[To return here with Adobe Reader, version 7: (1) Click on the left vertical bar icon to return to the first page of the document, or (2) drag up the bar in the tool box which is on the right of the text, or (3) for previous pages click on the return page arrow. Similar features are available on other versions of Adobe Reader, such as Adobe Reader versions 8, 9, or 10]
CHAPTER 2  

PREFACE

This book is published in an electronic format to provide students, practicing lawyers, and scholars with a user friendly and inexpensive source of information and analysis on the path of constitutional law in the United States – a path that echoes themes in all areas of the law. Parts I, II, and III of the book discuss the styles of decisionmaking used by Justices of the Supreme Court and the factors that influence case outcomes, the standards of review, and the format of opinions and resulting law. Part IV discusses the law recognized or created by the Court in the various eras of American law. It is organized by general doctrines and by the clauses of the Constitution. A brief summary of the main themes explored in the book appears in the Summary of Themes on page 5.

A 2018 Supplement to the E-Treatise has been appended to the end of the E-Treatise. The Supplement can be accessed from the Title Page 1, or by clicking on this link: 2018 Supplement. For any point in Chapters 01-32 where material in the Supplement is related to the E-Treatise text, a boldface S, with a visible link, will appear at the end of the sentence, or with the relevant footnote. Clicking on that S will take the reader to the part of the Supplement relevant to that E-Treatise text.

There are many ways to identify topics and move from one topic or section to another. The following are available on Adobe Reader, version 7, as described below. Similar functions are on other versions. For example, in Adobe Reader, version 8, right click on “Next Page” icon to add the very useful “First Page”, “Last Page”, “Previous View”, and “Next View” features.

A. Using the cursor, drag the box in the right hand column or click on the arrows at the top or bottom of that column to move from one page to the next.

B. Press on the keyboard “Page Up”, “Page Down”, “Home”, or “End”.

C. Left click on any link. Most numbers and references to Chapters, Sections, or page numbers are active as links to other pages or sections. To use a link, left-click when the hand cursor, placed under a link, points upward.

D. Left click on a bookmark in the left hand margin to be taken to Chapters or sections. [Expose bookmarks by dragging the right margin to the middle.]

E. Use the search function by clicking on the search icon (in version 7 a binocular in the top row of icons; in earlier versions, Edit > Search) and follow on-screen prompts which appear in the right hand column. The search function can be used to locate pages, particular cases, topics, or authorities of interest. It thereby supplements the conventional table of cases, table of authorities, and index. [Press “Hide” in the upper right hand to remove the search column and restore the text to its original size.]

F. In Adobe Reader, version 7, a click in the circles on the bottom of the screen will move to a “Previous View” or the “Next View.” The bars and outer triangles at the bottom of the page will lead to Page 1 (“First Page”) or to the end of the book (“Last Page”). The inner triangles will move one page forward or backward.

For further information on moving about in the book in version 7 and arranging pages to your satisfaction, consult HELP, which follows on the next page. [ON ADOBE, AMAZON, AND MOST READERS, ALT/LEFT ARROW WILL RETURN TO PREVIOUS VIEW]
CHAPTER 3  HELP FOR ADOBE READER, VERSION 7

1. HOW IS THE PROGRAM CONSTRUCTED?
   a. The entire book is on a PDF file that appears in the middle or on the right hand side.
   b. Bookmarks to the text are on the left hand side of the screen.
   c. The Adobe Acrobat program permits movement from bookmarks to text, allows movement in the text through movement icons and links, and permits the user to search for page numbers, sections, subsections, individual words, and phrases (including the names of cases or of authorities).

2. HOW TO MOVE UP/DOWN OR FORWARD/BACKWARD IN THE TEXT
   a. Click on an arrow at the top or bottom of the right hand margin, drag the box-shaped symbol up or down, or press on the keyboard “Page Up” or “Page Down”.
   b. In the center at the bottom of the page is an indicator of the page number and on the right and left of the indicator are triangles which, when clicked on, move one page forward or one page backward. Click on a circle for previous or next view. The vertical bars send to Page 1 or the end as do keyboard keys “Home” and “End”.
   c. Virtually every number in the text or tables, or reference to a Chapter or section number, is a link to that page or section number. Use a left click when the hand symbol, placed under a link, points upward to the number or reference that is a link.

3. MOVING BETWEEN BOOKMARKS AND TEXT
   a. To reveal the column of bookmarks, move the cursor to the left lines until a symbol similar to “#” appears. Then hold down on a left click and drag the line to the right.
   b. At the right-hand side of the bookmarks is rectangular symbol. Move the cursor to the symbol, and hold down a left click to move up or down in the bookmarks.
   c. When a bookmark notes a relevant part or section of the text, the user can highlight the item by placing the cursor on that item. To move to the text, click or press “Enter.” Click on a bookmark + or - to reveal or hide sections within Chapters.
   d. To return from text to a bookmark, put the cursor on a bookmark and click.

4. HOW TO CHANGE THE SIZE OF TEXT
   There are circles with + or - in the upper set of icons, with a percentage indicator between them. Zoom in or zoom out by clicking on the circles.

5. THE SEARCH FUNCTION
   a. Put cursor on the search icon atop the page (and which looks like a set of binoculars), or on Edit > Search, then click and follow on-screen prompts in the upper right.
   b. The search function will disappear by a click on “Hide”, which appears in the upper right above the search function.

6. MOVING BETWEEN TABLES AND TEXT
   a. When in the text, click on the left bar icon at the bottom for Page 1 or Search to return to Page 1.
   b. Then, click on Table to Contents in order to get a link to Tables.
   c. When in a table, click on any page number or section to be sent there.

ILLUSTRATED HELP — NEXT PAGE
IMPORTANT ITEMS ON TOOL BAR ACROSS TOP AND RIGHT SIDE OF ADOBE READER

ACROSS TOP: For Search, click on binoculars or Edit>Search  Zoom Out - Zoom In Adobe Help

ON RIGHT SIDE: To scroll pages, click on small triangle in tool bar on the right side of the text  Move pages forward or back by dragging the box or using “Page Up” or “Page Down” on the keyboard

LINKS IN THE TEXT

Almost all numbers and cites to sections are active links. When the hand-cursor is on a link, it will point upward with the index finger. Left Click on the link to be taken to its destination.

BOOKMARKS

To see Bookmarks, click on Bookmarks in the tool bar on the left side of the text

To move down the list of Bookmarks, drag the bar on the right side of the Bookmarks tool box

To see or hide Bookmarks to sections, click on + or - that appear to the left of bookmark symbols

To hide Bookmarks feature, click on the “x” at the top right of the bookmarks tool box

ADVICE ON MOVING TO SPECIFIC PAGE OR CHAPTER HEADING

Search for pages by using a phrase, for example “Page 35”, or use Pages tab at left side of screen Search for Chapters by the format “Chapter 12”, or use a Bookmarks tab or a table with page links

NAVIGATING AROUND IN THE TEXT

IN TOOL BOX AT THE BOTTOM OF THE PAGE OF ADOBE READER:

Click on green circle at bottom of the page to return to your previous or next page viewed Bar on left goes to First Page \ Triangles give previous or next page \ Bar on right goes to Last Page Images of pages on right of tool box at the bottom of the page permits the text to be viewed as a single page, as a single page with continuous scrolling, as two pages facing each other, or as four pages formatted with two pages facing each other and continuous scrolling down to the next two pages facing each other

ON KEYBOARD: Use “Page Up” or “Page Down” or “Home” or “End”
CHAPTER .4 SUMMARY OF THEMES

§ .4.1 The Purpose of this Book

This book is intended to provide a detailed description and analysis of Supreme Court decisions interpreting and applying the Constitution. Also, it provides an explanation of how those decisions have resulted from applying four different styles of decisionmaking to the facts and to the sources for interpretation. Those styles are introduced in Chapters 1-3 of the book. Also considered in the book are the causes for each of the styles being present in the judicial predisposition of the controlling Justices during various eras of American legal history. These eras and causes are considered in Chapters 13-16 of the book.

§ .4.2 The Sources of Constitutional Interpretation

The sources for interpretation of the Constitution can be divided into contemporaneous and subsequent. Contemporaneous sources are those existing when the Constitution was framed. There are three kinds: text, context, and history. These sources can be subdivided, as follows:

1. The Constitution’s text, including
   a. The literal meaning of the text, and
   b. The text’s purpose or spirit;
2. The context of a particular provision, including
   a. Related provisions and maxims of construction, and
   b. Arguments derived from the structure of the Constitution, including theories of judicial review, federalism, separation of powers, and checks and balances;
3. Historical evidence concerning the framers’ and ratifiers’
   a. Specific intent, and
   b. General intent.

Subsequent sources are those which came into being after the Constitution was framed and ratified. There are three varieties, as follows:

1. Legislative and executive practice, and social practice, under the Constitution;
2. Judicial precedents interpreting the Constitution;
3. Arguments concerning the consequences of a particular judicial decision, including
   a. Consequences considered in light of text, context, and history; and
   b. Consequences considered in terms of practice, precedent, and policy.

These sources are considered in depth in Chapters 5-6. Chapter 8 discusses in particular the purpose of various constitutional provisions and that impact on constitutional interpretation. The different styles of decisionmaking that have predominated in various eras of American legal history weigh these sources differently, and some are not considered by one or several of the styles. Details are provided in the book, particularly in Chapters 9-12, and a summary is provided immediately below.
§ 4.3 Interpretation Sources and the Styles of Constitutional Decisionmaking

As discussed in Chapter 9, between 1873 and 1937, the predominant approach to constitutional interpretation was formalism. Today, Justices Scalia and Thomas make use of that style, and they may be joined by Justice Alito, as discussed in the Addendum chapter of this book. Formalists believe that the Constitution has a fixed, static meaning that can be changed only by amendment. Thus, they rely almost exclusively on contemporaneous sources, particularly literal meaning and specific historical intent, although they will follow well-established precedent as “settled law.”

As discussed in Chapter 10, from 1937 until 1954, a majority of the Supreme Court Justices adopted the interpretation theories of Justice Oliver Wendell Holmes, Jr. Holmes shared the formalist emphasis on literal meaning and specific historical intent, but was willing to consider purpose or general intent arguments because of his focus on the fact that all law has a purpose. Since Holmes also thought that law should reflect the will of the people, he gave considerable deference to legislative, executive, and social practice. Holmes also followed precedents which were settled law or on which persons had substantially relied. In this view, the Constitution thus can be a living document, particularly to the extent its interpretation reflects legislative and executive practice, or judicial precedents. A recent follower of this style was Chief Justice Rehnquist. Chief Justice Roberts appears likely to be a Holmesian, as discussed in the Addendum chapter of this book.

As discussed in Chapter 11, between 1954 and 1986, a majority of the Court were instrumentalists in that they viewed the Constitution as a living document which should be interpreted as an instrument to bring about just results. For instrumentalists, all of the sources of constitutional interpretation are relevant in the interpretation process, including consequences considered in terms of policy considerations. Influential instrumentalists have included Chief Justice Warren, and Justices Douglas, Brennan, and Marshall. On today’s Court, Justices Stevens, Ginsburg, and Breyer embody a moderate form of instrumentalism in their decisions.

As discussed in Chapter 12, from 1789 until 1873, and again in recent key votes since 1986 of Justices Powell, O’Connor, Kennedy, and Souter, the judges followed the 18th-century tradition of reasoned elaboration of the law in light of the law’s purposes and history, with fidelity to precedent and to a considered and consistent legislative, executive, or social practice. Chief Justice John Marshall and modern natural law Justices have also considered how consequences may interact with principles that are embodied in constitutional text, context, history, practice, or precedent.

Table 13.4 at § 13.4 summarizes the interpretation style of Justices on the Court since 1968. Text at § 13.4 summarizes the interpretation style of Justices on the Court since 1937. The entry “Justices” in the Name Index refers to the interpretation style for all 110 Justices who have been confirmed between 1789-2006. The "New Justices Addendum" notes styles for recent additions.

§ 4.4 The Format of Constitutional Law

The four styles of decisionmaking that have been applied to the sources of constitutional interpretation by various Supreme Court Justices have tended to produce different legal structures for use in judicial review. The first difference that can be observed is whether the legal reasoning of a Justice on particular issues is predominantly deductive or inductive. Formalists tend to be
deductive. Instrumentalists tend to be more inductive, with Holmesians and natural law Justices somewhere in between. Similar relationships exist for the four most important kinds of decisions that determine the form or shape of any legal doctrine, as shown by the table below. The first decision is whether doctrine should be phased in absolute, categorical terms or as a balancing test. Once that decision is made, the next decision is whether the test should be phrased in terms of elements to meet or factors to weigh. The third is whether the elements or factors should be phrased in the language of specific rules or of broader standards. The final decision is whether the rules or standards should be viewed as questions of law to be decided by a judge or questions of fact to be determined by the trier of facts. The table below suggests how all of these decisions tend to be made by the Justices who use various styles of decisionmaking.

<table>

</tr>
</tbody>
</table>

With respect to deduction and induction, there is a tendency for all Justices to reason deductively where the Constitution’s terms are relatively detailed and specific. For terms phrased more generally, like “equal protection” or “due process,” judicial elaboration has tended to be more inductive. However, the above general pattern tends to hold, regardless of the specificity of constitutional terms. These issues are discussed in depth in Chapters 4 and 7 of the book.

§ .4.5 The Decisions Reached by Applying the Styles to the Sources

In Chapters 17-32 of this book, Supreme Court decisions are discussed in the conventional order of judicial review and other structural factors, followed by individual rights, beginning with general economic and non-economic rights, then the Civil War Amendments, and concluding with the First Amendment. Emphasis is placed on the changes in the controlling decisionmaking style, and how the changes have influenced the substance of, and purposes advanced by, the governing doctrine.

As an advance look at some of the observations which are detailed in this book, it can be noted that instrumentalists, who tend to be liberal in their political predisposition, tend to believe that the Constitution created a very powerful federal government with little reserved to the states, and whose separation of powers principles favor the legislative branch rather than the President. Instrumentalists tend to believe that the general powers of government are limited by many explicit and implicit individual rights that are constitutionally protected from government action unless they can be justified by important or compelling interests and narrow tailoring. Instrumentalists prefer standards that allow for judgments in light of particular facts.

Formalists, who tend to be conservative in their political predisposition, find more powers reserved to the states by the 10th Amendment, and separation of powers principles that favor the President.
They are reluctant to find implied individual rights unless they are supported by a long and well-established history. They prefer bright-line rules rather than standards, and prefer doctrine to reflect categorical elements rather than a balancing or factor-weighing approach.

Holmesians side with formalists in supporting clear and definite rules, but they are more willing to defer to legislative or executive judgments on the scope of governmental powers. Conservative Holmesians tend to join formalists in support of states’ rights principles of federalism, while liberal Holmesians tend to join instrumentalists in favor of federal power.

Natural law Justices tend to be in the middle on structural matters. They prefer a balanced approach to federalism and separation of powers issues, and are willing to find implied rights if supported by an emerging national consciousness reflecting background natural law principles embedded in the Constitution by the framers and ratifiers, most of whom believed in some version of natural law.

The Subject Matter Index references these points under entries: Federalism, Formalist Constitutional Interpretation, Holmesian Constitutional Interpretation, Instrumentalist Constitutional Interpretation, Natural Law Constitutional Interpretation, Rules versus Standards, and Separation of Powers.

CHAPTER .5 STANDARDS OF REVIEW USED BY THE COURT

In many cases on constitutional law, the central issue is what level of scrutiny should be used by the Court. This book will explore when each level is used. A Table summarizing each of the seven levels of review noted here appears in Table 7.2, at page 186. The most deferential standard of review, used by Chief Justice Marshall in 1819 in McCulloch v. Maryland, and today described as minimum rational review, is found most prominently in cases on substantive due process and equal protection review of economic legislation. Under this level of review, a burden is placed on the challenger to show that the challenged government action has no legitimate end, or that the means are not rationally related to that end, or that the means impose an irrational burden on individuals. Substantial deference is given to the government in applying this test.

There are six higher levels of review. In second-order rational review, no substantial deference is given to the government, and the relationship of means to legitimate ends, considering the benefits and burdens of the government action, must be reasonable and not excessive, in an overall factor-weighing approach. In a slightly higher level of review, called in this book third-order rational review, the burden is shifted to the government to establish the constitutionality of its action.

Next there is intermediate review, where the government must show that its interests are important or substantial, the means are substantially related to the ends, and the means are not substantially more burdensome than necessary. This level appears in equal protection cases on discrimination based on gender or illegitimacy. The term “intermediate with bite” is used in this book to describe the next-higher standard that is used for reviewing content-based regulations of commercial speech. It is the same as intermediate review, except that the means must be directly related to the substantial end, rather than being merely substantially related.

Finally, in use for such cases as race discrimination, are two strict scrutiny standards. Both require the government to justify its actions in terms of a compelling interest, and the means must be
directly related to achieving that interest. For the highest level of strict scrutiny, the law must also be the least restrictive effective alternative. However, a few cases, such as involving racial redistricting, have used a loose form of strict scrutiny, where it is enough if the means are not substantially more burdensome than necessary, rather than having to be the least burdensome effective alternative that the government could have adopted.

Part IV of the book, Chapters 17-32, provides many examples of these seven levels of review.

PART I: THE MATERIAL OF CONSTITUTIONAL LAW

CHAPTER 1: THE MATERIAL OF JUDICIAL DECISIONMAKING

§ 1.1 Introduction to the Path of Constitutional Law Decisionmaking

It is a commonplace observation that real learning implies a “deep understanding” of a conceptual framework along with “detailed knowledge” of a rich factual base.\(^1\) This book provides such a framework and base – in metaphorical terms, a detailed atlas or roadmap – for studying the path of American constitutional law. The book covers United States constitutional doctrine from the Constitution’s ratification in 1789 to October 2006, with a “New Justices Addendum” on additions to the Court of Chief Justice John G. Roberts, Jr. on September 29, 2005, and Justices Samuel A. Alito Jr. on January 31, 2006; Sonia Sotomayor on August 8, 2009; Elena Kagan on August 7, 2010; Neil Gorsuch on April 7, 2017, and Brett Kavanaugh on October 6, 2018. A 2018 Supplement, at the end of this E-Treatise, discusses constitutional doctrine from October 2006 - August 2018.

Inspiration for the book traces to Justice Oliver Wendell Holmes, Jr., who in 1881 opened his great book, *The Common Law*, by saying, “The law embodies the story of a nation’s development through many centuries, and it cannot be dealt with as if it contained only the axioms and corollaries of a book of mathematics. In order to know what it is, we must know what it has been, and what it tends to become. We must alternatively consult history and existing theories of legislation. But the most difficult labor will be to understand the combination of the two into new products at every stage.”\(^2\)

The new products today in constitutional law embody a combination unique in Court history. This is the gradual transformation from precedents and law designed by Justices who adhered to one style of constitutional interpretation – the instrumentalist, result-oriented, judicially-activist, situation-sense perspective that flourished on the Supreme Court in the 1960s, and predominated generally on the Court from 1954-86 – to law designed by a contemporary group of non-instrumentalist Justices. The instrumentalist approach toward law generally is discussed in this book at § 3.3, with detailed discussion of the instrumentalist approach to constitutional law discussed at Chapter 11.

In contrast to the instrumentalist approach, popular usage is that a non-instrumentalist judge rejects judicial activism and will not legislate from the bench. Instead, the judge adheres to a policy of “strict construction” of the “plain meaning of text” consistent with the “original intent” of a doctrine’s framers and ratifiers. A more precise formulation of this usage would note that there are three different concepts used in the preceding sentence – plain meaning of text, strict construction, and original intent – and thus at least three different kinds of non-instrumentalist judges.\(^3\)

---

2. Oliver Wendell Holmes, Jr., The Common Law 1 (1881).
3. See, e.g., Morell E. Mullins, Sr., *Coming to Terms with Strict and Liberal Construction*, 64 Alb. L. Rev. 9 (2000) (contrasting “strict construction”; “plain meaning”; and “original intent”).
One kind of non-instrumentalist judge focuses on a doctrine’s text, whether in terms of the literal text of prior judicial decisions for common-law decisionmaking, the plain meaning of a statute for statutory construction, or the plain meaning of the text of the Constitution for constitutional interpretation. Since the text of the Constitution does not change absent formal constitutional amendment, this “textualist” approach concludes that the meaning of any provision is fixed at the time of ratification. Because the meaning is fixed, the term “originalism” has also been used to describe this approach. However, since this approach does not likely reflect the “original intent” of the framers and ratifiers, the term “originalism” is not so used in this book, as explained at § 8.4. This approach has also been called a “formalist” approach, and was most popular on the Supreme Court from 1873-1937. The term “formalism” is used in this book, not “textualism,” since each approach to constitutional interpretation discussed in this book starts with the constitutional text, and thus is “textualist” to that extent. The various approaches differ on what sources in addition to “text” are used to complete the process of constitutional interpretation, and how much weight to give those sources. The formalist approach toward law generally is discussed at § 3.1, with detailed discussion of the formalist approach to constitutional interpretation discussed at Chapter 9.

A second kind of non-instrumentalist judge focuses on “strict construction” of doctrine. With respect to the Constitution, the emphasis of “strict construction” is on a presumption of constitutionality given to legislative and executive actions, and thus deference to such legislative and executive actions, as they reflect society’s “dominant forces.” A judge following this approach will find governmental action unconstitutional only if the action is clearly unconstitutional. In this book, this approach is called a Holmesian approach, after Justice Oliver Wendell Holmes, Jr., who popularized this approach while on the Supreme Court from 1902-32. This approach is also associated with Professor James Bradley Thayer, as noted at § 10.2.1.2. This approach was most popular among a majority of Supreme Court Justices from 1937-54. The Holmesian approach to law generally is discussed at § 3.2, with detailed discussion of the Holmesian approach to constitutional interpretation discussed at Chapter 10. As noted at § 3.2, the Holmesian approach is a “strict construction” approach only for cases involving individual rights challenges to the constitutionality of governmental action. For structural issues of federalism or separation of powers, the Holmesian deference-to-government approach does not call for “strict construction” of governmental powers, but rather for deference to governmental powers. Aspects of the relationship between the Holmesian approach and “strict construction” of statutes and the common law are also discussed at § 3.2.

A third kind of non-instrumentalist judge focuses attention on the “original intent” of a doctrine’s framers and ratifiers, and therefore asks in the context of the constitutional law how the framers and ratifiers would have gone about interpreting the provision in question. In this book, this approach will be called a natural law approach to interpretation, since the Constitution’s framers and ratifiers, at least from the Constitution’s drafting through the Civil War Amendments, were guided by 18th- and 19th-century theories of natural law. This natural law approach is discussed more generally at § 3.4, with detailed discussion of the natural law approach to constitutional law discussed at Chapter 12. Under this approach, which predominated on the Supreme Court from 1789-1873, and is reflected in Chief Justice John Marshall’s approach from 1801-35, a judge follows principles associated with reasoned elaboration of the law, giving due weight to constitutional text, purpose, structure, and history contemporaneous with the drafting and ratifying of the Constitution, as well as to the subsequent events of legislative, executive, and social practice and judicial precedents.
Since Justice Thurgood Marshall’s retirement from the Supreme Court in 1991, there have been no Justices on the Court who have embodied the robust instrumentalist approach of Chief Justice Earl Warren, and Justices William Douglas, William Brennan, Abe Fortas, and Thurgood Marshall of the Warren Court of the 1960s. To a lesser extent, however, a more moderate instrumentalist approach has survived on the Court in the personages of Justices John Paul Stevens, Ruth Bader Ginsburg, and Stephen Breyer, as discussed at § 11.3.1. At least since 1986, however, a majority of Justices have not adopted an instrumentalist perspective on constitutional interpretation.

Instead, the other Justices on the Court have opted for one of the non-instrumentalist approaches. Chief Justice William Rehnquist usually adhered to Justice Holmes’ philosophy of giving great deference to legislative and executive actions. Justices Antonin Scalia and Clarence Thomas have usually applied an interpretation theory characteristic of a formalist approach. This led them often to join with Chief Justice Rehnquist, but not always. Indeed, in each Term from 1991 through 2004, when all three Justices were on the Court, there usually were some 7-2 decisions where Justices Scalia and Thomas’ formalist approach left them alone in dissent, as discussed at § 9.3.1. During this time, the typical swing votes on the Court were held by Justices Sandra Day O’Connor, Anthony Kennedy, and David Souter. They usually adhered to a natural law style of interpretation, although in some cases, as discussed at §§ 12.4.1-12.4.3, each was inclined to adopt a different style: Kennedy, formalist; O’Connor, Holmesian; and Souter, instrumentalist.

Constitutional law today reflects the clash and accommodation of these four interpretation styles. As discussed at §§ 13.1 & 14.2, each of these interpretation styles was adopted by a majority of Justices at some earlier time: natural law, 1789-1873; formalism, 1873-1937; Holmesian, 1937-54; and instrumentalism, 1954-86. None are adopted by a majority of Justices today, although each has had at least one adherent since 1973, as noted at § 13.4. This clash among the four approaches is likely to continue in the near future. As discussed in the “New Justices Addendum,” Chief Justice Roberts has tended to follow a Holmesian interpretation style similar to Chief Justice Rehnquist; Justices Alito and Gorsuch have tended to follow, and new Justice Kavanaugh likely will follow, a formalist style similar to Justice Scalia, with a slight affinity for Holmesian deference; and Justices Sotomayor and Kagan have tended to follow a liberal moderate instrumentalist style similar to Justices Ginsburg and Stevens. As discussed at § 15.4, a modern version of natural law will likely become the dominant 21st century approach. Until Justice Kennedy’s retirement, effective July 31, 2018, it was the swing vote from 1986-2018. The new swing vote is likely Chief Justice Roberts.

That four styles of interpretation are in today’s Supreme Court opinions makes it more difficult to predict outcomes and underlying reasoning. However, there is some value in not having one dominant perspective. The University of Chicago’s distinguished scholar, the late Professor Richard McKeon, believed that with “every fundamental problem, be it scientific or humanistic, there are alternative approaches which are in fruitful relation to each other.” This applies to thinkers who were contemporaries – or centuries apart. McKeon demanded his students learn more than what Plato or Aristotle had said on a given subject. . . . “[H]e wanted them to understand how Plato would have handled Aristotle’s position, and how Aristotle would have handled Plato’s position.”

---

Similarly, in this book an effort has been made to show how each of the four perspectives on judicial decisionmaking has handled the others by supporting its own premises and questioning the principles and applications of the other approaches. Because each of the four interpretation styles is reflected in some Justice’s approach today, it is easier than it might otherwise be to see that the Justices engage in this process of questioning principles and contrasting premises on a daily basis, especially when there are concurring or dissenting opinions. However, their discussion usually focuses on justifying specific decisions that may be substantially influenced by particular facts. In contrast, this book takes the discussion to a higher level of abstraction, often by dealing with groups of cases, so that general principles about the competing perspectives can emerge and be stated more clearly.

§ 1.2 Understanding the Causes of Constitutional Interpretation

§ 1.2.1 Aristotle’s Four Causes Used to Explain Any Thing or Situation: Material, Formal, Efficient, and Final Causes

For aid in designing the conceptual framework of this book, the authors have consulted Aristotelian philosophy. The nature of Aristotle’s influence on this book accords with an observation made in Professor Richard McKeon’s introduction to Aristotle’s philosophy, where McKeon said:

When . . . men return in later ages to read a philosopher’s works, their study seldom yields them concrete knowledge or useable information, unless it be history or philology, but often suggests directions of inquiry and methods inspired by the manner . . . of that philosophy.5

McKeon’s insight is valuable, as aspects of Aristotle’s substantive philosophy are clearly wrong, like his view that some men are by nature slaves, discussed at § 8.4.1 nn.72-78, or that objects, like acorns, have purposes, discussed at § 16.2.2 nn.32-33. Regarding directions of inquiry and methods, however, Aristotle’s insights are still usefully considered. McKeon explained that for Aristotle:

Ideally . . . four causes are used to explain any thing or situation, although on occasion only two or three may be accessible to investigation: the material cause out of which a thing comes to be (as the silver of a bowl); the form or definition (as the shape of the bowl); the efficient cause (as the hammering of the silversmith); and the final cause (as the purpose for which the bowl is intended).6

McKeon explained that Aristotle studied philosophy at a time when others were discussing formal and material causes. Aristotle considered his contribution to have been the discussion of efficient and final causes. As to how the causes fit together, McKeon said that in Aristotelian philosophy, “The relation of form and matter is determined in his analysis by the final and efficient cause, not by some assumption about the nature of being or some inference from the nature of thought.”7

6 Id. at xx.

7 Id. at xx.
While there is nothing magical about this approach, attention to Aristotle’s four causes can help assure that every aspect of a topic is given appropriate consideration. For example, in providing students an overview of a course, a professor reasonably can convey to them a summary of the material to be studied (coursebook, supplements, and other such material, that is, material causes), and the topics to be covered by that material (formal causes). The relation between these two formal and material matters can be foretold by the professor through noting the methods of preparation and classroom performance (efficient causes), and the goals of the course, including discussion of the final examination (final causes). Use of Aristotle’s methodology in this way has helped structure and organize the material in this book, as is explained in the remainder of this Chapter.

§ 1.2.2 Application of a Causal Analysis in the Four Parts of This Book

Aristotle’s four causes – material, formal, efficient, and final – remind us that in considering any topic one needs to address four things: what it is one is analyzing, how to define it, how it changes, and what is its purpose. Consequently, this book is divided into four Parts, each one based primarily on a perspective provided by one of Aristotle’s four causes.

Part I of this book identifies the materials that underlie all judicial decisionmaking: common law, statutory interpretation, and constitutional law decisionmaking. Part I shows how these materials combine in ways that have led to the four judicial decisionmaking styles: natural law, formalism, Holmesian, and instrumentalism. Part I concludes with a discussion of the materials by which each of the approaches molds common law, statutory interpretation, and constitutional law doctrine. This includes discussion of whether the doctrine should be phrased in absolute, categorical terms or as a balancing test, as discrete elements to meet or factors to weigh, as a specific rule or a more general standard, and the doctrine’s relationship to previously decided judicial precedents.

Part II of the book focuses more directly on the form or shape of constitutional law. The focus of Part II is thus on the specific materials, devices of interpretation, methods of reasoning, and ends sought in the constitutional interpretation process. As with Aristotle’s example of a silver bowl, Part II discusses the terms and definitions used to describe some judicial act as a proper act of constitutional interpretation, just as the formal cause of a silver bowl is the form or defined shape that is used to categorize some object as a bowl.

Part III of the book concentrates on efficient causes. This Part discusses first the different ways that Justices have made use of the materials and forms of constitutional law as, in Aristotle’s silver bowl example of the “hammering of the silversmith,” they “hammer out” decisions in individual cases that link basic materials and principles to fact situations. This Part also discusses the efficient causes that lie behind why a majority of Justices on the Supreme Court at different times in our Nation’s history have adopted one of the four distinct judicial decisionmaking styles.

Part IV of the book is concerned with final causes. Part IV thus summarizes the specific outcomes of decisions whose coming into being is the purpose, or final cause, of judicial review. In support of this endeavor, Part IV describes in some detail the basic doctrines, standards of review, interpretive methodology, and results of constitutional adjudication in the context of its many and varied specific factual applications.
§ 1.3 Use of the Four Causes in Each Part of This Book

One productive use of the Aristotelian methodology is to note that within each category of causes, secondary aspects exist. For example, there are formal, efficient, and final cause aspects of material causes, just as there are material, efficient, and final cause aspects of formal causes. Again, there is nothing magical about this fact. However, making use of this fact has permitted a relatively structured approach toward organizing and categorizing the various topics necessary for an analysis of constitutional law. Secondary aspects of Aristotle’s four causes are reflected within the Chapters that comprise each of the four Parts of this book. An introduction to each of these secondary aspects, and how they have structured the various Chapters in this book, appears next.

§ 1.3.1 Part I – The Materials of Constitutional Law

As noted, Part I of this book concerns the materials that are used in the four judicial decisionmaking styles out of which the content of constitutional decisionmaking is constructed. Chapter 1 has begun the discussion by introducing the material on which constitutional decisionmaking is based, that is, the four judicial decisionmaking styles.

Chapter 2 discusses the form or shape of this material. One aspect of this form is defining the judge’s view on the nature of law that the judge is called upon to apply. Is law viewed as sufficiently autonomous from policy considerations that justice can be done by concentrating primarily on logical application, or is law believed to be so infused with purpose and policy that it should be interpreted as a means to social ends so that consequences are of vital importance? Chapter 2 deals with these and related questions by discussing two different approaches to the nature of law: analytic versus functional. A second aspect of the form of the judicial decisionmaking styles is defining what judges are called upon to do when engaged in judicial review. Are they to find all relevant principles within the law itself or should they test their reasoning by some external standard of rightness, some social or moral value, such as promoting democracy or protecting individual autonomy? These and related questions are addressed by discussing two different approaches to the nature of the judicial task: positivist versus normative.

Chapter 3 focuses on how different answers to the above questions – analytic versus functional; positivist versus normative – are combined to create the four decisionmaking styles that have been used during various eras of American legal history on matters of constitutional law, statutory interpretation, and common law to “hammer out” decisions. Presentation of this efficient aspect of the material of constitutional law concludes the following about the four decisionmaking styles: formalism (analytic positivism); Holmesian (functional positivism); instrumentalism (functional normative); natural law (analytic normative).

Chapter 4 discusses the final aspect of this material, the decisions that emerge from “hammering” out results according to each of the four decisionmaking styles. The material of these decisions will inevitably reflect certain choices made by the judges: does the decision adopt an absolute, categorical rule or a balancing test; is the test phrased in terms of discrete elements to meet or factors to weigh; is the doctrine phrased as a specific rule or a more general standard? Chapter 4 thus deals with the structure of law that emerges from use of the materials of judicial decisionmaking.
§ 1.3.2 Part II – The Form or Shape of Constitutional Law

As noted, Part II of this book focuses on the form or shape of constitutional law. Part II thus examines the sources used, interpretation rules and theories, methods of reasoning, and ends sought in constitutional decisionmaking. These matters are dealt with in Chapters 5-8.

Chapter 5 examines the material used by different Justices when interpreting the Constitution: material contemporaneous with the time of ratification (text, context, structure, and history), and material subsequent to ratification (legislative, executive, and social practice under the Constitution, judicial precedents, and prudential considerations, including consideration of contemporary social policy). Chapter 6 focuses on the different forms or definitions of how text, context, structure, history, and subsequent developments are used in constitutional interpretation. Chapter 7 discusses the efficient causes of how, and in what manner, doctrine emerges in constitutional law from the process of case-by-case adjudication. Chapter 8 examines the final causes of constitutional decisionmaking, that is, the purposes or ends of constitutional law that emerge from considering the materials used in constitutional interpretation.

§ 1.3.3 Part III – Decisionmaking Styles as Efficient Causes

Part III of this book, focusing on efficient causes of constitutional law, combines the investigations of Parts I and II into a description of how constitutional law is hammered out by the four different styles of constitutional decisionmaking. This Part compares how each of the four styles uses arguments of text, context, structure, history, and subsequent developments to decide particular cases. It also points out that each one has placed slightly greater emphasis on one or the other of the four causes: formalism (formal causes); Holmesian (material causes); instrumentalism (efficient causes); and natural law (final causes). The formalist style is discussed in Chapter 9; the Holmesian style in Chapter 10; the instrumentalist style in Chapter 11, and the natural law style in Chapter 12.

Part III also discusses the efficient causes that help explain why a majority of Justices on the Court at different times in our Nation’s history have adopted one of the four judicial decisionmaking styles. In discussing these causes, Chapter 13 focuses on the formal fact of changes in American legal history from an initial natural law era, to formalist, Holmesian, and instrumentalist eras, to a modern natural law era today. Chapter 14 focuses on the material cause of these changes, that is, the social and political events in society which form the material base from which constitutional law emerged in its various eras. Chapter 15 discusses aspects of cognitive and moral developmental psychology that help explain changes in the majority approach from one era to the next. Chapter 16 relates the cognitive and moral developmental stages and the judicial eras to aspects of societal development, the final cause or purpose behind legal change to advance and reflect such societal developments.

