possible. The majority ruled in the case that the Privileges or Immunities Clause protects four kinds of rights, those that “owe their existence to the Federal government, its National character, its Constitution, or its laws.” Professor William Rich has noted in an article that although the majority opinion only gave a few examples of these rights:

With this language, and though these illustrations, [Justice] Miller had covered all the important bases. Privileges or immunities could be based upon (1) text that specifically limited states, (2) implied rights, such as the right to travel, (3) rights found in the first eight amendments to the Constitution, or (4) rights established through exercise of the power of Congress to pass laws or the power of the executive to make treatises. . . . Both Miller and [Congressman] Bingham [one of the principle architects of the 14th Amendment] argued that the Privileges or Immunities Clause did not create new substance, but rather reinforced laws and principles already encompassed by the Constitution. Both men articulated views consistent with incorporating the Bill of Rights and applying them to the states. And both men appeared to understand the

---

61 83 U.S. at 79.
importance of reinforcing federal supremacy to assure that no states would again rely on claims of state sovereignty to evade responsibilities imposed by federal law.\textsuperscript{62}

This view of the \textit{Slaughter-House Cases} creates an opinion of greater impact, particularly when combined with Chief Justice Marshall’s more expansive view of congressional power under the Commerce Clause. That view, which is consistent with a natural law approach to the Commerce Clause, as discussed at § 12.3.2 nn.91-95, was used during the 1960s to make constitutional civil rights legislation regarding service at places of public accommodation in cases like \textit{Katzenbach v. McClung}.\textsuperscript{63} As discussed at §17.2.4.3 nn.248-57, this view would also mean that Congress can trump any 11\textsuperscript{th} Amendment argument of state sovereignty through a 14\textsuperscript{th} Amendment Privileges or Immunities Clause analysis granting each citizen a right against the state to have any constitutionally valid federal law enforced.

The Court’s treatment of the \textit{Slaughter-House Cases} as a precedent, however, has not lived up to this analysis. Instead, after 1873, the Court limited the \textit{Slaughter-House Cases} Privileges or Immunities Clause analysis during the formalist era to the literal examples given by Justice Miller of federal privileges and immunities. As discussed at § 18.2.2, the Court limited the Commerce Clause analysis to regulations literally involving commerce, not civil rights statutes that had a substantial affect on commerce. The Court did not return to the list for many decades, and the Privileges or Immunities Clause of the 14\textsuperscript{th} Amendment came to be regarded as pretty much a dead letter. As an example of one of the few cases to discuss the matter, the Court held in 1940 in \textit{Madden v. Kentucky}\textsuperscript{64} that the right to carry out an incident to a trade, business or calling, such as the deposit of money in banks, is not a privilege of national citizenship. Thus, a state could require residents to pay a higher tax on deposits in banks outside the state than in local banks.

As a practical matter, the Court reinstated the historical intent of the framers of the 14\textsuperscript{th} Amendment by creating the doctrine of substantive due process. As discussed at § 27.2, virtually all of the Bill of Rights are now applicable against the states by being viewed as incorporated into the 14\textsuperscript{th} Amendment Due Process Clause. As discussed at § 27.3, additional fundamental rights are protected under the unenumerated fundamental rights analysis of those rights “implicit in the concept of ordered liberty” under the 14\textsuperscript{th} Amendment Due Process Clause. As discussed at § 28.2 nn.20-25, that aspect of \textit{Corfield v. Coryell} dealing with equal rights to make contracts and own property are protected under 42 U.S.C. §§ 1981-1982, which have been held to be constitutionally valid as part of Congress’ enforcement power under the 13\textsuperscript{th} Amendment. One consequence of this is that by protecting these rights under the 13\textsuperscript{th} Amendment or the 14\textsuperscript{th} Amendment Due Process Clause, rather than the Privileges or Immunities Clause, all persons, not merely citizens, are granted these fundamental rights, an expansion of the protections given to aliens.

Given the result in the \textit{Slaughter-House Cases} and its progeny, however, the Privileges or Immunities Clause of the 14\textsuperscript{th} Amendment lay relatively dormant for 150 years. However, in \textit{Saenz

\textsuperscript{62} Rich, \textit{supra} note 58, at 182-84.  

\textsuperscript{63} 379 U.S. 294, 299-305 (1964).  

\textsuperscript{64} 309 U.S. 83, 90-93 (1940).
v. Roe, the Court held that the right to travel and move from one state to another, is protected not only by the first sentence of Article IV, § 2, but also by the Privileges or Immunities Clause of the 14th Amendment. Further, that protection includes the right of a newly arrived citizen to the same privileges and immunities enjoyed by other citizens of the same state. Writing for a 6-3 Court, Justice Stevens noted in Saenz that the "right to travel" embraces at least three different components. It protects: (1) the right of a citizen of one state to enter and to leave another state; (2) the right to be treated as a welcome visitor rather than an unfriendly alien when temporarily present in the second state; and (3) for those travelers who elect to become permanent residents, the right to be treated like other citizens of that State.

Regarding the first of these rights, Justice Stevens noted that while the Court’s precedents have clearly identified such a right, the Court has never identified:

the source of that particular right in the text of the Constitution. The right of “free ingress and regress to and from” neighboring States, which was expressly mentioned in the text of the Articles of Confederation, may simply have been “conceived from the beginning to be a necessary concomitant of the stronger Union the Constitution created.”

Under this right, the ability of Congress to make criminal one person taking another person across state lines for purposes of lawful activity in that second state, such as passing a bill to outlaw adults taking minors across state lines to evade the parental notification provisions regarding abortions in one state by transporting them to another state that does not have such parental notification requirements, would be of questionable constitutionality as infringing on individuals’ right to travel.

A second component of the right to travel is protected by constitutional text. Justice Stevens noted:

The first sentence of Article IV, § 2, provides: "The Citizens of each State shall be entitled to all Privileges and Immunities of Citizens in the several States." Thus, by virtue of a person's state citizenship, a citizen of one State who travels in other States, intending to return home at the end of his journey, is entitled to enjoy the "Privileges and Immunities of Citizens in the several States" that he visits. This provision removes "from the citizens of each State the disabilities of alienage in the other States." Paul v. Virginia, 8 Wall. 168, 180, 19 L. Ed. 357 (1868) ("[W]ithout some provision . . . removing from the citizens of each State the disabilities of alienage in the other States, and giving them equality of privilege with citizens of those States, the Republic would have constituted little more than a league of States; it would not have constituted the Union which now exists").

The third aspect of the right to travel – the right of the newly arrived citizen to the same privileges and immunities enjoyed by other citizens of that state is protected by the 14th Amendment’s Privileges or Immunities Clause. Justice Stevens stated:

66  Id. at 501 (citations omitted).
67  Id. at 501-02.
The Framers of the Fourteenth Amendment modeled this Clause upon the "Privileges and Immunities" Clause found in Article IV. Cong. Globe, 39th Cong., 1st Sess., 1033-1034 (1866) (statement of Rep. Bingham). In Dred Scott v. Sandford, 19 How. 393, 15 L.Ed. 691 [1857], this Court had limited the protection of Article IV to rights under state law and concluded that free blacks could not claim citizenship. The Fourteenth Amendment overruled this decision. The Amendment's Privileges or Immunities Clause and Citizenship Clause guaranteed the rights of newly freed black citizens by ensuring that they could claim the state citizenship of any State in which they resided and by precluding that State from abridging their rights of national citizenship.

Despite fundamentally differing views concerning the coverage of the Privileges or Immunities Clause of the Fourteenth Amendment, most notably expressed in the majority and dissenting opinions in the Slaughter-House Cases, it has always been common ground that this Clause protects the third component of the right to travel.68

Justice Stevens quoted from the Slaughter-House Cases that such a new citizen has “the same rights as other citizens of that state.”69 Stevens continued that discriminations against new citizens are to be tested strictly, which presumably means the state must show a compelling purpose and means necessary to advance that purpose. Regarding justifications for discrimination between newly arrived and already established residents, a purpose to deter welfare applicants from migrating is impermissible,70 as is an interest in saving money by discriminating among equally eligible citizens.71 Thus, Saenz v. Roe invalidated a California statute which for one year limited welfare grants to new residents to the amount payable by the state of the family’s previous residence.

The extent to which this case will apply as a precedent to any other form of discrimination against new residents remains to be seen. However, the language in Saenz is quite broad and, unlike the rights protected by Article IV, § 2, discussed at § 20.3.3.2 n.298-300, does not appear to be limited to interests sufficiently basic to the livelihood of the nation. Further, Justice Stevens appeared to extend to Article IV, § 2 the non-discrimination principle of the 14th Amendment Privileges or Immunities Clause, when, he said:

There may be a substantial reason for requiring the nonresident to pay more than the resident for a hunting license, see Baldwin v. Fish and Game Comm’s of Mont., 436 U.S. 371 (1978) or to enroll in the state university, see Vlandis v. Kline, 412 U.S. 441, 445 (1963), but our cases have not identified any acceptable reason for qualifying the protection afforded by the Clause for “the citizen of State A who ventures into State B” to settle there and establish a home.’ Zobel, 457 U.S., at 74 (O’Connor, J., concurring in judgment). Permissible justifications for discrimination between residents and nonresidents are simply inapplicable to a nonresident's

68 Id. at 502-03 & n.15.
69 Id. at 503.
70 Id. at 506.
71 Id. at 506-07.
exercise of the right to move into another State and become a resident of that State.\textsuperscript{72}

This language is sufficiently broad that it seems unlikely for \textit{Saenz v. Roe} to be confined as a precedent to situations where the state of new residence denies a benefit vital to either the new resident or the nation. Additional aspects of the right to travel under the Equal Protection Clause are discussed at § 26.5.1.

Chief Justice Rehnquist, in dissent with Justice Thomas, pointed out that the text of Article IV, § 2 limits its protection to nonresidents. He also objected that the majority’s approach in \textit{Saenz} unreasonably restricted the power of a state to assure that only persons who establish a bona fide residence receive the benefits provided to current residents of the state. Justice Rehnquist said that the California law did not impose any obstacle to entry into California and so there was no infringement on any right to travel.\textsuperscript{73}

Absent any fundamental right being involved, Justice Rehnquist indicated that only minimum rational review should be applied, as discussed at §§ 26.4.1 & 27.1.2.1. Under such a standard of review, California's use of a durational residence requirement, as in \textit{Sosna v. Iowa}\textsuperscript{74} and \textit{Vlandis v. Kline},\textsuperscript{75} discussed under the fundamental right to travel at § 26.5.1 nn.493-95, was a reasonable means for testing the bona fides of an individual's claim to residence. Justice Thomas, dissenting in \textit{Saenz}, also noted that repeated references to the \textit{Corfield} decision by members of the 39\textsuperscript{th} Congress supports the inference that they understood the “privileges or immunities of citizens” to be fundamental rights, rather than every public benefit established by positive law.\textsuperscript{76}

\section{25.4 The Fifteenth Amendment’s Ban on Race Discrimination in Voting}

The 15\textsuperscript{th} Amendment provides: “Section 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude. Section 2. The Congress shall have power to enforce this article by appropriate legislation.”

The 15\textsuperscript{th} Amendment was an improvement over the provisions in the 14\textsuperscript{th} Amendment on voting. The provisions in § 2 of the 14\textsuperscript{th} Amendment merely provided that the denial of the right to vote to any male citizen otherwise qualified to vote (21 years of age and a citizen), except on grounds of “participation in rebellion, or other crime,” would result in reduction of the state’s number of representatives to Congress “in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such State.” This provision was

primarily intended to deal with the fact that under § 1 of the 14th Amendment, which made all persons born in the United States citizens, including former slaves, the representation of the South in Congress would increase as former slaves would now be counted as full persons, not 3/5 of person, as under the original Constitution in Article I, § 2, cl. 3, discussed at § 25.1 text following n.6. If counted as full persons, even though the South had lost the Civil War, “the elite white South would return to the Congress with even more political power in the House of Representatives and the electoral college. African Americans would have no more right to vote after slavery than before slavery; but the white elite that had caused such a costly war would increase its political power by the addition of two fifths of the African American population in the apportionment process.” Under § 2 of the 14th Amendment, “If all African Americans were excluded from voting, Section 2 could actually reduce the voting power of a southern state that limited votes to white males. In theory, this would force the states to choose between increased representation with black voters or reduced representations and the ability to exclude black voters.”

In practice, the reconstituted Southern state governments established during Andrew Johnson’s presidency immediately after the Civil War limited suffrage to white males. Indeed, as has been noted, “As late as 1867, blacks were enfranchised in only five New England states and, subject to a discriminatory property requirement, in New York. State after state rejected black suffrage proposals in popular referenda between 1865 and 1867: Minnesota, Wisconsin, Connecticut, Kansas, Ohio, and New York.” Ratified in 1870, the 15th Amendment changed all of those practices as a constitutional imperative.

As with the 13th and 14th Amendments, the protections of the 15th Amendment can be enforced directly by the courts, through a civil action brought under 42 U.S.C. § 1983. During the early part of the formalist era, the Court made clear that laws intentionally discriminating on the basis of race were invalid. Using ancestry as a proxy for race in determining voting qualifications has also been declared unconstitutional.

---

77 Aynes, supra note 19, at 314.

79 Guinn v. United States, 238 U.S. 347, 363 (1915) (the court struck down a grandfather clause which exempted from a literacy test for voting all lineal descendants of persons entitled to vote or residing in some foreign nation on January 1, 1866).

80 Neal v. Delaware, 103 U.S. 370, 390-97 (1881) (adoption of the 15th Amendment rendered inoperative a provision in the then-existing Constitution of Delaware, whereby the right of suffrage was limited to the white race; a statute confining the selection of jurors to persons possessing the qualifications of electors is enlarged in its operation so as to embrace all those who, by the Constitution of the State, as modified by the 15th Amendment, are entitled to vote).

During the early and mid-1900s, many states disenfranchised African-Americans from voting by the use of grandfather clauses, procedural hurdles, primary elections open only to whites, improper voting challenges, racial gerrymandering, and discriminatory application of voting tests. These efforts were gradually struck down in a long series of cases decided during formalist and Holmesian eras. Some of these cases used the 15th Amendment, and some of them found a lack of equal protection under the 14th Amendment. A few such cases continued to come before the Court during the instrumentalist era.

Throughout all of this time there were on the books a number of statutes enacted by Congress that were intended to prevent racial discrimination in voting practices. For example, the Enforcement Act of 1870 made it illegal for public officials or private persons to obstruct the right to vote. In 1871, Congress created some federal supervision of elections by requiring the certification of election returns. And, during the first part of the instrumentalist era, there were renewed efforts designed to enhance judicial enforcement of the Constitution. For example, the Civil Rights Act of 1957 empowered the Attorney General to sue to enjoin public and private racial interference with the right to vote. Later statutes gave the Attorney General the right to see local records and authorized courts to register voters in areas of systematic voting discrimination. All of these efforts were approved by the Court as “appropriate” legislation.

---

82 Nixon v. Herndon, 273 U.S. 536 (1927) (blacks denied the vote in a primary election; 14th Amendment violated); Lane v. Wilson, 307 U.S. 268 (1939) (15th Amendment violated by statute granting voters not qualifying under a grandfather clause only 12 days in which to register to vote); Nixon v. Condon, 286 U.S. 73 (1932) (exclusion of voters on racial grounds by a party executive committee authorized to do so under state law violates the 14th Amendment); Smith v. Allwright, 321 U.S. 649 (1944) (15th Amendment must be complied with during primary elections); Terry v. Adams, 345 U.S. 461 (1953) (15th Amendment is violated by a state which allows the operation of an all-white primary that in practice determines the outcome of Democratic primary elections).

83 Gomillion v. Lightfoot, 364 U.S. 339 (1960) (drawing city boundaries to exclude almost all black voters violates the 15th Amendment); Louisiana v. United States, 380 U.S. 145 (1965) (15th Amendment violated by granting registrars unreviewable discretion in deciding who understands a state or federal constitutional provision and thus who may vote, where that discretion had been used to deny blacks the right to vote).

84 16 Stat. 170.

85 16 Stat. 433.

86 71 Stat. 634.

87 74 Stat. 86.

Unfortunately, all these judicial remedies and congressional statutes dealt with confined situations and were circumvented on a large scale in some states. As a practical matter, most African-Americans were denied meaningful voting rights in the South from the 1880s through the mid-1960s, as discussed at § 14.1 n.1.

The turning point came when Congress, to provide more effective enforcement of the 15th Amendment, enacted the Voting Rights Act of 1965.89 The Act created a coverage formula and provided many remedies if a political subdivision was covered. Coverage applied to any state, county, parish, or similar political subdivision that on November 1, 1964 was determined by the Attorney General to maintain a “test or device” to qualify voting rights where less than 50% of its voting age residents were registered on November 1, 1964 or voted in that year’s presidential election. The term “test or device” was defined as a requirement that the registrant be able to read or interpret any matter, demonstrate any educational achievement or knowledge of any particular subject, or possess good moral character, or prove his voting qualification by the voucher of registered voters or others.90

If these criteria were met, the Attorney General could suspend voting tests and send federal voting examiners into the state. Under the Voting Rights Act, a state could block enforcement by proving in court that it had not engaged in racial discrimination in voting.91 A covered state or political subdivision could not change its election qualifications or procedures without approval of the Attorney General.92 Although phrased in race-neutral terms, the states or political subdivisions covered by the Act were predominantly those where the less than 50% registration of voting age residents had been caused by denial of voting rights to minorities, particularly African-Americans in the South.

In South Carolina v. Katzenbach,93 the Court upheld the Voting Rights Act as “appropriate” legislation. The majority opinion by Chief Justice Warren established several principles that were thereafter applied by the Court during the instrumentalist era:

1. “Congress may use any rational means to effectuate the constitutional prohibition of racial discrimination in voting.”
2. The determination of what means are rational is to be made by applying the standard announced in McCulloch v. Maryland regarding the express powers of Congress as related to the reserved powers of the States,”
3. Congressional power is not limited to forbidding violations of the 15th Amendment; Congress may create specific remedies, and the remedies provided by the Voting Rights

---

90 Id. § 1973b(b).
91 Id. § 1973b(a), (d).
92 Id. § 1973(b).
Act are rational in both theory and practice as a means of combating the evils revealed by congressional investigations.\textsuperscript{94}

Congress later abolished literacy tests on a nationwide basis, and the Court held this constitutional in 1970.\textsuperscript{95} However, the string of court victories for civil rights groups in cases on race discrimination in voting came to a halt when the court ruled in 1980, in \textit{Mobile v. Bolden},\textsuperscript{96} that Congress intended that laws which “deny or abridge” the right to vote be identified by proof of discriminatory purpose, not merely discriminatory effects. This holding set off a heated debate in Congress, which was legislating to extend the Act. Civil rights groups said that the purpose test imposed an unduly burdensome hurdle in litigation. Supporters of \textit{Mobile v. Bolden} said that a results standard would lead to the eventual use of quotas and racially proportional representation. A compromise was finally agreed upon, signed by President Reagan in 1982, and codified at 42 U.S.C. § 1973, which provides:

2(a) “[n]o voting qualification or prerequisite to voting or standard, practice, or procedure shall be imposed or applied [in] a manner which results in a denial or abridgement of the right [to] vote on account of race or color, or in contravention of the guarantees [provided in subsection (b)];

2(b) [A violation is established] “if, based on the totality of circumstances, it is shown that the political processes leading to nomination or election [are] not equally open to participation by members of a [protected] class of citizens [in] that its members have less opportunity than other members of the electorate to participate in the political process and to elect representatives of their choice. The extent to which members of a protected class have been elected to office [is] one circumstance which may be considered: \textit{Provided}, That nothing in this section establishes a right to have members of a protected class elected in numbers equal to their proportion of the population.”

The above compromise qualifies the results orientation announced in § 2(a) with violations limited in § 2(b) to situations in which political processes are not equally open to members of a protected class, and the rejection in § 2(b) of any right to proportional representation.

As the Court has moved into the post-instrumentalist era, its opinions have expressed an increasing concern that congressional remedies not be primarily an effort to enhance elected minority representation, rather than an effort to remedy past race discrimination in voting and to prevent such discrimination in the future. The series of cases includes a transformation of what is considered “appropriate” under the 14\textsuperscript{th} as well as the 15\textsuperscript{th} Amendment, it being assumed that the word has the same meaning for both Amendments. The cases trace back to \textit{South Carolina v. Katzenbach} and \textit{Katzenbach v. Morgan}. They are discussed at §§ 28.3-28.4, along with other cases dealing with the issue of congressional enforcement of the Civil War Amendments.

\textsuperscript{94} \textit{Id.} at 324-26, \textit{citing McCulloch}, 17 U.S. 316, 421 (1819).

\textsuperscript{96} 446 U.S. 55, 62-65 (1980).
The second line of post-instrumentalist cases relating to the 15th Amendment ban on race discrimination in voting have dealt with the inappropriate use of race as a predominant guide in redistricting. Although the cases relate ultimately to that right, the Court has dealt with the matter under the Equal Protection Clause of the 14th Amendment. These cases are discussed at § 26.2.1.5.
CHAPTER 26: THE EQUAL PROTECTION CLAUSE

The Equal Protection Clause of § 1 of the 14th Amendment provides: "No State shall ... deny to any person within its jurisdiction the equal protection of the laws." By explicit text, this provision applies only to "State" action, i.e., the actions of states and their political subdivisions, cities and counties. The federal government is not limited by the text of the 14th Amendment. However, in 1954, the Court held in Bolling v. Sharpe, discussed at § 26.2.3.1.B n.178, that the Fifth Amendment's Due Process Clause, which does limit the federal government, has an Equal Protection "branch," so that the Equal Protection Clause of the 14th Amendment, which textually applies only to "States," applies to the federal government through the Fifth Amendment's Due Process Clause. To reach this result, the Court stated in Bolling that "discrimination may be so unjustifiable as to be violative of due process."

In a later case, Weinberger v. Wiesenfeld, the Court noted that the "Court's approach to Fifth Amendment equal protection claims has always been precisely the same as to equal protection claims under the Fourteenth Amendment." This has remained Court doctrine, despite occasional dicta to the contrary, as in Hampton v. Mow Sun Wong, where the Court stated, "[T]he two protections are not always coextensive. Not only does the language of the two Amendments differ, but more importantly, there may be overriding national interests which justify selective federal legislation that would be unacceptable for an individual state." The Court stated in 1995 in Adarand Constructors, Inc. v. Pena, "[E]qual protection obligations imposed by the Fifth and Fourteenth Amendments [are] indistinguishable. . . . We do not understand a few contrary suggestions appearing in cases in which we found special deference to the political branches of the Federal Government to be appropriate [citing Hampton, discussed at § 26.2.2.2 nn.346-47] to detract from this general rule." Thus, Equal Protection Clause principles apply today to any form of "state action," whether federal, state, or local governmental action, or private action "fairly attributable" to the government, as discussed under the state action doctrine at § 21.1. As a matter of pleading, one pleads under the Equal Protection branch of the Fifth Amendment Due Process Clause for challenges to the federal government, and under the Equal Protection Clause of the 14th Amendment for challenges to state and local action.

The Court’s decision in Bolling was unanimous, and no Justice since Bolling has expressed disagreement with the proposition that equal protection principles apply to the federal government through the Fifth Amendment Due Process Clause. Admittedly, arguments can be made that prior

---

3  426 U.S. 88, 100 (1976).
to the 14th Amendment the federal government was not bound, and Congress did not consider itself bound, by equal protection principles. Further, it can be argued that nothing in the history or drafting of the 14th Amendment, or congressional practice soon thereafter, was intended to change that result. Indeed, the text that became the Equal Protection Clause “expressly bound both the states and the national government when originally presented to the Joint Committee on Reconstruction by Thaddeus Stevens on April 21, 1866,” but after “a week of consideration, the Joint Committee removed the provision's express application to the federal government when on April 28 – after Republican party caucusing – it replaced Stevens's original proposal with John Bingham's substitute formulation [which became the current version with its state-centered text] just before finalizing its workproduct.”6 Nevertheless, given the unanimous view of the Justices since Bolling to the contrary, application of equal protection principles to the federal government is, practically speaking, a matter of “settled law.” “Settled law” is defined at § 4.3.2 nn.79-85.

Binding all levels of government to principles of equal protection is consistent not only with a literal commitment to equal citizenship of a society at the formalist Stage 4 level of moral reasoning, discussed at § 15.4.1 nn.60-65, but also is consistent with the commitment of a society at Stage 6 to giving each individual equal concern and respect, discussed at § 15.4.1 nn.77-79, including those individuals traditionally or customarily discrimination against at Stage 4. In America, this included minorities, women, the mentally or physically disabled, and illegitimate children, among others. It is also consistent with full elaboration of the meaning of the Declaration of Independence and its promise that all individuals are endowed with equal inalienable rights to life, liberty, and the pursuit of happiness, discussed at § 15.4.1 n.80. For this reason, if the Court ever changed this aspect of equal protection doctrine, political pressures based upon broad-based belief today in rights to equal treatment would likely cause Congress to propose, and 3/4 of the states to ratify, a constitutional amendment binding the federal government to equal protection principles anyway.

---

6 Siegel, supra note 5, at 571-72. On the history and drafting of the 14th Amendment regarding applicability to the federal government, see generally id. at 547-90; David E. Bernstein, Bolling, Equal Protection, Due Process and Lochnerphobia, 93 Geo. L.J. 1253, 1257-61 (2005) (summarizing scholarly critiques of Bolling from the perspective of original intent, including noting that while John Hart Ely in his book, Democracy and Distrust 32 (1980), called the Bolling decision "gibberish both syntactically and historically," writing twenty years or so later he argued that "it was the office of the Equal Protection Clause unequivocally to apply to the states a command of equality of the sort that the original framers, and [the Supreme] Court among others, had already acknowledged in various contexts to be constitutionally applicable to the federal government." John Hart Ely, John Hart Ely (concurring in the judgment except as to the remedy), in What Brown v. Board of Education Should Have Said 135, 139 (Jack M. Balkin ed., 2001)).
By explicit text, the Equal Protection Clause applies to “any person.” Thus, it is not limited to “citizens.” Aliens are thus protected by the clause, as discussed at § 26.2.2. Corporations, as well as partnerships or individual proprietorships, have also been held to be “persons” entitled to equal protection of the laws.7 The clause is also not limited to protecting only “groups” or “classes” of individuals from discrimination. The Court said in 2000 in Village of Willowbrook v. Olech,8 “[T]he purpose of the equal protection clause of the 14th Amendment is to secure every person within the State’s jurisdiction against intentional and arbitrary discrimination, whether occasioned by express terms of a statute or by its improper execution through duly constituted agents.” The Court explained that the plaintiff need not allege membership in a class that suffered discrimination. It said, “Our cases have recognized successful equal protection claims brought by a ‘class of one,’ where the plaintiff alleges that she has been intentionally treated differently from others similarly situated and that there is no rational basis for the difference in treatment.”9

Despite the straightforward application of these terms in the Equal Protection Clause, determining what constitutes “equal protection of the laws” has been difficult. The term “equal protection” does not define itself. Logically, all laws, by drawing classifications between permitted and prohibited conduct, treat some persons differently than others – that is the nature of legislation. Thus, mere different treatment does not constitute a denial of equal protection of the laws, for every law treats some persons differently than others.9 However, as stated in one early case in 1897, Gulf, Colorado & Santa Fe Railroad Co. v. Ellis,10 classifications in the law "must always rest on some difference which bears a reasonable and just relation to the act in respect to which the classification is proposed, and can never be made arbitrarily and without any such basis."

In applying this test, the Court stated in Railway Express Agency, Inc. v. New York,11 “It is by such practical considerations based on experience rather than by theoretical inconsistencies that the question of equal protection is to be answered.” Discussing the requirement of a “reasonable” relationship, the Court noted in 1992 in Nordlinger v. Hahn:

---

7 See Gulf, Colorado & Santa Fe R. Co. v. Ellis, 165 U.S. 150, 154 (1897), and cases cited therein. In 1886, the Court assumed that corporations were "persons" under the Equal Protection Clause in Santa Clara County v. Southern Pac. R. Co., 118 U.S. 394, 410-11 (1886), and the Court squarely held that two years later in Pembina Consol. Silver Mining & Milling Co. v. Pennsylvania, 125 U.S. 181, 189-90 (1888).

8 528 U.S. 562, 564 (2000). See generally Lauth v. McCollum, 424 F.3d 631, 632-34 (7th Cir. 2005) (Posner, J., opinion) (discussing difficulty of proving in “class of one” cases that action was motivated by illegitimate “animus” or was not conceivably “rationally related” to legitimate ends).

9 See generally Peter Westen, The Empty Idea of Equality, 85 Harv. L. Rev. 537 (1982) (discussing the need for some substantive theory to determine which kinds of unequal treatment are permissible versus which kinds of unequal treatment are not permissible).

10 165 U.S. 150, 155 (1897).

As a general rule, “legislatures are presumed to have acted within their constitutional power despite the fact that, in practice, their laws result in some inequality.” . . . Accordingly, this Court's cases are clear that, unless a classification warrants some form of heightened review because it jeopardizes exercise of a fundamental right or categorizes on the basis of an inherently suspect characteristic, the Equal Protection Clause requires only that the classification rationally further a legitimate state interest.12

The elements of this “rational” basis review are discussed at § 26.1.1.1. The elements of “heightened review” are discussed at § 26.1.1.2. The factors used by the Court to determine if a fundamental right or an inherently suspect characteristic is involved are discussed at § 26.1.2. Additional elements of the structure of Equal Protection Clause review related to the “presumption” of constitutionality mentioned in Nordlinger are discussed at §§ 26.1.3 & 26.1.4.

§ 26.1.1 Equal Protection Standards of Review

§ 26.1.1.1 The Rational Basis Test

As the Court noted in Nordlinger v. Hahn, cited at § 26.1 n.12, “[U]nless a classification warrants some form of heightened review because it jeopardizes exercise of a fundamental right or categorizes on the basis of an inherently suspect characteristic, the Equal Protection Clause requires only that the classification rationally further a legitimate state interest.” To determine whether a statute “rationally furthers a legitimate state interest,” the Court considers three things.

The first inquiry is what government ends, or interests, support the statute’s constitutionality. Under rational basis review, the government ends supported by the statute must be “legitimate.” Legitimate ends are those within the usual “police power” of the state, that is, they involve the health, safety, or general welfare of the people. In practice, the Court presumes the legislature is motivated by legitimate interests, leaving the burden on the challenger to prove that the legislature was motivated by illegitimate interests.13

The specific history surrounding adoption of the Equal Protection Clause indicates that one clear purpose of the clause was to outlaw the “Black Codes” that had proliferated in many Southern states during the post-Civil War period after slavery had been outlawed by the 13th Amendment. The Black Codes imposed severe legal restrictions on newly freed African-Americans. The Codes typically prohibited blacks from voting or holding office, serving on juries, or marrying whites. The Codes gave employers contract rights and methods of enforcing contracts against black laborers that were not available in contracts with white laborers. Further, the Codes gave landowners methods of disciplining black tenants and field hands that they were not legally authorized to use against white tenants and field hands. The Black Codes authorized employers and landowners, as well as ordinary whites organized into patrols, to enforce an informal, customary system of controls that restricted blacks' freedom to move from place to place through discriminatory application of

12 505 U.S. 1, 10 (1992).
vagrancy laws. In addition, blacks in the South were denied access to local systems of civil and criminal justice when they sought to redress violations of their rights and punishment for crimes committed against them.\textsuperscript{14}

In response, Congress enacted the Civil Rights Act of 1866, which declared that all persons born in the United States were "citizens of the United States" and listed their rights, including the right to own property, the right to enter into contracts without racial discrimination, and the right to be safe from corrupt law enforcement practices. One purpose of the 14\textsuperscript{th} Amendment was to make it clear that the Civil Rights Act of 1866 was constitutional.\textsuperscript{15} Given this history, the Court has always held that a bare desire to discriminate on racial grounds constitutes an illegitimate governmental interest.\textsuperscript{16} The Court has also held that "if the constitutional conception of `equal protection of the laws’ means anything, it must at the very least mean that a bare congressional desire to harm a politically unpopular group cannot constitute a legitimate governmental interest."\textsuperscript{17} In a sequence of cases, the Court has applied this principle to both federal and state action involving discrimination against "hippies" wishing to live in a commune;\textsuperscript{18} prejudice against persons who enter into an interracial marriage;\textsuperscript{19} prejudice against the mentally impaired;\textsuperscript{20} and animus against individuals

\textsuperscript{14} See generally Robert J. Kaczorowski, Congress’s Power to Enforce the Fourteenth Amendment Rights: Lessons from Federal Remedies the Framers Enacted, 42 Harv. J. based upon their sexual orientation.\textsuperscript{21}

Once it is determined that the statute is advancing a “legitimate state interest,” the next inquiry turns to whether the statute “rationally furthers” that interest. This inquiry focuses on whether the statute’s means are rationally related to furthering the statute’s legitimate ends. As with the presumption that the statute’s ends are legitimate, in practice the Court presumes the statute’s means are “rationally related” to furthering its ends, leaving the burden on the challenger to prove that no rational relationship exists.\textsuperscript{22}

In addition, in applying this rational review test, the Court grants substantial deference to legislative judgment regarding the rationality of the legislative classification because, as the Court has often observed, the judiciary does not sit “as a superlegislature to judge the wisdom or desirability of legislative policy determinations made in areas that neither affect fundamental rights nor proceed along suspect lines.”\textsuperscript{23} Thus, it has been noted, “The traditional deference both to legislative purpose \textit{i.e., legislative interests or ends] and to legislative selections among means continues, on the whole, to make the rationality requirement largely equivalent to a strong presumption of constitutionality.”\textsuperscript{24} For this reason, this standard of review is often called minimum rational review, because the government action only need be minimally rational to be upheld.

Under the Court’s doctrine, this “rational relationship” inquiry has two parts. The first aspect focuses on the statute’s “underinclusiveness” – that is, to what extent does the statute fail to regulate all individuals who are part of some problem. A statute may be held to be “irrationally underinclusive” if that statute fails to regulate certain individuals who are an equal part, or perhaps even a greater part, of creating some problem as are those individuals whom the statute does regulate, unless there is some rational explanation for why the persons who are equally or a greater part of some problem are not being equally regulated. A statute that does not regulate all persons who are part of some problem, but which regulates the greater part of the problem first, will be held to be “rational” because, as the Court has stated, “[e]qual protection doesn't require that all evils of the same genus be eliminated or none at all.”\textsuperscript{25} The legislature can adopt a step-by-step approach, as long as each step is rational in terms of which part of the problem is regulated first.

\textsuperscript{21} Romer v. Evans, 517 U.S. 620 (1996) (“animus” against a politically unpopular group, in this case animus based upon sexual orientation, an illegitimate governmental interest).

Tribe, \textit{American Constitutional Law} § 16.3, at 1442-43 (2d ed. 1988). \textit{See also} Erwin Chemerinsky, \textit{Constitutional Law: Principles and Policies} 652 (2d ed. 2002) (“The Supreme Court generally has been extremely deferential to the government when applying the rational basis test. . . . [I]t is very rare for the Supreme Court to find that a law fails the rational basis test.”).

A classic example of the Court’s “underinclusiveness” analysis occurred in Railway Express Agency, Inc. v. New York. In this case, involving a ban on advertising on vehicles, the Court upheld an exemption for vehicles engaged in the usual business of the owner and not used mainly for advertising. The legislature’s legitimate interest in the case was a concern that advertisements on the sides of trucks would be a distraction to other drivers and pedestrians, and that distraction would cause a traffic safety problem. Such distraction would be caused both by ads for other businesses on the side of a truck, which was prohibited under the statute, and by ads for the truck owner’s own business, which was permitted. Despite this underinclusiveness in the statute, Justice Douglas wrote for the Court that the underinclusiveness was rational because the local authorities "may well have concluded that those who advertised their own wares on their trucks do not present the same traffic problem in view of the nature or extent of the advertising which they use." Thus, the legislature was attacking the greater part of the problem first.

Presumably, in reaching this conclusion, Justice Douglas had in mind that the legislative might have concluded that the nature of the ads for other businesses were more likely to be eye-catching, since the company was paying for the advertising space, and thus their nature was more likely to be distracting. In addition, the legislature may well have concluded that the extent of such advertising was likely to be greater than the number of owners placing ads for their own business on the side of their trucks. It is important to note the way in which the Court’s typical deference to the legislature influenced the outcome of this case. The Court did not say in Railway Express that the Court was convinced that the nature and extent of the advertising on the side of trucks was different between ads for hire and ads for one’s own business. Nor did the government have the burdening of introducing evidence into the case record on this point. The statute was held to be constitutional once the Court decided that the legislature “may well have concluded” the nature and extent of the advertising was different, and that such a conclusion was not shown by the challenger to be “irrational.”

The second part of the “rationally furthers” or “rational relationship” inquiry focuses on the statute’s “overinclusiveness” – that is, the extent to which the statute imposes burdens on individuals who are not the focus of the statute’s regulation. Ideally, of course, a statute should only regulate those persons who are part of creating some problem, and not regulate innocent persons. However, as the Court has noted, “If the classification has some ‘reasonable basis,’ it does not offend the Constitution simply because the classification ‘is not made with mathematical nicety or because in practice it results in some inequality.’” On the other hand, a statute that burdens innocent persons for no rational reason will be held to be irrationally overinclusive. As the Court has noted, “The question is whether Congress achieved its purpose in a patently arbitrary or irrational way.”

---

27 Id. at 110.

29 Fritz, 449 U.S. at 177.
The case of *New York City Transit Authority v. Beazer*\(^{30}\) provides a good example of the Court’s overinclusiveness analysis. *Beazer* involved a New York City Transit Authority policy not to employ persons who use methadone. At the time, methadone was used in New York as a treatment program to help individuals cure their addiction to heroin. Because of traffic safety concerns, the Transit Authority did not want persons on heroin working for the Transit Authority, and there was evidence that some individuals in the methadone treatment program, perhaps as many as 20-30%, would relapse and start taking heroin again.

Although the complete ban on employment was overinclusive, in that perhaps 70% of the methadone users would have no on-going drug problem with heroin, the Court held that the ban was not “irrationally” overinclusive. Absent proof that the “offending 30% could be excluded as cheaply and effectively in the absence of the rule,” the Court held that “the degree of rationality” was sufficient to make the ban constitutional. The Court acknowledged that the Transit Authority’s rule was likely “broadly than necessary to exclude those methadone users who are not actually qualified to work” and that it may be “unwise for a large employer like [the Transit Authority] to rely on a general rule instead of individualized consideration of every job applicant,” but that “represents a policy choice . . . made by that branch of Government vested with the power to make such choices.”\(^{31}\)

### § 26.1.1.2 Heightened Scrutiny Tests

As indicated in *Nordlinger v. Hahn*, cited at § 26.1 n.12, “[U]nless a classification warrants some form of heightened review because it jeopardizes exercise of a fundamental right or categorizes on the basis of an inherently suspect characteristic, the Equal Protection Clause requires only that the classification rationally further a legitimate state interest.” Where a classification does jeopardizes a fundamental right or categorizes based on a suspect characteristic, however, the Court typically will apply some form of heightened review. The factors used by the Court to determine if a fundamental right or a suspect characteristic is involved are discussed at § 26.1.2. The remainder of this section will discuss the elements of heightened Equal Protection Clause review.

The creation of these heightened levels of review came about gradually. As discussed at § 26.1.2.2 nn.68-72, the possibility that the Court might apply a higher standard of review than rational basis when considering constitutional clauses that protect civil rights was first suggested explicitly in 1938 in footnote 4 of *United States v. Carolene Products Co.*\(^{32}\) In later cases the phrase that has come to be associated with the highest standard of review is "strict scrutiny."

The first actual use of the term "strict scrutiny" to invalidate a law appears to have been by Justice Douglas in 1942 in *Skinner v. Oklahoma*.\(^{33}\) A similar phrase, "most rigid scrutiny," was mentioned

\(^{31}\) Id. at 592 (citations omitted).

\(^{33}\) 316 U.S. 535, 541 (1942).
by the Court in 1944 in one of the Japanese internment cases, *Korematsu v. United States*.34 In *Griswold v. Connecticut*,35 Justice Douglas stated in 1965 that laws that "sweep unnecessarily broadly" may not constitutionally be employed. In 1967, the language of *Korematsu* was alluded to in *Loving v. Virginia*,36 where miscegenation statutes were struck down. Chief Justice Warren stated, "At the very least, the Equal Protection Clause demands that racial classifications, especially in criminal statutes, be subjected to the ‘most rigid scrutiny.’" The Court in *Graham v. Richardson*,37 in 1971, spoke of "strict judicial scrutiny" for classifications based on alienage, nationality, or race. Current judicial usage, which speaks of "strict scrutiny," seems to have been cemented in place in the 1973 opinion of Justice Brennan in *Frontiero v. Richardson*,38 an opinion which announced the judgment of the Court, but which was joined by only a plurality composed of Justices Douglas, White, and Marshall. Justice Brennan wrote that classifications based on sex, like those based on race, alienage, or national origin, "are inherently suspect, and must therefore be subjected to strict judicial scrutiny."

As to what kind of governmental interest will satisfy strict scrutiny, the first use of the term "compelling" to describe the required government interest appears to have been made in 1957 by Justice Frankfurter, concurring in *Sweezy v. New Hampshire*.39 In 1967, the Court referred in *Loving v. Virginia*40 to a "legitimate overriding purpose independent of racial discrimination." The use of the term "compelling" government interest, now used in formulaic fashion by the Court, was cemented in place by Justice Blackmun, writing in 1973 in *Roe v. Wade*,41 where he said, "Where certain ‘fundamental rights’ are involved, the Court has held that regulations limiting these rights may be justified only by a ‘compelling state interest,’ and that legislative enactments must be narrowly drawn to express only the legitimate interests at stake."

In 1976, the Court announced in *Craig v. Boren* a third standard of scrutiny between rational basis review and strict scrutiny: intermediate scrutiny. As phrased in *Craig v. Boren*,42 at intermediate

42 429 U.S. 190, 197 (1976).
scrutiny the statute “must serve important governmental objectives and must be substantially related
to achievement of those objectives.” Occasionally, the term “mid-level review” has been used to refer
to this level of scrutiny.43 The more common term, however, is “intermediate review.” The
Court has indicated that this intermediate review applies to classifications which, though not
“suspect,” are “quasi-suspect,” as for gender discrimination, discussed at § 26.3.1.2.

As applied, these two versions of heightened scrutiny – strict scrutiny (for suspect characteristics)
and intermediate review (for quasi-suspect characteristics) – track the three inquiries that the Court
uses at rational basis review, but at each level increase the difficulty for the government to satisfy
each inquiry. Thus, with respect to governmental interests, at rational review the government need
only advance “legitimate” governmental interests for the government action to be constitutional.
At intermediate review, the government must advance “important” or “substantial” governmental
interests. At strict scrutiny, the governmental interests must be not only important or substantial,
but “overriding” or “compelling.”

The Court has noted that certain interests, like administrative cost considerations, while legitimate,
are typically not important or substantial, and thus cannot be used to justify a statute at intermediate
scrutiny.44 On the other hand, certain interests, like diversity in broadcast programming, may be
important, but are not compelling.45 Thus, they could be used to justify a statute at intermediate
scrutiny, but not at strict scrutiny. Finally, certain interests, like remedying one’s own prior racial
discrimination, are compelling, and thus can be used to justify a statute at strict scrutiny.46 Examples
of other interests that have been assumed to be compelling by judges while deciding cases are
national security and military defense,47 compliance with the Voting Rights Act,48 improving the
delivery of health-care services to communities currently underserved,49 operation of a research-

oriented elementary school dedicated to improving the quality of education in urban public
schools, and the reduction of racial isolation in a situation that appeared to be de facto
segregation.

Once the governmental interest part of the inquiry is finished, the attention then turns, as under
rational basis review, to the way in which the statute’s means further these ends. At intermediate
scrutiny, the statute must be “substantially related” to advancing its ends, not merely “rationally
related,” as under rational basis review. Under strict scrutiny, the statute must be “necessary” to
further the statute’s ends, which means, in part, that the statute must be the “least restrictive” or
“least burdensome” way of effectively advancing the governmental ends. As under rational basis
review, this inquiry has two parts: an underinclusiveness inquiry and an overinclusiveness inquiry.

With regard to the underinclusiveness inquiry, at intermediate review the statute must be
“substantially related” to achieving its ends. Thus, the statute must regulate “substantially” all of
the individuals who are part of creating some problem. A statute which is so poorly drafted that it
does not regulate such a “substantial” number of problem individuals will be too underinclusive to
satisfy intermediate review. For example, the ad ban in *Railway Express*, discussed at § 26.1.1.1
nn.26-27, while rational, probably was not “substantially related” to achieving its ends because its
exception of ads for the truck owners’ own business probably left too many individuals unregulated
by the act to satisfy the substantial relationship test.

This analysis underscores an important fact about the underinclusiveness inquiry. Failing this part
of the test does not mean that the legislature cannot regulate at all. It means only that the current
way the legislature has drawn the line is impermissible. Thus, as a matter of equal protection law,
if New York City had banned all advertisements on the side of all trucks, that would have raised no
problem of underinclusiveness under either rational basis or intermediate review, since all
individuals whose advertisements on the side of trucks could cause problems of distraction would
have been regulated. Since 1976, however, such a regulation of advertisements would raise a First
Amendment problem under the Court’s current commercial speech doctrine, discussed at § 30.3.2.

With regard to overinclusiveness, the statute at intermediate review must not burden “substantially
more individuals than necessary” to achieve its ends. The *Beazer* case, discussed at § 26.1.1.1
nn.30-31, provides a good example of this. While the complete ban on hiring methadone users was
held rational by the Court in *Beazer*, had the Court applied intermediate review, the fact that

50 Hunter ex rel. Brand v. Regents of the Univ. of Cal., 190 F.3d 1061, 1063-64 (9th Cir. 1999).
51 Brewer v. The West Irondequoit Central Sch. Dist., 212 F.3d 738, 752 (2d Cir. 2000).
52 *See* Chemerinsky, *supra* note 24, at 645 (“Under intermediate scrutiny, a law is upheld if it is
substantially related to an important government purpose. . . . The means used need not be
necessary, but must have a ‘substantial relationship’ to the end being sought.”).
53 *See id.* (“Under strict scrutiny a law is upheld if it is proved necessary to achieve a
compelling government interest. The government . . . must show that it cannot achieve its objective
through any less discriminatory alternative.”).
according to the Court’s opinion probably 70% of the persons burdened by the Act had no heroin problem would likely make that statute substantially more burdensome than it needed to be. This would be true as long as some more individualized consideration of applicants would be more effective in weeding out the problem candidates, or if some more narrowly tailored ban would effectively advance the government’s interest, such as a “rule denying methadone users any employment unless they had been undergoing treatment for at least a year and [a] rule denying even the most senior and reliable methadone users any of the more dangerous jobs in the system.” At intermediate review, the extra costs associated with more individualized consideration of applicants would likely not be an effective argument to justify a complete ban, since saving administrative costs, while legitimate, and thus appropriate to use under rational basis review, is typically not an important or substantial governmental interest that can be used to justify governmental action at intermediate review.

At strict scrutiny, the government has an even more difficult time justifying its action. With regard to the overinclusiveness inquiry, the government must show that its action is the “least restrictive” or “least burdensome” way to advance effectively the government’s interests. This means that if there is any way the government could burden less those individuals who are not actually part of the problem, and yet still effectively advance its interests, the government must adopt that alternative. Of course, the government need not adopt a less burdensome alternative that would not effectively advance its ends, as the government may burden individuals if “necessary” to achieve its ends.

With regard to the underinclusiveness inquiry, the statute must also be “necessary” to achieve its ends. This means that any unnecessary underinclusiveness will render the statute unconstitutional at strict scrutiny. Phrased in the affirmative, this means that the statute must be “directly related,” as well as “substantially” and “rationally” related, to achieving its ends. Only such a direct connection between means and ends, that is, to the extent possible directly linking all those who are the cause of some problem with the regulation, will satisfy the strict scrutiny underinclusiveness test.

The Court typically phrases this requirement in the negative, that is, by stating that at strict scrutiny the statute must be “necessary” to advance the government’s compelling interest. However, the more positive way of phrasing this requirement – that there be a “direct relationship” between means and ends – seems easier to understand and apply in most circumstances. It is further clear that this requirement of a direct relationship does exist at strict scrutiny. As discussed at § 30.3.2.1 nn.217-30, commercial speech cases have always involved a less rigorous form of scrutiny than traditional First Amendment content-based regulations of speech, which trigger strict scrutiny. Yet, the Court has stated explicitly that statutes must be “directly related” to advancing the governmental ends under commercial speech doctrine of Central Hudson Gas & Electric Corp. v. Public Service Comm’n, discussed at § 30.3.2.1 nn.228-30. Thus, since a “direct relationship” is required in commercial speech cases, a fortiori such a requirement must be required at strict scrutiny.

54 440 U.S. at 589.

55 See supra note 44.

56 See supra note 53.
Finally, it is important to note that since strict scrutiny is a more vigorous form of scrutiny than rational review or intermediate review, implicit in the requirement of a direct relationship is the requirement that the statute be rationally and substantially related to meeting the government ends as well. Thus, the best way to understand the Court’s underinclusiveness analysis is to note that at rational basis review the statute must be rationally related to achieving its ends; at intermediate scrutiny the statute must be rationally and substantially related to achieving its ends; at strict scrutiny, the statute must be rationally, substantially, and directly related to achieving its ends.

One example of the difference that the “direct relationship” test makes in deciding Equal Protection Clause cases comes from the race-based affirmative action cases. Under the strict scrutiny approach toward race-based affirmative action programs adopted in Richmond v. J.A. Croson Co., discussed at § 26.2.1.4.C n.234-36, if the state’s compelling government interest is to remedy its own prior racial discrimination, only remedial steps “directly related” to remedying that discrimination will be constitutional. As indicated in Wygant v. Jackson Board of Education, discussed at § 26.2.1.4.C n.226, “indirect” means, such as hiring to create role models to help overcome racial discrimination at some future time, do not satisfy strict scrutiny. In contrast, under intermediate review, as existed for federal race-based affirmative action between 1990 and 1995 under Metro Broadcasting v. FCC, discussed at § 26.2.1.4.D nn.239-41, encouraging broadcast diversity through the “indirect” means of a preference for minority ownership, rather than “direct” regulation of content diversity, was used to satisfy the “substantial relationship” requirement of intermediate review.

Given the myriad ways statutes might be drafted to respond to some problem, it is perhaps not surprising that governments have had a difficult time establishing that the particular statute which the legislature did adopt meets strict scrutiny. In each case, the government must show that the statute adopted was, in fact, directly related to advancing the government’s compelling interest in a manner that employed the least burdensome effective alternative. Specifically, even if a compelling government interest exists, a court can often imagine some alternative statute that would be a less burdensome effective alternative to solving whatever problem exists. If such an alternative statute can be imagined, then the statute actually passed is not “necessary” to advance the government’s interest, and is declared unconstitutional.

A Table summarizing each of the elements of minimum rational review, intermediate review, and strict scrutiny, discussed here at § 26.1.1, appears in Table 7.2, at § 7.2.1 text following n.42.

§ 26.1.2 Determining Whether Heightened Scrutiny Should Apply

§ 26.1.2.1 The Basic Guidelines for Heightened Scrutiny Today

As noted at § 26.1 n.12, under Equal Protection Clause doctrine the Court first must determine what standard of review to adopt in each case – rational review, intermediate scrutiny, or strict scrutiny. The Court does this in each case by considering a myriad of factors that counsel the Court either to defer to legislative judgment, in which case rational review is employed, or counsel the Court to be suspicious of the legislative action, in which case some form of heightened scrutiny is applied. Over time, the Court has clarified the standard of review to be applied in most cases under the Equal Protection Clause, so that lower courts today are supplied with reasonably clear and predictable guidance on what standard of review to apply in most cases. These specific standards of review for
different kinds of Equal Protection Clause cases are discussed at §§ 26.2-26.5. The discussion here will indicate how the Court determines what standard to apply in each case.

From the Court’s opinions, nine separate factors can be identified as potentially relevant in determining what standard of review to apply. The first of these factors, equally relied upon by all four decisionmaking styles, is: (1) whether arguments of text, context, and history suggest that the classification is one the framers and ratifiers would have thought deserves heightened scrutiny. As the Court has noted, “The Court is most vulnerable and comes nearest to illegitimacy when it deals with judge-made law having little or no cognizable roots in the language or design of the Constitution.”\(^{57}\) With regard to the text and history of the Equal Protection Clause, the Court noted as long ago as 1886 that the provisions of the 14th Amendment "are universal in their application, to all persons within the territorial jurisdiction, without regard to any differences of race, or color, or of nationality."\(^{58}\) Thus, cases involving race, ethnicity, or national origin traditionally trigger the highest kind of Equal Protection Clause review – strict scrutiny in today’s terminology.

Two other factors appear more prominently in formalist opinions, as they reflect the formalist emphasis on the task of the judge to follow positive law, not make law, and emphasis on clear and predictable rules. These two factors are: (2) whether, under a proper theory of constitutional interpretation, a fundamental right is involved, particularly a right that appears to be within the specific prohibitions of the Constitution, such as those of the first ten Amendments\(^{59}\); and (3) would a Pandora’s Box be opened up where heightened scrutiny in the case would lead to demands for heightened scrutiny in other similarly situated cases, creating unpredictability in the law.\(^{60}\) The issue of how to determine what constitutes a proper theory of constitutional interpretation to decide if some right is a fundamental right existing in the Constitution is discussed at § 27.1.1.

Two other factors appear more prominently in Holmesian opinions. These relate to the Holmesian preference to defer to legislative and executive decisionmaking, where possible. These factors ask: (4) whether a deficiency exists in the “political process which can ordinarily be expected to bring

\(^{58}\) Yick Wo v. Hopkins, 118 U.S. 356, 369 (1886).

\(^{59}\) See Skinner v. Oklahoma, 316 U.S. 535, 541 (1942) (“Marriage and procreation are fundamental to the very existence and survival of the race. . . .[S]trict scrutiny of the classification which a State makes in a sterilization law is essential.”); United States v. Carolene Products Co., 304 U.S. 144, 152 n.4 (1938) (“There may be narrower scope for operation of the presumption of constitutionality when legislation appears on its face to be within specific prohibitions of the Constitution, such as those of the first ten amendments.”).

\(^{60}\) City of Cleburne v. Cleburne Living Center, 473 U.S. 432, 445-46 (1985) (“[I]f the large and amorphous class of the mentally retarded were deemed quasi-suspect, it would be difficult to find a principled way to distinguish a variety of other groups . . . . One need mention in this respect only the aging, the disabled, the mentally ill, and the infirm.”).
about repeal of undesirable legislation"61; and (5) whether the statute is "directed against particular religious, national, or racial minorities," or reflects "prejudice against discrete and insular minorities" who, because they are discrete and insular, cannot be expected to protect their interests adequately in the legislative process.62 Where such a concern exists with the political process, even Holmesian judges are not prepared to exercise rational review deference. Cases involving higher than minimum rational review based on concern with the political process also include cases where the legislature may be operating in a self-interested capacity, as occurs for state protectionist legislation that raises dormant commerce clause problems, discussed at § 20.3.2.1.C nn.181-84, or the state impairing the obligation of its own contracts under Contracts Clause review, discussed at § 22.1.4 nn.29-33.

Two other factors appear more prominently in natural law opinions. These reflect the basic natural law principle that individuals should be held responsible for their own actions, but that individuals should not be punished for things over which they have no control. These two factors are: (6) whether the classification burdens an immutable characteristic, like race or gender63; and (7) whether the classification burdens an individual for something not the product of the individual’s choice, like status as an illegitimate child or being the child of parents who are illegally in the United States.64

Two final factors appear more prominently in instrumentalist opinions. They reflect the instrumentalist focus on scrutinizing more carefully burdens that the judge feels are the product of wrong-headed thinking and on achieving sound social policy. These factors are: (8) whether the classification is viewed by the judge as a product of false stereotypes about individuals, particularly if part of an historical pattern of such discrimination65; and (9) to what extent the judges are competent to make the substantive decisions required at heightened scrutiny which involve second-guessing legislative judgment as to whether the ends are sufficiently important or compelling, the means are sufficiently narrowly tailored or necessary, and whether any alternatives to the legislation would be effective or not.66 Not surprisingly, instrumentalist judges, with their greater willingness

63 See, e.g., Frontiero v. Richardson, 411 U.S. 677, 686 (1973) (“[S]ex, like race and national origin, is an immutable characteristic determined solely by the accident of birth.”)

64 See, e.g., Plyler v. Doe, 457 U.S. 202, 220 (1982), citing Weber v. Aetna Cas. & Sur. Co., 406 U.S. 164, 175 (1972) (“Imposing disabilities on the . . . child is contrary to the basic concept of our system that legal burdens should bear some relationship to individual responsibility or wrongdoing.”)

65 Frontiero, 411 U.S. at 684 (“There can be no doubt that our Nation has had a long and unfortunate history of sex discrimination . . . [O]ur statute books gradually became laden with gross, stereotyped distinctions between the sexes.”)

66 See, e.g., City of Cleburne v. Cleburne Living Center, 473 U.S. 432, 443 (1985) (“Heightened scrutiny inevitably involves substantive judgments about legislative decisions, and we doubt the
to consider social policy in their decisionmaking, are often more willing to conclude they are competent to make the kind of substantive decisions necessary at heightened scrutiny. Formalist, Holmesian, and natural law judges are less confident about this matter, particularly Holmesian judges with their greater preference for deference to legislative and executive action.\(^67\)

In terms of the two categories under *Nordlinger v. Hahn* that trigger heightened scrutiny – fundamental rights and suspect, or quasi-suspect, characteristics – factor (2) focuses directly on the question of whether a fundamental right exists. Factors (4) - (8) focus on whether a suspect, or quasi-suspect, characteristic is involved. Factor (1) on the framers and ratifiers’ intent, and factors (3) and (9) on concerns with a Pandora’s Box and judicial competence to second-guess legislative judgment, apply in both cases of fundamental rights and suspect, or quasi-suspect, characteristics.

\section*{§ 26.1.2.2 The Carolene Products Decision and Historical Notes on What Level of Scrutiny to Apply}

In the foundational case regarding what level of scrutiny to apply, *United States v. Carolene Products Co.*,\(^68\) the Court held in 1938 that in determining whether legislation violates the Due Process Clause the Court will presume the existence of facts supporting the legislative judgment and will ask only whether facts made known or generally assumed "preclude the assumption that the legislation rests upon some rational basis within the knowledge and experience of the legislators." At this point, however, in footnote 4, the Court said that: (1) “there may be a narrower scope for the presumption of constitutionality” when “legislation appears on its face to be within a specific prohibition of the Constitution, such as those of the first ten amendments, which are deemed equally specific when held to be embraced within the Fourteenth." The Court also said that it was not necessary to consider at that time whether a more exacting or searching judicial scrutiny should be brought to bear: (2) "when legislation restricts those political processes which can ordinarily be expected to bring about repeal of undesirable legislation"; or (3) when "statutes [are] directed against particular religious, or national, or racial minorities: prejudice against discrete and insular minorities may be a special condition, which tends seriously to curtail the operation of those political processes ordinarily to be relied upon to protect minorities, and which may call for a correspondingly more searching judicial inquiry."

This footnote was penned by Justice Stone while Louis Lusky served as his law clerk.\(^69\) As Professor Lusky has noted, paragraph one of footnote 4 was added at the suggestion of Chief Justice

\(^{67}\) *Id.* at 443 (majority opinion of formalist, Holmesian, and natural law Justices unwilling to apply heightened scrutiny in *Cleburne*, in an opinion written by Holmesian Justice White; instrumentalist dissent by Justices Brennan, Marshall, and Blackmun more willing to second-guess legislative judgment in the case).