§ 1.3.4 Part IV – The Final Cause: Decisions and Opinions

To complete the book’s promise for serving as a tool in learning constitutional law, Part IV undertakes a detailed examination of doctrinal results – the final cause or purpose of constitutional adjudication – that have emerged from the rich factual base of actual constitutional decisions. This appears in Chapters 17-32. For each of the doctrines considered, there is an attempt to explain how
the various styles of judicial decisionmaking (efficient causes) in various eras of American legal history (material causes) have reached defined results (formal causes) that were hoped to achieve or preserve certain values in society (final cause or purpose of a decision). The principal focus of these Chapters is on the constitutional doctrines usually covered in a first-year Constitutional Law course in American law schools. Thus, aspects of a criminal defendant’s rights under the Fourth, Fifth, Sixth, and Eighth Amendments, typically covered in a separate upper-level course in Criminal Procedure, are given only brief attention in Chapter 23. That discussion makes clear that the judicial decisionmaking styles applicable to interpreting the rest of the Constitution apply also to them.

In presenting the summary of constitutional doctrine, Part IV is divided into four sub-parts of four Chapters each. The first of these sub-parts focuses on structural issues of constitutional law. Chapter 17 focuses on judicial review; Chapter 18 focuses on federalism; Chapter 19 focuses on separation of powers; Chapter 20 focuses on other aspects of constitutional checks and balances.

The second sub-part of Part IV discusses non-structural constitutional doctrines other than the Civil War Amendments and the First Amendment. Chapter 21 discusses the structure of such individual rights adjudication, including what constitutes sufficient government action to trigger a finding of state action. Individual rights protections involving economic rights are discussed in Chapter 22. Individual rights protections involving non-economic rights are discussed in Chapter 23. The Ninth Amendment’s provision that the “enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people,” is discussed in Chapter 24.

The third sub-part of Part IV discusses the Civil War Amendments. Chapter 25 discusses the 13th Amendment, the 14th Amendment’s Citizenship Clause; the 14th Amendment’s Privileges or Immunities Clause, and the 15th Amendment’s ban on race discrimination in voting. Chapter 26 discusses the 14th Amendment Equal Protection Clause. Chapter 27 discusses the Due Process Clauses of the Fifth and 14th Amendments. Chapter 28 discusses the topic of congressional power to enforce the Civil War Amendments.

The last sub-part of Part IV discusses First Amendment law. Chapter 29 discusses the basic aspects of Freedom of Speech and of the Press. Chapter 30 discusses the various exceptions the Court has created to basic Free Speech doctrine. Chapter 31 discusses the Freedom of Assembly and Freedom of Association aspects of First Amendment doctrine. Chapter 32 addresses the Religion Clauses of the First Amendment: the Free Exercise Clause and the Establishment Clause.

§ 1.4 Conclusion

Part IV is the most concrete section of the book. A reader unaccustomed to philosophic generalities may find it more inviting to begin reading in Part IV. Of course, full understanding and appreciation of the analysis of cases in Part IV will be enhanced by the background supplied in Parts I, II, and III. Once that background is absorbed, it is likely that the intricacies of many cases can better be understood, put into the mental atlas or roadmap, and used in the future as a guide for thinking about constitutional issues and doctrines. There will be ample opportunities for that endeavor because, as discussed at § 17.1.4, under the doctrine of judicial review many vital issues of public policy are ultimately debated and resolved, at least for the time being, in constitutional cases decided by courts.
CHAPTER 2: THE FORM OR SHAPE OF JUDICIAL DECISIONMAKING

§ 2.1 Introduction to the Form or Shape of Judicial Decisionmaking

To understand how any individual goes about the task of deciding a case, it is necessary first to understand that individual’s jurisprudential approach toward law. All individuals, whether they are aware of it or not, have such an approach. Justice Benjamin Cardozo reminded us of this fact in his famous book, The Nature of the Judicial Process, originally published in 1921. As he stated:

We are reminded by William James in a telling page of his lectures on Pragmatism that every one of us has in truth an underlying philosophy of life, even those of us to whom the names and notions of philosophy are unknown or anathema. There is in each of us a stream of tendency, whether you choose to call it philosophy or not, which gives coherence and direction to thought and action. Judges cannot escape that current any more than other mortals. All their lives, forces which they do not recognize and cannot name, have been tugging at them – inherited instincts, traditional beliefs, acquired convictions; and the resultant is an outlook on life, a conception of social needs, a sense in James’ phrase of “the total push and pressure of the cosmos,” which, when reasons are nicely balanced, must determine where the choice shall fall. In this mental background every problem finds its setting. We may try to see things objectively as we please. None the less, we can never see them with any eyes except our own. To that test they are all brought – a form of pleading or an act of parliament, the wrongs of paupers or the rights of princes, a village ordinance or a nation’s charter.1

Justice Cardozo also remarked, “It may not have been the same principle for all judges at any time, nor the same principle for any judge at all times. But a choice there has been, not a submission to the decree of Fate; and the considerations and motives determining the choice, even if often obscure, do not utterly resist analysis.”2

Jurisprudentially, there are two main questions that lie behind any act of judicial interpretation. The first concerns the nature of law: analytic versus functional. The second concerns the nature of the judicial task: positivist versus normative. The remainder of Chapter 2 will examine these two responses to these two questions. Chapter 3 will then combine the two responses to these two questions and show how they create the four judicial decisionmaking styles: formalism (analytic positivism); Holmesian (functional positivism); instrumentalism (functional normative); and natural law (analytic normative). Chapter 4 will then provide a general perspective on the structure of law that emerges from judicial use of these decisionmaking styles in the areas of common-law, statutory, and constitutional adjudication, including the extent to which legal reasoning is predominantly inductive or deductive, and the different approaches to precedent. Taken together, the discussion in Part I of this book will provide the necessary background context for the discussion of the specific issues relating to constitutional interpretation addressed in Parts II, III, and IV of this book.

§ 2.2 The Nature of Law

§ 2.2.1 Analytic versus Functional Approaches to the Nature of Law

Concerning the nature of law, two main approaches have appeared in jurisprudential writings. These two approaches differ over whether law should be judged primarily in terms of its success in developing a set of logically consistent, universal rules. Under one approach, law is seen as a primarily a set of rules and principles whose application is guided by an analytic methodology of logic and reason. This has been called the analytic, or conceptualist, approach. Alternatively, law can be seen as ultimately to be judged not in terms of logical consistency, but as a means to some social end through a pragmatic or functional treatment of rules and principles. This has been called the functional, or pragmatic, approach.

A relatively sophisticated discussion of this difference between an analytic and a functional approach toward the nature of law appeared in a 1988 Yale Law Journal article by Professor Ernest J. Weinrib. As Professor Weinrib noted, “[L]egal ordering [under an analytic approach] is not the collective pursuit of a desirable purpose. Instead, it is the specification of the norms and principles immanent to juridically intelligible relationships. [This approach] repudiates analysis that conceives of legal justification in terms of some goal that is independent of the conceptual structure of the legal arrangement in question.” In contrast, Professor Weinrib noted, "The dominant tendency today [under a functional approach] is to look upon the content of law from the standpoint of some external ideal that the law is to enforce or make authoritative. Implicit in contemporary scholarship is the idea that the law embodies or should embody some goal (e.g., wealth maximization, market deterrence, liberty, utility, solidarity) that can be specified apart from law and can serve as the standard by which law is to be assessed. Thus law is regarded as an instrument for forwarding some independently desirable purpose given to it from the outside." As described by Professor Felix Cohen in his classic 1935 article, Transcendental Nonsense and the Functional Approach, “If the functionalists are correct, the meaning of a definition is found in its consequences.”

6 Id. at 964-65.

A similar, but perhaps more accessible, discussion of the difference between an analytic and functional approach appeared in a 1981 *Cornell Law Review* article by Professor Robert Summers. Comparing a functional versus an analytic approach toward law, Professor Summers noted:

[The functional approach] views law not as a set of general axioms or conceptions from which legal personnel may formally derive particular decisions, but as a body of practical tools for serving substantive goals. Second, it conceives law not as an autonomous and self-sufficient system, but as merely a means to achieve external goals that are derived from sources outside the law, including the dictates of democratic processes and the “policy sciences.” Third, it assumes that a particular use of law cannot be a self-justifying “end in itself.” Uses of law can be justified only by reference to whatever values they fulfill. Finally, the law is considered to serve generally instrumental values rather than intrinsic ones. That is, law’s function is to satisfy democratically expressed wants and interests, whatever they may be (within constitutional limits).\(^8\)

Not surprisingly, these four differences between a functional and an analytic approach mentioned by Professor Summers track Aristotle’s four causes, discussed at § 1.2.1: material, formal, efficient, and final. With respect to material causes, in Summers’ terms, law is either viewed as a set of general axioms or law is viewed as a pragmatic tool. With respect to formal causes, law is either defined as being autonomous from social policy decisions or law is a means to an end. With respect to efficient causes, law is either an end in itself or is used to fulfill values. With respect to final causes or purposes, the law’s function is either to serve intrinsic values or instrumental ones. Each of these four causes is considered next, at § 2.2.2.

times, the prevalent moral and political theories, intuitions of public policy, avowed or unconscious, even the prejudices which judges share with their fellow-men, have had a good deal more to do than the syllogism in determining the rules by which men should be governed. The law embodies the story of a nation’s development through many centuries, and it cannot be dealt with as if it contained only the axioms and corollaries of a book of mathematics.9

University of Wisconsin Law School Professor and Historian J. Williard Hurst summed up Holmes’ functional attitude, as contrasted with the analytic attitude, as follows:

What is “the law,” the life of which we would study? . . . For a man steeped in history there exists no timeless, placeless, essential legal order; on the record, law has been man-made, or at least grown out of men’s social experience, and hence is found always bearing the stamp of particular situations . . . . Moreover, men use law to help order their relationships; by reason of its functions, therefore, law is found enmeshed in particular contexts of circumstances, purpose, and attitude.10

§ 2.2.2.2 Formal Causes and the Nature of Law

With respect to formal definitions, the functional approach conceives law not as an autonomous and self-sufficient system, but as merely a means to achieve external goals that are derived from sources outside the law, including the dictates of democratic processes and the policy sciences. From an analytic perspective, law is reducible to a unitary general theory, as in algebra or geometry, and thus susceptible to statement in abstract consistent generalizations. Supporting such an analytic approach, Harvard University Law School Dean Christopher Columbus Langdell stated in 1886:

[Law is a science; secondly, that all the available materials of that science are contained in printed books. . . . [T]he library . . . is to us what the laboratories of the university are to the chemists and physicists, the museum of natural history to the zoologists, the botanical garden to the botanists.11

In contrast, from the functional perspective, law is pluralistic and susceptible only to statement in many concrete and narrow generalizations. This is so, Summers noted, because:

Rules and other legal precepts characteristically have more than one goal. It is commonly possible to differentiate several goal levels along a means-end continuum of ascending generality, in which the realization of a low-level goals explicitly formulated in the law serves higher-level goals, usually not so formulated. Thus, we may usually attribute to a rule or other precept directing behavior one or more “immediate” goals, one or more “intermediate” goals,

9 Oliver Wendell Holmes, Jr., The Common Law 1 (1881).

10 James Willard Hurst, Justice Holmes on Legal History 4 (1964).

and one of more “higher-level” or “ultimate goals.” . . . Thus, there usually will be no simple, single goal for a legal precept. The goals of a given precept form a goal “constellation” or “synthesis” that usually reflects some effort to accommodate conflicts in an optimal way.\footnote{12}{Summers, supra note 8, at 884.}

For each new circumstance, this “constellation” of goals will likely suggest a different accommodation to reach an optimal result for that circumstance. Thus, the law will reflect many concrete and narrow generalizations.

\section*{§ 2.2.2.3 Efficient Causes and the Nature of Law}

Efficient causes focus on how things change. Efficient causes of the nature of law thus focus on the precise process of legal change. Regarding this topic, Professor Summers noted, “[Analytic jurists] assume that law is a self-justifying body of precepts to be discovered by reason and applied in light of the ‘logic’ of the language expressing those precepts.”\footnote{13}{Id. at 882.} From such an analytic perspective, “coherence, harmony, and consistency with existing law” are critical; “words of prior opinions and their ‘logic’ control.”\footnote{14}{Id. at 867 n.4.}

In contrast, as Professor Summers noted, from a functional perspective:

a legal precept cannot be self-justifying. To justify having a form of law, it is at least necessary to inquire into its ends and its effects. Does it maximize present wants and interests? By apposite and defensible means? If so, this use of law is justified. In addition, the law does not consist of precepts that may be applied formalistically. Rather, law must be applied in light of its substantive ends.\footnote{15}{Id. at 882.}

Thus, from a functional perspective, the law’s purposes, as well as its logic, are important; “social facts and existing wants and interests” are critical; “judge’s actions in light of facts controls.”\footnote{16}{Id. at 867 n.4.}

\section*{§ 2.2.2.4 Final Causes and the Nature of Law}

Final causes focus on the purpose or final end of the object under study. With regard to the nature of law, the purpose or end of law from an analytic perspective is to follow the language and logic of the relevant legal concepts. As Summers noted, under this analytic perspective “[c]onsistency, analogy, coherence, harmony, and symmetry [are the] main tests of soundness”; law is “a relatively closed system of conceptions and axioms from which judges and others [can] deduce resolutions of almost any issue”; there is “always one ‘true rule,’ ascertainable by reason; laws of governance are
thus similar to universal laws of nature.” As stated by legal philosopher Ronald Dworkin, even in so-called “hard cases,” theoretically there is “one right answer” embedded in the relevant legal doctrine. The judge, however hard the case, is never to determine what the law shall be; the judge is confined to saying what the law is. There is some solution for every conceivable case that the application of reason can discover.

In contrast, from a functional perspective, the law is considered to serve generally substantive values extrinsic to the legal order, rather than intrinsic ones of logic, consistency, and harmony. That is, law’s function is to satisfy democratically expressed wants and interests, whatever they may be, within constitutional limits. As Professor Summers stated, when commenting about the functional challenge to the analytic approach during the first half of the 20th century in America:

They did not look to the past and ask: Is this proposal consistent with X? Analogous to Y? Harmonious with Z? Rather, they looked forward and asked: What can now be done to alter the future? What substantive goals, derived from popular wants and interests, are relevant? What rules or other percepts are required to further them? Thus, the new theorists subscribed to a substantive means-goal rationality.

First, lawmakers had to find facts about the nature and extent of the problem knocking on the law’s door. Holmes and [Harvard University Law School Dean Roscoe] Pound were among the first to advocate the use of social science methods in such inquiries. In a famous essay, Holmes urged the use of statistics, economics, and science generally.

Second, it was assumed that lawmakers must ascertain the causes of economic inefficiency, of official corruption, or excessive hours of labor, or practices that led to impure food and drugs entering commerce. With knowledge of such laws of causation, legislators could predict the social effects that would occur depending on the legal means employed.

Third, science could help determine alternative legal means for coping with problems, and could even help construct such means by discovering or adapting technology.

Armed with such tools, lawmakers could be truly scientific. They could invoke laws of social and legal causation to predict the likely efficacy of alternative legal means, determine costs and benefits, choose the preferred means, and implement them. [The functional approach] generally prescribed this approach not only for legislators but for courts, too.

Because of the inevitable uncertainties that underlie such a process of empirical investigation and means-end reasoning, functionalists are skeptical of the analytic assumption that there is always

---

17 Id. at 867 n.4, 889-90.
19 Summers, supra note 8, at 890-92, citing, inter alia, Oliver Wendell Holmes, Jr., The Path of the Law, 10 Harv. L. Rev. 457, 467 (1897), reprinted in 110 Harv. L. Rev. 991, 1001 (1997).
“one right answer” to every legal problem. Furthermore, such a process of empirical investigation requires continual monitoring. As Summers remarked:

Once new law was made by legislature or court, [functionalists] urged that social methods be continuously applied to monitor and evaluate whether the law was working out as envisioned. Fact-finding of this nature would prove useful in deciding whether to modify and perhaps even abandon the current law. Pound stressed that “[t]he compromises and adjustments that will achieve the largest securing of social interests with the least sacrifice, must be sought through a process of trial and error.” Holmes and many others wrote of uses of law as “experiments” and of society as a legal “laboratory.” Holmes even viewed the Constitution in this spirit; “It is an experiment, as all life is an experiment.”

In sum, for functionalists, the end or purpose of law is to serve as an aid in pragmatic adjustment of social interests, law being part of that empirical science. From the analytic perspective, the purpose or end of law is to follow the language and logic of the relevant legal concepts without regard to such pragmatic means-end reasoning, in Langdell’s terms law being more of a library science.

§ 2.3 The Nature of the Judicial Task

§ 2.3.1 Positivist versus Normative Approaches to the Judicial Task

The second main question any judge must ask before deciding how to resolve a legal dispute is whether judicial decisionmaking should be separable from morals or social values, i.e., should judges view law solely as a body of rules and principles from which legal conclusions are derived – the positivist assumption – or should judges view law as a body of rules and principles testable by reference to some external standard of rightness, some social or moral value – law as normative or prescriptive, not descriptive.

Concerning this issue of the nature of the judicial task, a judge could aim at producing decisions and opinions that are "good law" in the narrow sense of being clear, certain, and predictable, and unquestionably within the legitimate power of the court. Such judges are typically described as following a "positivist" approach to judicial decisionmaking. As discussed by Professor Frederick Schauer in an article entitled Constitutional Positivism:

If one has a positivist view of legal identification, pursuant to which items of law can be “recognized” without satisfying a moral standard, . . . then one whose job partly involves law application could do that part of the job without having to engage in any moral reasoning.

20 Id. at 892, citing, inter alia, Abrams v. United States, 250 U.S. 616, 630 (1919) (Holmes, J., opinion).
21 See Bodenheimer, supra note 3, at 91-109; Lloyd, supra note 3, at 170-343.
22 See Bodenheimer, supra note 3, at 134-68; Lloyd, supra note 3, at 79-169.
As a result, positivist judges, were they so inclined, could in some systems get away with an amoral conception of their task. In contrast, a judge could aim at producing law and applications of law that accord with certain moral principles embedded in the society's legal and moral culture. Judges adopting this more "normative" perspective view the judge's role as requiring the judge to give some weight to the moral insights and traditions that lie behind legal rules and that may develop over time. As Professor Ronald Dworkin has noted, "[W]hat an individual is entitled to have, in civil society, depends upon both the practice and the justice of its political institutions."

In determining questions of justice, Professor Dworkin noted that from this perspective judges should only make such decisions as they can justify within a theory that also justifies the other decisions they propose to make. That is, a judge adopting such a “normative” perspective should ensure that each decision is consistent with society’s background legal and moral culture, society’s “norms.” As Professor Dworkin has noted, such an approach “condemns the practice of making decisions that seem right in isolation, but cannot be brought within some comprehensive theory of general principles and policies that is consistent with other decisions also thought right.”

It is important to note that there is a distinction between positivism versus normativism as an approach to judicial decisionmaking, discussed here, and positivism versus normativism as a theory of law. For example, in his famous book, _The Concept of Law_, English legal philosopher H.L.A. Hart postulated that each society has a positive “rule of recognition” that defines which acts count as valid legal enactments. To the extent that each society can develop its own “rule of recognition” without regard to any independent moral restraints, that would reflect a positivist theory of law. A classic statement of this approach appeared in an article written in 1958 by Professor Hart entitled, _Positivism and the Separation of Law and Morals_. As phrased by Hart:

> What [positivists like Jeremy] Bentham and [John] Austin were anxious to assert were the following simple two things: first, in the absence of an expressed constitutional or legal provision, it could not follow from the mere fact that a rule violated standards of morality that it was not a rule of law; and, conversely, it could not follow from the mere fact that a rule was morally desirable that it was a rule of law.

In contrast, a normative theory of law counsels that there are moral restraints on what can constitute a valid “rule of recognition.” A classic defense of this position appeared in Harvard University Law

---

25 *Id.* at 1064.

School Professor Lon Fuller’s reply in 1958 to H.L.A. Hart, in an article entitled, *Positivism and Fidelity to Law – A Reply to Professor Hart*. As phrased by Fuller:

There is a twofold sense in which it is true that law cannot be built on law. First of all, the authority to make law must be supported by moral attitudes that accord to it the competency it claims. Here we are dealing with a morality external to law, which makes law possible. But this alone is not enough. . . . We still cannot have law until our monarch is ready to accept the internal morality of the law itself.28

Regarding the “inner morality of law,” Professor Fuller concluded that there are at least 8 different ways in which a possible “rule of recognition” could fail to reflect valid law. As stated by Fuller:

[[1]] The first and most obvious lies in a failure to achieve rules at all, so that every issue must be decided on an ad hoc basis. The other routes are: (2) a failure to publicize, or at least to make available to the affected party, the rules he is expected to observe; (3) the abuse of retroactive legislation, which not only cannot itself guide action, but undercuts the integrity of rules prospective in effect, since it puts them under the threat of retrospective change; (4) a failure to make rules understandable; (5) the enactment of contradictory rules or (6) rules that require conduct beyond the powers of the affected party; (7) introducing such frequent changes in the rules that the subject cannot orient his action by them; and, finally, (8) a failure of congruence between the rules as announced and their actual administration.

A total failure in any one of these eight directions does not simply result in a bad system of law; it results in something that is not properly called a legal system at all, except perhaps in the Pickwickian sense in which a void contract can still be said to be one kind of contract. . . .

The citizen’s predicament becomes more difficult when, though there is no total failure in any direction, there is a general and drastic deterioration in legality, such as occurred in Germany under Hitler. A situation begins to develop, for example, in which though some laws are published, others, including the most important, are not. Though most laws are prospective in effect, so free a use is made of retroactive legislation that no law is immune to change *ex post facto* if it suits the convenience of those in power. For the trial of criminal cases concerned with loyalty to the regime, special military tribunals are established and these tribunals disregard, whenever it suits their convenience, the rules that are supposed to control their decisions. Increasingly, the principle object of government seems to be, not that of giving the citizen rules by which to shape his conduct, but to frighten him into impotence. . . . So it was with the German citizen under Hitler. . . .29

This broader difference between Hart and Fuller’s general conception of law, and whether there are any normative limitations on what a society’s “rule of recognition” could be and still be regarded

as a valid rule of recognition, is discussed at § 16.4 nn.87-90. In any individual society, however, that society’s “rule of recognition” might be that judges should adopt a positivist or normative approach to judicial decisionmaking. The issue raised here is thus not about the legitimacy of Professor Hart’s rule of recognition as a general theory of law, but about noting that any society’s rule of recognition may be that judges should adopt a positivist or normative approach in their judicial capacities.

An example may help make this point clearer. As noted at § 1.1, Justice Kennedy is categorized in this book as following a natural law style of interpretation. As discussed at §§ 2.4 & 3.4, this style of interpretation reflects a normative approach to the nature of the judicial task. It is an interesting question whether Justice Kennedy adopts this style of interpretation because he agrees with Lon Fuller that only such a natural law style of interpretation does justice to law, or he agrees with H.L.A. Hart that a judge should follow the positive “rule of recognition” of his society, and that our framers and ratifiers expected judges to adopt a natural law style of interpretation. From the perspective of how Justice Kennedy decides cases, however, it does not matter much why he adopts the natural law interpretation style, only that he adopts it. In his article, Constitutional Positivism, Professor Schauer made the same observation, when he stated, “[C]onsistent with this conceptual understanding of the positivist claim, the act of constitutional interpretation in the United States may require every bit as much moral inspection as would be required by the most morally thick of natural law theories. The difference would be only that the tradition of positivism would see this as a contingent feature of modern American constitutionalism, capable of being different at other times or in other systems, while the natural law tradition would see this as an instance of a conceptual truth equally applicable to all existing and possible legal systems.”

As discussed in the next subsection, at § 2.3.2, the judicial decisionmaking task will be different depending upon which style of interpretation, positivist or normative, the judge adopts. Particularly since the authoritative interpreters of the United States Constitution have been judges, at least since the 1803 decision in *Marbury v. Madison*, discussed at §§ 17.1.1-17.1.2.1, this issue of the nature of the judicial task is key for a book on American constitutional law. As English legal philosopher H.L.A. Hart noted about America:

American speculative thought about the general nature of law . . . is marked by a concentration, almost to the point of obsession, on the judicial process, that is, with what courts do and should do, how judges reason and should reason in deciding particular cases . . . . The simple explanation of that concentration is, no doubt, the quite extraordinary role that the courts, above all the United States Supreme Court, play in American government . . . [particularly the] power to review and declare unconstitutional and so invalid enactments of Congress as well as of the state legislatures.

---

§ 2.3.2 Discussion of Positivist versus Normative Approaches in Terms of the Four Causes

§ 2.3.2.1 The Positivist View

Using Aristotle’s scheme of four causes, the material of the judicial task for positivist judges is existing common law, statutes, and constitutional text. With regard to the form or definition of what constitutes law, the positivist view is that judges may only discover, declare, and apply the law as it already exists. With regard to efficient causes, the positivist view is that the logic and purpose of existing concepts control. As discussed at § 2.4, for analytic positivists, only the logic of existing concepts controls; for functional positivists, both the logic and purpose of existing concepts control, as functional jurists are sensitive to the purposes of legal rules as part of their pragmatic means-end reasoning, as discussed at § 2.2.2.3. The final cause or end of the judicial task for positivists is whether the law is traceable to an authoritative source.

Any departure from this view represents for positivists a form of illegitimate law-making, what Professor H.L.A. Hart called “The Nightmare” in his article entitled American Jurisprudence Through English Eyes: The Nightmare and The Noble Dream. According to Hart:

The Nightmare is this. Litigants in law cases consider themselves entitled to have from judges an application of existing law to their disputes, not to have new law made for them. Of course it is accepted that what the existing law is need not be and very often is not obvious, and the trained expertise of the lawyer may be needed to extract it from the appropriate sources. But for conventional thought, the image of the judge, to use the phrase of an eminent English Judge, Lord Radcliffe, is that of the “objective, impartial, erudite, and experienced declarer of the law,” not to be confused with the very different image of the legislator. The Nightmare is that this image of the judge, distinguishing him from the legislator, is an illusion, and the expectations which it excites are doomed to disappointment – on an extreme view, always, and on a moderate view, very frequently.32

§ 2.3.2.2 The Normative View

In contrast to the positivist view, the material of the judicial task for judges who adopt the normative view includes background norms that infuse existing common-law, statutory, and constitutional enactments. The normative view is that judges have the power to make law based on these background norms, and regularly do so, covertly as well as overtly. For normativists, the efficient causes of change in law rest in part on the substance of these background considerations, not merely the logic or purpose of existing concepts. As discussed at § 2.4, for analytic normative theorists, these background considerations are limited to background moral principles; for functional normative theorists, these background considerations can include both principles and policies. The final cause or end of the judicial task for normative theorists is whether the law has a defensible substantive content.

___________________________

32 Id. at 972.
In his article, Professor Hart called this conception of the judicial task, “The Noble Dream.” As Hart described it:

[A] legal system was too narrowly conceived if it was represented as containing only rules attaching closely defined legal consequences to closely defined, detailed factual situations and enabling decisions to be reached and justified by simply subsumption of particular cases under such rules. Besides rules of this kind, legal systems contain large-scale general principles; some of these are explicitly acknowledged or even enacted, whereas others have to be inferred as the most plausible hypotheses explaining the existence of the clearly established rules. Such principles do not serve merely to explain rules in which they are manifested but constitute general guidelines for decision when particular rules appear indeterminate or ambiguous or where no relevant authoritative, explicitly formulated rule seems available. . . .

[In the end [this is] the message preached by Karl Llewellyn in his rich and turbulent advocacy of what he termed the grand style of judicial decision. . . . Professor Ronald Dworkin . . . is, if he and Shakespeare will allow me to say so, the noblest dreamer of them all . . . .

The famous case of *Riggs v. Palmer* provides a good example of the difference between a positivist and normative perspective on the nature of the judicial task. The *Riggs* case involved the issue of whether an heir who murdered the testator to ensure the will would not be changed could collect under the will. The dissent in *Riggs* took the positivist view that since the existing legal statutes did not provide that the heir could not collect, then the heir could collect even if that led to an inequitable result. The majority in *Riggs* acknowledged that the relevant statutes did not expressly provide that the murderous heir could not collect. However, the majority based its decision on background “general principles of natural law and justice” embedded in the views of “many generations” of “philosophers and statesmen” and “fundamental maxims of the common law” that no one should be able to “profit” from “his own wrong.” The Court thus gave the relevant statutes on wills an “equitable construction” that denied the heir an ability to profit from his own wrong.

§ 2.4 How Perspectives on the Nature of Law and the Judicial Task Combine

As indicated in the preceding material, variations exist in the relative weight that different judges give to the two critical factors significant for judicial decisionmaking: the judge's views on the nature of law and on the nature of judicial task. Combining the two different views on the nature of law (analytic versus functional) and the nature of the judicial task (positivist versus normative) results in four decisionmaking styles. These modes of legal analysis are listed in Table 2.4 below:

Discussion of the details of each of these four judicial decisionmaking styles appears in Chapter 3. However, it is useful here to note that presenting these four decisionmaking styles in the context of this two-dimensional Table based upon the nature of law and the nature of the judicial task can help to clarify the confusion that may result from jurisprudential discussion that attempts analysis along a single, one-dimensional scale.

One kind of confusion results from failing to appreciate the differences among the terms “formalism,” “analytic jurisprudence,” and “positivism.” As Table 2.4 indicates, and discussed at §§ 3.1-3.2, there are two basic kinds of positivist theories: the analytic positivism of formalism, associated with individuals such as Harvard University Law School Dean Christopher Columbus Langdell, and the functional or pragmatic positivism associated with Justice Holmes. These two kinds of positivism differ, for example, with the emphasis placed upon the logic of existing rules under the analytic formalist approach versus the emphasis placed upon the purpose lying behind existing rules to advance some social policy, which is emphasized under the functional Holmesian approach.

Similarly, there are two kinds of analytic jurisprudential theories: the analytic positivism of formalism and the analytic normative theories associated with the natural law tradition. For example, as discussed at § 3.4 nn.79-80, in his article on the analytic approach toward law, cited at § 2.2.1 n.5, Professor Weinrib distinguished the natural law and natural rights tradition from "the thinner formalism of positivism, which . . . makes the notion of law as such indifferent to the law's content." Thus, although both adopt analytic approaches to the nature of law, "For Natural Law

---

36 See, e.g., Anthony J. Sebok, Misunderstanding Positivism, 93 Mich. L. Rev. 2054, 2054-72 (1995) (discussing the confusion that often surrounds these and other related terms).

37 Weinrib, supra note 5, at 954 n.14.
Theory the idea of morally legitimate power constitutes a real definition of law; for Positivism the rival real definition is contained in a morally neutral concept of socially organized power.\textsuperscript{38}

It should be noted that in his article Professor Weinrib used the term "formalism" to describe any analytic, non-functional approach to law. Thus, for Professor Weinrib, there are two basic kinds of formalist theories, the "thinner formalism" of analytic positivism and the formalism of the natural law and natural rights tradition.\textsuperscript{39} In contrast, in this book, and more in keeping with common use, as discussed at §§ 3.1 & 3.4, "formalism" is used to describe only the analytic, positivist approach to law, while the term "natural law" is used to describe the separate analytic, normative jurisprudential approach of the natural law and natural rights tradition.

This two-dimensional Table can also help clarify the confusion among functional approaches to law. For example, in his article on instrumentalism, Professor Summers grouped Holmes, John Chipman Gray, Karl N. Llewellyn, and Felix S. Cohen, among others, as all sharing the same jurisprudential philosophy of pragmatic instrumentalism.\textsuperscript{40} Each of these individuals did share a functional or pragmatic approach toward law, and thus rejected the analytic presuppositions of a formalist approach. However, as noted at § 3.2 nn.48-50, Holmes and Gray are best understood as having adopted a positivist approach toward the judicial task, while, as noted at § 3.3 nn.53-54, Llewellyn and Cohen adopted a more normative approach associated with the instrumentalist “Grand Style” of judicial decisionmaking. All these individuals were part of the early 20\textsuperscript{th} century “Realist Movement” in the law, which was a functional assault on the analytic presuppositions of the formalist style of decisionmaking, as discussed at §§ 13.1 & 13.2. Nevertheless, despite all being “realists,” there are clear differences between the Holmesian style of interpretation and Llewellyn’s “Grand Style” of interpretation that apply across the fields of common-law, statutory, and constitutional interpretation, as discussed at §§ 3.2-3.3.

This two-dimensional Table can also help clarify differences among normative approaches to the judicial task. Professor Ronald Dworkin has noted a difference between arguments of principle and arguments of policy. He has stated:

I call a “policy” . . . a statement that sets out a goal to be reached, generally an improvement in some economic, political, or social feature of the community. . . . I call a “principle” a standard that is to be observed, not because it will advance or secure an economic, political, or social situation deemed desirable, but because it is a requirement of justice or fairness or some other dimension of morality. Thus the standard that automobile accidents are to be decreased is a policy, and the standard that no man may profit by his own wrong is a principle.\textsuperscript{41}

\textsuperscript{39} Weinrib, \textit{supra} note 5, at 954 n.14.

\textsuperscript{40} Summers, \textit{supra} note 8, at 865.

In terms of what kinds of background considerations judges may use to resolve “hard cases,” the functional instrumentalist approach, associated with Llewellyn’s “Grand Style” of decisionmaking, is willing to consider both arguments of principle and arguments of policy, with an emphasis on functional consideration of social policy calculations, as discussed at § 3.3 nn.51-58. In contrast, Professor Dworkin indicated that he thinks judges in considering background considerations should limit themselves to reasoned, or analytic, balancing of moral principles.\(^{42}\) As discussed at § 3.4 nn.93-106, this view is reflective of a natural law approach toward normative considerations.

Of course, no judge is likely to be a perfect model of consistency in adopting any particular judicial decisionmaking style. Indeed, as Justice Cardozo noted at § 2.1 n.1, many judges may not even be aware of these defined decisionmaking styles, and they may merely represent “forces which they do not recognize and cannot name.” Nevertheless, these four decisionmaking styles can help to clarify what appear to be in most cases systematic differences in decisionmaking style among judges, including Justices of the United States Supreme Court.

An additional example of the benefits of categorizing judicial decisionmaking into four different styles along two dimensions, rather than two different styles along one dimension, comes from considering a 2003 article, entitled *Judicial Review and Legal Pragmatism*, by Stanford Law School Professor Thomas Grey. Professor Grey noted differences between two kinds of judicial reasoning styles, “formalism” and “pragmatism (or antiformalism).”\(^{43}\) Professor Grey’s discussion, however, admitted that there are a number of versions of antiformalism. One version, “policy jurisprudence,” treats “law as a means to social ends, the fulfillment and accommodation of the interests of those the law is meant to serve.”\(^{44}\) This is the judicial decisionmaking style called in this book “instrumentalism.” A second version, Professor Grey noted, is “modern rights theory.” As Grey stated, “Rights-oriented [theorists] differ from policy jurists in making qualitative distinctions between interests and rights, and between policies and principles, giving evaluative priority to rights and principles.”\(^{45}\) This is the judicial decisionmaking style called in this book “natural law.”

As Grey noted, some commentators, including Karl Llewellyn himself, attempted to morph Chief Justice John Marshall’s style of decisionmaking into Karl Llewellyn’s “Grand Style” of decisionmaking. However, there are notable differences between the two styles, including Marshall’s greater focus on analytic, categorical decisionmaking, typical of the natural law style of decisionmaking, versus Karl Llewellyn’s more “flexible and openly instrumental Grand Style.”\(^{46}\) Distinguishing natural law from instrumentalism makes these differences easier to understand.

---

\(^{42}\) *See* Dworkin, *supra* note 18, at 1061-65.

\(^{44}\) *Id.* at 479.

\(^{45}\) *Id.* at 480.

\(^{46}\) *Id.* at 479.
In addition, as Professor Grey noted, the formalist style of interpretation of the late 19th century was followed not by any return to John Marshall’s theory of interpretation, or even by immediate acceptance of Llewellyn’s Grand Style of interpretation, but by the “legal Progressives and pragmatists of 1880 to 1930.” As Professor Grey stated, “These writers were not champions of judicial review, but skeptical critics of it, by and large proponents of the supremacy of democratic legislatures, dedicated to reining in the aggressive public law style of the classical liberal judges of the *Lochner* era.” This is the style of interpretation called in this book the “Holmesian” style of judicial decisionmaking. As discussed at §§ 3.2-3.3, separating the Holmesian style of pragmatism from the Llewellyn’s instrumentalist Grand Style of pragmatism can help to explain systematic differences between Holmesian judges, like Justices Holmes, Brandies, and Frankfurter, or Judge Learned Hand, and instrumentalist judges, like Chief Justice Earl Warren and the other liberal, activist Justices of the Warren Court, or state court judges like Judge Roger Traynor. Absent drawing a distinction between Holmes and Llewellyn, it becomes more difficult to talk about these differences in judicial decisionmaking styles, a difficulty that Professor Grey acknowledged in his article when stating “mine does not find an obvious place for . . . activist liberal constitutionalism.”

As a final point, separating the analytic approaches to judicial decisionmaking into natural law and formalism can help explain certain aspects of law, like the jurisprudential underpinnings of the *Lochner*-era liberty of contract discussed by Professor Grey in his article. The standard “progressive” or “pragmatic” account of *Lochner*, Grey noted, was that *Lochner* was just another example of the flaws of an anti-pragmatic, formalist style of decisionmaking. A more complete understanding of *Lochner*, Professor Grey suggested, is that *Lochner* “had clear natural law overtones”; that it was motivated in part by “the prestige surviving from the natural law roots of the antislavery movement, which in turn informed the ideology of free labor”; and that it represented a “blurring of evolutionary custom and reason” and “blurring common law and natural law.”

Distinguishing a natural law approach from a formalist approach can help make these aspects of *Lochner* clearer. As discussed at § 14.2.2 nn.45-55, the blurring of common law and natural law took place through applying a formalist decisionmaking style to the concept of free labor, rather than a more sensitive, natural law approach. As discussed at § 15.4.1 nn.53-56, a blurring of custom and reason was typical of both the 19th-century natural law approach and *Lochner*-era formalism. The *Lochner* doctrine in general is discussed at § 27.3.2.1 nn.149-60.

CHAPTER 3: EFFICIENT CAUSES: THE FOUR DECISIONMAKING STYLES

As indicated in Chapter 2, variations exist in the relative weight that different jurists give to the two critical factors significant for judicial decisionmaking: the judge's views on the nature of law, discussed at § 2.2, and on the nature of judicial task, discussed at § 2.3. As discussed at § 2.4, combining the two different views on the nature of law (analytic versus functional) and the nature of the judicial task (positivist versus normative) results in four judicial decisionmaking styles: formalism (analytic positivism); Holmesian (functional positivism); instrumentalism (functional normative); and natural law (analytic normative). Each of these interpretation styles is discussed in greater depth in this Chapter. A short-hand reference for the major differences among these four interpretation styles, suggested by the discussion at § 2.4, is the following: formalist judges emphasize the logical elaboration of existing legal categories; Holmesian judges add to this focus a functional emphasis on the purpose of the existing legal categories; natural law judges add to this positivist focus on the logic and purpose of existing legal categories a normative emphasis on the analytic balancing of background moral principles embedded in the law; instrumentalist judges add to this normative enterprise an emphasis on functional consideration of background social policies embedded in the law, which become particularly relevant when existing legal categories yield indeterminate or ambiguous results, and thus leeways exist in the law. Table 3.4 summarizing these differences appears at the end of this Chapter, at § 3.4 text following n.106.

§ 3.1 Formalism: The Analytic/Positivist Approach

As discussed at § 2.4, one approach to judicial decisionmaking is represented by analytic, positivist judges who combine a focus on certain, predictable treatment of existing positive law with an insistence on logical rule application. Such judges have generally been called "formalists" because they concentrate on the formal aspects of law – technical rule manipulation in light of a statute's or constitution's words, and the literal holdings of common-law precedents. Under this approach, law is viewed as a closed system of related rules to be logically or mechanically applied. A classic account of this formalist approach appeared in 1908 by Harvard University Law School Dean Roscoe Pound, in an article entitled Mechanical Jurisprudence.1 Professor Robert Summers noted in 1981 when comparing formalism and instrumentalism, "Formalists generally viewed the law as a relatively closed system of conceptions and axioms for which judges and others could deduce resolutions of almost any issue."2 As phrased by Professor Frederick Schauer, in his 1988 article Formalism, “[N]ow that we have established that formalism – in the sense of following the literal mandate of the canonical formulation of a rule – is conceptually and psychologically possible, we must ask whether it is desirable.” For a formalist judge, the answer to that question is “yes.”3

---

1 Roscoe Pound, Mechanical Jurisprudence, 8 Colum. L. Rev. 605 (1908).

As noted by many authors, 19th-century Harvard University Law School Dean Christopher Columbus Langdell was a leading advocate of the formalist approach. Professor Thomas Grey, in his article, *Langdell’s Orthodoxy*, has described this approach to judicial decisionmaking as follows:

In the terms of the analytic scheme just sketched, the heart of classic theory was its aspiration that the legal system be made complete through universal formality, and universally formal through conceptual order. A few basic top-level categories and principles formed a conceptually ordered system above a large number of bottom-level rules. The rules themselves were, ideally, the holdings of established precedents, which upon analysis could be seen to be derivable from the principles. When a new case arose to which no existing rule applied, it could be categorized and the correct rule for it could be inferred by use of the general concepts and principles; the rule could then be applied to the facts to dictate the unique correct decision in the case. The system was doubly formal. First, the specific rules were framed in such terms that decisions followed from them uncontroversially when they were applied to readily ascertainable facts. Thus, the classic orthodoxy sought objective tests, and avoided vague standards, or rules that required determinations of state of mind. Second, at the next level up one could derive the rules themselves analytically from the principles.4

As with each of the four judicial decisionmaking styles described in this Chapter, the formalist style can be applied in common-law, statutory interpretation, or constitutional interpretation cases. Two good descriptions of the formalist style as applied to common-law decisionmaking appear in Professor Grant Gilmore’s book, *The Ages of American Law*, and Professor Karl Llewellyn’s book *The Common Law Tradition – Deciding Appeals*. As described by Professors Gilmore and Llewellyn, the formalist style of decisionmaking is based upon the assumption that law is composed of a system of rationally related rules, and that the judge's sole function is to apply those rules mechanically to the case at hand. It is a system of pure logical categorization and deduction. Judges do not need to inquire into the particular consequences of applying the rule in the case before them. The judge's sole duty is to apply the rule, or rules, applicable to the case at hand. The premise of such a system is that change should come, if at all, from the legislative or executive branch. Judges should not make new rules; rather, they should merely apply existing law.5 This analytic positivist approach is also reflected in the late 18th century and early 19th century works of Jeremy Bentham and John Austin in England, as noted at §§ 2.3.1 n.27 & 7.1 text preceding n.1.

Two examples from contract law indicate general and specific aspects of a formalist approach to common-law decisionmaking, and how that approach differs from an instrumentalist approach. Formalism and instrumentalism are compared here because they are opposite approaches to judicial decisionmaking, in the sense that formalism is an analytic positivist approach, while instrumentalism is a functional normative approach. Reflecting the formalist view that logical elaboration of existing legal categories can provide a relatively concise list of legal rules and principles that can govern the outcome of most legal problems, Dean Langdell noted in 1871 about the law of contracts:

---

The number of fundamental legal doctrines is much less than is commonly supposed. . . . If these doctrines could be so classified and arranged that each should be found in its proper place, and nowhere else, they would cease to be formidable in their number.  

In contrast to this view, as discussed at § 3.3, a judge following an instrumentalist approach is likely to embrace a wider array of doctrines because of the instrumentalist willingness to consider how background principles and policies embedded in the law must be balanced to achieve the optimal result in each circumstance, Llewellyn’s “Grand Style” of decisionmaking. Thus, as Professor Gilmore noted about Llewellyn’s approach to contract law, an approach that is reflected in part in the drafting of the Uniform Commercial Code in the 1950s, of which Llewellyn was the Reporter:

Transactions between professionals (or merchants) should be treated differently from transactions in which a professional sold goods to a non-professional (or consumer); [that s]ales for resale should be treated differently from sales for use; [that d]istinctions should be made between sales for cash and sales for credit; present sales and future sales; one-shot or single delivery transactions and long-term contract arrangements; [etc.].

With respect to a specific example from contract law, Langdell’s formalist approach led him to reject the “mailbox” rule for the enforceability of acceptances sent by mail. According to Langdell, the basic contract principle that offers, revocations of offers, and rejections of offers are only valid when received logically implied acceptances sent by mail are only valid when received. In contrast, as Llewellyn argued, from a functional perspective a different rule for revocations and acceptances is justifiable because a person making an offer can be expected to assume that an acceptance may be on the way, while a person making an acceptance needs the security of knowing that this acceptance will not be undercut by a later received revocation. Further, in the event the mail is lost, it is more likely that the offeror will inquire about the acceptance rather than the offeree inquiring whether the acceptance was received. Reflecting a similar functional approach toward law, Holmes also supported adoption of the mailbox rule. Holmes wrote about Langdell’s mailbox rule argument:

A more misspent piece of marvelous ingenuity I never read, yet it is most suggestive and instructive. I have referred to Langdell several times in dealing with contracts because to my mind he represents the powers of darkness. He is all for logic and hates any reference to anything outside of it. . . .

10 Letter from Oliver Wendell Holmes, Jr., to Sir Frederick Pollock (Apr. 10, 1881), in Holmes-Pollock Letters 16-17 (Howe, ed. 1941), cited in Sebok, supra note 8, at 2080 n.108.
An example from tort law also indicates differences between a formalist and an instrumentalist approach to common-law decisionmaking. The case of *Hynes v. New York Central Railroad Co.* was triggered on July 8, 1916, when James Harvey Hynes and two of his companions swam across the Harlem River from Manhattan to the Bronx in New York City. Along the Bronx side of the river ran the New York Central Railroad Co.’s right of way. The railroad operated its trains at that point by high tension wires strung on poles and crossarms. A bulkhead had been constructed at the edge of the water to protect the land from erosion. A plank, which could serve as a springboard, was attached to the bulkhead and projected out over the water. As boys in the neighborhood often did, Harvey Hynes and his companions climbed on top of the plank. One of the boys dived safely into the river. As Hynes prepared to dive, a crossarm and electric wires fell from one of the poles. An electric wire struck Hynes, flung him from the shattered board, and plunged him to his death in the water below.

In his mother’s action against the railroad for wrongful death, the jury returned a verdict for Hynes’ mother, but the trial judge set aside the verdict on the ground that she had failed to prove a valid cause of action. Specifically, the judge noted, if Hynes were a trespasser on the railroad’s land, then the railroad would only owe Hynes a duty to refrain from willful or wanton misconduct, and thus negligence on the part of the railroad in failing to maintain the crossarms in a proper condition would not form the basis for recovery. Adopting a formalist approach that followed the logic of the existing legal categories regarding technical trespassers and the duty owed to them, the intermediate appellate court in New York affirmed the decision of the trial judge.11

In contrast, the highest court in New York, the New York Court of Appeals, reversed the decisions of the trial judge and the intermediate appellate court. The New York Court of Appeals, in a decision authored by Justice Benjamin Cardozo, adopted an instrumentalist approach to the case, and rejected a formalist approach. Regarding the two approaches, the Court stated:

> This case is a striking instance of the dangers of “a jurisprudence of conceptions” [that is] the extension of a maxim or definition with relentless disregard of consequences to a “dryly logical extreme.” . . . The truth is that every act of Hynes, from his first plunge into the river until the moment of his death, was in the enjoyment of the public waters, and under cover of the protection which his presence in the waters gave him.

> . . . In one sense, and that a highly technical and artificial one, the diver at the end of the springboard is an intruder on the adjoining lands. In another sense, and one that realists will accept more readily, he is still on public waters in the exercise of public rights. The law must say whether it will subject him to the rule of one field or of the other, of this sphere or of that. We think that considerations of analogy, of convenience, of policy, and of justice, exclude him from the field of defendant’s immunity and exemption, and place him in the field of liability and duty.12

---

As noted at the beginning of Chapter 3, at text preceding § 3.1, while formalist judges emphasize the logical elaboration of existing legal categories, instrumentalist judges consider all four kinds of arguments in reaching decisions in any individual case: logic (“analogy”); purpose (“convenience”); background moral principles (“justice”); and background social policies (“policy”).13

The formalist approach to statutory and constitutional interpretation similarly focuses on the logical elaboration of existing legal categories. For these tasks, this principally means the logical (or literal) elaboration of statutory or constitutional text. In his book, A Matter of Interpretation,14 which discusses both statutory and constitutional interpretation, Justice Scalia described this approach as a “textualist” approach to interpretation. As Justice Scalia noted, this approach does not necessarily adopt a strict, or narrow, construction of all constitutional provisions. While there is a policy maxim of strict construction of penal statutes, as discussed at § 5.2.2.1.B nn.40, 43, that policy maxim does not apply to constitutional provisions in general. Thus, Justice Scalia rejected use of the phrase “strict constructionist” to describe his “textualist” approach to constitutional interpretation. As Justice Scalia stated, “[This] is not strict construction, but it is reasonable construction.”15 As noted at § 1.1, the term “textualism” is not used in this book to describe this interpretation style because all four judicial decisionmaking styles start their statutory and constitutional analysis with text. In any event, Justice Scalia has embraced the term “formalism” as well. He has stated, “Of all the criticisms leveled against textualism, the most mindless is that it is ‘formalist.’ Ths answer to that is, of course it’s formalistic! The rule of law is about form, . . . Long live formalism. It is what makes a government a government of laws and not of men.”16

On the question of the relative weight to give literal meaning versus purpose in interpreting statutory or constitutional provisions, all formalist jurists emphasize the literal, plain meaning of the words.17 Formalists are concerned that attempting to determine a provision’s purpose, or purposes, is not a clear, mechanical process that can yield unambiguous results. As stated by Professor Schauer, “The language in which a rule is written and the purpose behind that rule can diverge precisely because that purpose is plastic in a way that literal language is not. . . . It is because purpose is not reduced to a concrete set of words that it retains its sensitivity to novel cases, to bizarre applications, and to the complex unfolding of the human experience.”18 In contrast, formalists have a preference for

---

15 Id. at 38.

16 Id. at 25.

18 Schauer, supra note 3, at 532.
clear, bright-line rules that can be applied without regard to the purpose the rule is meant to serve.\(^9\)

As the interpretation task is similar for statutes and the Constitution, fuller treatment of both is reserved for Chapter 9, which considers the formalist approach to constitutional interpretation in greater depth. In short, as discussed at § 9.2.1.1, three variations of the formalist approach have appeared in Anglo-American legal history. They are the Literal Rule, the Golden Rule, and the Plain Meaning Rule. Under the Literal Rule, the court should follow a text’s literal meaning even if that meaning leads to an absurd result. This literal meaning would be determined from considering the dictionary meaning of the text's words, as supplemented by basic rules of grammar as reflected in traditional grammatical maxims of construction. Under this approach, only if the text is ambiguous, and thus has no plain meaning, should the court depart from what the text literally requires.

A second version of formalism is the Golden Rule. The Golden Rule differs from the Literal Rule in that under the Golden Rule the plain meaning of a text should not be followed if it leads to an absurd result. Thus, under the Golden Rule, a court should depart from literal text, whether statutory or constitutional text, if the text is ambiguous or the literal meaning would create an absurd result.

A third version of formalism is represented by the Plain Meaning Rule. Carefully stated, the Plain Meaning Rule does not constrain a court from considering purposes stated on the face of the text when determining the plain meaning of particular language. However, as discussed at § 9.2.1.1, this aspect of the difference between the Golden Rule and Plain Meaning Rule of interpretation has not always been carefully noted by courts. Nevertheless, even under a proper understanding of the Plain Meaning Rule, the literal meaning of text is emphasized more than the functional purpose of the text.

In sum, under any of these versions, the formalist decisionmaking style views the judge's role as the logical, mechanical restatement of the meaning placed into a statute or the Constitution by the framers and ratifiers of that document. Being a positivist theory of law, the formalist sees the judge as a neutral arbitrator who attempts to decide cases in light of existing positive law. Being an analytic, positivist theory of law, formalism has a preference in common-law, statutory, or constitutional adjudication for clear, bright-line rules that are capable of logical, mechanical application, rather than doctrine phrased as balancing tests, factors to weigh, or general standards.\(^2\) This preference is discussed in greater depth at § 4.2 and reflected in Table 4.1. As discussed in Chapter 9, when formalists interpret the Constitution they give great weight to the literal meaning of terms and to evidence of the specific historical intent of the framers and ratifiers regarding a particular constitutional provision because those matters are thought best to reflect an analytic, neutral approach to the positive law adopted by the framers and ratifiers.

For a formalist, the other interpretation styles are defective in that they give judges too much room to invent law and, thus, allow interference with the democratic process, whose basic assumption is that law should be the will of the people as expressed through statutes passed by their elected

\(^9\) See Mark D. Rosen, Nonformalistic Law in Time and Space, 66 U. Chi. L. Rev. 622, 623 n.6 (1999), and sources cited therein.

representatives or embodied in the text of the Constitution. Adopting a rigid, positivist approach that the Constitution is a static source for reasoning, Justice Scalia stated at a conference held in 2002, “The Constitution that I interpret and apply is not living, but dead. . . . Our first responsibility is not to make sense of the law – our first responsibility is to follow the text of the law.”21 Justice Scalia similarly noted in his 1997 book, A Matter of Interpretation, that the alternative view of the “living” Constitution is incompatible with the “antievolutionary purpose of a constitution.”22 This aspect of a formalist approach to interpretation is discussed at §§ 4.1 nn.7-12, 6.3.4 & 9.2.2.1.

The worst offender, for a formalist, is an instrumentalist judge, given such a judge’s willingness to allow background social policy considerations to affect constitutional interpretation. The natural law style, with its concern to search for and carry out background moral principles that may underlie text, likewise contains for a formalist too many opportunities for a judge to “make sense of the law” in a way that could be contrary to the framers and ratifiers’ intent as determined by the literal meaning of enacted text. Formalists are also distrustful of the Holmesian style of interpretation, given its willingness to allow logic to be overcome by experience and by a willingness to allow text to be read in light of a search for underlying purposes.

§ 3.2 Holmesian: A Functional/Positivist Approach

As noted at § 2.4, a second kind of judge combines a positivist emphasis on certain, predictable treatment of existing law with the functional view that legal rules are always means to societal ends. Given this view of legal rules, purely logical treatment of existing law is not sufficient to carry out the judicial task. Judges who adopt this view may be called "Holmesians," after Justice Holmes, whose famous statement was that "[t]he life of the law has not been logic: it has been experience."23 As pragmatic functionalists, Holmesian judges are sensitive to the purposes behind relevant legal rules and texts in order to apply the doctrine in a way best calculated to achieve its intended ends. However, as positivists, Holmesian judges believe that the judicial task is merely to interpret existing law, with any changes in the law coming from the other branches of government, the legislative or executive branch. As Holmes stated, "The first requirement of a sound body of law is, that it should correspond with the actual feelings and demands of the community, whether right or wrong."24

Because the life of the law was not the logic of the formalists, but rather experience, Holmes concluded that law must be responsive to social conditions, as a pragmatic means to that end.25

22 Scalia, supra note 14, at 44.

23 Oliver Wendell Holmes, Jr., The Common Law 1 (1881). This passage from The Common Law is quoted in full at § 2.2.2.1 n.9.

24 Holmes, supra note 23, at 36.

However, Holmes also held the positivist view that judicial decisionmaking is separate from moral discourse. Within the limits thus imposed on the judicial task, Holmes’ pragmatism caused him to focus on the certainty and predictability of law. As Professor Patrick Kelley noted, "Holmes believed a judge could do a number of things to improve the law within the limits imposed by his society's prevailing beliefs. First, a judge can increase the effectiveness of current law in achieving its socially desirable consequences by making it more fixed, definite, and certain. . . . So, too, the positivist judge ought to adhere strenuously to the doctrine of stare decisis, as that makes the law more reliable, certain, and knowable, and hence more effective in achieving its socially beneficial consequences, whatever they may be."

This concern with certainty and predictability led Holmes to postulate that law should be guided by external, objective standards, about which individuals could more readily agree, rather than on internal, subjective standards, about which disagreement is more likely. As Holmes stated, "[W]e ask not what this man meant, but what those words would mean in the mouth of a normal speaker of English, using them in the circumstances in which they were used." As has been noted, Holmes' analysis in *The Common Law*, “called for the adoption of wholly external standards of liability in tort and criminal law. . . . Holmes as a judge never hesitated to adopt external or objective liability standards in tort and criminal law.” For Holmes, "The acceptance of the objective standard for liability in tort and crime would, in his eyes, accelerate certainty, for it would permit and encourage judges to apply a known standard with foreseeable regularity. . . . 'The tendency of the law must always be to narrow the field of uncertainty.'" Similarly, Holmes rejected the subjective theory of contract interpretation, in favor of the objective theory. Under the objective theory, it is not important to determine what the parties in fact subjectively meant; rather, the goal of contract interpretation is to construe the contract objectively in light of how a reasonable person looking at the contract would reasonably interpret what was written or said. Similarly, consistent with his emphasis on objective, external standards, and his denigration of subjective, internal standards, Holmes always spoke of searching for the objective meaning of words used in a statute, and not for the legislature's subjective intent.

---

28 Kelley, *supra* note 26, at 461.

30 See, e.g., Goode v. Riley, 153 Mass. 585, 586, 28 N.E. 228 (1891) (Holmes, J., opinion); Hotchkiss v. National City Bank, 200 F. 287, 293 (S.D.N.Y. 1911) (opinion by Holmesian judge Learned Hand) (“A contract has, strictly speaking, nothing to do with the personal or individual intent of the parties. A contract is an obligation attached by mere force of law to certain acts of the parties, usually words, which ordinarily accompany and represent a known intent.”).

Some commentators, wishing to view Holmes as a forerunner of the instrumentalist approach to judicial decisionmaking, discussed at § 3.3, have a tendency sometimes to discount Holmes' positivist belief that law and morals should be separable. As Professor Thomas Grey has stated, "Holmes believed that adjudication should and must be result-oriented, fundamentally legislative. . . . Sound legislative judgment was thus a primary judicial qualification." This view attempts to collapse Holmes' views into instrumentalism by implanting into Holmes a particular social value science, typically utilitarianism. Professor Patrick Kelley noted that one commentator held the view that "the central core of Holmes' substantive jurisprudence and philosophical methodology arose from the premises of utilitarian jurisprudence." Professor Henry Hart noted about another commentator, "While Holmes speaks of existing law as 'the witness and external deposit of our moral life,' he is careful when he comes to describe what lawyers should be doing and hereafter to avoid any words as soft as 'moral' or 'ethical.' It is only by reading in our own utilitarian concept of these words that we can understand him [as a utilitarian]." Holmes, however, was ultimately skeptical of the validity of any moral system. As Yale Law School Professor of Law and Legal History Robert Gordon has noted, "I think that we have to start somewhere else – specifically with positivism – in order to understand The Common Law. In particular, I am referring to the scientific positivism of such authors as Clifford and Spencer, two of the most aggressive supporters of the tendency 'to treat the world as a hard object gradually being discovered by means of the suppression of human subjectivity.'" Professor Mark DeWolfe Howe has added, "If this interpretation of Holmes' intellectual development is accepted, it means that when he began the study of law in the fall of 1864 he had passed through two decisive phases of his growth. First, he had shaken off the religious faith on which so many assumptions of the world around him were based, and second, he had learned from the [Civil] War that personal taste in morals does not establish universal or objective truth in ethics. Skeptic in faith and skeptic in morals . . . We would do better to stand by Holmes' faith and his skepticism than to repudiate both.

Given this view, the role of the law in Holmes' view was to accommodate to what the dominant group in society wants, "whether right or wrong," as cited above at § 3.2 n.24. Thus, legislatures, as representatives of the majority in our democratic society, are the proper balancers of public policy in society, not courts. As Professor G. Edward White noted, "Holmes' job at the Supreme Court consisted of, in many instances, reviewing the constitutionality of actions of a legislature. In such cases Holmes forged his famous attitude of deference, which was seen as humility and

36 Mark DeWolfe Howe, The Positivism of Mr. Justice Holmes, 64 Harv. L. Rev. 529, 537, 546 (1951).
‘self-restraint’ by admirers and had the added advantage of sustaining ‘progressive’ legislation about which a number of early 20th-century intellectuals were enthusiastic. Deference to legislative policymaking was consistent with the view Holmes had developed on the Massachusetts [Supreme] court. . . . During Holmes’ tenure judicial deference resulted in legislation that helped alleviate some of the inequalities of rampant industrialization; in the 1950’s and 1960’s a similar version of deference would have perpetuated malapportioned legislatures, racially segregated facilities, the absence of legal representation for impoverished persons, and restrictions on the use and dispensation of birth control devices.”37 Indeed, Professor Grant Gilmore remarked that for Holmes “if the dominant majority desires to persecute blacks or Jews or communists or atheists the law, if it is to be ‘sound’, must arrange for the persecution to be carried out with, as we might say, due process.”38 As noted at § 16.2.4 n.68, concerning an article entitled “Holmes, Hobbes, and Hitler,” Holmes agreed with the formalist view that judges should not test their decisions by an external standard of moral rightness. The “uncompromising positivism of [Holmes’ bad man] speech remains.”39 In that speech, Holmes said, “If we take the view of our friend the bad man we shall find that [the] prophecies of what the courts will do in fact, and nothing more pretentious, are what I mean by the law.”40

Holmes disagreed with the formalists, however, over whether legal rules ideally should be organized into a system of logically consistent, symmetrically related rules. As noted at § 2.2.2.1 n.9, in contrast to the formalist view, Holmes felt that law should be more responsive to the "felt necessities of the times" than to "logic" or "symmetry." With respect to the common law, Holmes noted that the common law is never purely logical because it is always discarding rules at one end and adopting new rules at the other end in a constant process of change.41 With respect to constitutional or statutory interpretation, Holmes also criticized a purely literal approach. As Holmes noted, "A word generally has several meanings, even in the dictionary. You have to consider the sentence in which it stands to decide which of those meanings it bears in the particular case, and very likely will see that it there has a shade of significance more refined than any given in the wordbook."42

Adopting a functional theory of law, Holmes believed that laws have purposes to which a statute or constitutional provision is a means to an end. As Holmes stated, "[T]he general purpose is a more

38  Gilmore, supra note 5, at 49-50.

39  Hart, supra note 34, at 932.

41  Holmes, supra note 23, at 32.

42  Holmes, supra note 27, at 417.
important aid to the meaning than any rule which grammar or formal logic may lay down."^{43} Holmesian Justice Felix Frankfurter made the same point discussing the interpretation theory of Holmes under the headings “Proliferation of Purpose” and “Search for Purpose.”^{44} Criticizing the formalist approach in one of his opinions, Holmesian Judge Learned Hand said, "[I]t is one of the surest indexes of a mature and developed jurisprudence not to make a fortress out of the dictionary; but to remember that statutes always have some purpose or object to accomplish, whose sympathetic and imaginative discovery is the surest guide to their meaning."^{45}

Under the Holmesian view, a judge must focus on both clear text and inferences drawn from purpose. On text, Judge Henry Friendly reported that Justice Frankfurter, a devout follower of Holmes, was wont to remind students when he was a Professor at Harvard, there is a threefold injunction in interpreting a statute: “(1) read the statute; (2) Read the Statute; (3) READ THE STATUTE.”^{46} Reflecting a similar positivist respect for existing law regarding purpose, Justice Frankfurter noted, "[T]he purpose which the court must effectuate is not that which Congress should have enacted, or would have. It is that which it did enact, however inaptly, because it may fairly be said to be imbedded in the statute, even if a specific manifestation was not thought of, as is often the very reason for casting a statute in very general terms."^{47}

In sum, Holmes' distinctive style was to combine positivism with a pragmatic, functional approach to the law, and thus to reject the pure logic and symmetry of the formalist decisionmaking style. Other contemporaries of Holmes, like Professor John Chipman Gray, embraced the same kind of functional positivism.^{48} As Professor Grey noted, when discussing Holmes’ decisionmaking style as a blend of positivism and pragmatism, "Holmes was certainly one of the important American exponents of English analytic positivism, and his prediction theory of law is a significant elaboration of that approach to law. But if this were all there were to Holmes, we would add little by calling him a pragmatist. My suggestion is that we can understand the distinctively pragmatist cast to Holmes' legal thought if we take account of the recent revival and reinterpretations of pragmatism."^{49} When Professor Grey attributed instrumentalist, result-oriented reasoning to Holmes' pragmatism, however, and criticized Holmes for not always following through on this mode of decisionmaking, he was rightly criticized by Professor Kelley for forgetting Holmes' positivism. As Kelley stated:

---

45 Cabell v. Markham, 148 F.2d 737, 739 (2nd Cir.) (Hand, J.), aff’d, 326 U.S. 404 (1945).

46 Henry Friendly, Benchmarks 202 (1967).

47 Frankfurter, supra note 44, at 539.

49 Grey, supra note 25, at 789.
A pragmatic judge, Grey suggests, ought to embody in his opinions a synthesis of the instrumental and the contextual. He ought to exercise sound legislative judgment, based upon “considerations of social advantage” . . . . Grey then judges [that] Holmes's performance as a judge failed to live up to these pragmatic guidelines . . . . But what was it, exactly, that Holmes preached. . . . If we add back in what Grey leaves out – Holmes's progressive positivist historicism and his thoroughly reductive theory of judicial decision – we can understand Holmes's theory of judging, too, as a coherent positivist theory.50

In short, not every pragmatist is an instrumentalist. And, of course, not every positivist is a formalist. As summarized at § 2.4, and discussed here, the Holmesian judicial decisionmaking style represents a pragmatic functional positivism, which rejects both formalism and instrumentalism.

This functional positivist approach, when applied to the issue of judicial deference to existing law, has meant that Holmesian judges, more than any other kind of judge, have tended to defer to the government in constitutional cases unless the unconstitutionality of the government action is clear. Holmesian judges, as functional positivists, tend to have a greater level of deference to governmental action than the analytic, positivist formalists, because formalist judges may rule some governmental action unconstitutional based upon a literal interpretation of constitutional text, while the Holmesian emphasis on the functional purpose behind the constitutional provision may permit the governmental action to be constitutional. As positivists, Holmesian judges have a greater tendency to defer to government action than the normative natural law or instrumentalist judges, as those judges will use background considerations of moral principles or, in the case of instrumentalist judges, background considerations of social policy, to question the constitutionality of government action.

For these reasons, the Holmesian deference-to-government approach is the style most properly viewed as a “strict construction” approach to the Constitution, at least in cases involving individual rights challenges to the constitutionality of governmental action. For structural issues of federalism or separation of powers, a deference-to-government approach naturally does not call for strict construction of governmental powers, but rather for a deferential approach toward governmental powers. Similarly, regarding statutes and the common law, the Holmesian approach rejects the policy maxim of strict construction of statutes in derogation of the common law, discussed at § 5.2.2.1.B, because the Holmesian deference-to-government posture requires statutes to be given their full, complete meaning, not a strict interpretation. For reasons of certainty and predictability, however, shared to an extent by all the decisionmaking styles, the Holmesian approach embraces the policy maxim of strict construction of penal statutes, also discussed at § 5.2.2.1.B.

In addition, as discussed at § 10.2.2.1, this deference-to-government posture has meant that Holmesian judges are the most willing to permit legislative and executive action under the Constitution to act as a "gloss" on meaning to the Constitution. To this extent, the Holmesian approach rejects the formalist “static” model of constitutional interpretation in favor of a “living” Constitution. This is true so long as that “living” Constitution derives its support from positive legislative or executive action, rather than judicial normative consideration of background moral principles or social policy.

50 Kelley, supra note 33, at 453-54.
§ 3.3 Instrumentalism: A Functional/Normative Approach

In contrast to the positivism of both the formalist and Holmesian judicial decisionmaking styles, instrumentalists answer the question regarding the nature of the judicial task by adopting the normative view that judges should always test the law by reference to some external standard. As Professor Summers remarked in his article on pragmatic instrumentalism:

A general theory of law that does not address issues of value is, in my opinion, fundamentally incomplete. The law is not merely a formal receptacle. It includes substantive content. . . . [M]ost of the leading instrumentalists . . . followed . . . the American pragmatist philosophers in subscribing to a theory of value that may be characterized as utilitarian, quantitative, conventionalist, and majoritarian. . . . Most pragmatic instrumentalists believed that values in general and the goals of rules and other legal precepts in particular must derive from prevailing wants and interests.51

On the issue of the nature of law, instrumentalists view law in functional terms as a means to the end of some social values. As Professor Summers stated, “That law is, in essence, a means, and only a means, to goals derived from sources outside the law, was perhaps the most characteristic tenet of pragmatic instrumentalism.”52 Indeed, the term instrumentalism reflects the fact that such judges see law in functional terms as an instrument to achieve justice in society.

As noted by Professors Gilmore and Llewellyn, under this functional, normative approach the judge must test the formulation and application of each rule by its purpose and policy. Rules are not tested merely by internal logical symmetry, the focus of formalism. Rather, they are tested by the social ends to which they are the means. Because the consequences of a rule are critical in this means-end reasoning, instrumentalist judges tend to be result-oriented. Thus, they tend to follow, in Llewellyn’s terminology, the “situation-sense” of the case. Of course, judges must follow the law and cannot make law whimsically. But, for an instrumentalist judge, the act of interpreting a constitution, statute, or common-law decision will often call for background social policy considerations to resolve leeway in the law, where no law exactly covers the situation or each of two conflicting rules arguably applies.53 Justice Benjamin Cardozo, who served on the New York Court of Appeals from 1917-32, and Justice Roger Traynor, who served on the California Supreme Court from 1940-70, are often mentioned as exemplars of an instrumentalist approach to common-law adjudication.

Karl Llewellyn called this approach to judicial decisionmaking the “Grand Style.” To determine the “situation-sense” of a case under the Grand Style, Llewellyn noted:

51 Summers, supra note 2, at 875.
52 Id. at 882. For an in-depth discussion of instrumentalism, see id. at 863-96, 908-23.
As overt marks of the Grand Style: “precedent” is carefully regarded, but if it does not make sense it is ordinarily re-explored; “policy” is explicitly inquired into; alleged “principle” must make for wisdom as well as for order if it is to qualify as such, but when so qualified it acquires peculiar status. On the side both of case-law and of statutes, where the reason stops there stops the rule; and in working with statutes it is the normal business of the court not only to read the statute but also to implement that statute in accordance with purpose and reason.  

As discussed at § 3.1, the classic formalist view of Langdell was that there are no leeways in the law. Law is a complete system, and the analytic method of logic and reason can deduce fixed answers from the existing legal categories. Thus, any pretense to judicial lawmaking is illegitimate. Adopting a more realist, functional approach, Holmesian judges tend to acknowledge that some leeways in the law exist, but as positivists they are wary of judges taking a leading role in resolving such leeways. As Holmes noted, judge must sometimes exercise “the sovereign prerogative of choice,” but should only do so “interstitially.” The “Nightmare” for positivists, as described by H.L.A. Hart, is that instrumentalist judges will exercise this “sovereign” prerogative in too many cases, and thus will end up legislating from the bench. 

Under standard instrumentalist theory, a judge is not “legislating from the bench” when adopting the instrumentalist style, because the judge is merely resorting to social policies embedded in the law that are separate from the judge’s own values. To the extent this is true, an instrumentalist judge follows society’s rules as much as a formalist judge. Professor David Lyons noted, “[L]aw is rooted in authoritative sources, such as legislative and judicial decisions (a ‘source-based’ view of law). . . . [N]onradical instrumentalists seem to accept a source-based view of law, as do all instrumentalist judges in practice, whatever they may say when writing about the law.” Under this view, the “Nightmare” approach is adopted only in the strawman of a radical instrumentalist, such as Jerome Frank’s famous quip that a judge’s decision may be based on “what the judge had for breakfast,” or a radical natural law theorist, such as proposing that judges should be “Platonic Guardians,” discussed at § 12.2.2.3 nn.72-80.

55 Oliver Wendell Holmes, Jr, Law in Science and Science in Law, 12 Harv. L. Rev. 443, 461 (1899) (“the sovereign prerogative of choice”); Southern Pac. Co. v. Jensen, 244 U.S. 205, 221 (1917) (Holmes, J., dissenting) (judges are limited to legislating “interstitially”).

56 See H.L.A. Hart, American Jurisprudence Through English Eyes: The Nightmare and The Noble Dream, 11 Ga. L. Rev. 969, 972 (1977). This passage is quoted in full at § 2.3.2.1 n.32.

58 Jerome Frank, Courts on Trial 161-62 (1949).
The difficulty with the standard instrumentalist approach, however, is identifying what those background social policies are that are embedded in the law. As H.L.A. Hart noted in his article, *The Nightmare and The Noble Dream*:

But plainly, merely to adopt this style of decision is not in itself sufficient to banish the Nightmare. Many questions arise. May not the legal system contain conflicting principles? May not a given rule or set of specific rules be equally well explained by a number of different alternative hypotheses? If so, will there not be need at these higher levels for judicial choice, and if so, will not adjudication still fall short of the Noble Dream since such a choice will be an act of lawmaking, not a further discovery of existing law?\(^59\)

More specifically, how is an instrumentalist judge to balance the four kinds of arguments in reaching decisions: logic (“analogy” or “symmetry”); purpose (indicated in part by the “history” of a rule or considerations of “convenience”); background moral principles (a society’s conception of “justice” as indicated in part by “customary” social norms); and background social policies (“policy” or “social welfare” considerations). And there is the further consideration of what to do if the judge reaches one result, but prior judicial precedents suggest a different result.