\(^{68}\) 304 U.S. 144, 152-53 & n.4 (1938).

\(^{69}\) See Louis Lusky, By What Right 30 (1993).
Hughes, and rests on different premises than paragraphs two and three. Paragraphs two and three of footnote 4 affirm "self-government" principles: paragraph two affirms a commitment to government "by the people," and paragraph three focuses on government "by the whole people," including discrete and insular minorities. Paragraph one's commitment to specific protections in the Constitution, particularly the first ten Amendments that focus mostly on protecting individuals from the government, is based more on "individual autonomy" concerns, not "self-government." Placed in this context, Professor Lusky has stated that his belief is that footnote 4 was intended to start a dialogue on the Court on what circumstances deserve heightened scrutiny review.

As between concerns with "autonomy" versus "self-government," Holmesian Justices or jurists are likely to place greater weight on self-government, willing to defer to the legislative and executive branches as long as those branches are operating efficiently. Such an approach would agree with Professor Lusky that the "great objective" of government is to "enable people to live together peaceably," and the "single most essential means to that end is the achievement of a sense of universal kinship. . . . Law's primary means of expanding the circle of kinship is to define limits of permissible behavior." As Lusky made clear, he is willing to tolerate significant limits on permissible behavior, and thus significant limits on individual autonomy, in order to create the conditions he thinks are needed for the development of kinship, community, and democratic self-government. Professor Lusky stated, "The initial proposition is simple. . . . It declares that meaningful freedom is maximized . . . in a society where individual actions are subjected to wise controls. Thomas Hobbes so declared in Leviathan (1651)." From this perspective, it is paragraphs two and three of Carolene Products that deserve the greatest weight. This perspective is also evidenced in Professor John Hart Ely’s support for a “representation-reinforcing” model of Equal Protection Clause review.

As Professor Lusky noted, paragraph one's underlying notion of certain fundamental rights deserving heightened scrutiny is based upon "an implicit assumption . . . that this recognition of their special significance by the revered Framers will legitimize extraordinarily intrusive judicial review as implementing the intent of the Framers themselves. The dynamics of government play no part in

75 Id. at 172.
this calculus.”

Nonetheless, the increased scrutiny for certain specified rights does represent a departure from the usual posture of Holmesian deference to government. Thus, the extra amount of scrutiny called for by footnote one of Carolene Products might be too much for some Holmesian judges. For example, Holmesian Justice Felix Frankfurter never tired of pointing out that the Constitution itself makes no differentiation between so-called fundamental rights and other constitutionally protected rights.

Natural law and instrumentalist judges also embrace the concept of fundamental rights. As discussed at § 27.1.1 nn.21-31, such judges have been more willing than formalist and Holmesian judges to branch out and identify through natural law principles or instrumentalist social policy calculations fundamental rights beyond those listed in the first ten Amendments – the so-called unenumerated fundamental rights analysis. As a Holmesian, Professor Lusky naturally lamented this extension. However, even if it is true, as Professor Lusky believed, that some excessive expansion of constitutional rights has been aided by the addition of paragraph one to Carolene Products footnote 4, that does not mean that the concerns of paragraph one should be given short shrift. It may mean instead that a principled way must be found to apply paragraph one in a judicially appropriate and restrained manner, in the same way that Professor Lusky believed that paragraphs two and three can be so applied.

A similar difference among the four decisionmaking styles is reflected in the suspect and quasi-suspect characteristic part of the analysis. Formalists tend to prefer to keep suspect classes closely tied to the framers and ratifiers’ predominant specific historical intent – race, ethnicity, and national origin – and have a great worry concerning a Pandora’s Box effect and judicial second-guessing of legislative judgments. While substantially agreeing with this view, Holmesians are more willing to add those groups who cannot protect themselves adequately in the political process, such as religious minorities, in addition to racial and ethnic minorities, as indicated in Carolene Products footnote 4.

The natural law concern with whether the classification burdens an immutable characteristic, like race or gender, and whether the classification burdens an individual for something not the product

---

78 198 U.S. 45, 75-76 (1905) (Holmes, J., dissenting).

of that individual’s choice, like status as an illegitimate child or being the child of parents who are illegally in the United States, supports intermediate scrutiny for discrimination based upon gender, illegitimacy, or being the child of an illegal immigrant, under quasi-suspect characteristic analysis. As discussed at § 26.2.2.1.B nn.337-42 (children of illegal immigrants), § 26.3.1.2 nn.361-69 (gender discrimination), and § 26.3.2 n.413-16 (illegitimate children), adoption of intermediate scrutiny in each of these three cases was opposed initially by formalist and Holmesian judges.

The instrumentalist greater focus on groups historically victimized by discrimination, and greater willingness to second-guess legislative decisionmaking, has meant that instrumentalist judges have been more willing to apply strict scrutiny in certain cases, like gender discrimination, to which natural law judges only apply intermediate review, as noted at § 26.3.1.2.1 n.362. Further, it has meant a willingness to suggest heightened scrutiny for cases involving the poor, discussed at § 26.4.2 nn.447-49, or the mentally or physically impaired, discussed at § 26.4.5 nn.459-62, with respect to which the other decisionmaking styles have decided to apply only rational review.

§ 26.1.3 The Burden of Proof and What Governmental Interests Can be Considered Under Different Standards of Review

The plaintiff has the burden of proof in cases under rational review. Thus, the Court presumes that the statute or other governmental action is constitutional, and the challenger must prove either that no legitimate interests are advanced by the statute, or that the statute is irrationally underinclusive or overinclusive. In contrast, at intermediate review or strict scrutiny, the government has the burden of justifying its statute or other action. In these cases, the government must show that the statute is substantially related to advancing substantial or important government interests, for intermediate review, or is necessary to advance compelling government interests, for strict scrutiny.

In determining whether a legitimate, important, or compelling interest exists under the first prong of the equal protection tests, the Court has adopted different approaches to what interests can be considered under rational review, intermediate review, and strict scrutiny. Under rational review, the Court has stated that “any conceivable basis” can be used to satisfy the legitimate interest part of the rational review test. The Court has noted, “It is, of course, constitutionally irrelevant whether the reasoning in fact underlay the legislative decision.”

---

In contrast, at strict scrutiny, the Court looks only to actual purposes to determine if a compelling
government interest exists.\textsuperscript{85} Some formalists have indicated a concern with only using actual
purposes given the uncertainty and difficulty in establishing any particular legislative purpose.\textsuperscript{86} Although rejected by a majority of the Court, this concern with determining legislative purpose is
discussed at §§ 6.2.1.1 nn.2-5 & 6.2.1.2 mn.28-29.

Despite this being the doctrine today, occasionally members of the Court seeking more vigorous
protection of individual rights have suggested that something more than “any conceivable interest”
should be required at rational basis scrutiny. Dissenting in \textit{United States Railroad Retirement Board
v. Fritz},\textsuperscript{87} Justice Brennan, joined by Justice Marshall, said the legislative intent must reflect “actual”
purposes even under rational basis review. Dissenting in \textit{Schweiker v. Wilson},\textsuperscript{88} Justice Powell,
joined by Justices Brennan, Marshall, and Stevens, said that if no legitimate actual legislative
purpose appears in legislative history or the statutory scheme, the Court should require a “fair and
substantial relation” to an asserted purpose. Concurring in \textit{Logan v. Zimmerman Brush Co.},\textsuperscript{89} Justice
Blackmun, with Justices Brennan, Marshall, and O’Connor, said that a classificatory scheme must
"rationally advance a reasonable and identifiable governmental objective."

None of these alternative views have gained a majority vote. Echoing Justice Douglas in 1955 in
Beach Communications, Inc.},\textsuperscript{91} "In areas of social and economic policy, a statutory classification that
neither proceeds along suspect lines nor infringes fundamental constitutional rights must be upheld
against equal protection challenge if there is any reasonably conceivable state of facts that could
provide a rational basis for classification." Explaining this deferential approach, Justice Thomas
said, "The Constitution presumes that, absent some reason to infer antipathy, even improvident
decisions will eventually be rectified by the democratic process and that judicial intervention is
generally unwarranted no matter how unwisely we may think a political branch has acted."

\textsuperscript{85} See generally Thornburgh v. American College of Obstetricians and Gynecologists, 476 U.S.

\textsuperscript{88} 450 U.S. 221, 244-45 (1981) (Powell, J., joined by Brennan, Marshall & Blackmun, JJ.,
dissenting).

\textsuperscript{89} 455 U.S. 422, 439 (1982) (Blackmun, J., joined by Brennan, Marshall & O’Connor, JJ.,
dissenting).

\textsuperscript{90} 348 U.S. 483, 488 (1955) (“The day is gone when this Court uses the [14\textsuperscript{th} Amendment Due
Process Clause] to strike down state laws, regulatory of business or industrial conditions, because
they may be unwise, improvident, or out of harmony with a particular school of thought.”).

\textsuperscript{91} 508 U.S. 307, 313-14 (1993).
Cases under intermediate scrutiny have posed a greater problem for the Court. Three different formulations have appeared in Court opinions. At one extreme, in *Edenfield v. Fane*, the Court stated that at intermediate review the Court would consider any governmental interest “put forward by the State” during the litigation to determine whether an important or substantial interest exists. This differs from the “any conceivable basis” test that permits a court on its own to invent conceivable interests to support the statute. This test, though, does permit the government to invent interests during the course of litigation that may have no real relationship to actual legislative purposes. At the other extreme, per Justice Ginsburg in *United States v. Virginia*, the Court used the strict scrutiny “actual purpose” test in a case involving intermediate review.

The more typical requirement at intermediate scrutiny, however, is a third requirement that the interest be one which “could have plausibly motivated an impartial legislature.” This approach recognizes that “inquiries into congressional motives or purposes are a hazardous matter,” while also recognizing that the Court should not permit “post hoc rationalizations” to justify a statute at intermediate scrutiny. The two cases cited by Justice Ginsburg in *United States v. Virginia* to support using an actual purpose analysis do not clearly support that position. In the first case, *Weinberger v. Wiesenfeld*, while the Court did conduct an inquiry into the actual purposes underlying the statutory scheme, the Court indicated that this inquiry was directed to rejecting a purported purpose that “could not have been a goal of the legislation.” Thus, in context, the focus of the analysis was on whether the asserted purpose was plausible, that purpose being rejected once its implausibility was demonstrated. In the second case, *Califano v. Goldfarb*, Justice Ginsburg cited the four-Justice plurality opinion which did seem to adopt an actual purpose inquiry. Justice Stevens’ concurrence, however, which provided the fifth vote in that case, phrased the test as whether faced with an interest “put forward by the Government as its justification” the Court “might presume that Congress has such an interest in mind.”

Justice Stevens’ phrasing of this test in *Goldfarb* combined the requirement that the government “put forward the interest during litigation” with the requirement that the interest be “plausible to assume” the legislature had in mind. That approach is problematic, as it would prevent the Court from considering “plausible” or even “actual” governmental interests merely because government attorneys failed to mention them. Perhaps the best accommodation of these cases would be to

---

95 *Michael M.*, 450 U.S. at 469.

96 *Virginia*, 518 U.S. at 535-36.

98 430 U.S. 199, 212-13 (1977); id. at 223 & n.9 (Stevens J., concurring).
conclude that only “actual” governmental purposes can be used at strict scrutiny; “actual” or “plausible” governmental interests can be used at intermediate scrutiny; and implausible, but conceivable post hoc justifications for a statute can be used only under rational review. A 2001 case of intermediate scrutiny, *Nguyen v. INS*, discussed at § 26.3.2 n.417-22, seemed to follow this approach. The dissent criticized the majority for not requiring “actual purposes” as in *United States v. Virginia*. The majority summarily listed two purposes for the statute, without addressing whether they were actual or only plausible.

§ 26.1.4 Which Inquiries are Questions of Law versus Questions of Fact

Although Court opinions rarely discuss this subject, the first question under Equal Protection Clause doctrine of whether or not the government has a sufficient interest should be viewed as a question of law with no deference given to the district court on appeal. Whether a particular governmental interest is illegitimate, legitimate, important, or compelling typically does not turn upon the facts of any particular case, but on the nature of the interest. Thus, as noted § 26.1.1.1 nn.16-21, certain interests, like prejudice against the mentally impaired, are not legitimate. As noted at § 26.1.1.2 nn. 44-51, certain interests, like administrative cost considerations, while legitimate, are not important; certain interests, like diversity in broadcast programming, are important, but not compelling; and certain interests, like remedying one’s own prior racial discrimination, are compelling.

Even in the rare case where the amount of the administrative cost savings could possibly turn an otherwise legitimate interest into an important or compelling governmental interest, as in *Frontiero v. Richardson*, the Justices appeared to conduct a de novo review of the evidence, thus implicitly treating that determination as a question of law. The plurality also concluded in *Frontiero* that administrative cost savings alone could never be a compelling governmental interest, but would always have to be joined with some other interest that, in combination, might give the government a compelling governmental interest to regulate. The Court did treat cost savings as a valid interest in *Mathews v. Lucas*, discussed at § 26.3.2 n.412, a case that would be intermediate scrutiny today. However, at the time, it was only “second-order, not toothless” rational review. Thus, cost savings were used as a legitimate government interest in *Lucas*, not an important government interest.

In contrast, how much the government’s actions advance government ends or burden individuals in their operation are properly viewed as fact questions subject to the “clearly erroneous” standard of deference on appeal, discussed at § 4.2.4 n.63. As opposed to the nature of the interest, the underinclusiveness or overinclusiveness of any statute or government program are fact questions which depend on the particular statute or program before the court for their proper resolution.

On the other hand, the ultimate conclusions about whether the means are rationally related, substantially related, or directly related to the ends, or whether some burden is irrational, substantially more burdensome than necessary, or the least burdensome alternative, are best

---

100 411 U.S. 677, 689-91 (1973) (Brennan, J., plurality opinion).
conceived as mixed questions of law and fact for *de novo* review by courts on appeal. Under usual practice, appellate courts review *de novo* legal questions and mixed questions of law and fact insofar as those issues impact on constitutional matters. In explaining the rationale for *de novo* review on mixed questions of law and fact, the Supreme Court stated in 1996 in *Ornelas v. United States* that "[a] policy of sweeping deference" could allow constitutional issues to be decided "[i]n the absence of any significant difference in the facts, [depending] on whether different trial judges draw general conclusions that the facts are sufficient or insufficient" to decide the constitutional issue. The Court concluded that "[i]ndependent review [of ultimate constitutional facts] is therefore necessary if appellate courts are to maintain control of, and to clarify, the legal principles." Similarly, in 1985 in *Miller v. Fenton*, the Court indicated that where the "relevant legal principle can be given meaning only through its application to the particular circumstances of a case, the Court has been reluctant to give the trier of fact's conclusions presumptive force and, in so doing, strip a federal appellate court of its primary function as an expositor of law." Under this approach, the finder of fact should determine the amount of any underinclusiveness or overinclusiveness. The court should then determine as a matter of law the ultimate conclusion whether that amount renders the statute unconstitutional.

§ 26.2 Classifications Involving Strict Scrutiny

§ 26.2.1 Racial, Ethnic, or National Origin Discrimination

Under current doctrine, statutes that on their face involve racial, ethnic, or national origin classifications automatically trigger a strict scrutiny approach. Such classifications are discussed at § 26.2.1.1. In addition, statutes that are neutral on their face, but which nonetheless were passed based upon an intent to discriminate on racial, ethnic, or national origin grounds, trigger strict scrutiny. Such statutes are discussed at § 26.2.1.2. Four substantive areas where the Court has considered a number of cases are then discussed as examples of strict scrutiny review. These cases involve school desegregation, discussed at § 26.2.1.3; race-based affirmative action, discussed at § 26.2.1.4; race-based redistricting of voting districts, discussed at § 26.2.1.5; and race discrimination in the context of the criminal justice system, discussed at § 26.2.1.6.

§ 26.2.1.1 Facial Discrimination Cases

A. The Original Natural Law Era

Since the 14th Amendment was not ratified until 1868, and did not receive its first Supreme Court interpretation until 1873, its judicial history began in the formalist era. However, the Amendment

---

was drafted and passed during the original natural law era. Thus, informed consideration of the purpose and scope of the 14th Amendment, and the context and history surrounding ratification, should take this natural law background into account. This would suggest that an interpretation most faithful to the original intent of the framers and ratifiers of the 14th Amendment would be an interpretation from a natural law perspective. As discussed at § 12.2.2, such a perspective embraces the concept of an “evolving” Constitution in light of later legislative, executive, and social practice, a reasoned elaboration of judicial precedents, and prudential considerations of background moral principles, in addition to text, purpose, context, and history kinds of evidence. This perspective is increasingly reflected in Court cases decided since 1986 in the modern natural law era, particularly in areas such as race-based affirmative action, discussed at § 26.2.1.4; racial redistricting cases, discussed at § 26.2.1.5; race discrimination in the criminal justice system, discussed at § 26.2.1.6; alienage classifications, discussed at § 26.2.2; gender discrimination, discussed at § 26.3.1; discrimination based upon illegitimacy, discussed at § 26.3.2; cases involving physical or mental disability, discussed at § 26.4.5; and sexual orientation, discussed at § 26.4.6.

B. The Formalist Era

In the Slaughter-House Cases, when the Court first interpreted the Equal Protection Clause in 1873, the Court said that it doubted very much "whether any action of a State not directed by way of discrimination against the negroes as a class, or on account of their race, will ever be held to come within the purview of this provision." That conclusion, which apparently was a reflection of the Court's understanding of legislative history, rather than a reaction to the text of the clause, was repeated in 1880 in Strauder v. West Virginia. There the Court said, "What is this but declaring that the law in the States shall be the same for the black as for the white."

Despite those initial statements, the formalist Court, with its focus on literal text, as well as history, soon reverberated to the text of the Equal Protection Clause, which contained no such limitation. In Barbier v. Connolly, decided in 1885, the Court indicated that the clause applied to a law regulating the hours during which laundries could be operated, saying that the clause guaranteed, among other things, that "all persons should be equally entitled to pursue their happiness and acquire and enjoy property." Similarly, in 1886 in Yick Wo v. Hopkins, the Court struck down a ban on wooden laundries that was applied only to business owned by aliens of Chinese ancestry. The Court said the provisions of equal protection "are universal in their application, to all persons within the territorial jurisdiction, without regard to any differences of race, or color, or of nationality."

---

104 83 U.S. (16 Wall.) 36, 81 (1873).

105 100 U.S. 303, 307 (1880).

106 113 U.S. 27, 31(1885).

107 118 U.S. 356, 369 (1886).
Although the Court gave careful review to classifications that discriminated against individuals on grounds of race, ethnicity, or national origin, as in *Yick Wo v. Hopkins*, the formalist-era Court removed most protection to racial groups from state-based racial classifications that literally treated whites and non-whites equally. In 1896, the Court held in *Plessy v. Ferguson*\(^{108}\) that a state could require separate railway carriages for “colored” and “white” passengers. The Court concluded in *Plessy* that the state’s requirement did not involve racial discrimination, since the separate railway carriage requirement applied equally to both “coloreds” and “whites.”

Based upon this literal, or formal, equal application of the law, the formalist Court concluded in *Plessy* that “separate, but equal” facilities posed no problem requiring heightened scrutiny. Applying the rational review “reasonableness” test, the Court decided that the separate carriage requirement was reasonable because reasonableness should be considered in light of customs and traditions, and in 1896 segregation of the races was reasonable from that perspective. Specifically, the Court stated in *Plessy*:

> In determining the question of reasonableness, it [the state] is at liberty to act with reference to the established usages, customs, and traditions of the people, and with a view to the promotion of their comfort, and the preservation of the public peace and good order. Gauged by this standard, we cannot say that a law which authorizes or even requires the separation of the two races in public conveyances is unreasonable, or more obnoxious to the fourteenth amendment than the acts of congress requiring separate schools for colored children in the District of Columbia, the constitutionality of which does not seem to have been questioned, or the corresponding acts of state legislatures.\(^{109}\)

With respect to whether the law was based on notions of “White Supremacy,” and thus denied African-Americans equal protection of the law, the Court had two responses. First, the Court noted:

> We consider the underlying fallacy of the plaintiff's argument to consist in the assumption that the enforced separation of the two races stamps the colored race with a badge of inferiority. If this be so, it is not by reason of anything found in the act, but solely because the colored race chooses to put that construction upon it. The argument necessarily assumes that if, as has been more than once the case, and is not unlikely to be so again, the colored race should become the dominant power in the state legislature, and should enact a law in precisely similar terms, it would thereby relegate the white race to an inferior position. We imagine that the white race, at least, would not acquiesce in this assumption.\(^{110}\)

The Court’s second counterargument focused on the proper role for law in terms of molding public morality. The Court stated:

\(^{108}\) 163 U.S. 537, 546-52 (1896).

\(^{109}\) *Id.* at 550-51.

\(^{110}\) *Id.* at 551.
The argument also assumes that social prejudices may be overcome by legislation, and that equal rights cannot be secured to the negro except by an enforced commingling of the two races. We cannot accept this proposition. If the two races are to meet upon terms of social equality, it must be the result of natural affinities, a mutual appreciation of each other's merits, and a voluntary consent of individuals. As was said by the court of appeals of New York in People v. Gallagher, 93 N.Y. 438, 448: “This end can neither be accomplished nor promoted by laws which conflict with the general sentiment of the community upon whom they are designed to operate. When the government, therefore, has secured to each of its citizens equal rights before the law, and equal opportunities for improvement and progress, it has accomplished the end for which it was organized, and performed all of the functions respecting social advantages with which it is endowed.” Legislation is powerless to eradicate racial instincts, or to abolish distinctions based upon physical differences, and the attempt to do so can only result in accentuating the difficulties of the present situation. If the civil and political rights of both races be equal, one cannot be inferior to the other civilly or politically. If one race be inferior to the other socially, the constitution of the United States cannot put them upon the same plane.111

To implement the statute in Plessy, the state of Louisiana had to define who was “white” and who was “colored” for purposes of the statute. The particular plaintiff in the case, Homer Plessy, was by all appearances white, as, in the Court’s words, “his one-eighth African blood” was “not discernable in him.” Plessy actually declared himself “colored” to the railroad conductor, triggering the statute’s application and setting up Plessy as a test case.112 At the time, Louisiana’s law declared anyone with more than “one drop” of non-white blood to be “colored,” but different states had different definitions of how much “blood” one had to have to be declared “colored,” from “one drop of blood” or 1/32 (the typical Southern standards), to 1/16 or 1/8 (in a number of Northern and Southern states), to, in a Northern state like Michigan, 1/4, or in Ohio, a preponderance of blood test.113

Dissenting in Plessy, Holmesian Justice Harlan focused on the evident purpose behind the statute, not its literal requirement of equal treatment. He noted, “Everyone knows that the statute in question had its origin in the purpose, not so much to exclude white persons from railroad cars occupied by blacks, as to exclude colored people from coaches occupied by or assigned to white persons. . . . The thing to accomplish was, under the guise of giving equal accommodation for whites and blacks, to compel the latter to keep to themselves while traveling in railroad passenger coaches. No one would be so wanting in candor as to assert the contrary.”114 In terms of official doctrine, Justice

111 Id. at 552.

114 163 U.S. at 557 (Harlan, J., dissenting).
Harlan concluded that the Louisiana statute was inconsistent with “the personal liberty of citizens” to decide with whom they wish to sit. He also noted, “The arbitrary separation of citizens, on the basis of race, while they are on a public highway, is a badge of servitude wholly inconsistent with the civil freedom and the equality before the law established by the constitution.” His official core holding of the case, however, seemed to be that treating citizens differently was inconsistent with “the guaranty given by the constitution to each state of a republican form of government” under the Guaranty Clause.115 By limiting his decision to protecting the rights of “citizens,” and not “persons” under an Equal Protection Clause or Due Process Clause liberty analysis, Justice Harlan could observe, “There is a race so different from our own that we do not permit those belonging to it to become citizens of the United States. Persons belonging to it are, with few exceptions, absolutely excluded from our country. I allude to the Chinese race.”116

The formalist Court did depart from this “separate, but equal” doctrine when considering cases involving rights of property, based upon the specific history surrounding the Civil Rights Act of 1866 dealing with rights to purchase, own, and sell property without regard to race, which was repassed after ratification of the 14th Amendment. Because this history suggested the 14th Amendment incorporated the principle of the Civil Rights Act of 1866 regarding equal rights to own property, in Buchanan v. Warley117 the Court struck down as unconstitutional a state statute limiting the rights of both whites and blacks to sell their property to members of the other race.

Because it was never clear before 1954 that the Equal Protection Clause applied to the federal government, as noted at § 26.1 nn.1-6, the formalist Court did not apply even the limited “separate, but equal” doctrine to exercises of congressional power. For example, in the 1870 Naturalization Act, an attempt was made by Senator Charles Sumner to add language providing that “all acts of Congress relating to naturalization be, and the same are hereby, amended by striking out the word 'white' wherever it occurs, so that in naturalization there shall be no distinction of race or color." Faced with concerns from Western states about the amendment's effect on their growing Chinese population, the Senate rejected Sumner's language, with one Senator noting that "there is but little opposition to extending the naturalization laws to alien Africans within this country." For these Senators, the Chinese were "pagans" to whom oaths meant nothing and who had no sympathy for democracy. In contrast, America's black population were Christians and "wholly Americanized."

Based on the 1870 Naturalization Act, for many decades American law extended a right of naturalization to "aliens being free white persons, and to aliens of African nativity and to persons of African descent." The 1870 Naturalization Act strongly supports the inference that Congress felt sure of its constitutional power, despite the Equal Protection Clause, to enact invidious race-conscious laws regulating aliens. Such laws were never ruled unconstitutional by the Supreme Court of the formalist era. The naturalization law's racial bias remained largely intact until 1952.118

118 This account of the 1870 Naturalization Act appears in Siegel, supra note 5, at 554-56.
C. The Holmesian Era

As noted at § 3.2, as a functional approach to law, the Holmesian approach to decisionmaking is characterized by a substantially greater willingness than formalist judges to look past formal, or literal, application of the law, and to examine legislative purpose and practical effect. Holmesian judges also have a predisposition to defer to legislative and executive practice. These aspects of Holmesian jurisprudence pulled Holmesian judges in opposite directions during the Holmesian era.

On the one hand, the Holmesian Court moderated the impact of Plessy’s “separate, but equal” doctrine by requiring separate facilities actually to exist in practice, or by holding facilities that were provided were not functionally equal, and thus constituted unconstitutional discrimination. This occurred in cases like Missouri ex rel. Gaines v. Canada,119 which held in 1938 that if a state offers legal education to whites, it must also do so for African-Americans; Sipuel v. Board of Regents,120 where the Court held in 1946 that qualified African-Americans had to be admitted to the state’s only law school where denial of admission was solely on the basis of race; Sweatt v. Painter,121 where the Court held in 1950 that a ban on African-American admission to a state law school was unconstitutional where the state’s alternative law school for African-Americans offered inferior opportunity; and McLaurin v. Oklahoma State Regents,122 where the Court held in 1950 that differential treatment of African-American students to designated non-white rows in assignment of seats in a classroom, library, and cafeteria constituted a denial of equal protection. The Court also held in Shelley v. Kraemer,123 decided in 1948, that a racially restrictive covenant in a private land deed constituted a violation of equal protection when enforced by a court even though it applied equally to white and black buyers and sellers. The Court rejected the “separate, but equal” doctrine in this context based upon precedents like Buchanan v. Warley, discussed at § 26.2.1.1.B n.117, and because functionally the clause operated to deny blacks an equal opportunity to purchase a house.

On the other hand, most use of racial classifications by the federal government or state governments during the Holmesian era were upheld by the Court. For example, in 1944 in Korematsu v. United States,124 the Supreme Court upheld President Roosevelt's curfew and exclusion orders requiring persons of Japanese ancestry to be removed from certain districts and forced to enter "relocation centers." Because this regulation discriminated against persons based upon their national origin, the Court applied the strict scrutiny approach that was suggested in the 1938 case of Carolene Products, discussed at § 26.1.2.2 n.68. Reflecting the Holmesian deference to government posture, however, the Court concluded that the government had a compelling governmental interest to prevent sabotage.

---

123 334 U.S. 1, 11-12 (1948).
during war time to which the relocation centers were a necessary response. The Court said, “[A]ll legal restrictions which curtail the civil rights of a single racial group are immediately suspect. That is not to say that all such restrictions are unconstitutional. It is to say that courts must subject them to the most rigid scrutiny. Pressing public necessity may sometimes justify the existence of such restrictions; racial antagonism never can.”125 An instrumentalist-inspired dissent in *Korematsu* noted that the restrictions were not the least burdensome effective alternative, and thus should not have survived strict scrutiny. Justice Murphy stated, “No adequate reason is given for the failure to treat Japanese Americans on an individual basis by holding investigations and hearings to separate the loyal from the disloyal, as was done in the case of persons of German and Italian ancestry.”126

D. The Instrumentalist Era

In *Brown v. Board of Education*,127 decided in 1954, the Court held that racially separate educational facilities are inherently unequal and that segregation in public education deprived the plaintiffs of equal protection of the law. Any language in *Plessy* to the contrary of the Court's holding in *Brown* was overruled. A similar holding was reached under the Fifth Amendment with respect to segregated schools provided for in the District of Columbia by Congress in *Bolling v. Sharpe*.128 The Court said that segregation in public education is not reasonably related to any proper governmental objective and thus was an arbitrary deprivation of liberty in violation of the Equal Protection branch of the Due Process Clause, discussed at § 26.1 nn.1-6.

*Brown* quickly led into a series of cases holding that racial segregation in other public facilities was a denial of equal protection.129 Thus, by 1963, the Court could state in *Johnson v. Virginia*,130 “[I]t is no longer open to question that a State may not constitutionally require segregation of public facilities.” Also, the Court made clear that the protection was not solely a matter of black and white, but extended to all examples of discrimination against minority groups, whether based on race, ethnicity, or national origin. Thus, as early as 1954, the Court rejected the argument in *Hernandez v. Texas*131 that persons of Mexican descent could be excluded from a jury because the Equal

---

126 *Id.* at 241 (Murphy, J., dissenting).

Protection Clause contemplated only two classes – “white” and “Negro.” The Court noted that community prejudices with respect to race and color are not static and the 14th Amendment is not directed solely against discrimination based on a two-class theory.

The Brown case did not explicitly state that a heightened degree of scrutiny was being applied by the Court. However, that requirement was emphasized in Loving v. Virginia, when in 1967 the Court struck down statutes in 16 predominantly Southern states that prevented marriages between persons on the basis of race. Drawing on the Japanese internment cases and citing Korematsu v. United States, Chief Justice Warren said the Equal Protection Clause demands that racial classifications be subjected to the "most rigid scrutiny." He continued that if racial classifications are ever to be upheld, they must be "necessary" to the accomplishment of some permissible objective independent of racial discrimination. With regard to the particular issue of anti-miscegenation laws, the Court noted, “After the initiation of this litigation, Maryland repealed its prohibitions against interracial marriage, leaving Virginia and 15 other States with statutes outlawing interracial marriage: Alabama, Arkansas, Delaware, Florida, Georgia, Kentucky, Louisiana, Mississippi, Missouri, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, and West Virginia. Over the past 15 years, 14 States have repealed laws outlawing interracial marriages: Arizona, California, Colorado, Idaho, Indiana, Maryland, Montana, Nebraska, Nevada, North Dakota, Oregon, South Dakota, Utah, and Wyoming. The first state court to recognize that miscegenation statutes violate the Equal Protection Clause was the Supreme Court of California. Perez v. Sharp, 198 P.2d 17 (1948).”

By 1984, the meaning of strict scrutiny had become the formula recited by the Court today. In Palmore v. Sidoti, for example, the Court wrote that racial classifications must be justified by a compelling governmental interest and must be necessary to the accomplishment of this compelling interest. In Palmore, in a multi-racial child custody case, the Court refused to allow a trial court to consider private racial biases and the possible injury they might inflict on the child to affect the custody decision of a mother who, after a divorce, had subsequently remarried a man of another race. Not only was pandering to private racial biases not a compelling interest, it was not even a legitimate interest that could be used at rational review. The Court noted, "Private biases may be outside the reach of the law, but the law cannot, directly or indirectly, give them effect."

This principle, that unlike Plessy, customs and traditions of people are not a basis for legitimate action if they represent irrational biases or prejudices from the perspective of truth, as determined by formal operational thought and its scientific method and “hypothetico-deductive” technique, discussed at § 15.3 nn.44-46, distinguishes these post-1954 cases as examples of instrumentalist Stage 5 and modern natural law Stage 6 moral reasoning, instead of the concrete customs and traditions level of moral reasoning of the formalist era Stage 4. Other examples of the post-1954 Court rejecting customs and traditions alone as a legitimate basis for moral action in equal protection cases are noted at § 26.1.1 nn. 17-21, and at §§ 16.3 nn.76-83 & 16.4 nn.92-106, discussing moral and legal reasoning from the perspective of Stage 6 rational dialogue.

132 388 U.S. 1, 5 n.4, 9-11 (1967) (citations omitted).

Despite these developments, many instrumentalist Justices have argued for a departure from strict scrutiny in cases of race-based affirmative action, and adoption of only intermediate review, as discussed at § 26.2.1.4.A nn.212, 219 and § 26.2.1.4.C nn.227, 238-39, 246-48. As noted there, the theory behind this argument is that such affirmative action is intended to remedy a legacy of discrimination against the minority group, and this “benign” use of race should not be subjected to rigorous strict scrutiny review. In the modern natural law era, this instrumentalist view has been rejected by a majority of the Court, composed of formalist, Holmesian, and natural law Justices, as discussed at § 26.2.1.1.E nn.134-35, § 26.2.1.4.C nn.234-37, and § 26.2.1.4.D nn.241-45.

E. The Modern Natural Law Era

Today's Supreme Court, with its influential group of natural law Justices who give great weight to precedent, has followed most of the instrumentalist precedents with respect to race discrimination. Where necessary, it has extended application of the doctrine in order to ensure effective remedies, such as in cases involving peremptory jury challenges based upon race, discussed at § 26.2.1.6.A. In the area of affirmative action, discussed at §§ 26.2.1.4.C-26.2.1.4.D, the Court has resolved what was an uncertainty during the instrumentalist era by requiring strict scrutiny of all racial preferences. The Court’s current majority believes that the Equal Protection Clause supports complete racial neutrality – treating all citizens as individuals, and not as components of racial, ethnic, or national classes. Under this approach, there can be no “benign” kind of racial discrimination. In 1995, in Adarand Constructors, Inc. v. Pena,134 the Court observed that “any individual suffers an injury when he or she is disadvantaged by the government because of his or her race, whatever that race may be.” In Miller v. Johnson,135 also in 1995, the Court noted, “[The] Equal Protection Clause[’s] . . . central mandate is racial neutrality in governmental decisionmaking,” citing Loving v. Virginia and Brown.

When applying strict scrutiny to any racial classification, the modern extreme formalist position, adopted by Justice Scalia, is that any use of race as a classifying principle violates the literal meaning of equality, and thus government can never have a "compelling interest" in discriminating on the basis of race in order to "make up" for past racial discrimination in the opposite direction.136 Other modern formalists, such as Justice Thomas, acknowledge, as did Holmesian Chief Justice Rehnquist, that remedying prior racial discrimination through a race-conscious remedy could possibly, although not likely, be justified under a strict scrutiny approach.137 Only a few formalists today, who place greater weight on specific history than literal text, might still support the view that Plessy’s principle of “separate but equal” is correctly applied, as did Professor Raoul Berger in discussing segregation in the public schools, discussed at § 9.3.4 n.79. An area where the use of race

137 Id. at 204 (Chief Justice Rehnquist joining Justice O’Connor’s majority opinion in Adarand); id. at 240 (Thomas, J., concurring in part and concurring in the judgment).
may pose difficult problems for the Court in the near future concerns the possible use of racial profiling in security activities associated with antiterrorist efforts. To date, security efforts have been, at least on their face, race-neutral.  

§ 26.2.1.2 Non-Facial Race Discrimination: The Intent Requirement

During the formalist era, in the few cases where the Court struck down laws for discrimination on the basis of race where the statute did not use a discriminatory racial classification on its face, the discrimination was clearly intentional and was often labeled, as in *Yick Wo v. Hopkins*,\(^\text{139}\) to be based on "hostility" to the race. During the Holmesian era, when the Court began to address race discrimination in the context of participation in the administration of justice, such as service on a jury, the Court spoke of "intentional discrimination."\(^\text{140}\) In the instrumentalist era, when the Court began to address discrimination in public education and other public facilities, it spoke of tracing laws to a racially discriminatory purpose.\(^\text{141}\) However, not until 1976 did the Court squarely face the question of whether the race discrimination exists under the Equal Protection Clause if a law has a neutral purpose, but disproportionate racial effects.

That was the issue in *Washington v. Davis*.\(^\text{142}\) In *Davis*, Justice White wrote for the Court that finding race discrimination under the Fifth or 14th Amendment depended upon tracing government action to a racially discriminatory purpose or intent. If such an “invidious” intent is found by the Court, strict scrutiny will be invoked. Without such intent, a differential impact is given only rational basis scrutiny.\(^\text{143}\) Intent to discriminate is also needed to invoke a higher level of scrutiny for discrimination against any suspect or quasi-suspect class, like gender.\(^\text{144}\)

Although precedents are not clear, the doctrine from *Palmer v. Thompson*\(^\text{145}\) in 1971 seems to be that both a discriminatory effect and a showing of intent are necessary to trigger heightened scrutiny. The Court noted in *Palmer* that no case “has held that a legislative act may violate equal protection solely because of the motivations of the men who voted for it.” Thus, statutes passed with a discriminatory intent, but no actual discriminatory effects, likely trigger only rational review.

\(^\text{139}\) 118 U.S. 356, 373-74 (1886).

\(^\text{140}\) Akins v. Texas, 325 U.S. 398, 403 (1945).

\(^\text{142}\) 426 U.S. 229 (1976).

\(^\text{143}\) *Id.* at 239-41. See also Rogers v. Lodge, 458 U.S. 613, 616-17 & n.5 (1982).

\(^\text{145}\) 403 U.S. 217, 224 (1971).
Indeed, if no discriminatory effects exist, there may be a problem with showing an injury-in-fact sufficient to prove standing. For example, in *Palmer*, the city’s decision to close a public pool to all citizens, rather than integrating the pool, technically affected all citizens equally, and any stigmatic injury from closing the pool based on racial motives would be a generalized grievance for which no standing would exist, as noted at § 17.3.1.4.A n.447.

Factors relevant for finding discriminatory intent were detailed in 1977 in *Village of Arlington Heights v. Metropolitan Housing Development Corp.* There the Court held that a *prima facie* case of discrimination can be made by showing race was a motivating factor in the decision considering:

1. the impact or effect of the official action;
2. the historical background of the decision, particularly if it reveals a series of official actions taken for invidious purposes;
3. legislative or administrative history, including the specific sequence of events leading up to the challenged decision; any departures from normal procedural practices; and any substantive departures, particularly if factors usually considered important by the decision-maker strongly favor a decision contrary to the one reached; and
4. any other evidence of discriminatory motive.

Discriminatory intent implies more than awareness of consequences. It implies that the action was taken at least in part because of, not merely in spite of, its adverse effects on an identifiable group. Thus, the ability to foresee disparate impact as a consequence of a law does not, without more, trigger a finding of discriminatory intent. For example, a law granting veterans a preference in civil service hiring was upheld even though all knew it would advantage more men than women. Nothing in the record showed that the preference was devised or re-enacted because it would keep women out of the civil service. On the other hand, a court will consider whether a state adheres to a particular policy or practice with knowledge that it will have a discriminatory effect. If a *prima facie* case is made of discriminatory intent, the burden then shifts to the government to establish that the same decision would have been made even if the impermissible purpose had not been considered. If the government fails to meet this burden, strict scrutiny review is triggered.

---

146 See id. at 226-27.
Discriminatory intent was not proved in the following landmark cases:

1. A verbal skills and reading comprehension exam for police officers that African-Americans failed in disproportionate numbers was not shown to be intentionally discriminatory and was rationally related to the skills needed to be a police officer.153

2. A *prima facie* case was not established where a city denied a petition to re-zone for low cost housing which probably would have been used by a number of minority families. The Court pointed to a history of zoning for single-family dwellings and allowing apartments only as a buffer to industry and other non-conforming uses. The area was zoned since 1959, and statements by board members focused almost exclusively on zoning rather than race.154

3. Statistical evidence that the death penalty was being applied with racially discriminatory effects, with the death penalty “assessed in 22% of the cases involving black defendants and white victims; 8% of the cases involving white defendants and white victims; 1% of the cases involving black defendants and black victims; and 3% of the cases involving white defendants and black victims” not enough to establish a *prima facie* case of racial discrimination absent other evidence that the death penalty procedures adopted by the state were adopted with an intent to discriminatory on grounds of race.155

Discriminatory intent was found to have motivated the creation or maintenance of a law in the following landmark cases:

1. Statistical evidence of racial disproportion on jury panels established a *prima facie* case of discrimination against Mexican-Americans. Rebuttal could only be by evidence of the way jury commissioners operated and their reasons for doing so. It was not enough that 3 of the 5 commissioners were Mexican-Americans. Justice Marshall explained that the question is not how Mexican-Americans treat each other but how the particular commissioners acted.156

2. An at-large district was unconstitutional because it was maintained with a discriminatory intent. Relevant evidence included past discrimination that impaired minority ability to participate in the political process, whether elected officials were responsive to minority needs, and whether the district's size tended to impair minority political access.157

3. Section 182 of the Alabama Constitution, which disenfranchised persons convicted of a crime involving moral turpitude, was enacted for the purpose of disenfranchising African-Americans and had achieved that effect 10 times as often as for whites, and the law was not saved by its additional purpose of discriminating against poor whites.158

On balance, these cases are representative, in that it has seemingly been more difficult to prove racial discrimination in cases involving jobs, housing, or the death penalty, while it has been easier, although still difficult, to prove racial discrimination in cases involving voting rights, other aspects of the criminal justice system, or, as discussed at § 26.2.1.3.A nn.173-74, de facto segregation in the public schools.

When interpreting civil rights statutes, the Court has often had to decide whether Congress intended to require proof of intent as an element necessary to show a violation of the statute. The results have varied. There is no liability under 42 U.S.C. § 1981 or § 1982 without proof of discriminatory intent, based predominantly on the legislative history of the Civil Rights Act of 1866, passed by the same Congress that proposed the 14th Amendment, where discriminatory intent is required under Davis.159 On the other hand, proof of intent is not needed under the Voting Rights Act.160 Under the 15th Amendment, a 4-Justice plurality of the Court has said that it bars only purposeful discrimination with the right to vote.161 Two other Justices decided the case “assuming” that intent need be shown.162 It remains an open question whether proof of intent is needed under the 13th Amendment's ban on slavery or involuntary servitude. The more likely answer is no, based upon City of Memphis v. Greene,163 where the Court stated, “To decide the narrow constitutional question presented by this record we need not speculate about the sort of impact on a racial group that might be prohibited by the Amendment itself.” The Court did note in Greene, however, that “ racially discriminatory motives” were relevant in determining whether the impact was a “badge or incident” of slavery.

Additional cases involving intent have arisen in the context of state referendums. For example, California voters in 1966 approved Proposition 14, which repealed certain anti-discrimination laws. The Supreme Court of California held that the purpose and intent of Proposition 14 was to authorize and encourage private race discrimination. In Reitman v. Mulkey,164 a majority of the United States

162 Id. at 80 (Blackmun, J., concurring in the result); id. at 101-02 (White, J., dissenting).
Supreme Court agreed that Proposition 14 overturning existing state anti-discrimination laws in housing was unconstitutional under the Equal Protection Clause, because Proposition 14 constituted state action to “authorize” or “encourage” private race discrimination, either expressly or impliedly. Private racial discrimination in the rental of an apartment in California was barred by pre-existing California legislation that made such discrimination illegal. Analytically, the issue in the case was whether Proposition 14 constituted a “purpose” to discriminate on grounds of race, triggering strict scrutiny under an Equal Protection Clause discriminatory intent analysis.

During the instrumentalist period there were several other such cases. In 1969, a city charter provision that prevented the city council from implementing any ordinance dealing with discrimination in housing based on race, religion, or ancestry, without approval of a majority of city voters, was held unconstitutional as discriminatory on its face. In 1982, the Court invalidated a law that barred local school boards from requiring students to attend schools other than those nearest the students’ homes, unless ordered by a court of competent jurisdiction for adjudicating constitutional issues. The Court explained that in the context of efforts to desegregate public schools this law, in a practical sense, allocated government power non-neutrally by race, placing special burdens on certain racial minorities to achieve legislation in their interest. Justice Powell dissented, with Chief Justice Burger and Justices Rehnquist and O’Connor. Powell said that racial minorities were not uniquely burdened by this law and that the Constitution does not dictate at what level school decisions must be taken.

In a non-racial context, the Court has permitted some laws that increased the difficulty of obtaining legislative reform. For example, the California Constitution required a referendum for publicly supported low-rent housing projects. This was held valid because persons in poverty are not a suspect class and California had a long history of using referendums to give citizens a voice on questions of public policy. Eleven years later a California initiative was approved that amended the California Constitution to forbid California courts from ordering busing unless required by the United States Constitution. The Court said that the law contained no racial classification on its face and no discriminatory purpose had been shown.

§ 26.2.1.3 Constitutional Law on Desegregation of the Public Schools

A. An Overview

In several ways, the Court’s decisions regarding desegregation of the public schools in the United States following Brown v. Board of Education in 1954 is the most remarkable series of cases in the history of the Supreme Court. First, the Court had its longest set of unanimous opinions. From

---

Brown in 1954, until Keyes in 1973, there was no dissent in any school desegregation case. The Court may have held itself together with unanimous opinions because of the widespread resistance to Brown evidenced by a variety of techniques engaged in by many local communities and states to avoid desegregation, and the Court’s desire to present a united front in the face of such resistance.

Second, the Court involved itself and the lower federal courts more deeply in the administration of local affairs than it ever has done in any other area of law. In some other contexts, such as management of state prisons or state mental health facilities, federal courts have intruded into the management of state and local governmental operations as part of remedying some constitutional violation. But the number of such cases, while large, is less than in the school desegregation context. In this context, usual concerns with federalism were trumped by a commitment to eliminate from public education all traces of intentional race discrimination. This commitment was a deep one in part because of the concerns expressed in Brown about the educational effect on minority students when treated as inferior by the community, and in part because of the concept expressed by Justice Marshall, dissenting in Milliken v. Bradley (Milliken I), who said that "unless our children begin to learn together, there is little hope that our people will ever learn to live together." On the other hand, the Court is still struggling to find ways for maintaining a strong commitment to desegregation and yet to extricate the federal judicial system from what has threatened to become a perpetual trusteeship over a number of the Nation's public school systems.

The kinds of problems faced by the Court have changed over the decades. In the 1950s, the challenge was to begin obtaining compliance in Southern states that had laws requiring segregation, i.e., de jure discrimination. In the 1960s, the Court had to develop detailed principles guiding the formulation of desegregation decrees. In the 1970s, when the Court began to deal with Northern states that never had statutes requiring segregation as a matter of law, the Court devised doctrines that made it easier to reach a finding of de facto discriminatory intent. This occurred through doctrines such as the rule of Keyes v. School District No. 1, that if there is proof of intentional segregation in a meaningful portion of the school district, courts should presume that other segregated schools in the district also resulted from intent. This presumption put the burden on the school board to rebut a prima facie case. At the same time proof was made easier, the Court began to impose limits on the discretion of district courts. In Keyes, Justice Powell expressed concern about excessive busing, saying that the goal is the best possible education for all children.

---

174 Id. at 240-50 (Powell, J., concurring in part and dissenting in part).
In the 1980s, the Court focused on other matters than school desegregation, predominantly leaving lower courts to continue supervising desegregation decrees. In the 1990s, however, the Court began to deal with long-standing desegregation lawsuits where the parties, lawyers, and judges were wondering whether the lawsuits would outlive them. The issues have centered about the breadth of remedial decrees, when a district court can dismiss a desegregation action, and when a desegregation decree can be dissolved. It is not easy to end one of these lawsuits because the court must find that the system is being operated in compliance with the Equal Protection Clause and it is unlikely that the board will return to its former ways of segregating students by race. In answering this question the court must determine whether the school board has complied in good faith and whether all vestiges of past discrimination have been eliminated to the extent practicable, not an easy thing to find when, as is usually the case, the system today may be almost as racially separated as it was in the beginning.

In retrospect, from today's perspective, it appears that the Court has won its struggle to have local school boards engage in good faith compliance with the underlying constitutional principles. But residential decisions by some local citizens to move from urban school districts to the suburbs, and educational decisions by other local citizens who chose to remain in urban districts to place their children in private schools, have undone to a substantial extent what the Court was trying to do. Many systems remain quite segregated along racial lines.

To some extent, that result was made possible by the Court's 5-4 decision in *Milliken I*,\(^{175}\) which held that an interdistrict remedy – one that reaches beyond the confines of a single school district – can be ordered only if there is an interdistrict violation. Since in many cases the new suburban school districts never engaged in any intentional racial discrimination, their new school districts could not be part of a desegregation degree. The *Milliken I* case was thus a real hurdle in the path of being able to devise desegregation decrees which promise realistically to work if the district court could not find that the district lines were themselves drawn with an intent to segregate minority students in one school system. Absent such an intent, “white flight” to the suburbs would work, as the suburban districts would merely reflect the predominant white make-up of individuals in the suburban community, leaving the urban district with a predominantly minority population.

Some district courts have sought to find imaginative ways around *Milliken I*. For example, the District Court for the Western District of Missouri, attempting to eliminate vestiges of segregation from the public schools in Kansas City, Missouri, required the state to fund magnet programs in most of the city's schools in order to induce white children from the suburbs to enroll in city schools. In reviewing this decision in *Missouri v. Jenkins*,\(^{176}\) the Supreme Court held that since there was no evidence of an interdistrict violation, the District Court's pursuit of "desegregative attractiveness" across district lines was beyond the scope of its authority. Chief Justice Rehnquist said, “A district court seeking to remedy an *intra*district violation that has not 'directly caused' significant interdistrict effects, exceeds its remedial authority if it orders a remedy with an interdistrict purpose.”

---

\(^{176}\) 515 U.S. 70, 97 (1995).
B. Cases From the Instrumentalist Era

Cases from the instrumentalist era, 1954-1986, can be divided into four chronological periods: (1) school segregation was declared unconstitutional; (2) principles were developed to guide lower courts in finding violations and developing remedies; (3) limits were placed on remedial orders; and (4) initial consideration was given to when desegregation litigation may be concluded.

1. Step One: School Segregation Declared Unconstitutional

The watershed case, which inaugurated the instrumentalist era on the Supreme Court, was *Brown v. Board of Education*. There, the Supreme Court unanimously held that segregation in public education was unconstitutional as a violation of the Equal Protection Clause, with respect to the states. At the same time, the Court held in *Bolling v. Sharpe* that school segregation was a violation of the Due Process Clause of the Fifth Amendment, if conducted by the federal government, as it was at that time in the District of Columbia. Chief Justice Warren noted in *Bolling*, “In view of our decision [in *Brown*] that the Constitution prohibits the states from maintaining racially segregated public schools, it would be unthinkable that the same Constitution would impose a lesser duty on the Federal Government.”

In a short opinion, designed to be widely distributed to, read by, and understood by the American people, Chief Justice Warren considered a wide variety of arguments against the result, and countered each one. Using the six basic sources of constitutional law as an organizing principle, Justice Warren’s reasoning, contrasted with what was said in *Plessy*, can be outlined as follows:

**Text**: *Plessy*: Literally equal treatment is afforded when the races are provided equal facilities, even though they are separate. *Brown*: Separate educational facilities, because they are separate and thus not literally the same, are inherently unequal.

**Context**: *Plessy*: Taken as a whole, the clauses of the 14th Amendment require civil equality, and the 15th Amendment requires political equality, but this is not a question of civil or political equality, it is more akin to social equality, which is dependent on societal customs and traditions. The 14th Amendment was not intended to reach such social matters. *Brown*: The context of public education today is that it is of vital importance to every child and our society; if a state undertakes to provide public education, it confers a right which must be made available to all on equal terms.

**History**: *Plessy*: When the 14th Amendment was ratified, the states and Congress had systems of separate education and it was not thought the Amendment changed this, as evidenced by continuation of these systems. *Brown*: The Amendment’s history is inconclusive, with avid proponents wanting to remove all legal distinctions among persons born or naturalized in the Nation and avid opponents wanting a limited effect. What others thought is uncertain.

Deference to Legislative and Executive Practice: *Plessy:* Public education is a function within a state's police power and the question is whether the state law is reasonable, granting the legislature large discretion to act with reference to established customs and traditions of the people. When the 14th Amendment was passed, Congress and many states authorized separate schools that continued in many states and the District of Columbia. *Brown:* Public education did not exist or was not much advanced in 1868, particularly in the South where education of white children was largely in the hands of private groups and education of African-Americans was almost nonexistent. We must consider public education in the light of its full development and its present place in American life and throughout our Nation.

Judicial Precedent: *Plessy:* The establishment of separate schools for white and colored children has been held valid many times. *Brown:* Before *Plessy,* the Court said the 14th Amendment barred all state-imposed discrimination against African-Americans. *Plessy* was a transportation case. In the Supreme Court, two formalist-era cases involving public education did not challenge the doctrine of separate but equal,179 and in the four Holmesian-era cases [discussed at § 26.1.1.1.C nn.119-22] inequalities in specific benefits were found. The decision on the broader question of whether to overrule *Plessy* was reserved.

Prudential Social Policy Concerns: *Plessy:* Laws permitting or requiring race separation do not imply inferiority of either race, and if such is found it is solely because the colored race chooses to put that construction on it. *Brown:* To separate African-American children from others of similar age and qualifications solely because of their race generates a feeling of inferiority as to their status in the community that may affect their hearts and minds in a way unlikely ever to be undone. Any language in *Plessy* to the contrary is overruled.

An important aspect of *Brown* is that the decision was unanimous. This was not a foregone conclusion. Indeed, the case was initially heard in 1952, and after discussing the cases in conference in December 1952, the Court ordered reargument for the following year, asking the parties to submit additional briefs, including focus on the specific question, "What evidence is there that the Congress which submitted and the State legislatures and conventions which ratified the Fourteenth Amendment contemplated or did not contemplate, understood or did not understand, that it would abolish segregation in public schools?"180 One author has noted, “According to one account, four

179 Cumming v. Richmond County Bd. of Educ., 175 U.S. 528 (1899) (African-American taxpayers denied an injunction requiring the defendant school board to discontinue the operation of a high school for white children until the board resumed operation of a high school for African-American children); Gong Lum v. Rice, 275 U.S. 78 (1927) (plaintiff, a child of Chinese descent, contended only that state authorities had misapplied the doctrine by classifying him with “colored” children and requiring him to attend a “colored” school).

Justices – Black, Douglas, Burton, and Minton – indicated in conference that they would vote to end public school segregation, with Chief Justice Vinson and Justice Reed suggesting that they would vote to affirm Plessy. The remaining Justices – Frankfurter, Jackson, and Clark – were ambivalent.181 Prior to the reargument, Chief Justice Vinson suffered a fatal heart attack, and President Eisenhower nominated Earl Warren as the Court's Chief Justice. He was subsequently confirmed by the Senate.

When Chief Justice Warren indicated his intent to vote to end public school segregation, the result in Brown became certain. A unanimous result, however, was not.182 The last holdout, Justice Reed, actually prepared a dissent in the case, which was never filed. Shortly after the Brown decision was announced, Justice Reed wrote a memo to Justice Frankfurter stating that the many considerations favoring segregation “did not add up to a balance against the Court’s opinion,” and that “the factors looking toward fair treatment for Negroes are more important than the weight of history.” It has also been noted, “Brown’s commitment to racial equality and human dignity legitimized participatory governance, handing the United States a crucial ideological advantage over the Soviet Union at the height of the Cold War,” and that perhaps this reason formed a crucial argument for Justice Reed, whose commitment to national security was well known.183

2. Step Two: Principles Developed to Guide Lower Courts in Finding Violations and Developing Remedies

Initially it was easy to find constitutional violations because many states had explicit policies calling for segregation. When challenges were made to school systems where no such policies ever existed, but where there were many one-race schools, it became critical to determine whether the segregation was the result of discriminatory intent. Several principles were used to deal with this problem.

First, under standard discriminatory intent analysis, as discussed at § 26.2.1.2 n.147, courts may consider the extent of the separation, the historical development of decisions, the specific sequence of events leading up to challenged decisions, departures from normal procedural practices, and legislative and administrative history, including reports and testimony by officials.184 Also, in the school desegregation context, the Court held that if the plaintiff proved purposeful discrimination in the past, not remedied by board action, and there presently is system-wide racial disproportion

---

in schools, there is a *prima facie* case that the current segregation was caused, at least in part, by the prior acts.\textsuperscript{185} The Court also held that if there is proof of intentional segregation in a meaningful portion of the school district, courts should presume that other segregated schools in the district also resulted from intent, and that if more than one racial group is the victim of discrimination, the groups may be aggregated in considering the existence of a violation and remedies.\textsuperscript{186}

With respect to remedies, the Court first said in 1955 in *Brown v. Board of Education (Brown II)*\textsuperscript{187} that the district courts should enter such decrees as were necessary to admit students to public schools on a racially nondiscriminatory basis "with all deliberate speed." Thirteen years later, in 1968, after experiencing great difficulty in getting states and school systems to comply with federally ordered remedies,\textsuperscript{188} the Court abandoned this relatively relaxed approach in *Green v. County School Board*\textsuperscript{189} and said that the “burden on a school board today is to come forward with a plan that promises realistically to work . . . now . . . until it is clear that state-imposed segregation has been completely removed.”

Three years later, in 1971, the Court slightly expanded the remedial goal in *Swann v. Charlotte-Mecklenburg Board of Education*,\textsuperscript{190} and provided relatively specific guidelines that have been used by the courts ever since. Chief Justice Burger said, “The objective today remains to eliminate from the public schools all vestiges of state-imposed segregation.” To achieve this object, the Chief Justice explained that all areas of discrimination must go: students, faculty, supporting personnel, transportation, extracurricular activities, and school construction and closing. The district judge or school authorities must make every effort to achieve the greatest degree of actual desegregation. Mathematical ratios could be used as a starting point in assigning students, and students could be ordered transported.\textsuperscript{191} Six years later, in 1977, the Court noted in *Milliken v. Bradley (Milliken II)*\textsuperscript{192} that a remedial decree can include ancillary matters, such as training programs for teachers, guidance and counseling programs, and revised testing procedures. Also ancillary are orders for

Page 1124
defendants to pay costs and the attorneys’ fees of prevailing parties. Usually the school board is ordered to pay court costs and reasonable attorneys’ fees. If the state was involved in the discrimination, it may also be ordered to share in paying for the remedy.

3. Step Three: Limits Placed on Remedial Orders

District courts began to discover in many cities that population shifts, primarily "white flight" to the suburbs, were making it difficult to end racial separation in city school systems. Orders were entered requiring suburban schools to accept students from the inner city, or requiring students from the suburbs to attend school in the inner city. However, the Supreme Court largely ended this practice with its decision in 1974 in *Milliken v. Bradley (Milliken I).*193 There, over objections by liberal instrumentalist Justices Douglas, Brennan, and Marshall, and liberal Holmesian Justice White, the majority, per Chief Justice Burger, held that an interdistrict remedy is proper only when there has been an interdistrict violation, *e.g.*, district lines were drawn on the basis of race, or a constitutional violation in one district is shown to have significant segregative effects in another district.194

Another restrictive rule was created in *Dayton Board of Education v. Brinkman (Dayton I).*195 The Court held in *Dayton I* in 1977 that if there are only a few isolated discriminatory practices, the district court should limit the scope of any remedy by determining the incremental segregative effect of intentional discrimination. This result was “clarified” by *Dayton Board of Education v. Brinkman (Dayton II)*196 in 1979, where liberal Holmesian Justice White, joined by liberal instrumentalist Justices Brennan, Marshall, Blackmun, and Stevens, held that the incremental rule applies only if there are a few isolated discriminatory practices. A court may order a system-wide remedy if it finds current, system-wide impact. If plaintiff proves purposeful discrimination in the past not remedied by board action, and there presently is system-wide racial disproportion in the schools, there is a *prima facie* case that current segregation was caused at least in part by prior acts.