Focusing mostly on the process of judicial decisionmaking in common-law cases, Justice Benjamin Cardozo considered these questions in his book, *The Nature of the Judicial Process*. He stated:

What is it that I do when I decide a case? To what sources of information do I appeal for guidance. . . . If a precedent is applicable, when do I refuse to follow it? If no precedent is applicable, how do I reach the rule that will make a precedent for the future? If I am seeking logical consistency, the symmetry of the legal structure, how far shall I seek it? At what point shall the quest be halted by some discrepant custom, by some consideration of the social welfare, by my own or the common standards of justice and morals? Into that strange compound which is brewed daily in the caldron of the courts, all these ingredients enter in varying proportions. I am not concerned to inquire whether judges ought to be allowed to brew such a compound at all. I take judge-made law as one of the existing realities of life. . . . The final cause of law is the welfare of society. . . . Logic and history and custom have their place. We will shape the law to conform to them when we may; but only within bounds. The end which the law serves will dominate them all.\(^60\)

In a later book, *The Growth of the Law*, Cardozo stated:

[The judge] is to regulate his estimate of values by objective rather than subjective standards, by the thought and will of the community rather than by his own idiosyncracies of conduct and belief. Often the two standards will be identical. At all events, if the communal thought or will is different, there will be neither statute nor custom nor external token to declare and define the difference. The judge will then have no standard of value available except his own. In such

\(^{59}\) Hart, *supra* note 56, at 981.

circumstance, the objective will be for him merged into the subjective; the axiology that is to
guide him will be his own and not another’s. . . .

We have no fear in this subordinating the individual to the community that great minds and
great souls will be without an opportunity to reveal themselves. The search, indeed, is for
something external, a norm which finds expression in custom or convictions, but, in the very
act of declaring what is found, there springs into being a new norm, a new standard, to which
custom and convictions tend thereafter to conform. . . . The judge interprets the social
conscience, and gives effect to it in law, but in doing so he helps to form and modify the
conscience he interprets. Discovery and creation react upon one another.61

Instrumentalist judges consider such interpretation of the social conscience necessary, given the
leeways in existing positive law. Indeed, Justice Cardozo’s greatest concern in the passage above
seems to be with reassuring the reader that “great” judges with “great minds and great souls” will
not have too little discretion under his proposed approach. In contrast, for positivists, the
instrumentalist approach is a recipe for too much judicial activism. Indeed, as discussed at § 3.4
nn.96-106, even for natural law judges the influence of background considerations should be limited
to analytic balancing of background moral principles, not the more broad-based foray into
background social policies, whatever they may be determined to be.

In theory, a personally conservative or liberal instrumentalist judge should read Cardozo’s objective
social conscience in the same way. In practice, that is not likely to be true. As Cardozo himself
admitted in the passage cited above, in some cases “there will be neither statute nor custom nor
external token to declare and define the difference. The judge will then have no standard of value
available except his own.” Furthermore, even if there were agreement on the basic goals to be
achieved, there will likely be different views among conservative and liberal judges on the best
means to achieve those goals. Such differences over the best means to achieve effective social
policy are critical for an instrumentalist judge because, as Professor Summers noted:

[T]he theory treats the law “in action.” It is concerned not only with the general nature of law
as social means but also with law as it is actually used, and with the practical differences that
law's uses make. This focus extends beyond law's external effects to the workings of its internal
processes – the operation of its complex implementive technology. Thus, the theory necessarily
addresses official legal personnel, their roles as “social engineers,” and the technical skill they
must deploy in those roles. More than any other theory of law, pragmatic instrumentalism is
concerned with the effectiveness of legal action.62

For this reason, more than is true of any other theory, there are likely to be differences in case results
among conservative and liberal instrumentalist judges. Nonetheless, there are conservative and
liberal variations of each of the four judicial decisionmaking styles, as discussed at § 4.4.2 when
considering judicial predispositions in deciding cases. Specific differences among conservative and

62 Summers, supra note 2, at 864.
liberal variations of the four decisionmaking styles in the context of constitutional interpretation are discussed when considering each style in depth, at §§ 9.3.3, 10.3.3, 11.3.3 & 12.3.3.

Justice Cardozo also noted in the passage cited above that independent of how a judge might decide a case in the absence of precedent, there is always the question, “If a precedent is applicable, when do I refuse to follow it?” The differences among the four judicial decisionmaking styles in how each style treats the authoritativeness of precedent are discussed at § 4.3.2, as part of discussing how judges view precedents in general. Specific differences among the four judicial decisionmaking styles regarding their treatment of precedent in the context of constitutional interpretation are discussed at §§ 9.2.2.2, 10.2.2.2, 11.2.2.2 & 12.2.2.2.

For statutory interpretation, a similar concern exists with how to use background social policies that may influence interpretation in any statutory interpretation case. The standard instrumentalist approach is reflected in the Legal Process school of Harvard University Law School Professors Henry Hart and Albert Sacks. Under this approach, judicial creativity is limited to interpreting a statute in such a way as to "fit the statute into the legal system as a whole." In pursuing this task, the court assumes that "the legislature was made up of reasonable persons pursuing reasonable purposes reasonably"; gaps left in statutes are filled in by the courts to "rationalize the law," making it "fair, coherent, and purposive," while based on the legislature's purposes in enacting the law.63 The approach is also reflected in the views of Karl Llewellyn on statutory interpretation and his focus on “text, legislative history, statutory purpose, and contemporary public policy.”64

A classic example of such an approach in practice is Justice Brennan's opinion in the famous statutory interpretation case of United Steelworkers v. Weber.65 The Court held in Weber that the ban on employment discrimination based upon “race, color, religion, sex, or national origin” in Title VII of the 1964 Civil Rights Act did not prohibit voluntary affirmative action by private employers. The Court rejected the argument that the clear text of the statute prohibited affirmative action, reasoning instead that such a reading would violate the broad purpose of the Act to aid minorities.66 Justice Brennan used bits of legislative history to support this interpretation of Title VII.67 The positivist critique of this interpretation, which appeared in Justice Rehnquist's dissent in the case,

---

66 Id. at 201-02.

67 Id. at 202-04.
was that Justice Brennan's opinion in *Weber* disregarded clear text, and followed a selective reading of legislative history to produce a result compatible not with Title VII's literal text (the formalist emphasis) or actual congressional purpose (the Holmesian emphasis), but with Justice Brennan's view of the background social policy of civil rights legislation in the 1960s to aid minorities. As this example suggests, in some cases it may not be clear whether some consideration is an actual purpose of a statute, and thus appropriate to consider even under a Holmesian approach, or is merely a background social policy not clearly part of the actual congressional purpose of a particular statute, and thus appropriate to consider only under an instrumentalist approach, and only then if leeways exist in the proper interpretation of the statute after consideration of actual congressional purpose.

A more extreme instrumentalist approach uses the Legal Process approach for filling gaps in the law as justification for even greater creative judicial interpretation and law-making. As noted by Columbia University School of Law Professor John Kernochan, "Some statutes, by virtue of their generality, or otherwise, clearly contemplate judicial creativity. . . . Resort to purpose will resolve many [problems, but] there is often leeway in defining purposes. . . . Where such leeway remains, legislative choices must be made by courts [which] we may label 'policy' or 'public policy.'"

An example of a court following such an approach occurred in *West Winds, Inc. v. M.V. Resolute*. In *West Winds*, the court began by quoting a more modest instrumentalist approach, noting, "It has long been recognized that: 'increasingly as a statute gains in age . . . its language is called upon to deal with circumstances utterly unconsidered at the time of its passage. Here the quest is not properly for the sense originally intended by the statute, for the sense originally put into it, but rather for the sense which can be quarried out of it in light of the new situation.' Llewellyn, *Remarks on the Theory of Appellate Decisions and the Rules or Canons about How Statutes are to be Construed*, 3 Vand. L. Rev. 395, 400 (1950); see H. Hart & A. Sacks, *The Legal Process* 1410-11 (tent. ed. 1958) (unpublished manuscript)." However, the court continued, "[A] court interpreting a statute should 'ask itself not only what the legislation means abstractly, or even on the basis of legislative history, but also what it ought to mean in terms of the needs and goals of present day society. This approach is required by the insuperable difficulties of readjusting legislation by the legislative process and by the fact that it is obviously impossible to secure an omniscient legislature.'"

---

70 720 F.2d 1097 (9th Cir. 1983).

71 Id. at 1101.

An in-depth discussion and defense of this more activist model of statutory interpretation appears in former Yale Law School Dean, and now Judge, Guido Calabresi’s book, *A Common Law for the Age of Statutes*, and in Georgetown University Law Center Professor William Eskridge’s book, *Dynamic Statutory Interpretation*.73 Sometimes such a policy approach can be used to narrow a statute’s meaning, rather than expand it.74 In either case, such a policy approach has limits. For example, even the *West Winds* court acknowledged that "[d]espite the general validity of this approach to statutory interpretation, the judiciary is not the proper branch of government to update complex statutes when legislative decisionmaking is necessary[, such as] the Bankruptcy Reform Act's creation of a new intermediate level of debt priorities covering contributions."75

The instrumentalist approach to constitutional interpretation similarly involves resort to background moral principles and social policies where leeways exist in the law following consideration of the text and purpose of constitutional provisions. Because of the general nature of many constitutional provisions, such as due process, equal protection, or freedom of speech, a greater percentage of constitutional cases tend to involve leeways than in the case of statutory interpretation. Followed faithfully, however, the instrumentalist approach to constitutional interpretation is not an invitation to unbridled judicial activism. For example, as noted at §§ 11.2.1.2 n.19 & 11.2.1.3 n.23, Justice Brennan stated that he grounded his approach to the Constitution in terms of a concern with “human dignity” shared by the framers and ratifiers of the Constitution and the 14th Amendment, and thus part of the Constitution’s background context, not his personal views. Nevertheless, because of the potential for greater judicial activism represented by the instrumentalist approach, instrumentalist judges are the judges most often criticized for deciding cases based not on text (the formalist emphasis); text and purpose (the Holmesian emphasis); or text, purpose, and background moral principles embedded in the law (the natural law emphasis). Rather, they are criticized as basing decisions perhaps not even on an actual community consensus about some social policy, but on grounds that the decision reflects a supposed community consensus, or values the judge thinks the community eventually will hold, or the judge's own values.76 Instrumentalist judges are thus often described as judicial activists by their detractors.77

---

75 720 F.2d at 1102.

Because even a moderate instrumentalist judge considers actual background social policies of contemporary society as one source of constitutional interpretation, the instrumentalist approach rejects the formalist model of a “static” or “dead” Constitution. Instead, the instrumentalist approach favors a “living” Constitution that draws its breath not only from the text and purpose of the framing and ratifying generation, but also from the history and traditions of contemporary society. Unlike the Holmesian deference-to-government approach, the instrumentalist approach does not limit this “living” Constitution to support from positive governmental action, that is, recent action of the legislative and executive branches. Instead, as discussed at §§ 11.2.2.1-11.2.2.3, the “living” Constitution embodies many sources, including contemporary social views in America and Western Civilization generally, recent judicial precedents, and prudential consideration by judges of contemporary social policy.

§ 3.4 Natural Law: The Analytic/Normative Approach

The fourth mode of legal analysis listed in Table 2.4 is natural law. Natural law theory agrees with the formalist’s embrace of the analytic proposition that law can ultimately be expressed as a system of logically related, universally valid rules, and thus law is not just a means to the end of some social value, regardless of what that does to the symmetry of rules. As Professor Weinrib noted in his article, cited at § 2.2.1 n.5, which touted the virtues of an analytic approach to law, “Formalism postulates that law is intelligible as an internally coherent phenomenon. . . . Formalism can accordingly be summed up as proffering the possibility of an ‘immanent moral rationality.’ . . . This description reflects legal formalism both as it has been understood in the philosophical tradition of natural law and natural right and as it is presupposed in the ideal of coherence to which sophisticated legal systems aspire.”78

On the other hand, natural law theorists disagree with formalism’s embrace of the positivist position that law and morals are separable. Instead, natural law theorists believe that law, properly defined, is connected to an external standard of rightness, the standard of natural law. Thus, as cited at § 2.4 n.37, Professor Weinrib distinguished in his article the natural law and natural rights tradition from "the thinner formalism of positivism, which . . . makes the notion of law as such indifferent to the law's content."79 As one commentator explained, "Behind all these attempts to find a place for a higher law may be discerned a feeling of discontent with justice based on positive law alone, and a strenuous desire to demonstrate that there are objective moral values which can be given a positive content and expressed in normative form."80

A judge following this analytic, normative approach evaluates law in terms of how it advances background moral principles, but, like a formalist, views law as a set of principles implemented through logic and reason. There are, of course, a number of natural law traditions, including both religious or theological natural law traditions and more secular natural rights traditions. Thus, for

79 Id. at 954 n.14.

example, there is the classical natural law tradition of Plato, Aristotle, and the Stoics, including Cicero; the Christian natural law tradition, as reflected in the writings of Augustine in the 4th century, Thomas Aquinas in the 13th century, and others; the Renaissance natural law tradition of Grotius, Burlamaqui, Puffendorf, and Vattel; the civic Republican tradition of Harrington and others; the Enlightenment natural law tradition of the English, Scottish, and French Enlightenments; and various versions of modern 20th-century natural law. The impact of these different versions of natural law as applied to constitutional interpretation and decisionmaking is discussed at §§ 8.4.1 & 12.3.3. The intent in the remainder of this section is to describe the general features which unite all of these natural law theories, to distinguish them from the formalist, Holmesian, and instrumentalist approaches to judicial decisionmaking, and to provide an introduction to the natural law approach most prominent at our Nation’s founding.

At the outset, it is important to note that despite being a normative approach to the judicial decisionmaking task, the natural law approach, like the instrumentalist approach, is not a justification for unbridled judicial activism. Indeed, the basic premise of a natural law decisionmaking style is that the judge does not have unbridled discretion, but rather is disciplined by natural law theory. Under a natural law approach, societies typically have positive legal enactments—constitutions, statutes, and a record of prior judicial decisions—and in deciding cases judges examine those enactments very carefully. Judges in the natural law decisionmaking tradition will be quite careful to ask, however, whether the drafters of a constitution included natural law principles in the constitution. As Dean Roscoe Pound observed in 1938, "In studying the formative era of American law we are concerned immediately with the eighteenth-century natural law which became embodied for us in the Declaration of Independence and is behind our bill of rights." Natural law thinkers would also likely take natural law principles into account in passing statutes. As Dean Pound noted, "[T]he believers in eighteenth-century natural law did great things in the development of American law because the theory gave faith that they could do them. Application of reason to the details of the received common law was what made the work of the legislative reform movement of enduring worth. Some of its best achievements were in formulating authoritatively what men had reasoned out in the era of the school of the law of nature in the seventeenth and eighteenth centuries."

Despite this limitation on judicial activism, certain more radical versions of natural law theory may be as willing as certain more radical versions of instrumentalism to let views outside the mainstream of society affect judicial decisionmaking, as is discussed at § 12.2.2.3 nn.72-80, regarding the view of the judge as a “Platonic Guardian” of society. On the other hand, the natural law theory of our constitutional tradition, as espoused by Chief Justice John Marshall, Justice Joseph Story, James Madison, and others during the framing and ratifying period, held that judges should consider only the background moral principles that emerge from considering the Constitution itself. This flows from viewing the natural law philosophy of our framers and ratifiers as primarily influenced by Enlightenment natural law theory, and the Enlightenment's "social contract" conception of the nature

---

83  Id. at 27.
of government and the proper role of the judiciary in such a society to follow the "social contract" as set out in a written Constitution. Professor Kermit Hall has noted:

Beginning in the 1760's, Americans separated ideas about the principles of government from the product of its actions; the law. They did so by tying the idea of a written constitution to two related notions, natural law and social contract. . . . Natural law theory and the social contract gave American public law its emphasis on limiting governmental power. If government violated the social contract and if it denied natural rights and abused public trust, the people retained a right to overthrow it.84

Additional limitations on judicial activism also flow from the approach to judicial decisionmaking dominant during the framing and ratifying period. As discussed at §§ 4.3.2-4.3.4, judges wishing to follow the natural law judicial decisionmaking style of the framers and ratifiers would need to pay great attention to the grand traditions of the Anglo-American common-law system, which includes such principles as fidelity to precedent, reasoned elaboration of the law, and deciding cases on narrower grounds where possible. However, as discussed at § 12.3.3 nn.115-18, because the Christian natural law tradition assumes that natural law is an emanation of God’s will and reason and is not dependent on a social contract, that natural law tradition may be more receptive to the argument that judges may occasionally supplement the natural law principles the framers and ratifiers adopted with natural law principles derived from other sources, including religious ones.

Admittedly, argumentation under a natural law or a positivist regime may appear to be superficially similar. In both cases resort is had to the constitution, statutes, and prior judicial decisions, and great respect is paid to their meanings. Indeed, where words used in a constitution or statute do not reflect a sound natural law position – as with the case of slavery in the United States Constitution before the 13th Amendment85 – the judge’s responsibility under the natural law theory which framed our Constitution is to follow the Constitution until the natural law position is added to the document. As one author has noted, "[T]here are occasions when the Court is limited in what it can do. . . . [I]f the Marshall Court did not have substantial lawmaking discretion in the slavery cases, it would be misleading to say that it 'legitimated' slavery. That odious accomplishment was the work of colonial and state laws . . . , and, as the Abolitionists claimed, the Constitution of the United States."86 Of course, to say that judges, as judges, are limited to following clear constitutional commands does not mean that citizens should not press for reform consistent with a natural law vision. As has been

noted, "Repressive and unjust laws have too often seen birth in the Halls of Congress (e.g., the Fugitive Slave Acts of 1793 and 1850) and have too often been given the imprimatur of the Supreme Court. The only way out of this difficulty is to recognize that some connection must exist between law and enduring moral norms [by] which the performance of government officials can be judged."\(^{87}\)

Despite this superficial similarity between non-Platonic Guardian natural law interpretation and interpretation under a positivist regime, the analytic task of interpreting words from a natural law perspective is a different enterprise than interpreting words from a formalist perspective. Because of the natural law sensitivity to interpreting words in light of background moral principles, natural law judges will focus not only on the literal meaning of words, but also on the words’ purposes. As Professor Michael Moore noted in his article, *A Natural Law Theory of Interpretation*:

Once a judge determines the ordinary meaning of the words that make up a text and modifies that ordinary meaning with any statutory definitions or case law developments, there is still at least one more task. A judge must check the provisional interpretation reached from these ingredients with an idea how well such an interpretation serves the purpose of the rule in question. The necessity of asking this question of purpose Lon Fuller made familiar to us in his famous 1958 debate with H.L.A. Hart.\(^{88}\)

In that debate, Professor Hart posed the following hypothetical: “A legal rule forbids you to take a vehicle into the public park. Plainly this forbids an automobile, but what about bicycles, roller stakes, toy automobiles? What about airplanes?” Professor Hart’s view was that in many circumstances, the so-called “core” of the rule, no resort to arguments of purpose would be needed. Only in case of ambiguity or an absurd result from literal meaning would one be in the “penumbra” of the rule, which would require resort to purpose.\(^{89}\) In contrast, Professor Fuller’s view was that one can only truly understand what any particular rule means by reference to the purpose behind the words’ utterance. As Fuller stated, “If a statute seems to have a kind of ‘core’ meaning that we can apply without a too precise inquiry into its exact purpose, that is because we can see that, however one might formulate the precise objective of the statute, this case would still come within it.”\(^{90}\)

Following Fuller’s view, a natural law theory of interpretation emphasizes the importance of understanding a provision’s purpose. The natural law focus on a provision's purpose was most famously stated in 1584 in what has come to be known as "The Rule of Heydon's Case." In

\(^{87}\) Riga, *supra* note 85, at 109.

\(^{90}\) Lon L. Fuller, *Positivism and Fidelity to Law – A Reply to Professor Hart*, 71 Harv. L.Rev. 630, 663 (1958).
Heydon's Case,91 Lord Coke stated that a judge should inquire into the "mischief and defect" that the drafter was seeking to remedy and "the true reason for the remedy," and the judge should "make such construction as shall suppress the mischief, advance the remedy, and to suppress subtle invention and evasions for continuance of the mischief . . . and to add force to the cure and remedy, according to the true intent of makers of the act." This resort to purpose in every case makes the natural law theory of interpretation similar to Holmesian theory, but unlike formalism.

Despite this similarity, natural law interpretation differs from Holmesian interpretation in a critical respect. It has been noted:

“There is a tendency to think of judges,” Holmes wrote Laski in 1926, “as if they were independent mouthpieces of the infinite, and not simply directors of a force that comes from the source that gives them their authority . . . .” And that is precisely how [Holmes] thought of natural law – a mystic overlaw, not law in any true sense, theology or morals if you like, but not law. The demand for the superlative that we find in all men was at the bottom of the philosopher's effort to prove that truth was absolute, and of the jurist's search for criteria of universal validity which he collects under the head of natural law. That is why the jurists who believed in natural law seemed to [Holmes] to be “in that naive state of mind that accepts what has been familiar and accepted by them and their neighbors as something that must be accepted by all men everywhere.”92

In contrast to Holmes’ view, natural law judges believe that background moral principles do lie behind all legal enactments, that judges must make an effort to seek out and describe these principles, and, where leeways exists, that judges should interpret the law consistent with the logic of these principles. As Professor Ronald Dworkin has stated, “The doctrine demands, we might say, articulate consistency.”93 This doctrine has also been phrased as a requirement of deciding cases according to “neutral principles.”94

---

91 76 Eng. Rptr. 637, 638 (1584). See generally Warren Lehman, How to Interpret a Difficult Statute, 1979 Wis. L. Rev. 489, 495-504 (1979) (discussing the use by Aristotle, Aquinas, and Plowden of “practical reason” and following the “equity” of the statute); Moore, supra note 88, at 314-18, 384-88 (discussing use of “purposes” and “equity” of the statute to carry out better the “wishes” of the legislature, “even if the judge disagrees with the wisdom of such wishes”).  
92 Francis Biddle, Justice Holmes, Natural Law, and the Supreme Court 40-41 (1960).  
In contrast to an instrumentalist approach, the natural law style of interpretation believes that judges should seek out only background moral principles, not background social policies, to apply this requirement of articulate consistency. As Professor Dworkin stated:

Arguments of policy justify a political decision by showing that the decision advances or protects some collective goal of the community as a whole. The argument in favor of a subsidy for aircraft manufacturers, that the subsidy will protect national defense, is an argument of policy. Arguments of principle justify a political decision by showing that the decision respects or secures some individual or group right. The argument in favor of anti-discrimination statutes, that a minority has a right to equal respect and concern, is an argument of principle.

It is plainly competent for the legislature to pursue arguments of policy and to adopt programs that are generated by such arguments. If courts are deputy legislatures, then it must be competent for them to do the same. . . . I propose, nevertheless, the thesis that judicial decisions in civil cases, even in hard cases . . . . . are and should be generated by principle, not policy.95

The principal reason for this limitation, Dworkin indicated, is the familiar one regarding a concern that judicial resort to policy arguments might place the judge too much in the role of a legislator, while decisions based upon moral principles embedded in society’s laws are less susceptible to that kind of criticism. Under a natural law approach, if a moral principle is truly embedded in society’s laws, then an individual has a right to a decision based upon that moral principle, even if that principle is not explicitly stated in any current constitutional, statutory, or common-law decision. Any argument of unfair surprise by one party is countered by the fact that the other party would be unfairly surprised if the court did not decide the case consistent with that moral right.96

Regarding the requirement of articulate consistency, Dworkin noted:

[T]his demand is relatively weak when policies are in play. Policies are aggregative in their influence on political decisions and it need not be part of a responsible strategy for reaching a collective goal that individuals be treated alike. It does not follow . . . that if the legislature awards a subsidy to one aircraft manufacturer one month it must award a subsidy to another manufacturer the next. In the case of principles, however, the doctrine insists on distributional consistency from one case to the next, because it does not allow for the idea of a strategy that may be better served by unequal distribution of the benefit in question. If an official believes, for example, that sexual liberty of some sort is a right of individuals, then he must protect that liberty in a way that distributes the benefit reasonably equally over the class of those whom he supposes to have the right. If he allows one couple to use contraceptives on the ground that this right would otherwise be invaded, then he must, so long as he does not recant that earlier decision, allow the next couple the same liberty.97

95 Dworkin, supra note 93, at 1059-60.

96 Id. at 1061-62.

97 Id. at 1064-65.
This reason helps explain the special respect that natural law judges have for precedents and hypothetical examples, a respect not shared equally by instrumentalist judges, as discussed in greater depth at § 4.3.2. As Dworkin stated:

An argument of principle can supply a justification for a particular decision . . . only if the principle can be shown to be consistent with earlier decisions not recanted, and with decisions that the institution is prepared to make in hypothetical circumstances. That is hardly surprising, but the argument would not hold if judges based their decisions on arguments of policy. They would be free to say that some policy might be adequately served by serving it in the case at bar, providing, for example, just the right subsidy to some troubled industry, so that neither earlier decisions nor hypothetical future decisions need be understood as serving the same policy.98

Some commentators have argued that this distinction between principles and policies is not one capable of ultimate theoretical defense. For example, Scottish legal philosopher and Professor Neil MacCormick has noted, “To articulate the desirability of some general policy-goal is to state a principle. To state a principle is to frame a possible policy-goal.”99 Nevertheless, as a practical matter, one can draw a distinction, following Professor Dworkin’s writings, between arguments of principle upon based “a requirement of justice or fairness or some other dimension of morality” and arguments of policy based upon “an improvement in some economic, political, or social feature of the community.”100 For purposes of a practical understanding of how judges decide cases, the distinction between principles and policies is thus of practical use.

Former Yale Law School Dean and Professor Harry H. Wellington phrased the practical difference between arguments of principle and arguments of policy as follows:

The first type of justification [policy] is consequentialist; it looks to the future. The rule on which a holding rests will, according to the rationale of the decision, change the behavior of individuals or institutions. The articulated rule serves a policy that in turn is designed to effectuate a societal goal; the justification sounds in terms of benefits and costs.

The second type of justification [principle] looks to the past. Its persuasiveness is not in what it will be; it does not move us toward a goal. Instead, the rule has persuasiveness because it vindicates a principle embedded in the moral ideals of the community; the justification sounds in terms of rights and obligations.

Of course, the vindication of a principle may have significant effects. Indeed, it may entail – as in desegregation – remedial efforts that change the nature of society. But this does not mean, in this class of cases, that effect should be equated with justification any more than it should be

98  Id. at 1065.

100  Ronald Dworkin, The Model of Rules, 35 U. Chi. L. Rev. 14, 23 (1967). This passage is quoted in full at § 2.4 n.41.
when a court carries out a legislative command by enforcing a statute. There too the decision has an effect, but the justification for the decision . . . remains the authority of the legislature.

This distinction [is] between a forward looking policy justification and a backward looking justification from principles embedded in the moral ideals of the community . . . .

Of course, some judges may be willing to give respect to both arguments of principle and policy, but weight their consideration more in one direction than the other. For example, a judge leaning in the direction of natural law might be willing to rely on policy argumentation only if the wisdom of that policy goal is supported, in Professor MacCormick’s terms, by “some unstated but presupposed principle.” Such connections may be easy to make, if arguments of policy based upon “an improvement in some economic, political, or social feature of the community” are related to a categorization of versions of natural law as “economic, political, or ethical natural law,” discussed at §§ 13.1 nn.14-16, 30-40 & 14.2.1. Even without so linking arguments of principle and policy, one might take the view, as phrased by Columbia University School of Law Professor Kent Greenawalt:

[T]hat the Constitution institutionalizes many individual rights against claims of collective good, that statutes create rights that judges should not casually cast aside when they believe them to do disservice to the collective welfare, and that rights to be found within the common law should not be overridden whenever they are thought to be inconvenient. This view would lead to the conclusion that when one party has a clearly warranted claim of right, it should never be rejected or should be rejected only upon the strongest showing of urgent public necessity.

On the other hand, a judge leaning in the direction of instrumentalism might agree with Professor Kent Greenawalt’s ultimate conclusion that “Dworkin’s arguments for the proposition that judges should not rely on policy arguments are unpersuasive.” Furthermore, given the instrumentalist era of common-law, statutory interpretation, and constitutional adjudication in the United States in the mid-to-late 20th century, discussed at §§ 13.1 & 14.2.4, Professor Greenawalt was accurate when he asserted in 1977 that, as a factual matter, policies “do underlie common law decisions in areas as disparate as torts, contracts, conflict of laws, and ‘jurisdiction,’ and there is good reason to suppose that close examination would reveal their . . . use in any other areas that might be examined.”

As the interpretation task is similar for statutes and the Constitution, fuller treatment of the natural law approach to both is reserved for Chapter 12, which considers the natural law approach to

Page 61
constitutional interpretation in greater depth. In deciding common-law cases, a natural law judge, where leeways exist in the common law, would decide the case in a way to advance natural law principles embedded in society’s laws, rather than retard them. The classic example of this in American legal history is the transformation by judges of contract, tort, property, and other aspects of the common law during the first half of the 19th century based upon the economic natural law theories of John Locke and Adam Smith, discussed at § 13.1 nn.5-16.

In sum, as a normative approach, the natural law judicial decisionmaking style goes beyond literal text and purpose to background moral principles, but, as an analytic approach, emphasizes logical application of law, bending text and purpose, where leeways exist, to create a reasoned elaboration of the law consistent with the requirement of articulate consistency. The approach rejects judicial use of background social policies to fill gaps in the law, as that places the judge potentially too much in the role of a legislator. An updated version of Table 2.4, reflecting the more detailed aspects of the four judicial decisionmaking styles as developed in Chapter 3, results in the following:

CHAPTER 4: FINAL CAUSE: STRUCTURE OF LAW AS DETERMINED BY JUDGES

As used in this book, the term “structure of law” refers to the authoritative determinations made by courts on the meaning of constitutional provisions, statutes, and the common law. The shape of these determinations takes different forms, just as an Aristotelian bowl, discussed at § 1.2.1, can take different forms, as long as it is not so flat that it becomes a plate or so round that it becomes a vase.

The background to any act of judicial decisionmaking depends on whether the judge is operating within the framework of a common-law system or a civil-law system. The differing nature of these two systems, and the impact that has upon judicial decisionmaking, particularly the fact that legal reasoning tends to be more inductive in common-law countries, especially for common-law or some constitutional issues, while legal reasoning tends to be more deductive in civil-law countries, in terms of interpreting civil-law codes, is discussed at § 4.1. The form or shape of legal doctrine is discussed at § 4.2. This involves noting that, at a minimum, four different decisions must be made to determine the form or shape of any legal doctrine. The first decision is whether the doctrine should be phrased in absolute, categorical terms or as a balancing test. Once that decision is made, the next decision is whether that categorical or balancing test should be phrased in terms of elements to meet or factors to weigh. The third decision is whether those elements or factors should be phrased in the language of specific rules or broader standards. The final decision is whether those rules or standards should be viewed as questions of law to be applied by the judge or questions of fact to be determined by the trier of fact, in a common-law system typically a jury. Judicial use of precedent is discussed at § 4.3. Sometimes judges make broad use of precedent in their judicial opinions; other times judges make narrow use of precedent. Usually judges follow precedent, but sometimes precedent is overruled. Finally, the structure of law that emerges from the use of the materials of judicial decisionmaking is dependent upon various predispositions that judges may have in deciding cases. Aspects of these predispositions are discussed at § 4.4.

All of these possible variations on the structure of law reflect choices that must be made within the usually defined limits of what constitutes an acceptable approach to legal doctrine and judicial decisionmaking. It should come as no surprise that the different styles of judicial decisionmaking tend to favor different styles of legal reasoning, different forms or shapes of legal doctrine, and different approaches to precedent. Judicial predispositions regarding legal reasoning are discussed at § 4.1. Judicial predispositions regarding the form or shape of law are discussed at § 4.2. That discussion will suggest the following about the general judicial predispositions of the decisionmaking styles:

Judicial Predispositions in Legal Reasoning and the Form of Legal Doctrine

Page 63
§ 4.1 Common-Law versus Civil-Law Countries: Induction versus Deduction

As many authors have noted, judicial reasoning in constitutional, statutory, or common-law cases can adopt either an inductive or a deductive mode of reasoning. Typically in statutory interpretation cases, or interpretation of a code in a civil-law country, the judicial reasoning is more likely to follow a deductive mode of analysis. In contrast, common-law adjudication is more likely to reflect an inductive mode of analysis, particularly in resolving leeways in the law. Constitutional adjudication is somewhat more complicated. Judicial reasoning in constitutional cases has tended to be more inductive in areas where the constitutional provision is phrased in relatively detailed, specific terms, and thus where adjudication is more like statutory interpretation. For constitutional text phrased more generally, like the First Amendment provision that “Congress shall make no law . . . abridging the freedom of speech,” or the 14th Amendment provision that “no State shall . . . deny to any person equal protection of the laws,” judicial elaboration has tended to be more inductive.

The difference between deductive and inductive modes of analysis was discussed by Columbia Law School Professor Harry Jones. In his article, Our Uncommon Common Law, he stated:

The story of law in the Western World is a tale of two cities, Rome, where the continental European legal tradition had its rise, and London, to which our own legal system traces its pedigree. The nations of Europe and the Americas, and such Asian and African nations as have followed European legal patterns, are divided into two great law families: the civil-law countries and the common-law countries. A civil-law country is one whose legal system reflects, however remotely, the structural concepts, principles, and decisional methods of classical Roman law, the law of the Roman Empire as compiled and promulgated at Constantinople in the sixth century as the Corpus Juris Civilis of the Emperor Justinian. . . . [T]he story of the common law has to begin in London [with] the royal courts at Westminster.1

Professor Jones noted about the civil-law system:

A lawyer, judge, or legal scholar schooled in the civil-law tradition approaches legal problems and legal sources with certain philosophical presuppositions quite different from those of the common-law lawyer. . . . [I]n the civil-law universe of discourse, nothing is law, in the full sense, that has not been written down in exclusive textual form and enacted by the state’s sovereign power. In civil-law countries, the codes in which private law is cast are formulated in broad general terms and are thought of as completely comprehensive, that is, as the all-inclusive source of authority to which every disputed case must be referred for decision. The civil-law lawyer or judge, faced with a particular problem or controversy, must locate his answer somewhere within the four corners of the authoritative code. Learned commentary on the code may help him discover the code’s true meaning for the case at hand, but his decision must ultimately be justified, at least in form, by deduction from some principle in the code itself – and most certainly not by reliance on the authority of past judicial decisions.2

---

2 Id. at 448.
Professor Jones contrasted this with the mode of reasoning of the common-law system:

The common-law lawyer works in quite another metier and brings different jurisprudential presuppositions to his tasks. Although a great deal of contemporary American and English law is legislative in origin, the law inferred from judicial precedents is fully as important with us as the law set down by statutory enactments. . . . [O]ur codes are not the all-inclusive, systematic statements found in civil-law countries. In any event, our modes of thought are less deductive, far less confident that the final answer to every contemporary problem can be found within the confines of any enactment, however comprehensive. An eminent Italian jurist, impatient with my incorrigibly common-law habits of reasoning, once put the difference to me in these terms:

Given the same problem to a civil lawyer and a common lawyer. What do we do? We find the governing principle in the text of the code. What do you do? You look for a case. We reason from principle. You stumble along by analogy. I wonder how you ever get anything decided at all.