4. Step Four: Initial Consideration of Concluding Desegregation Litigation

The Court initially indicated that it might not be too difficult for a district court to terminate a desegregation action. In 1976, the Court said in *Pasadena City Board of Education v. Spangler*197 that if a plan achieves racially neutral attendance, the court has “fully performed its function of providing the appropriate remedy for previous racially discriminatory attendance patterns.” As noted at § 26.2.1.3.C nn.201-07, in practice terminating a desegregation action proved more difficult, and only in the mid-to-late 1990s did terminating such programs meet with much success.

---

194 *Id.* at 744-46; *id.* at 762 (White, J., joined by Douglas, Brennan & Marshall, JJ., dissenting).
C. The Modern Natural Law Era

During the modern natural law era, since 1986, the Supreme Court has been working primarily in the last two areas: fine tuning remedial rules and creating standards for terminating litigation that would be consistent with the Court's commitment to remove all vestiges of past discrimination from public school systems and assure that school boards do not return to former discriminatory policies.

In the remedial area, the Court decided in *Spallone v. United States*[^198] that if the court enters an order calling for legislative action that is not taken, the court can impose contempt sanctions against the governmental unit, but not against individual legislators, unless sanctions against the unit fail to produce compliance within a reasonable time. Further, if compliance with a desegregation order requires funding that the local agency cannot obtain because of resistance from the public or state laws, a 5-4 Court, composed of liberal Holmesian Justice White, and the four liberal instrumentalists, Justices Brennan, Marshall, Blackmun, and Stevens, held in *Missouri v. Jenkins (Jenkins II)*[^199] that the court may direct the local agency to levy taxes and may enjoin state laws that limit such levies. On the other hand, the Court reaffirmed in *Missouri v. Jenkins (Jenkins III)*[^200] the *Milliken I* principle in holding that a district court seeking to remedy an intradistrict violation that has not directly caused significant interdistrict effects exceeds its remedial authority if it orders a remedy with an interdistrict purpose. This holding is consistent with the background natural law principle, noted at § 12.2.2.3 text following n.81, that remedies should be proportionate to the violation.

With respect to the termination of desegregation litigation, the Court has been laboring to formulate appropriate principles. First, in *Board of Education of Oklahoma City Public Schools v. Dowell,*[^201] the Court held that a desegregation decree can be done only by a "rather precise statement." Chief Justice Rehnquist's opinion said a decree is appropriately dissolved if the purposes of the litigation have been fully achieved. That occurs when the system has achieved "unitary" status, that is, is being operated in compliance with the Equal Protection Clause, and it is unlikely the board will return to its former ways. In finding compliance, the court should ask whether the board has complied in good faith and whether all vestiges of past discrimination had been eliminated to the extent practicable, but a court should not make unsupported findings that current residential segregation is a vestige of former school segregation. In dissent, Justices Marshall, Blackmun, and Stevens would not allow dissolution if feasible steps could be taken to avoid one-race schools.

[^199]: 495 U.S. 33, 55-58 (1990). Justice Kennedy, joined by Chief Justice Rehnquist, and Justices O'Connor and Scalia, dissented from this part of the Court’s ruling. *Id.* at 58-59.
[^201]: 498 U.S. 237, 246 (1991); *id.* at 251-52 (Marshall, J., joined by Blackmun & Stevens, JJ., dissenting).
A creative half-way solution was found when the Court held in *Freeman v. Pitts* in 1992 that a district court may partially withdraw from supervision over a school system that has demonstrated a good faith commitment to a constitutional course of action and nothing requires intrusive measures to achieve racial balance in student assignments in the late phases of carrying out a desegregation decree when the imbalance is not attributable to either the prior de jure system or to a later violation by the school district. The Court held that a district court has authority to relinquish supervision and control over a school district in incremental stages before full compliance has been achieved in every area of operations. Thus, a district court could withdraw from ordering relief with regard to school assignments, transportation, physical facilities, and extracurricular activities, but continue to oversee teacher and principal assignments, resource allocation, and quality of education. Further, the Court noted in *Missouri v. Jenkins (Jenkins III)* that asking whether the scores of a system's students are at or below national norms at many grade levels is not an appropriate test to decide whether a previously segregated district has achieved partial unitary status.

In 1992, a new kind of school desegregation problem came before the Court in *United States v. Fordice*. This involved the desegregation of a state university. The specific question was whether Mississippi had dismantled its formerly segregated university system by establishing racially neutral admission policies. The problem arose from the fact that the state's university system was still divided into a group of historically white schools and historically black schools. The Court ordered the district court to reexamine the policies governing the system, particularly with respect to admission standards, program duplication, institutional mission assignments, and continued operation of all eight public universities. The reexamination was to use the following test: “If the State perpetuates policies and practices traceable to its prior system that continue to have segregative effects – whether by influencing student enrollment decisions or by fostering segregation in other facets of the university system – and such policies are without sound educational justification and can be practicably eliminated, the State has not satisfied its burden of proving that it has dismantled its prior system.”

Discussing the possible application of this test, the Court questioned why the state was assigning students to the comprehensive universities on the basis of achieving a minimum composite score of 15 on the ACT test, when the average score for white students was known to be higher than that of black students. The Court wondered why many undergraduate programs at historically black universities are duplicated by historically white universities. It noted that the universities designated “comprehensive,” which get the most resources, were historically white universities. And it wondered whether the state was attempting to fund more institutions of higher learning than were justified by the resources available to the state.

---

205 *Id.* at 732-43.
Justice Thomas, concurring, said that he did not understand the opinion as saying that a state is forbidden from maintaining historically black institutions.206 Dissenting in part, Justice Scalia said that only one aspect of an historically segregated university system need be eliminated: discriminatory admissions standards. He predicted that the test articulated by the majority left virtually standardless discretion in the district court judges, which would lead to litigation-driven confusion in the formerly de jure states, litigation that would benefit no one.207

At the end of the day, the cases involving school desegregation point out the difficulty courts may have in producing significant social reform, even with backing from Congress and the President, particularly if there is significant social opposition.208 On the other hand, Brown v. Board of Education and its progeny put societal desegregation on the national agenda, and was a catalyst for a whole host of civil rights laws.209 The Brown Court’s rejection of permitting customs and traditions regarding segregation to determine the outcome of the Equal Protection analysis also foreshadowed the view, discussed at § 26.1.1.1 nn.16-21, that a bare desire to harm a politically unpopular group is an illegitimate interest under modern Equal Protection Clause analysis.

§ 26.2.1.4 The Constitutionality of Affirmative Action Programs Based on Race

A. Initial Approaches to Affirmative Action

Unless one reads “equal protection” as a literal barrier to all racial classifications, as do some extreme formalists today, as noted at § 26.2.1.1.E n.136, the text of the Constitution neither explicitly mandates nor explicitly prohibits government-based affirmative action programs. As an historical matter, the Reconstruction-era Congresses that passed the 13th, 14th & 15th Amendments engaged in a number of forms of affirmative action, particularly through institutions such as the Freedman’s Bureau, but also race-conscious welfare programs for “colored women and children”; welfare legislation directed toward all “blacks,” not merely newly-freed slaves; and legislation to ensure compensation for African-American servicemen who served during the Civil War.210

206 Id. at 745-49 (Thomas, J., concurring).

210 See Jeb Rubenfeld, Affirmative Action, 107 Yale L.J. 427, 429-32 (1997) (race-conscious welfare programs for “colored women and children”); Eric Schnapper, Affirmative Action and the Legislative History of the Fourteenth Amendment, 71 Va. L. Rev. 753, 754-83 (1985) (Freedman’s bureau legislation, some of which was applicable to all “blacks,” not merely newly freed former slaves; welfare legislation directed toward African-Americans; and special legislation to ensure
The question of what standard of review should be used for such programs remained unasked during the formalist and Holmesian eras. Indeed, it was only many years after Brown v. Board of Education in 1954 that voluntary government affirmative action programs began to appear in the modern era. In the meantime, the Supreme Court and lower federal courts had ordered various kind of affirmative action as a means for remediying illegal race discrimination in schools. For example, in opposition to such action, the Mobile school board had argued in Swann v. Charlotte-Mecklenburg Board of Education\(^{211}\) that the Constitution requires teacher assignments to be on a “color blind” basis. The Court rejected that contention, however, where district courts were using equity power in ordering the assignment of teachers to achieve a particular degree of faculty desegregation as part of a remedial plan to bring about a completely unitary, non-discriminatory school system.

Not until late in the instrumentalist era was there a Supreme Court case testing the constitutionality of a state’s voluntary affirmative action program. The case was Regents of the University of California v. Bakke\(^{212}\) in 1978. In Bakke, the University of California-Davis medical school had set aside 16 places for minorities in its first-year class. As discussed below, at § 26.2.1.4.A n.219, Justices Brennan, White, Marshall, and Blackmun tested the program by intermediate scrutiny, concluding that it was constitutional because the school’s purpose of remediying the effects of past societal discrimination was legitimate and substantial, and the handicap of past discrimination was impeding the access of minorities to the medical school. Chief Justice Burger, along with Justices Stewart, Rehnquist, and Stevens, said that the affirmative action program was in conflict with § 601 of the Civil Rights Act of 1964, codified at 42 U.S.C. § 2000d. That Act bars excluding anyone “on the ground of race, color, or national origin” from receiving the benefits of any program receiving federal financial assistance, as did the University.\(^{213}\)

Given this 4-4 split, Justice Powell held the key vote in the case. He joined with the Burger group in finding the Davis program illegal. However, he joined with the Brennan group in holding that § 601 did not bar use of race except where it would be unconstitutional under the Equal Protection Clause. He then concluded that the trial court erred when it enjoined the university from according any consideration to race in its admissions process.

Justice Powell reasoned that there should be strict scrutiny of all racial classifications because the 14th Amendment is a guarantee of personal rights to individuals and not to groups.\(^{214}\) Applying strict scrutiny, Justice Powell noted that there were four governmental interests that the affirmative action program purported to serve. Justice Powell then analyzed each of those interests to determine if any could survive a strict scrutiny analysis.

---

\(^{212}\) 438 U.S. 265, 269-72 (1978) (Powell, J., opinion, announcing the judgment of the Court).

\(^{213}\) Id. at 412-18 (Stevens, J., joined by Burger, C.J., and Stewart & Rehnquist, JJ., concurring in the judgment in part and dissenting in part).

\(^{214}\) Id. at 289-91 (Powell, J., opinion, announcing the judgment of the Court).

Page 1129
The first government interest was “reducing the historic deficit of traditionally disfavored minorities in medical schools and in the medical profession.” Justice Powell concluded that this was not only not a compelling governmental interest, but it was an illegitimate interest. Justice Powell stated, “If petitioner’s purpose is to assure within its student body some specified percentage of a particular group merely because of its race or ethnic origin, such a preferential purpose must be rejected not as insubstantial but as facially invalid. Preferring members of any one group for no reason other than race or ethnic origin is discrimination for its own sake. This the Constitution forbids.”215

The second interest was “countering the effects of societal discrimination.” With regard to this interest, Justice Powell noted that while the Court has often said that a governmental entity has a compelling interest in remedying the effects of its own prior discrimination in an identified program, remedying the effects of general “societal discrimination” against members of a particular group by other members of society generally is “an amorphous concept of injury that may be ageless in its reach into the past.” Without explicitly reaching the question of whether such an interest could be a legitimate or important interest for rational basis or intermediate scrutiny review, Justice Powell left no doubt that such an interest was not for him a compelling governmental interest that could be used at strict scrutiny. As he remarked, “That is a step we have never approved.”216

The third interest considered by Justice Powell was an interest in “increasing the number of physicians who will practice in communities currently underserved.” For purposes of his analysis in Bakke, Justice Powell was willing to assume that such an interest was a compelling governmental interest. The problem, however, was that nothing in the record established that the Davis program was “directly related” to advancing this interest. Citing the lower court opinion in Bakke, Justice Powell noted, “The University concedes it cannot assure that minority doctors who entered under the program, all of whom expressed an ‘interest’ in practicing in a disadvantaged community, will actually do so.” It is important to note that even if a substantial number of these doctors would in fact go back and practice in disadvantaged communities, that would only establish a “substantial relationship” between means and ends, which is adequate at intermediate review. At strict scrutiny, however, there needs to be a “direct relationship” between means and ends, such as a formal requirement that any applicant admitted under the affirmative action program promise to go back and serve a disadvantaged community for some period of time. In contrast, in this case, as Justice Powell observed, the government “has not shown that its preferential classification is likely to have any significant effect on the problem.”217

The fourth governmental interest analyzed by Justice Powell in Bakke was “the attainment of a diverse student body.” Justice Powell concluded that this “clearly is a constitutionally permissible goal for an institution of higher education.” Further, as Justice Powell noted, there is direct relationship between means and end, since “the reservation of a specified number of seats in each class for individuals from the preferred ethnic groups would contribute to the attainment of considerable ethnic diversity in the student body.” However, with regard to the third prong of strict

215 Id. at 306.

216 Id. at 306-10.

217 Id. at 310-11.
scrutiny review, Justice Powell concluded that the Davis program’s set-aside of 16 places for minority applicants was not the “least burdensome effective alternative” to achieve a diverse student body. Looking to models at other schools, including the Harvard College plan, Justice Powell concluded that using race as a factor in the admissions process, but rejecting a quota system, was a less burdensome alternative that would nonetheless be effective in achieving the government’s compelling interest in a racially diverse student body. Under strict scrutiny, the government must adopt the least burdensome effective alternative, and thus the Davis affirmative action set-aside program was unconstitutional under a strict scrutiny approach.\(^{218}\)

Justice Brennan, dissenting with Justices Marshall, Blackmun and White, said that racial classifications designed to serve “benign” remedial purposes should be given only intermediate scrutiny. He concluded that Davis’ articulated purpose of remediaying the effects of past societal discrimination was an important interest, at least where “there is a sound basis for concluding that minority underrepresentation is substantial and chronic, and that the handicap of past discrimination is impeding access of minorities to the Medical School.” Further, the program was substantially related to responding to that interest, even absent any particularized finding that any applicant had been the victim of prior discrimination, because the “record makes clear that only minority applicants likely to have been isolated from the mainstream of American life are considered in the special program” and “the probability of victimization is great.” Finally, the program was “closely related” to its ends, \textit{i.e.}, not substantially more burdensome than necessary, because it did not stigmatize anyone and race was being reasonably used in light of the program’s objectives, with only a 16% set-aside, leaving 84% of the seats to be filled under “the regular admissions program.”\(^ {219}\)

Because of the vote pattern in Bakke, that case did not definitely settle whether strict scrutiny should be applied to state race-based affirmative action programs. And, it left open the question of whether strict scrutiny should be applied to affirmative action programs created by the federal government, as opposed to those created by states.

\textbf{B. Post-Bakke Developments During the Instrumentalist Era}

During later years of the instrumentalist era, the issue of a standard of review for federal affirmative action programs was addressed, but left clouded, in \textit{Fullilove v. Klutzick}.\(^ {220}\) \textit{Fullilove} involved a federal program that created a 10% minority-owned firm set-aside in construction grants to the states. The Supreme Court upheld the program by a 6-3 vote. Instrumentalist Justices Brennan, Marshall, and Blackmun had no problem in finding that the program satisfied intermediate scrutiny, as the program was substantially related to achievement of important government objectives – namely, remediaying the present effects of past discrimination in a way that does not stigmatize, since

\(^{220}\) 448 U.S. 448 (1980).
a contract could be awarded to a minority enterprise only if it was qualified to do the work. The difficulty in characterizing what the Court had done was created by Chief Justice Burger’s opinion, an opinion in which Justices White and Powell joined. The Chief Justice said that his opinion did not adopt either the intermediate or strict scrutiny formulas discussed in Bakke, but that Congress’ spending provision would survive judicial review under either test articulated in the several Bakke opinions. Regarding objectives, Chief Justice Burger said that Congress’ spending power was at least as broad as its regulatory powers. Congress could remedy the present effects of past discrimination pertaining to private persons through the Commerce Clause and could remedy present effects pertaining to state and local agencies through the Equal Protection guarantees of the 14th Amendment. This law was sufficiently tailored in his view because its provisions for waivers and grievances gave reasonable assurance that application of the program would be limited to accomplishing the remedial objectives contemplated by Congress. Chief Justice Burger indicated that Congress was responding not only to the federal government’s own prior racial discrimination, but also to general societal discrimination in the form of “barriers to competitive access which had their roots in racial and ethnic discrimination, and which continue today, even absent any intentional discrimination or other unlawful conduct,” and “this pattern of disadvantage and discrimination existed with respect to state and local construction contracting” as well as federal contracting.

In a concurring opinion, Justice Powell said that he joined the Chief Justice’s opinion because it was substantially in accord with his own views, as expressed in Bakke. Here, he said, Congress was an appropriate authority to act in response to identified discrimination, and its total contemporary record in dealing with the problems of racial discrimination against minority business enterprises established the conclusion that purposeful discrimination contributed significantly to the small percent of federal contracting funds (less than 1%) that minority business enterprises had received. This was the least burdensome effective alternative because Congress knew that other remedies had failed and there was a waiver provision in which the problems of particular geographic areas where minority group members constitute a small percentage of the population could be considered. Further, Justice Powell noted that the choice of a 10% set-aside was reasonable because it “falls roughly halfway between the present percentage of minority contractors [4%] and the percentage of minority group members in the Nation [17%].” Finally, the set-aside would have no effect on the ability of the remaining 96% of non-minority contractors to compete for the remaining 99.75% of construction funds for all construction projects nationwide, both public and private, that were not affected by the 10% set-aside for federal construction projects.

Justice Stewart, dissenting with Justice Rehnquist, said the Constitution is “color blind,” and any official action that treats a person differently on account of race or ethnic origin is inherently suspect and presumptively invalid. Applying strict scrutiny, Stewart could find no compelling governmental interest, since in his view there was no evidence that Congress had engaged in the past in racial discrimination.

discrimination in its disbursement of federal funds. Justice Stevens, also dissenting, said that the federal government has a duty to govern impartially. That duty was unsatisfied where Congress had failed to explain what relevant characteristic justifies the special treatment given to all citizens who are African-American, Hispanic, Orientals, Indians, Eskimos, or Aleuts.

C. The Modern Natural Law Era

At the beginning of the modern natural law era, in 1986, the Court began to gravitate toward its present insistence on strict scrutiny for all race-based affirmative action programs. A start was made in *Wygant v. Jackson Board of Education*. In that 5-4 case, a number of white teachers had been laid off pursuant to an agreement between the board and the teachers’ union that when layoffs were required teachers with the most seniority would be retained, except that such layoffs could not reduce the percentage of minority personnel employed at the time of the layoff. Justice Powell’s plurality opinion, joined in full by Chief Justice Burger and Justice Rehnquist, and in substantial part by Justice O’Connor, applied strict scrutiny and held that the board’s goal in adopting layoff protection for minority teachers of providing minority role models for minority students could not be regarded as constitutional since: (1) while providing minority role models might be sufficiently related to alleviating the effects of general societal discrimination against minorities, that interest, as in *Bakke*, was not a compelling government interest, as discussed at § 26.2.1.4.A n.216; (2) providing minority role models was not directly related to responding to any compelling government interest in remedying any racial discrimination in employment which had previously occurred; and (3) the loss of an existing job imposed too severe a burden on white employees, since less burdensome effective means to remedy any prior employment discrimination were available, such as the adoption of hiring goals. Justice O’Connor’s separate concurrence emphasized that the finding of past discrimination needed to justify an affirmative action program need not be made by a court or other authorized agency. Justice White, concurred in the judgment, noted there had been no showing that the black teachers for whom white teachers had been discharged were the victim of any racial discrimination.

Four Justices were in dissent. Justice Marshall, dissenting with Justices Brennan and Blackmun, continued to insist on intermediate scrutiny. He said that a public employer should be permitted to preserve the benefits of a legitimate and constitutional affirmative action program even while reducing its workforce. Justice Stevens, in a separate dissent, said that it was reasonable for the board to conclude that an integrated faculty would be able to provide benefits for students that could not be provided by an all-white, or nearly all-white, faculty.

224 *Id.* at 522-23 (Stewart, J., joined by Rehnquist, J., dissenting).

225 *Id.* at 535-36 (Stevens, J., dissenting).

226 476 U.S. 267, 269, 273-84 (1986) (plurality opinion of Justice Powell, joined by Burger, C.J., and Rehnquist, J., and in all but Part IV by O’Connor, J.); *id.* at 284 (O’Connor, J., concurring in part and concurring in the judgment); *id.* at 294 (White, J., concurring in the judgment).

227 *Id.* at 295 (Marshall, J., joined by Brennan & Blackmun, JJ., dissenting); *id.* at 313 (Stevens, J., dissenting).
The Court noted in 1986 in *Local No. 93, International Association of Firefighters v. Cleveland* that the Civil Rights Act of 1964 encourages voluntary resolution of affirmative action problems. A consent decree, which is a form of contract between the parties, may call for an affirmative action program without a showing that the persons benefitted have been discriminated against. In this case, a union that had engaged in race discrimination and had also violated an order requiring it to achieve a goal of 29% non-white membership by 1981, was ordered to support a fund for increasing the pool of qualified non-white applicants and was ordered to achieve a 29% goal of non-white members by 1987. The Court upheld the order, noting as to constitutional issues that the relief passed even the most rigorous scrutiny test. Justice Brennan's opinion for the Court, joined by Marshall, Blackmun, Powell, Stevens, and O'Connor, considered several factors in holding the tailoring proper:

1. **Need and Alternatives**: The efficacy of alternative remedies (the lower court had decided, in light of the union's long record of resistance to ending discrimination, that strong measures were required);
2. **Duration**: The planned duration of the remedy (it had a limited duration);
3. **Flexibility, Including Waivability**: The availability of waiver provisions or some other form of flexibility if the hiring plan could not be met (meeting the goal here had been twice delayed);
4. **Relationship of Numerical Goals to the Relevant Labor Market**: The relationship between the percentage of minority workers to be employed and the percent of minority group members in the relevant population or work force (this goal was directly related to the work force); and
5. **Impact on Innocent Third Parties**: The effect of the remedy on innocent third parties (the order did not disadvantage existing union members and thus was different than *Wygant*).

The same five factors were applied in 1987 in *United States v. Paradise*. In *Paradise*, a 5-4 Court upheld a temporary court order for “a 50% promotional quota in the upper ranks [in the Alabama state trooper force], but only if there were qualified black candidates, if the rank were less than 25% black, and if the Department had not developed and implemented a promotion plan without adverse impact for the relevant rank.” The Court upheld the order finding there was a compelling interest in remedying past and present discrimination by the state police force. In addition, there was a compelling interest in dealing with promotions since discrimination at the entry level precluded blacks from competing for promotions. Finally, there was a compelling interest in compliance with trial court judgments calling for the department to establish procedures that did not discriminate.

Applying the above five factors, the Court found that the order was properly tailored, as follows:

1. **Need and Alternatives**: The government alternatives did not take account of the more than 10-year delay in implementing a non-discriminatory system of promotion and the injury done to black officers who had lost promotion opportunities by the delays. Fines probably would not help, and an attorneys’ fee order had not prevented foot-dragging.

---

2. **Duration**: The order ended when a plan not having a discriminatory impact was in place.

3. **Flexibility, Including Waivability**: The Judge hoped that use of the order would be a one-time thing, and on submission of appropriate procedures the Judge had suspended its application.

4. **Relationship of Numerical Goals to the Relevant Labor Market**: 25% was the percentage of blacks in the relevant labor market. The 50% figure was not the goal; it merely stood for the speed at which the goal would be achieved, a reasonable provision in view of the defendant's prior delays.

5. **Impact on Innocent Third Parties**: It was used only once at the rank of corporal. It did not impose an absolute bar on white promotions, nor require layoffs of white officers.  

Justice Brennan observed that the Court had not in all situations required court-ordered remedial plans to be the least restrictive means of implementation. District courts retain some discretion even though the remedy must be narrowly tailored. Justice Stevens concurred. He said that where law violations had not been proved there should be a strong presumption against race-conscious decisions. Here, the decree should be tested by whether it exceeds the bounds of reasonableness.

Chief Justice Rehnquist dissented, along with Justices White, O'Connor, and Scalia. To survive strict scrutiny, an order must fit with greater precision than any alternative remedy. Here, the court could have appointed a trustee to develop promotion procedures or could have found the Department in contempt, but there was no hint that the district court considered alternative remedies.

A broader and more definitive holding was reached in *Richmond v. J.A. Croson Co.* Six Justices there agreed to strike down a city’s program that required prime contractors on city projects to subcontract at least 30% of the dollar amount of the contract to one or more Minority Business Enterprises. Chief Justice Rehnquist and Justices White and Kennedy joined in an opinion by Justice O'Connor that applied strict scrutiny. Justice O'Connor explained that classifications based on race carry a danger of stigmatic harm and unless strictly reserved for remedial settings may promote notions of racial inferiority and lead to a politics of racial hostility. Applying strict scrutiny, she wrote that the city’s failure to prove racial discrimination in the local construction industry by a “strong basis in evidence” showed that the city had failed to demonstrate a compelling interest. The fact that minority businesses received 1% of the public construction jobs, while 50% of the population in Richmond were minorities, did not, by itself, prove prior racial discrimination because, in part, “Blacks may be disproportionately attracted to industries other than construction.”

230 *Id.* at 171-83.

231 *Id.* at 184-85.

232 *Id.* at 194-95 & n.4 (Stevens, J., concurring).

233 *Id.* at 196-201 (O'Connor, J., joined by Rehnquist, C.J., and Scalia, J., dissenting); *id* at 196 (White, J., dissenting) (stating he agreed with much of what Justice O'Connor said in her dissent).

Even if discrimination against African-American construction workers had been found, the city’s affirmative program was not directly related to remedying that discrimination. Justice O’Connor noted, “There is absolutely no evidence of past discrimination against Spanish-speaking, Oriental, Indian, Eskimo, or Aleut persons in any aspect of the Richmond construction industry . . . . The random inclusion of racial groups that, as a practical matter, may never have suffered from discrimination in the construction industry in Richmond”\(^{235}\) underscores that the affirmative action program in \textit{Croson} was not directly related to advancing a compelling governmental interest.

Further, even if the program were limited to African-Americans, the city would have to show under strict scrutiny that its 30% set-aside program was the least burdensome effective alternative. This would include consideration of whether race-neutral means could be an effective remedy for prior discriminatory treatment. Yet, as Justice O’Connor noted, “[T]here does not appear to have been any consideration of the use of race-neutral means to increase minority business participation in city contracting. Many of the barriers to minority participation in the construction industry relied upon by the city to justify a racial classification appear to be race neutral. If MBE’s disproportionately lack capital or cannot meet bonding requirements, a race-neutral program of city financing for small firms would, a fortiori, lead to greater minority participation.”\(^{236}\)

Justice Scalia, concurring, said that in only one situation should a state be able to use affirmative action to undo past discrimination: where it is needed to eliminate a state’s maintenance of a system of unlawful race discrimination. Justice Stevens, concurring in the judgment, specifically disagreed with the view that a government decision that rests on a racial classification is never permissible except as a remedy for its own past wrong. Here, however, the city made no claim that the public interest in efficient performance of its construction contracts would be served by the racial preference and there was no attempt by the city to identify the characteristics of the advantaged and disadvantaged classes that may justify their disparate treatment. Instead, the city had merely engaged in a stereotypical analysis that is the hallmark of violations of equal protection as there was no attempt to limit the class of persons benefitted by the ordinance to victims of past discrimination.\(^{237}\)

\[^{235}\textit{Id.} at 506. \textit{Cf.} Jana-Rock Construction, Inc. v. New York State Dep’t of Economic Develop., 438 F.3d 195, 207-09, 211-14 (2nd Cir. 2006), and cases cited therein (exclusion of persons of Portuguese and Spanish descent in affirmative action program for Hispanics, defined as Latin American Hispanics, constitutional based upon different history of discrimination, although the court applied rational review, rather than the second prong of strict scrutiny asking whether the exclusion was “necessary” to make the program “directly related” to remedying prior discrimination against Latin American Hispanics, and, if not, the program would be “unnecessarily underinclusive”; the court’s cite to \textit{Katzenbach v. Morgan}, 384 U.S. 641, 656-58 (1966) to justify rational basis scrutiny was inapposite, since that aspect of \textit{Katzenbach} involved discrimination between “American-flag schools” and “non-American-flag schools,” a social regulation not involving on its face racial, ethnic, or national origin discrimination, and no showing of discriminatory intent was made based on race, ethnicity, or national origin; in \textit{Jana-Rock} the exclusion was based on national origin).\]

\[^{236}\textit{488 U.S.} at 507 (citations omitted).\]

\[^{237}\textit{Id.} at 520-28 (Scalia, J., concurring); \textit{id} at 511-16 (Stevens, J., concurring).\]
Justice Marshall dissented, with Justices Brennan and Blackmun. Marshall again insisted that intermediate scrutiny was adequate for voluntary governmental affirmative action programs. Applying intermediate scrutiny, Marshall said that Richmond’s initiative was clearly constitutional, when viewed against the backdrop of systematic nationwide racial discrimination that Congress has identified. Richmond had a substantial purpose in eradicating the effects of past racial discrimination and in preventing the city’s own spending decisions from reinforcing and perpetuating the exclusionary effects of past discrimination which had more clearly been identified than by relying on generalized societal discrimination. The means were substantially related to the goal because Richmond’s 30% figure falls roughly halfway between the present percentage of Richmond-based minority contractors (1%) and the percent of minorities in Richmond (50%).

Criticizing the majority’s use of strict scrutiny, Justice Marshall said there is a profound difference between governmental actions that are racist, and governmental actions that seek to remedy the effects of prior racism or prevent neutral governmental activity from perpetuating the effects of such racism.238

Early in the 1990s there was one instrumentalist victory in support of intermediate scrutiny, a victory destined to be short-lived. In *Metro Broadcasting Inc. v. FCC*,239 five votes were secured to uphold an FCC program that awarded an enhancement for minority ownership in comparative proceedings for new broadcast licenses and that permitted a limited number of existing radio and television broadcast stations to be transferred only to minority-controlled firms. Justice Brennan’s opinion said that the program had been mandated by Congress and that a majority of the Court in *Fullilove* did not apply strict scrutiny to such race-based classifications. He said that even if it was not “remedial,” the program served the important governmental objective of enhancing broadcast diversity and was substantially related to that objective because it was based on an analysis by Congress that there is a nexus between minority ownership and programming diversity.

Justice Stevens concurred because to him the case fell within the extremely narrow category of governmental decisions for which racial or ethnic heritage may provide a rational basis for differential treatment. The reason was that the public interest is served by broadcast diversity, as it is served by diversity in the police force, in a public school faculty, or in the student body of a professional school.240 Justice White joined the four instrumentalists in this case, probably based on Justice White’s strong policy of deference to Congress, that policy typical for liberal Holmesian judges, as discussed at § 10.3.3. Because *Metro Broadcasting* involved a congressionally-approved affirmative action program, rather than a state or local affirmative action program, as in *Richmond v. J.A. Croson Co.*, Justice White was willing to apply only intermediate scrutiny in this case.

Justice O’Connor dissented, with Chief Justice Rehnquist and Justices Scalia and Kennedy.241 Justice O’Connor insisted that strict scrutiny should apply to federal as well as to state affirmative

---

238 *Id.* at 528-61 (Marshall, J., joined by Brennan & Blackmun, JJ., dissenting).

240 *Id.* at 601-02 (Stevens, J., concurring).

241 *Id.* at 602-31 (O’Connor, J., joined by Rehnquist, C.J., and Scalia & Kennedy, JJ., dissenting).
action programs, a position she was able to transform into law six years later in *Adarand Constructors, Inc. v. Pena*, once Justice Marshall had been replaced by Justice Thomas. In her dissent, Justice O’Connor said that six members of the Court in *Fullilove* had rejected intermediate scrutiny of federal actions in favor or some more stringent form of review. In *Croson*, the Court had determined that strict scrutiny should apply to preferences that favor members of minority groups. Here, the FCC’s program failed strict review because diversity of broadcast viewpoints is not a compelling interest as it is too amorphous, insubstantial, and unrelated to any legitimate basis for employing racial classifications. Further, the chosen means could not be deemed narrowly tailored because they rested on stereotyping and only indirectly furthered the end of broadcast diversity.

Six years later, *Metro Broadcasting* was overruled. In *Adarand Constructors, Inc. v. Pena*, a federal highway construction program included a race-based rebuttable presumption that certain minorities were socially and economically disadvantaged, and it provided extra compensation for general contractors who employed subcontractors certified as small businesses controlled by disadvantaged individuals. Justice O’Connor, speaking for a majority of 5 Justices, stated the controlling legal principle as follows,”[A]ll racial classifications, imposed by whatever federal, state, or local governmental actor, must be analyzed by a reviewing court under strict scrutiny. In other words, such classifications are constitutional only if they are narrowly tailored measures that further compelling governmental interests.” Justice O’Connor added that to the extent *Metro Broadcasting* was inconsistent with this principle, it was overruled. She explained that *Metro Broadcasting* had departed from prior cases in failing to acknowledge that 14th Amendment rights are individual rights rather than group rights, and in departing from skepticism of all racial classifications and consistency of treatment irrespective of the race of the burdened or benefitted group. Justice Scalia, concurring, took an even more rigid view than did Justice O’Connor. He said: “In my view, government can never have a ‘compelling interest’ in discriminating on the basis of race in order to ‘make up’ for past racial discrimination.” Indeed, it is unclear whether Justice Scalia now believes there are any compelling government interests to support racial discrimination.

Dissenting were Justices Stevens, Souter, Ginsburg, and Breyer. Justice Stevens said that there is no moral or constitutional equivalence between a policy that is designed to perpetuate a caste system and one that seeks to eradicate racial subordination. No sensible conception of the government’s constitutional obligation to “govern impartially” should ignore this distinction. This distinction usually is obvious, said Justice Stevens, as it is here. Further, greater deference should be given to Congress’ institutional competence and constitutional authority when it enacts a program designed

---

243 *Id.* at 227. Applying strict scrutiny, narrowly drawn federal affirmative action programs in government contracting have continued to be upheld as constitutional. See, e.g., *Sherbrooke Turf, Inc. v. Minnesota Dep’t of Transportation*, 345 F.3d 964 (8th Cir. 2003), *cert. denied*, 541 U.S. 1041 (2004); *Adarand Constructors, Inc. v. Slater*, 228 F.3d 1147 (10th Cir. 2000) (*Adarand II*), *cert. granted then dismissed as improvidently granted*, 534 U.S. 103 (2001).

244 515 U.S. at 227-31.

245 *Id.* at 239 (Scalia, J., concurring in part and concurring in the judgment).
to foster equality. Justice Ginsburg, with whom Justice Breyer joined, said in dissent that given the Nation’s history of race discrimination and its practical consequences, Congress can conclude that a carefully designed affirmative action program may help to realize the equal protection of laws promised by the 14th Amendment since 1868. Seeking to allow some affirmative action programs to survive in the future, she underscored that Justice O’Connor’s opinion said that strict scrutiny is not always fatal in fact. Justice Ginsburg saw the Court’s decision as one which would allow precedents to evolve, and be informed by and responsive to changing conditions. Justice Souter, dissenting with Justices Ginsburg and Breyer, echoed the above theme of Justice Ginsburg, and explicitly rejected Justice Scalia’s limit on affirmative action. Souter said that § 5 of the 14th Amendment should remain, after this case, as the source of an interest of the national government sufficiently important to satisfy the requirements of the strict scrutiny test. Further, he did not see that Justice O’Connor’s opinion would effect what he called the long accepted view that constitutional authority to remedy past discrimination is not limited to the power to forbid its continuation, but extends to eliminating those effects that would otherwise persist.

In a related development, the Court has in recent years applied strict scrutiny to the redrawing of congressional districts covered by the Voting Rights Act for the remedial purpose of achieving a majority in each such district of racial groups that otherwise were a minority, discussed at § 26.2.1.5. As in Bakke, race may be considered, but it must not be the predominant consideration.

D. Affirmative Action in the Context of School Admissions Policies

Several questions remained open after this series of cases regarding the use of affirmative action in the context of school admissions policies. One question was whether Bakke stood as a precedent supporting the notion that race may be used in the admissions process of a state university. In Hopwood v. Texas, the Fifth Circuit struck down an affirmative action plan at the University of Texas School of Law. The court said that Justice Powell’s view in Bakke was not binding precedent, inasmuch as it garnered only his own vote, and more recent precedents on broadcast diversity in Metro Broadcasting, or diversity in hiring faculty for role model purposes in Wygant, show that the diversity interest will not satisfy strict scrutiny. In a statement accompanying the Court’s denial of certiorari, Justice Ginsburg said the issue of whether race could be used in the admissions process was of great national importance, but that the admissions program involved in the Hopwood case had long since been discontinued and would not be reinstated. The petitioners had not defended that program and instead challenged only the rationale relied on by the Court of Appeals. The Court reviews judgments, she said, not opinions. Thus, by the time the Hopwood case reached the Supreme Court, it was technically moot.

247 Id. at 271-76 (Ginsburg, J., joined by Breyer, J, dissenting).

248 Id. at 264-71 (Souter, J., joined by Ginsburg & Breyer, JJ, dissenting).

249 78 F.3d 932 (5th Cir. 1996), cert. denied, 518 U.S. 1033 (1996).
The Court resolved this issue in 2003 in a set of companion cases, *Grutter v. Bollinger* and *Gratz v. Bollinger*. In *Grutter*, the Court adopted Justice Powell’s approach in *Bakke* as the majority approach. Deferring to academic judgment, the Court then decided that having a racially diverse student body is directly and substantially related to the compelling governmental interest in effective and efficient education. Under strict scrutiny, of course, any race-based affirmative action program must be the least restrictive alternative to achieving these educational benefits. In *Grutter v. Bollinger*, the Court concluded that the University of Michigan’s law school system of individualized consideration of applicants, taking race into account as a factor, satisfied this test, consistent with Justice Powell’s opinion in *Bakke*. On the other hand, the Court decided in *Gratz v. Bollinger* that the rigid absolute point system preference of the University of Michigan undergraduate program, which gave the same extra points to aid admission to every member of a minority group, without regard to how much that individual had been the victim of prior discrimination, was unconstitutional. It was not the least burdensome effective alternative that could be used to assure that the undergraduate program received the educational benefits flowing from a racially diverse student body.

A second question is whether even if race may be used in admissions programs, what factual proof will be sufficient to show for a particular education program that diversity is directly related to advancing a compelling interest in efficient and effective education? After *Grutter* this should be easier to show, but it is clear that a present majority of the Court will test each individual program on its own merits, and the government must supply the proof.

A third question is whether, apart from judicially-imposed remedies or diversity in higher education, the Court will consider any interest to be compelling beyond an authorized government institution attempting to create a remedy for its own prior illegal discrimination or such discrimination by private individuals within the scope of the agency’s legislative jurisdiction. Regarding this question, many court opinions have held, or strongly implied, that such additional compelling governmental interests exist, as noted at § 26.1.1.2 nn.47-51.

A fourth question involves the manner in which the issues raised in the educational affirmative action cases have been framed. As indicated, courts typically ask whether having a diverse student body is a compelling government interest. Then, following Justice Powell’s concurrence in

---

251 539 U.S. 244, 270-76 (2003); id. at 276-80 (O’Connor, J., concurring, joined by Breyer, J., concurring only in Justice O’Connor’s opinion and in the judgment).

most lower courts concluded there is a compelling government interest, but some courts did not. This way of phrasing the issue, however, is wrong.

The real question of government ends in these cases is whether there is a compelling government interest in effective and efficient education. That is the end that governments seek regarding education. Diversity in the student body is one means to obtain this end. As Justice Powell noted in Bakke, discussed at § 26.2.1.4.A n.215, merely having diversity for diversity’s sake is not only not a compelling interest, it is not even a legitimate interest. Properly understood, the strict scrutiny analysis that should take place in race-based affirmative action cases involving education involves: (1) is there a compelling governmental interest in education; (2) is having a diverse student body directly related to advancing this interest, and (3) is the affirmative action program adopted the least burdensome alternative that would effectively advance the government’s interest in education.

Of course, a similar tracking of standard strict scrutiny analysis should be applied in other affirmative action cases. For example, in Wittmer v. Peters, the Seventh Circuit Court of Appeals had to decide whether a prison could adopt a racial preference in hiring officers for a “boot camp” for young, non-violent criminal offenders. The court analyzed the case as involving whether the government had a compelling government interest in having a diverse group of officers for the boot camp. The proper analysis should be: (1) is having an effective, rehabilitative “boot camp” program a compelling government interest; (2) is having a diverse group of officers directly related to a successful “boot camp” program; and (3) is the extent of the affirmative action program adopted to achieve that diverse group the least burdensome alternative that will effectively advance the government’s rehabilitative end.

254 See Bhagwat, supra note 252, at 266-68 (discussing Hunter and other cases).

255 Id. at 264, 268 n.48 (discussing Hopwood and other cases).

256 See, e.g., Texas Const. Art. VII, § 1 (“It shall be the duty of the Legislature of the State to establish and make suitable provision for the support and maintenance of an efficient system of public free schools.”), discussed in Edgewood Indep. Sch. Dist. v. Kirby, 777 S.W.2d 391 (Tex. 1989).

257 Bakke, 438 U.S. at 307 (“If petitioner’s purpose is to assure within its student body some specified percentage of a particular group merely because of its race or ethnic origin, such a preferential purpose must be rejected not as insubstantial but as facially invalid. Preferring members of any one group for no reason other than race or ethnic origin is discrimination for its own sake. This the Constitution forbids.”).

258 87 F.3d 916, 919-20 (7th Cir. 1996).
Courts are currently split on the question of whether analyzing the governmental ends part of this analysis is a fact question or question of law. That may be because the courts have been conflating the means and ends inquiries by asking whether having a diverse student body is a compelling government interest. Once it is understood that this way of viewing the question is wrong, it should become clear that the proper question of governmental ends, such as whether efficient education is a compelling governmental interest, is a question of law, as indicated at § 26.1.4 n.100. Based upon court precedents, it should be uncontroversial that education is a compelling government interest, particularly for state governments where most educational affirmative action takes place.259

In contrast to governmental ends, the two means questions of underinclusiveness and overinclusiveness are fact questions which depend on the particular program before the court for their proper resolution. Thus, after hearing all the evidence, and remembering that the government bears the burden in these heightened scrutiny cases, discussed at § 26.1.3 n.82, a district court should decide as a factual matter how the particular program operates in practice. It would then be a mixed question of law and fact, discussed at § 26.1.4 nn.101-02, whether having a racially diverse student body is directly related to efficient and effective education, and whether the particular program is the least burdensome alternative to achieving these educational benefits.

For many professors it will seem obvious that having a racially diverse student body is directly related to efficient and effective education for students who will live in a racially and culturally diverse society. For non-professors, however, it may be necessary to marshal (one might even say “Thurgood Marshall” given his role in the Brown line of cases) the evidence. A number of amici briefs discussed the advantages of a racially diverse student body in Grutter and Gratz.260 The third prong of the strict scrutiny test will depend upon the circumstances of each case whether less burdensome alternatives exist than the program adopted by the institution that would advance as effectively the government’s compelling interest in efficient and effective education. This analysis is consistent with the Court’s view in Grutter and Gratz that having a racially diverse student body is related in a number of ways to efficient and effective education, but that any affirmative action program must be narrowly tailored to achieve this end in the least burdensome effective manner. Despite this difficulty for progressives worried about upholding affirmative action programs, this approach is more likely to result in the programs being upheld than trying to convince the Court to adopt a new theory of equal protection that will uphold these programs, either by focusing on impact on groups, not individuals; or adopting a new approach toward discriminatory intent; or proposing to scrap strict and intermediate scrutiny so that race-based affirmative action will not be analyzed under heightened scrutiny but only rational review.261

259 See generally Hunter, 190 F.3d at 1063, citing Brown v. Board of Educ., 347 U.S. 483, 493 (1954) (“[E]ducation is perhaps the most important function of state and local governments.”).

261 See, e.g., Deborah Hellman, The Expressive Dimension of Equal Protection, 85 Minn. L. Rev. 1, 17 (2000) (advocating refocusing Equal Protection doctrine around “the principle of equal concern” for groups, rather than individuals, i.e., focusing on whether affirmative action harms “white students” as a group, rather than the obvious concrete harm to “individual white applicants”;

Page 1142
Considering affirmative action more broadly, under current doctrine race-based affirmative action can be justified as a remedy for prior racial discrimination. As Justice O’Connor has noted, “The unhappy persistence of both the practice and the lingering effects of racial discrimination against minority groups in this country is an unfortunate reality, and the government is not disqualified from acting in response to it.” This discrimination can take many forms. A full account of such discrimination would take into account the burdens suffered today by the intergenerational effects of discrimination practiced against parents, grandparents, and great-grandparents in the past. Such an intergenerational transmission of inequality “shows how ‘an oppressive racial legacy continues to shape American society through the reproduction of inequality generation after generation.’”

For example, in the context of admissions programs to colleges and universities, alumni connections can play a large role. Potential for contributions to the university by parents of applicants with wealth can also make a difference. Better schools in middle or upper-middle class neighborhoods, or funds to take standardized test training courses, can also be an advantage in admittance to colleges and universities. The intergenerational effects of past discrimination on today’s minority individuals mean that many of them will not share equally in these advantages more widely shared by middle and upper-middle class white applicants.

in many cases in terms of connections and networking of parents and extended family members. As has been noted, “The glass ceiling remains a barrier for women and people of color largely because of patterns of interaction, informal norms, networking, training, mentoring, and evaluation, as well as the absence of systematic efforts to address bias produced by these patterns.”

In some circumstances, critics of race-based affirmative action appear to take these advantages for granted, and thus complain about any other individual getting any kind of advantage set to equalize these effects. Some individuals tend to focus on the immediate admissions or hiring decision being made, rather than the more difficult task of working through longer chains of causation necessary to consider fully the intergenerational effects of prior racial discrimination. Nonetheless, despite this reality, there is an understandable concern that any consideration of race betrays the promise of the Equal Protection Clause that America should be a “color-blind” society. As Justice Scalia has stated, “In the eyes of government, we are just one race here. It is American.” Given America’s history, however, an abrupt end to affirmative action today might well increase racial tensions rather than reduce them. Given our Nation’s history, Justice Blackmun’s remark in *Bakke* that “to get beyond racism, we must first take account of race” may be more empirically accurate.

Nevertheless, Justice Blackmun’s remark in *Bakke* concerning the need to eventually “get beyond racism” is important. This remark was echoed in Justice O’Connor’s opinion in *Grutter* in two ways. First, she noted, “It has been 25 years since Justice Powell first approved the use of race to further an interest in student body diversity in the context of higher education. . . . We expect that 25 years from now, the use of racial preferences will no longer be necessary to further the interest approved today.” Second, in the absence of prior racial discrimination to which race-based affirmative action is a necessary remedy, whether or not to adopt a race-based affirmative action program is within the discretion of society’s policy-makers. Justice O’Connor noted, “Universities in California, Florida, and Washington State, where racial preferences in admissions are prohibited by state law, are currently engaged in experimenting with a wide variety of alternative approaches.”

One alternative approach is represented by the so-called “Hyde Park Declaration,” a New Democrat policy statement that in 2000 recommended that the goal for 2010 should be to “shift the emphasis of affirmative action strategies” away from race-based affirmative action, which triggers strict scrutiny, toward “economic empowerment of all disadvantaged citizens,” which as a socio-economic regulation would only trigger rational review. Such a proposal is consistent with the Stage 6

267 *Bakke*, 438 U.S. at 407 (Blackmun, J., concurring).

268 *Grutter*, 539 U.S. at 342-43 (O’Connor, J., opinion for the Court).

premises, noted at § 15.4.1 nn.78-81, of (1) equal concern and respect for all citizens and the desire to leave no child behind, combined with the view that (2) American society should eventually be able to deal justly with the legacy of past racism and achieve in the future a just color-blind society of equal dignity for all individuals regardless of race, ethnicity, or national origin.

The constitutional concerns with affirmative action are separate, of course, from the question whether as a policy matter affirmative action in various contexts yields more benefits than burdens. In the academic context, the core of that debate is whether the advantages in terms of access to, and degrees from, more prestigious schools outweigh the disadvantages of often worse grades than if the student had attended a less prestigious, less academically competitive school; the social “stigma” or “badge of inferiority” in some persons’ minds resulting from affirmative action admission, which can affect any minority individual whether that particular minority was admitted on that basis or not, since the precise ground of the admission decision will typically not be known; and the possible development of dependencies or attitudes that individuals are entitled to preferences.270

Of course, to apply an affirmative action program, decisions must be made about any particular individual’s race. Rather than having state-imposed rules on the matter, as during the Plessy era, noted at § 26.2.1.1.B n.113, most states today permit individuals to self-report their racial identity, and depart from that self-identification only in clear cases of misrepresentation. To the extent that an affirmative action program adopts individualized decisionmaking based on a totality of the circumstances approach, as in Grutter, rather than an automatic preference based on minority identity, as in Gratz, precise racial identification becomes less relevant. Such a Grutter approach is particularly appropriate given the increasing number of individuals of mixed-race background.271

With the replacement of Justice O’Connor by Justice Alito in 2006, Justice Kennedy will likely become the critical swing vote on race-based affirmative action cases in the next few years. In his dissent in Grutter, Justice Kennedy indicated less willingness to defer to government decisions than Justice O’Connor, and a greater willingness to conclude that programs in practice are adopting more burdensome kinds of quota systems, rather than more permissible kinds of factor analysis. This supports even more the wisdom of adopting “Hyde Park Declaration” kind of affirmative action, as well as suggesting Grutter’s approval of affirmative action based on student body diversity will not likely be extended very far, either in the educational context or in other areas of the law, such as

public employment. Two educational cases are set to be decided during the 2006 Term[72]

§ 26.2.1.5 Racial Redistricting Cases

In recent years, the post-instrumentalist Court has considered a number of cases dealing with the issue of racial redistricting of voting districts. In 1993, in Shaw v. Reno (Shaw I),273 the Court held that a claim is stated under the Equal Protection Clause by a voter who alleges that a state redistricting plan has no rational explanation except as an effort to separate voters on the basis of race. In 1995, in Miller v. Johnson,274 the Court held that to trigger strict scrutiny “a plaintiff must prove that the legislature subordinated traditional race-neutral districting principles, including but not limited to compactness, continuity, respect for political subdivisions or communities defined by actual shared interests, to racial considerations.” Applying that test in Miller, the Court approved a finding that the district in question was drawn in response to pressure from the Justice Department to create a majority black district, and that there were no race neutral reasons for the proposed district, such as tangible communities of interest, spanning its hundreds of miles. Once strict scrutiny was triggered, the Court did not find a compelling interest. Justice Kennedy said that the Justice Department’s racially-based maximization policy brings the Voting Rights Act, upheld as an exercise of Congress’ authority under § 2 of the 15th Amendment, into tension with 14th Amendment doctrine on racial discrimination. The Court rejected the Justice Department’s interpretation of the Act and thereby avoided the constitutional tension that such an interpretation raised. Justice Kennedy added that the goal of providing an equal opportunity to gain public office regardless of race is neither assured nor well served by carving electorates into racial blocs.

In his solo dissent, Justice Stevens said the plaintiff white voters had not suffered any injury to give them standing merely because the plan had increased the probability that black candidates might win. In her 4-Justice dissent, Justice Ginsburg rejected the “subordination” or race as a “predominant factor” test in favor of asking only whether race “crowded out” traditional districting principles.275

In the following year, 1996, the Court, by the same 5-4 vote, invalidated four more majority-minority districts that were created after the 1990 census with attention to the Justice Department’s

---

275 Id. at 929 (Stevens, J., dissenting); id. at 940 (Ginsburg, J., joined by Stevens, Souter & Breyer, JJ., dissenting).
enforcement of the Voting Rights Act. In the North Carolina case, *Shaw v. Hunt (Shaw II)*, Chief Justice Rehnquist wrote for the majority that since race was the “predominant factor” in drawing the questioned district, strict scrutiny should be applied. However, the state had not shown a compelling interest since remediying past or present racial discrimination in voting was not shown to precipitate its use of race in the redistricting plan. The Chief Justice did not then resolve the question of whether an attempt by a state to comply with the Voting Rights Act could be a compelling interest because he went on to hold that since an additional majority-black district in the Northern part of the state was not required by § 2 of the Act, creating that district was not a remedy narrowly tailored to the state’s professed interest in avoiding § 2 liability because of a need to give effect to black and Native American voting strength in the Southern part of the state. Justice Stevens, joined by Justices Ginsburg and Breyer, said that strict scrutiny was inappropriate and the state’s action was justified by a desire to facilitate the election of representatives of a previously disadvantaged minority. Justice Souter, joined by Justices Ginsburg & Breyer, indicated, as he did in *Bush v. Vera*, that the Court should abandon scrutiny in this area as being unworkable in practice.

In the companion Texas case, *Bush v. Vera*, a plurality opinion by Justice O’Connor, joined by Chief Justice Rehnquist and Justice Kennedy, purported to apply strict scrutiny to strike down three newly drawn congressional districts because legitimate redistricting principles were subordinated to race, which was the predominant factor motivating the legislature’s redistricting decision. Strict scrutiny was not satisfied because § 2 of the Voting Rights Act does not require a state to create, on predominantly racial lines, a district that is not reasonably compact. One aspect of this case is important to note. Although generally applying a strict scrutiny compelling governmental interest analysis to the case, Justice O’Connor “reject[ed], as impossibly stringent, the District Court’s view of the narrow tailoring requirement, that ‘a district must have the least possible amount of irregularity in shape, making allowances for traditional districting criteria,’” and instead adopted the intermediate analysis that the racial redistricting only not be “substantially more [burdensome] than is ‘reasonably necessary.’” This decision thus adopted a second kind of strict scrutiny review, called “loose” strict scrutiny at § 7.2.1 nn.38-41. This level of scrutiny adopts the first two elements of strict scrutiny review, but waters down element three to an intermediate level of inquiry.

As noted earlier, the Supreme Court did not clearly adopt strict scrutiny in the context of race-based affirmative action in the employment context in *Fullilove v. Klutznick*, discussed at § 26.2.1.4.B nn.220-25, and *Paradise v. United States*, discussed at § 26.2.1.4.C nn.229-33. However, in an opinion authored by Justice O’Connor, the Court clearly adopted traditional rigorous strict scrutiny for race-based affirmative action in *Adarand Constructors, Inc. v. Pena*, discussed at § 26.2.1.4.C nn.242-48. The *Adarand* opinion followed Justice O’Connor’s dissent in *Paradise* where she criticized the *Paradise* plurality for not adopting traditional rigorous strict scrutiny in a race-based context.

279 *Id.* at 977, 979.
affirmative action case, stating, “[T]o survive strict scrutiny, the District Court order must fit with greater precision than any alternative remedy.”280 Despite this criticism of a “looser” strict scrutiny approach in *Paradise* and *Adarand*, the adoption by Justice O’Connor of “loose” strict scrutiny in her majority opinion in *Bush v. Vera* suggests that this standard of review has become part of modern Supreme Court doctrine, at least for racial redistricting cases.281

In *Bush*, Justice Thomas, concurring with Justice Scalia, said that the intentional creation of a majority-minority district means that the district was created “because of” and not merely “in spite of” racial demographics. When that happens, traditional race-neutral districting principles are necessarily subordinated, without any further finding that race was a “predominant” factor in the district’s creation.282 While this approach reflects the usual rule that discriminatory intent can be found based on race being a “motivating” factor in the decision, discussed at § 26.2.1.2 n.147, and the Court applies that standard in other voting rights cases, discussed at § 26.2.1.2 nn.157-62, the requirement that race be a “predominant” factor reflects the precedents in racial redistricting cases.

Justice Stevens, dissenting with Justices Ginsburg and Breyer, called on the Court to abandon the practice of allowing an action for racial gerrymandering. He repeated that strict scrutiny was inappropriate and he said that in any event the record in this case reveals an interest in protecting incumbents and placing predominantly rural voters in one district and predominantly urban voters in another. The state took race into account only to the extent necessary to satisfy federal statutes regarding redistricting not leading to a result of a dissolution of minority voting strength.283 Justice Souter, dissenting, said that the “predominant motive” standard was unworkable as it is not possible to untangle traditional districting principles and race, a questionable conclusion, as discussed at § 12.4.3 n.199-200. He too called for a complete withdrawal from review of redistricting cases.284 Justice O’Connor, replying in a separate concurrence to her own plurality opinion, joined the dissenters in saying that states have a compelling interest in complying with federal voting rights law, in particular the “results test” as this Court has interpreted it.285

Despite these calls for the Supreme Court to abandon its equal protection review of redistricting, a number of additional cases have been decided. One of them was routine, in the sense that it was decided by the usual 5-4 split on the Court in these cases. One was unanimous. In three other cases, the usual dissenters became part of the majority as there was a switch of sides by Chief Justice Rehnquist in one case, Justice O’Connor in another case, and Justice Kennedy in the third case.

282 Id. at 999-1000 (Thomas, J., joined by Scalia, J., concurring in the judgment). Justice Kennedy also noted concern with a predominant factor test. Id. at 996-99 (Kennedy, J., concurring).
283 Id. at 1003 (Stevens, J., joined by Ginsburg & Breyer, JJ., dissenting).
284 Id. at 1045 (Souter, J., joined by Ginsburg & Breyer, JJ., dissenting).
285 Id. at 990-95 (O’Connor, J., concurring).
The lone routine case was *Abrams v. Johnson*.\(^{286}\) On remand from *Miller v. Johnson*, after the Georgia legislature deadlocked, the district court had established a single majority-minority district. The Court affirmed by the same 5-4 vote as in the original case. Justice Kennedy’s opinion said that the district court acted within its discretion in deciding that it could not draw two majority-black districts without itself engaging in racial gerrymandering. Justice Breyer, dissenting, said that the legislature should be permitted to redistrict if it has a strong basis for believing it necessary. Otherwise, what is essentially political power is shifted from legislatures to federal courts.

One non-routine case was *Lawyer v. Department of Justice*,\(^{287}\) where Chief Justice Rehnquist moved away from his usual group of colleagues, to join Justice Souter, and the other dissenters in the *Shaw* line of cases, Justices Stevens, Ginsburg, and Breyer. Following a legislative impasse, the Florida Supreme Court devised a legislative district. A contest over the constitutionality of that district was settled by all parties except Mr. Lawyer. A federal district court approved the settlement plan without formally adjudicating that the state supreme court’s earlier plan was unconstitutional. Lawyer objected that the settlement plan had a black voting population of 36.2%, a higher percentage of black voters than in any of the three counties from which the district was drawn. For the majority, Justice Souter pointed out that the district comprised a predominantly urban low-income population whose white and black members share a similarly depressed economic condition. And he said that the Court had never suggested that the percentage of black residents in a district may not exceed the percentage of black residents in any of the counties from which the district is created. The dissenters said that the Court had engaged in an unprecedented intrusion on state sovereignty since the district court had not first found the state supreme court’s plan unconstitutional. As to why Chief Justice Rehnquist did not join with this federalism concern, it may be that his conservative Holmesian states’ rights concern, noted at § 10.3.3, was met by the fact that the state’s Attorney General, and counsel for the President of the Florida Senate and the Speaker of the House, all represented their respective government bodies in the litigation and entered into the proposed settlement.