My friend’s charge is overstated, but he is quite right in a way. We common-law lawyers . . . do exhibit a Pavlovian stimulus and response effect: give us a problem, we try to think of a case, a judicial precedent, and if we cannot think of one, we go off to the library and start looking for it. We are uneasy with doctrinal generalizations, more comfortable with the facts of cases than with general concepts, and we never feel quite secure about our professional predictions until we have located a “case in point,” that is, a past court adjudication in a controversy that was factually alike, or something like, the problem now presented to us.3

Professor Jones cautioned in his article that we should be wary about exaggerating these differences. Professor Steve Nickles similarly noted in an article about the civil law, “[A civilian lawyer] looks at the articles of a Code not as mere rulings, but as particular expressions of more general ideas. Therefore, if no express answer to a certain problem is found in the Code, it is not improper to consider various articles in order to induce from them a more general rule and to apply this rule if it can give a solution. It has sometimes been said that articles of a code are not only law, but sources of law. This is true, not only in the sense that the courts may, by deduction, decide on the implications of a certain article, but also in the sense that the courts may, if necessary, use induction to discover the general rules implied in the provisions of a code, and then, reverting to deduction, develop the full potential of these rules in the solution of the problem at hand.”4 On the other hand, some differences do remain. The common law’s typical inductive process embraces a “‘frame of mind which habitually looks at things in the concrete, not in the abstract: . . . which prefers to go forward cautiously on the basis of experience from this case to the next case, as justice in each case

---

3 Id. at 448-49.

seems to require, instead of seeking to refer everything back to supposed universals; [it is] the frame of mind behind the sure-footed Anglo-Saxon habit of dealing with things as they arise instead of anticipating them by abstract universal formulas.”

Former Attorney General of the United States and former Dean of the University of Chicago Law School Edward H. Levi remarked on inductive versus deductive reasoning as follows:

There is, I think, a pattern of judicial reasoning in common law cases, which grows by comparing cases and reasoning by example of analogy from one particular situation to another – thus having a strong inductive element, and yet feeling the necessity to remold and announce rules which justify the new result reached. The new rule, which may have found new meanings in old language, thus becomes a kind of neutral principle which will be changed again in the future. The development of the law of torts is filled with such examples. On the other hand, the interpretation of legislation places a different task on the courts and involves a kind of deductive reasoning, since the words are fixed in the statute and are there to be applied. The initial interpretation of these words – which may be very ambiguous words – by the courts, in early decisions under the statute, are likely to fix the meaning of the legislation in a way that subsequent decisions of the courts in common law cases are not fixed. So there is rigidity and fixity in statutory interpretation. A third kind of reasoning involves the written constitution. Written constitutional provisions are like statutes in that the constitution has set words. But when a court says this is a constitution and not a statute, it often means that the words are allowed to change in meaning, and that they are subject to reinterpretation as though they were common law concepts. And then the court means something more. It means, as Justice Frankfurter said (almost as soon as he found his seat on the bench), “The ultimate touchstone of constitutionality is the Constitution itself and not what we have said about it.” The written constitution therefore gives the court great power – not just great power to declare legislation invalid, as Chief Justice Marshall found, but great power to disregard prior decisions of the court itself, to tear up whole periods of interpretation, and to start over again.

So there is a good deal of the common law type of reasoning in constitutional cases, incremental reasoning – reasoning by example – which it is easier for a court to use when big changes would be bogged down by hot disputes covering matters of policy. Thus at a time when the United States Supreme Court was refusing to permit national regulation to wipe out child labor in the states by closing the channels of interstate commerce to the products of that labor [discussed in this book at § 18.2.2], it found no difficulty in closing the channels of interstate commerce to the transportation of women for immoral purposes or the transportation of diseased cattle, or adulterated foods, or similar products in which it found similarity. And when the Court had walked a considerable distance down this road, it found it easier to uphold a national statute regulating wages and hours [discussed in this book at § 18.2.3]. When the Court did so, it referred to these cases where obnoxious things had been kept out of interstate commerce to show there was a general power to prohibit and regulate, for the distinction which had made an exception of deleterious and harmful products “was novel when made and unsupported by any

provision in the Constitution.” Those cases had been used as stepping stones, and when they were no longer needed, their separate classification was abandoned. You will find this going on continually. It makes for a certain adroitness on the part of the Court.6

Of course, this “adroitness” has been criticized by some jurists, particularly formalists, as undermining the certainty and predictability of law prized by formalists, and as reflecting a living, rather than static, model of the Constitution. For example, when discussing the Court’s contemporary view of the constitutionality of the death penalty, Justice Scalia has written:

As our opinions say in the context of our Eighth Amendment jurisprudence (the Cruel and Unusual Punishment Clause) its meaning changes to reflect “the evolving standards of decency that mark the progress of a maturing society.” This is preeminently a common-law way of making law, and not the way of construing a democratically adopted text. . . . One would suppose that the rule that a text does not change would apply a fortiori to a constitution. If courts felt too much bound by the democratic process to tinker with statutes, when their tinkering could be adjusted by the legislature, how much more should they feel bound not to tinker with a constitution, when their tinkering is virtually irreparable. It certainly cannot be said that a constitution naturally suggests changeability; to the contrary, its whole purpose is to prevent change – to embed certain rights in such a manner that future generations cannot readily take them away. A society that adopts a bill of rights is skeptical that “evolving standards of decency” always “mark progress,” and that societies always “mature,” as opposed to rot. Neither the text of such a document nor the intent of its framers (whichever you choose) can possibly lead to the conclusion that its only effect is to take the power of changing rights away from the legislature and give it to the courts.7

To the contrary, as discussed at §§ 6.3.1-6.3.4, proponents of a living Constitution do conclude, to varying extents, that legislative, executive, or social practice and judicial precedents can sometimes provide a gloss on meaning to the Constitution, and that this approach is consistent with how the framers and ratifiers anticipated the Constitution would be interpreted. As Chief Justice Marshall stated in McCulloch v. Maryland,8 “This provision is made in a constitution, intended to endure for ages to come, and, consequently, to be adapted to the various crises of human affairs. To have prescribed the means by which government should, in all future time, execute its powers, would have been to change, entirely, the character of the instrument, and give it the properties of a legal code. It would have been an unwise attempt to provide, by immutable rules, for exigencies which, if foreseen at all, must have been seen dimly, and which can be best provided for as they occur.”

In addition, particularly from an Enlightenment natural law perspective there is faith in man’s “progress” over time and in the “evolving standards of decency.” Of course, this faith is not blind.

As major influence on the drafting of the Constitution, and later fourth President of the United States, James Madison, wrote in *The Federalist Papers* No. 55, “As there is a degree of depravity in mankind which requires a certain degree of circumspection and distrust: So there are other qualities in human nature, which justify a certain portion of esteem and confidence. Republican governments presupposes the existence of these qualities in a higher degree than any other form.”

In contrast, a particular conservative version of a religious natural law tradition, such as a Calvinist-inspired view of humanity as “radically fallen” from a state of grace, is more likely to embrace Justice Scalia’s concern that societies may well “rot” over time.

As discussed at § 7.1, the most prominent individual of the framing and ratifying generation to have adopted a theory of constitutional interpretation similar to a formalist, deductive, static model of interpretation was Thomas Jefferson. However, Jefferson’s approach must be considered against a backdrop of Jefferson’s view that since “the earth belongs in usufruct to the living,” each new generation has the right to make for itself a new Constitution. Under such a view, the United States Constitution of 1789 would not have been intended to endure for ages, but only until the next constitution was adopted. A static model of interpretation makes better sense given this view, for flexibility can come from newly adopted constitutional language. Such newly-adopted language would thus be the mechanism for law to reflect man’s progress over time and the evolving standards of decency, a faith Jefferson shared with Madison and the Enlightenment natural law tradition.

Despite Jefferson’s support, this view of constantly newly adopted constitutions was rejected by the framing and ratifying generation, including Jefferson’s close friend James Madison. Madison’s letter to Jefferson, counseling against such a doctrine, is instructive. It has been noted, “Among the objections cited by Madison was that too frequent appeals to the people to ‘new-model’ government would ‘in great measure deprive the government of that veneration, which time bestows on every thing, and without which perhaps the wisest and freest governments would not possess the requisite stability’ . . . . Another objection put forward by Madison was that a frequent reference of constitutional questions to the decision of the whole society raised ‘the danger of disturbing the public tranquility by interesting too strongly the public passions.’”

Aspects of the amendment process related to the ease of amendment are discussed at §§ 7.1 nn.19-20 & 20.1.1.3 nn.20-21.

As Justice Scalia’s observations above suggest, the formalist style of decisionmaking is the style most comfortable with deductive modes of reasoning. This applies not only to constitutional and statutory interpretation, but also to common-law decisionmaking. As noted at § 3.1 n.4, Langdell’s model of the common law stressed a deductive process of reasoning where a “few basic top-level

---

10  *Id.* at 71.

12  Mayer, *supra* note 11, at 300-01.
categories and principles formed a conceptually ordered system above a large number of bottom-level rules. The rules themselves were, ideally, the holdings of established precedents, which upon analysis could be seen to be derivable from the principles.”

The Holmesian focus on certainty and predictability in the law, noted at § 3.2 nn.26-31, also has a predisposition toward deductive modes of reasoning. However, as a pragmatic, functional approach to law, Holmesian judges are more willing than formalists to engage in inductive modes of reasoning, particularly when such reasoning will help to illuminate the purposes behind existing legal categories. As noted at § 2.2.2.4, the functional view is that law is an empirical science, not the deductive library science of the formalists.

As an analytic approach to law, the natural law style of decisionmaking shares with the formalist style a desire for legal reasoning to be as deductive as possible. However, as discussed at § 3.4 nn.88-94, as part of the normative natural law emphasis on the background morality of the law, the natural law style shares with the Holmesian style a recognition of the importance of considering the purposes of legal categories. This creates the need as under the Holmesian style for greater resort to inductive reasoning than under formalism. In addition, the natural law resort to background moral principles embedded in the law typically will require an inductive mode of analysis to determine the content of those principles. As noted at § 4.1 n.4, when referring to a similar problem posed in a civil-law system where leeways exist in the existing legal categories, “the courts may, if necessary, use induction to discover the general rules implied in the provisions of a code, and then, reverting to deduction, develop the full potential of these rules in the solution of the problem at hand.” For this reason, while preferring legal reasoning to be as deductive as possible, the natural law style typically involves greater use of inductive modes of reasoning than the Holmesian style.

As a functional, normative approach to law, the instrumentalist style is the most receptive to inductive modes of reasoning in common-law, statutory, and constitutional contexts. As noted at § 3.3 nn.53-54, in each of these contexts, where the reason for the rule stops, there stops the rule. Determining the optimal result in each social circumstance, the so-called “situation-sense” of each case, will typically require some amount of inductive reasoning weighing background social contexts, judicial precedents, and existing legal categories to determine the proper legal result. The greater legal indeterminacy created by such legal reasoning is outweighed for instrumentalist judges by the ability to advance better social welfare or social justice. As Justice Cardozo remarked in a passage cited at § 3.3 n.60, “Logic and history and custom have their place. We will shape the law to conform to them when we may; but only within bounds. The end which the law serves will dominate them all.”

Although the focus of Part I of this book is on the styles of judicial decisionmaking in a common-law system, it is useful to note that the same issue of the four judicial decisionmaking styles exists in civil-law countries also. The general nature of legal reasoning may be more deductive in civil-law countries than in common-law countries, particularly because areas like contracts, torts, and property

---

are governed by legislative codes, and thus are more like statutory interpretation, rather than developed through the common-law system of precedent and reasoning by analogy. Within a civil-law system, however, a formalist civil-law judge is likely to be the most deductive in legal reasoning, while an instrumentalist civil-law judge is likely to be the most inductive in practice. Agreeing with a more instrumentalist approach to civil-law decisionmaking, Justice Cardozo noted in 1921, “I think the tone and temper in which the modern [common-law] judge should set about his task are well-expressed in the first article of the Swiss Code of 1907.”15 That section provides:

The Code governs all questions of law which come within the letter or spirit of any of its provisions.
If the Code does not furnish applicable provisions, the judge shall decide in accordance with customary law, and failing that, according to the rule he would establish as a legislator.
In this he shall be guided by approved legal doctrine and legal tradition.16

The approach reflects an instrumentalist approach because the judge is authorized to consider all four kinds of arguments. First, the judge considers the law’s letter (the literal text, emphasized by formalists) and spirit (purpose of the law, the added focus of Holmesians). Next, if leeways exist in the law, because the Code does not furnish applicable provisions, the judge considers customary law (where leeways exist, custom or background moral principles, the added focus of the natural law style) and, if leeways still exist, how the judge would rule as a legislator (where leeways exist, social welfare or social policy considerations, the added focus of instrumentalism).

§ 4.2 The Form or Shape of Legal Doctrine

As noted in the introduction to this Chapter, at a minimum four different decisions must be made to determine the form or shape of any legal doctrine. These decisions involve the following choices: (1) whether the legal doctrine is presented in absolute, categorical terms, or is phrased as a balancing test; (2) whether the legal doctrine is phrased as a set of elements to meet, or is phrased as a set of factors to weigh; (3) whether the legal doctrine takes the form of rules to follow, or takes the form of standards to meet; and (4) whether the legal doctrine is phrased as an issue of law for judicial determination, or is phrased as a factual issue to be determined by the trier of fact. Each of these decisions is discussed below with reference to common-law, statutory, and constitutional adjudication. Further discussion of these issues with respect to the specific issue of constitutional adjudication appears at § 7.2, as part of Part II’s focus on the form or shape of constitutional law.

§ 4.2.1 Categorical Rights versus Balancing Tests

One conception of rights is that rights are absolute for the area which is covered by the right. Under this conception, rights “trump” all other considerations; they are not balanced against other

15 Id. at 140.

considerations. This is the classic philosophic sense of rights, as noted by Ronald Dworkin.\textsuperscript{17} This approach has also been called a categorical approach.\textsuperscript{18} Comparing a categorical approach with a balancing approach, former Stanford Law School Dean and Professor Kathleen Sullivan has written:

Categorization and balancing each employ quite different rhetoric. Categorization is the taxonomist’s style – a job of classification and labeling. When categorical formulas operate, all the important work in litigation is done at the outset. Once the relevant right and mode of infringement have been described, the outcome follows, without any explicit judicial balancing of the claimed right against the . . . justification for the infringement. Balancing is more like grocer’s work . . . – the judge’s job is to place competing rights and interests on a scale and weigh them against each other.\textsuperscript{19}

Of course, for most categorical rights there are exceptions where the right does not apply. Having an exception to a categorical right, however, is not the same as doctrine being phrased as a balancing test. For example, under contract law, the standard rule is that there must be consideration to make an enforceable contract. In some cases, however, such as those involving promissory estoppel or moral obligation, no consideration is needed. But each of these doctrines is phrased as an absolute right: where consideration applies, it is absolute; where the exceptions apply, they are absolute.\textsuperscript{20}

In many common-law areas, the doctrine is phrased in such categorical terms. For example, under contract law, there needs to be a valid offer and acceptance for there to be an enforceable contract; where the statute of frauds applies, a writing is required to make the contract enforceable, unless some exception applies, like promissory estoppel.\textsuperscript{21} In tort law, whether there exists an assault, a battery, or a false imprisonment depends upon rules phrased in categorical terms.\textsuperscript{22}

A number of rights in the United States Constitution have been held by the Court to be of this kind. For these rights, no balancing of the individual’s right versus the government’s needs is done. For example, as discussed at § 25.1, the 13\textsuperscript{th} Amendment’s ban on slavery is stated in absolute, categorical terms. Similarly phrased in absolute terms are the ban on legislative Bills of Attainder in Article I, discussed at § 23.2.2.1; the President’s power in Article II to pardon individuals for federal offenses, discussed at § 19.3.5; and the view under Article III that federal courts cannot render opinions on matters which are political questions, discussed at § 17.3.4.

For many doctrines, however, the relevant test is not phrased in such categorical terms, but instead is phrased as a balancing test. In an article entitled *Constitutional Law in the Age of Balancing*, Professor Alexander Aleinikoff described balancing tests as follows:

By a “balancing opinion,” I mean a judicial opinion that analyzes a constitutional question by identifying interests implicated by the case and reaches a decision or constructs a rule of constitutional law by explicitly or implicitly assigning values to the identified interests. . . . [B]alancing, as I define it, differs from methods of adjudication that look at a variety of factors in reaching a decision. These would include some of the familiar multi-pronged tests and “totality of the circumstances” approaches.23

Consistent with this definition, the distinction is made here between balancing tests, discussed in the remainder of this section, and the separate issue of whether a doctrine employs elements or a “variety of factors” in reaching a decision, discussed in the next section, at § 4.2.2. So defined, a balancing test is a test that involves a cost-benefit analysis of means and ends – in Aleinikoff’s terms “a head-to-head comparison with competing interests.”24 The logic of this cost-benefit analysis means that in every balancing test there are three basic components of the test, no matter how the test is officially phrased. First, there is question of what principles or policies are involved, that is, what are the ends to be achieved by the doctrine. Against the backdrop of these ends, the means of the action under review are examined both for the benefits achieved by the means (the benefit) and the burdens imposed by the means (the cost) as part of a cost-benefit analysis. Thus, balancing tests inevitably involve a three-part consideration of ends, benefits, and burdens.

For example, in contract law, the doctrine of whether a covenant not to compete is enforceable or not is phrased as a balancing test. The benefits of any covenant not to compete in terms of protection of trade secrets, or customer lists, or employer investment in training is balanced against the anti-competitive costs of a covenant not to compete given the covenant’s scope in terms of time, place, and subject-matter. These benefits and burdens are considered against a backdrop of governmental ends to support freedom of contract, while also supporting marketplace competition. In such cases, the ultimate test is whether the covenant not to compete is “reasonable” given the cost-benefit analysis.25 Similarly, in tort law, the famous Hand formula for determining whether some act constitutes actionable negligence is phrased as a balancing test. Under the Hand formula, the benefit of preventing an accident, measured by the probability of an accident (P) times the harm or liability caused (L), is balanced against the cost or burden of taking action to prevent the harm (B). The end is to reduce the overall cost of activity, that is, whether the benefit is worth the cost.26

26 See generally Prosser and Keeton, *supra* note 22, at 173 n.46.
Many constitutional rights are similarly phrased as balancing tests. As Justice Holmes’ famous example states, even the First Amendment requirement that Congress shall pass no law “abridging the freedom of speech” does not permit an individual to shout “fire” in a crowded theater.\(^{27}\) For such rights, some balancing of individual interests versus governmental interests is required.

These balancing tests inevitably involve a three-part consideration of ends, benefits, and burdens. In each case, the Court considers the government’s ends, how the statute’s means beneficially advance the ends, and how the statute’s means burden individuals regulated by the statute. Professor Aleinikoff noted that the procedural due process cases and the dormant commerce clause cases are classic examples of balancing tests.\(^{28}\) Under the due process test of *Mathews v. Eldridge*,\(^ {29}\) the Court considers: (1) “the government’s interest” or ends in the case; (2) the means by which the existing procedures achieve the government’s ends, including “the risk of an erroneous deprivation through present procedures and the probable value, if any, of additional or substitute procedures”; and (3) “the private interest” that will be burdened. Under dormant commerce clause analysis, as phrased in *Pike v. Bruce Church, Inc.*,\(^ {30}\) the Court considers: (1) the state’s “legitimate local public interest”; (2) the means by which the statute achieves these ends, including whether the benefits of the statute could be promoted “as well with a lesser impact on interstate activities”; and (3) given this, whether the “burden” on interstate commerce is “clearly excessive” given the statute’s benefits.

More examples of balancing tests in constitutional law are considered at § 7.2.1. As noted there, given the definition of balancing tests adopted here, only what Professor Aleinikoff called “ad hoc balancing” counts as a balancing test, because only in such cases does the Court engage in the three-part cost-benefit analysis in applying the test. Professor Aleinikoff also discussed what other commentators have called “definitional” balancing, exemplified, he said, by the conclusion in *New York v. Ferber*, discussed at § 30.1.4.1, that a balancing of interests suggests that the distribution of child pornography is not protected by the First Amendment.\(^ {31}\) The Court’s view in *Ferber* that child pornography is never protected by the First Amendment is best conceived as adopting a categorical approach to doctrine based upon a weighing of factors. As discussed at § 7.2.2 nn.57-59, such examples of “definitional” balancing are best understood in terms of a categorical approach because in each case the doctrinal structure eventually adopted is a categorical rule of general application.

As might be predicted, analytic approaches to law, like formalism and natural law, naturally have a predisposition for as many categorical rules to be adopted as possible. As Professor Aleinikoff noted, “ad hoc balancing may undermine the development of stable, knowable principles of law.”\(^ {32}\)

As stated at § 1.1, and developed at §§ 13.1 & 14.2, an original natural law era on the Supreme Court existed from 1789-1873, and a formalist era existed from 1873-1937. It is thus no surprise that Professor Aleinikoff reported, “The great constitutional opinions of the nineteenth and early twentieth century did not employ balancing as a method of constitutional argument or justification.” In contrast, as Professor Aleinikoff noted, balancing developed based on the pragmatic, functional theories of Holmes, Cardozo, and Llewellyn, and triumphed on the Supreme Court after 1937. This is consistent with the Holmesian era on the Supreme Court of 1937-54 and an instrumentalist era of 1954-86, as stated in § 1.1 and developed at §§ 13.1 & 14.2.

In modern times, however, the natural law judge’s great respect for precedent, and willingness to consider background moral principles embedded in the law, discussed at § 3.4 nn.93-106, has pushed natural law judges more in the direction of a willingness to accept balancing tests. The precedents and background moral principles embedded in Court doctrine since 1937 during the Holmesian and instrumentalist eras are filled with more balancing tests than the precedents and doctrine considered by natural law judges between 1789-1873. Thus, despite adopting the same natural law style of interpretation, natural law judges today may reach different conclusions on the proper form or shape of doctrine than natural law judges in the past, based on today’s different substantive landscape of judicial precedents and background moral principles.

This fact is discussed in greater depth in the context of constitutional adjudication at § 13.3, where a distinction is drawn between traditional natural law doctrinal results of 1789-1873 and modern natural law doctrinal results today. In her previously cited article, Professor Sullivan noted aspects of this tension between the traditional natural law reluctance to employ balancing tests, and the modern natural law greater willingness to use balancing tests, when among the modern natural law Justices on the Supreme Court she noted that Justices O’Connor and Souter “staunchly defend the balancing mode” while Justice Kennedy “appears a rising ally” to formalist Justice Scalia in “condemn[ing] balancing for affording judges excessive discretion.” Justice Kennedy has been a particular critic of balancing tests in those areas of the law where Justice Kennedy, despite his usual natural law style of interpretation, has adopted more of a formalist approach, as in First Amendment free speech cases, as discussed at §§ 12.4.1 nn.162-64 & 29.2 nn.58-59.

Despite being a functional approach to law, the Holmesian preference for law to be as certain and predictable as possible, discussed at § 3.2 nn.26-31, has pushed Holmesian judges in the direction of categorical rules where possible. Furthermore, as discussed at § 26.1.2.2 nn.73-79, the Holmesian deference-to-government predisposition has meant that Holmesian judges are likely to press for adoption of the deferential “minimum rational review” balancing test, if a balancing test is going to be applied. As Professor Sullivan noted, the minimum rational review balancing test “functions as a de facto categorical mode of analysis despite its nominal use of balancing rhetoric. . . . True, the standard formulations of [rational review] require a court to go through the motions of balancing . . . . But this is not real balancing. If the standard is rationality, the government is supposed to

33 *Id.* at 949

34 *Id.* at 952-72.

win.”\textsuperscript{36} Thus, although the Holmesian style of interpretation is not as faithful to pure categorical rules as formalists, in the contemporary context the Holmesian style is likely to support more doctrine phrased as categories or based upon “minimum rational review” than the natural law style of interpretation.

Instrumentalists tend by far to be the judges most comfortable with balancing tests. Professor Sullivan identified instrumentalist Justices such as Marshall, Blackmun, and Stevens as advocates of balancing.\textsuperscript{37} Professor Aleinikoff noted that balancing tests “spread” like “wild clover” during the 1960s, 1970s, and 1980s on the Court. Further, since balancing tests ultimately turn on a cost-benefit analysis, a concern exists regarding how to evaluate costs and benefits in a principled way.\textsuperscript{38} This is similar to the difficulty of determining Cardozo’s “objective social values” to guide instrumentalist decisionmaking, discussed at § 3.3 nn.59-62. As discussed there, for supporters of instrumentalism that difficulty is not viewed as a major problem; for supporters of the other decisionmaking styles, that difficulty tends to give judges too much discretion in deciding cases.

Cases involving statutory interpretation can also raise this issue of a categorical approach versus a balancing test. In most statutes, of course, the plain language of the statute will indicate whether the statute is adopting a categorical approach or a balancing test. However, sometimes it is unclear whether a statute’s text anticipates a categorical approach or a balancing test. For example, in \textit{Regents of the University of California v. Bakke},\textsuperscript{39} one issue in the case was whether the language in Title VI of the 1964 Civil Rights Act providing that no person shall be subjected to discrimination “on the ground of race” reflected a categorical approach banning all discrimination based upon race, or whether the language merely referred to the strict scrutiny balancing test under the Equal Protection Clause for testing cases of racial discrimination. Not surprisingly, most of the formalist and Holmesian judges on the Court, like Chief Justice Burger and Justices Rehnquist and Stewart, concluded that the statute adopted a categorical approach, while most of the instrumentalist judges on the Court, like Justices Brennan, Marshall, and Blackmun, along with modern natural law judge Justice Powell, concluded that the statute adopted strict scrutiny balancing. This predictive power is not absolute, however, as instrumentalist Justice Stevens joined in a categorical understanding of Title VI, while Holmesian Justice White joined in the balancing approach. Such a departure from a judge’s usual mode of analysis is discussed at §§ 4.4.2-4.4.4 regarding judicial predispositions.

Based on this discussion, Table 4.1 places formalist judges as the judges most predisposed toward doctrine phrased in categorical terms, while instrumentalist judges are most predisposed toward balancing tests. Holmesian judges are placed closer to formalists than natural law judges reflecting

(concurring in the judgment in part and dissenting in part).
the modern natural law greater willingness to adopt balancing tests. If one referred only to the traditional natural law approach, the order of Holmesian and natural law entries should be reversed.

Of course, this placement of the general predisposition of judges will not control the outcome of every doctrine. There are examples where formalist judges have been more supportive of using balancing tests, and instrumentalist judges have been more supportive of categorical approaches. This usually happens where other reasons determine outcomes. For example, as Professor Sullivan has noted, a conservative, law-and-order formalist may prefer a multi-factored “reasonableness” analysis instead of a categorical requirement of a “warrant and/or particularized cause”; a liberal instrumentalist may prefer categorical protection of some free speech right, rather than a free speech balancing approach. However, such observations regarding the possibility of judges departing for tactical reasons from their general predisposition with respect to a particular doctrine do not upset the general predisposition of the judicial decisionmaking styles as reflected above.

§ 4.2.2 Elements versus Factors

Once the issue is resolved of whether the doctrine will be phrased in categorical terms or as a balancing test, the next issue a judge must determine is whether the doctrine will consist of a set of elements, each of which must be independently met, or a set of factors, each of which must be considered against the others to form a total aggregation of interests.

When a doctrine is phrased as a set of elements, this means that for the doctrine to apply the court must conclude that each element of that doctrine is met independently of the other elements. This kind of approach typically appears if the doctrine is phrased in categorical terms. For example, the categorical rule against Bills of Attainder, discussed at § 23.2.2.1, requires that the act constitute “legislative punishment of an identifiable individual.” Thus, the act must be “legislative”; it must be directed against “an identifiable individual”; it must constitute “punishment.” Each of these elements must be met independently of the others for the act to be unconstitutional. For each of these elements, there is naturally a test to determine whether the act is “legislative,” does it single out any “identifiable individuals,” and does it represent the kind of “punishment” within the constitutional proscription against bills of attainder.

Many common-law doctrines that are phrased as categorical rules also consist of a set of elements to meet. For example, in proving a defense of duress to contract enforceability, a party must prove four things: an improper threat, which deprived the party of free will, where the normal legal remedy was inadequate, and the claim of duress was brought within a reasonable time. These four requirements are phrased as elements, each of which independently must be met in order to have a valid defense of duress. Similarly, in tort law, to have a valid claim of false imprisonment, one must show three elements: the defendant intended to confine, the plaintiff was conscious of the

42 See generally Perillo, supra note 20, at 315-18.
However, doctrine phrased in categorical terms can also consist of a set of factors to weigh. An example of a categorical doctrine determined by a weighing of factors is the political questions doctrine, mentioned at § 4.2.1. The Court has stated as a categorical matter that the Court will not resolve issues which represent political questions. Whether something is a political question is determined, according to Baker v. Carr, by weighing six factors. As stated in Baker v. Carr, discussed at § 17.3.4.4, these factors are: (1) whether there is a textually demonstrable constitutional commitment to a coordinate branch of government; (2) whether there is a lack of judicially manageable standards; (3) whether the issue calls for resolution of a non-judicial policy decision; (4) whether the decision would represent a lack of respect for other branches of government; (5) whether there is need for finality; (6) and the potential for embarrassment from multifarious pronouncements on the particular issue.

A second example of a categorical approach to doctrine that uses factor analysis is the state action doctrine. As discussed at § 21.1.1, the Court has stated as a categorical manner state action is required before most constitutional rights are triggered. As phrased in Edmonson v. Leesville Concrete Co., Inc., discussed at § 21.1.2.5, the Court considers three factors to determine if state action exists: (1) “the extent to which the actor relies on governmental assistance and benefits”; (2) “whether the actor is performing a traditional governmental function”; and (3) “whether the injury caused is aggravated in a unique way by the incidents of governmental authority.” These factors are weighed together to determine in any individual case whether state action exists.

A common-law example of this same structure would be the contract doctrine of material breach. In contract law there is a categorical rule that a material breach of a contract entitles the party to suspend that party’s performance, absent exceptional circumstances that may apply. In determining whether any particular breach of a contract is a material or only a minor breach, most courts will weigh the five factors stated in Restatement (2d) of Contracts § 241 to make that determination.

As with doctrines phrased in categorical terms, doctrines phrased as balancing tests can also adopt either an approach of elements to meet or factors to weigh. However, unlike doctrines phrased in categorical terms, which are structured more often as elements to meet, balancing tests are structured more often in terms of factors to weigh.

This can happen both with respect to determining which balancing test to apply, and in the actual application of the balancing test. An example of factor analysis used to determine which balancing test to apply occurs under the Equal Protection Clause. As discussed at § 26.1.2.1 nn.57-67, in an Equal Protection case, the Court determines which standard of review to apply – minimum rational

43  See generally Prosser and Keeton, supra note 22, at 47-54.

46  See generally Perillo, supra note 20, at 430-33.
review, intermediate scrutiny, or strict scrutiny – by considering a myriad of factors that counsel the Court either substantially to defer to legislative judgment, in which case rational review is employed, or counsel the Court to be more suspicious of the legislative action, in which case some form of heightened scrutiny is applied.47

Two examples of factor analysis in the actual application of balancing tests are the procedural due process cases based upon Mathews v. Eldridge and the dormant commerce clause cases based on Pike v. Bruce Church, Inc., noted at § 4.2.1 nn.28-30. As discussed there, both the Mathews test and the Pike test involve balancing the factors of ends, benefits, and burdens. Despite this usual connection between balancing tests and factor analysis, doctrines phrased as balancing tests can also adopt the structure of elements to meet. For example, as discussed at §§ 26.1.1.1 & 26.1.1.2, under the Equal Protection Clause balancing tests the Court has organized the three inquiries into ends, benefits, and burdens as separate elements to meet. As noted at § 26.1.1.1 n.12, under minimum rational review, the legislation has to (1) advance legitimate government ends, (2) be rationally related to advancing these ends, and (3) not impose irrational burdens on individuals. As noted at § 26.1.1.2 n.52, under the intermediate review balancing test, the legislation must (1) advance important or substantial government ends, (2) be substantially related to advancing these ends, and (3) not be substantially more burdensome than necessary to advance these ends. Under strict scrutiny, as noted at § 26.1.1.2 n.53, the statute must (1) advance compelling governmental ends, (2) be directly and substantially related to advancing these ends, and (3) be the least restrictive effective means of doing so. In each case, whether or not a statute is constitutional depends on whether the three individual elements in each standard of review are met.

In some cases, factor analysis can be used to determine whether or not an individual element under some doctrine is met. For example, as noted at § 23.2.2.1 nn.219-21, one element used to determine whether a legislative act is a Bill of Attainder is whether it is a “punishment.” To make this decision, the Court weighs various considerations of purpose, history, practice, and precedent.48

As might be expected, formalists tend to prefer doctrine to be stated as elements to meet. Doctrines stated as elements are more likely to be capable of mechanical application, reducing judicial discretion. In contrast, any weighing of factors is necessarily going to be an imprecise science. Instrumentalists, not surprisingly, tend to be receptive to doctrine stated as factors because most factor schemes permit judges to take into account through the weighing of factors full consideration of the “situation-sense” of the case, to use Llewellyn’s terminology, discussed at § 3.3 nn.53-54.

The Holmesian preference for predictability and certainty in the law suggests to most Holmesian judges a predisposition in favor of doctrine phrased as elements, except where the purposes behind the law are sufficiently complex that they can only be adequately reflected in a weighing of factors.

The background moral principles of a society are likely to be similarly complex. Thus, although the analytic side of the natural law style would prefer doctrine to be stated more as elements to meet, the normative side of the natural law style, which is sensitive to the law’s purposes and to the background moral principles embedded in the law, counsels for some greater amount of doctrine to be phrased as factors to weigh than the formalist or Holmesian styles of interpretation.

Given the principles embedded in the law at the time, which had few balancing tests, as discussed at § 4.2.1 nn.33-38, and few examples of factor analysis, traditional natural law was based more on elements to meet than is modern natural law. This fact is discussed with respect to constitutional decisionmaking at § 7.2.2 text following n.50. Table 4.1’s placement of the Holmesian style next to the formalist style reflects the modern natural law greater willingness to adopt factor tests.

§ 4.2.3 Rules versus Standards

A third issue that courts must confront when faced with the task of defining doctrine is whether to phrase some part of the doctrine as a rule or a standard. As typically defined, doctrines are phrased as rules when the elements or factors embody specific definitions capable of relatively mechanical application. In contrast, doctrines phrased as standards embody more general definitions, such as that behavior must be reasonable. For example, in the classic example from torts, Holmes took the view that automobile drivers should “stop, look, and listen” at railroad crossings. This was an example of a rule. In contrast, Cardozo took the view that the negligence of automobile drivers at railroad crossings should be based upon whether they acted “reasonably under the circumstances,” an example of a standard.49

In her classic article, *The Justices of Rules and Standards*, Dean Kathleen Sullivan said the following about rules versus standards:

A legal directive is “rule”-like when it binds a decisionmaker to respond in a determinate way to the presence of delimited triggering facts. Rules aim to confine the decisionmaker to facts, leaving irreducibly arbitrary and subjective value choices to be worked out elsewhere. A rule captures the background principle or policy in a form that from then on operates independently. A rule necessarily captures the background principle or policy incompletely and so produces errors of over- and under-inclusiveness. But the rule’s force as a rule is that decisionmakers follow it, even when direct application of the background principle or policy to the facts would produce a different result.