A unanimous Court held in *Hunt v. Cromartie*\(^{288}\) that the district court erred in granting summary judgment to the challengers of a redrawn 12th Congressional District in North Carolina, the district court finding that the legislature disregarded traditional districting criteria and gave race a predominant influence. For the Court, Justice Thomas said that the evidence tends to support an inference that the state drew district lines with an impermissible racial motive, but that this inference was challenged by substantial evidence that the legislature was engaged in political gerrymandering to protect Democrats, an action that is constitutional even if most loyal Democrats happen to be black and the legislature is aware of that fact. Justice Stevens, concurring with Justices Souter, Ginsburg, and Breyer, commented that a bizarre configuration is the traditional hallmark of a

\(^{286}\) 521 U.S. 74, 87-90 (1997); *id.* at 105-09 (Breyer, J., joined by Stevens, Souter & Ginsburg, JJ., dissenting).

\(^{287}\) 521 U.S. 567, 577-83 (1997); *id.* at 583 (Scalia, J., joined by O’Connor, Kennedy & Thomas, JJ., dissenting).

\(^{288}\) 526 U.S. 541, 548-54 (1999); *id.* at 555-58 (Stevens, J., joined by Souter, Ginsburg & Breyer, JJ., concurring).
political gerrymander and that registered Democrats in the South do not always vote for Democratic candidates in federal elections.

On remand, the district court concluded that the district had been drawn for predominantly racial motives and was unconstitutional. In *Easley v. Cromartie,* Justice O’Connor voted with the usual dissenters to reverse this decision. Writing for the majority, Justice Breyer said that the district court’s conclusion was clearly erroneous. The Court noted:

where an intermediate court reviews, and affirms, a trial court's factual findings, this Court will not “lightly overturn” the concurrent findings of the two lower courts [*citing* Neil v. Biggers, 409 U.S. 188, 193 n.3 (1972)]. But in this instance there is no intermediate court, and we are the only court of review [pursuant to 28 U.S.C. § 2284, discussed at § 17.2.2.1.B n.111.] Moreover, the trial here at issue was not lengthy and the key evidence consisted primarily of documents and expert testimony. Credibility evaluations played a minor role. Accordingly, we find that an extensive review of the District Court's findings, for clear error, is warranted [*citing* Bose Corp. v. Consumers Union of United States, Inc., 466 U.S. 485, 500-501 (1984)]. That review leaves us "with the definite and firm conviction" that the District Court's key findings are mistaken [*citing* United States v. United States Gypsum Co., 333 U.S. 364, 395 (1948)].

Emphasizing the demanding nature of the challenger’s burden of proof, he said that a party attacking legislatively drawn boundaries would have a stronger case to prove racial considerations were a predominant factor in the districting decision if they could show that the legislature could have achieved its legitimate political objectives in alternative ways that are comparably consistent with traditional districting principles and that those districting alternatives would have brought about significantly greater racial balance. As for why Justice O’Connor’s shift occurred, it can be speculated that her legislative experience in Arizona before becoming a judge may have sensitized her to the fact that political and racial considerations are very difficult to separate, particularly if there is racial bloc voting for one party. Justice Thomas, dissenting with Chief Justice Rehnquist and Justices Scalia and Kennedy, replied that the Court had improperly engaged in its own fact finding enterprise. Further, it was unnecessary to impose a new burden on challengers to show that districting alternatives would have brought about significantly greater racial balance.

The third non-routine case in this series is *League of United Latin American Citizens v. Perry.*

290 Id. at 242-43.
291 Id. at 243-46.
292 Id. at 263 n.4 (Thomas, J., joined by Rehnquist, C.J., and Scalia & Kennedy, JJ., dissenting).
293 126 S. Ct. 2594, 2612-23 (2006); id. at 2652-53 (Roberts, C.J., joined by Alito, J., concurring in part, concurring in the judgment in part, and dissenting in part); id. at 2663-69 (Scalia, J., joined by Thomas, J., and joined in Part III by Roberts, C.J., and Alito, J., concurring in the judgment in part and dissenting in part).
In this 2006 case, Justice Kennedy joined with Justices Stevens, Souter, Ginsburg and Breyer to hold that one district in a Texas redistricting plan adopted in 2003 did have an impermissible effect of discriminating against Hispanic voters, and thus violated § 2 of the Voting Rights Act. Dissenting from this conclusion, Chief Justice Roberts, and Justices Scalia, Thomas, and Alito, would have held that all the districts in the Texas redistricting plan were based upon political gerrymandering considerations intended to increase the likelihood of Republicans being elected to Congress, and, as such, did not violate § 2 of the Voting Rights Act’s concern with diluting gerrymandering strength. Chief Justice Roberts and Justice Alito indicated they took no position in this case on whether political gerrymandering cases should always be viewed as political questions, as a 4-Justice plurality opinion, including Chief Justice Rehnquist and Justice O’Connor, had concluded in Vieth, discussed at § 17.3.4.5 nn.568-70. Justices Scalia and Thomas held to their view in Vieth that such cases always are political questions.

Given the variations in Justices making up the majority blocks in the recent racial redistricting cases, how these cases will be decided with Chief Justice Roberts and Justice Alito replacing Chief Justice Rehnquist and Justice O’Connor on the Court will be a matter of some interest, and difficult to predict in advance. In many of these cases, as in other areas of constitutional law, in the near term Justice Kennedy is likely to be the swing vote, as noted in this book’s Addendum, at § G n.35.294

§ 26.2.1.6   Racial Discrimination in the Context of the Criminal Justice System

A.   Peremptory Challenges Based on Race

In 1880, the Court held that a state denies a black defendant equal protection of the laws when it puts him on trial before a jury from which members of his race have been purposefully excluded.295 The Court has noted that a defendant has no right to a "petit jury composed in whole or in part of persons of his own race." However, a defendant does have the right to be tried by a jury whose members are selected pursuant to nondiscriminatory criteria.296

The Court stated in in Batson v. Kentucky297 that the “harm from discriminatory jury selection extends beyond that inflicted on the defendant and the excluded juror to touch the entire community. Selection procedures that purposefully exclude black persons from juries undermine public confidence in the fairness of our system of justice. . . . Discrimination within the judicial system is most pernicious because it is ‘a stimulant to that race prejudice which is an impediment to securing to [black citizens] that equal justice which the law aims to secure to all others.’” For this reason, while prosecutors ordinarily can exercise peremptory challenges "for any reason at all, as long as

294   For general discussion of the issues involved in the racial redistricting cases, see Symposium: Democracy in a New America, 79 N. Car. L. Rev. 1207-1567 (2001).

295   Strauder v. West Virginia, 100 U.S. 303, 305 (1880).

296   See Martin v. Texas, 200 U.S. 316, 321 (1906); Ex parte Virginia, 100 U.S. 339, 345 (1880).

297   476 U.S. 79, 87-88 (1986), citing, inter alia, Strauder, 100 U.S. at 308.
that reason is related to his [or her] view concerning the outcome" of the case to be tried,298 the Equal Protection Clause forbids prosecutors from challenging potential jurors solely on account of their race or on the assumption that black jurors will be unable impartially to consider the state's case against a black defendant.

In deciding whether peremptory challenges are based upon race, the Court concluded in 1965 in Swain v. Alabama299 that an inference of purposeful discrimination would be raised on evidence that a prosecutor, "in case after case, whatever the circumstances, whatever the crime and whoever the defendant or the victim may be, is responsible for the removal of Negroes who have been selected as qualified jurors by the jury commissioners and who have survived challenges for cause, with the result that no Negroes ever serve on petit juries." Lower courts following Swain reasoned that proof of repeated striking of members of a racial group over a number of cases was necessary to establish a violation of the Equal Protection Clause. This interpretation of Swain placed on defendants a crippling burden of proof, making prosecutors' peremptory challenges largely immune from constitutional scrutiny.300 In order to make the Swain remedy more effective, and consistent with the natural law principle, noted at § 12.3.3 n.13, that “where there is a right, there should be a remedy,” in 1986, in Batson v. Kentucky,301 the Court clarified the standard of proof necessary to establish that peremptory challenges had been used in a racially discriminatory manner. The Court stated in Batson:

[A] defendant may establish a prima facie case of purposeful discrimination in selection of the petit jury solely on evidence concerning the prosecutor's exercise of peremptory challenges at the defendant's trial. To establish such a case, the defendant first must show that he is a member of a cognizable racial group, and that the prosecutor has exercised peremptory challenges to remove from the venire members of the defendant's race. Second, the defendant is entitled to rely on the fact, as to which there can be no dispute, that peremptory challenges constitute a jury selection practice that permits "those to discriminate who are of a mind to discriminate." Finally, the defendant must show that these facts and any other relevant circumstances raise an inference that the prosecutor used that practice to exclude the veniremen from the petit jury on account of their race. This combination of factors in the empaneling of the petit jury, as in the selection of the venire, raises the necessary inference of purposeful discrimination.

In deciding whether the defendant has made the requisite showing, the trial court should consider all relevant circumstances. For example, a "pattern" of strikes against black jurors included in the particular venire might give rise to an inference of discrimination. Similarly, the prosecutor's questions and statements during voir dire examination and in exercising his challenges may support or refute an inference of discriminatory purpose. . . .

300 See Batson, 476 U.S. at 92-93, and cases cited therein.

Once the defendant makes a prima facie showing, the burden shifts to the State to come forward with a neutral explanation for challenging black jurors. . . . [T]he prosecutor may not rebut the defendant’s prima facie case of discrimination by stating merely that he challenged jurors of the defendant’s race on the assumption – or his intuitive judgment – that they would be partial to the defendant because of their shared race. . . . [T]he Equal Protection Clause forbids the States . . . to strike black veniremen on the assumption that they will be biased in a particular case simply because the defendant is black. . . . The prosecutor therefore must articulate a neutral explanation related to the particular case to be tried. The trial court then will have the duty to determine if the defendant has established purposeful discrimination.302

As the Court noted in 2005 in Miller-El v. Dretke,303 if a state court has found that the state’s race-neutral explanation was valid, and the defendant seeks habeas corpus relief in a federal court, the state court’s factual findings will be presumed accurate unless the defendant rebuts the presumption of correctness by clear and convincing evidence that they were not “objectively reasonable.” In Miller-El, a 6-3 Court majority concluded that such clear and convincing evidence existed. Justice Souter’s opinion supported this conclusion with four arguments: (1) there were similarities between black veniremen who were struck and white veniremen who were not; (2) different questions were asked of black and white veniremen regarding their views on the death penalty; (3) the prosecutor used a “jury shuffle” to postpone questioning of black veniremen; and (4) there was evidence of historical discrimination by the District Attorney’s office. In contrast, the dissent of Justice Scalia, joined by Chief Justice Rehnquist and Justice Thomas, disputed that the majority’s analysis added up to the “clear and convincing” evidence necessary to support the majority’s conclusion.

The majority’s decision in Miller-El indicates that the natural law and instrumentalist Justices on the Court take seriously the Batson requirement of no racially-based peremptory challenges. This is particularly true since a number of the arguments relied upon by Justice Souter were based on evidence not presented to the state courts in their Batson consideration, and thus the majority had to create a seemingly case-specific exception in Miller-El to the normal rule, pointed out by the dissent, that on habeas corpus review whether “the state court decision was unreasonable must be assessed in light of the record the court has before it.”304

In applying the Batson test, the Court has held that the challenger need only establish an inference of racial discrimination to establish a prima facie case and shift the burden to the other party to explain a race-neutral justification. The challenger need not establish initially that the peremptory challenge was more likely than not the product of racial discrimination, although, as in all cases of establishing discriminatory intent, ultimately the burden does remain on the challenger to establish

302 Id. at 96-98 (citations omitted). On Batson generally, see Sheri Lynn Johnson, Batson Ethics for Prosecutors and Trial Court Judges, 73 Chi.-Kent L. Rev. 475, 476, 480-81 (1998).

by a preponderance of the evidence that race discrimination occurred.\footnote{305}{See Johnson v. California, 545 U.S. 162, 168-73 (2005).}

In cases after Batson, a majority of natural law and instrumentalist Justices have extended the Batson analysis to apply to use of peremptory challenges by private attorneys in civil litigation, to defense counsel in criminal trials, and to peremptory challenges based on gender discrimination.\footnote{306}{See Edmonson v. Leesville Concrete Co., Inc, 500 U.S. 614 (1991) (private attorneys); Georgia v. McCollum, 505 U.S. 42 (1992) (defense counsel); J.E.B. v. Alabama ex rel. T.B., 511 U.S. 127 (1994) (gender).} Batson does not apply to challenges based on language-speaking ability, either lack of proficiency in English, or proficiency in a second language, such as Spanish, that might undermine the juror’s ability to abide by the interpreter's version of the testimony.\footnote{307}{See generally Clare Sheridan, Peremptory Challenges: Lessons from Hernandez v. Texas, 25 Chicano-Latino L. Rev. 77 (2005).} The Court has not yet decided whether Batson principles apply to religious discrimination – a classification, like race, that triggers strict scrutiny – or to cases involving sexual orientation.\footnote{308}{See generally Courtney A. Waggoner, Peremptory Challenges and Religion: The Unanswered Prayer for a Supreme Court Opinion, 6 Loy. U. Chi. L.J. 285 (2004); People v. Garcia, 92 Cal. Rptr. 2d 339, 347-48 (2000) (applying Batson to sexual orientation, while acknowledging that usually the sexual orientation of prospective jurors would not be known; codified in Cal. Civ. Proc. Code § 231.5 (West 2003): "A party may not use a peremptory challenge to remove a prospective juror on the basis of an assumption that the prospective juror is biased merely because of his or her race, color, religion, sex, national origin, sexual orientation or similar grounds."}\

**B. Race Discrimination in Prison Management and Control**

Consistent with other cases of race discrimination, the Court has applied strict scrutiny when evaluating a state’s policy of race segregation in prisons.\footnote{309}{See, e.g., Lee v. Washington, 390 U.S. 333 (1968).} With regard to less than undue burdens on unenumerated fundamental rights, such as the right of access to courts, discussed at § 26.5.2; the right to vote, discussed at § 26.5.3; and the right to marry, discussed at § 27.3.3.1.A, prisoners have been held to be entitled only to a version of rational basis scrutiny, not strict scrutiny, given the fact that prisoners give up some rights when incarcerated and the deference owed to the legitimate penological interests of prison administrators. In 2005, in Johnson v. California,\footnote{310}{543 U.S. 499, 502 (2005).} the Court was presented with the question whether that lesser rational basis standard should be applied to race discrimination in the context of a California prison administration policy of racially segregating prisoners in double cells in reception centers for up to 60 days each time a prisoner initially enters a correctional facility.
In *Johnson*, a majority of the Court rejected the invitation to apply the lesser scrutiny applicable in the unenumerated fundamental rights cases to race discrimination. Justice O’Connor stated:

The need for strict scrutiny is no less important here, where prison officials cite racial violence as the reason for their policy. As we have recognized in the past, racial classifications "threaten to stigmatize individuals by reason of their membership in a racial group and to incite racial hostility." Indeed, by insisting that inmates be housed only with other inmates of the same race, it is possible that prison officials will breed further hostility among prisoners and reinforce racial and ethnic divisions. By perpetuating the notion that race matters most, racial segregation of inmates "may exacerbate the very patterns of [violence that it is] said to counteract." . . . Trulson & Marquart, *The Caged Melting Pot: Toward an Understanding of the Consequences of Desegregation in Prisons*, 36 Law & Soc. Rev. 743, 774 (2002) (in a study of prison desegregation, finding that "over [10 years] the rate of violence between inmates segregated by race in double cells surpassed the rate among those racially integrated").

Instead of remanding the case for the lower court to apply strict scrutiny, Justice Stevens would have ruled the policy unconstitutional on the merits. Justices Ginsburg, joined by Justices Souter and Breyer, joined the majority’s opinion, but concurred, repeating their view, stated in the race-based affirmative action cases, discussed at § 26.2.1.4 nn.246-48, that “benign” racial discrimination should only trigger intermediate scrutiny, not strict scrutiny. Chief Justice Rehnquist took no part in the decision. Dissenting, Justice Thomas, joined by Justice Scalia, would have applied rational basis scrutiny based on the deference toward prison administrators in the fundamental rights cases.

### § 26.2.2 Classifications Disadvantaging Aliens

#### § 26.2.2.1 Alienage Classifications in State Law

A. **Classifications Applied to Legal Resident Aliens: Strict Scrutiny, with Political Function Exception Triggering Only Rational Review**

In the late 1800s and early 1900s, the Supreme Court applied a rational basis standard of review in cases involving state action that disadvantaged aliens. This standard was applied in a manner that allowed states to disadvantage aliens in a number of ways. States could bar aliens from harvesting wildlife, working on public projects, or owning land. During those years there were only a

---

311 *Id.* at 507-08 (some citations omitted).

312 *Id.* at 1152 (Rehnquist, C.J., took no part in the decision); *id.* at 1152-53 (Ginsburg, J., joined by Souter & Breyer, JJ., concurring); *id.* at 1153 (Stevens, J., dissenting); *id.* at 1157 (Thomas, J., joined by Scalia, J., dissenting).

few protective decisions, such as *Yick Wo v. Hopkins*,\(^{316}\) where it was held unconstitutional to enforce a wooden laundry statute only against Chinese, a case based on the ethnic discrimination aspect of the government action, not on alienage, and *Truax v. Raich*,\(^{317}\) where it was held unreasonable for a state to bar lawfully residing aliens from common employment, since that conflicted with the federal policy granting those aliens a right to reside in the United States.

During the Holmesian era, the Court made a slight inroad on previous case results. In 1948, the Court cited to the Japanese internment case of *Korematsu* and its “suspect classification” doctrine, discussed at § 26.2.1.1.C nn.124-26, in holding that California could not bar lawfully resident aliens from making a living by fishing off the coast because that, as in *Truax*, conflicted with federal policy.\(^{318}\) The Court also held that a California statute discriminating against certain aliens from owning agricultural land was unconstitutional because, as in *Yick Wo*, it actually operated as a discrimination based upon ethnicity, in this case Japanese-Americans.\(^{319}\)

During the instrumentalist era, the Court took a big step. In 1971, in *Graham v. Richardson*,\(^{320}\) the Court held that with respect to persons in the United States alienage is a “suspect classification.” Citing footnote 4 in *Carolene Products Co. v. United States*, discussed at § 26.1.2.2 nn.68-72, the Court said that aliens are a prime example of a discrete and insular minority for whom strict scrutiny is appropriate. In addition to discreteness and insularity, Professor Tribe has suggested that another reason for strict scrutiny is that the alienage classification is so unlikely to prove relevant to any legitimate governmental purpose that its use to disadvantage persons probably signals a response to disadvantage a politically weak and unpopular group based upon some illegitimate stereotype.\(^{321}\)

Following *Graham v. Richardson*, strict scrutiny was used during the 1970s to strike down state statutes banning aliens from working in fields as diverse as the classified civil service,\(^{322}\) practicing law,\(^{323}\) or becoming an engineer.\(^{324}\) However, the instrumentalist Court created one significant exception to the application of strict scrutiny. It is the “political function” exception. If state employment positions involve functions that go to the heart of representative government, barriers

\(^{316}\) 118 U.S. 356 (1896).
\(^{317}\) 239 U.S. 33 (1915).
\(^{318}\) Takahashi v. Fish & Game Comm’n, 334 U.S. 410 (1948).
\(^{323}\) In re Griffiths, 413 U.S. 717 (1973).
against aliens are given only rational review. The reason for this exception is that states may establish their own form of government, and thus limit the right to govern and exercise discretionary state power over others to persons who are full-fledged members of the political community.\footnote{See Bernal v. Fainter, 467 U.S. 216, 220-22 (1984).}

To determine whether the “political function” exception applies, the Court uses a two-part test first announced in \textit{Cabell v. Chavez-Salido}.
\footnote{454 U.S. 432, 454 (1982).} Applying the \textit{Cabell} test, the Court asks two questions:

\begin{enumerate}
    \item Does the classification serve legitimate political ends, determined in part by asking whether the classification is substantially overinclusive or underinclusive, or does it apply to a well-defined job classification, and
    \item If the classification is sufficiently narrowly tailored, is the job invested with policy-making responsibility or broad discretion in the execution of public policy which requires the routine exercise of authority over other individuals.
\end{enumerate}

Applying the above tests, the Court concluded in \textit{Bernal v. Fainter} that a Texas law that barred aliens from service as a notary public did not fit within this exception and did not pass strict scrutiny. Justice Marshall explained that the statute was not overinclusive because it applied narrowly to only one category of persons. However, the Court did not need to decide whether it was underinclusive on the ground that other officers, such as court reporters and the Secretary of State, were not required to be citizens, because the law failed the second prong of the \textit{Cabell} test. The Court noted that a notary's duties, essentially clerical and ministerial, do not go to the heart of representative government. Since the exception did not apply, the law was subject to strict scrutiny.

Once the Court determined that strict scrutiny should apply, the statute was easily determined to be unconstitutional. The Court noted that the law was not directly related to advancing the state's compelling interest in insuring familiarity with the law. The law did not require a test or any other evidence of familiarity with the law. In addition, no facts supported an asserted compelling interest in assuring the later availability of notaries to testify.

public school teachers, the Court stated in *Ambach v. Norwich*,[332] “Public education, like the police function, ‘fulfills a most fundamental obligation of government to its constituency.’” “Political functions” also include the right to vote or hold elective or non-elective executive, legislative, and judicial positions held “by officers who participate directly in the formulation, execution, or review of broad public policy.”[333]

State discrimination against aliens may be prevented by preemption. For example, the Court held in *Graham v. Richardson*[334] that durational residence requirements for welfare to aliens conflicted with a congressional policy of not imposing burdens on aliens who become indigent after their entry into the United States. In *Toll v. Moreno*,[335] the Court held that states may not impose discriminatory tuition fees on holders of G-4 visas because Congress, in issuing such visas to officers and employees of international organizations and their families, did not contemplate that states might impose such charges.

### B. Classifications Applied to Illegal Aliens: Rational Review for Adults, Intermediate Review for Children Attending School

Aliens who are illegally in the United States have also been held entitled to protection under the Equal Protection and Due Process Clauses, as they are “persons” textually entitled to such protection. However, they have not been characterized as a suspect class because entry into the class is the result of a voluntary criminal act. Thus, state regulations affecting illegal aliens are typically subjected to mere rational basis review.[336]

However, in *Plyler v Doe*,[337] a case involving the rights of the children of illegal immigrants to attend public school, a 5-4 Court applied intermediate scrutiny to find that Texas could not deny free public education to the children of illegal immigrants. Four instrumentalists, Justices Brennan, Marshall, Blackmun, and Stevens, were joined by Justice Powell. Justice Brennan began his reasoning for the Court by holding that unlawful aliens are "persons" within the meaning of the 14th Amendment. He noted that the usual standard for equal protection review is rational basis, but that less deference is given to classifications that disadvantage a suspect class because typically they may reflect prejudice rather than rationality or which impinge on a fundamental right. Then, Justice Brennan pointed to the gender discrimination and non-marital children cases as examples of classifications that "give rise to recurring constitutional difficulties" where the Court requires a state to further a substantial interest. That intermediate scrutiny standard should be applied here, he said,

---

335 458 U.S. 1, 13-17 (1982).
because of the social costs of having an uneducated group of residents, and the injury to children who are in a class beyond their control. Justice Powell, concurring, with the crucial fifth vote, said the case was analogous to that of illegitimate children, where such children were often punished for the misdeeds of their parents. Since cases involving discrimination against illegitimate children trigger intermediate scrutiny, as discussed at § 26.3.2, Justice Powell agreed with Justice Brennan that intermediate scrutiny should apply here as well.\textsuperscript{338} This conclusion is consistent with the natural law concern that individuals should not be punished for something not the product of that individual’s choice, as discussed at § 26.1.2.1 nn.63-64.

The Brennan opinion in \textit{Plyler} was not particularly careful in its linguistic use and did phrase the ultimate test as whether the statute could “be considered rational unless it furthers some substantial goal of the State.”\textsuperscript{339} Later cases have indicated, however, consistent with the thrust of both Justice Brennan’s opinion for the Court, and Justice Powell’s concurrence, that the level of review in \textit{Plyler} is a standard intermediate scrutiny kind of test.\textsuperscript{340}

Applying the intermediate "substantial goal" standard in \textit{Plyler}, the Court found that Texas did not show that any substantial goal was implemented by the classification, be it preserving resources for its own citizens (since administrative costs savings are usually not viewed as a substantial government interest, as noted at §§ 26.1.1.2 n.44 & 26.1.4 n.100); guarding against an influx of illegal immigrants (the record containing no evidence that illegal entrants impose significant burdens on the state's economy); improving educational quality (the record not supporting the claim that excluding undocumented children will improve the overall quality of education in the state); or avoiding the education of people who will leave the state or not put their education to productive use within the state (the record making clear that many of the children disabled by the classification would remain indefinitely and some would become lawful residents or citizens). And, as Justice Powell noted, denial of education to the children of illegal aliens bears no substantial relation to any substantial state interest because no one benefits from the creation within our borders of a subclass of illiterate persons.\textsuperscript{341}

Chief Justice Burger, dissenting with Justices White, Rehnquist, and O’Connor, said that the Court was adopting a policy role, abusing the 14th Amendment in an effort to become an omnipotent and omniscient problem solver. Once it is conceded, as here, that illegal aliens are not a suspect class and that education is not a fundamental right, the inquiry should be whether the classification bears a rational relationship to a legitimate state purpose. It does here because it is rational for a state to conclude that it does not have the same responsibility to provide benefits for persons whose very presence in the state and this country is illegal as it has in providing for persons lawfully present.\textsuperscript{342}

\textsuperscript{338} \textit{Id.} at 217-24; \textit{id.} at 238-40 (Powell, J., concurring).

\textsuperscript{339} \textit{Id.} at 224.

\textsuperscript{341} \textit{Plyler}, 457 U.S. at 224-30; \textit{id.} at 239-41 (Powell, J., concurring).

\textsuperscript{342} \textit{Id.} at 242 (Burger, C.J., joined by White, Rehnquist & O’Connor, JJ., dissenting).
As discussed at § 12.4.2 n.191, during 1981-84, Justice O’Connor more often voted with Holmesian Justice Rehnquist than natural law Justice Powell, before finding her natural law voice after that.

One consequence of *Plyler* has been an increasing number of children of illegal immigrants graduating from American high schools. Beginning in 2002, a number of states (California, Illinois, Kansas, New Mexico, New York, Oklahoma, Texas, Utah, and Washington) have enacted legislation allowing such alien students who have two to three years of residency to apply for, and receive, in-state tuition at one of their public colleges, as long as the students sign an affidavit promising to seek legal immigration status. While the states argue that such conditions are more stringent than for out-of-state students seeking to gain in-state tuition, since the alien must come forward and agree to seek legal immigration status, lawsuits have been filed in a number of states arguing that such legislation discriminates against out-of-state United States citizens who wish to be granted in-state tuition status, and thus violates either the Equal Protection Clause or the Illegal Immigration Reform and Immigrant Responsibility Act of 1996. In terms of public universities’ overall budgets, the amount of money involved in granting in-state tuition to such aliens is relatively small. So far, not many illegal aliens have taken advantage of these laws – in part because such students are not legally employable upon graduation – although, as an example, in 2006, anecdotally, slightly over 100 such aliens were attending the University of Texas-Austin out of their population of 48,000 students.343

§ 26.2.2.2 Alienage Classifications in Federal Law: Rational Review Applied

Federal action with respect to aliens – whether by Congress, the President, or administrative agencies pursuant to validly delegated power – is tested by minimum rational review. Congress has the primary responsibility for regulating the relations between the United States and aliens. Further, such regulations may implicate foreign relations, and the reasons that raise political questions concerns in foreign relations cases, discussed at § 17.3.4.6 nn.578-86, also support a very deferential standard of review of decisions made by Congress or the President over regulation of aliens.344 As the Court noted in 1976 in *Mathews v. Diaz*,345 “In the exercise of its broad power over naturalization, Congress regularly makes rules that would be unacceptable if applied to citizens.” Based on this extra level of deference in applying rational basis scrutiny for alienage classifications, the Court held in *Diaz* that Congress may condition medical benefits to aliens on continuous residence for 5 years or on admission for permanent residence. Justice Stevens distinguished *Graham v. Richardson*, discussed at § 26.2.2.1.A n.320, on the ground that Congress has control over travel across the borders of the United States, whereas there is little basis for states treating citizens of another country differently than persons who are citizens of another state. State statutes that incorporate such federal rules for the treatment of aliens, as can occur under the Medicaid

343 See generally Liza Porteus, *States Grapple with In-State Tuition for Illegal Immigrants* (March 6, 2006) (Foxnews.com) (search using words in the article’s title).

program, similarly trigger only rational basis review.\textsuperscript{346}

This extra level of special deference applicable in \textit{Diaz}, however, does not mean that a level of scrutiny different than standard minimum rational review is being applied in federal equal protection cases. As noted at § 26.1 n. 3, the Court did say in 1976 in \textit{Hampton v. Mow Sun Wong}, a case which held that the Civil Service Commission had no delegated authority to make special employment rules for aliens, that “the two protections are not always coextensive." However, as noted at § 26.1 n.4, the Court stated in 1995 in \textit{Adarand Constructors, Inc. v. Pena}, “[E]qual protection obligations imposed by the Fifth and Fourteenth Amendments [are] indistinguishable.”\textsuperscript{347}

As a companion to this relaxed Equal Protection Clause review for federal statutes or other federal actions regarding aliens, the Court also applies a relaxed Due Process Clause review with respect to immigration-related matters such as admission, removal, and detention of aliens. This Due Process Clause doctrine is discussed at § 27.4.4.8.

\textbf{§ 26.2.3 Classifications Discriminating on the Basis of Religion}

Discrimination based upon religion also triggers strict scrutiny under the Equal Protection Clause. As the Court noted in 1976 in \textit{New Orleans v. Dukes},\textsuperscript{348} classifications drawn upon “inherently suspect distinctions such as race, religion, or alienage” trigger strict scrutiny. In practice, the Court typically analyzes these cases as a matter of strict scrutiny under the Free Exercise Clause, as in the 1993 case of \textit{Church of the Lukumi Babalu Aye, Inc. v. City of Hialeah}, discussed at § 32.2.2.5 n.254. Thus, these cases are addressed as part of the Free Exercise Clause, discussed at § 32.2.

\textbf{§ 26.3 Classifications Involving Intermediate Scrutiny}

\textbf{§ 26.3.1 Gender Discrimination}

\textbf{§ 26.3.1.1 Gender Discrimination Cases Before 1970: Only Rational Basis Review}

The Equal Protection Clause was not ratified until 1868. As noted at § 26.2.1.1.B n.104, the first Equal Protection Clause case was the \textit{Slaughter-House Cases}, which in 1873 ushered in the formalist era of constitutional interpretation. The Court doubted in the \textit{Slaughter-House Cases} "whether any action of a State not directed by way of discrimination against the negroes as a class, or on account of their race, will ever be held to come within the purview of that provision." However, in 1885, based on the literal text of the Equal Protection Clause, the Court brought the full

\textsuperscript{346} See, e.g., Soskin v. Reinertson, 353 F.3d 1242, 1247-57 (10\textsuperscript{th} Cir. 2004) (Colorado statute that eliminated Medicaid coverage for some aliens constitutional under rational basis review because federal 1996 Personal Responsibility and Work Opportunity Reconciliation Act permits states to stop funding Medicaid benefits for aliens who do not meet the statutory definition of “qualified aliens”).

\textsuperscript{348} 427 U.S. 297, 303 (1976).
range of legislative classifications within the clause by requiring in *Barbier v. Connolly*\(^{349}\) all legislation to be not “arbitrary” but a legitimate exercise of the state’s “police power.”

During the late 1800s, there were no Equal Protection cases that applied this “arbitrariness” test to gender classifications. It seems clear, however, that classifications relating to women would have been found reasonable, and not arbitrary, because men and women were not considered to stand as equal before the law. For example, in many states, until the late 1800s, a married woman lacked the legal capacity to contract or convey property. Although African-Americans were given the right to vote in 1870, the 19\(^{th}\) Amendment giving women the right to vote was not ratified until 1920. In *Bradwell v. Illinois*,\(^{350}\) an 1873 case brought under the Privileges or Immunities Clause, the Court upheld a refusal to license women to practice law, with Justice Bradley adopting a conservative formalist deference to customs and tradition view that the “destiny and mission of women are to fulfil the noble and benign offices of wife and mother,” not to have a career, such as practicing law.

Responding to a Due Process challenge, the Court in 1908 in *Muller v. Oregon*\(^{351}\) sustained a statute barring factory employment of women for more than 10 hours a day, based upon a concern for the health of women, which was viewed as more frail than that of men. The Court noted:

> That woman's physical structure and the performance of maternal functions place her at a disadvantage in the struggle for subsistence is obvious. This is especially true when the burdens of motherhood are upon her. Even when they are not, by abundant testimony of the medical fraternity continuance for a long time on her feet at work, repeating this from day to day, tends to injurious effects upon the body, and, as healthy mothers are essential to vigorous offspring, the physical well-being of woman becomes an object of public interest and care in order to preserve the strength and vigor of the race.

Still again, history discloses the fact that woman has always been dependent upon man. He established his control at the outset by superior physical strength, and this control in various forms, with diminishing intensity, has continued to the present. As minors, though not to the same extent, she has been looked upon in the courts as needing especial care that her rights may be preserved. Education was long denied her, and while now the doors of the schoolroom are opened and her opportunities for acquiring knowledge are great, yet even with that and the consequent increase of capacity for business affairs it is still true that in the struggle for subsistence she is not an equal competitor with her brother. Though limitations upon personal and contractual rights may be removed by legislation, there is that in her disposition and habits of life which will operate against a full assertion of those rights. She will still be where some legislation to protect her seems necessary to secure a real equality of right. Doubtless there are individual exceptions, and there are many respects in which she has an advantage over him; but

\(^{349}\) 113 U.S. 27, 31-32 (1885).

\(^{350}\) 83 U.S. 130, 141 (1873) (Bradley, J., concurring).

\(^{351}\) 208 U.S. 412, 418-23 (1908) (discussing, *inter alia*, the brief filed by Louis Brandeis, who served as counsel for Oregon, which defended the statute by arguing for the inequality of women, saying they were not able to work for the same hours as men).
looking at it from the viewpoint of the effort to maintain an independent position in life, she is not upon an equality. Differentiated by these matters from the other sex, she is properly placed in a class by herself, and legislation designed for her protection may be sustained, even when like legislation is not necessary for men, and could not be sustained. It is impossible to close one's eyes to the fact that she still looks to her brother and depends upon him.\textsuperscript{352}

Despite this protective rhetoric regarding women, the practical impact of the statute was to favor men for employment, since many manufacturing plants at the time ran on two 12-hour shifts, and if women, but not men, could only work 10 hours a day, they were not as attractive employees for businesses since they could not easily be plugged into the shift structure. That this might have been one explanation for the rule is supported by the fact that the statute exempted from its operation jobs traditionally held by women, such as nursing.\textsuperscript{353}

During the latter part of the formalist era, as in 1920 in \textit{F.S. Royster Guano Co. v. Virginia},\textsuperscript{354} the Court began to phrase the test under the Equal Protection Clause for reviewing economic classifications as whether the classification rested on some ground of difference "having a fair and substantial relation to the object of the legislation, so that all persons similarly circumstanced shall be treated alike." Though such a difference was found in \textit{Muller}, it was not found in 1923 in \textit{Adkins v. Children's Hospital}.\textsuperscript{355} There, the Court invalidated a statute setting minimum wages for women and children in the District of Columbia. The Court said that due to changes in the contractual, political, and civil status of women, “culminating in the Nineteenth Amendment,” which granted women the right to vote in 1920, the differences between men and women, with the exception of physical differences, had come almost to "the vanishing point."

As part of rejecting the formalist-era \textit{Lochner} approach to liberty of contract, the Holmesian-era Court did overrule \textit{Adkins} in \textit{West Coast Hotel v. Parrish}.\textsuperscript{356} This overruling did not involve any aspect of gender discrimination, however, as the Court merely held that a minimum wage law applicable to both men and women did not violate the Due Process Clause of the 14\textsuperscript{th} Amendment.

During the Holmesian era, the Court continued to apply rational basis scrutiny to classifications in economic and social legislation without regard to whether the statute involved gender discrimination. For example, in \textit{Goesaert v. Cleary},\textsuperscript{357} the Court in 1948 upheld a Michigan statute

\textsuperscript{352} Id. at 422-23.

\textsuperscript{354} 253 U.S. 412, 415 (1920).

\textsuperscript{355} 261 U.S. 525, 553 (1923).

\textsuperscript{356} 300 U.S. 379 (1937).

\textsuperscript{357} 335 U.S. 464, 466-67 (1948).
that barred a female from being licensed as a bartender unless she was the wife or daughter of the male owner of the bar. The test articulated by the Court was whether there was any "basis in reason" for a discrimination between men and women. Applying that test, the Court concluded that Michigan could bar women from being bartenders in order to deal with perceived possible "moral and social problems" from a woman being a barmaid "without such protecting oversight" of husband or father.

During the early part of the instrumentalist era, the Court continued its Holmesian deferential approach toward gender classifications. For example, in 1961 in *Hoyt v. Florida*, the Court upheld a law making males eligible for jury duty unless they requested an exemption, but granted females an exemption unless they waived it and registered their desire to be placed on the jury list. The Court said that women are still regarded as the center of the home and family life.

Major changes occurred during the 1960s. The Equal Pay Act of 1963 barred employers in the private sector from sex discrimination. Title VII of the Civil Rights Act of 1964 made it illegal for any employer to discriminate against anyone with respect to "compensation, terms, conditions, or privileges of employment" because of the person's sex, unless there were bona fide occupational qualifications. In 1967, President Johnson issued an executive order barring sex discrimination by the federal government or by government contractors and subcontractors. The Equal Rights Amendment (ERA), first introduced in 1923, and passed in limited form by the Senate in 1950, was approved by the House in 1971, and was approved by the Senate and sent to the states in 1972. Legally, the ERA would have made gender classifications, like race, subject to strict scrutiny review. Although ratified at some point by 35 states, three short of the 3/4 needed to ratify it, the ERA was not ratified by the time of its extended deadline – June 30, 1982. The 15 states that refused to ratify the amendment were 10 Southern states – Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, Missouri, North Carolina, South Carolina, and Virginia – along with Arizona, Illinois, Nevada, Oklahoma, and Utah.

§ 26.3.1.2 Gender Discrimination Cases After 1970: Movement to Intermediate Review

The statutes and executive orders of the 1960s presaged judicial reform. Prior to 1971, there was no suggestion in Supreme Court opinions that anything other than minimum rational basis scrutiny would be applied to gender classifications in state or federal law. That began to change in *Reed v. Reed*. In 1971, an Idaho court appointed the father of a decedent, rather than his mother, to administer his estate. This was pursuant to an Idaho statute which provided that if several persons were otherwise equally entitled to administer an estate, "males must be preferred to females." The purpose of the law was to reduce the workload on probate courts by eliminating the need for a

---

hearing on the relative merits of eligible candidates. In *Reed v. Reed*, the mother challenged the law as a denial of equal protection. The Court agreed. Quoting from *F.S. Royster Guano Co. v. Virginia*, cited at § 26.3.1.1 n.354, Chief Justice Burger said that the test was whether a difference in the sex of competing applicants bears a "fair and substantial relationship" to the state's objective, a heightened kind of rational review, as defined at § 7.2.1 text following n.42, and sometimes used during the formalist era for economic regulations, as noted at §§ 26.4.1 nn.424-31 & 27.3.2.1 nn.149-60. Without the deference usually given to legislatures under rational basis scrutiny, the Court found that the legislature's choice of males over females in the administration of estates was "arbitrary."

Two years after *Reed v. Reed*, in *Frontiero v. Richardson*, the Court concluded that discrimination against military service women in quarter allowances for dependents, designed to serve only administrative convenience by assuming that women, but not men, were dependent on their military service spouses, was invalid since the government had not shown it produced any savings and, further, gender discrimination solely to serve administrative convenience is arbitrary. Writing for himself and Justices Marshall, Douglas, and White, Justice Brennan cited *Reed* for "implicit support" that sex classifications are suspect and entitled to strict scrutiny. He noted that women have been victims of stereotypical distinctions, sex is immutable and not related to ability, and women are vastly underrepresented in government. Justice Brennan said the situation was analogous to race classifications because of history, current discrimination, the immutability of the characteristic, and because, unlike nonsuspect categories such as intelligence or physical disability, gender frequently bears no relation to ability to perform or contribute to society. Justice Brennan also noted that Congress has been increasingly sensitive to sex discrimination in legislating under the 14th Amendment. Justices Burger, Powell, Blackmun, and Stewart concurred in the result, but used the rational basis scrutiny as applied in *Reed*. Each of these Justices, except for Justice Stewart, also said that the Court should not go beyond *Reed* at this time because the issue was before the public in the form of the Equal Rights Amendment. Justice Rehnquist dissented, saying that under rational basis scrutiny the classification was rationally related to the legitimate interest of cost management.

In the first case to invalidate discrimination against males, *Craig v. Boren*, Justice Brennan, speaking for the Court, abandoned his quest for strict scrutiny in favor of what has come to be known as intermediate review. Borrowing the "substantial relationship" language from *Reed*, Brennan said that gender classifications "must serve important governmental objectives and must be substantially related to achievement of those objectives." Applying that standard to the facts, he found that barring only males aged 18-20 from buying low-alcohol 3.2% beer was not substantially related to the important goal of traffic safety. Although arrest statistics showed men in this age group were 10 times more likely to be arrested for drunk driving than women (.18% for females; 2% for males), Justice Brennan pointed out that "Oklahoma’s statute prohibits only the

362 411 U.S. 677, 682-88 (1973); id. at 691 (Stewart, J., concurring in the judgment); id. at 691-92 (Powell, J., joined by Burger, C.J. and Blackmun, J., concurring in the judgment); id. at 691 (Rehnquist, J., dissenting).

364 Id. at 197.
sells 3.2% beer to young males and not their drinking the beverage once acquired (even after purchase by their 18-20-year-old female companions).” The relationship between the statute, which banned only the buying but not the drinking of beer, and traffic safety was thus far too tenuous to satisfy the “substantially related” part of the Craig v. Boren test.

In addition, under the standard phrasing today of the third prong of intermediate review, the Oklahoma statute probably would be viewed as being “substantially more burdensome than necessary,” since it banned all 18-20-year-old males from buying 3.2% beer, even though statistics showed that only “2% of males in that age group were arrested for that offense.” Even if that 2% arrest rate suggests perhaps 10% of males were driving drunk, but just not stopped and arrested, the law might still be viewed as substantially too burdensome under intermediate review to justify gender discrimination. Of course, banning all 18-20 years olds from buying, or drinking, beer to deal with the serious problem of teenage drunk driving would just involve age discrimination, triggering only minimum rational review, discussed at § 26.4.4, even absent the authorization for states to determine drinking age in the 21st Amendment, which repealed Prohibition, discussed at § 20.4.1.

Although joining the Court’s opinion, Justices Powell, Stevens, and Blackmun filed concurring opinions, and Justices Stewart concurred only in the judgment, finding that the statute “amounts to total irrationality” and failing rational basis as described in Reed. In his concurrence, Justice Powell expressed concern with how Justice Brennan had used language in Reed to create a “middle-tier” approach between rational basis scrutiny and strict scrutiny. Justice Stevens said in his concurrence that he would prefer a "single standard" approach to equal protection analysis focusing on how an impartial lawmaker would deal with a claim to equal treatment, and not different “standards of review.” On the issue of the appropriate test, Justice Blackmun joined Justice Brennan’s opinion in its entirety. Dissents were filed by Chief Justice Burger and Justice Rehnquist, who thought the law needed to pass only "rational basis" review. In particular, Justice Rehnquist said that it was objectionable that men, challenging a law which treats them less favorably than women, can invoke a more stringent standard of review than pertains to most other classifications. The only redeeming feature of the case, he said, was that it signaled a retreat from the plurality opinion in Frontiero which had called for strict scrutiny.

By 1980, the Craig v. Boren test had more adherents. Justices Burger, Stewart, and Powell joined with Justices White, Brennan, Marshall, and Blackmun in Wengler v. Druggists Mutual Insurance Co. to hold unconstitutional under Craig v. Boren’s intermediate scrutiny standard a workers' compensation law that required widowers, but not widows, to prove actual dependency in order to recover death benefits for work-related accidents. The Court said that the state must choose whether

to extend the dependency presumption to widowers or eliminate it for widows. Justice Stevens concurred in the Court’s judgment, but not the precise reasoning of the majority opinion. It appeared that only Justice Rehnquist still clung to rational basis scrutiny. By this time, the Court had clearly decided that even though the Equal Rights Amendment was not going to pass, with only 35 states ratifying the Amendment, rather than the required 3/4 majority of 38, the Court was going to be more vigorous in scrutinizing gender discrimination anyway.

In 1981, Justice Rehnquist muddied the waters a bit in a plurality opinion in Michael M. v. Superior Court. The plurality opinion was joined by Chief Justice Burger and Justices Stewart and Powell. Michael M. involved a challenge to a California statutory rape law that made men alone criminally liable for intercourse with a partner under 18. Regarding the standard of review, Rehnquist said that the cases have held that the traditional minimum rational test takes on a somewhat "sharper focus" when gender-based classifications are challenged. In Reed, the Court referred to a "fair and substantial relationship" to legitimate purposes; in Craig to a “substantial relationship” to “important governmental objectives.” Underlying both decisions, said Rehnquist, was the principle that a legislature may not make overbroad generalizations based on sex, but the Court has upheld laws where the gender classification is not invidious but rather realistically reflects the fact that the sexes are not similarly situated in certain circumstances. Applying these principles, Justice Rehnquist explained that the classification in this case was to protect women from the risks of teenage pregnancy. For that risk, he said, men and women are not similarly situated. Legislators could reasonably chose to punish the actor who by nature suffers fewer consequences of the conduct. Justice Blackmun concurred in the judgment, saying that the California law was a sufficiently reasoned effort to control the problem of teenage pregnancy.

Even under standard intermediate scrutiny, the statute in Michael M. can be constitutional. Discouraging teenage pregnancy is certainly an important governmental interest. The statute is “substantially related” to advancing that interest if one accepts, as the state of California argued in the case, that “a female is surely less likely to report violations of the statute if she herself would be subject to criminal prosecution.” Finally, the statute is not “substantially more burdensome than necessary,” particularly since a “criminal sanction imposed solely on males thus serves to roughly ‘equalize’ the deterrents on the sexes,” as only women have the risk of an unwanted pregnancy.

Justices Brennan, White, and Marshall dissented, saying that the classification could be shown substantially related to its purpose only if California established that a gender neutral law would be less effective as a deterrent. On this point, the dissent is in error. Under strict scrutiny, the government does have to show that they have adopted the “least burdensome effective alternative.” Under strict scrutiny, if a gender neutral law would be an effective alternative, the government would have to adopt that alternative. However, the “least burdensome effective alternative” analysis is not a part of intermediate review. As long as the actual statute which the state did adopt is “substantially related” to advancing its ends, and not “substantially more burdensome than

369 Id. at 153-54 (Rehnquist, J., dissenting).
370 450 U.S. 464, 468-69, 472-73 (1981); id. at 482 (Blackmun, J., concurring in the judgment).
371 Id. at 473-74.
necessary,” it does not matter at intermediate review whether some other effective statute would be less burdensome, unless that alternative is “substantially less burdensome” than the statute the government adopted. Justice Stevens also dissented in the case, concluding that the gender discrimination in this case that “authorizes punishment of only one of two equally guilty wrongdoers violates the essence of the constitutional requirement that the sovereign must govern impartially.” Soon after Michael M, California amended its statutory rape law to make it gender neutral, like virtually all states today, but with greater punishments the more one of the parties is significantly older than the party under 18 – a form of age discrimination rationally related to protecting younger persons from exploitation.

In 1981, the Court also decided Rostker v. Goldberg, where plaintiffs challenged the Military Selective Service Act under the Fifth Amendment for authorizing the President to require the registration of males but not females. Justice Rehnquist wrote for a majority that exempting women from draft registration is “substantially related” to the Congressional purpose of facilitating the draft of combat troops, where women by law are exempt from combat. A more complete opinion would also have pointed out that requiring men to register for the draft by filing out a registration card is “not substantially more burdensome than necessary” to facilitate the drafting of combat troops. Justice White, joined by Justice Brennan, dissented, saying that draft registration was also intended to secure people for jobs that could be filled by persons ineligible for combat. Justice Marshall, also joined by Justice Brennan, dissented, saying that the record did not show that completely excluding women from the draft substantially furthered important government objectives. It only showed that inducting a large number of men and a limited number of women, as set by non-combat personnel needs, was substantially related to government objectives. Once again, the dissenters seemed to be applying a “least burdensome effective alternative” approach, which pointed out that a gender neutral registration system would advance the government’s interest as well. However, since in 1981 a substantial number of military positions would be filled by men, the majority was correct that the Military Selective Service Act was “substantially related” to meeting the military’s personnel requirements. This conclusion regarding a “substantial relationship” would still be true today, even though some combat positions can be held by women today. However, given some women in combat, the statute would not be “directly related” to achieving its end if strict scrutiny applied.

That Justice Rehnquist had failed in his effort to move a majority of the Court from the Craig v. Boren intermediate test became quite clear one year later in Mississippi University for Women v. Hogan. In that case, Justice O’Connor wrote for five Justices that the government’s burden is to show an "exceedingly persuasive justification" for gender classifications and that this burden is met "only by showing at least that the classification serves important governmental objectives and that
the discriminatory means employed are substantially related to the achievement of those objectives."
This showing was not made, she held, with respect to a state policy of excluding males from admission to a state School of Nursing. The evidence showed that males in the classroom did not disrupt education of females or that women lacked opportunities to obtain nurses training or attain positions of leadership in the field.

Chief Justice Burger, and Justices Blackmun, Powell, and Rehnquist, dissented. Justice Powell, with whom Rehnquist joined, said the Court was creating needless uniformity in nursing education since plaintiff could attend another nursing school. Their dissent also suggested that Hogan should be limited to areas, like nursing, where no history of discrimination against women existed. Justice Blackmun agreed with this view in his separate dissent, as did Chief Justice Burger. Justice O'Connor's majority opinion stated that there may be gender discrimination in favor of women only if it is substantially related to an important governmental purpose, such as compensating women for past discrimination, and in the nursing field no such evidence of prior discrimination existed.

Two significant post-instrumentalist era decisions in the area of gender discrimination are J.E.B. v. Alabama ex rel. T.B. and United States v. Virginia. The Court held that the Equal Protection Clause forbids peremptory challenges on the basis of gender in J.E.B., in addition to the basis of race, as had previously been held in Batson v. Kentucky. Justice Blackmun wrote that our Nation's long history of sex discrimination warrants intermediate scrutiny for gender-based classifications. With respect to peremptory challenges, the state's important interest is in achieving a fair and impartial trial. However, the record indicated virtually no support for the conclusion that gender alone is an accurate predictor of a juror's attitudes. Instead, that generalization seemed to be the product of a stereotype. Justice Blackmun did note that parties may exercise peremptory challenges to remove any group or class of individuals normally subject to "rational basis" review. Justice O'Connor, concurring, on state action grounds, would have limited the Court's holding to the government's use of peremptory strikes. Justice Kennedy concurred on the ground that an individual denied jury service because of his or her sex is denied individual personal dignity and the right to participate in the political process that the Equal Protection Clause was designed to guarantee.

Chief Justice Rehnquist, dissenting, thought that intermediate scrutiny had been satisfied because it is not merely stereotyping to say that differences in biology and experience may produce a difference in outlook in the jury room. Justice Scalia also dissented, joined by Chief Justice Rehnquist and Justice Thomas. Justice Scalia said that since all groups are subject to peremptory challenge and will be made the object of it, depending on the case, it is hard to see that any group is denied equal protection. In this paternity action, the state used 9 of its 10 peremptory strikes to remove male jurors; the defendant used all but one of his strikes to remove female jurors. This was not an example of sex-based animus, but merely a desire to get a jury favorably disposed to the advocate's case. Justice Scalia expressed a concern that holding would provide the basis for

376 Id. at 728; id. at 733 (Burger, C.J., dissenting); id. at 733-34 (Blackmun, J., dissenting); id. at 736-42 (Powell, J., joined by Rehnquist, J., dissenting).

377 511 U.S. 127, 140-44 (1994), citing Batson, 476 U.S. 79 (1986); id. at 146-51 (O'Connor, J., concurring); id. at 151-54 (Kennedy, J., concurring in the judgment).
extensive collateral litigation over peremptory challenges, which criminal defendants especially could be expected to pursue.378

In United States v. Virginia,379 the Court held that the male-only admissions policy at Virginia Military Academy (VMI) denied equal protection to women and was not adequately remedied by the state's creation of the Virginia Women's Institute for Leadership (VWIL). Justice Ginsburg delivered the Court's opinion, which was joined by Justices Stevens, O'Connor, Kennedy, and Breyer. Justice Thomas, whose son was enrolled in VMI, did not participate. Justice Ginsburg first stated the current standard of review for gender discrimination cases, but also used the “exceedingly persuasive justification” language from Justice O'Connor’s opinion in Hogan not only as a preliminary observation about the difficulty of meeting intermediate scrutiny, but throughout her opinion as if it were part of the test. Justice Ginsburg also mentioned several corollaries of intermediate review, e.g., that the justification must be genuine, not hypothesized or invented post hoc in response to litigation. Further, it must not rely on overbroad generalizations about the different talents, capacities, or preferences of males and females.

Applying the intermediate level of review and these corollaries, Justice Ginsburg said that VMI had not shown that its exclusion of women was supported by an “exceedingly persuasive justification.” VMI had contended that single-sex education provides important educational benefits and contributes to diversity in educational approaches. Justice Ginsburg replied that the record contained no persuasive evidence that VMI was created or maintained for the “actual purpose” of advancing diverse educational options, and thus that interest could not be considered by the Court.

With respect to whether the VMI program bore a substantial relationship to an actual valid important government purpose that the Court could consider – the effectiveness of VMI’s adverisive method of instruction – Justice Ginsburg replied that VMI's goal of producing citizen-soldiers was not substantially advanced by women's categorical exclusion, in total disregard of their individual merit, as it had been found that some women can meet VMI's physical standards and that its implementing methodology is not inherently unsuitable to women.

With respect to remedy, Justice Ginsburg cited Milliken v. Bradley, discussed at § 26.2.1.3. A n.175, which held that a remedial decree must closely fit the constitutional violation; it must be shaped to place persons unconstitutionally denied an opportunity or advantage in the position they would have occupied in the absence of the discrimination. The creation of VWIL did not meet this test because it did not qualify as VMI's equal in terms of student body, faculty, course offerings, and facilities. Further, VWIL graduates are not united with the legions of VMI graduates who have distinguished themselves in military and civilian life.

Chief Justice Rehnquist concurred in the result but provided a different analysis. He first said that the Court's use of the phrase "exceedingly persuasive justification," originally used as an observation

378 Id. at 154 (Rehnquist, C.J., dissenting); id. at 156 (Scalia, J., joined by Rehnquist, C.J., and Thomas, J., dissenting).

on the difficulty of meeting the intermediate scrutiny test, seemed here to become part of the test. He disagreed with such use, and stated that the Court should stick with the standard “substantially related to important government interests” test. The Court’s more recent gender discrimination case, *Nguyen v. INS*, which also involved illegitimacy, and thus is discussed at § 26.3.2 nn.417-22, followed this advice and did not repeat the “exceedingly persuasive justification” language except as an adjunct to the “substantial relationship” test, a fact noted and criticized by Justices O’Connor, Souter, Ginsburg, and Breyer in dissent.

Second, Justice Rehnquist said that he agreed with Justice Ginsburg’s opinion that under the intermediate standard the proffered purpose for a challenged law must be the actual purpose and that Virginia had not established the goal of diversity among its public institutions was the actual purpose for its single-sex admissions policy at VMI. As discussed at § 26.1.3 nn.92-99, it is not clear that the Court’s precedents on intermediate review support this requirement of looking only to “actual purposes,” rather than “plausible purposes.” The Court’s more recent case of *Nguyen INS*, discussed at § 26.3.2 nn.417-22, perhaps followed this observation, as the dissent of Justices O’Connor, Souter, Ginsburg, and Breyer criticized the majority for not requiring “actual purposes” in a case involving intermediate scrutiny.

Chief Justice Rehnquist noted that one way Virginia could have shown that educational diversity was their policy was to establish, shortly after *Mississippi University for Women v. Hogan* made it clear that VMI’s men-only admissions policy was open to serious question, single-gender undergraduate institutions for women, with support substantially comparable to that given VMI. In short, the state had not demonstrated that its interest in providing some single-sex education for men was matched by an interest in providing the same opportunity for women. Thus, on these facts, VMI could not have even argued that an interest in educational diversity was “plausible.” With respect to maintaining the adversative method, that is not an important governmental objective, said Rehnquist, because there is no evidence in the record that the method is pedagogically beneficial or is any more likely to produce character traits than other methodologies. With respect to the remedy, Justice Rehnquist said that the violation is not the exclusion of women from VMI, but the failure to provide a comparable institution for women. That could be shown if Virginia were to establish a women's institution offering the same quality of education as VMI. Here, however, VWIL is distinctly inferior to the men's institution. It is not a self standing institution and is substantially underfunded as compared to VMI.

384 518 U.S. at 565-66 (Rehnquist, J., concurring in the judgment).
Justice Scalia delivered a dissent. He first made clear that VMI's single-sex policy did not violate the equal protection principle that he would apply, regardless of whether scrutiny is intermediate or strict, namely, “[W]hen a practice not expressly prohibited by the text of the Bill of Rights bears the endorsement of a long tradition of open, widespread, and unchallenged use that dates back to the beginning of the Republic, we have no proper basis for striking it down.” The principle is just another restatement of the Stage 4 formalist reliance on customs and traditions to determine morality, as discussed at §§ 16.1 & 16.3. VMI's policies, of course, come squarely within such a governing tradition. The people can change such a tradition through democratic processes, Justice Scalia said, but it should not be done by the Court.

Justice Scalia's second point was that the Court had misapplied the test it had been using for two decades with respect to sex-based classifications. The test calls for the sex-based classification to be "substantially related" to an important goal. But the Court, he said, seemed to require a least-restrictive means analysis because Justice Ginsburg said that the dispositive realities in the case were that “VMI's implementing methodology is not inherently unsuitable to women; some women do well under the adversative model; some women, at least, would want to attend VMI if they had the opportunity; some women are capable of all of the individual activities require of VMI cadets and can meet the physical standards VMI now imposes on men.”

Justice Scalia then moved on to apply the intermediate standard as he thought it should be applied. Virginia's important goal here was providing effective college education for its citizens. Single-gender education, at the college level, as found by the Court of Appeals, is beneficial to both sexes. That should be enough. Beyond that, however, to maintain a school which uses the adversative method is substantially related to the goal of good education. The fact that the state's only single-sex school is for males only must be taken in context that there are four all-female private colleges in the state and one private all-male college, and that the state provides funds for residents of Virginia who attend private colleges in the state in the form of tuition assistance, scholarship grants, guaranteed loans, and work-study funds. Justice Scalia then proceeded to identify what he considered flaws in the majority opinion and in Justice Rehnquist's concurrence. Contrary to the majority opinion, he said that there is evidence that a desire for diversity of educational options was a purpose in Virginia's maintaining VMI as an all-male institution. Regarding Justice Rehnquist's opinion, Justice Scalia said there is evidence in the record on the educational benefits of the adversative method and on diversity as a goal for higher education in Virginia.

Justice Scalia predicted that the decision would mean the end of both public and private single-sex education in the United States. Private schools can of course discriminate against a sex without violating the Constitution. However, private education is dependent on government aid in a variety of ways, and, in Justice Scalia’ view, under the Court's opinion the government itself would be violating the Constitution by providing support to single-sex colleges. Justice Ginsburg's reply to that concern appeared in her footnote seven. There she said:

385 518 U.S. at 568 (Scalia, J., dissenting).

386 Id. at 572 (Scalia, J., dissenting).

387 Id. at 576-95 (Scalia, J., dissenting).
We do not question the State's prerogative evenhandedly to support diverse educational opportunities. We address specifically and only an educational opportunity recognized by the District Court and the Court of Appeals as “unique” . . . available only at Virginia's premier military institute, the State's sole single-sex public university or college. Cf. Mississippi Univ. for Women v. Hogan, 458 U.S. 718, 720, n. 1 (1982) (“Mississippi maintains no other single-sex public university or college. Thus, we are not faced with the question of whether States can provide 'separate but equal' undergraduate institutions for males and females.”).

The Court’s decision in the VMI case has not had the negative consequences that Justice Scalia feared for private single-sex colleges. Title IX is a 30-year-old statute codified at 20 U.S.C. 1681, et. seq., which states that "no person in the United States shall, on the basis of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any education program or activity receiving federal financial assistance." In 1988, Congress made it clear in the Civil Rights Restoration Act of 1987 that if any program or activity at an educational institution receives federal funds, then the entire institution must comply with Title IX. Thus, a research grant to one department at a university will make the entire university responsible for complying with Title IX and other federal civil rights laws in all of its programs and activities.

Despite this fact, students attending private single-sex colleges still receive federally guaranteed student loans. A similar case is Zelman v. Simmon-Harris, discussed at § 32.1.2.1.B nn.135-37. In Zelman, a school voucher program was upheld against an Establishment Clause challenge where the governmental provided voucher assistance for educational expenses to a broad class of citizens, who made independent judgments whether to use the voucher to fund educational expenses at religious or secular private schools. Similar independent judgments by individuals to attend single-sex colleges using federal financial aid should continue to be permissible under Title IX and the Equal Protection Clause.

For public universities, it appears that there is a only a small window of opportunity for single-gender institutions of higher education if educational efficiency or diversity is established as a goal and if the opportunity is provided equally for men and women. However, Justice Scalia may be right when he says that the potential costs of litigating the constitutionality of a single-sex program are simply too high to be embraced by public officials.

Evidence of educational benefits of single-sex programs at primary and secondary school levels give such public school single-sex programs better chance of constitutional success. However, as one author has observed, “The real problem facing the nation . . . is that public schools are failing so many children, regardless of their sex. A preoccupation with single-sex education is arguably a diversion from dealing with schools as a whole. . . . Well-funded and carefully monitored single-sex opportunities may be valuable for the small number of children who receive them. . . . [However,

388 Id. at 534 n.7.

we] need to focus on both the equality and quality in education for all children, all girls and all boys. Realistically, that means co-education for all but a very few. So we had better make sure that that education is as excellent and as bias-free as possible.”

On a different topic, under various state public accommodation laws, or as a matter of constitutional gender discrimination law, there is an issue whether special pricing policies, such as waiving a “cover charge” at bars on some nights for women, violates either the public accommodations law or the Constitution. State courts in different states have reached different conclusion on this issue. Similar gender discrimination issues can arise in the context of different “grooming policies” for male and female workers, or aspects of “sexual stereotyping” more generally, either under Title VII of the 1964 Civil Rights Act or, for state action, under the Constitution. As a matter of constitutional law, the better approach would seem to be that a narrowly drawn policy substantially related to a non-discriminatory economic interest in the business maximizing overall profits should be viewed as constitutional under intermediate scrutiny review, but sexual stereotyping should not.

§ 26.3.1.3 Problems in Identifying Gender Discrimination

Sometimes it is not easy to determine whether women have been discriminated against or whether, although discrimination exists, those discriminated against are males, females, both, or couples. A number of such cases came before the Court during the instrumentalist era.

In 1974, in *Geduldig v. Aiello*, the Court considered whether classifications based on pregnancy were gender discrimination. A California state employee disability insurance program excluded from coverage all disabilities resulting from normal pregnancy. The Court did not find an equal protection violation, explaining that there was no risk from which men are protected and women are not and no risk from which women are protected and men are not. Two years later, in *General Electric Co. v. Gilbert*, the Court, reaffirming *Geduldig*, held that Title VII of the Civil Rights Act of 1964, which forbids sex discrimination in employment, did not require disabilities because of pregnancy be included in company disability plans. The Court held that there was no gender discrimination because the classification was pregnant women versus men and non-pregnant women.

---

In 1978, Congress reversed the result in *General Electric* by passing the Pregnancy Discrimination Act (PDA), which provides that women affected by pregnancy shall be treated the same for all employment-related purposes as other persons not so affected but similar in their ability or inability to work. Applying this law, in *Newport News, Shipbuilding and Dry Dock Co. v. EEOC*, the Court invalidated a health plan that provided less benefits for pregnancy-related conditions to spouses of male employees than it gave to female employees. In 1987, in *California Federal Savings and Loan Association v. Guerra*, the Court held that Title VII, as amended by the PDA, did not preempt the California Fair Employment and Housing Act, which required employers to provide up to four months leave and reinstatement to employees disabled by pregnancy. Justice Marshall said the state law did not compel employers to treat pregnant women better than other disabled employees, but merely established a benefit that employers must provide, and was consistent with federal policy.

On a different issue concerning the fact that women, as a class, live longer than men, the Court held in *City of Los Angeles v. Manhart* that Title VII bars employers from requiring women to make higher payments in a retirement program. Justice Stevens explained for the Court that the statute bars discrimination against any "individual" because of race, color, religion, sex, or national origin. Requiring higher payments because of membership in the class of women discriminates against every woman. Stevens added that even a true generalization about a class is an insufficient reason to disqualify an individual to whom the generalization does not apply. A similar result was reached in *Arizona Governing Committee v. Norris*, where there were equal pay-ins but unequal pay-outs.

A related result was reached in *Wengler v. Druggists Mutual Insurance Co.* There, the Court held that providing worker death benefits automatically to widows, but only to widowers on proof of dependency, was not shown substantially related to the purpose of providing for needy spouses, as the government did not establish any substantial economic consequences that would result if men and women were treated equally. Justice Rehnquist dissented in the case, applying rational review, although he later acquiesced in intermediate scrutiny in gender cases, as noted at § 26.3.1.2 n.380.

In terms of whether discriminatory intent can be found, the Court held in *Personnel Administrator of Massachusetts v. Feeney* that a state's job preference for veterans in civil service employment was not intentional discrimination against women, even though less than 2% of veterans were women, but rather was adopted to aid veterans returning to civilian employment. The Court noted that many non-veteran men were also disadvantaged by the law, and that the law was not passed

400 442 U.S. 256, 276-80 (1979); *id.* at 281-86 (Marshall, J., joined by Brennan, J., dissenting).
"because of," but merely "in spite of," its adverse effects upon women. Justice Marshall, dissenting, joined by Justice Brennan, said a *prima facie* case was established by the foreseeable impact of the law, plus exempting all job requisitions “especially calling for women,” thus creating a gender-based civil service with women in low-grade clerical or secretarial jobs and men as supervisors.

As indicated by *Feeney*, mere discriminatory effects do not establish a case of gender discrimination. For example, women often suffer disproportionately in the aftermath of natural disasters, both in terms of higher risks of sexual assaults during the immediate aftermath, and in terms of often-greater child care responsibilities make securing housing or new employment more difficult where existing homes and jobs were destroyed by the disaster. Women are also often the targets for special abuse in circumstances of armed conflict. In the absence of a showing of discriminatory intent, none of these burdens represent violations of gender discrimination under the Equal Protection Clause.

Finally, tricky issues of gender identification can be presented to courts when dealing with transgendered individuals, or those individuals who have undergone sex change operations. Some states base gender identify solely on the individual’s initial chromosomes (XX for women, XY for men), while other states more sensibly use flexible categorization that permit gender identity to change after a sex change operation. Following a successful sex change operation, an individual would thus be defined as a man in some states, but a woman in another. Issues would then be presented, for example, with whom such an individual could marry, and would any marriage in one state be given Full Faith and Credit in another state with a different definition of gender identity.

§ 26.3.1.4  Government Affirmative Action Programs Based on Gender

Gender-based affirmative action programs are a relatively new legal phenomenon, and constitutional law on this subject is almost entirely a product of decisions during the instrumentalist era. For example, in 1974, in *Kahn v. Shevin*, a majority of the Court, using rational basis scrutiny, upheld Florida's annual $500 property tax exemption for widows. Writing for the Court, Justice Douglas said that the exemption cushioned the financial impact of spousal loss upon the sex for whom that loss imposes a heavier burden. Prior to agreeing on intermediate scrutiny for gender discrimination

---

405  416 U.S. 351, 355-56 (1974); *id.* at 357-60 (Brennan, J., joined by Marshall J., dissenting); *id.* at 360-62 (White, J., dissenting).
in 1976 in *Craig v. Boren*, Justices Brennan, White, and Marshall, in dissent, applied strict scrutiny based on Justice Brennan’s plurality in *Frontiero*, discussed at § 26.3.1.2 n 362. Here the state had not shown why inclusion of rich widows was necessary to advance the purpose of ameliorating the effects of past economic discrimination against women.

By 1976, a majority of the Court in *Craig v. Boren* had begun the process of coalescing around intermediate scrutiny for gender discrimination cases, which requires the state to show the law serves important governmental objectives and that the discriminatory means are substantially related to achieving those purposes. Applying that test in 1977 in *Califano v. Webster*, the Court permitted Congress to allow female workers to eliminate three more low-earning years from retirement benefit calculations than male workers, which gave female wage earners higher monthly old-age benefits under Social Security, where the purpose was to redress disparate treatment of women in the economy, and the calculation remedied some effects of past wage discrimination. *Califano* involved calculation for earlier years, as Congress rescinded the different calculation method in 1972.

On the other hand, many affirmative action programs with respect to women have not survived the intermediate level of scrutiny. For example, in 1979, in *Orr v. Orr* Justice Brennan wrote that Alabama had not shown that imposing alimony obligations on men but not women was substantially related to the state’s goal of providing support for needy wives of broken marriages. Justice Brennan explained that there is no reason to use sex as a proxy for need when individualized hearings already occur and, further, the law gives an advantage only to the financially secure wife whose husband is in need. With respect to any argument that the state was saving money by not requiring individualized hearings in cases where men might otherwise seek alimony, and that this cost savings could make the Alabama statute constitutional, while saving administrative costs is a legitimate interest that can be used to support not requiring individualized hearings under rational review, as in *New York City Transit Authority v. Beazer*, discussed at § 26.1.1.1 nn.30-31, saving administrative costs is not usually viewed by the Court as an important or substantial interest to justify government action at intermediate scrutiny, as noted at § 26.1.1.2 n.44.

In 1982, in *Mississippi University for Women v. Hogan*, the Court struck down a Mississippi's statute that excluded males from enrolling in a state-supported nursing school. The state said this rule was for the benefit of women. For the Court, Justice O’Connor said that Mississippi had not established that its purpose in barring men from a School of Nursing was to compensate for discrimination against women since the state had not shown that women lack opportunities for training or positions of leadership in nursing. Although four Justices in Justice Brennan’s plurality opinion in *Bakke* had concluded thatremedying general societal discrimination was an important government interest that could be used to justify a statute under intermediate scrutiny, discussed at § 26.2.1.4.A n.219, a majority of the Court has never adopted that position. Thus, although granting this preference to women could be viewed as related to remedying general societal discrimination

against women in employment, the majority focused in Hogan only on whether there was prior discrimination in the nursing industry. This is consistent with the race-based affirmative action cases where only one’s own prior racial discrimination in a particular industry can be used to justify race-based affirmative action in that industry, as in Richmond v. J.A. Croson Co., discussed at § 26.2.1.4.C n.234.

Further, Mississippi did not prove that barring men from nursing school was substantially related to any interest in educational effectiveness. Mississippi had suggested that having men in the class would alter the classroom dynamics to the detriment of the women nursing students. However, the record in the case showed that admitting men to nursing classes as auditors had not affected teaching style or the performance of female nursing students.

Justice O'Connor's opinion contained two corollaries relevant to gender-based affirmative action. These were: (1) if the program reflects stereotypes, e.g., that one gender is innately inferior, the objective is not legitimate, and (2) whether the means are substantially related is determined by reasoned analysis, not by assumptions on the proper roles of men and women or by using gender as a proxy for other, more germane considerations.

§ 26.3.2 Discrimination Based Upon Illegitimacy

Almost the entire development of constitutional law relating to non-marital children occurred during the instrumentalist era. The instrumentalist Court began in 1968 by applying rational basis scrutiny in Levy v. Louisiana, but over the dissent of formalist Justice Black, and Holmesian Justices Harlan and Stewart, held that even the lowest level of review was not met by a statute that permitted legitimate but not illegitimate children to sue for wrongful death of their mother. Three years later, over the dissent of Justice Brennan, joined by Justices Douglas, White, and Marshall, the Court did allow a state to deny intestate succession to illegitimate children acknowledged but not legitimated by the father. However, that decision was soon followed by four decisions which found state laws treating illegitimate children differently not supported by any legitimate state interest, with only deference-to-government Holmesian Justice Rehnquist dissenting on the merits.

409 391 U.S. 68, 71-72 (1968); id. at 76 (Harlan, J., joined by Black & Stewart, JJ., dissenting).

In 1976, in *Mathews v. Lucas*, the trial court treated illegitimacy as a suspect classification, requiring strict scrutiny. The Supreme Court reversed and applied a standard of second-order rational review, the “not toothless” scrutiny of *Reed v. Reed*, discussed at § 26.3.1.2 n.361. Under that standard, the challenger failed to meet the burden of showing that it was unreasonable to condition the eligibility of certain illegitimate children for a surviving child's insurance benefits upon a showing that the deceased wage earner was the claimant child's parent and, at the time of his death, was living with the child or was contributing to support. The presumption of dependency for legitimate children, while the presumption of non-dependency for illegitimate children, was viewed as reasonable and saved money in administering the insurance benefits program, a legitimate government interest.

The Court’s decision that same year in *Craig v. Boren*, adopting what has come to be known as intermediate review, changed the Court’s view regarding the appropriate level of scrutiny for classifications involving illegitimacy in cases after 1976. Instead of having only two choices, some form of rational review and strict scrutiny, and rejecting strict scrutiny, as in *Mathews*, the Court now had a third definable option, intermediate scrutiny.

In *Trimble v. Gordon*, decided in 1977, the Court used the phrase “carefully tuned” and “carefully tailored,” which is similar to the “closely related’ or “substantially related” language of intermediate scrutiny, to hold that classifications based on illegitimacy are invalid under the 14th Amendment if they are not so related to permissible state interests. Critical to applying this standard of review was the observation that illegitimate children are not responsible for their status. One factor supporting heightened scrutiny, as discussed at § 26.1.2.1 n.64, is for discrimination based on classifications that are not the product of individual choice.

Applying intermediate scrutiny in *Trimble*, the Court declared invalid an Illinois law that allowed an illegitimate child to inherit from its father only if the father had acknowledged the child and married its mother. Justice Powell said that the classification affecting illegitimate children was not substantially related to the goal of protecting the orderly distribution of estates. Justice Powell explained that the law excluded significant categories of illegitimate children who could be allowed to inherit without jeopardizing the orderly settlement of estates, e.g., those who had a court order of paternity. Applying rational basis scrutiny of *Labine v. Vincent*, Chief Justice Burger, and Justices Stewart, Rehnquist, and Blackmun, dissented in the case.

The following year, in *Lalli v. Lalli*, Justice Powell, writing for a 5-4 Court and applying the intermediate standard of review articulated in *Trimble*, upheld a New York statute that allowed illegitimate children to inherit from their father only if an order of filiation had been entered during

---

414 Id. at 776-77 (Burger, C.J., joined by Stewart, Rehnquist & Blackmun, JJ., dissenting).

the father's lifetime. Justice Powell admitted that some children who might be able to prove paternity without serious disruption of estate administration would be excluded, but the statute was the product of careful study, minimized the possibility of delay and uncertainty, enhanced accuracy, and made fraudulent assertions of paternity less likely to succeed. The Court also noted that the state’s interests in the case were “substantial,” thus foreshadowing complete adoption of intermediate scrutiny in these cases, even though nominally the Court followed the *Trimble* language of requiring only that the statute be substantially related to permissible interests. Dissenting Justice Brennan, joined by Justices White, Marshall, and Stevens, agreed that intermediate scrutiny was the proper standard, but said that the statute excluded forms of proof, such as acknowledgment of the child or marriage to the mother, and thus was not substantially related to advancing the state’s interests.

A result more favorable to illegitimate children was reached in *Clark v. Jeter*,416 decided in 1988. Under Pennsylvania law, an illegitimate child had to prove paternity before seeking support from the father. Legitimate children could seek support at any time, but illegitimate children had to sue within six years of birth. Perhaps reflecting the modern natural law concern with analytic consistency in the law, the Court held that the classification was not “substantially related to an important governmental objective,” thus clearly phrasing the test in terms of standard intermediate scrutiny review.

A similar requirement of a substantial relationship to an important government interest occurred in 2001 in *Nguyen v. INS*.417 This case considered a requirement that in order to become a United States citizen an illegitimate child born of a citizen father and a non-citizen mother must, before becoming 18, be “legitimated” or otherwise have “paternity” acknowledged by the father or found by a court. Because there was no such requirement if the father had been the non-citizen and the mother the citizen, the Court viewed the case through the lens of gender discrimination. Of course, there was no such requirement if the father and mother were married, so the case also involved illegitimacy discrimination. In either case, intermediate scrutiny applied.

In applying intermediate scrutiny, the Court considered two important interests. The first interest was “the importance of assuring that a biological parent-child relationship exists.” This interest was apparently not “put forward in litigation” by the government attorneys in the case.418 Nevertheless, under the approach discussed at § 26.1.3 nn.92-99, it would be appropriate for the Court to consider this interest if it were an “actual purpose” or a “plausible purpose” of the regulation, whether argued to the Court or not. Given that birth from citizen parents is “often critical to our constitutional and statutory understanding of citizenship” and that the focus of the rule at issue in the case concerned “legitimation” or other determination of “paternity,” a Court could easily find this was an actual or plausible purpose of the rule in question.419

418 Id. at 79-80 (O’Connor, J., joined by Souter, Ginsburg & Breyer, JJ., dissenting).
419 Id. at 60-64.
The Court then noted that the statute’s requirement of some legitimation or finding of paternity made before the age of 18 was substantially related to this interest in determining that a parent-child relationship exists. The statute was perhaps not the least burdensome effective alternative, as the Court acknowledged that clear and convincing evidence of paternity might be established after 18 years of age today “given the sophistication of modern DNA tests.” However, since the case involved only intermediate scrutiny, not strict scrutiny, there was no least burdensome effective alternative requirement. The only requirement was that the statute not be “substantially more burdensome than necessary.” As to this point, the Court noted that “we are mindful the obligation it imposes with respect to the acquisition of citizenship by the child of a citizen father is minimal. . . . Only the least onerous of the three options provided for [‘legitimation,” paternity “acknowledged” the father, or “established” by a court] must be satisfied.”

The second important government interest was “to ensure that the child and the citizen parent have some demonstrated opportunity or potential to develop not just a relationship that is recognized, as a formal matter, by the law, but one that consists of the real, everyday ties that provide a connection between child and citizen parent and, in turn, the United States.” This was an interest argued to the Court by the government attorneys. Although no review was done by the Court to determine if this were an “actual purpose” of the legislation, under the approach discussed at § 26.1.3 nn.92-99, it would be enough if this were a “plausible” purpose. The Court then noted that in the case of “a citizen mother and a child born overseas, the opportunity for a meaningful relationship between citizen parent and child inheres in the very event of birth.”

The Court acknowledged that the rules at issue in this case regarding the citizen father would not in every case create such a similar opportunity for a relationship to develop. In terms of the standard of review, there is thus no “direct relationship” between the rules at issue in this case and the important governmental end. However, as the Court noted, under intermediate scrutiny there is no requirement of a direct relationship so that “the statute under consideration must be capable of achieving its ultimate objective in every instance.” It is enough if the statute is “substantially related to the achievement of” the important governmental end.

In dissent, Justice O’Connor, joined by Justices Souter, Ginsburg, and Breyer, criticized the majority for not establishing clearly enough that these two interests were important; that they were actual purposes of the legislation, rather than merely court-stated purposes; or that the rules at issue actually substantially advanced the government’s ends. Part of the dissent focused on less burdensome alternatives – for the first interest, either allowing paternity to be established after 18 years through DNA testing or adopting a sex-neutral scheme requiring both fathers and mothers to prove paternity, and, for the second interest, requiring some degree of regular contact between the child and citizen parent over time. However, it must be remembered that at intermediate scrutiny there is no least burdensome alternative requirement. Instead, the existence of alternatives is used at intermediate scrutiny to help show that the particular statute actually adopted does not

\[420\] Id. at 63-64, 70.

\[421\] Id. at 64-70.

\[422\] Id. at 74-91 (O’Connor, J., joined by Souter, Ginsburg & Breyer, JJ., dissenting).
“substantially advance” its ends, or that the statute is “substantially more burdensome” than it needs to be. In this case, while the statute is not as narrowly drawn as it could be, and would fail strict scrutiny given the alternatives mentioned by the dissent, it is not surprising that the majority found the statute substantially related to its ends and not substantially more burdensome than necessary to survive intermediate scrutiny.

§ 26.4 Classifications Involving Rational Basis Scrutiny

§ 26.4.1 Standard Social and Economic Regulatory Legislation

As noted at § 26.1.1 n.12, unless a classification warrants some form of heightened review because it jeopardizes exercise of a fundamental right or categorizes on the basis of an inherently suspect characteristic, the Equal Protection Clause requires only that the classification rationally further a legitimate state interest. The challenger has the burden of establishing that the classification, on its face or as applied, is not rationally related to any legitimate conceivable governmental interest.423

As initially applied during the formalist era, this rational basis test had some “teeth.” For example, in 1897, the clause was used to protect railroads against having to pay attorneys’ fees to successful plaintiffs in certain kinds of actions. The Court said in Gulf, Colorado & Santa Fe Railroad Co. v. Ellis424 that the railroads were being discriminated against and that classifications in the law "must always rest on some difference which bears a reasonable and just relation to the act in respect to which the classification is proposed, and can never be made arbitrarily and without any such basis." In F.S. Royster Guano Co. v. Virginia,425 the Court phrased the test as whether the classification rested on some ground of difference "having a fair and substantial relation to the object of the legislation, so that all persons similarly circumstanced shall be treated alike."

The Court used this doctrine during the formalist era to rule unconstitutional many examples of “class” legislation, that is, laws that treated rich persons or corporations differently from poor persons or individual entrepreneurs. As the Court noted in Quaker City Cab Co. v. Pennsylvania,426 “The right to withhold from a foreign corporation permission to do local business therein does not enable the state to require such a corporation to surrender the protection of the federal Constitution.” Based on this observation, the Court invalidated in Quaker City Cab a taxing scheme that taxed corporately-owned cabs differently than those owned by individual entrepreneurs. The Court stated, “The equal protection clause does not detract from the right of the state justly to exert its taxing power or prevent it from adjusting its legislation to differences in situation or forbid classification in that connection, but it does require that the classification be not arbitrary, but based on a real and substantial difference having a reasonable relation to the subject of the particular legislation.” A substantial number of statutes were similarly struck down that discriminated against corporations

424 165 U.S. 150, 155 (1897).

426 277 U.S. 389, 400-02 (1928).
or made tax classifications not based on circumstances “peculiarly applicable to corporations, as are
taxes on their capital stock or franchises.” Similar decisions striking down regulations on
corporations were reached using a due process analysis, discussed at § 27.3.2.1, or a dormant
commerce clause analysis, discussed at § 20.3.2.1.B.

These decisions reflected the general predisposition of the conservative formalist-era Court to be
a bulwark against what the Court perceived as “socialist” legislation, as discussed at § 14.2.2 nn.36-
55. Even so, it was not always easy to predict when the Court would find that a classification was
not reasonable. For example, the New York Milk Control Law, as it existed in the 1930s, allowed
a milk dealer to sell to stores at one cent per quart lower than a fixed price if the dealer lacked a
well-advertised trade name and had been in business prior to the effective date of the Act, April 10,
1933. The Court sustained the trade name provision, saying that the legislature might reasonably
have thought that trade conditions justified the differential, which gave smaller, less well-advertised
businesses a once cent price advantage in competition with larger, well-advertised businesses, like
Borden’s. However, the Court struck down the requirement in the Act that the less well-
advertized dealer had to have been in business by April 10, 1933, saying that it was arbitrary to deny
the price benefit to newer businesses, and had no relation to the public welfare or prevention of
monopoly.

Because the Holmesian approach to judicial decisionmaking is characterized by deference to
legislative and executive judgments, during the Holmesian era the Court became very deferential
to legislative action. It reduced the level of equal protection review in economic cases to minimum
rational review, as it did also for substantive due process review, as discussed at § 27.3.2.1 nn.161-
66. Thus, a challenger had the burden of proving that a classification was not rationally related to
any legitimate goal that the legislature conceivably intended to pursue. Regarding due process, that
was made clear in 1938, by the decision in United States v. Carolene Products Co. There the
Court said that when a legislative judgment is drawn in question, the judicial inquiry must be
restricted to "whether any state of facts either known or which could reasonably be assumed affords

v. Harding, 272 U. S. 494, 507-17 (1926); Fidelity & Deposit Co. v. Tafoya, 270 U. S. 426, 434-35
(1926); Western Union Tel. Co. v. Foster, 247 U. S. 105, 112-14 (1918).

on corporation based on earnings out of the state violates due process), and cases cited therein.

429  See, e.g., Sioux Remedy Co. v. Cope, 235 U.S. 197, 201-05 (1914) (requirement that a
corporation file articles of incorporation, appoint a resident agent for service of process, and pay a
$25 filing fee in order to do business in a state violates dormant commerce clause principles as an
unlawful burden on interstate commerce), and cases cited therein.

430  Borden's Farm Products Co. v. Ten Eyck, 297 U.S. 251, 262-63 (1936).

432  304 U.S. 144, 154 (1938).
support for it." The same approach began to be used in equal protection review of classifications in economic laws and laws dealing with government benefits. Indeed, during the Holmesian era, the Court invalidated only one law in the realm of purely economic regulation. In Morey v. Doud, the Court held that a statute imposing licensing and financial standards on sellers and issuers of money orders unconstitutionally exempted the American Express Company. As noted at § 26.4.1 n.437, however, even this precedent was overruled during the instrumentalist era.

Minimum rational review, with great deference given to legislative decisions, has remained in place during the instrumentalist and post-instrumentalists eras with respect to social and economic legislation. Under this approach, most laws have been sustained against an equal protection challenge. For example, in Williamson v. Lee Optical Co. of Oklahoma, the Court rejected a challenge to exempting sellers of ready-to-wear glasses from regulations imposed on opticians that forbid an optician from fitting or duplicating lenses without a prescription from an ophthalmologist or optometrist. Justice Douglas noted, “Evils in the same field may be of different dimensions and proportions, requiring different remedies. Or so the legislature may think. Or the reform may take one step at a time, addressing itself to the phase of the problem which seems most acute to the legislative mind. . . . For all this record shows, the ready-to-wear branch of this business may not loom large in Oklahoma or may present problems of regulation distinct from [opticians].”

Similarly, in Dandridge v. Williams, a case involving a limit on the amount of money a family can receive under the Aid to Families with Dependent Children program, no matter how many children are in the family, the Court noted, "In the area of economic and social welfare, a State does not violate the Equal Protection Clause merely because the classifications made by its law are imperfect. . . . The [rational basis standard] is true to the principle that the Fourteenth Amendment gives the federal courts no power to impose upon the States their views of what constitutes wise economic or social policy." In Vance v. Bradley, the Court upheld a federal law requiring retirement at age 60 of federal employees in the Foreign Service retirement and disability system, but not those in the Civil Service retirement and disability system.

Applying this kind of deferential approach, the Court overruled Morey v. Doud in 1976 in New Orleans v. Dukes. Dukes involved a ban in the New Orleans French Quarter on selling foodstuffs from pushcarts, with an exemption for vendors who had been operating for eight years. The exemption was upheld, with the Court explaining that Morey was a needlessly intrusive judicial infringement on a state's legislative powers to make exemptions for legitimate, rational reasons – here that some vendors had become part of the charm of the area. Indeed, clarifying the language from Carolene Products about deference to the legislature, the Court noted in 1980 in United States
Railroad Retirement Board v. Fritz\textsuperscript{438} that where there is a conceivable reason for governmental action, that reason can be used to support the action, it being constitutionally irrelevant whether the reasoning in fact underlay the legislative decision.

Today's post-instrumentalist Supreme Court, strongly influenced by the natural law tradition which gives great weight to \textit{stare decisis}, continues to follow minimum rational review for standard social and economic legislation. Since the Court's formulation of the standard has not changed since the 1940s, it is not surprising that the Court's comments on the application of the standard are consistent in all post-formalist decades. In a number of these cases, the Court has been clear about how deferential to the government minimum rational review is in practice. The Court has noted:

A classification "must be upheld against equal protection challenge if there is any reasonably conceivable state of facts that could provide a rational basis for the classification." A State, moreover, has no obligation to produce evidence to sustain the rationality of a statutory classification." [A] legislative choice is not subject to courtroom factfinding and may be based on rational speculation unsupported by evidence or empirical data." A statute is presumed constitutional, and "[t]he burden is on the one attacking the legislative arrangement to negative every conceivable basis which might support it," whether or not the basis has a foundation in the record. Finally, courts are compelled under rational-basis review to accept a legislature's generalizations even when there is an imperfect fit between means and ends. A classification does not fail rational-basis review because it "'is not made with mathematical nicety or because in practice it results in some inequality.'" . . . [On the other hand,] even the standard of rationality as we so often have defined it must find some footing in the realities of the subject addressed by the legislation.\textsuperscript{439}

The Court strongly presumes the constitutionality of laws that confer monetary benefits.\textsuperscript{440}

Judicial deference is strong where a tax classification is alleged to infringe equal protection.\textsuperscript{441}

On the other hand, in some cases, the Court has focused on how the minimum rational review test, while involving substantial deference to the government, does not require blind deference to government. Thus, the Court has noted that even under minimum rational review:

All persons similarly situated should be treated alike, and a bare desire to harm a politically unpopular group is not a legitimate state interest.\textsuperscript{442}

A state may not treat those within its borders unequally solely on the basis of their different residences or states of incorporation.443

A state may legitimately promote local business, but promoting local business by discriminating against nonresident competitors is not a legitimate state purpose when done by imposing higher taxes on nonresident corporations solely because of nonresidence.444

In some cases the underinclusiveness or overinclusiveness of a classification will be so severe that it cannot be said that the classification is motivated by anything other than animus toward a group.445

Instrumentalist justices have occasionally tried to increase this level of scrutiny by not permitting “any conceivable basis” to be used to defend a statute under rational basis review. While not adopted by a majority of the Court, Justice Brennan stated in dissent:

The rational basis standard "is not a toothless one," and will not be satisfied by flimsy or implausible justifications for a legislative classification, proffered after the fact by Government attorneys.446

§ 26.4.2 Classifications Involving Wealth

Despite support from some instrumentalist Justices for heightened scrutiny regarding wealth classifications,447 during the instrumentalist era the Court rejected heightened scrutiny for cases involving the poor or indigent. As the Court noted in Harris v. McRae,448 “[T]his Court has held repeatedly that poverty, standing alone, is not a suspect classification.” Justice Harlan provided a good summary of the reasons for this conclusion in his dissent in Douglas v. California:

The States, of course, are prohibited by the Equal Protection Clause from discriminating between “rich” and “poor” as such in the formulation and application of their laws. But it is a far different thing to suggest that this provision prevents the State from adopting a law of general applicability that may affect the poor more harshly than it does the rich, or, on the other

hand, from making some effort to redress economic imbalances while not eliminating them entirely. Every financial exaction which the State imposes on a uniform basis is more easily satisfied by the well-to-do than by the indigent. Yet I take it that no one would dispute the constitutional power of the State to levy a uniform sales tax, to charge tuition at a state university, to fix rates for the purchase of water from a municipal corporation, to impose a standard fine for criminal violations, or to establish minimum bail for various categories of offenses. . . .

Laws such as these do not deny equal protection to the less fortunate for one essential reason: the Equal Protection Clause does not impose on the States “an affirmative duty to lift the handicaps flowing from differences in economic circumstances.” To so construe it would be to read into the Constitution a philosophy of leveling that would be foreign to many of our basic concepts of the proper relations between government and society. The State may have a moral obligation to eliminate the evils of poverty, but it is not required by the Equal Protection Clause to give to some whatever others can afford.449

Using the factors discussed at § 26.1.2.1, this conclusion can be supported by noting that wealth classifications were not the original focus of the framers and ratifiers to protect; that the poor are not a discrete and insular minority group without the ability to vote and thus protect their interests in the political process; that there does not exist a strong or sustained pattern of discrimination based upon false stereotypes not truly indicative of their abilities; and that real concerns about second-guessing legislative judgment and opening a Pandora’s box apply in these kind of cases. These reasons can be viewed as outweighing any argument of heightened scrutiny based on the condition of being poor often not really being the product of individual choice.

Despite this doctrine, the Court has applied strict scrutiny to certain substantial or undue burdens on the poor in the context of the exercise of a fundamental right. For example, financial burdens on welfare recipients that substantially burden the right to travel trigger strict scrutiny, discussed at § 26.5.1; filing fees or fees for record preparation to permit an appeal trigger strict scrutiny if a substantial burden on the right of access to courts, discussed at § 26.5.2; and poll taxes or other laws that substantially burden the poor from exercising their fundamental right to vote trigger strict scrutiny, discussed at § 26.5.3.

Even under rational basis scrutiny, some legislative schemes have been found to be unconstitutional. For example, in United States Department of Agriculture v. Moreno,450 the Court concluded that barring otherwise eligible unrelated members of households living together from receiving food stamps, while permitting related members of households to receive food stamps, was unconstitutional as reflecting an illegitimate animus toward “hippie” communes and as not rationally related to a legitimate interest in preventing fraud in the food stamp program

§ 26.4.3  Classifications that Disadvantage Non-Resident Corporations

The Privileges and Immunities Clause of Article IV, § 2 has been held not to apply to corporations, as discussed at § 20.3.3.1 n.292. However, the Equal Protection Clause has been applied where a state discriminated against a non-resident corporation. Thus, in *Metropolitan Life Insurance Co. v. Ward*, the Court held that a state gross-premiums tax on insurance companies may not impose a higher rate on out-of-state companies than on domestic companies. For a 5-4 Court, Justice Powell held that Alabama's goal of encouraging domestic companies by discriminating against nonresident competitors was not a legitimate state purpose. In addition, a purpose to encourage capital investment in Alabama assets was not legitimate when furthered by discrimination. A dormant commerce clause analysis did not apply in this case because Congress, through the McCarran Act, had exempted the insurance industry from its restraints. Dissenting in *Ward* with Justices Brennan, Marshall, and Rehnquist, Justice O'Connor objected to the Court's collapse of the two prongs of rational basis testing into one, *i.e.*, judging the legitimacy of a goal by the discriminatory means used, and not engaging in the deferential inquiry the Court typically uses as a brake on judicial impeachment of legislative policy choices.

Justice Rehnquist sought to limit *Ward* in the case of *Northeast Bancorp, Inc. v. Board of Governors*, a case in which Justice Powell did not participate. In *Northeast Bancorp*, the Court upheld a Massachusetts law that allowed an out-of-state bank holding company to acquire a local bank, provided that the out-of-state acquirer was also from New England. For the Court, Justice Rehnquist noted that Congress had consented to this kind of state regulation, and he emphasized language in *Ward* which said that a state may not regulate its economy by "imposing discriminatorily higher taxes on nonresident corporations solely because they are nonresidents." Here, he said, the state is favoring out-of-state corporations domiciled in New England (thus cutting out some large banks in New York and other places) in accord with the fact that our country traditionally has favored widely dispersed control of banking so as to avoid threats to the independence of local banking institutions.

Justice O'Connor, concurring, said the case involved no meaningful distinction from *Ward*, since both banks and insurance companies have historically been regulated by the states. She took another shot at *Ward*, saying that when Congress has sanctioned the barriers to commerce that might result from fostering local industry, the Court has no authority under the Equal Protection Clause to invalidate classifications designed to encourage local businesses because of their special contribution.

The precise doctrine in *Ward* is not of much practical significance, since taxes on non-resident corporations are reviewed under the heightened rational review dormant commerce clause doctrine.

454 *Id.* at 179-80 (O’Connor, J., concurring).
discussed at 20.3.2.4.A, except in the rare case of being preempted by federal law, like the McCarran Act for insurance companies. Given this reality, it seems likely Ward will be confined to its precise facts.

§ 26.4.4  Classifications Involving Age: Children or the Elderly

The Court has consistently rejected heightened scrutiny for cases involving the aged or for children. Using the factors discussed at § 26.1.2.1, this conclusion can be supported by noting that neither the aged or children were among the original focus of the framers and ratifiers to protect; that the aged are not a discrete and insular minority groups without either direct ability to vote and participate in the political process, or, for children, parents who will protect their interests as surrogates; that there does not exist a strong or sustained pattern of discrimination based upon false stereotypes not truly indicative of their abilities; and that concerns about second-guessing legislative judgment and opening a Pandora’s box all outweigh, as for classifications involving the poor, any argument of heightened scrutiny based on the status not really being the product of individual choice.

In the classic case of age discrimination involving the elderly, Massachusetts Board of Retirement v. Murgia, the Court stated:

old age does not define a “discrete and insular” group, in need of “extraordinary protection from the majoritarian political process.” . . . While the treatment of the aged in this Nation has not been wholly free of discrimination, such persons, unlike, say, those who have been discriminated against on the basis of race or national origin, have not experienced a "history of purposeful unequal treatment" or been subjected to unique disabilities on the basis of stereotyped characteristics not truly indicative of their abilities.455

Standard economic or social regulations involving children similarly trigger rational review. The Court has often noted that states have great “latitude to regulate the conduct of children,” in part because the law has regarded minors “as having a lesser capacity for making important decisions.”456

Of course, in cases involving regulations where the child is burdened for something not the product of the child’s choice, such as burdening illegitimate children, discussed at § 26.3.2 nn.413-22, or burdens on the children of illegal aliens in the United States being denied a public school education, as in Plyler v. Doe, discussed at § 26.2.2.1.B nn.337-42, the Court will apply intermediate scrutiny.

A similar case of children being punished for something not the product of their choice was decided by the Second Circuit in *Lewis v. Thompson*.\(^{457}\) In this case, the court considered part of the Welfare Reform Act of 1996 that denied for the first year after birth automatic eligibility to Medicaid benefits for citizen children of illegal alien mothers equivalent to the automatic eligibility extended to the citizen children of citizen mothers. The plaintiffs contended that the intermediate scrutiny applied in *Plyler* was appropriate here because the discriminatory denial of automatic eligibility was imposed on the citizen children solely because of the unqualified alien status of their mothers. The Court agreed, noting, “[T]he circumstances in *Plyler*, which the Court has never since invoked to invalidate a statute, presented a more compelling case for heightened scrutiny than does the Plaintiffs' claim for automatic eligibility, because the denial there – public education – is more burdensome than the brief postponement [one year] of obtaining Medicaid coverage (serious as that might be in some circumstances). On the other hand, the Plaintiffs' claim is stronger in that here it is asserted on behalf of citizen children, whereas the claimants in *Plyler* were alien children.” Perhaps more simply, intermediate scrutiny is appropriate in *Lewis* because, as stated in *Plyler*,\(^ {458}\) “[I]mposing disabilities on the . . . child [in these circumstances] is contrary to the basic concept of our system that legal burdens should bear some relationship to individual responsibility or wrongdoing.”

§ 26.4.5  **Classifications Involving Physical or Mental Disabilities**

Cases involving physical or mental disability also trigger rational basis review. As the Court noted in *City of Cleburne v. Cleburne Living Center*,\(^ {459}\) even though mental retardation is not the product of the individual’s choice, and often is an immutable characteristic, many factors support applying only rational review to classifications disadvantaging the mentally retarded. They include concerns with the ability of the Court to second-guess legislative decisions regarding the disabled, a “difficult and often technical matter, very much a task for legislators guided by qualified professionals”; the lack of recent history of legislative discrimination against the disabled; the fact that such groups are not political powerless as demonstrated by effective lobbying groups on their behalf; and a concern with opening up a Pandora’s box where the aging, the infirm, and individuals at various levels of mental or physical disability would all claim grounds for heightened scrutiny. There is even a weaker case for heightened scrutiny for physical disability classifications, than for mental disability, given the greater capabilities of persons with physical disabilities to participate more fully in the political process, and given the history of recent legislation, like the Americans with Disabilities Act of 1990, which is particularly responsive to the concerns of persons with physical disabilities.

Despite this rational basis scrutiny, the Court struck down the legislative classification in *Cleburne* regarding mental disability. This has given rise to speculation that the Court was applying something above minimum rational basis review, principally because the Court looked very carefully at the record, which reflects second-order rational review, as discussed at § 7.2.1 text following n.42, rather than assuming possible facts that might make the classification rational. As

\(^{457}\) 252 F.3d 567, 590 (2nd Cir. 2001).

Justice Marshall noted in his dissent in *Cleburne*, supra note 24, at 1444. "To be sure, the Court does not label its handiwork heightened scrutiny, and perhaps the method employed must hereafter be called ‘second order’ rational-basis review rather than ‘heightened scrutiny.’ But however labeled, the rational basis test invoked today is most assuredly not the rational-basis test of *Williamson v. Lee Optical of Oklahoma, Inc.*” Professor Tribe has similarly remarked that the Court did not substantially defer to the legislature’s judgment regarding means and ends, but rather determined for itself “whether the policies hypothesized to save the challenged action were actually supported by fact.” Professor Chemerinsky has noted, “It can be argued the Court’s review was more rigorous than usual for rational basis analysis.”

In *Cleburne*, the city required a special use permit for the operation of a group home for the mentally retarded, even though no such permit was required for apartment houses, boarding and lodging homes, fraternity or sorority houses, convalescent homes, and the like. Four interests were alleged to support the statute, but each of them failed part of the rational basis scrutiny test.

One alleged interest was responding to the views of persons in the neighborhood who did not want mentally retarded persons living close by. Justice White noted that such irrational prejudice against the mentally retarded reflected illegitimate animus not appropriate to use even under rational basis review. A second interest, concern about harassment of the mentally retarded by neighboring school students, was legitimate, but the Court concluded the ban on the home for the mentally retarded was not rationally related to achieving that benefit, as those same students did not harass the 30 or so mentally retarded students attending their school. Given this, it was irrational to assume they would harass residents of a home for the mentally retarded. The third interest, that such a home would rest on a 500-year flood plain, also violated the second prong of rational basis review. The ban was viewed as irrationally underinclusive, since a home for the aged or infirm could be placed on the property, and the Court concluded they would pose the same problem of evacuation in the event of a flood. Thus, the government was not addressing a greater part of the problem first. Similarly, the fourth interest in population concentration posing additional demands on neighborhood services was viewed as irrationally underinclusive, as fraternity and sorority homes would pose the same problem of population concentration as a home for the mentally retarded. Again the government was not addressing the greater part of the problem first, or explaining why that was not being done, as is required even under rational basis scrutiny, as discussed at § 26.1.1.1 nn.25-27.

Of these four, probably the best chance for the government under standard minimum rational review deference would have been to argue that the mentally impaired do pose special problems of evacuation in the event of a flood, since at least the infirm, although they would need to be carried, could mentally understand the nature of the crisis. Nonetheless, in *Cleburne*, the Court did not defer

461 Tribe, supra note 24, at 1444.

462 Chemerinsky, supra note 24, at 755.

463 473 U.S. at 447-50.
to that potential government argument, but concluded for itself that it was irrational to assume the mentally impaired posed any greater evacuation problem than the infirm.

In *Heller v. Doe*, Justice Kennedy, writing for a 5-4 Court, said that rational-basis review, as used in *Cleburne*, would continue to apply to classifications affecting mentally retarded people. Applying that standard, he said that a state could authorize involuntary civil commitment of “mentally retarded” persons on a clear and convincing standard of proof, even though proof beyond a reasonable doubt was used for involuntary commitment of “mentally ill” persons. Explaining, Justice Kennedy said the state could find that (1) mental retardation is easier to diagnose, and (2) dangerousness to self or others is established more easily, as a general rule, since mental retardation is a relatively stable condition. Further, the usual treatment for mental retardation, attempting to encourage self-care and self-sufficiency, is less invasive than treatment for mentally ill persons. Dissenting Justices Blackmun, Stevens, O’Connor, and Souter did not consider whether some form of heightened scrutiny applied, since in their judgment the distinctions between mentally retarded and mentally ill persons failed even rational-basis scrutiny as applied in *Cleburne*. Their dissent, however, made it clear that they viewed *Cleburne* as applying a kind of second-order rational basis scrutiny. Justices Stevens, Souter, Ginsburg, and Breyer would probably hold to that position today.

§ 26.4.6 Classifications Involving Sexual Orientation

Classifications involving sexual orientation currently trigger only minimum rational review. This is true despite arguments that could be made regarding a history of discriminatory legislation based upon false stereotypes, and the fact the sexual orientation increasingly appears to be not merely a lifestyle preference, but a substantially immutable characteristic determined predominantly by genetics and hormonal influences, and not the product of individual choice. Under some state constitutions, some state supreme courts have ruled that sexual orientation discrimination is a suspect class, triggering heightened scrutiny. One could also make the argument that, as a practical matter, discrimination based upon sexual orientation draws distinctions based upon sex, and thus is a form of gender discrimination. Despite such arguments, the Supreme Court, and thus

---

464 509 U.S. 312, 319-28 (1993); *id.* at 335-46 (Souter, J., joined by Blackmun & Stevens, JJ, and O’Connor, J., in part, dissenting).

lower federal courts, have consistently treated cases under the United States Constitution of discrimination based upon sexual orientation as involving only minimum rational review.468

Despite applying such minimum rational review, the Supreme Court has found some statutes discriminating on the basis of sexual orientation to be unconstitutional. For example, in Romer v. Evans,469 Justice Kennedy wrote for the Court that Amendment 2 of the Colorado Constitution violated the Equal Protection Clause because it lacked a rational relation to a legitimate end. Amendment 2 barred any law entitling gays, lesbians, or bisexuals to “claim any minority status, quota preferences, protected status or claim of discrimination.” The state had argued that the Amendment was designed to respect other citizen's freedom of association, particularly landlords or employers who had personal or religious objections to homosexuality, and that the state had an interest in conserving resources to fight discrimination against other groups. Justice Kennedy replied that the breadth of Amendment 2 was so far removed from these particular justifications that they could not be credited, and the law seemed merely to make homosexuals unequal to everyone else with respect to seeking aid from the government, and thus was the product of an illegitimate animus toward persons based upon sexual orientation. However, Justice Kennedy did not accept an argument that heightened scrutiny should be applied on the theory that Amendment 2 burdens a fundamental right or targets a suspect class.

Justice Scalia, dissenting with Justices Rehnquist and Thomas, said that the law reflected legitimate interests, i.e., that it reflects the customary or traditional view that homosexuality is morally wrong and socially harmful. Justice Scalia also said that Amendment 2 was analogous to the constitutions of four states whose admission to the Union was made contingent on providing that polygamy is forever prohibited.470 As discussed at § 27.3.4.2 nn.259-64, in the context of discussing Lawrence v. Texas, a substantive due process challenge to the state of Texas’ ban on homosexual sodomy, this kind of reasoning reflects a Stage 4 commitment to customs and traditions as defining moral behavior, rather than a Stage 6 commitment to the rational principle of treating all individuals with “equal concern and respect,” a difference in moral reasoning developed at §§ 16.1 & 16.3. Justice Scalia also noted to the extent that Amendment 2 was only about denying homosexuals preferential treatment in the form of affirmative action, that might be a legitimate interest. While Justice Scalia’s dissent was willing to read Amendment 2 in that fashion, the majority in Romer concluded that the

468 See generally Chemerinsky, supra note 24, at 758-59, and sources cited therein, including, inter alia, Equality Foundation of Greater Cincinnati v. City of Cincinnati, 54 F.3d 261 (6th Cir. 1995); Steffan v. Perry, 41 F.3d 677 (D.C. Cir. 1994); Ben-Shalom v. Marsh, 881 F.2d 454 (7th Cir. 1989); National Gay Task Force v. Board of Educ. of City of Oklahoma City, 729 F.2d 1270 (10th Cir. 1984). In 1988, a Ninth Circuit panel did apply strict scrutiny to the Army’s policy of discrimination based upon sexual orientation in Watkins v. United States, 847 F.2d 1329 (9th Cir. 1988), but on en banc review the case was resolved on grounds of equitable estoppel preventing the government from failing to reenlist the individual in the particular case, 875 F.2d 699 (9th Cir. 1989). Since Watkins, the Ninth Circuit has applied rational review in these kind of cases. See, e.g., High Tech Gays v. Defense Indus. Security Clearance Office, 895 F.2d 563 (9th Cir. 1990).

470 Id. at 636-50 (Scalia, J., joined by Rehnquist, C.J., and Thomas, J., dissenting).
language of Amendment 2 was so broad in scope that it could not conceivably be limited to that more legitimate interest. In lower court cases, the interest in preventing a group from an affirmative action preference has been held to be a legitimate governmental interest.\(^{471}\)

It should be noted that the Court is likely to use the “illegitimate motive” or “animus” characterization with some care. For example, in *Village of Willowbrook v. Olech*,\(^{472}\) a Village demanded a 33-foot easement as a condition of connecting the plaintiff’s property to the municipal water supply, while the Village required only a 15-foot easement from other similarly situated property owners. The Court acknowledged that this could constitute an Equal Protection violation if proven that the Village's demand was "irrational and wholly arbitrary," but the Court declined to consider an alternative Equal Protection theory that the state action was motivated solely by “subjective ill will” to get the plaintiff for reasons unrelated to any legitimate state objective. In the lower federal courts and state courts, cases outside the context of discrimination based on sexual orientation, including many cases involving prisoners claiming “animus” to various provisions of the Prison Litigation Reform Act of 1996, have met with little success.\(^{473}\)

With respect to cases involving discrimination based upon sexual orientation, the case results following *Romer* have been more mixed. For example, in one case involving a public school teacher's claim of sexual orientation discrimination when his teaching contract was not renewed, a federal court in Ohio cited to *Romer* for the proposition that actions based solely on animus violated equal protection rights and found in favor of the teacher.\(^{474}\) Similarly, in a case involving a teacher's challenge to her removal as a volleyball coach and restraints on her speech, the court held that the only justification for the action was bias against the teacher's homosexuality.\(^{475}\)

On the other hand, an *en banc* opinion of the Eleventh Circuit supported the Attorney General of Georgia's decision to withdraw an offer of employment to a woman after it became known that she had been married to her partner in an unofficial same-sex marriage ceremony. The court distinguished *Romer*, noting that it was not unreasonable to think that the woman’s acts were likely to cause the public to be confused and to question the Georgia Department of Law’s credibility; to interfere with the Department's ability to handle certain controversial matters, including enforcing

\(^{471}\) *Id.* at 635; *id.* at 638-39 (Scalia, J., joined by Rehnquist, C.J., and Thomas, J., dissenting). For lower court cases, *see*, e.g., Equity Foundation of Greater Cincinnati, Inc. v. City of Cincinnati, 54 F.3d 261 (6th Cir. 1995) (Cincinnati charter providing for “no ordinance, regulation, rule or policy which provides that homosexual, lesbian, or bisexual orientation, status, conduct, or relationship constitutes, entitles, or otherwise provides a person with the basis to have any claim of minority or protected status, quota preference or other preferential treatment” advances a legitimate interest).

\(^{472}\) 528 U.S. 562, 565 (2000).

the law against homosexual sodomy; and to endanger working relationships inside the Department.476

More generally, as suggested by the discussion at § 16.3 nn.79-83, the Northern “Blue States” are likely to be more receptive to using Romer-like “animus” analysis, where needed, to promote gay rights more broadly, including recognizing same-sex marriages or civil unions, as in Vermont, Massachusetts, and Connecticut.477 In cases decided before October, 2006, the New York Court of Appeals failed to strike down the New York State ban on gay marriage in a 4-2 vote, and the Washington Supreme Court failed to strike down the Washington State ban by a closer 5-4 vote. In both cases, the controlling plurality of judges upheld the ban on the grounds that under deferential minimum rational review limiting marriage to heterosexual couples was rationally related to a legitimate state interest in fostering the raising of children in stable, heterosexual families.478

This conclusion is perhaps supported by the first and second prongs of rational basis review. Under the first prong, the argument would be that heterosexual couples on average will do a better job of raising children than homosexual couples. This is an empirically dubious proposition, but perhaps one the legislature is entitled to make under deferential minimum rational review, so that the end is legitimate, and not the product of “animus” toward gays and lesbians. Under the second prong, the statute’s ban on who can get married would not be irrationally underinclusive, because it would then be rationally related to achieving that legitimate benefit. However, this analysis fails to consider the third prong of rational basis scrutiny – whether the statute is irrationally overinclusive because it imposes an irrational burden on individuals. The dissents in the New York and Washington cases chastised the majorities for failing to consider this aspect of rational basis scrutiny.479

Given the state’s alleged interest in fostering the raising of children in stable, heterosexual families, banning gays and lesbians from getting married is an irrational burden, unless one believes that such a ban will either (1) convince some gays and lesbians to change their sexual orientation, enter into heterosexual marriages, and raise children in that context, or (2) reduce the number of children that

477 Baker v. Vermont, 744 A.2d 864, 886-87 (Vt. 1999) (under rational basis review, violation of equal protection to deny same-sex couples the right to marry or enter into civil unions); Goodridge v. Department of Public Health, 798 N.E.2d 941, 949 (Mass. 2003) (under rational basis review, violation of equal protection to deny same-sex couples the right to marry); Conn. Gen. Stat. Ann. Title 46B. Family Law § 46b-3800 (a bill authorizing civil unions was passed by the Connecticut legislature and was signed by the Governor of Connecticut on April 20, 2005).

gay or lesbian couples might otherwise raise if they had the protection of marriage. Otherwise, the ban is not related at all to an interest in raising children in heterosexual marriages. As such, the ban is not only unconstitutional under the third prong of rational basis review, but suggestive that the ban is the product of “animus” toward gays and lesbians, particularly since promising to raise children in a stable family is not a requirement before heterosexual couples can get married, nor part of standard marriage vows, which focus on the relationship between the parties toward each other. From this perspective, the views of a majority of judges in the New York and Washington cases are best understood as being driven by a formalist focus on customs and traditions banning gay marriage, or Holmesian deference to the legislative process, rather than a natural law reasoned elaboration of the requirements of minimum rational review.

The “Midwest, Plains, and Western” Red States are more likely to grant equal kind of rights in terms of health, pension, medical visitation, and other such rights, as reflected in decisions in Alaska and Montana, but not civil union or marriage status, as in Arizona and an Eighth Circuit opinion regarding a Nebraska law. In contrast, the “Deep South” Red States will likely continue, in the absence of Supreme Court binding precedent, to support limiting gay rights generally. For example, a Texas case upheld against an equal protection challenge a referendum that amended the city of Austin's charter to prohibit employment benefits for same-sex partners of city employees.

Issues surrounding parental rights and custody decisions are likely to reflect a similar split. For example, Vermont has granted full parental rights to both same-sex partners when one of them has conceived by artificial insemination. In Maryland, the correct standard to be applied in visitation

480 Hernandez v. Robles, 7 N.Y.3d 338, 855 N.E.2d 1 (N.Y. 2006) (Holmesian plurality opinion of R.S. Smith, J., joined by G.B. Smith & Read, JJ., emphasizing deference to the legislative branch); id. (Graffeo, J., joined by G.B. Smith, J., concurring in the judgment) (formalist focus on customs and traditions); Andersen v. King County, 138 P.3d 963 (Wash. 2006) (Holmesian plurality opinion of Madsen, J., joined by Alexander, C.J., and C. Johnson, J., emphasizing deference to the legislative branch); id. (J.M. Johnson, J., joined by Sanders, J., concurring in the judgment) (formalist focus on customs and traditions).

481 Alaska Civil Liberties Union v. State of Alaska, 122 P.3d 781 (Alaska 2005) (under rational review, a violation of equal protection to deny state and municipal employee benefits provisions to same-sex domestic partners, while unmarried public employees in opposite-sex domestic relationships had opportunity to obtain benefits by marrying); Snetsinger v. Montana Univ. System, 104 P.3d 445 (Mont. 2004) (under rational review, a violation of equal protection for state to deny health insurance benefits to unmarried same-sex partners of public employees, while granting the benefits to unmarried opposite-sex couples who sign affidavit claiming common law marriage).

482 Standhardt v. Superior Court ex rel. County of Maricopa, 77 P.3d 451 (Ariz. App. Div. 1, 2003) (statute banning gay marriage was rationally related to state's legitimate interest in encouraging procreation and child-rearing within marriage, and not the product of animus based upon sexual orientation); Citizens for Equal Protection v. Bruning, 455 F.3d 859 (8th Cir. 2006) (same).

483 Bailey v. City of Austin, 972 S.W.2d 180, 183-84 (Tex. App. – Austin 1998).
determinations involving the presence of a same-sex partner is the same best interests of the child standard applicable to the presence of an opposite-sex nonmarital partner, with liberal visitation being restricted only upon a showing of actual or potential adverse impact to child resulting from contact with the nonmarital partner.484

In contrast, an Indiana Court of Appeals upheld an order precluding the father’s overnight visitation with his children if his same-sex partner was also in house overnight, and prohibited the father from taking his children to activities promoting the homosexual lifestyle. In another case, rather than granting full parental rights, as did the Vermont court and an Indiana Court of Appeals, the Supreme Court of Indiana remanded a case to the district court to consider whether both women involved in a domestic relationship were legal parents of the child, where one of them conceived a child though artificial insemination with donor sperm (in the particular case from the other domestic partner’s brother).485 In a “Deep South” Red State case, the Eleventh Circuit upheld Florida’s ban on gay adoption, one of few such bans in the Nation.486

Following the Massachusetts Supreme Court’s opinion in 2003 in Goodridge v. Department of Public Health, cited at § 26.4.6 n.477, which legalized gay marriages in Massachusetts under the Massachusetts Constitution, a number of states, through public referenda or otherwise, have amended their state constitutions to ban recognition of marriages other than between one man and one woman. As of October, 2006, such a ban now appears in roughly 20 state constitutions, with more states likely to follow, including 7 states where the issue is on the ballot for the November, 2006 elections.487 These bans do not directly affect other issues of gay rights under state constitutional law. They do mean that any right to gay marriage would have to be found under the federal Equal Protection Clause in those states, rather than under the state constitution.