A legal directive is “standard”-like when it tends to collapse decisionmaking back into the direct application of the background principle or policy to a fact situation. Standards allow for the decrease of errors of under- and over-inclusiveness by giving the decisionmaker more discretion than do rules. Standards allow the decisionmaker to take into account all the relevant

factors or the totality of the circumstances. Thus, the application of a standard in one case ties the decisionmaker’s hand in the next case less than does a rule – the more facts one may take into account, the more likely that some of them will be different the next time.50

In her article, Professor Sullivan listed four arguments in favor of rules, and then four arguments in favor of standards. With respect to rules, Professor Sullivan noted: (1) rules advance a conception of fairness as formal equality, as rules “reduce the danger of official arbitrariness or bias”; (2) rules better “afford certainty and predictability to private actors, enabling them to order their affairs productively” and “promote economies for the legal decisionmaker by minimizing the elaborate, time-consuming, and repetitive application of background principles to facts”; (3) rules advance liberty “by ensuring that ‘government in all its actions is bound by rules fixed and announced beforehand’”; and (4) rules better “allocate roles or power among competing decisionmakers” because rules better “establish and constrain the jurisdiction of those decision-makers.”51

On the other hand, as Sullivan noted, “bright-line rules are arbitrary at the border” and may “force the decisionmaker to treat differently cases that are actually substantively [quite] alike”; by promoting certainty and predictability rules may “allow the ‘bad man’ to engage in socially unproductive behavior right up to the line”; supposed decisionmaking economies of rules may be “offset if decisionmakers spend time inventing end-runs around them”; and rules “cannot perform such role allocation without a theory that defines the relevant decisionmakers’ roles.”52

With respect to standards, Professor Sullivan noted: (1) standards promote a conception of fairness as substantive justice, as “standards allow decisionmakers to treat like cases that are substantively alike” and thus “spare individuals from being sacrificed on the alter of rules”; (2) “standards serve better than rules in maximizing productivity” because standards, unlike rules, are “flexible and permit decisionmakers to adapt them to changing circumstances over time”; (3) standards serve “substantive equality” better by better preventing “the shrewd, the calculating, and the wealthy to manipulate its forms [rules] to their own advantage”; and (4) standards “make visible and accountable the inevitable weighing process that rules obscure.”53

On the other hand, standards have their drawbacks. In a famous speech, Justice Scalia discussed six reasons why rules are better than standards: consistency and the appearance of consistency; uniformity among the lower courts; predictability; judicial restraint; judicial armor against public disapproval; and keeping matters of law separate from matters of fact.54

51 Id. at 62-64 (citations omitted).

52 Id. (citations omitted).

53 Id. at 66-67 (citations omitted).

Not surprisingly, given their focus on reducing judicial discretion through analytic, logical treatment of settled positive law, formalists have the greatest predisposition to frame doctrine as rules. As noted at a Symposium on *Formalism Revisited,* several participants in the Symposium “treated formalism and ‘rules’ interchangeably.”55 Professor Sullivan noted in her classic article, “Justice Scalia, more than any current Justice, favors operative rules and condemns operative standards.”56

Not surprisingly, instrumentalists, like Justice Cardozo in the tort example given above, tend to have a preference for standards. As Professor Sullivan noted about constitutional law, “If Justice Scalia leads the charge for rules on the current Court [1992], Justice Stevens is his most consistent, standard-bearing antagonist.”57 Reflecting the connections indicated in Table 4.1 among balancing tests, factor analysis, and standards, on the one hand, and categorical tests, elements, and rules, on the other hand, Professor Sullivan noted Justice Stevens’ “commitment to multi-factored contextual analysis and his opposition to rule-based or categorical decisionmaking.”58 Similarly, Justice Scalia has indicated his reluctance to employ balancing tests; factor analysis, particularly in the form of “totality of the circumstances” tests; and standards of “reasonableness.” He has indicated a preference for categorical rules of general applicability.59

Because of desire for certainty in the law, discussed at § 3.2 nn.26-31, Holmesians have a preference for doctrine to be phrased more in terms of rules, than standards. Holmes’ preference for the “stop, look, and listen” rule is just one of a number of possible examples of Holmes’ preference for rules over standards. For example, in a detailed look at the rules versus standards debate in the context of common-law, statutory, and constitutional adjudication, Professor Pierre Schlag noted in his article, *Rules and Standards,* that in the fields of tort, criminal, and regulatory law, “[R]ules mete out a fixed quantum of predetermined deterrent, ensuring that a certain penalty will be imposed for engaging in the prohibited conduct. . . . By predesignating and quantifying the magnitude of the penalty to be applied, rules allow Holmes’ proverbial bad man to treat the deterrent as a fixed cost of doing business.” Regarding the fields of contracts, civil procedure, and property law, Schlag noted that by “specifying routine means of communication, rules minimize the possibility of misunderstanding, making transactions more secure,” a goal of the Holmesian focus on certainty and predictability in the law. On the other hand, as Schlag noted, “Formalities cast in terms of rules can distort meaning and understanding and defeat authentic communication by favoring those most adept at manipulating legal boxes.”60

56 Sullivan, *supra* note 50, at 83.

57 *Id.* at 88.

58 *Id.*

59 Scalia, *supra* note 54, at 1179-82.

This concern that too great an adherence to rules might distort the underlying moral basis of the law pushes the natural law style somewhat in the direction of standards, rather than rules. The language of standards is often better at encapsulating some background moral principle embedded in the law, such as the restitution principle that “no person should be permitted to profit from his own wrong”; or the contract principle that “promises should be kept”; or the tort principle that “persons should behave reasonably under the circumstances.”

On the other hand, the analytic predisposition of the natural law style pushes natural law decisionmakers more in the direction of rules, rather than standards. As Schlag noted, “Rules draw a sharp line between forbidden and permissible conduct, allowing persons subject to the rule to determine whether their actual or contemplated conduct lies on one side of the line or the other.”

§ 4.2.4 Issues of Fact versus Issues of Law

The fourth issue that courts must confront when faced with the task of defining the content of any legal doctrine is whether the relevant rule or standard is phrased as an issue of fact or an issue of law. If the doctrine is phrased as an issue of law, it will be decided by the trial court judge as a question of law, and will not be entitled to deference on appeal. Instead, the appellate court will decide de novo if the trial court’s determination on the issue of law was “erroneous” or not. In contrast, if the doctrine is phrased as an issue of fact, resolution of that doctrine will be initially for the trier of fact.

When reviewing district court findings of fact, that deference will embody some variation of a “clearly erroneous” standard. Thus, an appellate court will overturn the district court’s fact determination only if, based upon evidence in the record, the decision of the trier of fact was “clearly erroneous” because the reviewing court is "left with the definite and firm conviction that a mistake has been committed." An even more deferential standard of review is reserved for jury fact-findings, which typically are reviewed for substantial evidence. Substantial evidence "means such relevant evidence as a reasonable mind might accept as adequate to support a conclusion." If a fact decision is found to be “clearly erroneous” or not based upon “substantial evidence,” the appellate court could then decide “as a matter of law” the state of the facts if the court concluded, based upon the record, that “no reasonable trier of fact could decide otherwise.” The most lenient standard of review is “abuse of discretion,” used for aspects of trial supervision or decisions of administrative

---

62 Schlag, supra note 60, at 384.
agency tribunals. Abuse of discretion may be found when: (1) the tribunal's decision is clearly unreasonable, arbitrary, or fanciful; (2) the decision was based on an erroneous conclusion of law; (3) the tribunal's findings are clearly erroneous; or (4) the record contains no evidence upon which the tribunal rationally could have based its decision.\(^{63}\)

As an example, in contract doctrine, the elements that trigger some defenses are questions of fact for a trier of fact, like for duress, mistake, or misrepresentation.\(^{64}\) Other defenses, like unconscionability or illegality, are questions of law for the court.\(^{65}\) Some doctrines reflect a mixture of questions of facts and law. For example, under the doctrine of promissory estoppel, the questions of whether a promise was made, was it reasonably foreseeable that there would be reliance, and was there reliance, are questions of fact for the trier of fact. The fourth element of promissory estoppel, can injustice only be avoided by enforcement of the promise, is a question of law for the court.\(^{66}\)

The desire for certainty and predictability in the law typically has meant that formalists and Holmesian prefer legal doctrines to be phrased as issues of law for court resolution. Indeed, one of Holmes’ premises was that as “standards of reasonable behavior became clear, judges should lay them down ‘once and for all’ as per se rules of conduct.”\(^{67}\) Justice Scalia has also pointed out a connection among balancing tests, factor analysis, and whether doctrine is phrased as an issue of fact or law. He has stated, “We should recognize that, at the point where an appellate judge says that the remaining issue must be decided on the basis of the totality of the circumstances, or by a balancing of all the factors involved, he [or she] begins to resemble a finder of fact more than a determiner of law. To reach such a stage is, in a way, a regrettable concession of defeat – an acknowledgment that we have passed the point where ‘law,’ properly speaking, has any further application.”\(^{68}\)

In contrast, the instrumentalist style of interpretation, with its emphasis on the “situation-sense” of a case, often prefers issues to be phrased as facts for the social sensibilities of the triers of fact to be determinative. For the natural law style, the analytic side of natural law pushes in the direction of the formalist predisposition, while the normative side pushes more in the instrumentalist direction, as reflected in Table 4.1. As with the other aspects of the form or shape of law, these observations

merely reflect general judicial predispositions that can be overridden for other reasons with respect to any particular doctrine. Examples of doctrines phrased as issues of fact versus rules of law in the context of constitutional adjudication are discussed at § 7.2.4.

§ 4.3 Use of Judicial Precedents

§ 4.3.1 General Observations on the Theory of Precedent

In a common-law system, a court decision interpreting a common-law, statutory, or constitutional provision fixes its meaning unless the court changes its mind. Thus, as a general matter, a later court should follow an earlier court’s precedent.69 In contrast, in a civil-law system, judicial precedents do not, as a theoretical matter, have any binding force on later courts. Each later court is free to determine for itself what the provisions of a particular code section mean in the current case.70

In practice, however, the two systems do not differ as much as may initially appear. In most common-law systems, precedents are not absolutely binding. As Professor Harry Jones noted in 1975 in his previously cited article, Our Uncommon Common Law, “There was a time in England when precedents were taken to be absolutely binding, as distinguished from generally binding, but that rigid conception never caught on in American courts and is now on the way out in England, too.”71 Thus, Professor Jones summarized the American doctrine of precedent, as follows:

(1) Precedents are generally binding for the decision of future cases.
(2) But a decision is a full-fledged precedent only for future “like” cases, that is, for future cases involving the same material facts.
(3) It is the court’s decision, not the court’s opinion, that is precedent for the future; anything said in the opinion that is not necessary to the decision of the case then before the court is a “dictum,” which may be “persuasive authority” in a future case, but is in no way binding. (Analytically, I suppose, this is a corollary of Proposition 2, but judicial usage is such that it is better to state it separately).
(4) Even a full-fledged precedent is only “generally” binding, not absolutely binding, for future cases.72

On the other hand, in a civil-law system, despite the theoretical view regarding precedents, in practice prior court opinions are given some weight. As Professor Steve Nickles noted:

In actual practice, an inferior court which continues to follow its own opinions against the decisions of a higher court is subject to reversal, and the fear of being reversed is a universally

69 See Jones, supra note 1, at 454-59; Rupert Cross, Precedent in English Law (3d ed. 1977).
70 See Nickles, supra note 4, at 28.
71 Jones, supra note 1, at 457.
shared one. Precedents also serve as a source of law under the civilian practice which accords the status of “custom” to a series of like decisions on the same point of law. . . . Yet th[is] authority . . . is not based on recognition of the binding force of precedent, but rather on the persuasiveness of the reasoning which is evidenced by its being adopted by a number of courts.73

In his book entitled Courts, Professor Martin Shapiro similarly noted:

The extent to which Continental jurists rely upon case law is evidenced by the publication of the opinions of the leading appellate tribunals. Almost invariably these are annotated reports. With that deference to academic authority which, as we have seen, so often characterizes civil law, these annotations, prepared by well-known legal scholars, are often as influential as the opinions themselves in building up legal doctrine. Few European law students would be so foolish as to believe that they could understand the law exclusively by direct reference to the code without reading passages of authoritative text, the leading decisions, and the annotations of decisions that surround nearly every clause of the code.74

Even in the American common-law system, some positivist judges have taken the position that as a theoretical matter precedents should have no force of law. The justification for this position, as is true in civil-law systems, is that the positive law exists independent of the judge, and thus any prior judicial opinion, if viewed as erroneous, should be entitled to no weight. Thus, formalist Justice Scalia has made it clear that any respect he gives to precedent “is not part of my originalist philosophy; it is a pragmatic exception to it.”75 As noted at § 4.1 n.6, Holmesian Justice Felix Frankfurter’s view was that the “ultimate touchstone of constitutionality is the Constitution itself and not what we have said about it.” Reflecting a Holmesian functional perspective, Justice Brandeis observed, “[I]n cases involving the Federal Constitution, where corrections through legislative action is practically impossible, this Court has often overruled its earlier decisions. The Court bows to the lessons of experience and the force of better reasoning, recognizing that the process of trial and error, so fruitful in the physical sciences, is appropriate also in the judicial function.”76

Despite these observations, the positivist desire for certainty and predictability has led formalist and Holmesian judges to adopt a practical approach toward precedent. As Justice Scalia has stated, “[To] forswear stare decisis is essentially a demand that [such judges] alone render their methodology so disruptive of the established state of things that it will be useful only as an academic exercise and not as a workable prescription for judicial government.”77

73 Nickles, supra note 4, at 28 n.72.
75 Scalia, supra note 7, at 139.
77 Scalia, supra note 7, at 139-40.
As a theoretical matter, the normative judicial decisionmaking styles give greater respect to judicial precedents because of the judge’s normative role in developing legal doctrine. Particularly for natural law judges, as noted at § 3.4 nn.93-98, the natural law concern for “articulate consistency” as applied to society’s moral principles helps explain the special respect that natural law judges have for precedents. As discussed at § 3.3 nn.54, under the instrumentalist “Grand Style” of judicial decisionmaking “precedent” is carefully regarded, but if it does not make sense it is ordinarily re-explored.” This willingness to “re-explore” precedent based upon whether the judge concludes the precedent “makes sense” has meant that in practice instrumentalist judges tend to be the least faithful to following existing precedents, as discussed in the next section. For all judges, because precedent is not absolutely binding, there is no sound argument that following precedents denies litigants “due process” by enforcing “issue preclusion” upon them in cases where they were not parties, although that concern may affect how much weight a judge might give a precedent in practice.78

§ 4.3.2 Four Different Reasons to Follow Precedents: Precedent is Right, Is Settled Law, Substantial Reliance Exists, or No Special Reason Calls for Overruling

Just as there are four different basic styles of judicial decisionmaking, there are four approaches to the extent to which judicial precedents can fix the meaning of some common-law, statutory, or constitutional provision. Under one approach, a court will change its mind – that is, overrule a prior decision – if the court concludes that the earlier court's analysis "got it wrong." In such a case, the later court will feel free to overrule the prior decision as erroneous and to reinterpret the provision in question so that it represents an accurate reflection of what the relevant doctrine requires. Of course, because formalist, Holmesian, natural law, and instrumentalist judges approach questions of judicial decisionmaking differently, they often reach different conclusions about the extent to which some earlier precedent was rightly or wrongly decided. Thus, they may disagree about whether there is reason on the merits for any particular precedent to be followed or overruled.

This consideration of whether the prior precedent was rightly or wrongly decided, without further tests or conditions, carries greatest weight for instrumentalist judges. Because of their concern with advancing the correct social policies where leeways exist in the law, and because instrumentalist judges can often be persuaded that such leeways exist, instrumentalist judges have felt freer than judges in any of the other interpretive traditions to overrule prior decisions when they believe those decisions were wrongly decided. This is true even if the prior precedents appear to represent settled law, there has been substantial reliance on the precedents, and no special reason is present that calls for the precedents to be overruled. The amount of legal change in doctrine is thus likely to be greatest during an instrumentalist era of law, as is discussed with respect to constitutional law at § 7.3.2 nn.128-33, and with respect to common-law adjudication at § 13.1 nn.23-25.

A second variation affecting the treatment of precedent is how much weight a judge will give to whether the precedent has become an integral part of subsequent case law, that is, whether the case has become "settled law." Justice Scalia has defined such “settled law” as “long-standing and well-accepted principles (not out of accord with the general practices of our people, whether or not they

78 On this concern, see generally Amy Coney Barrett, Stare Decisis and Due Process, 74 U. Colo. L. Rev. 1011 (2003).
were constitutionally required as an original matter).“79 Justice O’Connor has stated that precedents represent “settled law” when they have become “integrated into the fabric of the law.”80

Formalist and natural law judges, whose analytic approach to law makes highly relevant the logical elaboration of doctrine, tend to weigh heavily in their consideration of precedent whether it appears to represent "settled law." Holmesian judges, because they take a positivist approach to the law, and are also concerned with certainty and predictability, as discussed at § 3.2 nn.26-31, also evidence a willingness to follow precedents with which they disagree if the precedent represents settled law. Thus, formalist judges, such as Justices Scalia and Thomas; Holmesian Justices, such as Chief Justice Rehnquist or Justice White; and natural law judges, such as Justices O’Connor, Kennedy, or Souter, have been willing to follow a precedent if they view that precedent as settled law.

In deciding whether a precedent represents or has produced “settled law,” many factors may be relevant. The age of the precedent is certainly one factor, but it is not the sole determining factor. Erroneous decisions in constitutional cases are uniquely durable because it is so difficult to amend the Constitution. Therefore, the Court has been willing to reconsider constitutional interpretations, even if those interpretations are long-lasting. As Chief Justice Rehnquist noted in Planned Parenthood v. Casey,81 the major decisions of Plessy v. Ferguson and Lochner v. New York were overruled in Brown v. Board of Education and West Coast Hotel v. Parrish many decades after they had been decided.

Judges may also ask whether the precedent case was itself a departure from prior precedents and gave little weight to established traditions. As Justice O’Connor noted in Adarand Constructors, Inc. v. Pena, which overruled Metro Broadcasting, Inc. v. FCC,82 "Metro Broadcasting itself departed from our prior cases – and did so quite recently. By refusing to follow Metro Broadcasting, then, we do not depart from the fabric of the law; we restore it."

A third factor concerning whether a precedent can succeed in producing a settled body of law is whether or not it is susceptible of principled application. Expressing his unwillingness to follow a case that did not meet that test, Justice Scalia, joined by Justice Thomas, stated in BMW of North America, Inc. v. Gore,83 “When, however, a constitutional doctrine adopted by the Court is not only mistaken but also insusceptible of principled application, I do not feel bound to give it stare decisis effect – indeed, I do not feel justified in doing so.”

79 Scalia, supra note 7, at 138.
As an example of “settled law,” Justices Scalia and Thomas indicated in *TXO Production Corp. v. Alliance Resources Corp.* that although they do not themselves believe that the framers and ratifiers of the 14th Amendment intended the Due Process Clause to incorporate selectively the Bill of Rights, since the text of the Due Process Clause is focused on procedure, and not substantive rights, they are “willing to accept” the instrumentalist-era view that has incorporated almost all of the Bill of Rights into the 14th Amendment Due Process Clause, discussed at § 27.2.4. More generally, as Justice Scalia phrased the point in *Planned Parenthood v. Casey*, “Justices should do what is legally right by asking two questions: (1) was *Roe* correctly decided? (2) Has *Roe* succeeded in producing a settled body of law. If the answer to both questions is no, *Roe* should undoubtedly be overruled.”

A third variation in the treatment of precedent arises from the extent to which individuals have “substantially relied” upon a precedent as a means to advance important ends in their lives. Because of their focus on a functional understanding of doctrine as a means to individuals' and society's ends, Holmesian judges tend to weigh this variable very heavily in their consideration of precedent. As stated by Chief Justice Rehnquist in *Payne v. Tennessee*, "Considerations in favor of stare decisis are at their acme in cases involving property and contract rights, where reliance interests are involved; the opposite is true in cases such as the present involving procedural and evidentiary rules." Under this approach, the concern with overruling a precedent is whether such overruling would upset settled expectations upon which people had relied in making serious financial, business, employment, or other kinds of important commitments.

Since this third variable is linked to certainty and predictability in the law, as well as to traditional notions of equity and the background moral principle of protecting individuals' reasonable reliance, the concern with reliance upon a precedent is also given significant weight by formalist and natural law judges. However, as between the considerations of settled law versus reliance, the analytic predisposition of the formalist approach has meant that formalist judges tend to place greater weight on whether the precedent is settled law, rather than a concern with substantial reasonable reliance. For the functional Holmesian approach, the functional concern with substantial reliance tends to be equally, if not more, important. For example, although both Justice Scalia and Chief Justice Rehnquist joined the other’s dissent in *Planned Parenthood v. Casey*, discussed at § 27.3.4.1 nn.240-41, Justice Scalia focused only on the aspect of “settled law” in deciding that *Roe v. Wade* should be overruled, while Chief Justice Rehnquist focused both on the aspect of “settled law” and on the aspect of “substantial reliance,” as discussed at § 7.3.2 nn.116-27. Further examples of Justices relying on “settled law” or “substantial reliance” in constitutional cases are discussed at § 7.3.2.

A fourth variation in how judges treat precedent concerns their views on the traditional common-law commitment to reasoned elaboration of the law and respect for the work-product of previous judges. Under this approach to precedents, a sequence of court decisions — that is, a reasoned elaboration...

---

of precedents – can provide a gloss on meaning that changes what the common-law, statutory, or constitutional provision means. Thus, the question is not just what other sources of interpretation suggest about a provision's meaning. Instead, just as the common law changes over time in response to court decisions, the proper meaning of a constitutional or statutory provision can change over time in response to court decisions elaborating its meaning in a particular way. The judges who most often have this extra commitment to precedent are judges in the natural law tradition.

Judges who believe very strongly in this traditional common-law commitment to precedents may choose to follow precedents they believe are wrongly decided even if those precedents do not represent settled law and there has been no substantial reliance upon them. Instead, under this approach to precedent, one or more additional reasons are needed before the court should depart from a prior judicial opinion. Based upon recent cases, the additional special reasons that may call for a precedent to be overruled can be grouped under five headings: (1) the precedent is unworkable in practice; (2) the precedent creates an inconsistency or incoherence in the law; (3) a changed understanding of facts has undermined the factual basis of the precedent; (4) the precedent represents a substantially wrong or substantially unjust interpretation of the law; or (5) the precedent raises concerns about a commitment to the "rule of law." The natural law Justices on the Supreme Court – Justices O’Connor, Kennedy, and Souter – discussed these reasons in the context of constitutional interpretation in Planned Parenthood v. Casey, where they noted that “a decision to overrule should rest on some special reason over and above a belief that a prior case was wrongly decided.” Further examples in the context of constitutional adjudication of each of these five reasons that suggest a precedent should be overruled are discussed at §§ 7.3.3-7.3.4.

These same reasons have also been used in the context of statutory interpretation. For example, in Neal v. United States, in an opinion by Justice Kennedy, the Court stated, "We have overruled our [statutory construction] precedents when the intervening development of the law has 'removed or weakened the conceptual underpinnings from the prior decisions, or where the later law has rendered the decision irreconcilable with competing legal doctrines or policies.'" Earlier, in Patterson v. McLean Credit Union, another opinion by Justice Kennedy, the Court stated precedents may be overruled where "changes have removed or weakened the conceptual underpinnings from the prior decision, or where the later law has rendered the decision irreconcilable with competing legal doctrines or policies, [or] the precedent may be a positive detriment to coherence and consistency in the law, either because of inherent confusion created by an unworkable decision, or because the decision poses a direct obstacle to the realization of important objectives embodied in other laws, [or] the precedent becomes outdated and after 'being tested by experience, has been found to be inconsistent with the sense of justice or with the social welfare.'" Indeed, the Court has noted the even greater force of precedent in statutory construction because of the easier resort to amendment in such cases to correct faulty interpretations. As stated in Patterson, "Considerations of stare decisis have special force in the area of statutory interpretation, for here, [unlike constitutional law,] the legislative power is implicated, and Congress remains free to alter what we have done."

88  516 U.S. 284, 295 (1996) (Kennedy, J., for the Court) (citations omitted).
89  491 U.S. 164, 172-74 (1989) (Kennedy, J., for the Court) (citations omitted).
§ 4.3.3  Precedential Concerns and the Rule of Law

The fifth additional reason noted at § 4.3.2 n.87 on when to overrule a precedent involved whether the precedent raised concerns about the "rule of law." Unlike the other four reasons, which focus more on the substance of the precedent, this reason focuses more on procedural aspects surrounding the precedent. The concern with the "rule of law" raises at least four kinds of procedural concerns.

First, there is the issue of whether a newly announced rule of law should be applied to all pending cases or only prospectively, that is, only as to conduct in the future. Beginning in the original natural law period, and carrying through the formalist and Holmesian eras, the theory of judicial review was, as stated in Marbury v. Madison, that it is the duty of the judicial department to "say what that law is." That principle had been taken to imply that any rule of law stated in a case, even a newly discovered rule, should be applied not only in the future, but also to conduct that preceded the decision – at least to all cases not fully resolved. This rule was based on the belief "that the duty of the court was not to 'pronounce a new law, but to maintain and expound the old one.'" Before the instrumentalist era, the common law and the Court had recognized "a general rule of retrospective effect for the constitutional decisions of [the] Court . . . subject to [certain] limited exceptions." In contrast to this, some decisions in the instrumentalist era, between 1954-86, departed from that principle of retroactivity on social policy grounds. Discussion of these cases and the modern post-1986 approach to this issue of retroactivity is discussed at § 7.3.4.

A second issue concerning the rule of law is whether a court decision is based, or perceived to have been based, not upon proper legal argumentation, but as a response to political pressure. This reason was explicitly used by the joint opinion in Casey as one reason for not overruling Roe v. Wade. The joint opinion stated, "The Court must take care to speak and act in ways that allow people to accept its decisions on the terms the Court claims for them, as grounded truly in principle, not as compromises with social and political pressures having, as such, no bearing on the principled choices that the Court is obliged to make." As discussed at § 7.3.4, in their opinions in Casey, Chief Justice Rehnquist and Justice Scalia agreed that the Court should never make its decisions with a view toward such public pressures, but wondered whether the joint opinion met that test.

A third concern about the rule of law is whether the original precedent was decided only after full briefing and argument on the issue, or without the benefit of briefing and argumentation. A fourth concern is whether the reasoning in a precedent commanded the support of five or more members of the Supreme Court or whether it was only a plurality opinion, or whether even if a majority opinion it was accompanied by one or more concurrences that weakened the force of that majority opinion. These concerns are also discussed in the context of constitutional law at § 7.3.4.

§ 4.3.4 Narrow/Strict versus Broad/Loose Treatment of Precedent

Independent of the decision whether to follow or overrule a precedent, a court must first decide what the precedent means. In their treatment of precedent, courts sometimes adopt a narrow, or strict, use of precedent, particularly when trying to distinguish a prior case from the present case. Under this use of precedent, courts limit the preceding case to its “core holding.” On the other hand, when language in the prior case is welcomed by the present court, the court may refer not only to the core holding of the preceding case, but also to its “general reasoning.” The court may then use that general reasoning to help justify the result in the present case. Examples of such narrow versus broad use of precedent in the context of constitutional adjudication appear at § 7.3.1.1.

Professor Karl Llewellyn summarized these two uses of precedent in his classic work, The Bramble Bush.94 As discussed in The Bramble Bush, Professor Llewellyn explained that there are two recognized, legitimate, and honorable techniques for dealing with precedents. The strict view, used to whittle down unwelcome precedents, is to confine the earlier case to its rule or, in extreme form, to its particular facts. This permits skillful judges to free themselves from the precedent. The loose view, used to capitalize on welcome precedents, allows a conclusion that the prior court has decided authoritatively any point or all points on which it chose to rest the case, including *dicta* or *obiter dicta*. Deciding which view will be taken of a precedent, said Llewellyn, requires a lawyer to “use all that you know of individual judges, or of the trends in specific courts, or, indeed, of the trend in the line of business, or in the situation, or in the times are large – in anything which you may expect to become apparent and important to the court in later cases.” Therefore, everything said in an opinion must be read with primary reference to the particular question before the judge.

This being the nature of reasoning on precedents, Dean Edward Levi, of the University of Chicago School of Law, concluded in his famous book, An Introduction to Legal Reasoning,95 that the rules of law are created and change in a process of their application because the courts treat some different cases as though they were the same and cases with some facts in common as though they were different. In this sense, the categories used in the legal process remain ambiguous and form a moving classification system that makes new meanings possible. These new meanings typically arise in the following manner: (1) A statement of some relatively coherent theory; (2) The theory is seen to have undesirable consequences either because of unforeseen results or the situation has changed over time. Exceptions are adopted which create a conceptual muddle; (3) A new theory is developed, although lip service is paid to the old theory for a while.

Of course, despite the possibility of changing the law in more dramatic fashion by limiting, extending, or overruling a precedent, the most common result when a court considers a factually analogous precedent is that the court follows the precedent without clearly extending it. Naturally, every new fact situation to which a rule is applied is in some sense an extension of the rule. However, in common usage, if the facts in the new case are closely analogous to the facts of a prior case, normal legal terminology states that the precedent has been followed, not extended.

If the facts of a current case are perceived to be only somewhat similar to those of a precedent, however, instead of being closely analogous, then "following" the precedent may really be "extending" it, at least slightly. This way of treating a precedent involves building on a precedent with which the judge agrees. A second way to "follow or extend" a precedent involves targeting an aspect of the prior precedent with which the judge agrees, and then, as explained by Professor Llewellyn, emphasizing that part of the precedent. This can occur when the court focuses on some aspect of the reasoning in the prior opinion, and resolves the case according to that aspect without considering other things that the prior court said in its opinion. A third way to "follow or extend" a precedent is to elevate some general statement, that may have been dictum, into the status of a holding, or find implicit in the precedent a principle broader than anything stated in the case, and use it as a premise in the case at hand. When a court does this, the court is really manipulating the prior precedent to claim that today's court is merely following or extending prior law. Examples of each of these uses of precedent in the context of constitutional law are discussed at §§ 7.3.1.2-7.3.1.4.

The various judicial decisionmaking styles differ, of course, in their predispositions regarding narrow/strict versus broad/loose use of precedents. Because of their focus on mechanical rule-making based upon following the literal holdings in prior specific cases, formalist judges tend to approach interpreting precedents in light of their particular specific facts. Thus, they tend to adopt a narrow view of precedents. Because of their functional approach to law, viewing language in cases only as a means to justify the end result in the case, Holmesian and instrumentalist judges also tend towards a narrow or strict use of precedent. This is particularly true for instrumentalist judges who have less of a focus on certainty and predictability in the law, and more of a focus on the “situation-sense” of each case. As Karl Llewellyn stated in The Bramble Bush, “Everything, everything, everything, big or small, a judge may say in an opinion is to be read with primary reference to the particular dispute, the particular question before him. You are not to think that the words mean what they might if they stood alone. You are to have your eye on the case at hand, and to learn how to interpret all that has been said merely as a reason for deciding that case that way. At need.”

For this reason, just as instrumentalist judges are the most willing to overrule a precedent with which they disagree, as discussed at § 4.3.2 text following n.78, instrumentalist judges are the most willing to limit the applicability of a precedent by giving it a narrow reading. On the other hand, just as the Holmesian functional concern with parties’ reasonable substantial reliance has meant that Holmesian judges are slightly more willing to follow precedents than formalists, as discussed at § 4.3.2 n.86, Holmesian judges are slightly more willing than formalists to give a precedent a broader reading if that is consistent with the parties’ reasonable substantial reliance.

Of all the four judicial decisionmaking styles, natural law judges are more likely to see in precedents an embodiment of explicit or implicit principles which courts can use as a foundation for doctrinal development. Thus, despite the general preference for deciding cases on narrower grounds where possible, based upon, as cited at § 4.1 n.5, “the sure-footed Anglo-Saxon habit of dealing with things as they arise instead of anticipating them by abstract universal formulas,” natural law judges are the

---

96 Llewellyn, supra note 94, at 43.
most willing to extend precedents in light of a general principle found therein, a broad/loose use of precedents, or as it is sometimes called, a “reasoned elaboration of the law,” discussed at § 12.2.2.2.

Despite this willingness to use general reasoning in prior cases more broadly than the other decisionmaking styles, *dicta* in prior opinions is still viewed as *dicta* by natural law judges. As Chief Justice Marshall noted in *Cohens v. Virginia*,97 “It is a maxim not to be disregarded, that general expressions, in every opinion, are to be taken in connection with the case in which those expressions are used. If they go beyond the case, they may be respected, but ought not to control the judgment in a subsequent suit when the very point is presented for decision.”

Table 4.3 encapsulates the approach to precedent of the various decisionmaking styles:

* Focus Predominantly on Core Holdings of Precedent  
** More Willing to Focus on Reasoned Elaboration of the Law

In England, judicial practice is that when courts sit in panels each judge delivers his or her own opinion, and thus the opinion of each judge who votes with the majority is as authoritative as each of the other opinions. American practice is that there is usually one majority opinion for the court. This was formalized at the United States Supreme Court by Chief Justice John Marshall, who authored 147 of the 171 majority opinions during his first decade on the Court, although the trend toward one majority opinion was begun by Marshall’s predecessor, Chief Justice Oliver Ellsworth.98

The American practice of having one majority opinion makes it more likely that American cases will stand for broader, general propositions stated in that majority opinion, including *dicta* in that opinion, since the opinion is an “institutionalized” opinion of the court, not merely the personal opinion of an individual judge. English cases, without any single majority opinion for the court, tend to stand more for the narrow particular result decided in the particular case.99

97 19 U.S. (6 Wheat.) 264, 399-400 (1821).

This fact helps explain how English courts could more easily indulge in the fiction, noted at § 4.3.1 n.71, that precedents are never overruled. It is much easier to distinguish a precedent that stands only for a particular result on particular facts than to distinguish a precedent based on the reasoning of a majority opinion for the court. English courts can therefore more easily distinguish troublesome precedents rather than have a need to overrule. In the American system, with a majority opinion for the court, there is a greater need for a blunt and obvious overruling rather than a sub silentio burial or an ambiguous limiting of a case to its precise facts.

An issue lower courts must face is what to do if a precedent of a higher court commands one result, but later cases from that court appear to undermine the reasoning of that precedent. The traditional view, reaffirmed by the Supreme Court in 1989 in *Rodriguez de Quijas v. Shearson/American Express Inc.*, is that “[i]f a precedent of this Court has direct application in a case, yet appears to rest on reasons rejected in some other line of decisions, the Court of Appeals should follow the case which directly controls, leaving to this Court the prerogative of overruling its own decisions.”

On practical grounds of processing cases expeditiously, for many decisions today American courts issue “unpublished opinions” that resolve the case without a full, reasoned defense. The percentage for the federal Courts of Appeals was 11% unpublished in 1981, 68% by 1990, and 81% by 2005. These cases are usually held to have no “precedential” weight, since from a natural law perspective they do not represent a “reasoned elaboration of the law,” and from a Holmesian or instrumentalist pragmatic perspective they do not deserve precedent respect. Despite not having “precedential” weight, Federal Rule of Civil Procedure 32.1, effective for 2007, requires all federal appellate courts to permit such “unpublished opinions” to be cited as “persuasive authority.” In a case later vacated as moot on rehearing en banc, an Eighth Circuit Court of Appeals panel held in *Anastasoff v. United States* that such cases, which typically can be found online, must be given “precedential” weight since they are literally court decisions. This formalist focus on literalism has not been followed by other courts, although, as of 2006, the local rule in the District of Columbia Court of Appeals, and in a very few states, such as Utah, permit such opinions to be cited as “precedent.”

§ 4.4 Judicial Predisposition in the Reasoning Process

§ 4.4.1 General Interpretive Bias

As noted throughout Part I of this book, there have been four main judicial decisionmaking styles in American history: natural law, formalism, Holmesian, and instrumentalism. Although most judges do not self-consciously adopt one of these four styles, the approach of most judges to judicial

---

100 490 U.S. 477, 484 (1989).
101 223 F.3d 898 (8th Cir.), vacated as moot on reh’g en banc, 235 F.3d 1054 (8th Cir. 2004).
decisionmaking is reflected more in one style than the others. While in theory a judge could adopt one style of interpretation for common-law decisionmaking, and a different style for statutory interpretation, and yet a different style for constitutional law, almost all judges adopt the same interpretive approach toward each. This fact is discussed at § 12.4.4, after each of the styles of interpretation have been discussed in depth in the remaining parts of Chapters 9-12.

Given the judge's interpretive style, whether a common-law provision, statute, or the Constitution, general interpretive bias refers to the fact that any judge is likely to view the relevant provisions of the law though the interpretive style generally favored by the judge. Thus, despite the fact that each judge is operating from a similar database concerning purposes or history, a formalist judge may view purposes or history somewhat differently than a natural law judge, a Holmesian judge, or an instrumentalist. Although no responsible judge consciously allows considerations of interpretive bias to influence the result or reasoning of any particular case, judges are human beings, and no human being is perfect. Individual bias in decisionmaking occurs. Thus, formalist judges may tend to see the framers and ratifiers as formalists, Holmesian judges see them as Holmesian, and so forth.

The differing views on the Court concerning the framers and ratifiers' intent regarding the Establishment Clause as expressed in *Lee v. Weisman* are a good example of this phenomenon. In that case, an instrumentalist opinion by Justice Blackmun concluded that the history of the framing and ratifying period was consistent with modern liberal notions of the need for a strict wall of separation between church and state. A natural law opinion by Justice Souter, grounded in the traditional 18th- and 19th-century judicial decisionmaking style, attributed to the framers and ratifiers James Madison’s and Thomas Jefferson's views, grounded in 18th- and 19th-century natural law Enlightenment philosophy, that "any official endorsement of religion can impair religious liberty." Another version of that insight, reflecting slightly greater deference to government, appeared in Justice Kennedy’s opinion, where he stated, "[T]he lesson of history that was and is the inspiration for the Establishment Clause [is] the lesson that in the hands of government what might begin as a tolerant expression of religious views may end in a policy to indoctrinate and coerce." Formalist and Holmesian judges concluded in a dissent by Justice Scalia that the framers and ratifiers shared their premises that the Establishment Clause prohibits governmental action only where (1) there exists clear, bright-line prohibitions grounded in clear text or specific historical traditions (the formalist premise), or (2) deference to the government is inappropriate because the unconstitutionality appears in clear text or clear inferences from historical evidence (the Holmesian premise).