As an additional aspect of this doctrine, there is the issue of whether under the Full Faith and Credit Clause states that do not recognize same-sex marriages or civil unions in their states will be required to recognize valid same-sex marriages or civil union in those states which do recognize them. This issue is addressed as part of the discussion of the Full Faith and Credit Clause at § 23.1.4 nn.45-51. As discussed there, the federal Defense of Marriage Act of 1996, dealing with the obligation to recognize same-sex marriages, provides: “No State, territory, or possession of the United States, or Indian tribe, shall be required to give effect to any public act, record, or judicial proceeding of any other State, territory, possession, or tribe respecting a relationship between persons of the same sex that is treated as a marriage under the laws of such other State, territory, possession, or tribe, or a

487 See Same-Sex Marriage in the United States (Wikipedia) (Online encyclopedia) (Search using “Same-Sex Marriage”, “United States”, and “Wikipedia”; click on “Efforts to Ban Same-Sex Marriage by Constitutional Amendment” for updated list of states with such amendments).
right or claim arising from such relationship.” In 2005, that law was held not to violate full faith and credit, due process, or equal protection principles by a federal district court in Wilson v. Ake.488

As noted at § 23.1.4 text following n.51, eventually, as with the issue of interracial marriages, where the Full Faith and Credit Clause issue was mooted by the Supreme Court in Loving v. Virginia, discussed at § 26.2.1.1.D n.132, which struck down all bans on interracial marriages, the Supreme Court will likely eventually join the educated, enlightened view of Western Europe and Canada, discussed at §§ 16.1 text following n.5 & 16.2.4, which supports equal rights for gays and lesbians. This will moot the full faith and credit issue with respect to same-sex marriages as well. This view of equal rights for gays and lesbians would naturally be adopted more quickly by natural law Justices following an Enlightenment model of natural law, who balance arguments of text, context, history, practice, and precedent against a model of pure reason and equal concern and respect (perhaps adopted 10 years from 2006 on the Court, given the need for some more substantial shift away from traditional state practices denying equal rights so as not to outweigh arguments of reason in this balance). Even a Burkean model of natural law will eventually come to adopt the view of equal rights, but only after a longer period of legislative, executive, and social acceptance in the states (perhaps 25 years from 2006 on the Court). This difference between an Enlightenment and a Burkean model of natural law in terms of impact of reason versus traditions on interpreting a natural law concept like “equality” or “liberty” is discussed at § 12.3.3 nn.116-28. The view that the Court is usually cautious not to get too far out in front of society in implementing notions of equal concern and respect, where they conflict with well-established societal traditions, is noted at § 16.3 nn.79-83.

While the view of equal marriage rights for gays and lesbians may seem an “extreme” view to some, the likely best historical parallel in United States history is the struggle for equal rights for African-Americans during the 19th and 20th centuries. During the first half of the 19th century, customs and traditions supported the practice of slavery, including the ban on slaves getting married. A number of “moderate” individuals supported various half-measures, such as gradual elimination of slavery, compensation for slave owners if slaves were freed, and return of freed slaves to Africa. The view that slaves should be freed, no compensation paid, and African-Americans permitted to remain in the United States as full citizens was viewed as the “radical” abolitionist position. Full equal rights eventually became, of course, the mainstream view, supported by virtually everyone today. As discussed at § 16.2.4, an important part of this shift was a change in attitudes regarding what religious documents said about the issue, particularly a shift in whether the Bible was best read to support the discrimination inherent in the institution of slavery or instead was best read to support the cause of equal rights and human dignity for all.

§ 26.5 Classifications Interfering with Fundamental Rights

The cases discussed at §§ 26.2-26.4 all involved classifications that the Court determined deserved strict scrutiny (§ 26.2), intermediate scrutiny (§ 26.3), or rational basis review (§ 26.4), depending upon whether the classification used a characteristic that is “suspect,” like race or ethnicity; “quasi-suspect,” like gender or illegitimacy; or “non-suspect,” like age or mental disability. In addition to

this branch of Equal Protection Clause doctrine, a second branch of Equal Protection Clause doctrine focuses on classifications that interfere with “fundamental” rights.

The issue of how to determine if some right is “fundamental” is discussed at § 27.1.1. The discussion here provides the details for those fundamental rights that have triggered an Equal Protection Clause analysis. These are a right to travel, discussed at § 26.5.1; access to the courts, discussed at § 26.5.2; and a right to vote and access to the ballot, discussed at § 26.5.3. This discussion also addresses the Court’s conclusion that there is no fundamental right to equal educational funding in the public schools under the United States Constitution, discussed at § 26.5.4.

As a preliminary matter it is important to note that each of these fundamental rights is not listed in the text of the Constitution. Thus, they form part of what is called the “unenumerated” fundamental rights analysis. As discussed at § 27.1.1, these rights are viewed as “deeply rooted in our Nation’s history and traditions” or “fundamental to our concept of constitutionally ordered liberty,” even though not mentioned in the text of the Constitution. For many of these rights, as noted at § 21.2.3, the Court has adopted the view that “undue” or “substantial” burdens on these unenumerated fundamental rights trigger strict scrutiny, while “lesser” burdens on these rights trigger only some version of rational review, probably best understood as “second-order rational review.” This aspect of fundamental rights doctrine is reflected in the cases discussed below.

§ 26.5.1 Right To Travel

The first major case concerning the fundamental right to travel under Equal Protection Clause analysis occurred in 1969 in Shapiro v. Thompson.489 There, a one-year durational residence requirement for welfare was held to penalize exercise of a fundamental right to travel and, thus, triggered strict scrutiny. The state interest in keeping out poor migrants was held illegitimate as a penalty on travel. Budgetary and administrative justifications were held not compelling, and were not necessary because less burdensome means were available. The right to travel within the United States was viewed as fundamental because, although not mentioned in the Constitution, the Constitution created “one Nation,” and thus travel within that Nation was a fundamental right.

Reflecting his Holmesian deference-to-government predisposition, Justice Harlan dissented in the case. He said that the Court, in substance, was treating travel as a suspect classification, and this was a return to the "superlegislature" days of due process review, as in Lochner v. New York.490 Justice Harlan added, “I must reiterate that I know of nothing which entitles this Court to pick out particular human activities, characterize them as ‘fundamental’ and give them added protection under an unusually stringent equal protection test.”491

490 198 U.S. 45 (1905), discussed at § 27.3.2.1 nn.149-60.

491 394 U.S. at 662 (Harlan, J., dissenting).
Shapiro was extended in 1972 by Dunn v. Blumstein.\footnote{492} In Dunn, the Court said that there is no need to show the actual deterrence of travel; it is enough that a law penalize exercise of the right. Travel is an "unconditional" right, and a one-year durational residence law on voting penalizes exercise of the right. Even if the goal were compelling, like preventing fraud in voting, the state must choose the least burdensome means for reaching it, and a one-year requirement is not such a means.

Later cases have qualified the right to travel analysis. For example, in Vlandis v. Kline,\footnote{493} the Court indicated in dicta that a one-year durational residence requirement for lower tuition at a state university would be constitutional under a rational basis test, because such a requirement did not impose the kind of burden as found in Shapiro, which involved the immediate and pressing need for preservation of life and health of persons unable to live without public assistance. Similarly, in Memorial Hospital v. Maricopa County,\footnote{494} in the course of invalidating a durational residence requirement on state payment for non-emergency hospital service under a state welfare program, the Court noted that the strict scrutiny of Shapiro applied only where there had been a denial of a "basic necessity of life," or a "vital" government benefit, and that medical care qualified as such a “vital” government benefit. Justice Rehnquist, dissenting, said that the right to travel was only remotely affected by the state’s durational residence requirement for non-emergency hospital service, and this was not an "urgent need" for the necessities of life or a benefit funded from current revenues to which the claimant may have contributed.

With only Justices Brennan and Marshall dissenting on the right to travel issue, Justice Rehnquist wrote for the Court in Sosna v. Iowa\footnote{495} that Iowa could impose a one-year durational residence requirement for obtaining a divorce. Rehnquist explained that this law was reasonably justified on grounds other than budget or administrative convenience, \textit{i.e.}, protecting judgments from collateral attack. He said that unlike the situation in Shapiro, Dunn, and Memorial, the plaintiff was not "irretrievably foreclosed" from obtaining some part of what she sought. Under this line of cases, Shapiro can be explained as holding that a one-year durational residence requirement for welfare was a substantial interference with the right to travel, while Sosna, where no right was "irretrievably foreclosed," was not a substantial interference. In Jones v. Helms,\footnote{496} the Court allowed a state to transform the misdemeanor of parental abandonment into a felony if the parent left the state. Justice Stevens explained that the criminal conduct engaged in by the individual in the first state "necessarily qualified" the right to travel to another state. He also noted that the case did not involve disparate treatment of residents and non-residents or new and old residents.

\end{itemize}}
Subsequent developments have provided evidence that some Justices would prefer to use another mode of analysis in cases that classify people by the length of their residence. For example, in *Williams v. Vermont*, the Court invalidated the failure by Vermont in a “vehicle purchase and use tax” to give a credit for sales tax paid in another state on the purchase of a car by a person who, at that time, was not a resident of Vermont. Such a credit was given if the buyer was a resident of Vermont at the time of purchase. The Court did not discuss whether this disadvantage for recent residents was a penalty on exercise of the right to migrate to Vermont. Instead, the Court said that residence at the time of purchase bears no rational relation to the purpose of the tax, *i.e.*, to improve and maintain Vermont highways. Justice Blackmun, dissenting with Justices Rehnquist and O’Connor, said that legislators could presume that most people who reside in Vermont and who buy cars elsewhere will return immediately and, thus, will not have used their cars in two states.

Another example of the use of rational basis review in a right to travel case occurred in *Zobel v. Williams*. Chief Justice Burger there wrote for the Court that distinctions between new and old residents in payments from Alaska’s mineral fund violated the Equal Protection Clause, even under rational basis scrutiny. It was not rational to give pre-enactment residents more cash to create incentives for living in Alaska or to encourage more prudent management of the fund. Further, a purpose to reward citizens for past contributions is not legitimate because it could open the door to apportioning other rights according to length of residence. Justice Brennan concurred in this opinion, with Justices Marshall, Blackmun, and Powell. Justice Brennan added that rewarding citizens on length of residence tended to keep people in Alaska and, thus, interfered with the right to travel, a right intended to preserve mobility essential to economic progress. Justice O’Connor, concurring only in the judgment, said that rewards to long-time residents might sometimes be reasonable, but since non-residents were not a source of evil here, there was a violation of the Article IV, § 2 Privileges and Immunities Clause. Justice Rehnquist, dissenting, said the illegitimacy of recognizing past contributions was established only in a few cases on the right to travel. Here, however, no travel was impeded.

An analysis similar to that in *Zobel* was applied by the Court in *Hooper v. Bernalillo*. There the Court struck down a tax exemption for veterans who resided in the state before May 8, 1976. Applying rational basis scrutiny, the Court held that it was illegitimate for laws to create permanent distinctions among residents based on the length or timing of their residence in the state.

---

497 472 U.S. 14, 21-28 (1985); *id.* at 28-37 (Blackmun, J., joined by Rehnquist & O’Connor, JJ., dissenting).

498 457 U.S. 55, 60-65 (1982); *id.* at 65-68 (Brennan, J., joined by Marshall, Blackmun & Powell, JJ., concurring); *id.* at 76-81 (O’Connor, J., concurring in the judgment); *id.* at 81-84 (Rehnquist, J., dissenting).

In *Attorney General of New York v. Soto-Lopez*, the Court split on whether strict scrutiny should be applied or only rational basis review. The law in *Soto-Lopez* involved a civil service preference for resident veterans who lived in the state when they entered military service. Justice Brennan, with Justices Marshall, Blackmun, and Powell, said that because the law penalized those persons who had exercised their right to migrate, strict scrutiny should be used. Justice Brennan indicated that “even temporary deprivations of very important benefits and rights can operate to penalize migration.” Once strict scrutiny was triggered, it was easy for Justice Brennan to conclude that none of the interests advanced by New York could satisfy strict scrutiny review. Chief Justice Burger and Justice White, in separate concurrences, found that the law failed even the rational basis test, as in *Zobel* and *Hooper*. Justice O'Connor, dissenting with Justices Rehnquist and Stevens, said that more than a minimal effect on the right to travel or migrate should be required to trigger heightened scrutiny. Here the law did not restrict the freedom to move to New York nor did it impose discriminatory fees, taxes, or other direct restraints.

A slightly different way to view the right to travel appeared in *Saenz v. Roe*. Instead of viewing the right to travel as an aspect of the “unenumerated” fundamental rights analysis, the Court said that the right to travel is partly a privilege of citizens of the United States, protected by the Privileges or Immunities Clause of the 14th Amendment, discussed at § 25.3 nn.65-76. In *Saenz*, the Court held that the discrimination against new citizens by the California law, which for one year limited welfare payments to the amount payable by the state of the family’s prior residence, not California’s typically more generous payment for longer-term residents, triggered strict scrutiny, which the law could not pass. The one-year classification could not be justified by a purpose to deter welfare applicants from migrating to California since this is an illegitimate purpose. Nor could a fiscal justification provide the required necessity since neither the duration of residence nor the identity of the prior state of residence has any relevance to the need for benefits. Chief Justice Rehnquist dissented, with Justice Thomas, saying that the California law imposed an appropriate test for the bona fides of residence in California. When revamping its total welfare packages, as California was doing, it should have the authority and flexibility to ensure that the new programs are not exploited, a concern that Congress has recognized by specifically authorizing the program California adopted. Justice Stevens responded to this contention by saying that Congress may not authorize the states to violate the 14th Amendment, unlike the ability of Congress to preempt a dormant commerce clause challenge, as discussed at § 20.3.2.2.B.

The *Saenz* theory has not yet been applied in any subsequent case, so it remains unclear whether it will be limited to durational limits on welfare benefits, or any benefits or burdens that affect travel, or to any classification relating to newer or older residents. Since the strict scrutiny approach in *Saenz*, and the result in *Saenz*, track the Court’s earlier decision in *Shapiro v. Thompson*, discussed

at § 26.5.1 n.489, it is unclear what practical difference it makes to ground this aspect of the right to travel cases in the Privileges or Immunities Clause. As an aspect of that clause, however, the Saenz case is discussed in greater depth at § 25.3 nn.65-76. \[5\]

§ 26.5.2 Access to Courts

When indigents sought access to the courts or were brought before a court, cases during instrumentalist era held that under the Due Process Clause or Equal Protection Clause "fundamental fairness" required that in some cases fees must be waived, or counsel or other services must be provided, particularly for indigent parties. The post-instrumentalist Court does not appear to have backed away from the instrumentalist-era precedents. Fairness determinations are influenced by the importance of the rights involved and the extent to which alternatives to litigation are available to the indigent person. Thus, the cases need to be divided into criminal and civil proceedings.

In criminal cases the states must not impose filing fees or transcript costs that bar access to appeal by an indigent defendant,\(^\text{502}\) and must provide counsel for an indigent at trial and for taking a first appeal as a matter of right.\(^\text{503}\) However, a state need not supply counsel for a discretionary appeal to the highest state court or for certiorari to the United States Supreme Court.\(^\text{504}\) Indeed, in 1987, the Court held that states have no constitutional duty to provide counsel to a defendant in postconviction proceedings in non-capital cases.\(^\text{505}\) Nor is there a state duty to supply counsel for postconviction proceedings in capital cases unless an inability is shown otherwise to obtain counsel.\(^\text{506}\)

In civil cases the states must waive filing fees for the poor in divorce cases,\(^\text{507}\) and probably in other cases where access to court is an indigent’s only way to protect a fundamental right. As discussed at § 27.3.3.1.A, individuals have a fundamental right to marry or not to marry, which is affected by the ability to get a divorce. As discussed at § 27.3.3.1.C, in most circumstances individuals also have a fundamental right to rear their biological children. Thus, a state must furnish blood grouping tests to an indigent defendant in a civil paternity case where state officials are parties to the action.\(^\text{508}\) And, in an action brought by the state, it must pay for the transcripts needed for effective review of

a trial court's order terminating a mother's parental rights. However, states need not waive filing fees in voluntary bankruptcy, since the proceeding does not relate to a fundamental constitutional right and is not the exclusive way to adjust creditor relationships. Similarly, the states need not waive a $25 filing fee for appeal from a reduction in welfare benefits after a pre-termination hearing. Even where a fundamental right may be involved, states usually do not need to providing funding for the exercise of that right. They just need not to burden the exercise of it. Thus, states need not supply counsel to terminate parental status unless special factors are present that would make the presence of counsel determinative of the result, as where there are disputed allegations of abuse or neglect or testimony of expert witnesses.

These cases are consistent with the observation that “substantial” burdens on the right of access to courts, which occur more often in the context of criminal proceedings or civil proceedings involving a fundamental right, trigger strict scrutiny, and thus are usually invalid. “Less than substantial” burdens on the right to access to courts trigger only rational basis scrutiny, and thus are usually upheld. In 1996, the Court made this clearer in Lewis v. Casey, a case involving complaints by prisoners that the prison law library was not adequately maintained. Indicating the minimal injury suffered by the prisoners in the case, the Court noted that the proper standard of review was thus whether the prison regulation was “reasonably related to legitimate penological interests.”

§ 26.5.3 Right to Vote and Access to the Ballot

At the time of the Nation’s founding, many individuals were denied the right to vote, including, in most states, African-Americans, Native Americans, women, minors, and non-property owners. Gradually, the right to vote was extended to all these groups, except for persons under 18 years of age. In Harper v. Virginia State Board of Elections, Justice Douglas wrote for the Court in 1966 that Virginia's poll tax was unconstitutional because the right to vote in a free and unimpaired manner is "fundamental," as it is preservative of other basic civil and political rights. Indeed, there was a suggestion in the opinion, not later picked up by the majority on the Court, that classifications drawn on the basis of wealth or poverty not only triggered strict scrutiny in the context of obtaining a ballot, but in other contexts as well. Justice Douglas answered a formalist static Constitution

dissent by Justice Black, which focused on traditions of poll taxes, and a Holmesian deference-to-
government dissent by Justices Harlan and Stewart, by saying that notions of what constitutes equal
treatment can change over time and the Court cannot defer to the government when government
action violates equal rights, citing Brown v. Board of Education. Justice Douglas concluded by
saying that where fundamental rights are asserted under the Equal Protection Clause, classifications
which might invade or restrain them must be closely scrutinized and carefully confined.\textsuperscript{516}

The Court applied a similar strict scrutiny approach in Kramer v. Union Free School District No.
15.\textsuperscript{517} Kramer involved a challenge to a New York law that limited who could vote in a school
district election to property owners and parents of children in the public schools. The state justified
the law by saying the attempt was to limit voting rights to those persons “directly affected” by
school board decisions. Under a strict scrutiny approach, however, the law was not “directly
related” to advancing this interest, because the law “permit[s] inclusion of many persons who have,
at best, a remote and indirect interest, in school affairs and, on the other hand, exclude[s] others who
have a distinct and direct interest in the school meeting decisions.” For example, the Court noted
that some property owners, particularly those getting ready to move, may have little interest in
school board matters. On the other hand, parents of children too young to attend school could well
have an interest in the kind of school their children soon would be attending, and yet they were
denied an opportunity to vote for the school board under the New York law.

Despite application of strict scrutiny in Harper and Kramer, the Court has applied only rational basis
scrutiny for less serious burdens on the right to vote. The Court noted in Burdick v. Takushi:

The Constitution provides that States may prescribe "[t]he Times, Places and Manner of holding
Elections for Senators and Representatives," Art. I, § 4, cl. 1, and the Court therefore has
recognized that States retain the power to regulate their own elections. Common sense, as well
as constitutional law, compels the conclusion that government must play an active role in
structuring elections; "as a practical matter, there must be a substantial regulation of elections
if they are to be fair and honest and if some sort of order, rather than chaos, is to accompany the
democratic processes." . . . [T]o subject every voting regulation to strict scrutiny and to require
that the regulation be narrowly tailored to advance a compelling state interest, as petitioner
suggests, would tie the hands of States seeking to assure that elections are operated equitably
and efficiently. Accordingly, the mere fact that a State's system "creates barriers . . . tending
to limit the field of candidates from which voters might choose . . . does not of itself compel
close scrutiny." . . . A court considering a challenge to a state election law must weigh "the
character and magnitude of the asserted injury to the rights protected by the First and Fourteenth
Amendments that the plaintiff seeks to vindicate" against "the precise interests put forward by
the State as justifications for the burden imposed by its rule," taking into consideration "the
extent to which those interests make it necessary to burden the plaintiff's rights."\textsuperscript{518}

\textsuperscript{516} Id. at 669-70, citing Brown, 347 U.S. 483, 492 (1954); id. at 670-72 (Black, J., dissenting);
id. at 680-86 (Harlan, J., joined by Stewart, J., dissenting).

For example, in *Ball v. James*,\(^{519}\) voting rights for an Arizona water reclamation district were weighted depending on how many acres of land each voter had. This weighting would normally have violated the principle of “one person, one vote” recognized in *Reynolds v. Sims* and many other cases. Under that doctrine, only variations from equal voting that can satisfy a strict scrutiny, least restrictive alternative analysis are permissible. In practice, this has meant population variations of less than 1% for congressional districts, or less than 10% for state house and senate districts, as long as those variations can be justified based on drawing district lines consistent with traditional political boundaries; geographic barriers, such as rivers or mountains; or district shape compactness.\(^{520}\) However, since the district in *Ball* “had ‘relatively limited authority,’ because ‘its primary purpose, indeed the reason for its existence, is to provide for the acquisition, storage, and distribution of water for farming in the Tulare Lake Basin,’” the Court applied only rational basis scrutiny and upheld the law because “Arizona could rationally make the weight of their vote dependent upon the number of acres they own, since that number reasonably reflects the relative risks they incurred as landowners and the distribution of the benefits and burdens of the District’s water operations.”

The Court has applied the same kind of analysis in cases involving the right of access to the ballot. For example, in *Timmons v. Twin Cities Area New Party*,\(^{521}\) the Court dealt with Minnesota’s ban on fusion tickets appearing together on the ballot. The majority and the two dissenting opinions agreed that for “severe” burdens strict scrutiny would be appropriate. As discussed at § 21.2.4.2 nn.88-93, for the less severe burden at issue in this case, the majority applied second-order rational basis review, while the dissenting opinions opted for intermediate review. Such intermediate review is contrary to the rational review approach adopted in cases like *Ball v. James*\(^{522}\)

The Court has also applied rational review in cases dealing with limitations on the rights of prisoners to vote, as in *O’Brien v. Skinner*.\(^{522}\) Because prisoners give up many rights that persons not incarcerated take for granted, burdens on prisoners’ right to vote are not viewed as severe or substantial burdens. Because of the constitutional presumption of innocence, however, persons being held in jail, prior to be convicted, cannot be denied a right to vote, and must be provided with absentee ballots. Once convicted, however, the Court has permitted states to limit the right to vote based upon specific text in the 14th Amendment, as discussed in *Richardson v. Ramirez*,\(^{523}\) which permit states to limit the right to vote “for participation in rebellion, or other crimes.” Based on arguments of history, the Court limited this denial of rights to “felonies” or other “infamous crimes”

\(^{521}\) 520 U.S. 351, 358, 364 (1997); id. at 374 (Stevens, J., joined by Ginsburg, J., & Souter, J., dissenting); id. at 382 (Souter, J., dissenting).

consistent with state practice in 1868. As of 2004, states were dealing with felony disenfranchisement in six different ways: “(1) two states do not disenfranchise felons [Maine & Vermont]; (2) sixteen states plus the District of Columbia disenfranchise felons only during incarceration; (3) four states disenfranchise felons during incarceration and parole; (4) fourteen states disenfranchise felons during incarceration, parole, and probation; (5) eight states disenfranchise some ex-felons for life; and (6) six states disenfranchise all ex-felons for life.”

It is beyond doubt that imposing such a deprivation for loss of a civil case would be unconstitutional.

The most noteworthy recent case involving equal protection issues and the right to vote is unquestionably *Bush v. Gore*. In this case, the Court considered the constitutionality of the Florida Supreme Court’s recount decision in the 2000 Presidential election between Governor George W. Bush and Vice-President Al Gore. One concern was the Florida Supreme Court’s decision to recount only “undervotes” but not “overvotes.” “Undervotes” can occur if the machine does not register a vote, as would occur if the voter had punched the punch card but either did not pierce the card at all or left only an indentation, or punched the card but did not dislodge the chad. “Overvotes” can occur where the machine indicates more than one vote had been cast, as would occur for a voter marking a candidates’ name, but then also writing in that candidate’s name on the write-in line. In both kinds of cases, manual inspection of the ballot can reveal the voter’s actual intent. A second concern was with the differing ways different Florida counties chose to count the undervotes, some viewing an indentation as being sufficient to determine voter intent, while other counties required the card to be punched through. All of these issues were critical because under the original November 26, 2000 certified result, Bush’s lead over Gore in Florida was just 537 votes, with Bush having received 2,912,790 votes and Gore 2,912,253.

Faced with these facts, seven Justices agreed that there were equal protection problems with the recount ordered by the Florida Supreme Court. Five of these seven Justices concluded there was

---

526 On these and other issues surrounding the electoral count in Florida, see Lynne H. Rambo, *The Lawyer’s Role in Selecting the President: A Complete History of the 2000 Election*, 8 Tex. Wesleyan L. Rev. 105 (2002), and sources cited therein.

527 531 U.S. at 111 (*per curiam* opinion) (“Seven Justices of the Court agree that there are constitutional problems with the recount ordered by the Florida Supreme Court.”); *id.* at 134 (Souter, J., joined by Breyer, J. in Part III, dissenting) (“I can conceive of no legitimate state interest served by these differing treatments of the expressions of voters’ fundamental rights.”). Justices Stevens and Ginsburg decided that these problems were not serious enough to justify a finding of a violation of the equal protection clause. *Id.* at 143 (Ginsburg, J., joined by Stevens, J. in Part II, dissenting).
It should be noted that the five Justices in the majority, and the four Justices in dissent, did disagree on whether the Court should have taken the case at all. Strong arguments made in dissenting opinions in Bush v. Gore suggested that the case was either a political question, or was not yet ripe for resolution. As Justice Souter noted in one dissent, “If this Court had allowed the State to follow the course indicated by the opinions of its own Supreme Court, it is entirely possible that there would ultimately have been no issue requiring our review, and political tension could have worked itself out in the Congress following the procedures provided in 3 U.S.C. § 15.”

Justice Breyer noted in another dissent, “[T]he Twelfth Amendment commits to Congress the authority and responsibility to count electoral votes. . . . [T]here is no reason to believe that federal law either foresees or requires resolution of such a political issue by this Court. Nor, for that matter, is there any reason to think that the Constitution’s Framers would have reached a different conclusion.” Despite these observations, and legislative and executive practice following the procedures provided in the Electoral Count Act of 1877, codified at 3 U.S.C. § 15, one author has argued that the Electoral Count Act is unconstitutional, based on literal text and context kind of considerations.

The majority per curiam opinion in Bush v. Gore did not directly address the issues of ripeness and political questions. Justice Scalia did address indirectly the ripeness argument in his concurrence to the Emergency Stay Order, which also served as a grant of a petition for certiorari in the case. He concluded that “irreparable injury” would result to “petitioner [Bush], and to the country, by casting a cloud upon what he claims to be the legitimacy of his election.” One can ask, however, whether it was ripe to conclude there would be a “cloud” on the “legitimacy” of the election if Congress were simply allowed to follow the constitutionally proscribed procedures for counting electoral votes without prior court intervention? In fact, based upon a later media-backed recount

---

528 Id. at 110 (“[I]t is obvious that the recount cannot be conducted in compliance with the requirements of equal protection and due process without substantial additional work.”).

529 Id. at 135 (Souter, J., joined by Breyer, J. in Part III, dissenting) (“Unlike the majority, I see no warrant for this Court to assume that Florida could not possibly comply . . . before the date set for the meeting of electors, December 18. . . . There is no justification for denying the State the opportunity to try to count all disputed ballots now.”).

530 Id. at 129 (Souter, J., joined by Stevens, J., Ginsburg, J., and Breyer, J., dissenting).

531 Id. at 154-55 (Breyer, J., joined by Stevens, J., & Ginsburg, J., dissenting).

of the votes in Florida, it appears that Bush would have remained ahead even if the Florida recount had been allowed to proceed. At that point, Al Gore would have conceded the election, and there would have been no need for the Supreme Court decision in the case.

Regarding the political questions issue, Justice Kennedy did observe during oral argument in the case that there are judicially manageable standards under the Equal Protection Clause to govern resolution of this dispute, thus making reference to one of the six factors used in Baker v. Carr, discussed at § 17.3.4.4, to determine if a political question exists. The opposing political questions argument is that while the Court routinely addresses equal protection complaints regarding elections, the issue of selecting electors is a special circumstance under the 12th Amendment, which commits to Congress the responsibility to count electoral votes, and under Article II, § 1, cl. 2, which commits the method of selecting electors to the exclusive power of the state legislature. Thus, under these provisions, there are “textually demonstrable constitutional commitments” to “coordinate political departments,” and thus under Baker v. Carr it could reasonably be regarded as a political question.535

In addition to this issue, a number of other issues were involved in the recount in Florida. One involved voter confusion with the “Butterfly Ballot” in Palm Beach County. Instead of having names for all candidates on the left of the ballot, and holes to punch to indicate one’s vote on the right, the Butterfly Ballot had names on both sides of the ballot, with holes in the middle. Although this was done to get the names of all Presidential candidates on one page of the ballot, by having names on each side of the ballot, this resulted in Gore being assigned the third hole down on the ballot, even though his name appeared second in the left-handed column. Based on statistical analysis, this confusion probably resulted in “well over” 2,000 votes for Pat Buchanan, whose was assigned punch hole 2, being misplaced Gore votes, since Gore’s name appeared second in the left-handed column, with perhaps an equal number of votes invalidated because two holes were punched given the confusion of the ballot.536

Another issue involved use of faulty lists of alleged felons, thereby disenfranchising thousands of voters, most of them African-Americans, who, based on exit polling of African-Americans generally, would likely have voted for Al Gore at a greater than 90% rate. While estimates vary between 2,000 to 8,000 as to the number of such voters who were wrongly denied the ability to vote

534 See Rambo, supra note 526, at 325 n.1479.

535 See generally Bush v. Palm Beach County Canvassing Bd., 531 U.S. 70, 76-78 (2000) (“in such Manner as the Legislature thereof may direct” means that this exclusive legislative power cannot be circumscribed by the Florida Constitution); cf. Nixon v. United States, 506 U.S. 224 (1993) (“sole” power of Senate to try impeachments means Senate decisions regarding impeachment are political questions not subject to Court review). For discussion of both the ripeness and political questions issues as applied to Bush v. Gore, see generally Erwin Chemerinsky, Bush v. Gore Was Not Justiciable, 76 Notre Dame L. Rev. 1093 (2001).

in Florida during the 2000 election, a mid-range estimate of 4,000 is probably most likely.\textsuperscript{537} It has been noted, “Currently, approximately 3.9 million people nationwide cannot vote due to felony convictions; about one in fifty adults. A side effect of high minority crime rates is that those disenfranchised are disproportionately black or Hispanic. Nearly 1.4 million black Americans (thirteen percent of all black men) cannot vote due to felon disenfranchisement. In Florida and Alabama, nearly one-third of black men cannot vote. African-American men as a group account for nearly thirty-six percent of all those disenfranchised nationwide.”\textsuperscript{538} Challenges to such disenfranchisement laws on grounds that, given this effect, they are the product of racially discriminatory intent and thus violate the Equal Protection Clause, or in any event violate the Voting Rights Act, typically fail.\textsuperscript{539}

Another issue involved the ballots in Duval County, which includes Jacksonville, Florida. In this county, the ballot had Presidential candidates on two pages of the ballot, given the number of individuals qualified to run for President in the state of Florida in 2000. Usual practice is to try to have all the candidates for one office be on the same page of the ballot. That confusion apparently led approximately 26,000 voters, many in predominantly African-American precincts, to punch holes on both pages of the ballot, thus voting for two candidates for President, and invalidating their votes for Al Gore on the first page of the ballot.\textsuperscript{540}

Under standard election law, because there is no way to know for sure how the person would have voted in any of these cases—Butterfly Ballot mistakes, wrongly disenfranchised voters, or more than one candidate marked for President—none of these lost votes for Gore could be counted. On the other hand, for “overvotes” that occurred because the voter marked a candidates’ name, but then also wrote that same candidate’s name on the write-in line, manual inspection can tell that the voter intended to vote for that candidate. Standard election law permits those ballots to be counted. That mistake is more likely to happen in counties which use machine-readable paper ballots, with a more easily available write-in line, rather than punch card ballots. Since most of those counties that used such paper ballots in Florida were Bush strongholds, Al Gore did not ask for that recount to be done, although Bush attorneys took the position that if a further recount was going to be ordered by the

\textsuperscript{539} See generally \textit{id}. at 852-99; Hayden v. Pataki, 449 F.3d 305, 309-10 (2d Cir. 2006) (8-5 \textit{en banc} decision) (Voting Rights Act provisions on dilution of minority voting strength do not apply to felony disenfranchisement statutes); \textit{id}. at 330 (Walker, C.J. joined by Jacobs, J., concurring) (even if the Voting Rights Act applied, the Act would then be unconstitutional because Congress would have exceeded its enforcement power under the 14\textsuperscript{th} and 15\textsuperscript{th} Amendments).

Florida courts, it should include counting of such overvotes. As it turned out, according to the media recount of the ballots after the election in Florida, had those overvote ballots been counted, Al Gore would have won the election, since more of his voters made that mistake than did Bush voters, even in counties that overall went for Bush.\textsuperscript{541} Thus, ironically, Al Gore did not ask for a recount of both undervotes and overvotes, which would have been more consistent with equal protection principles, and yet that was the only way he would win. Also, ironically, the only way Bush would have lost the recount is if the Florida courts have adopted the Bush attorneys’ view that the overvote recounting should be done.

With respect to lost votes for Bush, the networks did predict at 7:50 p.m., based on exit polls, that Gore would win Florida, 50 minutes after the polls had closed in most of Florida, but 10 minutes before the polls closed in the Western panhandle part of Florida, a Bush stronghold. This led some Bush partisans to allege that some of those Bush voters went home and did not vote, and this cost Bush thousands of votes. Since there is no way to know for sure how any individual who went home would have voted, a court could not have compensated for that problem. How many voters actually went home is speculative, as other candidates were on the ballot, including a close Senate race.

Since \textit{Bush v. Gore} was decided in December, 2000, few election challenges based upon \textit{Bush v. Gore} as a precedent have succeeded. \textit{Bush v. Gore} was decided under rational basis review, indicating that the Court viewed the various problems with the Florida recount as constituting “less than substantial” burdens on the fundamental right to vote. The recount authorized by the Florida Supreme Court was nonetheless ruled unconstitutional because it was so flawed in design (different ways to count punch card ballots in different counties and only counting undervotes, not overvotes, despite the Florida Supreme Court’s statement that a statewide recount was being done) that it was irrational in terms of an attempt to count votes equally, as 7 of the 9 Justices held in the case. Most other election inequalities, however, such as optical scan machines in some counties of a state (more reliable but more costly), but punch cards in others (more prone to error but cheaper), or differences in the amount of voting booths provided (so that in poor areas the lines typically are longer because not as many machines are provided), may be unfair, but are not likely to be viewed as irrational under a rational basis test. This is so particularly because considerations of administrative costs can be used as a legitimate government interest under rational basis scrutiny to justify such disparities. For this reason, \textit{Bush v. Gore} has not been viewed as very relevant in other election cases, because those cases do not present the same irrationality as was present in the Florida recount.\textsuperscript{542}

\textsuperscript{541} See Rambo, supra note 526, at 325 n.1479.

\textsuperscript{542} See generally Richard B. Saphire & Paul Moke, \textit{Litigating Bush v. Gore in the States: Dual Voting Systems and the Fourteenth Amendment}, 51 Vill. L. Rev. 229 (2006), discussing, \textit{inter alia}, Southwest Voter Registration Educ. Project v. Shelley, 334 F.3d 882 (9\textsuperscript{th} Cir. 2003) (preliminary injunction granted based upon reasonable likelihood of success that in the gubernatorial recall election in California using punch-card ballots for 44\% of the electorate, but more reliable machines in other precincts, violates equal protection), rev’d, 344 F.3d 914 (9\textsuperscript{th} Cir. 2003) (unanimous \textit{en banc} opinion). \textit{But see} Stewart v. Blackwell, 444 F.3d 843, 860-62 (6\textsuperscript{th} Cir. 2006) (2-1 panel decision) (disparities between punch card ballots and optical scan machines in Ohio more than a minimal burden, and thus strict scrutiny triggered, rendering state’s differential use unconstitutional),
In addition, there are issues surrounding electronic voting equipment, or DREs (for digital recording electronic device). The main concern here is security of the machines from hackers and accurate electronic counting of the votes.\textsuperscript{543} Given these problems, states are increasingly requiring a voter-verified paper trail for counties using DRE devices.\textsuperscript{544}

\textbf{\textsection{26.5.4} No Fundamental Right of Equal Funding for Public Education}

Do students have a constitutional right under the Equal Protection Clause to equal access to education that includes a right to have as much money spent per pupil in their public school system as is spent in other systems throughout the state? The simple answer is no, but the reasons have shifted during the various eras of Supreme Court history.

As discussed at \textsection{26.2.1.1.B} nn.104-18, in 1873, the \textit{Slaughter-House Cases} reviewed legislative history and doubted that the Equal Protection Clause would ever be applied to state action beyond race discrimination. Responding more to the literal text of the provision, the Court in 1885 brought all legislative classifications within the Equal Protection Clause in \textit{Barbier v. Connolly}. However, most schools were racially segregated at that time and, under the “separate, but equal” and “reasonableness” tests of \textit{Plessy v. Ferguson}, decided in 1896, that condition prevailed for many decades. As discussed at \textsection{26.2.1.1.C} nn.119-22, the Court began to moderate the impact of the \textit{Plessy} doctrine during the Holmesian era by holding some disparities in educational opportunities were constitutionally “unequal.” As discussed at \textsection{26.2.1.1.D} nn.127-31,during the instrumentalist era, the Court overruled \textit{Plessy} in \textit{Brown v. Board of Education}, and, as noted at \textsection{26.2.1.4.D} n.259, said that education is perhaps the most important function of state and local governments. In \textit{Harper v. Virginia Board of Elections},\textsuperscript{545} decided in 1966, Justice Douglas said for the Court, "Lines drawn on the basis of wealth or property, like those of race . . . are traditionally disfavored."

In 1973, the Court decided a key case regarding funding of public education, \textit{San Antonio Independent School District v. Rodriguez}.\textsuperscript{546} On a 5-4 vote, the Court held in \textit{Rodriguez} that there is no fundamental right to equal funding in education under the United States Constitution, and that school children who are poor and reside in school districts having a low property tax base are not a suspect or quasi-suspect class. Thus, the Court rejected the heightened scrutiny for classifications involving the poor suggested in \textit{Harper}. Accordingly, rational basis scrutiny was used to test the unequal distribution of tax moneys among Texas school districts. The test was passed because

\textsuperscript{545} 383 U.S. 663, 668 (1966).

\textsuperscript{546} 411 U.S. 1, 17-44 (1973).
Texas had made reasonable efforts to ameliorate differences between rich and poor districts, there was a lack of purposeful discrimination, the Texas finance system had resulted from responsible studies by qualified people, and there were similar plans in most states. Justice Powell explained for the Court that the large, diverse and amorphous class of persons who were poor and living in districts with a low tax base had not been saddled with the disabilities, the history of purposeful unequal treatment, or the political powerlessness that had led the Court to give extraordinary protection to certain classes, such as race. Nor is education among those rights given explicit protection by the Constitution. Further, there is no basis for saying that education is implicitly so protected, particularly when the Court, as here, is dealing with matters of fiscal and educational policy for which it lacks both expertise and familiarity.

Liberal Holmesian Justice White, dissenting with liberal instrumentalist Justices Douglas and Brennan, said that the Texas system was not rationally related to its end of maximizing local initiative and local choice because there was no chance to achieve those goals in districts with property taxes so low that there was little opportunity for parents to augment school district revenues. Liberal instrumentalist Justice Marshall, dissenting with Justice Douglas, urged the Court to consider the importance to individuals of the benefits not received and the asserted state interests in support of a classification. The invidiousness of wealth classifications should be gauged with an awareness of the importance of the interests being affected and the relevance of personal wealth to those interests. In his view, the discrimination on the basis of group wealth in Rodriguez called for heightened scrutiny because education is such an important personal interest. Justice Brennan, dissenting, emphasized that education is linked to participation in the electoral process and to rights of free speech and association. Thus, any classification affecting education must be given strict scrutiny. He also agreed with Justice White that the Texas scheme was devoid of a rational basis.547

Despite this decision in Rodriguez, a number of state courts have found a fundamental right to education under their own state Constitutions, and thus applied a strict scrutiny approach toward the question of equal funding of public schools.548 These cases have served to moderate, somewhat, unequal funding for public schools in rich versus poor school districts.549

The decision regarding no fundamental right to equal funding for education under the United States Constitution is consistent with Court doctrine on funding matters generally. For example, with respect to the need of indigents for some kind of welfare assistance, the Court has not held that there exists a right to minimum protection against economic hazards that would impose an affirmative

547 Id. at 62-63 (Brennan, J., dissenting); id. at 63-70 (White, J., joined by Douglas & Brennan, JJ., dissenting); id. at 70-72 (Marshall, J., joined by Douglas, J., dissenting).

duty on government to supply basic human needs. Further, classifications in welfare laws have been treated as economic or social matters and, thus, given only rational basis review, as discussed at § 26.4.1. Similarly, a refusal by the government to fund medically necessary abortions as part of Medicaid was held in *Harris v. McRae* not to deny equal protection, even though its purpose was to encourage childbirth, as discussed at § 27.3.3.3 n.230. The majority explained that Congress need not remove obstacles in the path of exercising a fundamental right which are not of its own doing. Dissenting in *Harris v. McRae*, Justice Brennan, with Justices Marshall and Blackmun, complained that by funding expenses associated with childbirth and none incurred in terminating pregnancy, the government was making an offer that an indigent women could not afford to refuse, and thus interfering with her constitutionally protected right of choice.

Despite *Rodriguez*, the Court noted in *Papasan v. Allain* that *Rodriguez* had "not yet definitively settled . . . whether a minimally adequate education is a fundamental right and whether a statute alleged to discriminatorily infringe that right should be accorded heightened equal protection review." Given the level of funding by state and local governments, there will likely be few examples where denial of access to constitutionally minimally adequate education could be raised.

---

CHAPTER 27: THE DUE PROCESS CLAUSES OF THE 5th AND 14th AMENDMENTS

The Due Process Clause of § 1 of the 14th Amendment provides, “No State shall deprive any person of life, liberty, or property, without due process of law.” This language mirrors the Due Process Clause in the Fifth Amendment, which provides “nor shall any person . . . be deprived of life, liberty, or property, without due process of law.” It was commonly understood at the time of the ratification of the original Constitution in 1789 and the Fifth Amendment in 1791, as well as at the time of ratification of the 14th Amendment in 1868, that “due process” referred to the settled usages and modes of proceeding existing in the common and statute law of England, not shown unsuited to conditions in this country.1 Due process, thus, usually referred to proper procedures. Only occasionally was due process thought to have a substantive component.2

Despite this fact, subsequent to ratification of the 14th Amendment, the Court has provided individuals with a number of substantive protections against state or federal infringement through use of the Due Process Clause. As discussed at § 25.3 nn.55-64, the original intent of the framers and ratifiers of the 14th Amendment probably was to provide for such substantive immunities through the Privileges or Immunities Clause of the 14th Amendment. However, the Court gave the Privileges or Immunities Clause a very narrow interpretation in the Slaughter-House Cases in 1873. Since 1876, the Court has provided this kind of substantive protection through the doctrine known as “substantive due process.”

An introduction to “substantive due process” doctrine is discussed at § 27.1. The main consequence of this doctrine is that all “persons” are granted rights under the Due Process Clause, while if the doctrine had been developed under the Privileges or Immunities Clause, the text of that Clause would have limited the rights to “citizens.” This doctrine of substantive due process has two parts: “enumerated” rights and “unenumerated” rights.

“Enumerated” rights under substantive due process doctrine include those rights that are “fundamental” based on the text, context, and history of “life, liberty, and property” in the Due Process Clause, as well as rights based on the text, context, and history of “life, liberty, and property” that are not viewed by the Court as “fundamental.” The basic definition of fundamental rights is discussed at § 27.1.1. The doctrine regarding non-fundamental rights is discussed at § 27.1.2. In addition, “enumerated rights” include those aspects of the Bill of Rights that are sufficiently “fundamental” to be incorporated into the Due Process Clause of the 14th Amendment, and thus made applicable against the states. These rights are discussed at § 27.2. The second part of substantive due process doctrine involves “unenumerated” fundamental rights that form part of substantive due process analysis. These rights, which the Court has held are “implicit in the concept of ordered liberty,” although not textually specific in the Constitution, are discussed at § 27.3.

1 See generally Murray's Lessee v. Hoboken Land & Improvement Co., 59 U.S. (18 How.) 272, 276 (1856); Joseph Story, Commentaries on the Constitution § 1789 (1833).

The final aspect of due process analysis focuses on the original primary meaning of due process as referring to proper procedures that must be followed in order to deprive some person of “life, liberty, or property.” This “procedural due process” doctrine is discussed at § 27.4.

§ 27.1 Introduction to Substantive Due Process Doctrine

Individuals are assured a number of substantive and procedural protections against governmental action by the first eight of the ten Amendments that comprise the Bill of Rights. Although all but the First Amendment speak in general terms, rather than being limited to restrictions on Congress, as is the First Amendment, the Court held in 1833 in Barron v. Baltimore, discussed at § 27.2.1 n.95, that the Bill of Rights restrains only the federal government. The Civil War Amendments – the 13th, 14th, and 15th Amendments, ratified between 1865 and 1870 – added protections for individuals against actions by state governments. In those amendments, there was no explicit reference to any one of the specific protections contained in the first eight Amendments, other than restating the Due Process Clause language of the Fifth Amendment in the 14th Amendment.

Since 1876, however, in Munn v. Illinois, discussed at § 27.3.2.1 nn.142-43, the Court has interpreted the Due Process Clauses of the Fifth and 14th Amendments to provide for a number of substantive protections for individuals against both federal and state action. As a result, today's legal picture cannot be encompassed merely by consulting constitutional text. It has resulted from a series of gradual transformations in what “due process” has been taken to mean. These transformations have mirrored differences in the interpretive predispositions of the various styles of decisionmaking that have predominated on the Court in succeeding eras. As part of an introduction to these transformations, it is important to distinguish between those rights that are deemed “fundamental,” to which some form of heightened scrutiny may apply, and those rights that are not “fundamental,” to which some form of rational review applies.

§ 27.1.1 Introduction to Fundamental Rights Doctrine

A major issue in deciding what kind of protection the Due Process Clause provides regarding substantive rights for individuals concerns whether the particular right is “fundamental.” Finding that a right is fundamental has two major consequences. First, those protections of the Bill of Rights that are deemed fundamental are held to be incorporated into the Due Process Clause of the 14th Amendment, and thereby made applicable against the states, discussed at §§ 27.2.1-27.2.5.1. Second, whether or not the fundamental right is part of the Bill of Rights, the Court typically applies a greater than minimum rational review analysis to determine the constitutionality of government action burdening that right, particularly where a substantial or undue burden exists on that right. This can occur under an “enumerated” fundamental rights analysis, as for the “freedom from bodily restraint,” which includes the right to have the “beyond a reasonable doubt” standard applied in criminal cases, discussed at § 27.2.5.2, or an “unenumerated” fundamental rights analysis under the Equal Protection Clause, discussed at § 26.5, or under the Due Process Clause, discussed at § 27.3.

---

4 94 U.S. 113, 125-26 (1876).
In addition to the textually specific fundamental rights, discussed at § 27.2.5.2, like the “freedom from bodily restraint,” fundamental rights have been defined as those rights “implicit in the concept of ordered liberty.” The classic definition of these rights occurred in *Palko v. Connecticut*, where Justice Cardozo asked whether the right is “so rooted in the traditions and collective conscience of the people as to be ranked as fundamental.” In *Griswold v. Connecticut*, Justice Goldberg said such rights derive “from experience with the requirements of a free society.” In *Bowers v. Hardwick*, Justice White asked whether the right is "deeply rooted in this Nation's history and tradition."

Although not explicitly acknowledged by the functionally driven courts of the Holmesian and instrumentalist eras, the definition of fundamental rights has two separate branches that are becoming clearer given the more analytic predisposition of the modern natural law era. One branch focuses on “history” and “traditions”; the other branch focuses on “collective conscience” and “the requirements of a free society.” As phrased in 1997 by Chief Justice Rehnquist in *Washington v. Glucksberg*, the two branches of what rights are “implicit in the concept of ordered liberty” are: “[1] those personal activities and decisions that this Court has identified as so deeply rooted in our history and traditions, or [2] so fundamental to our concept of constitutionally ordered liberty, that they are protected by the Fourteenth Amendment.”

In general, formalist and Holmesian judges, as positivists, rely more on history and traditions in their development of fundamental rights. This is particularly true for formalist judges, who tend to operate at a Stage 4 level of concrete operational thought, which is based on customs and traditions, as discussed at §§ 16.1 & 16.3. It is also true, however, for Holmesian judges, whose Stage 4½ predisposition to defer to the dominant forces in society suggests that fundamental rights should emerge from legislative and executive traditions, or perhaps popular referenda, not court action. Instrumentalist and natural law judges, as Stage 5 and Stage 6 normativists, are more willing to embrace the second branch of fundamental rights analysis concerning evolving standards of “conscience” and “requirements of a free society,” as the judges perceive these to have developed over time. In particular, this is part of the modern natural law Stage 6 commitment, discussed at §§

---

6 *Id.*

16.1 & 16.3, to reasoned elaboration of what is fundamental to our concept of constitutionally ordered liberty.

In reaching a decision about whether a particular fundamental right exists, the Court must decide three basic questions concerning how to identify fundamental rights. The first question concerns the basic test for defining whether a right is fundamental. This involves determining how precisely to define the term “implicit in the concept of ordered liberty” for purposes of the two branches of fundamental rights analysis. The second question is what sources can be used to determine whether any particular right meets this definition of fundamental rights. The third question is at what level of generality are the sources consulted to determine fundamental rights. In making each of these determinations, the four decisionmaking styles have emphasized different definitions, sources, and levels of generality.

Consistent with the formalist emphasis on literal text and specific historical intent, the formalist approach is to adopt a more literal and historically restrained definition of what rights are “implicit in the concept of ordered liberty.” With regard to the first branch of fundamental rights analysis that focuses on history and traditions, formalists tend to restrict their analysis to the specific historical intent of the framers and ratifiers, rather than general kinds of historical evidence, and to specific traditions of our Nation, particularly as reflected in legislative and executive practice, since that practice is more certain and predictable than resort to other kinds of evidence. Thus, in Stanford v. Kentucky, Justice Scalia’s plurality opinion concluded that “traditions” must be established from sources of legislative enactments and their application, not from other kinds of indicia, such as public opinion polls, the view of interest groups, and the positions adopted by various professional associations. With regard to what level of generality these sources should be considered, Justice Scalia followed the formalist emphasis on specific intent when he stated in Michael H. v. Gerald D. that the Court should consider, and not disregard, "the most specific level at which a relevant tradition protecting, or denying protection to, the asserted right can be identified."

Regarding the second branch of fundamental rights analysis that is focused on what rights are “fundamental to our concept of constitutionally ordered liberty,” the formalist approach is to ask whether such a right is sufficiently fundamental that it is acknowledged in American, English, and Continental European systems, so that it is truly “implicit in the concept of ordered liberty” because recognized by all “fair and enlightened” Western democracies. The formalist approach thus tends to support the narrow phrasing of fundamental rights in Palko v. Connecticut, which defined fundamental rights as those to which "a fair and enlightened system of justice is impossible without them" so that "neither liberty nor justice would exist if they were sacrificed."

13 491 U.S. 110, 127 n.6 (1989) (Scalia, J., joined by Rehnquist, C.J., announcing the judgment of the Court).

Supplementing this formalist approach, a Holmesian judge would also be willing to focus more fully on the purposes behind any constitutional text regarding any identified right, as well as any general views the framers and ratifiers may have had about a right and any general societal tradition. As Justice Holmes stated in *Lochner v. New York*, our tradition derives from both "our people and our laws." The Holmesian preference for deference to government, however, has meant that some Holmesian judges, despite considering these broader sources, have often in practice focused more heavily on specific historical intent and specific traditions, particularly as reflected in legislative and executive practice, as an aspect of deference to government. Thus, in *Stanford v. Kentucky*, Chief Justice Rehnquist and Justice White joined Justice Scalia’s plurality opinion, discussed at § 27.1.1 n.12, which concluded that "traditions" must be established from legislative enactments and their executive application, not from social indicia of various kinds. So, too, Justice Rehnquist joined Justice Scalia’s view in *Michael H. v. Gerald D.*, that the Court should consider, and not disregard, "the most specific level at which a relevant tradition protecting, or denying protection to, the asserted right can be identified.” Indeed, in 1977, Holmesian Justices Stewart, White, and Rehnquist expressed some concern in *Moore v. City of East Cleveland* about even using traditions to determine the content of fundamental rights, and thereby second-guess government action, although in 1986 in *Bowers v. Hardwick* they seemed resigned to that definition.

Regarding the second branch of fundamental rights analysis, the Holmesian view focuses more on the broader language in *Palko* that asked whether the right is "so rooted in the traditions and collective conscience of the people as to be ranked as fundamental." Reflecting the Holmesian broader focus on the history and traditions of our people from the Magna Carta in England in 1215 to the present, the classic Holmesian phrasing of what rights are fundamental are the rights that “those canons of decency and fairness which express the notions of justice of English-speaking peoples” indicate are fundamental, as stated by Justice Frankfurter in *Adamson v. California*.

Under a natural law approach, full consideration is given not only to purposes behind the text, any general concept the framers and ratifiers had about a provision, and any general societal tradition, but also analogical reasoning based on prior precedents as part of “reasoned elaboration” of the law. Regarding the first branch of fundamental rights analysis, there is no Holmesian predisposition for deference to government, and societal traditions can be established by legislative and executive practice, or by individual social practice. As indicated by Justice O’Connor’s refusal to join Justice

20 332 U.S. 46, 67 (1947) (Frankfurter, J., concurring).
Scalia’s plurality opinion in Stanford,21 the natural law approach will not limit traditions analysis to legislative and executive practice, but will be willing to consider other sources, including foreign sources, as long as they illuminate American history and traditions, particularly regarding natural law and the demands of human dignity, and are not a cover for imposing the judge’s own policy preferences, as discussed at § 12.2.2.1 n.51. Justice Kennedy, who has an occasional predisposition for a formalist approach, as discussed at § 12.4.1, joined Justice Scalia’s opinion in Stanford. However, Justice Kennedy has backed away from this view in a number of subsequent cases, including Atkins v. Virginia and Roper v. Simmons, involving the death penalty for the mentally retarded and juveniles, discussed at §§ 23.2.1.4 nn.200-204, with the Court in Roper overruling the specific holding in Stanford on the constitutionality of the death penalty applied to juveniles, and in Lawrence v. Texas, dealing with the constitutionality of states criminalizing sodomy, discussed at § 27.3.4.2 n.259.22 Regarding the level of generality from which to view sources of fundamental rights, Justices O’Connor and Kennedy refused to joined Justice Scalia’s specific tradition approach in Michael H. v. Gerald D.,23 stating that they were not willing to "foreclose the unanticipated" by adopting Justice Scalia's suggested approach which is "somewhat inconsistent with our past decisions in this area.” Of course, the natural law approach also has a strong policy of deference to precedents, which can only be overridden according to factors stated in Planned Parenthood v. Casey.24 These Casey factors regarding precedent are discussed at §§ 7.3.3-7.3.4.

Regarding the second branch of fundamental rights analysis, a natural law judge is willing to let general concepts evolve over time consistent with reasoned elaboration of the law. This is reflected in the joint opinion of Justices O’Connor, Kennedy, and Souter in Casey, where the joint opinion stated, based on “analogical” reasoning regarding liberty as defined in prior cases, “At the heart of liberty is the right to define one’s own concept of existence, of meaning, of the universe, and of the mystery of human life.”25 Under this approach, the general concept of liberty can also be illuminated by "emanations" or "penumbral" rights from specific constitutional guarantees.26 “Analogical” and “penumbral” reasoning are discussed at § 27.3.3 nn.171-74.

Under an instrumentalist approach, full consideration is given to the natural law approach of considering purposes behind the text, any general concept or general societal tradition, analogical reasoning based upon prior precedents, and reasoning based upon "penumbras" or "emanations" from constitutional provisions. In addition, where leeways exists after this analysis, instrumentalists

21 492 U.S. at 382 (O’Connor, J., concurring) (not willing to adopt Justice Scalia's proposed approach, at least in this Eighth Amendment case applied to the states through the 14th Amendment).

26 See Griswold, 381 U.S. 479, 484-85 (1965) (penumbral analysis in opinion for the Court).
are willing to consider arguments of sound social policy to resolve remaining leeways in the law. For liberal instrumentalists, sound social policy usually means courts engaging in special scrutiny on the side of the unempowered in society, whether the indigent, the disadvantaged, criminal defendants, or individuals who wish to protest against the establishment. For instrumentalists, the definition of fundamental rights is not the formalist "a fair and enlightened system of justice is impossible without the right," nor the Holmesian "canons of decency and fairness which express the notions of justice of English-speaking peoples," but rather whether the rights are simply “part of the American scheme of justice.”

In determining this, societal traditions can be established by legislative and executive practice, or by social practice. Further, because the focus is, in part, on sound social policy, instrumentalist judges will use the experience of other countries to determine what rights should be viewed as fundamental, and will not require the right be recognized by American, English, and Continental European countries. As reflected in their Stanford dissent, instrumentalist judges will be willing to use the fact that the right seems fundamental in any one of these systems to argue that it should be viewed as fundamental under the “American” scheme of justice.

In applying this approach, some instrumentalist Justices have asked what the "experience with the requirements of a free society" suggests about what fundamental rights should be held to exist. Further, instrumentalist judges have noted that the Court must remain sensitive to the fact that terms like "liberty" or "property" are "broad and majestic terms" and that the traditions protected by these terms involve consideration of generalized "interests and practices – freedom from physical restraint, marriage, childbearing, childrearing, and others." Thus, they reject Justice Scalia’s specific tradition approach to determining constitutional rights. As Professor Ely noted, under this approach "the choice of fundamental values, unsurprisingly, [favors] the values of the upper-middle professional class,” the group from whom judges tend to be drawn. . . . [T]he list of values the Court [has] tended to enshrine as fundamental [includes] expression, association, . . . academic freedom, the privacy of the home, and personal autonomy. . . . But watch [what happens] when someone mentions jobs, food or housing; those are important, sure, but they aren't fundamental.”

§ 27.1.2 Non-Fundamental Rights Doctrine

§ 27.1.2.1 Economic and Social Legislation under the Due Process Clause

Where dealing today with liberty or property rights that are not deemed fundamental, the Court tends to apply minimum rational review. The touchstone case for this doctrine is United States v.

28 492 U.S. at 389-90 (Brennan, J., joined by Marshall, Blackmun & Stevens, JJ., dissenting)

In that 1938 case, the Court upheld a federal ban on the interstate shipment of skimmed milk compounded with any fat or oil other than milk fat. Justice Stone wrote that a challenger, who bears the burden of proof, must show that there is no rational basis for the legislation. Further, the existence of facts supporting the legislative judgment will be presumed, said Justice Stone, and the Court will ask whether any state of facts either known or which could reasonably be assumed affords support for the statute. In the famous footnote 4, Justice Stone added that a different approach, and a weaker presumption of constitutionality, might be used for laws that are within a specific prohibition of the Constitution, which restrict political processes, or which prejudice discrete and insular minorities. As discussed at § 26.1.2.2, this footnote later helped to justify heightened scrutiny for fundamental rights, discussed at §§ 26.5 & 27.2-27.3, and for suspect or quasi-suspect classes under the Equal Protection Clause, discussed at §§ 26.2-26.3.

Application of theories embodied in Carolene Products has resulted in the Supreme Court rarely declaring basic economic or social legislation invalid since 1938 as a result of substantive due process review. For example, in the 1940s, the Court upheld laws fixing maximum hours and minimum wages, protections for union members, and entry conditions on business. In the 1950s, in Williamson v. Lee Optical Co. of Oklahoma, the Court rejected a challenge to an Oklahoma law that forbid an optician from fitting or duplicating lenses without a prescription from an ophthalmologist or optometrist. For the Court, Justice Douglas speculated that the legislature may have decided that in some cases the directions in a prescription regarding the fit of spectacles are essential or that the legislature sought to encourage repeated eye examinations. He noted:

The Oklahoma law may exact a needless, wasteful requirement in many cases. But it is for the legislature, not the courts, to balance the advantages and disadvantages of the new requirement. It appears that in many cases the optician can easily supply the new frames or new lenses without reference to the old written prescription. It also appears that many written prescriptions contain no directive data in regard to fitting spectacles to the face. But in some cases the directions contained in the prescription are essential, if the glasses are to be fitted so as to correct the particular defects of vision or alleviate the eye condition. The legislature might have concluded that the frequency of occasions when a prescription is necessary was sufficient to justify this regulation of the fitting of eyeglasses. Likewise, when it is necessary to duplicate a lens, a written prescription may or may not be necessary. But the legislature might have concluded that one was needed often enough to require one in every case. Or the legislature may have concluded that eye examinations were so critical, not only for correction of vision but

---

32 304 U.S. 144 (1938).
33 Id. at 152 n.4.
34 United States v. Darby, 312 U.S. 100 (1941).
also for detection of latent ailments or diseases, that every change in frames and every duplication of a lens should be accompanied by a prescription from a medical expert. To be sure, the present law does not require a new examination of the eyes every time the frames are changed or the lenses duplicated. For if the old prescription is on file with the optician, he can go ahead and make the new fitting or duplicate the lenses. But the law need not be in every respect logically consistent with its aims to be constitutional. It is enough that there is an evil at hand for correction, and that it might be thought that the particular legislative measure was a rational way to correct it.38

In 1963, in Ferguson v. Skrupa,39 the Court wrote that a state legislature could outlaw the business of debt adjusting, except as incident to the practice of law, because the legislature was free to decide for itself whether that business had social utility. However, in 1973, in United States Department of Agriculture v. Murry,40 the Court did hold that a rule denying a household food stamp benefits merely because a child over 18 in that household had been claimed as a dependent on someone else’s tax for the preceding year was not rationally related to preventing fraud in the food stamp program.

As with rational review under the Equal Protection Clause, discussed at § 26.1.1.1, this Due Process Clause review involves three considerations: governmental ends, rational relationship between the benefits obtained by the means and these ends, and no irrational burdens imposed by the means. With regard to the first consideration, under Due Process Clause review, as under Equal Protection Clause review, the legislation must advance “legitimate” governmental interests. For example, just as the Court refused in 1985 in City of Cleburne v. Cleburne Living Center to permit irrational prejudice against mentally retarded persons to be used as a legitimate interest to deny a use permit for the operation of a group home for the mentally retarded under the Equal Protection Clause, discussed at § 26.5.5 n.463, the Court refused under the Due Process Clause to consider prejudice against persons based on sexual orientation as a legitimate government interest in 2003 in Lawrence v. Texas, discussed at § 27.3.4.2 n.259.41 Similarly, a district court held in Santos v. City of Houston42 that any legitimate interest in banning competition by small buses had long since passed.

The focus of the two means inquiries is slightly different under Due Process Clause review than under Equal Protection Clause review. For the second step of the analysis, instead of asking whether there is an irrational underinclusiveness in the statutory classification in terms of who is not regulated—the Equal Protection Clause question, discussed at § 26.1.1.1 nn.25-27—the Due Process question is whether the statute rationally serves to achieve some benefit on those whom the statute does regulate. For the third step in the analysis, instead of asking whether there is an irrational

---

38 Id. at 487-88.

Page 1223
overinclusiveness in the statutory classification in terms of regulating individuals not really part of the problem, discussed at § 26.1.1.1 nn.28-31, the Due Process Clause question is whether there is an irrational burden on those whom the statute is properly regulating.

This difference in the focus of the second and third steps of the analysis results from the different focus of the Equal Protection and Due Process Clauses. With regard to the second step, depending on the standard of review, the statute must have a rational relationship to its ends, a substantial relationship, or a direct relationship, as discussed at § 26.1.1.2 nn.52-53, 56. Logically, this relationship inquiry "has two parts: (1) the extent to which the statute fails to regulate all individuals who are part of some problem (the underinclusiveness inquiry); and (2) the way in which the statute serves to achieve its benefits on those whom the statute does regulate (the service inquiry)."43 Similarly, with regard to the third step in the analysis, depending on the standard of review the statute’s burden must be not irrational, not substantially more burdensome than necessary, or be the least restrictive burden that would be effective in advancing the governmental interests, as discussed at § 26.1.1.2 nn.54-55. This burden inquiry also logically "has two parts: (1) the extent to which the statute imposes burdens on individuals who are not [part of the problem] (the overinclusiveness inquiry); and (2) the amount of the burden on individuals who are properly regulated by the statute (the oppressiveness or restrictiveness inquiry)."44

Although the Court has not always been careful to separate the two kind of analyses, when carefully applied, the Court should consider only the underinclusiveness and overinclusiveness inquiries under Equal Protection Clause analysis, and reserve the service and restrictiveness inquiries for Due Process Clause analysis. This is because “a statute which is neither underinclusive nor overinclusive, but which only minimally serves the government’s interests, or greatly burdens individuals, does not deny a citizen equal protection of the laws, because the law is equally applied to all similarly situated parties. It may, however, deny the citizen substantive due process if the burden on the individual is sufficiently great compared to the minimal benefit that is achieved.”45 As discussed at § 29.4.4.3 nn.149-53, since First Amendment review regarding the freedom of speech is concerned with all four of these relationship and burden concerns, all four are part of First Amendment free speech review.

In analyzing the Due Process Clause questions for standard social or economic regulations, the level of judicial review since 1986 has continued the minimum rational basis review of the Holmesian and instrumentalist eras. For example, in Pennell v. City of San Jose,46 the Court upheld a state rent control ordinance, saying that the Due Process Clause would not be violated by price control, so long as the law was not "arbitrary, discriminatory, or demonstrably irrelevant to the policy the

44 Id. at 1281.

45 Id.

legislature is free to adopt.” In Nordlinger v. Hahn, the Court upheld California Proposition 13, which limited real property taxes to 1% of assessed valuation as of 1975-76, and permitted reassessment only when sold. The Court held that Proposition 13 was rationally related to conceivable legitimate purposes of allowing people to know their tax burden at the time of purchase, avoiding taxes on appreciation due to inflation, and encouraging stable neighborhoods by creating an economic disincentive to move. On the other hand, in Allegheny Pittsburgh Coal Co. v. County Commission, the Court held it was irrational for a county tax assessor to value real property at 50% of its most recent sale price, no matter when that most recent sale occurred. In Craigmiles v. Giles, a federal district court held that requiring individuals to have a funeral director license to sell caskets and urns was not rationally related to health concerns. In Cornwell v. Hamilton, a federal district court held that it was an unconstitutional irrational burden to apply cosmetology regulations to a hair braider whose activities involved only a small overlap with subjects covered by the regulations.

Some state courts have interpreted a due process clause in their state constitutions to call for more vigorous review than currently used by the United States Supreme Court. Typically, such cases adopt the higher standard of review used by the Court for due process review during the formalist Lochner era, discussed at § 27.3.2.1 nn.149-60. For example, in 1952, in Day-Brite Lighting, Inc. v. Missouri, the United States Supreme Court upheld a state statute requiring an employer to give employees four hours to vote on election day, without loss of pay. In 1955, in Heimgaertner v. Benjamin Electric Manufacturing Co., the Supreme Court of Illinois declared a similar law invalid under its state constitution. Since 1937, the United States Supreme Court has indicated that it will not return to the kind of review found in Lochner. In 1992, in Planned Parenthood v. Casey, both the joint opinion and a dissent referred to Lochner as wrongly decided, noting it was properly overruled in West Coast Hotel Co. v. Parrish. Even at the state level, such use is in decline.

50 80 F. Supp. 2d 1101, 1105-08 (S.D. Cal. 1999).

§ 27.1.2.2  The Birth, Life, and Death of the Irrebuttable Presumption Doctrine

Despite the low level of due process review for standard economic regulations, the Court did flirt during the instrumentalist era with a doctrine that would have created some increased scrutiny in the due process area. This was the “irrebuttable presumption” doctrine. In 1973, the Court held in Vlandis v. Kline that if a law denies a benefit by an irrebuttable presumption not necessarily true, and the crucial determination could be made by reasonable alternative means, due process requires that individuals be allowed to show that they satisfy the benefit criteria. Here, in-state tuition had been denied to unmarried persons for their entire time in college if their legal address for any part of a one-year period prior to admission was outside of Connecticut. The Court held that this denied them due process of law.

The Court extended Vlandis the following year by holding in Cleveland Board of Education v. LaFleur that irrebuttable presumptions could be implied. It did this by invalidating a law requiring pregnant teachers to take maternity leave without pay at least 5 months before expected birth. The Court said this amounted to an irrebuttable presumption that every pregnant teacher who reaches the fifth month is unfit. Since this presumption is not necessarily true, it unduly penalizes a woman for exercising the fundamental right to have a child. A year later the Court applied LaFleur in Turner v. Department of Employment Security to invalidate a law making pregnant women ineligible for unemployment benefits from 12 weeks before expected birth to 6 weeks after childbirth. Such a law irrebuttably presumed, in effect, that all women are incapable of work during that interval.

Cases following Turner backed away from using the “irrebuttable presumption” analysis to invalidate laws. For example, in Weinberger v. Salfi, the Court upheld a Social Security rule that refused survivor benefits to surviving wives and stepchildren who had been related in that way to a decedent for less than nine months prior to his death. Justice Rehnquist distinguished LaFleur on the ground that receiving funds from the public treasury, unlike having a child in LaFleur, is not a constitutional right. He distinguished Vlandis on the ground that the Social Security Act did not purport to speak in terms of the bona fides of parties to a marriage and then make plainly relevant evidence inadmissible. Here, Congress could rationally conclude that its rule would protect against sham marriages used to secure Social Security benefits. Justice Brennan dissented, citing Vlandis.

Similarly, in Usery v. Turner Elkhorn Mining Co., the Court upheld a federal law that provided that a miner afflicted with pneumoconiosis is irrebuttably presumed to be totally disabled due to that disease and, if he dies, it is irrebuttably presumed that the miner was totally disabled at death and that his death was due to pneumoconiosis – thus creating entitlement for certain benefits. The Court

said that Congress could have required mine operators to provide benefits for all miners with this affliction and that in a law regulating purely economic matters, Congress’ use of “irrebuttable presumptions” could not invalidate a law whose operation and effect were otherwise permissible.

In recent years, the Court has not relied upon “irrebuttable presumption” analysis to justify greater than minimum rational review. Instead, the focus has been on whether a fundamental right exists or a suspect or quasi-suspect class is involved. For example, in *Michael H. v. Gerald D.*, \(^{60}\) discussed at § 27.3.3.1 nn.201-04, a natural father sought visitation rights to a child he had fathered with a married women who, with her husband, resisted the father’s visitation. The state court denied visitation based on a California statute that provided that a husband in this situation was irrebuttably presumed to be the father. Justice Scalia, joined by Chief Justice Rehnquist, and Justices Kennedy, and O’Connor, said that irrebuttable presumption cases should be analyzed in terms of substantive rules created by presumptions, i.e., irrebuttably presuming a husband to be the father is a substantive rule that an adulterous natural father shall not be recognized as the father. Under a substantive due process analysis, the Court upheld the constitutionality of the California law, saying that a natural father has no fundamental right to custody of, or visitation with, a child being raised within a marriage. Nor does a child have a fundamental right for two persons to be recognized as its father.

The other “irrebuttable presumption” cases mentioned above would likely be analyzed today, as in *Vlandis*, in terms of discrimination against non-residents under the Article IV, § 2 Privileges and Immunities Clause, discussed at § 20.3.3, or under the Equal Protection Clause as part of the right to travel, discussed at § 26.5.1; or, as in *LaFleur* or *Turner*, as an aspect of gender discrimination, discussed at § 26.3.1; or, as in *Usery v. Turner Elkhorn*, as discrimination against the disabled, discussed at § 26.4.5. In each of these cases, there is at least some plausible argument for scrutiny higher than minimum rational review, and that insight perhaps drove the Court to experiment with an indirect way of giving that effect through the “irrebuttable presumption” doctrine.

For example, personal papers of Justice Blackmun make it clear that application of the irrebuttable presumption analysis in *LaFleur* in 1974 was a consequence of the Court majority not willing to apply heightened scrutiny in gender discrimination cases at that time. Heightened scrutiny was only adopted two years later in 1976 in *Craig v. Boren*.\(^{61}\) Where no plausible arguments existed for heightened scrutiny, as in the government funding case of *Salfi*, irrebuttable presumption analysis was rejected. After reflection, the Court decided to address directly the need, or not, for higher scrutiny in these cases, and has rejected irrebuttable presumption analysis. It is thus a dead letter in constitutional doctrine today.\(^{62}\)

---

§ 27.1.2.3 Unconstitutional Conditions Doctrine

An unconstitutional conditions problem arises when the government offers a benefit conditioned on the beneficiary's waiver of a constitutional right. As the Court stated in Perry v. Sindermann,63 “[E]ven though a person has no ‘right’ to a valuable governmental benefit and even though the government may deny him the benefit for any number of reasons, there are some reasons upon which the government may not rely. It may not deny a benefit to a person on a basis that infringes his constitutionally protected interests. . . . This would allow the government to ‘produce a result which [it] could not command directly.’"

This unconstitutional conditions doctrine reflects, in part, a constitutional commitment to protect the dignity of individuals in choices that they make. It rejects the idea that the government's greater power to deny a benefit entirely includes the lesser power to attach any conditions it wishes. On the other hand, most conditional offers by governments are constitutionally permissible. For example, the unconstitutional conditions cases do not generally encompass plea bargaining, which has long been analyzed under the separate doctrine of "criminal waiver." Under that doctrine, criminal defendants may waive various constitutional protections under the Fourth, Fifth, and Sixth Amendments, as referenced at § 24.1 text following n.14.64

In general, the Court has been more vigorous in enforcing the general prohibition of unconstitutional conditions with regard to waiver of noncriminal constitutional rights.65 However, the Court's "failure to provide coherent guidance on the subject is . . . legendary."66 Perhaps the best treatment of the Court’s unconstitutional conditions doctrine appears in an article by Kathleen M. Sullivan entitled, Unconstitutional Conditions.67 Using the major cases she discusses as examples, it can be seen that, as might be expected, the Court’s conclusion on whether something is an unconstitutional condition varies depending upon the level of scrutiny applied in the case.

---

For example, where strict scrutiny is applicable, a finding that some condition on funding is an unconstitutional condition is much more likely. For example, in *Sherbert v. Verner*, discussed at § 32.2.2.4 n.241, a Free Exercise strict scrutiny case, the Court held that it was unconstitutional to condition public unemployment compensation on acceptance of work on one's sabbath day. In *Arkansas Writers' Project, Inc. v. Ragland*, discussed at § 29.6.2.5 n.358, a First Amendment free speech case, the Court held that selective exemption of some magazines from state taxation on the basis of subject matter unconstitutionally infringed speech. In *Regan v. Taxation With Representation*, the Court conceded that selective subsidies that explicitly discriminated on the basis of viewpoint, and thus would trigger strict scrutiny, as discussed at § 29.4.3.1, would be invalid. The Court said, “The case would be [problematic] if Congress were to discriminate invidiously in its subsidies in such a way as to ‘aim[.] at the suppression of dangerous ideas.’”

On the other hand, where minimum rational review is applied, a finding that some condition on funding is an unconstitutional condition is not so likely. For example, in *Harris v. McRae*, discussed at § 27.3.3.3 n.230, the Court held that the selective subsidy of the medical expenses of childbirth, but not abortion, did not unconstitutionally infringe reproductive autonomy. In *Regan v. Taxation With Representation*, the Court held that denying tax exemptions for nonprofit organizations that engage in substantial lobbying activities was constitutional. Strict scrutiny was not triggered as the case merely involved the government refusing to pay for lobbying out of public monies, a government funding case involving rational review, as discussed at § 29.3.2. In *South Dakota v. Dole*, discussed at § 18.3.2.2 nn.163-68, the Court held that Congress conditioning a state receiving federal highway money on the state raising its drinking age to 21 was not an unconstitutional condition under a minimum rational review Spending Clause analysis.

Cases involving “third-order” rational review or intermediate scrutiny pose more difficult questions for the Court. In these cases, instrumentalist and natural law Justices more often find an unconstitutional condition, while deference-to-government Holmesian Justices and formalist Justices more often view the case as merely involving the government choosing how to spend its own funds. For example, in *FCC v. League of Women Voters*, as discussed at § 30.3.1 n.209, the Court held

---

74 468 U.S. 364, 386-402 (1984) (applying intermediate scrutiny); id. at 402-05 (Rehnquist, J., joined by Burger, C.J., and White, J., dissenting) (applying rational basis scrutiny); id. at 414-19 (Stevens, J., dissenting) (rejecting heightened scrutiny).
under an intermediate scrutiny approach that it was unconstitutional to condition public broadcasting subsidies on abstinence from editorializing. Chief Justice Burger, and Justices White, Rehnquist, and Stevens, dissented in the case. In *Elrod v. Burns*, a case analyzed by a Brennan plurality opinion as triggering strict scrutiny, but analyzed today under the “third-order” rational review standard of *Pickering v. Board of Education of Will County, Illinois*, as discussed at § 30.2.2 nn.199-203, the Court held that the government may not condition tax exemptions or government jobs on political party affiliation. Chief Justice Burger, and Justices Rehnquist and Powell, dissented in the case, and Justice Stevens took no part in the decision. On the other hand, in *Dolan v. City of Tigard*, another case of “third-order” rational review, discussed at § 22.2.5.1 nn.9-10, formalist, Holmesian, and natural law Justices joined to find a violation of the Takings Clause when the government conditioned the granting of a building permit on the individual granting the government an easement to the property. Justices Blackmun, Stevens, Souter, and Ginsburg dissented in the case.

Of course, rejection of an unconstitutional conditions challenge does not relieve the Court of reviewing conditioned benefits for minimum rationality under a due process or equal protection analysis. Typically, such a challenge fails. For example, in *Bowen v. Gilliard*, the Court upheld amendments to the AFDC program that effectively reduced benefits to families with children who receive support payments from noncustodial parents. The majority viewed the government's action as rationally related to a legitimate interest in reserving resources for the most pressing cases, stating, “That some families may decide to modify their living arrangements in order to avoid the effect of the amendment, does not transform the amendment into an act whose design and direct effect is to 'intrud[e] on choices concerning family living arrangements,' nor into an effort ‘to foist orthodoxy on the unwilling.'"

On the other hand, in *United States Department of Agriculture v. Moreno*, the Court concluded that barring otherwise eligible unrelated members of households living together from receiving food

---

75 427 U.S. 347, 356-59 (1976) (plurality opinion of Brennan, J., joined by White & Marshall, JJ.); *id.* at 374-75 (Stewart, J., joined by Blackmun, J., concurring in the judgment); *id.* at 374 (Stevens, J., took no part in the decision); *id.* at 376-77 (Powell, J., joined by Burger, C.J., and Rehnquist, J., dissenting).

76 512 U.S. 374, 383-91 (1994); *id.* at 407-11 (Stevens, J., joined by Blackmun & Ginsburg, JJ., dissenting); *id.* at 411-14 (Souter, J., dissenting).

77 *See, e.g.*, *Lyng v. International Union, UAW*, 485 U.S. 360, 370-74 (1988) (constitutional to preclude household from becoming eligible for food stamps if member of household were on strike and to preclude increase in allotment of food stamps household was receiving because income of striking member had decreased); *id.* at 374 (Marshall, J., joined by Brennan & Blackmun, JJ., dissenting).

stamps, while permitting related members of households to receive food stamps, was not rationally related to a legitimate interest in preventing fraud in the food stamp program. The Court has also rejected government spending programs under a rational review analysis where the spending scheme burdened an individual’s right to travel, as in *Zobel v. Williams* and *Hooper v. Bernalillo County Assessor*, discussed at § 26.5.1 nn.498-99.

As these cases suggest, the term “unconstitutional conditions” is predominantly a conclusion the Court reaches based upon its analysis applying strict scrutiny, intermediate scrutiny, or some version of rational review under some other provision in the Constitution. When viewed in this way, there is not really an independent “unconstitutional conditions” doctrine separate from the other constitutional doctrines. In addition, as the Court noted in 2006 in *Rumsfeld v. Forum for Academic and Institutional Rights, Inc. (FAIR)*,80 “It is clear that a funding condition cannot be unconstitutional if it could be constitutionally imposed directly.” In *Fair*, the Court concluded that the government could constitutionally require law schools to grant equal access to military recruiters on their campuses, and this would not violate any First Amendment freedom of speech or freedom of associational rights belonging to law school. Thus, the Solomon Amendment, which conditioned federal funding on the granting of such equal access, was not an unconstitutional condition.

§ 27.1.2.4  **Unconstitutionality of Excessive Punitive Damages Awards**

One area where the Court has been more vigorous than minimum rational review in terms of a non-fundamental liberty interest dealing with economic matters concerns punitive damages awards. In 1991, the Court held in *Pacific Mutual Life Insurance Co. v. Haslip*81 that punitive damages awards in civil cases can be limited by the Due Process Clause, although not by the Excessive Fines Clause of the Eighth Amendment, which only applies to criminal matters, as noted at § 27.2.5.1 n.128. Opinions in *Haslip*, and later cases involving attempts by the Court to define precisely when the Due Process Clause has been violated by a punitive damages award, contain arguments which mirror those found in other cases. Instrumentalist Justices focus on fundamental fairness, Holmesians are concerned about a lack of respect for legislative and executive practice, formalists object to the Court interfering with legal traditions through creating rights not explicitly mentioned in constitutional text, and natural law justices seek to find some reasoned accommodation.

In *Pacific Mutual*, Justice Blackmun's opinion for the Court sustained Alabama's method of assessing punitive damages which, in accord with common-law traditions, included trial and appellate review of court-instructed jury verdicts. However, Blackmun's conclusion was reached only after a determination, consistent with instrumentalist emphasis on "fundamental fairness,” that Alabama's method was not inherently unfair in light of "general concerns of reasonableness and adequate guidance from the court." Justice Scalia, concuring from his formalist perspective, said that it was not appropriate for members of the Court to decide, from time to time, whether a process approved by the legal traditions of our people is "due process." He said that jury-assessed punitive damages are valid because no Bill of Rights provision is implicated, and, reflecting a Stage 4 focus

---

on customs and traditions, the Due Process Clause is not violated if a particular procedure is traditional.\textsuperscript{82}

Several natural law Justices staked out intermediate positions. Concurring, Justice Kennedy agreed with Justice Scalia that the judgment of history was relevant to the outcome of this case, but he added that widespread adherence to a historical practice does not always foreclose further inquiry. Dissenting, Justice O'Connor said that changes in circumstances may lead to a loss of confidence that even ancient procedures are capable of producing fair and reasonable results. "When we lose that confidence, a change must be made."\textsuperscript{83}

The next case in this series was BMW of North America, Inc. v. Gore,\textsuperscript{84} decided in 1996. There, in a 5-4 opinion, the Court struck down for the first time a punitive damages award as excessive. The plaintiff had recovered $4,000 as compensatory damages for fraud, since he was sold as “new” a BMW sports sedan that actually had been repainted prior to sale. At that time, BMW had a policy of selling cars as “new” without advising the dealer that any repairs had been made if the repair cost did not exceed 3 percent of the suggested retail price. The jury's verdict added a $4 million dollar punitive damages award, based on evidence that BMW has sold roughly 1,000 such repaired cars as new ($4 million equaling $4,000 damages for each car times 1,000 cars). The Alabama Supreme Court reduced the punitive damages award to $2 million. The United States Supreme Court said that an award enters the zone of arbitrariness that violates due process if the award is “grossly excessive” in relation to the state's legitimate interests in punishment and deterrence. Reflecting a “second-order” rational review factor balancing test, discussed at § 7.2.1 nn.21-22, Justice Stevens said three "guideposts" sustained the conclusion that here the award was grossly excessive: the slight degree of reprehensibility of the nondisclosure; the disparity between the harm suffered by the plaintiff and the punitive damages award; and the difference between this remedy and the smaller civil penalties authorized or imposed by law in comparable cases.

Justice Breyer, concurring with Justices O'Connor and Souter, defended the result in BMW based on background principles which underlie the Due Process Clause. Justice Breyer said that the Due Process Clause is a guarantee of nonarbitrary governmental behavior. Examining Alabama law, he found that the standards applied by its courts were so vague and open-ended that they risked arbitrary awards. That fact warranted the Court in making a detailed examination of the award in this case. The lack of proportionality between the size of the award and the underlying punitive damages objectives showed the award to be grossly excessive. Thus, the lack of standards and the excessive award, taken together, overcame what would otherwise amount to a strong presumption of constitutional validity for laws relating to economic matters.\textsuperscript{85}

\textsuperscript{84} 517 U.S. 559, 575-85 (1996).

\textsuperscript{85} Id. at 586-88 (Breyer, J., joined by O’Connor & Souter, JJ., concurring).
Justice Scalia, dissenting with Justice Thomas, said that a procedure which subjects a jury verdict to some judicial review for reasonableness furnishes a defendant with all the process that is "due." He said that the doctrine adopted by the Court does not deserve to have a stare decisis effect because it is not only mistaken, but also insusceptible of principled application. He said that application of the Court's new rule of constitutional law, unconnected to any clear text or specific intent of the framers and ratifiers, is constrained by no principle other than the Justices' subjective assessment of the "reasonableness" of an award in relation to the conduct for which it was assessed. This provides virtually no guidance to legislatures or to state or federal courts. By the Court's logic, he concluded, every dispute as to evidentiary sufficiency in a state civil suit poses a question of constitutional moment, subject to review by the Supreme Court. That, he said, "is a stupefying proposition."86

Also dissenting was Justice Ginsburg, joined by Chief Justice Rehnquist. Justice Ginsburg said that in view of reform measures recently adopted or under consideration in Alabama, the Court should resist unnecessary intrusion into an area predominantly of state concern. She pointed out that the Alabama court's judgment was entitled to a presumption of legitimacy and that under the Court's own Rule 10, the United States Supreme Court rarely grants certiorari to review erroneous factual findings or misapplications of a properly stated rule of law. Further, reviewing the size of a punitive damages award is a task for which the Court is not well equipped and for which the majority opinion admits that it has no mathematical formula, no categorical approach, and no bright line. It has only a "vague concept of substantive due process, a 'raised eyebrow' test . . . as its ultimate guide."87

Justices Scalia’s and Ginsburg’s concern with predictability was addressed in 2003 in State Farm Mutual Automobile Insurance Co. v. Campbell.88 In Campbell, the Court indicated that while a punitive damages award only 4 times higher than a compensatory damages award will rarely cause due process problems, a ratio of 10:1 or higher will be viewed quite suspiciously under the BMW factor balancing approach. The Court stated, “We decline again to impose a bright-line ratio which a punitive damages award cannot exceed. Our jurisprudence, and the principles it has now established demonstrate, however, that in practice, few awards exceeding a single-digit ratio between punitive and compensatory damages, to a significant degree, will satisfy due process. While these ratios are not binding, they are instructive.” As in BMW, Justices Scalia and Thomas dissented, reiterating that from a formalist perspective the Court’s doctrine was unconnected to any clear text in the Constitution or specific intent of the framers and ratifiers. As in BMW, Justice Ginsburg also dissented in the case, although Chief Justice Rehnquist switched sides and joined the majority opinion, apparently convinced that the approach in Campbell was now predictable enough.

The Court also noted in Campbell that, based on concerns with federalism, one state “cannot” punish a defendant for actions in another state that are lawful in that state, and, “as a general rule,” a state

86  Id. at 607 (Scalia, J., joined by Thomas, J., dissenting).

88  538 U.S. 408, 425 (2003); id. at 429 (Scalia, J., dissenting); id. at 429-30 (Thomas, J., dissenting); id. at 430-31 (Ginsburg, J., dissenting).
may not “punish a defendant for unlawful acts committed outside of the State's jurisdiction.” On the other hand, the Court did permit out-of-state conduct to be used to demonstrate deliberateness and culpability of in-state conduct to bolster the reprehensibility factor under the 3-factor BMW approach. The extent to which due process permits a jury to punish the defendant for effects of its conduct on non-parties to the lawsuit will be the subject of a case considered during the 2006 Term, Philip Morris USA, Inc. v. Williams. Similar to the Court’s resolution of the federalism issue in Campbell, the better analysis would seem to be that only effects on the party to the litigation may be directly considered, since that party is the only party before the court to whom punitive damages will be paid, but that effects on other parties can be used as evidence to indicate deliberateness and culpability to bolster the reprehensibility factor regarding the party to the litigation – a distinction calling for careful jury instructions on how such evidence can be used by the jury. Like the limitation on use of out-of-state conduct, this result would help deal with the problem of “multiple punitive damages,” where the same conduct is used to grant punitive damages in multiple cases.

Following Campbell, federal and state courts have decided literally hundreds of cases involving the excessiveness of punitive damages awards. In many of these cases, the awards were determined to be excessive. On the other hand, in some cases, as for “false arrest,” where economic damages can be predicted to be small, or for very egregious misconduct, such as fraud, punitive damages awards have been upheld with very large ratios between punitive and compensatory damages. During the 2006 Term, the Court will consider in the aforementioned case, Philip Morris USA, Inc. v. Williams, whether or not a punitive damage award of $79.5 million atop a compensatory damage award of $821,000, a ratio of 97:1, was “grossly excessive,” given defendant’s long-standing fraudulent conduct toward this plaintiff and others regarding the safety of smoking. The result in the case may mirror that of Boeken v. Philip Morris USA, Inc., where a smoker who contracted cancer and brought an action against Philip Morris, alleging negligence, strict product liability, and fraud, was awarded by the jury $5,539,127 in compensatory damages and punitive damages of $3 billion (ratio roughly 540:1). The trial court judge reduced punitive damages to $100 million (ratio roughly 18:1), and, on appeal, the appellate court reduced the punitive damages award to $50 million, bringing the ratio to single-digits of 9:1. In all of these cases, the appellate courts use a de novo standard of review, as required in Campbell, since “excessiveness” is a mixed question of law and fact.

---

91 See Campbell, 538 U.S. at 418 (de novo standard of review used, as is usual for mixed questions of law and fact, as discussed at § 26.14 nn.101-02 ); Williams, 127 P.3d 1165 (Or. 2006), cert. granted, 126 S. Ct. 2329 (2006); Boeken, 26 Cal. Rptr. 3d 638 (2nd Ct. App. Cal. 2006), cert. denied, 126 S. Ct. 1557 (2006). For a sampling of other cases, compare Daka Inc. v. McCrae, 839 A.2d 682, 697-701 (D.C. 2003) (punitive damages of $4.8 million atop $187,500 award for compensatory damages (ratio 26:1) excessive for employer’s negligent supervision of manager and retaliation against plaintiff for reporting manager’s sexual harassment) with Romanski v. Detroit
An additional issue which has arisen is whether due process analysis of punitive damages awards applies to arbitration awards, since technically arbitration is private dispute resolution that would not trigger a finding of state action. The relevant legal question is whether court enforcement of an arbitration award is state action under *Shelley v. Kraemer*, discussed at § 21.1.2.3 nn.12-14. As noted there, the Court has read *Shelley* narrowly outside the context of race discrimination cases. On the other hand, given the amount of arbitration that occurs, the Court may feel some pressure to decide that *Shelley* does apply to have an effective remedy for excessive punitive damages awards. Naturally, this concern predominantly applies to arbitration of tort cases or violations of statutory rights, like some civil rights statutes, for which violations might trigger a punitive damages award. In virtually all contract cases, punitive damages are not able to be granted as a matter of law.92

The future development of all the issues surrounding punitive damages awards is difficult to predict. Justices Scalia and Thomas will likely continue to dissent from Court scrutiny of punitive damages awards. Justice Ginsburg has indicated great reluctance to overrule punitive damages awards, as did Chief Justice Rehnquist, to an extent. Chief Justice Roberts and Justice Alito may join in these views, or join Justices Stevens, Kennedy, Souter, and Breyer in their willingness to use the Due Process Clause to limit punitive damages awards. Even those Justices embracing the due process analysis may split on the reasonable of various awards or the extent non-party effects can provide a basis for a punitive damages award. These last two issues will be before the Court during the 2006 Term in the *Philip Morris USA, Inc. v. Williams* case, which could provide some guidance on how the current Court will resolve these issues in the near future. A related issue of whether statutory caps on punitive damages might violate plaintiff’s due process rights is discussed at § 27.4.2.4 n.337.

§ 27.2  Enumerated Fundamental Rights Under Substantive Due Process

§ 27.2.1  The Original Natural Law Era

Since the 14th Amendment was not ratified until 1868, cases from the original natural law era looked to constitutional provisions other than the Due Process Clause to provide substantive protection.
against state action. Even as against federal action, the Fifth Amendment Due Process Clause was predominantly restricted to procedural matters during the natural law era.

During the first half of the original natural law era, the Court interpreted the Constitution to grant the federal government great power, as discussed at §§ 18.1-18.2. When it came to protecting individuals from excessive or abusive use of power by federal or state governments, the Court's natural law perspective tended to support a pro-individual bias for both economic and civil rights. For example, in *Fletcher v. Peck*, the Court held in 1810 that a grant of land from a state is a contract not to reassert rights to the land, and is protected by the Contracts Clause. Chief Justice John Marshall, following John Locke and Adam Smith, treated the ownership of property as a natural right. With respect to legislative deprivations of property and contract rights, he said that “it may well be doubted, whether the nature of society and of government does not prescribe some limits to the legislative power.”

Even so, potential property or contract rights against government action were limited when the Court, predominantly as part of protecting "states rights," narrowly interpreted several prohibitions on governmental power. First, the Ex Post Facto Clause was limited to criminal law, so it did not bar all retroactive legislation. Next, the Article IV, § 2 Privileges and Immunities Clause was interpreted by Justice Washington, while traveling circuit, to encompass only fundamental rights, and not a right to be treated equally regarding all rights. Justice Washington said that the Clause protected only those rights thought fundamental to citizens of all free governments, such as the rights to pass through a state, to habeas corpus, to sue, and to own property. Third, the Contracts Clause was limited to contracts previously made. This made possible various state reforms of commercial law, including adoption of bankruptcy laws with prospective application only.

In addition, in 1833, the Court held in *Barron v. Baltimore* that the Bill of Rights applied only to the federal government. In a case involving whether the Takings Clause of the Fifth Amendment applied against the states, Chief Justice Marshall said that limitations on power expressed in general terms apply only to the government created by an instrument. Further, people who wanted added protection from their own state would not have used the cumbersome process of amending the United States Constitution. Finally, the Bill of Rights was intended only to secure against federal encroachments discussed during the ratification campaign.

During this period, the Due Process Clause of the Fifth Amendment was predominantly limited to requiring procedures called for by the Constitution or by settled common law usage, as held in *Murray's Lessee v. Hoboken Land and Improvement Co.* A broader interpretation of "due process"

93 10 U.S. (6 Cranch) 87, 133 (1810).

96 59 U.S. (18 How.) 272 (1856).
was reflected in *Dred Scott v. Sandford*, discussed at § 25.1 nn.9-16, where the Court said in 1857 that depriving a citizen of property, a slave, merely because the citizen brought the slave into a free state, was not due process. Other seeds for "substantive due process" were planted in a few state court decisions against impairing "vested rights." For example, in *Wynehamer v. The People*, the New York Court of Appeals held that an act to prevent intemperance substantially destroyed the property in intoxicating liquors by persons within the state in its application to liquors owned and possessed at the time the act was passed, depriving those owners of property without due process. Had the act been applicable only to liquors imported or manufactured after it took effect, it would have been constitutional.

§ 27.2.2 The Formalist Era

Following the Civil War, limitations on state power were imposed by ratification of the 13th, 14th, and 15th Amendments between 1865 and 1870. The Court first interpreted these amendments in the *Slaughter-House Cases*, decided in 1873. As noted at § 25.2 nn.45-51 the Court held that the first sentence of the 14th Amendment overruled the holding in *Dred Scott* that African-Americans could not be citizens by providing, "All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside."

The Court next held that the 14th Amendment Privileges or Immunities Clause protects only a limited list of rights which persons hold as citizens of the United States, distinguishing these rights from those held as citizens of states, as discussed at § 25.3 nn.59-64. Reflecting formalist reluctance to use legislative history, the Court did not mention the legislative history used by Justice Black, dissenting in *Adamson v. California*, that the Privileges or Immunities Clause of the 14th Amendment was intended to overrule *Barron v. Baltimore* by forbidding states from abridging the privileges and immunities of United States citizens identified in the first eight Amendments.

The Court concluded in its *Slaughter-House Cases* opinion that Louisiana's state-granted economic monopoly did not violate the Equal Protection Clause, which the Court suspected would be limited to racial matters, or the Due Process Clause, probably because due process was thought to relate only to procedure. Four extreme, conservative formalists in dissent – Justice Field, joined by Chief Justice Chase, and Justices Bradley and Swayne – would have found under the Privileges or Immunities Clause a “liberty of contract,” a result eventually reached under the Due Process Clause

in 1905 in *Lochner v. New York*, discussed at § 27.3.2.1 nn.149-60. The majority in the case, including moderate formalists Justices Miller and Davis, reflected more the purpose behind the Due Process Clause which was not to advance such a “liberty of contract” doctrine. After the *Slaughter-House Cases*, the privileges of state citizens continued to be protected by the Privileges and Immunities Clause of Article IV, § 2, but only against state laws that discriminated without adequate justification against non-residents, not a general right of equal protection, as discussed at § 20.3.3.1 nn.283-93. Today, these cases trigger intermediate review, as discussed at § 20.3.3.2 nn.294-305.

Through a series of doctrinal transformations, the Civil War Amendment provisions relating to due process, equal protection, and slavery or involuntary servitude gradually came to have a far greater scope in granting individuals protection from state action than the Court held or suggested in the *Slaughter-House Cases*. The development with respect to slavery or involuntary servitude is discussed at § 25.1 nn.20-44. The development with respect to equal protection is discussed at § 26.2.1 (race, ethnic, and national origin discrimination), § 26.2.2 (alienage classifications), § 26.3.1 (gender discrimination), § 26.3.2 (illegitimacy classifications), § 26.4.5 (disability classifications), and § 26.5 (right to travel, access to court, and access to the ballot and right to vote).

With respect to due process, the first significant development occurred in 1876, where the Court held in *Munn v. Illinois* that under some circumstances a regulation of business could be found to violate due process because “in mere private contracts, relating to matters in which the public has no interest, what is reasonable must be ascertained judicially.” Next, in 1877, the Court held that jurisdiction over persons was a due process issue. In 1884, due process was held to guarantee fair proceedings, and it was said that the Fifth and 14th Amendments called for similar kinds of proceedings. In 1897 in *Allgeyer v. Louisiana*, and again in 1905 in *Lochner v. New York*, the Court held that due process prevented unreasonable interference with the right to contract and use property. Many state and federal economic laws subsequently were struck down as not bearing a “fair and substantial” relationship to a legitimate government interest, as discussed at § 27.3.2.1.

The question of whether some or all of the specific rights enumerated in the first eight Amendments are safeguarded against state action by the Due Process Clause of the 14th Amendment was first explicitly addressed in 1897 in *Chicago, Burlington & Quincy Railroad v. Chicago*. Previously, as noted at § 22.2 n.57, the Court had applied the Takings Clause against the states under an Equal Protection Clause analysis in one case in 1894. In *Chicago, Burlington*, the Court held that the

106 Allgeyer v. Louisiana, 165 U.S. 578 (1897) (right of out-of-state insurance company to do business within the state); *Lochner v. New York*, 198 U.S. 45 (1905) (New York could not limit bakers’ weekly hours to 60 because this would interfere with the freedom of contract).

107 166 U.S. 226, 244-46, 253-57 (1897).
Takings Clause of the Fifth Amendment was an aspect of Due Process in the 14th Amendment, and thus applicable against the states. The Court also noted, in dicta, that the last clause of the Seventh Amendment, dealing with the inability of federal courts to reexamine facts tried by juries other than according to the rules of the common law, applied not only to cases tried in federal courts, but to cases tried in state courts and appealed to the United States Supreme Court.108

A case raising the issue whether a criminal defendant’s rights were a part of due process occurred in 1908 in Twining v. New Jersey.109 In a state court prosecution, the jury had been instructed that it might draw an unfavorable inference from defendant's refusal to testify. The Court opened its opinion by saying that the Fifth Amendment's bar against self-incrimination does not apply to the states, citing Barron v. Baltimore. Nor was there a denial of a privilege or immunity of a citizen of the United States, citing the Slaughter-House Cases.

As to whether the concept of due process includes protection from self-incrimination, the Court asked whether the exemption from self-incrimination is a “fundamental” principle of liberty and justice that “inhere[s] in the very idea of free government” and is the inalienable right of a citizen of such a government. In answering that question, the Court followed the formalist emphasis on text and history. As to text, Congress in submitting the Bill of Rights to the states treated due process of law and the privilege of self-incrimination as exclusive of each other. Also, the historic documents usually looked to in determining how a right was rated before our Constitution was framed, such as the Magna Carta (1215) and the Petition of Right (1629), did not refer to the exemption from self-incrimination. Finally, of the 13 states that ratified the original Constitution, only four proposed amendments to incorporate into the Constitution the privilege against self-incrimination. Given all these facts, the Court held due process did not include the privilege against self-incrimination.110

In 1925, in dicta, the Court said in Gitlow v. New York111 that it assumed that the First Amendment freedom of speech and of the press are among the “fundamental” personal rights and liberties protected by the Due Process Clause of the 14th Amendment. The state statute involved in Gitlow regarding protest activities under a criminal syndicalism statute was nevertheless upheld, as the statute survived review under the First Amendment anyway. Two years later, in Whitney v. California112 the Court squarely held that a state syndicalism statute had to be tested for First Amendment freedom of speech, association, and assembly principles under the Due Process Clause of the 14th Amendment.

111 268 U.S. 652, 666 (1925).
112 274 U.S. 357, 646 (1927).
Five years later, in 1932, the Court concluded in Powell v. Alabama\textsuperscript{113} that a state’s denial of counsel to an accused in a capital case denied that individual due process of law, thus applying the Sixth Amendment right to counsel against the states. However, in 1937, the Court reach a different conclusion regarding the Fifth Amendment double jeopardy clause in Palko v. Connecticut.\textsuperscript{114} The Court noted that a right against double jeopardy was not universally available in England or other European countries, and thus the right was not a fundamental aspect of ordered liberty that “a fair and enlightened system of justice would be impossible” without the right.

\textbf{§ 27.2.3 The Holmesian Era}

In the realm of reviewing commercial regulations, the Holmesian era opened with cases that enlarged the Commerce Clause power of Congress, as discussed at § 18.2.3. Also, when engaged in review of economic legislation, the Court retreated from the formalist era’s more vigorous "fair and substantial" relationship “reasonableness” review under the Equal Protection Clause, discussed at § 26.4.1 nn.424-31, and the Due Process Clause, discussed at § 27.3.2.1 nn.149-60, to the much lower level of minimum rational review, where substantial deference was given to legislative judgment, placing the burden on the challenger to show the lack of any rational connection to a legitimate governmental interest. This lessening of constitutional rights occurred with respect to the Equal Protection Clause, discussed at § 26.4.1 nn.432-45, and the Due Process Clause, discussed at § 27.3.2.1 nn.161-66. With respect to legislation affecting non-economic interests, the law remained relatively static in the Holmesian era in terms of case results. However, the Court did note in footnote 4 in Carolene Products, discussed at § 26.1.2.2, that some cases might trigger heightened scrutiny. The Court also talked about "strict scrutiny" of a sterilization law in Skinner v. Oklahoma, and “most rigid scrutiny” of racial classifications in Korematsu v. United States.\textsuperscript{115}

With respect to whether the protections against the United States given citizens by the Bill of Rights are applicable to the states through the Due Process Clause of the 14th Amendment, a famous debate developed in the Holmesian era. In Adamson v. California,\textsuperscript{116} the judge and the prosecutor in a California criminal case commented on defendant's failure to testify. In a Holmesian-style opinion by Justice Reed, a 5-4 Court reaffirmed Twining’s holding that the 14th Amendment, intended to protect the right to a fair trial, did not draw within its scope the Fifth Amendment privilege against self-incrimination.

Using a formalist style of reasoning, but differing from the conservative formalist Justices of the formalist era that only viewed those Bill of Rights as incorporated into the 14th Amendment to which "a fair and enlightened system of justice is impossible" so that "neither liberty nor justice would exist if they were sacrificed," liberal formalist Justice Black dissented in Adamson, joined by liberal

\textsuperscript{113} 287 U.S. 45 (1932).

\textsuperscript{114} 302 U.S. 319, 325 (1937).

\textsuperscript{115} Carolene Products, 304 U.S. 144, 152 n.4 (1938); Skinner, 316 U.S. 535, 541 (1942); Korematsu, 323 U.S. 214, 216 (1944).

\textsuperscript{116} 332 U.S. 46, 49-53 (1947).
instrumentalist Justice Douglas. Justice Black concluded that as a historical matter the framers of the 14th Amendment intended to make the entire Bill of Rights apply to the states. The legislative history of the 14th Amendment, assembled in an appendix to Justice Black’s opinion, was taken by him to show an intent to overrule *Barron v. Baltimore* by the Privileges or Immunities Clause and the Due Process Clause. Justice Black accused the majority of using a theory by which the Court could periodically expand and contract constitutional standards to conform to what the Court, at any time, feels is fundamental liberty and justice, rather than what the framers and ratifiers intended.117

Justices Murphy and Rutledge, liberal instrumentalist in their decisionmaking style, also dissented, agreeing with Justice Black that all of the specific guarantees of the Bill of Rights were embodied in the 14th Amendment. However, they insisted that the 14th Amendment was not limited by the Bill of Rights. The Court could find that other requirements were also essential for “fundamental fairness” – and that was the central concept of due process. This analysis was based upon resort to the “conscience of the people” to determine fundamental fairness, in addition to the textual and historical arguments of Justice Black.118

Justice Frankfurter, a Holmesian, concurring with Justice Reed, disagreed with both sets of dissenters. Regarding Justice Black’s "total incorporation" approach, Frankfurter said that persons familiar with political and legal history would not recognize the 14th Amendment as a cover for the various explicit provisions of the first eight Amendments. Regarding the "fundamental fairness" approach of Justices Murphy and Rutledge, Frankfurter said that judges were not intended to be able to roam at large to select what is indispensable to the dignity and happiness of a free man. He added that a safeguard against using the idiosyncrasies of personal judgment is to search for the “canons of decency and fairness which express the notions of justice of English-speaking peoples” that could indicate which of the first eight Amendment protections should be viewed as “selectively incorporated” into the 14th Amendment.119

Although Justice Black’s theory of “total incorporation” of the Bill of Rights never won the support of a majority of the Court, the “selective incorporation” approach, applied with instrumentalist reasoning, rather than Justice Frankfurter’s deference-to-government Holmesian reasoning, ultimately resulted in almost all of the specific provisions of the Bill of Rights being incorporated into the meaning of "liberty" in the Due Process Clause of the 14th Amendment, as discussed at § 27.2.4. In addition, certain additional due process rights have been declared a fundamental part of the American scheme of ordered liberty, as discussed at §§ 27.2.5.2 & 27.3. Thus, the views of Justices Murphy and Rutledge ultimately prevailed on that issue.

§ 27.2.4 The Instrumentalist Era

With respect to incorporation of Bill of Rights protections into the 14th Amendment, an important

118 *Id.* at 68 (Murphy, J., joined by Rutledge, J., dissenting).

119 *Id.* at 67-68 (Frankfurter, J., concurring). Under this approach, the Holmesian-era Court incorporated the Sixth Amendment right to a public trial in *In re Oliver*, 333 U.S. 257 (1948).
summing-up occurred during the instrumentalist era in 1968 in *Duncan v. Louisiana*.

The majority opinion followed the general course of reasoning suggested by Justice Frankfurter in his *Adamson* concurrence. However, whereas Justice Frankfurter inquired into whether a particular procedural safeguard was required by the Anglo-American tradition, the Court in *Duncan* said that the relevant question is what is fundamental in the criminal processes maintained in the United States, processes heavily influenced, of course, and mandated for the federal government, by the Bill of Rights. Given this bias toward incorporation, the Court held in *Duncan* that the right to have a jury trial for serious crimes was a phase of the Sixth Amendment jury trial provision that should be applied to the states. Crimes carrying possible penalties of up to six months could be regarded as petty. Not so, any crime subject to punishment of up to two years imprisonment, such as the one involved in *Duncan*.

Justice Harlan, dissenting with Justice Stewart, both conservative Holmesians, rejected the majority's methodology of selective incorporation, saying that it tended to put the states in a straitjacket. As a conservative Holmesian, Justice Harlan favored an evolving concept of fundamental fairness that took account more of the conservative preference for states’ rights and tolerance for experimentation.

Justice Black, concurring with Justice Douglas, replied to Justice Harlan, and said he did not believe that under the guise of federalism the states should be able to experiment with the protections afforded citizens through the Bill of Rights. He repeated his arguments for total incorporation, saying that an eminently reasonable way of expressing the idea that henceforth the Bill of Rights should apply to the states was to provide, "No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States."

Consistent with the instrumentalist reasoning articulated in *Duncan*, many other provisions of the Bill of Rights were listed in *Duncan* that had already been incorporated by 1968, often over the dissents of Holmesian Justices remaining on the Court. These included the Fourth Amendment ban on unreasonable searches and seizures; the Fifth Amendment privilege against self-incrimination, incorporated in 1964, overruling *Twining* and *Adamson*; and the Sixth Amendment, with respect to a speedy trial, the confrontation of witnesses, and the right to counsel.

North Carolina, 386 U.S. 213 (1967) (Holmesian Justice Harlan rejecting the conclusion regarding incorporation, and concurring, as did Justice Stewart, only in the result, based on the
Based on the approach laid out in Duncan in 1968, the instrumentalist-era Court overruled Palko the next year in Benton v. Maryland, and thereby incorporated the Fifth Amendment prohibition on "double jeopardy." This was done over the dissents of Holmesian Justices Harlan and Stewart. Two years later, in 1971, the Court unanimously incorporated the Eighth Amendment ban on "excessive bail" in Schilb v. Kuebel. The Eighth Amendment ban on cruel and unusual punishment was unanimously incorporated in 1972 in Furman v. Georgia, although the Court had assumed it was incorporated as early as 1965 in Robinson v. California. Indeed, by the end of the instrumentalist era, the only provisions of the first eight Amendments not explicitly incorporated into the 14th Amendment were the Second Amendment dealing with the right to keep and bear arms, the Third Amendment provision regarding quartering soldiers in homes, the Fifth Amendment's requirement of a grand jury indictment, the Seventh Amendment’s right to a jury trial in civil cases, and the Eighth Amendment’s ban on excessive fines.

§ 27.2.5  The Modern Natural Law Era

§ 27.2.5.1  Selective Incorporation and the Modern Natural Law Era

The natural law judicial tradition calls for reasoned elaboration of the law in light of text, purpose, context, history, respect for legislative or executive practice, fidelity to precedent, and prudential consideration of background natural law principles embedded in the Constitution. This approach to decisionmaking leads a Court to be less likely than an instrumentalist Court to discover or extend individual rights in civil or criminal cases, but also to a Court not likely to overrule precedents.

Regarding the topic of incorporation, the Court held in 1989 in Browning-Ferris Industries v. Kelco Disposal, Inc, that the Eighth Amendment's ban on "excessive fines" is a reference to criminal cases and does not apply to punitive damages awards in cases between private parties. The Court’s concern with excessive punitive damage awards, however, led the Court to place due process limits on punitive damages awards in state and federal civil cases in BMW v. Gore and other such cases, discussed at § 27.1.2.4. Given this concern with excessive punitive damages awards in civil cases, and the fact that the Eighth Amendment ban on excessive bail was unanimously viewed as “fundamental” in Schilb, discussed at § 27.2.4 n.126, it is likely that the Eighth Amendment ban on excessive fines is not applicable to civil cases.

---

125 395 U.S. 784, 793-96 (1969); id. at 808-09 (Harlan, J., joined by Stewart, J., dissenting).

126 404 U.S. 357, 365 (1971) (unanimous on the issue of incorporation).

excessive fines in criminal cases would be viewed as “fundamental” and incorporated against the states if a case ever raised that issue for review.

Similarly, based on a reasoned elaboration of the approach laid out in *Duncan*, the Second and Third Amendments would likely be viewed as “fundamental” and incorporated against the states if a case ever raised that issue for review. No matter what their precise scope, discussed at §§ 23.1.1-23.1.2, the Second and Third Amendments are equally civil liberties protections as the provisions in the First, Fourth, Fifth, and Sixth Amendments that have been incorporated under the *Duncan* approach. In practice, whether the Second or Third Amendments are incorporated into the 14th Amendment may not be all that critical. Regarding the Second Amendment, no gun control laws to date have ultimately ever be held to violate the Second Amendment, as discussed at § 23.1.1 nn.17-19, and 44 states have constitutional provisions protecting gun ownership under their state constitutions, as discussed at § 23.1.1 n.4, which apply without regard to an incorporation analysis. Regarding the Third Amendment, the Supreme Court has never considered a case, but the Second Circuit Court of Appeals has concluded that the Third Amendment should be viewed as incorporated into the 14th Amendment, as discussed at § 23.1.2 n.22.

As a matter of deference to state procedural practices, probably the only two aspects of the Bill of Rights that are not “fundamental” today are the Fifth Amendment requirement of grand jury indictment, and the Seventh Amendment right to a jury trial. Thus, despite the Fifth Amendment, states are free to arrest an accused in various ways, not just by grand jury indictment, although roughly half the states have state constitutional provisions regarding grand jury indictment, as discussed at § 23.2.1.2 n.110. Despite the Seventh Amendment, states can follow a practice of trying some factual issues to a court, rather than a jury, in those rare cases where that might apply. This would not be true for the same issue if the case were heard in federal court under diversity jurisdiction, as discussed at § 23.1.3 nn.24-31.

§ 27.2.5.2 Non-Bill of Rights “Enumerated” Fundamental Rights and the Modern Natural Law Era

In 1992, the Supreme Court noted in *Foucha v. Louisiana*, 129 “Freedom from bodily restraint has always been at the core of the liberty protected by the Due Process Clause from arbitrary governmental action.” Of course, whatever the exact scope of the fundamental right to "freedom from bodily restraint," it is not a right applicable to all persons in all contexts. For example, if convicted prisoners could always claim such a right, all prison sentences would be subjected to some form of heightened scrutiny, which the Court has refused to do.130 In *Foucha*, the issue involved the rights of persons involuntarily committed to mental institutions, discussed at § 27.4.4.1. Another issue of “freedom from bodily restraint” involves the rights of teenagers and juvenile curfew statutes, discussed at § 27.3.4.4.
In 1970, the Court held in *In re Winship*\(^{131}\) that the Due Process Clause protects the accused against criminal conviction except on proof “beyond a reasonable doubt,” although that right is not textually specific in the Bill of Rights. The Court has also stated that government actions which “shock the conscience” can give rise to a deprivation of a liberty interest. The classic case of this kind occurred in *Rochin v. California*,\(^{132}\) in which it was held that the forced pumping of a suspect’s stomach to obtain evidence “shocked the conscience.” This right was viewed in *United States v. Salerno*\(^{133}\) as an “enumerated” liberty right, *i.e.*, based directly on “liberty,” and distinguished from “unenumerated” rights “implicit in the concept of ordered liberty,” discussed at § 27.3.3. The doctrines of *In re Winship* and *Rochin*, along with other aspects of due process for criminal defendants, are discussed at § 23.2.1.2.D.

In 1992, the Court considered another due process challenge to a criminal procedure not mentioned in the Bill of Rights. The Court held in *Medina v. California*\(^{134}\) that a state could require a defendant to carry the burden of proving his incompetence by a preponderance of the evidence. Writing for the Court in *Medina*, Justice Kennedy sought to find a way to bridge the differences between formalist and Holmesian emphasis on history and tradition, and instrumentalist concern with "fundamental fairness" implicit in our “concept of constitutionally ordered liberty.” He did this by acknowledging that many precedents had used "fundamental fairness" in determining the meaning of the Due Process Clause, but that this mode of analysis should be used cautiously. Kennedy said, “In the field of criminal law, we have defined the category of infractions that violate ‘fundamental fairness’ very narrowly, based on the recognition that ‘[b]eyond the specific guarantees enumerated in the Bill of Rights, the Due Process Clause has limited operation.’ *Dowling v. United States*, 493 U.S. 342, 352 . . . (1990).”

Justice Kennedy justified the "very narrowly" approach adopted in *Medina* in terms of judicial review, the separation of powers, and considerations of federalism. Emphasizing separation of powers and concerns about the limits of judicial review, he said, “The Bill of Rights speaks in explicit terms to many aspects of criminal procedure, and the expansion of those constitutional guarantees under the open-ended rubric of the Due Process Clause invites undue interference with both considered legislative judgments and the careful balance that the Constitution strikes between liberty and order.” Emphasizing federalism, Justice Kennedy added, “[B]ecause the States have considerable expertise in matters of criminal procedure and the criminal process is grounded in centuries of common-law tradition, it is appropriate to exercise substantial deference to legislative judgments in this arena.” In determining the contours of due process, Justice Kennedy noted that the Court had considered not only historical customs and traditional practices, but also whether the rule in operation transgressed any recognized principle of fundamental fairness that was part of the conscience of our people. In *Medina*, Justice Kennedy concluded, “We cannot say that the allocation of the burden of proof to a criminal defendant to prove incompetence ‘offends some

\(^{133}\) 481 U.S. 739, 746 (1987).

principle of justice so rooted in the traditions and conscience of our people as to be ranked as fundamental.”

Justice O'Connor, concurring with Justice Souter, said that a historical pedigree can give a practice no more than a presumption of constitutionality. She pointed out that the Court's opinion allowed some weight to be given to considerations of fairness in operation, as she thought required by relevant precedents. Justice Blackmun's dissent, joined by Justice Stevens, stressed that the majority had acknowledged that an analysis of fundamental fairness must be done, and the Court must carefully balance the individual and governmental interests at stake.

In addition to the analysis in cases like In re Winship and Medina, the Court has also considered cases where the Due Process Clause operates as a limitation on government for “non-fundamental” liberty rights not specifically mentioned by the Bill of Rights. The cases triggering a substantive due process review for “non-fundamental” economic and social rights are discussed at § 27.1.2.1. Those cases dealing with excessive punitive damages awards are discussed at § 27.1.2.4. The cases triggering a procedural due process review of “non-fundamental” liberty interests are discussed at § 27.4.2.3. In certain of these cases, the modern natural law Court has refined an instrumentalist-era precedent to make it more rational and effective in its operation. For example, as discussed at § 27.4.2.3 nn.322-24, the Court overruled Hewitt v. Helms in Sandin v. Conner. Hewitt had asked whether the prison had created a liberty interest by using language of a mandatory character. The Sandin Court said this created disincentives for states to codify prison management procedures and was squandering federal court time in day-to-day management of prisons.