Sometimes judges hold the positions they do even in the face of clear historical evidence to the contrary. For example, as noted at § 6.2.2.4, Justice Scalia's view that history supports his formalist, strict separation of powers approach to separation of powers issues is not well-grounded when compared to the Holmesian, natural law, and instrumentalist approaches that view history and the framers and ratifiers’ purposes as supporting a sharing of powers, checks and balances approach.

---

103 505 U.S. 577, 599-601, 605-609 (1992) (Blackmun, J., joined by Stevens & O'Connor, JJ., concurring); *id.* at 609-18 (Souter, J., joined by Stevens & O'Connor, JJ., concurring); *id.* at 591-92 (Kennedy, J., opinion for the Court); *id.* at 631-36 (Scalia, J., joined by Rehnquist, C.J., and White & Thomas, JJ., dissenting).
A judge who generally favors one interpretive style may also be more likely to presume that clauses of the Constitution reflect that style. For example, a natural law judge may presume that more clauses of the Constitution were drafted in light of natural law principles than will formalist, Holmesian, or instrumentalist judges. Thus, although some provisions in the Constitution may not reflect a sound natural law position, as regarding slavery before the 13th Amendment, a natural law judge can be predicted to view more clauses of the Constitution as embodying natural law principles than judges who adopt the other interpretive styles. For example, natural law judges tend to hold the Eighth Amendment’s ban on “cruel and unusual punishments” embodies the natural law principle of proportionality of punishment, while formalist judges tend to reject that view.  

§ 4.4.2 Conservative versus Centrist versus Liberal Bias

Although the impact on interpretation is varied and complex, a number of commentators have suggested that the political views that judges bring to the courts typically have some impact (and perhaps great impact) on how the Constitution is interpreted. Such views may impact a judge's interpretation whether or not the judge intends there to be such an effect, or is aware that such political views may affect the judge's views. Particularly for a judge adopting an instrumentalist perspective, the greater ability to resort to what the judge believes are the background policies of contemporary society may lead conservative versus liberal judges in different directions.

As discussed at § 11.3.4.2, commentators who share many of the premises of the Critical Legal Studies Movement tend to place great weight on this proposed connection between law and politics. With regard to political considerations, a judge, like any citizen, may be leftist, liberal, centrist, conservative or on the extreme right. Because all federal court judges must be confirmed by the Senate, most federal judges tend not to be on the extremes of the political spectrum. It has been noted that “the ideological distance” between a Senator’s constituents and the nominee plays an important role in the confirmation process. This suggests that if the distance is great, as for nominees on the extremes of the political spectrum, confirmation is less likely. Federal court judges thus tend to be liberal, centrist, or conservative, and not either leftist or on the extreme right. This is particularly true given the historical fact that, until recently, virtually every federal court judge has been confirmed in the Senate by filibuster-proof majorities of at least 60% approval. How much this might change given the view that has emerged since 2000 that federal judges should be confirmed on bare 50 plus one majority vote, as discussed at § 7.4.2 nn.236-39, remains to be seen.

---

104 See Hudson v. McMillan, 503 U.S. 1, 8-12 (1992) (Justices O'Connor, Kennedy, and Souter applying the principle of proportionality); id. at 17-29 (Thomas, J., joined by Scalia, J., dissenting) (rejecting that view). See generally Solem v. Helm, 463 U.S. 277, 284-85 (1983) (Powell, J., for the Court) ("The principle that a punishment should be proportionate to the crime is deeply rooted and frequently repeated in common-law jurisprudence.").

As an historical matter, the formalist approach is most often associated with a conservative political bias. This is based in part on the fact that the formalist era of American law, from 1873-1937, was an era of conservative formalism. This is discussed at § 14.2.2, as part of a discussion of the social and political forces behind the formalist era. In addition, modern formalist judges and Justices, such as Chief Justice Warren Burger and Justices Scalia and Thomas, have tended to be conservatives. However, for each of the decisionmaking styles, there is a conservative and a liberal version. For example, as discussed at § 9.3.3, Justice Hugo Black, appointed by President Franklin Delano Roosevelt, was an example of a liberal formalist judge. As discussed at § 7.1, some 18th-century progressives, like Thomas Jefferson in the United States, Jeremy Bentham in England, and the Jacobins during the French Revolution, also supported a more formalist model of decisionmaking.

As an historical matter, the instrumentalist style of interpretation is most often associated with liberal judges. This is based on the relative liberalism of major proponents of the instrumentalist style, like Cardozo and Llewellyn, and on the fact that the modern adherents to instrumentalism on the Supreme Court, from Chief Justice Warren, to Justices Douglas, Brennan, Fortas, Marshall, Blackmun, and Stevens, have had a liberal bent to their instrumentalism. However, as discussed at § 11.3.3, a judge like Richard Posner, of the Seventh Circuit Court of Appeals, styles his law and economics approach, which is decidedly conservative, as a variation of pragmatic instrumentalism.

Specific differences among conservative and liberal variations of the Holmesian style, such as the differences between conservative Chief Justice Rehnquist versus more liberal Justice White, are discussed at § 10.3.3. Specific differences among conservative and liberal variations of the natural law style of interpretation are discussed at § 12.3.3. This section notes that conservative natural law judges tend to ground their approach in a classic or Christian natural law tradition, while centrist and liberal natural law judges tend to ground their approach more in the 18th-century Enlightenment natural law tradition. This difference affects what background moral principles the judge thinks were embedded in the Constitution or are part of a reasoned elaboration of constitutional doctrine.

With regard to structural issues of constitutional interpretation, on issues of federalism, conservative judges tend to prefer states’ rights, while liberal judges tend to favor exercises of federal power, as discussed at § 6.2.2.3. On separation of powers issues, conservative judges tend to favor the executive, while liberal judges tend to favor the legislative branch, as discussed at § 6.2.2.4. On individual rights, conservative judges tend to focus on the protection of economic rights, while liberal judges tend to focus on the protection of non-economic, civil rights, as noted at § 21.2.1.2.

§ 4.4.3 Doctrinal Bias

Doctrinal bias refers to the fact that some judges, because of past experiences or idiosyncratic preferences, may have a view about a particular doctrine that is inconsistent with the judge's general interpretive style or general political predisposition. Nevertheless, the judge's views may be consistent within that particular doctrine, and thus more important in how that judge decides a particular case than are the judge's general views.

For example, among Holmesian judges, Justice White's beliefs regarding his strong commitment to civil rights, may have affected his decision to join Justice Brennan's more instrumentalist, pro-civil rights majority opinion in United Steelworkers v. Weber, discussed at § 3.3 nn.65-68, rather than
follow­ing his more typical Holmesian approach and joining Justice Rehnquist’s more judicial­ly restrained dissent, as discussed at § 10.4.107 Despite being a conserv­ative Holmesian judge, Justice Stewart often joined liberal instrument­alists in First Amendment free speech cases involving the free speech rights of the press, as noted at § 29.6.2.4 nn.340-44.

Among natural law judges, Justice O’Connor has decided a number of cases reflecting a stronger commitment to states rights than might be expected from a moderate conserv­ative natural law judge, even a judge with conserv­ative Holmesian deference-to-state-government leanings. On the other hand, in some cases involving women or children, Justice O’Connor has joined liberal instrument­alist judges. These cases are summarized at § 12.4.2. Justice Kennedy’s strong commitment to freedom of speech and the free interchange of ideas, perhaps based in part on his role as an Adjunct Professor at the University of the Pacific, McGeorge School of Law, may have influenced his free speech decisions. Justice Kennedy has adopted more of an absol­ulist, categor­i­cal, formal­ist approach in such cases, as noted at § 12.4.1, rather than a natural law interpretation style.

§ 4.4.4 Party Bias

Party bias refers to the fact that in some cases a judge may prefer a particular party, or that party’s lawyer, as opposed to the other party, or that party’s lawyer. Although such personal bias is inap­propriate for the judge to consider, and rules regarding judicial recusal are meant to prevent such bias from affecting case resolution, as discussed at § 7.4.4, nonetheless such party bias may occasionally affect the result in a particular case. Some commentators, for example, have suggested that the Court’s decision in Bush v. Gore was the product of such party bias. As stated in one such account, “Immediately after, it was widely said that no one could imagine the Court’s majority voting the same way if the identities of the parties had been reversed.”108 This may be particularly true regarding the procedural issues involved in Bush v. Gore of whether the case was ripe for resolution, or whether in any event the issues involved in the case represented political questions not appropriate for federal court intervention. Bush v. Gore is discussed at § 26.5.3 nn.525-44.

PART II: THE FORM OR SHAPE OF CONSTITUTIONAL LAW

As discussed at § 1.2.1, Aristotle illustrated the use of four causes to explain any thing or situation with the famous silver bowl example. The material cause of a silver bowl was, of course, silver. Its efficient cause was the hammering of the silversmith and its final cause the purpose for which the bowl was intended. The fourth cause was the form or shape which identified the thing as a bowl rather than a plate or a vase.1 With respect to constitutional law, the form or shape of constitutional law is dependent primarily on interpretations of the Constitution produced by authorized government officials, particularly the Supreme Court of the United States. For this reason, although the impact of other governmental actors and citizens generally play some role in the form or shape of constitutional law, as discussed at §§ 17.1.2 & 17.1.4, Part II of this book focuses predominantly on an overview of the elements that combine to define an act of constitutional interpretation by courts.

Part II is comprised of four Chapters. Chapter 5 identifies the materials used to construct the form or shape of constitutional interpretation: text, context, history, practice, precedent, and prudential considerations. Chapter 6 builds on this discussion to address the differing views on the relevance and weight to be given to these various sources of constitutional interpretation, that is, the possible forms or shapes of constitutional interpretation. Chapter 7 deals with efficient causes of interpretation, that is, the kinds of reasoning brought to bear on the relevant materials and the manner in which constitutional doctrine emerges from the process of case-by-case adjudication. Chapter 8 considers the final cause or ends sought in constitutional interpretation.

CHAPTER 5: MATERIAL SOURCES OF CONSTITUTIONAL INTERPRETATION

§ 5.1 Introduction to the Material Sources of Constitutional Interpretation

As noted at § 1.2.1, under Aristotle’s categorization of sources, material sources are the building blocks of any situation or thing. Thus, for Aristotle, silver is the material source out of which a silver bowl is made. With respect to interpretation, the building blocks are the sources of meaning that the interpreter must consider during the act of interpretation. Focusing on constitutional interpretation, any interpreter must decide, among other things, how much weight to give arguments about the plain meaning of the Constitution's text; the text's purpose or spirit; the context of that text, including verbal or policy maxims of construction, related provisions in the Constitution or other related documents, like the earlier enacted Articles of Confederation, and the structure of government contemplated by the Constitution, including issues of federalism and separation of powers; historical evidence concerning the intent of the framers and ratifiers of the Constitution; legislative, executive, and social practice under the Constitution; judicial precedent interpreting the Constitution; and prudential arguments concerning the consequences of a particular judicial decision, both from the perspective of text, context, history, practice, and precedent, and whether that decision would advance a particular background principle of justice or social policy that the judge believes is embedded in the Constitution or constitutional doctrine, more succinctly phrased as “embedded in the law,” or perhaps a principle of justice or social policy that is “not so embedded” in the Constitution or existing constitutional doctrine.

---

These sources can be organized under two broad headings: contemporaneous sources of meaning and subsequent considerations. Contemporaneous sources are those sources that existed at the time a constitutional provision was ratified. These include the text of the Constitution; the context of that text, including verbal and policy maxims of construction, related provisions in the Constitution or other related documents, and the structure of government contemplated by the Constitution; and the history surrounding the provision's drafting and ratification. The term "contemporaneous sources" conforms to usage by Justice Powell in *Garcia v. San Antonio Metropolitan Transit Authority*, where he wrote, "As contemporaneous writings and the debates at the ratifying conventions make clear, the States' ratification of the Constitution was predicated on this understanding . . . ."

Subsequent considerations involve matters that occur after the constitutional provision is ratified. These include the sub-categories of (a) subsequent events, which involve legislative, executive, and social practice under the Constitution, and judicial precedent interpreting the Constitution, and (b) prudential considerations, which involve judicial speculation concerning the consequences of any particular judicial construction, including arguments of justice or sound social policy.

These sources can be organized by resort to whether they involve relatively specific and limited interpretive tasks, or resort to more general kinds of reasoning. This difference between specific interpretive tasks and general kinds of reasoning will be explored during the rest of this Chapter. Preliminarily, however, Table 5.1 may help make clearer the discussion in the rest of this Chapter.

---

This summary of sources of constitutional meaning owes its genesis to University of Texas School of Law Professor Philip Bobbitt and his book, *Constitutional Fate*. In that book, Professor Bobbitt described six main kinds of constitutional arguments: textual, structural, historical, doctrinal, prudential, and ethical. The first three of these arguments – textual, structural, and historical – form the main parts of the three sub-categories of meaning grouped under the heading contemporaneous sources of meaning: text; context, including arguments of structure; and history. Professor Bobbitt's fourth category, doctrinal argument, is the sub-category of subsequent events that deals with judicial precedents, that is, the doctrines developed by the Court in construing the Constitution. The other sub-category of subsequent events – subsequent legislative, executive, or social practice – is not specifically identified as a separate source by Professor Bobbitt in *Constitutional Fate*. However, he did touch upon aspects of legislative and executive practice in a later book, *Constitutional Interpretation*. Professor Bobbitt's fifth category, prudential argument, is reflected in the category of prudential considerations. As discussed at § 5.4.2, Professor Bobbitt’s discussion of prudential considerations focused mostly on considerations of consequences in light of text, context, history, practice, and precedent, and specifically structural arguments about the proper role of the judiciary, particularly the limited role mentioned in *Ashwander v. Tennessee Valley Authority* and favored by Holmesian Justices such as Justices Holmes, Brandeis, and Frankfurter, and commentators such as Professor Alexander Bickel. As indicated in Table 5.1, these considerations are part of prudential considerations analysis. As discussed at § 5.4.1, additional prudential considerations focus on background principles of justice or social policy, whether embedded in the law or not so embedded.

Discussion of Professor Bobbitt's sixth category, ethical argument, is a bit more complicated. As Professor Bobbitt’s colleague at the University of Texas School of Law, Professor Sanford Levinson, has noted, "[T]here are, within American law, cases illustrating a distinctive seventh 'modality' of 'natural law' or 'justice.' This differs quite radically from 'ethos' [or ethical argumentation], which I teach as a modality calling upon lawyers to exercise a certain kind of cultural-anthropological skill in discerning the underlying value commitments of a given social order." Upon this understanding, Bobbitt's ethical argument is reflected in part as the sub-category of history dealing with “general historical intent,” which elaborates the general concept (or "ethos") behind a constitutional provision, rather than the specific examples held by the framers and ratifiers about a provision. Professor Bobbitt indicated, however, that ethical argumentation also involves

---

9 Compare Bobbitt, *supra* note 3, at 93-119 with § 5.2.3.3.
moving beyond “contemporaneous” historical evidence to consider background principles of justice or social policy embedded in the law. Argumentation based on such background principles is thus part of Bobbitt’s ethical argumentation as well. Professor Levinson’s seventh modality of "justice," which he defined as independent of any particular society’s “ethos,” is reflected in the sub-category of prudential considerations dealing with the consequences of an interpretation from the perspective of justice or social policy that is independent of, and thus not necessarily embedded in, the law.

Professor Wilson Huhn has also developed a taxonomy of arguments used in legal reasoning, which he stated can apply to common-law, statutory interpretation, or constitutional law analysis. His list involves five kinds of arguments: text, intent, precedent, tradition, and policy analysis. Professor Huhn’s category of “text” includes both what are called here arguments of “text” and “context.” For the sake of clarity, it seems better to separate “text” and “context” into two different categories, rather than treating them as different parts of the same category. For instance, under some versions of a plain meaning rule for statutory construction, or some versions of the Parol Evidence Rule in contract law, one cannot consider aspects of “context” but only aspects of “text” alone. Separating “text” and “context” into two different categories is more consistent with this doctrinal structure.

Professor Huhn’s final four categories track the remaining four categories used in this book, with only linguistic variations: intent = history; precedent = precedent; tradition = practice; and policy analysis = prudential considerations. The terms history, practice, and prudential considerations are used in this book principally because they are used more often in constitutional dialogue. For example, as Justice Kennedy stated in *Alden v. Maine*, “We continue our discussion of history, practice, precedent, and the structure of the Constitution.” The Court has used the term “prudential” when discussing the prudential factors in *Ashwander v. Tennessee Valley Authority*, discussed at § 17.1.3.2, and in the prudential factors governing whether a party has standing to sue, discussed at § 17.3.1.4. Use of the term “history” rather than “intent” is also more precise, since the standard view is that the overall goal of any act of interpretation is to determine the drafter’s “intent.” Thus, when referring to only one aspect of that interpretive process, “history” is a better term. Finally, structural arguments, like those related to federalism and separation of powers, are best understood as aspects of the context of the drafting of the Constitution, as they are listed in Table 5.1, rather than as arguments of policy analysis or prudential considerations, as they are categorized by Huhn.

10 Compare id. at 102 (ethical argument not “contemporaneous” history only) with § 5.4.2.

12 See § 9.2.2.1 (discussing different versions of a plain language approach to statutory or constitutional interpretation); Joseph M. Perillo, Calamari and Perillo on Contracts 124-25 (5th ed. 2003) (discussing the Parol Evidence Rule in contract law).

13 Compare Huhn, supra note 11, at 443-49 with §§ 5.2.3, 5.3 & 5.4.

15 Compare Huhn, supra note 11, at 453 with § 5.2.2.2.
A similar set of six sources for constitutional interpretation—text, context/structure, history, practice, precedent, and prudential/adjudicatory norms/value considerations—appears in Professor Richard H. Fallon, Jr.’s book, Implementing the Constitution. These six sources are discussed next.

§ 5.2 Contemporaneous Sources of Meaning

§ 5.2.1 Text

In considering the text of a constitutional provision, as in considering the text of a statute, any interpreter must consider two different questions. First, there is the general philosophic question of whether to seek the actual subjective intent of the drafter of the text or whether to ask only objectively what do the text’s words mean to a reasonable objective observer. Second, there is the interpretive question of how much weight to give the literal text under consideration versus what weight to give to the purposes behind why the text was adopted.

Regarding the general philosophic question, Professor Reed Dickerson, of the Indiana University School of Law, noted that subjective intent “refers usually to the actual intent of some human being, or group of human beings, respecting what he[,] she [or they] intended to say. It reflects the user’s expectation that the reader or hearer will take the language as referring to what the user had in mind. It is, therefore, the specific message that the user intended to convey.” In contrast, objective intent refers to “the intent objectively manifested by the language used. Because language has meaning independent of the actual intent of the user, the meaning actually carried may imply an intent that differs from the user’s actual intent. It will be useful, therefore, to distinguish actual intent from manifest intent.” Manifest intent refers to the objective manifestation of the words actually used. Such manifest intent is typically determined by asking what are the words’ ordinary meaning in light of prevalent dictionary definitions, coupled with any specific technical definition of words of which a reasonably well-informed observer would be aware. The debate surrounding whether to adopt a subjective or objective intent approach to constitutional interpretation is discussed at § 6.2.1.1.

Regarding the interpretive question, Professor Dickerson noted that purpose refers “primarily to an ulterior purpose that the legislature intends the statute to accomplish or help accomplish.” The same analysis naturally applies to the purposes the framers and ratifiers intended a constitutional provision to accomplish. One of the most famous phrasing of purpose described it as the “mischief to be remedied.” As Lord Coke stated in 1584 in Heydon’s Case, a judge should inquire into the

---

17 Reed Dickerson, The Interpretation and Application of Statutes 69 (1975).

18 Id.

19 Id. at 88.

20 76 Eng. Rptr. 637, 638 (1584).
"mischief and defect" that the drafter was seeking to remedy and "the true reason for the remedy," and the judge should "make such construction as shall suppress the mischief, advance the remedy, and to suppress subtle invention and evasions for continuance of the mischief . . . and to add force to the cure and remedy, according to the true intent of makers of the act." As Karl Llewellyn noted, "If a statute is to make sense, it must be read in the light of some assumed purpose." So, too, with respect to constitutional provisions. In the 18th and 19th centuries, parties often spoke of the document's "spirit" or "object" as synonymous with what today we define as purpose. Chief Justice Marshall remarked in 1819 in *McCulloch v. Maryland*, “[The Constitution’s] nature, therefore, requires, that only its great outlines should be marked, its important objects designated, and the minor ingredients which compose those objects by deduced from the nature of the objects themselves.” In his 1833 book *Commentaries on the Constitution of the United States*, Justice Joseph Story noted, “In construing the Constitution of the United States, we are, in the first instance, to consider what are its nature and objects, its scope and design, as apparent from the structure of the instrument, viewed as a whole, and also viewed in its component parts.” The debate surrounding how much weight, if any, to give arguments of purpose versus literal text is discussed at § 6.2.1.2.

If an interpreter chooses to interpret a provision in light of both its literal meaning and purpose, the interpreter must then decide how to determine the purpose, or purposes, of the text. Some purposes are stated in the Constitution itself. For example, the preamble to the Constitution states that the Constitution was drafted "in Order to form a more perfect Union, establish Justice, insure domestic Tranquility, provide for the common defence, promote the general Welfare, and secure the Blessings of Liberty." Such purposes, however, are very general and do not provide unequivocal guidance on how to interpret specific constitutional provisions. They may provide, however, some background understanding of the constitutional enterprise embarked on by the framers and ratifiers.

For example, in his 1953 book *Politics and the Constitution*, Professor William Crosskey argued that because the preamble covers virtually all the subjects for which a government might regulate, the Constitution must have been intended to create plenary power in the federal government to act, subject to the specific limitations indicated by clear constitutional text. In his 1833 book, Justice Story discussed more limited inferences to be drawn from the preamble, stating that the preamble's

---

24 U.S. Const. pmbl.

"true office is to expound the nature, and extent, and application of the powers actually conferred by the Constitution, and not substantively to create them." Story emphasized that the "importance of examining the preamble, for the purpose of expounding the language ... has long been felt, and universally conceded. . . . [T]he preamble . . . is a key to open the mind of the makers, as to the mischiefs, which are to be remedied, and the objects, which are to be accomplished by the provisions of the statute."26 Justice Story then discussed how each of the clauses of the preamble are related to various mischiefs which had arisen under the Articles of Confederation that needed to be remedied, such as those discussed at § 20.1.1.2.27

A second way to determine a constitutional provision's spirit/purpose is to consult historical sources surrounding the provision's passage. These sources may aid in determining the provision's purpose, or purposes. An interpreter must decide which of these sources are appropriate to use, at what level of generality to view historical insights, and what weight to give each, as discussed at § 5.2.3.

Finally, some interpreters may be so convinced of the spirit or purposes that must have motivated the text under consideration that the interpreter may simply take "judicial notice" of these purposes without engaging in any textual or historical analysis.28

§ 5.2.2  Context

§ 5.2.2.1  Basic Elements of Context

Any interpreter must decide to what extent any particular provision of the Constitution must be read against the backdrop of the context in which the Constitution’s words were used. As has been noted about the related enterprise of statutory interpretation, "[A]ny serious effort on the part of judges to discover the thought or reference behind the language of a statute must be based on a painstaking endeavor to reconstruct the setting or context in which the statutory words were employed."

26  Story, supra note 23, §§ 459, 462.

27  Story, supra note 23, §§ 463-68 (discussing inferences to be drawn from "We the people", not "We the states"); §§ 469-81 ("more perfect union"); §§ 482-88 ("establish justice"); §§ 489-93 ("ensure domestic tranquility"); §§ 494-95 ("provide for the common defense"); §§ 496-505 ("promote the general welfare"); §§ 506-516 ("secure the blessings of liberty to ourselves and our posterity"). On use of the preamble in constitutional interpretation generally, see Milton Handler, Brian Leiter & Carole E. Handler, A Reconsideration of the Relevance and Materiality of the Preamble in Constitutional Interpretation, 12 Cardozo L. Rev. 117 (1990).

Similar to statutory interpretation, this inquiry into context as applied to constitutional interpretation can involve resort to verbal maxims of grammatical construction, policy maxims of construction, or related provisions in the same section or other parts of the Constitution, or in documents related to the Constitution. These arguments regarding verbal maxims, policy maxims, and related provisions are traditional considerations that form part of the 18th- and 19th-century judicial decisionmaking tradition. Justice Story noted in 1833, "[W]ords, from the necessary imperfection of all human language, acquire different shades of meaning . . . . We must resort then to the context, and shape the particular meaning." These contextual approaches are still part of contemporary interpretation techniques.

A. Verbal Maxims

Verbal maxims include those canons of construction that focus on specific grammatical rules of understanding. Some of the most famous of these verbal maxims are: construe technical words technically; the expression of one thing implies exclusion of others (expressio unius est exclusio alterius); where general words follow an enumeration of specific words, the general words are to be held as applying only to the same general kind or class as the specific words (ejusdem generis); and words are to be read in context (noscitur a sociis). Justice Scalia has summarized the expressio unius est exclusio alterius maxim as follows: "Expression of the one is exclusion of the other. What this means is this: If you see a sign that says children under twelve may enter free, you should have no need to ask whether your thirteen-year-old must pay. The inclusion of the one class is an implicit exclusion of the other." Regarding the ejusdem generis maxim, Justice Scalia stated, "For instance, if someone speaks of using 'tacks, staples, screws, nails, rivets, and other things,' the general term 'other things' surely refers to other fasteners." Justice Scalia also noted, "Another

30 See generally Llewellyn, supra note 21, at 401-04 (canons of construction numbered 4-6, 9-11, 16-17, and their limitations). For a general overview to interpreting documents in light of their context, see Dickerson, supra note 17, at 103-16 ("The Statute and its Context").

31 Story, supra note 23, § 452. See also id. § 429 (discussing the policy maxim that "[w]here a power is remedial in nature, there is much reason to contend, that it ought to be construed liberally"); § 448 (discussing verbal maxims of construction, while noting "they are susceptible of being applied, and indeed are often ingeniously applied, to the subversion of the text, and the objects of the instrument."); § 451 ("Every word employed in the constitution is to be expounded in its plain, obvious, and common sense, unless the context furnishes some ground to control, qualify, or enlarge it.").

33 See Llewellyn, supra note 21, at 404-05 (canons of construction numbered 15, 18, 20 & 22).

35 Id. at 25.
frequently used canon is *noscitur a sociis*, which means, literally, ‘it is known by its companions.’ It stands for the principle that a word is given meaning by those around it. If you tell me, ‘I took the boat out on the bay,’ I understand ‘bay’ to mean one thing; if you tell me, ‘I put the saddle on the bay,’ I understand it to mean something else.’ 36 Another prominent maxim of construction is that qualifying or limiting words are to be referred to the last antecedent, that is, the words closest to them in the sentence that they appear naturally to modify. 37 As used by most judges, these verbal maxims of construction are merely rules of thumb that can be overridden if other considerations of intent or purpose suggest otherwise. 38 As Justice Story stated as far back as 1833, while “[t]hese maxims, rightly understood and applied, undoubtedly furnish safe guides to assist us in the task of exposition . . . they are susceptible of being applied, and indeed are often ingeniously applied, to the subversion of the text, and the object[s] of the instrument.” 39

B. Policy Maxims

Policy maxims involve rules of construction based upon general assumptions about the drafters and their intent. Because policy maxims thus involve more general reasoning about interpretation, rather than specific grammatical construction, some Justices, notably formalists, are more hesitant to resort to policy maxims than verbal maxims, as discussed at § 6.2.2.1. Some of the most famous policy maxims are: construe penal provisions strictly (the “rule of lenity” providing that ambiguities in criminal statutes should be resolved in favor of the defendant) and construe remedial provisions broadly; presume reasonableness of the drafters' action; require clear expression for provisions to have retroactive application; and permit no one to profit from his own wrong. 40 Other policy maxims include that waivers of sovereign immunity are to be narrowly construed; a clear statement is needed for a federal statute to eliminate state sovereign immunity; ambiguities in treaties and statutes dealing with Native Americans are to be resolved in favor of Native Americans; and the more controversial, and less often applied today policy maxim, statutes in derogation of the common law are to be narrowly construed. 41 Justice Scalia has noted that this last maxim was “used to devastating effect in the conservative courts of the 1920's and 1930's” and “seems like a sheer judicial power-grab.” 42 A classic example of the “rule of lenity” regarding the strict construction

42 *Id.* at 27, 29. For an article sharing this concern, see Jefferson B. Fordham & J. Russell Leach, *Interpretation of Statutes in Derogation of the Common Law*, 3 Vand. L. Rev. 438 (1950).
of penal statutes appeared in an opinion by Justice Holmes in 1931 in *McBoyle v. United States*. In that case, a unanimous Court interpreted that word “motor vehicle” in a statute to exclude theft of an “airplane” because “in everyday speech ‘vehicle’ calls up the picture of a thing moving on land.”

C. Related Provisions and Other Contextual Considerations

Arguments concerning related provisions and other kinds of contextual considerations, such as section titles or section headings, involve using provisions in other parts of the Constitution, or in other related documents, to help establish the meaning of a particular constitutional provision.

A number of examples of such interpretation appeared in the classic case of *McCulloch v. Maryland*, discussed at § 18.1.2. One issue in *McCulloch* was whether Congress had the power to incorporate a national bank. Since there was no express provision in the Constitution granting Congress such power, the argument on behalf of Congress was that an “implied” power existed and was derived, in part, from the Necessary and Proper Clause of Article I, § 8, cl. 18, which grants Congress power to do all things "necessary and proper" to effectuate the other named powers in the Constitution.

In concluding that the framers and ratifiers intended Congress to have implied powers, the Court noted that while the related federalism provision in the earlier “articles of confederation, excludes incidental or implied powers [and] requires that everything granted shall be expressly and minutely described,” the 10th Amendment to the United States Constitution “omits the word ‘expressly,’ and declares only, that the powers ‘not delegated to the United States, nor prohibited to the states, are reserved to the states or to the people. . . .  The men who drew and adopted this amendment had experienced the embarrassments resulting from the insertion of this word [expressly] in the articles of confederation, and probably omitted it, to avoid those embarrassments.” Thus, reference to a related document, the Articles of Confederation, our constitutional document from 1781-89, as discussed at § 20.1.1.2, helped interpret federal power under Article I, § 8.

The Court also resorted to arguments of related provisions and section headings in the Constitution itself to interpret the Necessary and Proper Clause. One argument for the government was that to carry out effectively some of the named powers, like raising taxes, paying debts, and raising money to pay army and navy personnel, a national bank was "necessary and proper." Whether this argument would be accepted depended, in part, upon whether the Court would give a narrow or broad reading to the phrase "necessary and proper." A narrow reading would restrict the power to acts which are "absolutely necessary"; a broad reading would allow Congress to act as long as Congress thought it "proper." In adopting a broad reading, the Court considered related provisions in the Constitution, noting that the framers used the phrase "absolutely necessary" in Art. I, § 10, cl. 2, but chose not to use it in Art. I, § 8. The Court also considered arguments of section headings,

---

43 283 U.S. 25, 26-27 (1931) (Holmes, J., for the Court).

45 *Id.* at 406-07.
noting, "1st. The clause is placed among the powers of Congress [in Art. I, § 8], not among the limitations on those powers [in Art. I, § 9]. 2nd. Its terms purport to enlarge, not diminish the powers vested in the government."46

An additional early example of related provisions occurred in *Gibbons v. Ogden*.47 In determining the narrowness or breadth of the term “commerce” for purposes of interpreting the phrase “commerce . . . among the several States,” the Court first interpreted the related provision in Art. I, § 8, cl. 3 regarding “commerce with foreign nations.” The Court noted, “The mind can scarcely conceive a system for regulating commerce between nations, which shall exclude all laws concerning navigation.” Since the same word “commerce” also modified “among the several States,” the Court concluded that “commerce” in that related provision must also include regulation of navigation.

The complete text of Article I, § 8, cl. 3 provides Congress with the power, “To regulate commerce with foreign nations, among the several States, and with the Indian tribes.” Thus, instead of viewing this argument as one of related provisions, one might view it an example of the verbal maxim *noscitur a sociis*, interpreting “commerce” in light of the words surrounding it – “foreign nations,” “among the several States,” and “Indian tribes.” Nothing important turns on this characterization, however. Both verbal maxims and related provision arguments exemplify specific interpretation tasks viewed by virtually all courts and commentators as equally appropriate to use. As discussed at § 6.2.2.1, the debate regarding context predominantly involves differences regarding the weight given to the general interpretation tasks of policy maxims and arguments of structure, discussed next.

§ 5.2.2.2 Structure

As Professor Reed Dickerson noted, at its broadest level, resort to general contextual considerations of interpretation can involve "the totality of relevant factors in the general cultural environment external to the specific language being interpreted that are shared by the users of the language in the particular speech community and taken account of by the particular communication."48 In the realm of constitutional interpretation, this “general cultural environment” is predominantly determined by background theories of constitutional structure that influenced the drafting of the Constitution. Stated more simply, arguments of structure form a background context within which constitutional interpretation takes place. As noted by Justice Kennedy in *United States v. Lopez*,49 there are four main elements of constitutional structure: judicial review, federalism, separation of powers, and checks and balances.

48 Dickerson, *supra* note 17, at 110.

A. Judicial Review

Any interpreter must decide what role the courts should play in enforcing constitutional mandates, that is, the issue of judicial review. For example, one might take the view, stated in 1893 by Harvard University Law School Professor James B. Thayer, that courts should defer to governmental action out of respect for the other branches of the federal government, or out of respect for state governments, unless the unconstitutionality of the governmental action is “so clear that it is not open to rational question.”50 Under this view, the Court should find action unconstitutional only if contemporaneous sources and subsequent considerations clearly indicate that the government's action is unconstitutional, rather than merely on balance leading the Court to that conclusion. A slightly less deferential view counsels judges to exercise caution and restraint before deciding cases on the merits, including the view that courts should construe statutes to avoid constitutional problems if possible. As discussed at § 5.4.2, this view is reflected in Professor Alexander Bickel’s passive virtues approach to judicial decisionmaking, and in what are called the Ashwander factors regarding judicial restraint. As noted at § 6.2.2.2, some version of this approach is favored by most Holmesian jurists, based upon their functional deference-to-government posture, discussed at § 3.2 nn.35-40.

At the other extreme from this posture of judicial deference, a judge might conclude that courts have a special role to play in our democratic system in protecting certain kinds of constitutional rights. For example, some interpreters might believe that courts have special obligations to provide protection for the disadvantaged or unempowered in society. As Justice Brennan remarked, "[H]undreds of thousands of Americans live entire lives without any real prospect of the dignity and autonomy that ownership of real property could confer. Protection of the human dignity of such citizens requires a much modified view of the proper relationship of individual and state. . . . [I]t has been well said that there is no better test of a society than how it treats those accused of transgressing against it. . . . The constitutional vision of human dignity [also] respects the rights of each individual to form and express political judgments, however far they may deviate from the mainstream and however unsettling they might be to the powerful or the elite."51 Some interpreters may believe that courts have special obligations to protect individuals' civil rights or civil liberties. Justice Thurgood Marshall argued for the need to view the Constitution as a living document, with special focus on "the Bill of Rights and the other amendments protecting individual freedom and human rights."52 University of California-Berkeley School of Law Professor and former Dean Jesse Choper argued that courts should treat separation of powers and federalism cases as political questions, and thus refuse to decide them, so that courts can reserve their institutional capital for

individual rights cases.\textsuperscript{53} Professor Philip Bobbitt asked to what extent the structural relationship between the citizen and his government can account for proper court scrutiny of individual rights.\textsuperscript{54} As noted at § 6.2.2.2, some version of this “special role” approach is favored by most instrumentalist jurists, based upon their functional social policy perspective, discussed at § 3.3 nn.51-61, 76-77.