§ 27.3 Unenumerated Fundamental Rights Under Substantive Due Process

Although not related to any clear constitutional text, the Supreme Court stated as early as 1876 in Munn v. Illinois that under some circumstances a regulation of business could be found to violate due process because “in mere private contracts, relating to matters in which the public has no interest, what is reasonable must be ascertained judicially.” Despite this being a formalist-era doctrine, a formalist methodology has difficulty accepting this kind of review of “unenumerated” rights, since it is not based on constitutional text, unless it reflects well-established traditions. Holmesians are concerned that it may not give proper deference to legislative or executive decisions.

In contrast, just as instrumentalist Justices expanded the number of Bill of Rights provisions that were deemed fundamental during the instrumentalist era, as discussed at § 27.2.4, they expanded the list of “unenumerated” rights previously recognized by the Court. This occurred in part by giving weight to considering the detriment that would occur to individuals if a particular right were not recognized. For example, as discussed at § 27.3.3, the original discovery of a right of privacy, applied initially to interference with sexual relations in marriage, led in a direct line of cases to

137  94 U.S. 113, 134 (1876).
privacy rights regarding access to contraceptives for single individuals, access to abortion, and living with relatives. As discussed at §§ 26.5.1-26.5.3, a related development during the instrumentalist era was application of strict scrutiny to non-privacy related fundamental rights found implicit in the Constitution, such as a right to travel, access to courts, and access to voting and the ballot.

In contrast to this more free-wheeling approach, natural law adherents are open to the possibility of different levels of scrutiny once they have appeared in some precedents, since natural law Justices respect the rationale of decided cases, as well as the basic values that they perceive the framers and ratifiers regarded as forming the core of individual autonomy in our society. However, natural law Justices need to find some basis, such as a long-standing tradition, or reasoned elaboration from existing precedents, or background natural law principles implicit in equal protection or due process, from which to conclude that an alleged fundamental right is implicit in the Constitution.

As a result of these different style-related perspectives, a majority of the current Supreme Court Justices are not actively engaged in extending instrumentalist precedents that discovered various unenumerated fundamental rights. For example, in Washington v. Glucksberg, discussed at § 27.3.4.3 nn.275-80, the Court held that states can ban terminally ill people from killing themselves with the help of a doctor because there is no fundamental right to assistance in committing suicide. On the other hand, the respect natural law Justices have for precedent inhibits them from overruling instrumentalist precedents with which they might not have agreed as an initial matter, as in the joint opinion of Justices O’Connor, Kennedy, and Souter in Planned Parenthood v. Casey, which refused to overrule Roe v. Wade, discussed at 27.3.4.1 nn.243-44. In addition, a number of privacy-related questions remain open, such as what are the limits on a woman's right to choose to have a partial-birth abortion, discussed at § 27.3.4.1 nn.250-52; can certain sexual acts traditionally regulated by the criminal law, like fornication or adultery, continue to be made illegal, discussed at § 27.3.4.2 nn.259-64, given the Court’s decision in Lawrence v. Texas, which held it was unconstitutional to make sodomy illegal; and do persons have a right to medical treatment that will relieve pain even though it may accelerate death, discussed at § 27.3.4.3 nn.281-82.

§ 27.3.1 The Original Natural Law Era

The basic approach of the Supreme Court to judicial review of legislation during the original natural law era was set forth in McCulloch v. Maryland, discussed at § 18.1.2. There Chief Justice Marshall said, “Let the end be legitimate, let it be within the scope of the constitution, and all means which are appropriate, which are plainly adapted to that end, which are not prohibited, but consist with the letter and spirit of the constitution, are constitutional.”

That principle, combined with the further principle announced by Justice Marshall that the Court will not inquire into the degree of the necessity for particular legislation, resulted in a very low level of judicial review. Further, as noted at § 27.2.1 nn.96-98, the Due Process Clause at this time predominantly was understood to encompass only procedure: the settled usages and modes of proceeding existing in the common and statute law of England, not shown unsuited to conditions in this country. Thus, there really was not a textual source in the Constitution during the original

---

natural law era that the Court could have used as a basis for finding some implied individual personal rights—other than, perhaps, the Ninth Amendment, discussed in Chapter 24. However, as discussed in Chapter 24, the Ninth Amendment has remained a largely unused provision of the Constitution.

§ 27.3.2 The Formalist Era: Substantive Due Process was Developed, But No Distinction Was Made in Judicial Review Between Economic and Personal Rights

As noted at § 27.1 n.4, and discussed at § 27.3.2.1 nn.142-43, beginning in 1876 in *Munn v. Illinois*, the Court gradually discovered a substantive aspect to the Due Process Clause. This led to reasonableness review of economic legislation, as in *Lochner v New York*, discussed at § 27.3.2.1 nn.149-60. Several cases during this era also involved reasonableness review of governmental action that interfered with non-economic personal interests. For example, in 1923 in *Meyer v. Nebraska*, the Court struck down a state ban on teaching German. The Court said the ban denied due process because it was not reasonably related to any legitimate end.

In *Meyer* there was no suggestion that a higher level of review would be given to interference with whatever right was involved merely because that right was non-economic in nature. Indeed, the Court dealt in the same sentence with each of the economic and non-economic rights protected during the formalist era, discussed at § 27.3.2.1-27.3.2.4, saying the liberty protected by due process:

> denotes not merely freedom from bodily restraint, but also the right of the individual to contract, to engage in any of the common occupations of life, to acquire useful knowledge, to marry, establish a home and bring up children, to worship God according to the dictates of his own conscience, and, generally, to enjoy those privileges long recognized at common law as essential to the orderly pursuit of happiness by free men."
circumstances they may, but not under all.” He then invoked a maxim he identified with a treatise written by Lord Chief Justice Hale in England “more than two hundred years ago” that when property became "affected with a public interest" it ceased to be private and could be "controlled by the public for the common good." This maxim, he argued, had become part of the common law and was embodied in the principle that private property "became clothed with a public interest when used in a manner to make it of public consequence, and affect the community at large."

Reflecting a moderate formalist approach toward the "affected with a public interest" doctrine, discussed at §§ 9.3.2 nn.71-74 & 27.3.2.1 nn.155-56, Chief Justice Waite then listed examples of such private property, including ferries, wharves, warehouses, inns, turnpikes, bridges, mills, and common carriers. In *Munn*, Chief Justice Waite found that the Chicago grain elevators at issue in the case were clothed with a public interest because: (1) the grain elevators were significant to the shipment of grain from the midwestern states that produced it to markets around the Nation; (2) nearly all the nation's midwestern grain passed through the port and railroad hub of Chicago and was stored in elevator warehouses while awaiting shipment; and (3) the Chicago grain elevator franchises charged uniform, comparatively high storage rates.143

Two years later, in 1878, the *Munn* view began to take hold that the Due Process Clause included some substantive limitation on government action regulating economic transactions. In *Davidson v. New Orleans*,144 the Court held that if a statute purported to vest the title of A's land in B, that would be a deprivation of A's property without due process of law. Additional dictum appeared in 1887 in *Mugler v. Kansas*,145 where the Court said that a law which has “no real or substantial relation” to its objects would violate the Constitution. In 1890, the Court reviewed administratively set railroad rates.146 This gave rise to the substantive standard in 1898 that such rates had to be reasonable in light of the fair value of the property in use.147 A year earlier, in 1897, the Court had struck down its first statute on liberty of contract grounds in *Allgeyer v. Louisiana*,148 which held that liberty of contract includes the right to earn a living by lawful means, and thus a state could not make it illegal for residents to use the mails to contract with a New York insurance company, even where the state’s ban was only applied against insurance companies refusing to have sufficient presence in the state to permit state citizens to sue in Louisiana courts in the event of breach of contract.

144  96 U.S. 97, 101-03 (1878).

145  123 U.S. 623, 661 (1887).

148  165 U.S. 578, 583-93 (1897).
Substantive due process review of economic regulations came to full flower in *Lochner v. New York*, 149 decided in 1905. There the Court squarely held that the right to make a contract in relation to one's business is part of a "liberty of contract" protected by the 14th Amendment, reflecting the views of the 4 extreme formalist dissenters in the *Slaughter-House Cases*, discussed at § 27.2.2 n.102. This “liberty of contract” could be interfered with only by laws which reasonably relate to the health and safety, morals, or general welfare of the public. While this doctrine might have been applied in a sensitive natural law manner, as discussed at § 14.2.2 nn.48-54, the Court applied a more rigid analysis, concluding that a law that barred a bakery employee from working more than 60 hours a week was a mere "meddlesome interference" with the rights of the individual, and, citing *Mugler*, concluded that the law had “no substantial effect” upon the health of employees to justify the Court regarding it as a health law. Justice Harlan dissented, saying the Court should place the burden of proof on the challenger to show *Mugler’s* lack of any “real or substantial relation” between means and ends. Justice Holmes, dissenting, with his usual willingness to defer to legislative decisions, said the entire *Mugler* doctrine was in error. He said the Constitution does not embody a particular economic theory, and the word "liberty" is perverted unless “a rational and fair person necessarily would admit that the statute proposed would infringe fundamental principles as the have been understood by the traditions of our people and our law.”

In terms of the standards of review, although the *Lochner* court did not indicate it was applying any heightened scrutiny, the test of *Mugler*, requiring a “fair and substantial” relationship, not a mere rational relationship, between the statute and the health of the employee, was higher than minimum rational review. As in the Takings Clause case of *City of Monterey v. Del Monte Dunes at Monterey, Ltd.*, discussed at § 21.2.5.1 nn.84-94, the requirement of a “substantial relationship to a legitimate government interest” is best understood as reflecting a heightened rational review factor balancing approach. Since in *Lochner* the Court placed the burden on the government, not the challenger, this makes the *Lochner* test a third-order heightened rational review approach, discussed at § 7.2.1 nn.23-25, similar to the third-order rational review test used today for facial discrimination against interstate commerce under the *Maine v. Taylor* test, discussed at § 20.3.2.1 nn.194-208. Similar to *Maine v. Taylor*, only strong governmental interests could justify government regulation burdening the free flow of commercial activity under the *Lochner* doctrine.

In *Lochner*, the majority concluded that the health concerns of workers in the baker’s industry was not a strong enough reason to limit bakers to 10 hours of work a day. The court viewed the baker’s industry as no more unhealthy than many other industries. The Court noted:

> We think that there can be no fair doubt that the trade of a baker, in and of itself, is not an unhealthy one to that degree which would authorize the legislature to interfere with the right to labor, and with the right of free contract on the part of the individual, either as employer or employee. In looking through statistics regarding all trades and occupations, it may be true that the trade of a baker does not appear to be as healthy as some other trades, and is also vastly

---

149 198 U.S. 45, 52-60 (1905).

150 *Id.* at 54-56 (Holmes, J., dissenting); *id.* at 68-69 (Harlan, J., joined by White & Day, JJ., dissenting).
more healthy than still others. . . . There must be more than the mere fact of the possible existence of some small amount of unhealthiness to warrant legislative interference with liberty. It is unfortunately true that labor, even in any department, may possibly carry with it the seeds of unhealthiness. But are we all, on that account, at the mercy of legislative majorities? A printer, a tinsmith, a locksmith, a carpenter, a cabinetmaker, a dry goods clerk, a bank's, a lawyer's, or a physician's clerk, or a clerk in almost any kind of business, would all come under the power of the legislature, on this assumption. No trade, no occupation, no mode of earning one's living, could escape this all-pervading power, and the acts of the legislature in limiting the hours of labor in all employments would be valid, although such limitation might seriously cripple the ability of the laborer to support himself and his family.\footnote{\textit{Id.} at 59.}

In contrast, Justice Harlan’s dissent concluded that the health reasons were sufficient. He noted:

Professor Hirt in his treatise on the “Diseases of the Workers” has said: “The labor of the bakers is among the hardest and most laborious imaginable, because it has to be performed under conditions injurious to the health of those engaged in it. It is hard, very hard, work, not only because it requires a great deal of physical exertion in an overheated workshop and during unreasonably long hours, but more so because of the erratic demands of the public, compelling the baker to perform the greater part of his work at night, thus depriving him of an opportunity to enjoy the necessary rest and sleep,-- a fact which is highly injurious to his health.” Another writer says: “The constant inhaling of flour dust causes inflammation of the lungs and of the bronchial tubes. The eyes also suffer through this dust, which is responsible for the many cases of running eyes among the bakers. The long hours of toil to which all bakers are subjected produce rheumatism, cramps, and swollen legs.” . . . Nearly all bakers are palefaced and of more delicate health than the workers of other crafts, which is chiefly due to their hard work and their irregular and unnatural mode of living, whereby the power of resistance against disease is greatly diminished. The average age of a baker is below that of other workmen; they seldom live over their fiftieth year, most of them dying between the ages of forty and fifty.\footnote{\textit{Id} at 70-71 (Harlan, J., joined by White & Day, JJ., dissenting).}

Part of the difference in the result between majority and dissent in \textit{Lochner} is no doubt the fact that the majority put the burden on the government to defend its statute, similar to \textit{Maine v. Taylor}, while Justice Harlan’s Holmesian deference-to-government dissent, joined by moderate formalists Justices White and Day, put the burden on the challenger to prove the government’s reasons were not sufficient, similar to the \textit{Pike v. Bruce Church} test under dormant commerce clause review. This difference in terms of who has the burden of proof in \textit{Taylor} versus \textit{Pike} is discussed at § 20.3.2.1 nn.194-208. Justice Harlan indicated in his dissent, “If there be doubt as to the validity of the statute, that doubt must therefore be resolved in favor of its validity, and the courts must keep their hands off, leaving the legislature to meet the responsibility for unwise legislation.”\footnote{\textit{Id.} at 68.}
The tests of *Maine v. Taylor* and *Lochner v. New York* are similar in another way. Under *Taylor*, pure economic protectionism is an illegitimate interest that cannot be used to justify a burden on interstate commerce. Under *Lochner*, pure economic regulation of the free market was viewed as an illegitimate government interest. This was based, in part, on a view that the 14th Amendment Due Process Clause reflected a belief in economic Social Darwinism, or as phrased in Justice Holmes’ dissent in *Lochner*, “Mr. Herbert Spencer’s Social Statics.” Under this view, only government regulations for health and safety reasons, morals, or businesses affected with the public interest reflected legitimate government reasons for regulating.

Further, as discussed at § 9.3.2 nn.71-74, for extreme formalists, a business affected with the public interest had to be one in which “the public itself might appropriately undertake, or one whose owner relies on a public grant or franchise for the right to conduct the business, or in which he is bound to serve all who apply; in short, such as is commonly called a public utility; or a business in its nature a monopoly.” In such cases, there is no competitive free market to discipline business behavior, and thus government regulation is justified. In contrast, for moderate formalists, the phrase “affected with the public interest” meant “no more than that an industry, for adequate reason, is subject to control for the public good.”

After *Lochner*, many cases during the formalist era applied the *Lochner* kind of heightened rational review analysis to invalidate federal or state economic regulation. This included invalidating laws regulating or banning employers from using yellow dog contracts (*i.e.*, employee agreements not to join a union); minimum wage laws for women and children, as in *Adkins v. Children’s Hospital*; and laws regulating materials used in production, prices, or entry into business.

154 *Id.* at 75 (Holmes, J., dissenting).

155 *Id.* at 536. For discussion of *Lochner* generally, see Jeffrey M. Shaman, *On the 100th Anniversary of Lochner v. New York*, 72 Tenn. L. Rev. 455 (2005), and sources cited therein.

156 See, *e.g.*, *Adair v. United States*, 208 U.S. 161 (1908) (invalidated state and federal legislation forbidding employers to require employees to agree not to become or remain members of a labor organization during their employment); *Adkins v. Children’s Hospital*, 261 U.S. 525 (1923) (struck down federal law prescribing minimum wages for women and children, the Court saying that laws abridging the freedom of contract can be justified only by the existence of exceptional circumstances); *Weaver v. Palmer Bros. Co.*., 270 U.S. 402 (1926) (invalid to bar the use of shoddy in the manufacture of comfortables where shoddy could be made harmless by disinfection or sterilization and there was no evidence of disease having resulted from its use); *Tyson & Bro.-United Theatre Ticket Offices v. Banton*, 273 U.S. 418 (1927) (invalid to regulate the prices of theater tickets because that power exists only with business that has become affected with a public interest); *New State Ice Co. v. Liebmann*, 285 U.S. 262 (1932) (invalid to require a certificate of public convenience and necessity of persons who desired to engage in the ice business). See generally Robert C. Post, *Defending the Lifeworld: Substantive Due Process in the Taft Court*, 78 B.U.L. Rev. 1489 (1998).
On the other hand, where the government interests were perceived as being strong enough, as for health concerns with miners and black lung disease,158 or laws requiring vaccinations,159 or health concerns with women working more than 10 hours a day in a factory, as in Muller v. Oregon,160 legislation was upheld. As discussed at § 26.3.1.1 nn.351-53, the practical impact of the statute in Muller was to favor men for employment, since many manufacturing plants at the time ran on two 12-hour shifts, and if women, but not men, could only work 10 hours a day, they were not as attractive employees for businesses.

As the formalist era came to a close, a shadow was cast over the Lochner form of review in 1934 by Nebbia v. New York.161 In that case, a 5-4 Court allowed New York to fix prices for milk. The 5-Justice majority of non-formalist Justices Brandeis, Stone, and Cardozo, and moderate formalists Chief Justice Hughes and Justice Roberts, rejected the argument that price fixing was unreasonable per se except as applied to businesses, like utilities, that are in their nature a monopoly. The Court said there is no closed class of public interest businesses. Instead, the question in all cases is whether the challenged regulation has a reasonable relation to a proper legislative purpose. Building on the Lochner dissents, and echoing Justice Holmes, the Court said that a state is free to adopt whatever economic policy may reasonably be deemed to promote the public welfare. Four extreme formalists, Justices McReynolds, Van Devanter, Sutherland, and Butler, dissented in the case.

Even so, Nebbia did not spell the end of Lochner reasonableness review. In 1936, Justice Roberts, author of the Nebbia opinion, joined with the four Nebbia dissenters. Citing Adkins, which the Court had not been asked to reconsider, the Court held invalid a law providing minimum wages for women employees in Morehead v. New York ex rel. Tipaldo.162

Despite Tipaldo, in 1937, when faced with the question whether to overrule Adkins, Justice Roberts joined the same 5-4 majority in Nebbia to overrule Adkins in West Coast Hotel Co. v. Parrish.163 The Court said that the liberty safeguarded by due process is a "liberty in a social organization which requires the protection of law against the evils which menace the health, safety, morals, and welfare of the people." The Court then held that the health of women is a legitimate goal and a legislature could reasonably determine that minimum wages were a means toward that goal. During the 1940s, the Court overruled other cases that had followed Lochner, and upheld laws fixing maximum hours

and minimum wages for men and women, laws protecting union members, and laws on entry conditions on business. Since 1937, there has been no fundamental right to liberty of contract, and standard economic regulations trigger only minimum rational review, as discussed at § 27.1.2.1.

§ 27.3.2.2 Fundamental Right to Acquire Useful Knowledge

As noted at § 27.3.2 nn.140-41, in Meyer v. Nebraska the Court struck down a state ban on teaching German. The Court said the ban denied due process because it was not reasonably related to any legitimate end, and denied the individual a fundamental right “to acquire useful knowledge.” The Court noted in Meyer that the “American people have always regarded education and acquisition of knowledge as matters of supreme importance which should be diligently promoted.”

This right can also be seen as related to the First Amendment freedom of speech. If one has a right of free speech, one should have a right to acquire useful knowledge about which to speak. Indeed, the Court noted in Meyer, “No emergency has arisen which renders knowledge by a child of some language other than English so clearly harmful as to justify its inhibition with the consequent infringement of rights long freely enjoyed.”

§ 27.3.2.3 Fundamental Right to Marry, Establish a Home, and Raise Children

As noted at § 27.3.2 n.141, in Meyer v. Nebraska the Court stated that individuals have a fundamental right “to marry, establish a home and bring up children.” Although not stated explicitly in Meyer, these rights can be seen as reflecting long-standing traditional practices in Western societies regarding individual rights, and thus appropriate for even a formalist court to acknowledge as “implicit in the concept of ordered liberty,” based upon the formalist historical focus on customs and traditions. Viewed as a matter of customs and traditions, this constellation of rights would only include the right of one man and one woman to marry (not polygamy or same-sex marriage), and then establish a home (not live together before marriage), and then bring up the children conceived in that marriage (not rights regarding illegitimate children). The literal text in Meyer supports that view, as the rights are not phrased as three independent rights – one right “to marry,” another right “to establish a home” independent of marriage, and a third right “to bring up children” – but are phrased as one set of related rights “to marry, establish a home and bring up children.”

A formalist-era case where the state law interfered with this bundle of rights was Pierce v. Society of Sisters. There an Oregon statute required parents to send their children, aged 8-16, to a public school. The challenger was a Catholic society whose school would be put out of business by the

164 United States v. Darby, 312 U.S. 100 (1941).
167 262 U.S. 390, 400, 403 (1923).
law. The Court struck down the law because it unreasonably interfered with the right of parents and guardians to direct the education of children under their control. As the Court stated, “The fundamental theory of liberty upon which all governments in this Union repose excludes any general power of the state to standardize its children by forcing them to accept instruction from public teachers only. The child is not the mere creature of the state; those who nurture him and direct his destiny have the right, coupled with the high duty, to recognize and prepare him for additional obligations.” Once again, however, the Court did not indicate that it was applying any higher standard than it would have applied to interference with an economic right.

In another formalist-era case, Buck v. Bell, the Court upheld a law permitting sterilization of a person deemed mentally infirm, with the Court noting, per Justice Holmes, “Three generations of imbeciles are enough.” Although the Court did not specifically address the issue, the case is consistent with the view that during the formalist era there was no fundamental right to procreate, even though there was, as stated in Meyer and Pierce, a right “to marry, establish a home and bring up children.” With respect to the particular individual involved in Buck v. Bell, it has been questioned whether Carrie Buck was, in fact, mentally infirm, or only had an 8th-grade education. In any case, she was a victim of the almost 20,000 “forced eugenic sterilizations” performed in the United States during the first third of the 20th Century.

§ 27.3.2.4 Fundamental Right to Worship God and the Orderly Pursuit of Happiness

The Court’s language in Meyer, cited at § 27.3.2 n.141, indicated that part of the liberty of the 14th Amendment was a liberty “to worship God according to the dictates of his own conscience, and, generally, to enjoy those privileges long recognized at common law as essential to the orderly pursuit of happiness by free men.” The first of these additional rights, the liberty to worship God, is reflected in the First Amendment provision regarding the “free exercise” of religion, discussed at § 32.2. The second of these two provisions, regarding the “orderly pursuit of happiness,” is reflective of the Declaration of Independence’s language regarding inalienable rights to “life, liberty, and the pursuit of happiness.” This right is discussed at § 27.3.4.2 nn.259-70, as part of the developing right of privacy, particularly the right to make decisions regarding sexual practices in which to engage.

§ 27.3.3 Modern Unenumerated Fundamental Rights Doctrine: Distinctions Drawn Between Economic and Personal Rights

The main thrust of due process decisions during the Holmesian era, first outlined by the Court in 1938 in United States v. Carolene Products Co., was to abandon the heightened reasonableness review of Lochner and substitute the minimum rational review presumption of constitutionality for economic regulations. Thus, the Court would ask whether any state of facts either known or which

could reasonably be assumed afforded support for the legislature's choice of means to accomplish a legitimate goal. In his famous footnote 4, discussed at § 26.1.2.2, Justice Stone said that a narrower scope for presuming constitutionality might exist in certain cases. The examples provided, however, did not include fundamental rights not found in constitutional prohibitions. They were instead legislation within a specific constitutional prohibition, or legislation that restricts political processes, or which is directed at particular religions or discrete and insular minorities.

Since 1938, the list of fundamental personal liberty rights has grown to include not only the right to marry, establish a home, and raise children, as in Meyer, but also a right to procreate, a right not to procreate through access to contraception and abortion, and other personal liberty rights identified by the Court. In addition to the consideration of “history and traditions” and “collective conscience” of the people, discussed at § 27.1.1 nn.9-31, these rights have been elaborated in two kinds of ways.

One kind of analysis involves reasoning from enumerated fundamental rights in the Bill of Rights to other kinds of unenumerated rights viewed as related to those rights by being within the “penumbras” or “emanations” of those rights. For example, as noted at § 27.3.2.2 n.167, the Court’s conclusion in Meyer that there exists a right “to acquire useful knowledge” can be understood as a corollary to the First Amendment right to “freedom of speech.” Similarly, as discussed at § 27.3.2.4, the right “to worship God” mentioned in Meyer was likely closely related in the Court’s mind, and perhaps even identical, to the First Amendment provision regarding the “free exercise” of religion. Justice Douglas’ 1965 opinion in Griswold v. Connecticut provides another example. In Griswold, Justice Douglas said that a case involving access to contraception by a married couple for use in their home concerned an unenumerated right of privacy related to several fundamental constitutional guarantees dealing with privacy. He referred to the right of association contained in the “penumbra” of the First Amendment, the Third Amendment’s ban on the quartering of soldiers in one’s home, the Fourth Amendment right to be secure from unreasonable searches and seizures, and the self-incrimination clause of the Fifth Amendment.

A second kind of analysis involves “analogical” reasoning from earlier identified unenumerated fundamental rights to new unenumerated fundamental rights that flow from a process of reasoned elaboration. For example, the Court had held in Meyer that there exists fundamental rights to marry, establish a home, and raise children. A right flowing naturally from these rights would be a right of a married person to procreate a child that the individual has a right to raise. Thus, the Court held in Skinner v. Oklahoma that both “marriage and procreation” are fundamental rights. So stated, these rights deal with the right of an individual to make decisions regarding marriage, procreation, and raising children. The Court has indicated that these cases involve what is called “decisional privacy,” that is, an “interest in independence in making certain kinds of important decisions.” Following the principle of “reasoned elaboration of the law,” this means the individual should have a right to make a decision either to procreate or not procreate, or marry or not marry.

172 316 U.S. 535, 541-42 (1942).
The Court has elaborated the unenumerated fundamental rights analysis in this way. Thus, a second justification for the decision in *Griswold*, noted above, is that if a married couple has a right to procreate, they also have a right not to procreate, and thus a right of access to contraception. Similarly, based on “analogical” reasoning, an individual has a right not to marry, in addition to a right to marry. Thus, in *Eisenstadt v. Baird*, the Court held that an individual does not have to be married to have equal rights to procreate or not to procreate. The Court said, “If the right of privacy means anything, it is the right of the *individual*, married or single, to be free from unwarranted governmental intrusion into matters so fundamentally affecting a person as the decision whether to bear or beget a child.” Through such “penumbral” and “analogical” reasoning, fundamental rights can be identified that were not part of societies’ original customs and traditions. Given the role of customs and traditions in their analysis of fundamental rights, as noted at §§ 9.2.2.1 n.40 & 27.1.1 n.10, formalist Justices reject such “reasoned elaboration” of the law, as noted at § 9.2.2.2 n.56.

One additional aspect of this modern unenumerated fundamental right doctrine deserves mention. Usually any burden on an enumerated fundamental right will trigger the same kind of scrutiny, typically strict scrutiny. However, in recent times, as noted at § 21.2.3, the Court has begun to draw a distinction between undue or substantial burdens on unenumerated fundamental rights, which trigger strict scrutiny, versus less than undue or substantial burdens, which trigger only some form of rational review. This has been done both for unenumerated fundamental rights under Due Process Clause analysis, and unenumerated fundamental rights under the Equal Protection Clause.

For example, the Court has applied strict scrutiny in cases involving substantial burdens on the fundamental right to marry, as in *Zablocki v. Redhail*, but rational review for less substantial burdens, as in *Turner v. Safley*, discussed § 27.3.3.1. The Court also clearly adopted this distinction between undue burdens and less than undue burdens regarding the right of abortion in *Planned Parenthood v. Casey*, discussed at § 27.3.4.1. The Court has applied strict scrutiny for significant burdens on the right to travel in *Shapiro v. Thompson* and *Memorial Hospital v. Maricopa County*, but in cases involving less than substantial burdens on the right to travel, the Court has applied some version of rational review, but seemingly without the usual deference to the legislative branch typical of minimum rational review, as in *Sosna v. Iowa*, discussed at § 26.5.1. The Court has also applied strict scrutiny for substantial burdens on access to courts, as in *Boddie v. Connecticut*, but only rational review for less than substantial burdens, as in *United States v. Kras*, discussed at § 26.5.2. Similarly, in the access to ballot cases, the Court has applied strict scrutiny regarding the poll tax in *Harper v. Virginia State Board of Elections*, but only rational review for less burdensome restrictions on access to the ballot in cases like *Timmons v. Twin Cities*

---

Area New Party,\textsuperscript{179} discussed at § 26.5.3. As noted at § 21.2.3, the rational review in these cases typically reflects not minimum rational review, but second-order rational review. As part of “reasoned elaboration of the law,” this distinction between undue or substantial burdens triggering heightened scrutiny versus lesser burdens triggering second-order rational review will likely be extended to each aspect of unenumerated fundamental rights analysis.

\textbf{§ 27.3.3.1 Right to Marry, Establish a Home, and Raise Children During the Modern Era}

\textbf{A. Right to Marry}

In 1978, in \textit{Zablocki v. Redhail},\textsuperscript{180} the Court reaffirmed that the right to marry is part of the fundamental right of privacy implicit in the 14\textsuperscript{th} Amendment's Due Process Clause. The case involved a Wisconsin statute that prevented a person with a pre-existing child support order from getting married unless the person could submit proof of compliance with the order and could demonstrate that the children covered by the order “are not then and not likely thereafter to become public charges.” Because this statute was held to “substantially interfere” with the right to marry, the Court applied “rigorous scrutiny” – in today’s terminology, strict scrutiny.\textsuperscript{181}

However, the Court did note that strict scrutiny was not required for less than substantial burdens on the right to marry. The Court stated, “[W]e do not mean to suggest that every state regulation which relates in any way to the incidents of or prerequisites for marriage must be subjected to rigorous scrutiny. To the contrary, reasonable regulations that do not significantly interfere with decisions to enter into the marital relationship may legitimately be imposed.”\textsuperscript{182}

Later cases have followed this distinction. For example, in \textit{Turner v. Safley},\textsuperscript{183} the Court considered a ban on the right to marry of a prisoner. Because the law recognizes that prisoners forfeit many rights that law-abiding citizens enjoy, this ban was not viewed as a substantial burden on the right to marry triggering strict scrutiny. Instead, the Court applied a “reasonableness” test. Even under this test, the absolute ban on marriage was declared unconstitutional as “unreasonably” broad.

The Court has never been clear whether this “reasonableness” test is a more vigorous kind of

\textsuperscript{179} Harper, 383 U.S. 663 (1966); Timmons, 520 U.S. 351 (1997).

\textsuperscript{180} 434 U.S. 374 (1978).

\textsuperscript{181} \textit{Id.} at 388. Specifically, the Court stated, “When a statutory classification significantly interferes with the exercise of a fundamental right, it cannot be upheld unless it is supported by sufficiently important state interests and is closely tailored to effectuate only those interests.” While the language in this phrasing of “important” state interests may suggest intermediate scrutiny, later cases have made it clear that substantial infringements on the right to marry trigger strict scrutiny. \textit{See, e.g.}, Turner v. Safley, 482 U.S. 78, 94-95 (1987).

\textsuperscript{182} 434 U.S. at 388.

\textsuperscript{183} 482 U.S. 78, 96-99 (1987).
rational review or the minimum rational review test of modern economic regulation cases. Results of the cases, as in Turner v. Safley, suggest it is the more vigorous kind of second-order rational review, as noted at § 21.2.3. Since substantial deference is not given to the government, the government will lose these cases if substantial burdens are imposed that only advance minor interests, but the challenger bears the burden of establishing the “unreasonableness” of the government action in this second-order cost-benefit analysis.

As noted at § 27.3.3 n.174, in Eisenstadt v. Baird, the Court observed, “If the right of privacy means anything, it is the right of the individual, married or single, to be free from unwarranted governmental intrusion into matters so fundamentally affecting a person as the decision whether to bear or beget a child.” This decision suggests the Court views the right to marry as including a right not to marry, and still be treated equally, at least for purposes of the right of privacy.

B. Right to Establish a Home

The right to establish a home was initially stated in Meyer as part of a constellation of three rights: the right “to marry, establish a home and bring up children.” However, just as the right to marry has been extended past its core to encompass the right not to marry and be treated equally before the law, at least with respect to the right to privacy, the right to marry and establish a home has been extended in the modern era past its core right of a married couple to establish a home. For example, in 1977, in Moore v. City of East Cleveland, the right to establish a home was expanded to include the right of related individuals to choose their living arrangements – specifically, the right of a grandmother to live with her two grandsons who were first cousins rather than brothers.

Writing for the Court, Justice Powell said that the Constitution protects the sanctity of the family because the institution of the family is “deeply rooted in the Nation's history and traditions.” This tradition is not confined to members of the nuclear family. Justice Powell noted, “The tradition of uncles, aunts, cousins, and especially grandparents sharing a household along with parents and children has roots equally venerable and equally deserving of constitutional recognition.” The Court thus used “history and traditions” as the justification for broadening the extent of the unenumerated right. As a second justification for broadening the right to establish a home, Justice Marshall, concurring, cited Pierce in support of a principle that the state can no more standardize families than it can standardize children by forcing them to accept instruction from public teachers only. This is an example of “analogical” reasoning used to broaden the extent of a fundamental right.

Holmesians Justices Stewart and Rehnquist, in one dissent, and Justice White, in another dissent, said that there are a wide array of liberty interests, but the usual test should be whether the law is a rational means of achieving a legitimate purpose. Only interests that are implicit in the concept of ordered liberty, defined in Palko terms of “neither liberty nor justice would exist if (it) were

---

186 Id. at 537-40 (Stewart, J., joined by Rehnquist, J., dissenting); id. at 548-50 (White, J., dissenting).
sacrificed,” should be given a heightened level of scrutiny. In their view, Justice Powell’s test of what is deeply rooted in the country’s traditions gives far too extensive a charter to the Court and is a far less confining guiding principle. By 1986, however, in *Bowers v. Hardwick*, Justice White, joined by Justice Rehnquist, wrote an opinion resigned to traditions as one way to determine ordered liberty.

C. **Right to Raise Children**

The core right identified in *Meyer* was the right of a married couple to raise their child. This was the right vindicated in *Pierce v. Society of Sisters*, where an Oregon statute that required parents to send their children, aged 8-16, to a public school was struck down as interfering with the rights of parents to direct the education of children under their control. Even in *Pierce*, however, the Court phrased the doctrine as the rights of “parents or guardians” to direct the education of children under their control, thus extending the right past married couples to guardians. In modern times, the Court has phrased the doctrine as follows: “We have little doubt that the Due Process Clause would be offended ‘if a State were to attempt to force the breakup of a natural family, over the objection of the parents and their children, without some showing of unfitness and for the sole reason that to do so was thought to be in the children’s best interest.’”

Modern cases involving the rights of parents to raise children have implicitly applied a “substantial burden” versus “less than substantial burden” analysis. For example, in *Alfonso v. Fernandez*, a court considered a condom-distribution program to children at public schools that did not have an voluntary opt-out provision for parents who wished their children not to have access to the program. Faced with this greater burden on parental rights, the court applied a strict scrutiny approach to this burden on their fundamental right to raise their child. In contrast, in *Parents United for Better Schools, Inc. v. School District of Philadelphia*, the condom distribution program had a voluntary opt-out provision for parents who did not wish their child to participate in the program. Faced with this lesser burden on parental rights, the court applied only rational basis scrutiny.

When the issue involved is merely providing information, not providing services, courts usually hold that schools may provide information, including information about sexual matters, without parental consent. This may be done either by holding that providing such information does not trigger any fundamental “child-rearing” analysis at all, and thus only minimum rational review applies, or by holding that any burden is only minor, and the program is constitutional under generic rational basis

---

In addition, while the Supreme Court has held that a state may not forbid parents from attempting to educate their children in accordance with their beliefs, this right does not extend to preventing states from providing certain information or services to minors without parental participation. For example, in 1980, a federal court of appeals upheld a Michigan Health Department's provision of contraceptive information and services to minors without parental notification. The court noted, “There is no requirement that the children of the plaintiffs avail themselves of the services offered by the Center and no prohibition against the plaintiffs’ participating in decisions of their minor children on issues of sexual activity and birth control. The plaintiffs remain free to exercise their traditional care, custody and control over their unemancipated children.” More recently, in 2005, a federal district court upheld as constitutional the provision of morning after pills by a municipal health center to an unemancipated minor without parental notice or consent. Indeed, outside the school context, numerous courts have held that parental notice requirements in the context of contraception and family planning services are inconsistent with Title X of the Public Health Service Act, which is viewed as imposing a burden of confidentiality on providers of such services.
Modern cases have also struggled with the rights of unmarried persons to raise their children. These cases typically involve unwed fathers. The critical fact in these cases, as noted below, appears to be the extent to which the father had established or had tried to establish a relationship with the child. Where the father had established such a relationship, a fundamental right to raise that child was usually held to exist. Where no such relationship existed, the courts typically apply rational review.

Because in many cases the unwed mother is given greater rights than the unwed father, a number of these fundamental rights cases were brought under the Equal Protection Clause. For example, the Court held equal protection is denied by a statute which, on death of the mother, made the child a ward of the state without giving the father a hearing on fitness before the child was removed from his custody.\textsuperscript{196} If the father has lived with the child, equal protection is denied if the mother can block adoption, but the father can not.\textsuperscript{197} Such a discriminatory classification could be applied, however, where the father had not lived with the mother, did not have custody of the child, had not sought custody, and the adoption by the mother’s husband recognized a family unit already in existence.\textsuperscript{198} And a state may permit a mother, but not an unwed father, to sue for the wrongful death of the child where the father had taken no steps to legitimate the child.\textsuperscript{199}

Other cases have involved more of a straightforward Due Process Clause review. For example, it was not a denial of due process to grant an adoption without notice to the father, even though his whereabouts were known, if the father had not established any relationship with the child, despite a statutorily required notice to him that he was identified as the father on the child’s birth certificate.\textsuperscript{200}

In the most noteworthy post-instrumentalist case, \textit{Michael H. v. Gerald D.},\textsuperscript{201} the Court upheld a denial of visitation rights to the father of an unwed child who for some time lived with the mother and child. Subsequent to that time, however, the mother had reconciled with her husband and was living with him. Justice Scalia wrote for a plurality that if a mother lives with her husband and seeks to preserve her marriage, a state may apply a conclusive presumption that her children are legitimate and, thus, may dismiss an action by a putative father to establish paternity and obtain visitation rights. The plurality held that the putative father lacked a fundamental liberty interest in his relationship with the child. Also, the child had no due process right to multiple fathers.

\end{itemize}
Justice Brennan, dissenting with Justices Marshall and Blackmun, said that a biological link plus a substantial parent-child relationship, establishes a constitutionally protected interest in parenthood, and parenthood is a fundamental interest. Such traditions as protecting parenthood should not be looked at with specificity, as by asking whether protection has traditionally been afforded a natural father's relationship with a child whose mother is married to another man. Justice Scalia replied in footnote 6 that he preferred to consider “the most specific level at which a relevant tradition protecting, or denying protection to, the asserted right can be identified.” Justices O'Connor and Kennedy concurred in all but footnote 6 of Justice Scalia's opinion. Demonstrating their respect for precedent, they noted that the Court has characterized relevant traditions protecting asserted fundamental rights at levels of generality that might not be the most specific level available.202

Justice Stevens concurred, but only because he read the record to indicate that the trial court had considered all the facts and made a decision in light of the best interests of the child. Justice White, dissenting with Justice Brennan, said that he read the precedents to hold that an unwed father who has demonstrated a sufficient commitment to his paternity by way of personal, financial, or custodial responsibilities has a protected liberty interest in a relationship with his child. To protect that interest he should be given a hearing on that matter rather than having the child conclusively presumed to be that of the mother's husband, as was done here under California law.203

Despite this ruling, some state Supreme Courts, under their own state Constitutions, have granted biological fathers constitutionally protected rights, both in cases similar to Michael H., and in cases where the biological father wished to contest the mother's desire to give up the child for adoption.204 As a matter of statutory law in state Family Codes, a majority of states today would give the father in circumstances like Michael H. statutory rights, as well as responsibilities for support.

§ 27.3.3.2 Right to Procreate and Right Not to Procreate

The first case identifying a fundamental right to procreate was Skinner v. Oklahoma.205 There the Court held that equal protection is denied by a statute which required sterilization of persons twice convicted of grand larceny, but not embezzlement. After noting that irrevocable injury to a basic civil right was involved, Justice Douglas said, "We mention these matters not to reexamine the scope of the police power of the States. We advert to them merely in emphasis of our view that strict scrutiny of the classification which a State makes in a sterilization law is essential." In deciding the case, the Court noted, “We are dealing here with legislation that involves one of the basic civil rights of man. Marriage and procreation are fundamental to the very existence and survival of the race.”

205 316 U.S. 535, 541 (1942).
The issue of a right not to procreate was raised in Poe v. Ullman. In Poe, a majority of the Court avoided a decision on the merits. Justice Frankfurter’s plurality opinion noted, “The Connecticut law prohibiting the use of contraceptives has been on the State's books since 1879. During the more than three-quarters of a century since its enactment, a prosecution for its violation seems never to have been initiated, save in [one test case] in 1940. . . . Neither counsel nor our own researches have discovered any other attempt to enforce the prohibition of distribution or use of contraceptive devices by criminal process. The unreality of these law suits is illumined by another circumstance. We were advised by counsel for appellants that contraceptives are commonly and notoriously sold in Connecticut drug stores. Yet no prosecutions are recorded; and certainly such ubiquitous, open, public sales would mere quickly invite the attention of enforcement officials than the conduct in which the present appellants wish to engage – the giving of private medical advice by a doctor to his individual patients, and their private use of the devices prescribed.” For these reasons, the majority of the Court dismissed the case under the ripeness doctrine, noted at § 17.3.2 n.490.

In a famous dissent, Justice Harlan found the case sufficiently ripe and addressed the substance of a due process claim. He stated:

Due process has not been reduced to any formula; its content cannot be determined by reference to any code. The best that can be said is that through the course of this Court's decisions it has represented the balance which our Nation, built upon postulates of respect for the liberty of the individual, has struck between that liberty and the demands of organized society. If the supplying of content to this Constitutional concept has of necessity been a rational process, it certainly has not been one where judges have felt free to roam where unguided speculation might take them. The balance of which I speak is the balance struck by this country, having regard to what history teaches are the traditions from which it developed as well as the traditions from which it broke. That tradition is a living thing. A decision of this Court which radically departs from it could not long survive, while a decision which builds on what has survived is likely to be sound. No formula could serve as a substitute, in this area, for judgment and restraint.

. . . . This “liberty” is not a series of isolated points pricked out in terms of the taking of property; the freedom of speech, press, and religion; the right to keep and bear arms; the freedom from unreasonable searches and seizures; and so on. It is a rational continuum which, broadly speaking, includes a freedom from all substantial arbitrary impositions and purposeless restraints, and which also recognizes, what a reasonable and sensitive judgment must, that certain interests require particularly careful scrutiny of the state needs asserted to justify their abridgment.

Despite this natural law sounding rhetoric, Justice Harlan’s ultimate conclusion reflected his Holmesian predisposition for normal legislative and executive decisionmaking to be central in

\[207\] Id. at 542-43 (Harlan, J., dissenting) (citations omitted).
determining the content of constitutional rights. He noted:

But conclusive, in my view, is the utter novelty of this enactment. Although the Federal Government and many States have at one time or other had on their books statutes forbidding or regulating the distribution of contraceptives, none, so far as I can find, has made the use of contraceptives a crime. Indeed, a diligent search has revealed that no nation, including several which quite evidently share Connecticut's moral policy, has seen fit to effectuate that policy by the means presented here. Though undoubtedly the States are and should be left free to reflect a wide variety of policies, and should be allowed broad scope in experimenting with various means of promoting those policies, I must agree with Mr. Justice Jackson that “There are limits to the extent to which a legislatively represented majority may conduct . . . experiments at the expense of the dignity and personality” of the individual. Skinner v. State of Oklahoma, 316 U.S. 535, [546 (1941) (Jackson, J., concurring)]. In this instance these limits are, in my view, reached and passed.208

The 1965 opinion in Griswold v. Connecticut209 formally extended the fundamental right to procreate to create a fundamental right not to procreate. The Court there reversed a conviction for violating the Connecticut statute, where, in order to overcome ripeness concerns, the Executive Director of the Planned Parenthood League of Connecticut, Estelle Griswold, and Dr. Lee Buxton, a licensed physician who served as Medical Director for the League in New Haven, had been arrested and convicted for giving contraceptive advice to married persons, and fined $100 each, as part of a test case. Justice Douglas said that the case concerned a relationship lying within a zone of privacy created by several fundamental constitutional guarantees. Using “penumbral” reasoning, discussed at § 27.3.3 n.171, he referred to the right of association contained in the penumbra of the First Amendment, the Third Amendment's ban on the quartering of soldiers in homes, the Fourth Amendment right to be secure from unreasonable searches and seizures, the Fifth Amendment self-incrimination clause, and the Ninth Amendment. By banning information about contraceptives, and their use, the law had used means which swept unnecessarily broadly.

Justice Douglas indicated that he was not using Lochner as his guide, as it dealt with laws touching economic problems, business affairs, or social conditions. Here, however, was the intimate relationship of husband and wife, and their physician's role in one aspect of that relationship. In order to show that the association of persons in the marriage relationship is a penumbral right, protected by the Constitution, Justice Douglas argued that several cases had recognized peripheral rights around the specific rights mentioned in the First Amendment which help make the specific rights more secure – such as the right to read and freedom of inquiry. Justice Douglas cited the Meyer case as standing for the proposition that a state may not, consistently with the spirit of the First Amendment, contract the spectrum of available knowledge. Left open in Justice Douglas’ opinion were questions such as what would be the exact test for when law would be viewed as sweeping too broadly, and what state interests could justify interference with marital rights.

208  Id. at 554-55.

Justice Goldberg, concurring with fellow instrumentalists Warren and Brennan, said that the right of privacy in marriage was deep-rooted in our society. He explained that rights to marital privacy and to make decisions on the size of a family to raise are of similar order and magnitude as the fundamental rights specifically protected by the Constitution. Therefore, they were rights that a state could not abridge. This method of creating constitutional rights by analogy has often been used by the Court, as discussed at § 27.3.3 nn.172-74. Justice Goldberg also supported this result by reference to the Ninth Amendment, as discussed at § 16.3 nn.71-75.210

Justices Black dissented, with Justice Stewart. Justice Black’s formalist-sounding dissent pointed out that there was no constitutional text which forbade laws abridging the "privacy" of individuals. He said that interpreting the Due Process Clause in terms of natural justice, as the Court had done, is no less dangerous when used to enforce the Court's views on personal rights than when enforcing economic rights – a method that had been repudiated since *Lochner* was rejected in 1937.211

Seven years later, in 1972, the Court held in *Eisenstadt v. Baird*212 that *Griswold* could be extended to cover the use of contraceptives by unmarried couples. The Court noted, “[T]he marital couple is not an independent entity with a mind and heart of its own, but an association of two individuals each with a separate intellectual and emotional makeup. If the right of privacy means anything, it is the right of the *individual*, married or single, to be free from unwarranted governmental intrusion into matters so fundamentally affecting a person as the decision whether to bear or beget a child.”213

In 2002, the Ninth Circuit Court of Appeals considered in *Gerber v. Hickman*214 whether a prisoner had a fundamental right to procreate that would be infringed by the refusal of the prison’s warden to send a sample of his sperm to his wife for artificial insemination. Although acknowledging that prisoners have a fundamental right not to be sterilized, as in *Skinner v. Oklahoma*, discussed at § 27.3.3.2 n.205, and a fundamental right to marry, as in *Turner v. Safley*, discussed at § 27.3.3.1.A n.183, a 6-5 *en banc* majority of the Ninth Circuit held that prisoners have no fundamental right in this context, as recognition of such a right would be “inconsistent” with the status of being a prisoner. Perhaps a better argument, based on “reasoned elaboration of the law” through “analogical reasoning,” would have been to recognize such a right, as did the *en banc* dissent, but then to ask, as in *Safley*, whether the refusal by the warden was “reasonably related to penological objectives” as a less than substantial burden on a fundamental right – which it may, or may not, have been.

§ 27.3.3.3  Right Not to Procreate Through Access to Abortion

As noted at § 27.3.3.2 nn.212-13, the Court held in 1972 in *Eisenstadt v. Baird* that the right of privacy includes the right of an individual, married or single, to be free from governmental intrusion into the decision “whether to bear or beget a child.” One year later, the Court decided *Roe v. Wade*. There the Court held that the right of privacy, already extended in the precedents to activities relating to marriage, procreation, and contraception, was broad enough to encompass a woman's decision on whether or not to terminate her pregnancy. Thus, if the state were to burden that right, the state regulation would have to pass strict scrutiny review.

The decision in *Roe* was supported by reference to arguments of history, practice, precedent, and prudential considerations. As an historical matter, Justice Blackmun noted that in many ancient civilizations, such as Greece and Rome, abortions were legal, and that at the common law in England and most American colonies, abortions performed before “quickening” – “the first recognizable movement of the fetus *in utero*, appearing usually from the 16th to the 18th week or pregnancy – was not an indictable offense.” This history supported recognizing a right to have an abortion early in the pregnancy. Perhaps for this reason, formalist Chief Justice Burger concurred in *Roe*, although the formalist reluctance to engage in unenumerated fundamental rights analysis absent clear specific historical intent of the framers and ratifiers or clear specific traditions, discussed at §§ 27.1.1 nn.10, 12-14 & 27.3 n.137, has supported formalists Justice Scalia and Thomas rejecting *Roe* and calling for it to be overruled, discussed at § 27.3.4.1 nn.239-41.

Regarding practice, Blackmun observed that subsequent to the 14th Amendment, states regulated abortion more strictly, with many states banning abortion from conception on. He noted: “Gradually, in the middle and late 19th century the quickening distinction disappeared from the statutory law of most States and the degree of the offense and the penalties were increased. By the end of the 1950's a large majority of the jurisdictions banned abortion, however and whenever performed, unless done to save or preserve the life of the mother. . . . In the past several years, however, a trend toward liberalization of abortion statutes has resulted in adoption, by about one-third of the States, of less stringent laws.” Justice Blackmun also considered arguments of social practice, noting that while the American Medical Association had historically been anti-abortion, a new AMA resolution in 1970 “emphasized 'the best interests of the patient,' 'sound clinical judgment,' and 'informed patient consent.'” Justice Blackmun also cited the position of the American Public Health Association, which advocated, “Rapid and simple abortion referral must be readily available through state and local public health departments, medical societies, or other non-profit organizations.”

The fact that a sizable number of states as a matter of legislative and executive practice banned abortion between 1868 and 1973 formed the basis of Justice White’s and Justice Rehnquist’s Holmesian dissents in the case, given the Holmesian great deference to legislative and executive practice. Justice Rehnquist noted in his dissent, “By the time of the adoption of the Fourteenth Amendment in 1868, there were at least 36 laws enacted by state or territorial legislatures limiting abortion. While many States have amended or updated their laws, 21 of the laws on the books in 1868 remain in effect today. Indeed, the Texas statute struck down today was, as the majority notes, first enacted in 1857 and ‘has remained substantially unchanged to the present time.’” 220 Justice White noted in his dissent, “The upshot [of Roe] is that the people and the legislatures of the 50 States are constitutionally disentitled to weigh the relative importance of the continued existence and development of the fetus, on the one hand, against a spectrum of possible impacts on the mother, on the other hand. . . . This issue, for the most part, should be left with the people and to the political processes the people have devised to govern their affairs.” 221

Justice Blackmun then turned the attention of his opinion to arguments of precedent and prudential considerations. Regarding precedent, Blackmun noted, “[T]he Court has recognized that a right of personal privacy, or a guarantee of certain areas or zones of privacy, does exist under the Constitution. . . . [These decisions] make it clear that the right has some extension to activities relating to marriage, procreation, contraception, family relationships, and child rearing and education. This right of privacy . . . is broad enough to encompass a woman's decision whether or not to terminate her pregnancy.” 222 Justice Blackmun also discussed prudential arguments of social policy, consistent with an instrumentalist approach to interpretation. He noted:

Specific and direct harm medically diagnosable even in early pregnancy may be involved. Maternity, or additional offspring, may force upon the woman a distressful life and future. Psychological harm may be imminent. Mental and physical health may be taxed by child care. There is also the distress, for all concerned, associated with the unwanted child, and there is the problem of bringing a child into a family already unable, psychologically and otherwise, to care for it. In other cases, as in this one, the additional difficulties and continuing stigma of unwed motherhood may be involved. All these are factors the woman and her responsible physician necessarily will consider in consultation. 223

Given this discussion, it was relatively easy for liberal instrumentalists to support Roe, since arguments of history, social practice, precedents, and prudential arguments of liberal social policy all tended to support the same result. Without resort to social policy, it is a closer call for a natural law judge based on history and practice and precedent alone, as discussed at § 27.3.4.1 nn.243-48.

Once the individual’s decision to have an abortion was viewed as a fundamental right, the Court then applied a strict scrutiny approach. Under a strict scrutiny approach, the Court noted that at some point in pregnancy the state's legitimate interests in safeguarding maternal health and protecting potential life from the moment of conception become sufficiently compelling to sustain regulation of the abortion decision under a strict scrutiny approach. During the first trimester (first three months of pregnancy), the Court concluded that none of the state's interests were compelling. After the first trimester, roughly after the 12th week of pregnancy, the state had a compelling interest in the health of the mother because at that point the medical risk of having the abortion became greater than the risk in continuing the pregnancy. Under strict scrutiny, this permits regulations “directly related” to protecting the woman’s health, as long as such regulations are the least burdensome effective alternative.224

The Court also concluded that after viability the state has a compelling interest in protecting potential life. The Court stated, “This is so because the fetus then presumably has the capability of meaningful life outside the mother’s womb. State regulation protective of fetal life after viability thus has both logical and biological justifications.” At viability, which at the time was roughly the 28th week of pregnancy, the fetus is truly an independent life, since it is capable of life apart from its mother, either by natural or artificial support. Regulations directly related to protecting the fetal life are then permissible, including banning abortion, except when necessary to preserve the life or substantial health of the mother. The interest in maternal health, which becomes compelling at an earlier part of the pregnancy, remains more compelling than protecting pre-natal life throughout the pregnancy, according to the Court’s analysis. Thus, in a case of a conflict between the two, the interest is protecting maternal health is primary.225 The Court also ruled in Roe that the fetus is not a person under the Due Process Clause with its own due process rights, an issue discussed at § 27.4.2.1.

In his concurrence in the case, Justice Stewart, who had dissented in Griswold, acknowledged that based upon Court precedents, Roe was correctly decided. He said:

Several decisions of this Court make clear that freedom of personal choice in matters of marriage and family life is one of the liberties protected by the Due Process Clause of the Fourteenth Amendment. Loving v. Virginia; Griswold v. Connecticut; Pierce v. Society of Sisters; Meyer v. Nebraska. . . . As recently as last Term, in Eisenstadt v. Baird, we recognized “the right of the individual, married or single, to be free from unwarranted governmental intrusion into matters so fundamentally affecting a person as the decision whether to bear or beget a child.” That right necessarily includes the right of a woman to decide whether or not to terminate her pregnancy. “Certainly the interests of a woman in giving of her physical and emotional self during pregnancy and the interests that will be affected throughout her life by the birth and raising of a child are of a far greater degree of significance and personal intimacy than the right to send a child to private school protected in Pierce v. Society of Sisters, or the right to teach a foreign language protected in Meyer v. Nebraska.” . . . Clearly, therefore, the

225 Id. at 160, 164-65.
Court today is correct in holding that the right asserted by [Roe is protected by the 14th Amendment].226

After the decision in Roe v. Wade, the Court decided a large number of cases in which it spelled out various implications and corollaries of the fundamental right identified in Roe. For example, even under strict scrutiny review, the Court indicated that all abortions after the first trimester could be required to be in a licensed hospital, where "hospital" included outpatient surgical clinics, and a second physician could be required at the abortion of a viable fetus to attempt to save its life when no delay occurs from that requirement which would increase the risk to the mother's health.227

On the other hand, many laws were held not to satisfy strict scrutiny. Regarding the surgical procedure itself, these included: abortion must be approved by more than one physician; saline amniocentesis cannot be used after the first 12 weeks of pregnancy; physicians must use the same care to preserve fetal life as if a live birth was intended, even before viability; abortions after the first trimester must be in a full-service hospital; doctors must use an abortion technique that favors the fetus, unless it would pose significantly greater risk to maternal health; and a second physician requirement when viability is possible, with no exception for the mother's health when a second physician is delayed.228

Regarding related matters of abortion regulation, the Court held it was unconstitutional to require a wife to inform her husband before having an abortion; to require parental consent to a minor's abortion, unless a medical emergency exists; to require a 24-hour waiting period after consent; to require the physician to tell the women that "an unborn child is a human life from the moment of conception"; to require that certain information must be provided in all cases regardless of whether in the physician's judgment the information is relevant to her personal decision or whether certain risks are nonexistent for a particular patient; and to require

226 Id. at 169-70 (Stewart, J., concurring) (citations omitted).

228 Doe v. Bolton, 410 U.S. 179, 199-200 (1973) (approval by more than one physician unconstitutional); Planned Parenthood v. Danforth, 428 U.S. 52, 75-79 (1976) (prohibition of the abortion procedure saline amniocentesis after the first 12 weeks of pregnancy unconstitutional); id. at 81-83 (same care to preserve fetal life as if a live birth was intended, even if fetus is not viable, unconstitutional); Planned Parenthood Ass'n v. Ashcroft, 462 U.S. 476, 481-82 (1983) (unconstitutional to require that abortions after 12 weeks of pregnancy be performed in a licensed hospital); Akron v. Akron Center for Reproductive Health, Inc., 462 U.S. 416, 434-36 (1983) (all abortions after the first trimester must be in a full-service hospital unconstitutional); Thornburgh v. American College of Obstetricians and Gynecologists, 476 U.S. 747, 768-69 (1986) (striking down statute requiring physician to employ abortion procedure that maximizes prospect of fetal survival on grounds that the state may not trade off a woman's life or health for the sake of the fetus); id. at 769-71 (second physician is required when viability is possible, with no exception for the mother's health when a second physician is delayed).
physicians to file information in public records from which patients might be identified.\textsuperscript{229}

Laws permitted by rational basis review because they were viewed as neutral laws not burdening abortion rights, and thus not triggering strict scrutiny, included: only physicians may perform abortions; women must provide written, informed consent; routine hospital records must be kept; states and the federal government can fund normal childbirth expenses, but refuse to reimburse for the cost of an abortion, and permissible to exempt abortion from laws reimbursing other medical costs; and all removed tissue must be sent to a pathologist.\textsuperscript{230}

With respect to minors, the Court appeared to apply an intermediate scrutiny approach, rather than strict scrutiny, because of three reasons: “the peculiar vulnerability of children; their inability to make critical decisions in an informed, mature manner; and the importance of the parental role in child rearing.” Thus, abortion laws that would be unconstitutional if applied to adults, like requiring notification or consent of another person, may be constitutional if applied to minors if there is a “significant justification” – in intermediate review terms, an “important or substantial reason” – for the difference in treatment.\textsuperscript{231}