A third possible approach takes an intermediate position between these two approaches. This approach counsels that courts should be willing to rule that certain governmental action is unconstitutional if indeed the other sources of meaning support that finding, without any policy of special deference to legislative or executive action. On the other hand, this approach states that courts do not have any special role in protecting certain kinds of constitutional rights, but should apply the same general approach toward judicial review to any constitutional provision. As stated by Justice Scalia, “[T]he context of the Constitution tells us not to expect nit-picking detail, and to give words and phrases an expansive rather than narrow interpretation – though not an interpretation that the language will not bear. . . . [This] is not strict construction, but it is reasonable construction.”\textsuperscript{55} As discussed at § 6.2.2.2, some version of this more neutral approach toward judicial review is favored by most formalist and natural law jurists, based upon their more analytic approach to law, which does not involve the kind of functional considerations that affect Holmesian or instrumentalist decisionmaking.

Each of these approaches assumes that the courts will be the ultimate interpreters of the meaning of constitutional provisions. It would be possible, of course, to take the view that judicial review of the constitutionality of governmental action is impermissible, as historically has been true in England. It would also be possible to take the view that each branch is responsible for determining the constitutionality of its own action. Thus, the legislative branch would determine its powers under Article I of the Constitution; the executive branch would determine its powers under Article II; the judicial branch would determine its powers under Article III. A third alternative would permit the legislature to determine the constitutionality of action only if the legislature invoked a special power, like the “notwithstanding clause” of § 33 of the Canadian Charter of Rights and Freedoms, discussed at § 17.1.4 n.67.\textsuperscript{56}

Since \textit{Marbury v. Madison} in 1803, these alternatives to judicial review have been rejected by the United States Supreme Court, and, with few exceptions, the other branches of the federal and state governments have acquiesced in the Court’s assertion of power in \textit{Marbury} that “[i]t is emphatically

\textsuperscript{55} Scalia, \textit{supra} note 34, at 37-38.

the province and duty of the judicial department to say what the law is.”

Discussion of these, and other, possible alternatives to judicial review do appear, however, at §§ 17.1.2 & 17.1.4. Detailed discussion of a broad range of issues concerning judicial review appears in Chapter 17.

**B. Federalism**

Any interpreter must also consider the relative power of the federal government versus the power of state governments in our constitutional system. In general, there are three main approaches one could adopt. The first approach, argued by the state of Maryland in the 1819 case of *McCulloch v. Maryland*, is that the states created the federal union through state-by-state ratification, and thus the structure of sovereignty in our system of government is that the people created the states, which created the federal government.

At the other extreme, one could adopt an approach, similar to France and other European countries, where the people created the federal government, and then the states (or provinces, or whatever similar term is used), are mere administrative subdivisions of the central government. It has been noted, “The federal form of the U.S. government is often contrasted with the highly centralized government that followed the other major revolutionary movement in the late 18th century, that of France. European thought emphasized the idea of ‘indivisible sovereignty,’ with a legislative power that essentially reflects the sovereign will and thus must control exercise of other powers. The French Revolution’s emphasis on equality was conceived to require a national, and uniform, concept of citizenship, incompatible with the internal differences associated with strongly decentralized federal unions.” This unitary model of sovereignty places the federal government on top.

A third approach, adopted by Chief Justice Marshall in *McCulloch v. Maryland*, and reaffirmed by the Supreme Court in *U.S. Term Limits v. Thornton*, discussed at § 20.2.3, is that the framers and ratifiers of the Constitution of the United States adopted a dual theory of sovereignty. As stated by Justice Kennedy in his concurrence in *Thornton*, under this approach the framers and ratifiers established “two orders of government, each with its own direct relationship, its own privity, and its own set of mutual rights and obligations to the people who sustain it and are governed by it.” This view is also supported by noting that the Constitution begins, “We, the People,” not “We, the States,” and that special state ratifying conventions ratified the Constitution, not the existing state legislatures, as noted at § 18.4.5 n.237. Thus, as discussed generally at § 18.4.5, under the dual theory of sovereignty, neither the states, nor the federal government, are structurally supreme over

62 Id. at 838 (Kennedy, J., concurring).
the other, although, of course, the Supremacy Clause of Article VI provides that in case of a conflict between state and federal enactments, the Constitution of the United States, along with laws and treaties made pursuant thereto, are “the supreme Law of the Land.”

As discussed at § 6.2.2.3, some judges in our history have tended to have a "states' rights" orientation, similar to that of the state of Maryland in *McCulloch v. Maryland*. Other judges have been oriented towards viewing our Constitution as sanctioning stronger federal governmental power, either under the dual theory of sovereignty or the unitary model with the federal government on top. Detailed discussion of issues of federalism appears in Chapter 18.

C. Separation of Powers

With regard to separation of powers, any interpreter must ask whether the framers and ratifiers adopted a strict separation of powers approach, with legislative, executive, and judicial powers strictly separate, or whether they adopted a constitution that focuses more on sharing of powers. For example, a judge following a strict separation of powers approach would be reluctant ever to permit judges to exercise the executive power of appointing a prosecutor, as happened under the Ethics in Government Act, between 1978-1998, for independent prosecutors. That law expired in 1998. A sharing of powers approach would be more likely to permit such an arrangement.

As discussed at § 6.2.2.4, a clear majority of Supreme Court Justices have concluded that the sharing of powers approach best represents the framers and ratifiers' intent. However, a formalist judge, placing greater reliance on aspects of literal text, may adopt a strict separation of powers approach. Detailed discussion of separation of powers issues appears in Chapter 19.

D. Checks and Balances

Related to this separation of powers issue of a strict versus a sharing of powers approach is the question of what kinds of additional checks and balances were adopted by the framers and ratifiers. This question is prominent in resolving issues such as congressional and executive immunities from legal action, or the scope of the congressional impeachment power. In addition, there are additional checks and balances in the Constitution related to federalism issues, such as the ability of the federal government to preempt state laws, or state laws being rendered invalid under dormant commerce clause analysis. Discussion of these kind of issues appears in Chapter 20.

63 U.S. Const. Art. VI.

64 *See Morrison v. Olson*, 487 U.S. 654, 673-97 (1988) (majority adopted a sharing of powers approach); *id.* at 705-23 (Scalia, J., dissenting) (adopting a strict separation of powers approach).

65 *See id.* at 705-23 (Scalia, J., dissenting).
§ 5.2.3  History

§ 5.2.3.1  Introduction

The history surrounding the adoption of a constitutional provision is naturally relevant to determine that provision’s meaning. The most direct use of history is to help determine the framers and ratifiers’ intent, what has been called “forensic” history. That is the use of history discussed here. History can also be used to help think prudentially about the likely consequences of various courses of current action based on prior experiences. Such “deliberative” use of history is discussed as part of prudential considerations at § 5.4.2 n.116. Arguments of history raise three main problems: what historical sources are appropriate to use; what level of generality should these sources be viewed; and what weight to give each source versus the other sources of interpretation. Consistent with the discussion at § 5.1 and Table 5.1, all the sources considered here existed at the time of ratification. Events occurring after ratification are best termed “practice,” and are discussed at § 5.3.1.66

§ 5.2.3.2  Specific versus General Historical Evidence

Any interpreter must first decide what sources of history are appropriate to consider in determining the meaning of a constitutional provision. A number of possible historical sources exist. Some are specifically connected to the drafting and ratification of the Constitution: (1) legislative history of the provision in question, like notes of the Constitutional Convention, records of state ratifying conventions, or House or Senate statements made during consideration of constitutional amendments; and (2) thoughtful contemporaneous statements during ratification of the Constitution, like The Federalist Papers. These kinds of sources are termed in this book examples of “specific historical evidence,” because specifically related to the drafting and ratification of the Constitution. Other historical sources involve more general background to the drafting and ratification. They involve: (3) existing legislative and executive practice, and existing judicial precedents, at the time the provision was drafted and ratified, mostly in the United States, but also English practice and precedent, to the extent history suggests that the English experience is relevant to understanding the choices made by the framers and ratifiers; and (4) other typical sources of historical inquiry (evidence of general social practice on a particular issue, newspaper accounts, statements of respected organizations, reliable evidence of public opinion generally, etc.). These kinds of sources are termed in this book “general historical evidence.” As a matter of terminology, one author has called use of history from other countries, such as England, which is directly relevant to choices made by the framers and ratifiers, “genealogical comparativism.”67

---

66 On the dichotomy between “forensic” versus “deliberative” uses of history, see Mitchell Gordon, Adjusting the Rear-View Mirror: Rethinking the Use of History in Supreme Court Jurisprudence, 89 Marq. L. Rev. 475, 476-81 (2006). On use of historical sources for “forensic” purposes, see generally Bobbitt, supra note 3, at 9-25 (Chapter on "Historical Argument"); Brest, Levinson, Balkin & Amar, supra note 21, at 140-43 ("Discovering the Adopters' Purposes"); Fallon, supra note 21, at 1198-99 ("Arguments About the Framers' Intent").

There is an issue regarding the extent to which source (1) mentioned above, legislative history of the provision in question, should be used to determine a provision’s meaning. Similar to the debates that have taken place with regard to the permissibility of using legislative history in statutory interpretation, there is a question whether material internal to the deliberations surrounding the adoption of a particular constitutional provision is properly used to interpret the provision. This issue of the use of such constitutional history is discussed at § 6.2.3.1.

In contrast, use of material external to the adoption of the Constitution, like The Federalist Papers, listed in source (2) above, is more routinely viewed as appropriate to use. For example, Justice Scalia has criticized use of internal deliberations to aid in interpreting the Constitution, but he has embraced use of The Federalist Papers. Justice Scalia has indicated a willingness to use such evidence not because Madison and Hamilton were at the Constitutional Convention, but “because their writings, like those of other intelligent and informed people of the time, display how the text of the Constitution was originally understood. Thus, I give equal weight to Jay’s pieces in The Federalist, and to Jefferson’s writings, even though neither of them was a Framer.”

Use of existing legislative and executive practice, and existing judicial precedents, source (3) listed above, has also been viewed as relatively uncontroversial. This material is clearly related to the general background historical context of the Constitution’s drafting and ratification. However, there is an issue regarding the extent to which the material mentioned in source (4) above should be used to determine a provision’s meaning. Some Justices have suggested that relevant historical evidence may be established from sources of legislative enactments and their application, as listed in source (3) above, but not from other kinds of indicia, such as public opinion polls, the views of interest groups, and the positions adopted by professional associations. Other Justices have been willing to consider evidence of social practice and community views. This issue is discussed at § 6.3.3.

§ 5.2.3.3 Specific versus General Historical Intent

In addition to the issue of which sources of history are appropriate to use, an interpreter must also decide at what level of generality to view historical insights. This applies to both specific and general kinds of historical evidence. For example, regarding specific historical evidence, a judge could remain focused on the specific views seemingly held by the framers and ratifiers about a particular provision of the Constitution that emerge from Notes of the Constitutional Convention or The Federalist Papers. On the other hand, a judge could focus on some general concept held by the framers and ratifiers about a provision as revealed by those materials.

__________________________

68 Scalia, supra note 34, at 38.

69 See generally Stanford v. Kentucky, 492 U.S. 361, 377 (1989) (plurality opinion of Scalia, J., joined by Rehnquist, C.J., and White & Kennedy, JJ.) (rejecting use of such evidence); id. at 389-90 (Brennan, J., joined by Marshall, Blackmun & Stevens, JJ., dissenting) (rejecting Justice Scalia's proposed approach to permit a broad inquiry into legislative, executive, and social practice); id. at 382 (O'Connor, J., concurring) (not willing to adopt Justice Scalia's approach, at least with respect to this Eighth Amendment case applied to the states through the 14th Amendment).
Similarly, with regard to general historical evidence, a judge focused on specific historical intent regarding, for example, the question of whether officially organized prayer in schools is constitutional, would focus on the specific tradition of permitting such prayer in schools at the time of ratification, as noted in the dissent in *Lee v. Weisman*, discussed at § 4.4.1 n.103. On the other hand, a judge focused on the general concept of separation of church and state as revealed by general historical evidence might conclude that such prayer is unconstitutional. This view appeared in the majority and concurring opinions in *Lee v. Weisman*, discussed at § 4.4.1 n.103.

This difference between the specific examples of an idea versus broader, more abstract concepts is explored by Professor Ronald Dworkin in his book *Law's Empire*. As he discussed there, conceptions are the specific, discrete ideas or examples held by individuals, while concepts are the broader, more abstract idea reflected in the conceptions. As elaborated by Professor Fallon, “One helpful division distinguishes between 'specific' or 'concrete' and 'general' or 'abstract' intent. Specific intent involves the relatively precise intent of the framers to control the outcomes of particular types of cases. . . . Abstract intent refers to aims that are defined as a higher level of generality, sometimes entailing consequences that the drafters did not specifically consider and that they might even have disapproved. An example comes from equal protection jurisprudence. The authors of the fourteenth amendment apparently did not specifically intend to abolish segregation in the public schools. Yet they did intend generally to establish a regime in which whites and blacks received equal protection of the laws – an aspiration than can be conceived, abstractly, as reaching far more broadly than the framers themselves specifically had intended.”

In thinking about what level of generality to view historical evidence, Justice Scalia, joined by Chief Justice Rehnquist, stated in 1989 in *Michael H. v. Gerald D.* that the Court should start historical analysis with, and never disregard, the “most specific level at which a relevant tradition protecting, or denying protection to, the asserted right can be identified.” A majority of Justices on the Court at the time rejected that approach. One professor has cautioned that “a judge should not try to

75 See *id.* at 138-39 (Brennan, J., joined by Marshall & Blackmun, JJ., dissenting) (explicitly rejecting Justice Scalia’s approach in *Michael H.*); 491 U.S. at 132 (O’Connor, J., joined by Kennedy, J., concurring) (refusing to join Justice Scalia’s specific tradition approach in *Michael H.*, stating that they were not willing to "foreclose the unanticipated" by adopting Justice Scalia's
articulate the most general aspect of the original understanding of a constitutional provision at a level of generality any broader than the relevant materials (‘words, structure and history’) warrant.”

Of course, indeterminacy exists in interpreting particular clauses of the Constitution depending upon what level of generality is adopted. For purposes of the discussion here, it is sufficient to note that historical sources can provide some guidance as to the level of generality intended by the framers and ratifiers upon their adoption of particular text, and that, as a matter of historical argument, the framers and ratifiers' intended level of generality should control. To the extent that the framers and ratifiers expected judges to resort to “general” or “abstract” concepts lying behind certain constitutional provisions, that would legitimate on historical grounds judicial consideration of “general historical intent.” Part of Professor Bobbitt’s discussion of ethical argumentation, including “the ethic expressed by the First Amendment” in The Pentagon Papers Case, discussed at § 29.6.1.1 n.208-12, or the “constitutional ethic . . . that finds partial expression in some of the passages of the Bill of Rights and that restrains the police from physically degrading an individual who is in their custody,” which is applicable to the Fifth Amendment case of Rochin v. California, discussed at § 23.2.1.2.D n.142, seem best understood as examples of such general historical intent reasoning. Of course, if a judge adopts a non-interpretive prudential approach toward constitutional interpretation that permits resort to principles of justice or social policy not embedded in the law, as discussed at § 5.4.1, the judge would have to decide what level of generality is best in some justice or public policy sense. The indeterminacy associated with choosing such a level would then come critically into play.

§ 5.2.3.4 What Weight to Give Each of These Sources

Once an interpreter has resolved the issues of which sources of history are appropriate to consider, and what level of generality to give them, the interpreter must then decide what weight to give historical insights in light of other sources of constitutional interpretation: text, context, practice, precedent, and prudential considerations. Naturally, there is no exact science to determine how much weight to give each historical source, or how to balance evidence gleaned from historical sources against evidence derived from text, context, practice, precedent, and prudential considerations. Indeed, as Professor Bobbitt has noted, the indeterminacy of this question creates the possibility of moral choice. Nonetheless, judges have balanced considerations of text, context, practice, precedent, and prudential considerations.

\[78\] See Bobbitt, supra note 3, at 101-05.

\[79\] Id. at 237-42.
history, practice, precedent, and prudential considerations for more than 200 years in deciding cases under the Constitution. As noted generally in Chapters 9-12, and with respect to specific doctrines in Part IV of this book, Chapters 17-32, each judge's balancing turns out to be relatively predictable over time, and each judge's balancing tends to reflect one of the four main judicial decisionmaking styles discussed in this book: natural law, formalism, Holmesian, or instrumentalism.

§ 5.3 Subsequent Events as Sources of Meaning

§ 5.3.1 Introduction

One view of constitutional interpretation is that the meaning of any constitutional provision should be fixed at the time that provision is ratified. This understanding leads to a “static” Constitution, where the meaning of a constitutional provision, fixed at the time of ratification, can only be changed by later formal constitutional amendment. Followers of this view, typically formalist jurists, like Justice Scalia, believe that interpreters of the Constitution should predominantly use sources contemporaneous with a provision’s ratification in order to interpret that provision, since they existed at the time the provision was ratified. Subsequent events can only be used to the extent they help illuminate what the provision meant at the time of ratification, as discussed at § 5.3.2.1.

In contrast, an alternative theory of constitutional interpretation proposes that the meaning of the Constitution can evolve over time in response to events subsequent to ratification. This understanding leads to a “living” Constitution that changes from age to age. Jurists in this tradition make fuller use of subsequent events in order to help guide constitutional interpretation, since under this view the use of subsequent events does not have to be related back to determining the meaning of the constitutional provision at the time of ratification, but only to determining the meaning of the constitutional provision today. Justice Scalia has remarked, “The ascendant school of constitutional interpretation affirms the existence of what is called The Living Constitution, a body of law that (unlike normal statutes) grows and changes from age to age, in order to meet the needs of a changing society. And it is the judges who determine those needs and ‘find’ that changing law.”

Subsequent events can be divided into two kinds: subsequent juridical events and subsequent non-juridical events. Subsequent juridical events can be defined as acts which take place after a provision's ratification that the legal order recognizes as official acts. Such juridical acts include legislative or executive practice under a provision, and judicial decisions interpreting a provision. Subsequent non-juridical events are non-official acts, such as an evolving community consensus or social tradition. In this book, such acts are grouped under the generic term, “social practice.”

---

80 Scalia, supra note 34, at 44 (supporting such a “static” model), discussed § 3.1 nn.21-22.

81 Id. at 38.

82 See John Henry Merryman, The Civil Law Tradition 77 (2d ed. 1985) (”[T]he juridical act is a declaration of intention directed towards legal effects that the legal order recognizes and guarantees.”).
Some interpreters draw a distinction between the weight to be given subsequent juridical acts versus non-juridical acts. For example, in *Stanford v. Kentucky*, a plurality of four Justices stated that, for them, whether a right was so “deeply rooted in this Nation’s history and tradition” as to be “implicit in the concept of ordered liberty” under due process analysis, discussed at §§ 27.1.1, depended upon whether that tradition was established from consideration of legislative enactments and their application (that is, juridical acts of legislative and executive practice), and not from other indicia, such as public opinion polls, the views of interest groups, and the positions adopted by various professional associations (that is, non-juridical acts of social practice). Four Justices in *Stanford* rejected this suggestion in order to permit an inquiry into traditions from whatever source. Indeed, these four Justices indicated they would consider not only legislative, executive, and social practice in the United States, but also legislative, executive, and social practice of other countries as part of an evolving community consensus among nations in the world. One Justice rejected the more limiting approach in the particular case, but left open the broader issue for later resolution.

This issue of the use of comparative social practice from around the world is discussed at § 6.3.3.

Without regard to whether subsequent non-juridical acts are ever appropriate to consider, it is clear that subsequent juridical acts are given much greater weight by almost all interpreters. For this reason, the remainder of this section will be divided as follows: subsequent juridical acts of legislative and executive practice will be discussed at § 5.3.2; subsequent juridical acts of judicial precedents, and how they are used by courts, will be discussed at § 5.3.3; subsequent non-juridical acts, involving various kinds of social practices, however measured, will be discussed at § 5.3.4.

§ 5.3.2 The Subsequent Events of Legislative and Executive Practice

§ 5.3.2.1 Practice as Gloss on Meaning versus No Gloss on Meaning

One approach toward subsequent legislative and executive practice under a constitutional provision states that a court should be sensitive to legislative and executive practice only to the extent such practice adds understanding of, and is faithful to, the meaning of the constitutional provision at the time of ratification. This approach embraces the concept of a static Constitution. For example, the Court has cited “the enactments of early Congresses as indicative of the original understanding of constitutional provisions.” As the Court stated in 1926 in *Myers v. United States*:

> We have devoted much space to this discussion and decision of the question of the Presidential power of removal in the First Congress, not because a Congressional conclusion on a constitutional issue is conclusive, but, first, because of our agreement with the reasons upon which it was avowedly based; second, because this was the decision of the First Congress, on

---

84 *Id.* at 389-90 (Brennan, J., joined by Marshall, Stevens & Blackmun, JJ., dissenting).

85 *Id.* at 382 (O’Connor, J., concurring).

86 Brest, Levinson, Balkin & Amar, *supra* note 21, at 142.
a question of primary importance in the organization of the Government, made within two years after the Constitutional Convention and within a much shorter time after its ratification; and, third, because that Congress numbered among its leaders those who had been members of the Convention.87

Cases from the founding era of constitutional law also made the same point. As stated in *McCulloch v. Maryland*, 88 "The power now contested was exercised by the first Congress elected under the present constitution. The bill for incorporating the bank of the United States did not steal upon an unsuspecting legislature, and pass unobserved. Its principle was completely understood, and was opposed with equal zeal and ability." Similarly, in *Martin v. Hunter's Lessee*, 89 the Court noted, "It is an historical fact that at the time when the judiciary act was submitted to the deliberations of the first Congress, composed, as it was, not only of men of great learning and ability, but of men who had acted a principal part in framing, supporting, or opposing that constitution, the same exposition was explicitly declared and admitted by the friends and by the opponents of that system."

A second approach toward legislative and executive practice states that such legislative or executive practice under a constitutional provision can also provide a “gloss” on meaning to the Constitution, in addition to illuminating the meaning at the time of ratification. Such a gloss changes the meaning of the Constitution from what it was before, and thus is embraced by those who adopt the living Constitution as their model of constitutional interpretation. As Justice Story observed in 1833, "[T]he most unexceptional source of collateral interpretation is from the practical exposition of the government itself in its various departments upon particular questions discussed, and settled upon their single merits."90 Similarly, James Madison had noted about interpretation in 1830, "[T]he early, deliberate, and continued practice under the Constitution, as preferable to constructions adapted on the spur of occasions, and subject to the vicissitudes of party or personal ascendencies" is relevant in determining constitutional meaning.91 Indeed, though as a congressman in 1791 Madison had opposed Congress creating a national bank as unconstitutional, in 1815 and 1816, when Madison was President, he supported the bank's constitutionality based upon "repeated recognitions under varied circumstances of the validity of such an institution."92 Thus, as discussed when considering *McCulloch v. Maryland* at § 18.1.2 nn.24-27, for Madison Congress' power to create a bank changed from 1791, when Madison considered it unconstitutional, to 1815 and 1816, when it became constitutional, based in part upon legislative and executive practice.

90 Story, *supra* note 23, § 408.
92 See Brest, Levinson, Balkin & Amar, *supra* note 21, at 17 (quoting Madison).
In the twentieth century, Justice Frankfurter made this same point in the specific context of referring to subsequent executive action. As stated by Justice Frankfurter in his concurrence in *Youngstown Sheet and Tube Co. v. Sawyer*, "[A] systematic, unbroken, executive practice, long pursued by the knowledge of Congress and never before questioned, engaged in by Presidents who have also sworn to uphold the Constitution, making as it were such exercise of power part of the structure of our government, may be treated as a gloss on 'executive Power' vested in the President."

§ 5.3.2.2 Levels of Generality and Arguments of Legislative and Executive Practice

As with arguments of history, any interpreter must decide what level of generality to consider with respect to arguments of legislative and executive practice. For example, as noted at § 5.2.3.3 nn.74-75, Justice Scalia, joined by Chief Justice Rehnquist, proposed in *Michael H. v. Gerald D.* that under 14th Amendment substantive due process analysis the Court should focus primarily on “the most specific level at which a relevant tradition protecting, or denying protection to, the asserted right can be identified.” Justices Brennan, Marshall, and Blackmun explicitly rejected this approach and stated that the Court must remain sensitive to the fact that terms like “liberty” or “property” in the 14th Amendment are “broad and majestic” terms, and thus must be given a more general reading. Justices O’Connor and Kennedy, while not reaching a final conclusion on this issue, were “not willing to foreclose the unanticipated” by adopting the specific level approach in this case, noting that it was “somewhat inconsistent with our past decisions in this area”; Justices Stevens and White also did not embrace Justice Scalia’s methodology, although they did not directly address it in their opinion. This issue is discussed at § 6.2.3.2, as part of the related discussion of what level of generality to adopt when considering historical sources of meaning.

§ 5.3.2.3 Weight to be Given Arguments of Legislative and Executive Practice

As with the other sources of constitutional interpretation, any interpreter must decide how much weight to give arguments of practice versus the other arguments of text, context, history, precedent, and prudential considerations. As discussed at § 6.3.1, some interpreters, particularly Holmesian judges with their deference-to-government posture, give great weight to arguments of legislative and executive practice.

§ 5.3.3 The Subsequent Events of Judicial Precedents

§ 5.3.3.1 Precedent as Gloss on Meaning versus No Gloss on Meaning

As stated by Chief Justice Marshall in *Marbury v. Madison*, "It is emphatically the province and duty of the judicial department to say what the law is." Thus, court decisions interpreting a constitutional provision fix the meaning of the Constitution for the jurisdiction covered by that court, unless the court changes its mind or is reversed by a higher court.

In theory, there are two different approaches to when a court may change its mind. Under one approach, a court will change its mind, that is, overrule a prior decision, if the court decides that the earlier court "got it wrong." In such a case, the later court will typically feel free to overrule the prior decision as erroneous and to reinterpret the provision so that it represents an accurate reflection of how the court believes the Constitution should always have been interpreted. As discussed at § 6.3.2, formalist, Holmesian, and instrumentalist theories each follow this approach, although to varying extents.

A second approach to judicial precedents holds that a sequence of court decisions can provide a gloss on meaning to the Constitution. This can change what the Constitution means in the same fashion as legislative and executive practice can provide a gloss on meaning. Thus, the question is not just what the other sources of meaning suggest about a constitutional provision's meaning. Instead, just as the common law changes over time in response to court decisions, the proper meaning of a constitutional provision can change over time in response to court decisions elaborating its meaning in a particular way. It has been suggested, "[T]he Framers may have realized the futility of writing a bunch of specific answers in the stone of the Constitution. In that event, their 'specific intent' would have been to provide no hard-and-fast answers in the constitutional text, and to let the answers develop over time in a common-law fashion. After all, the Framers were common-law lawyers." As discussed at § 6.3.2, it is the natural law style of interpretation, grounded in the 18th-century and 19th-century approach to interpreting documents, that most fully embraces this approach toward precedent.

Under this view, a sequence of court decisions can provide a gloss on meaning that may alter a constitutional provision's interpretation as gleaned from examining other sources of meaning. Thus, it would take something more to overrule a prior decision than just a later court deciding that the earlier court "got it wrong." There would have to be some reason to overturn this new "gloss" on constitutional meaning. As noted at § 4.3.2 n.87, and discussed in greater depth with respect to constitutional adjudication at §§ 7.3.3-7.3.4, some factors that courts have used to provide this extra impetus to overrule a prior decision include: (1) the precedent is unworkable in practice; (2) the precedent creates an inconsistency or incoherence in the law; (3) a changed understanding of facts

---

97 5 U.S. (1 Cranch) 137, 177 (1803).

has undermined the factual basis of the precedent; (4) the precedent represents a substantially wrong or substantially unjust interpretation of the law; or (5) the precedent raises concerns about a commitment to the "rule of law."

Despite this theoretical model of the force of judicial precedent, as a practical matter most judges will give some respect to precedent either as a matter of following "settled law" or following decisions on which there has been "substantial reliance," as discussed at § 4.3.2 nn.79-87. As phrased, this approach does not view precedent as providing any gloss on meaning to the Constitution. Rather, the respect for precedent is focused on not being so disruptive as to prevent a workable prescription for judicial government. Cases examples respecting following "settled law" or decisions on which there has been "substantial reliance" are discussed at § 7.3.2.

§ 5.3.3.2 Levels of Generality and Precedent

In deciding how to follow a judicial precedent, an interpreter must decide whether to follow only the specific "core holding" of the previous precedent, or whether to follow also the precedent’s more "general reasoning" about a particular constitutional provision. A specific "core holding" approach limits each precedent more to its particular facts, a narrow approach to the precedent. Following the "general reasoning" of the precedent expands the approach of that precedent to control new, but related, factual circumstances, a broad use of precedent. This topic of narrow versus broad use of precedent is discussed at § 4.3.4. Specific case examples of narrow versus broad use of precedent in the context of constitutional adjudication appear at § 7.3.1.

§ 5.3.3.3 Weight to be Given Arguments of Precedent

Where precedent is viewed as having a gloss on meaning, the precedent will obviously be given great weight. However, it is perhaps a hyperbole to conclude, as did Justice Scalia, that such a gloss on meaning approach will have "no regard for how far that logic, thus extended, has distanced us from the original text and understanding." Even when a precedent is not treated as having a gloss on meaning, the precedent still has some weight, particularly if it represents "settled law" or is a precedent upon which individuals have "substantially relied." Some jurists, however, give prior precedents very little weight. Perhaps apocryphally, Justice William Douglas once said that he preferred to make precedents rather than follow them. This statement would be consistent with an instrumentalist predisposition, which is the least likely to follow precedents, as discussed at § 4.3.2 text following n.78.

In addition to the considerations discussed here of the impact on constitutional interpretation of precedent alone, or legislative and executive practice alone, there is the related issue of how to resolve a tension between existing precedent and proposed legislative and executive action that would conflict with that precedent. The standard view, reflected in Marbury v. Madison's statement that it is the "duty of the judicial department to say what the law is," is that the legislative and executive branches should follow clear judicial precedents on point. Under this view, "[A]s long as it satisfied the Article III case or controversy requirements, then judicial precedents should be

---

99 Scalia, supra note 34, at 138-39.
treated as the enunciation of a positive rule of law.”

An alternative view, once stated by then-Attorney General Edwin Meese in 1987, but later revised, is that a judicial decision is binding “only with respect to the named parties, leaving officials theoretically free to ignore the Supreme Court’s pronouncement in dealing with remainder of the public – at least until officials are once again taken to court.” An intermediate view, eventually adopted by Attorney General Meese, is based upon President Abraham Lincoln’s views as set out in his First Inaugural Address. Against the backdrop of the Supreme Court’s flawed decision in 1857 in *Dred Scott v. Sandford*, discussed at § 25.1, Lincoln stated that “the candid citizen must confess that if the policy of the government upon vital questions affecting the whole people, is to be irrevocably fixed by decisions of the Supreme Court, the instant they are made, in ordinary litigation between parties in personal actions, the people will have ceased, to be their own rulers, having, to that extent, practically resigned their government, into the hands of that eminent tribunal.” Under this view, while still respecting the Court’s decisions as a matter of law under *Marbury*, non-judicial actors in our democratic society, such as federal and state legislators, the President, state Governors, or just plain citizens, are not required to accept the Court's judgments uncritically in making their own political and policy decisions. This issue is discussed in greater depth at § 17.1.2.1 nn.21-24.

§ 5.3.4 The Subsequent Events of Social Practice

As discussed at § 5.3.1, subsequent non-juridical acts involve various kinds of social practices, social traditions, and evolving community consensus, however measured. Some jurists in our history have taken the view that such social practices are never appropriate for judges to consider in determining the meaning of constitutional provisions. For example, as noted at § 5.3.1 n.83, in *Stanford v. Kentucky*, a case involving the constitutionality of the death penalty for persons under 18, a plurality of four Justices stated that whether a right is “deeply rooted in this Nation’s history and tradition” should not be based upon public opinion polls, the views of interest groups, and the positions adopted by various professional associations (that is, non-juridical acts of social practice).

---

Other jurists have rejected this suggestion in order to permit a broad inquiry into traditions from whatever source. For example, in *Stanford v. Kentucky*, four Justices supported their view that the death penalty for minors was unconstitutional by noting, “The American Bar Association has adopted a resolution opposing the imposition of capital punishment upon any person for an offense committed while under the age 18, as has the National Council of Juvenile and Family Court Judges. The American Law Institute’s Model Penal Code similarly includes a lower age limit for 18 for the death penalty. And the National Commission on Reform of the Federal Criminal Laws also recommended that 18 be the minimum age.” These Justices added, “Where organizations with expertise in a relevant area have given careful consideration to the question . . ., there is no reason why that judgment should not be entitled to attention as an indicator of contemporary standards.”

This issue of whether evidence of social practice is ever appropriate for the Court to consider is discussed at § 6.3.3.

§ 5.4 Prudential Considerations

§ 5.4.1 Kinds of Prudential Considerations: Interpretive versus Non-Interpretive Review

Prudential consideration can involve arguments concerning the consequences of a particular judicial decision from the perspective of: (1) the contemporaneous sources of constitutional text, purpose, context, and history; (2) the subsequent event sources of practice and precedent; (3) the mainstream normative concern with whether the decision would advance a particular background principle of justice or social policy that the judge believes is embedded in the law; or (4) the more radical normative concern with whether the decision would advance a principle of justice or social policy that is not so embedded in existing legal doctrine. Each of these kinds of prudential considerations are treated differently by judges.

Judicial consideration of arguments of justice or social policy that are not embedded in existing legal doctrine, category (4) listed above, involve what is often termed “non-interpretive” review. As defined by Professor Michael Perry, a court engages in non-interpretive review when "it makes the determination of constitutionality by reference to a value judgment other than the one constitutionalized by the Framers. Such review is 'non-interpretive' because the Court reaches [the] decision without really interpreting, in the hermeneutical sense, any provision of the constitutional text (or any aspect of governmental structure) – although, to be sure, the Court may explain its decision with rhetoric designed to create the illusion that it is merely 'interpreting' or 'applying' some constitutional provision.”

This kind of "non-interpretive" constitutional interpretation can be contrasted with arguments of text, context, history, practice, precedent, or resort to background principles of justice or social policy.

---

104 *Id.* at 388-89 (Brennan, J., joined by Marshall, Blackmun & Stevens, JJ., dissenting).

that the judge believes are embedded in text, context, history, practice, or precedent. As opposed to
these other sources of meaning, non-interpretive review involves a judgment about the impact of
a particular constitutional interpretation in light of value considerations that the judge determines
should be part of the Constitution, rather than the values being embedded in the Constitution, or in
subsequent practice, precedent, or background principles of justice or social policy embedded in
constitutional doctrine. These non-interpretive sources of value can derive from a supposed
community consensus or societal tradition, or values the judge thinks the community eventually will
hold, or the judge's own values. As discussed at §§ 6.4.1 & 6.4.2, only “radical” instrumentalist or
“Platonic Guardian” natural law jurists feel comfortable engaging in non-interpretive review.106

Some commentators have suggested all interpretation must, of necessity, be non-interpretive, and
thus must take into account contemporary judicial notions of justice or sound social policy.107 The
approach to constitutional interpretation adopted in this book rejects that premise, and agrees with
those commentators who argue that it is possible to draw distinctions between: (1) “interpretive”
review based upon such sources of meaning as the original intent of the framers and ratifiers as
determined by arguments of text, context, and history, and (2) “non-interpretive” review based upon
contemporary judicial notions of justice and social policy not embedded in the law.108

The “non-radical” or mainstream approach to constitutional interpretation holds that courts should
refuse to engage in non-interpretive review of consequences. Under this "interpretive" approach,
a judge should consider consequences only to the extent such considerations can help illuminate the
other sources of constitutional meaning: contemporaneous sources and subsequent events. Thus,
just as judges may look into the purposes behind adoption of a constitutional provision to illuminate
constitutional text, judges must be sensitive to the consequences of a particular interpretation in
order to ensure that the framers and ratifiers' purposes are adequately carried out. However, under
this "interpretive" theory, a judge should not read into the Constitution the values the judge
determines should be part of the Constitution. No matter how bad the judge thinks the consequences
are of a particular interpretation, if consideration of contemporaneous sources and subsequent events
suggest a particular meaning, that meaning should be adopted.109 For example, under this approach,
where constitutional provisions do not reflect a just moral position, as in the case of slavery under

106 The literature discussing "interpretive" versus "non-interpretive" review is voluminous. For a brief introduction to the "interpretive" versus "non-interpretive" debate, see Perry, supra note 105, at 264-84 and sources cited therein. For additional articles on point, see Symposium on Constitutional Interpretation, 6 Const. Comm. 19-113 (1989); Ronald D. Rotunda, Original Intent, the View of the Framers, and the Role of the Ratifiers, 41 Vand. L. Rev. 507 (1988).

the United States Constitution before the 13th Amendment, judges should follow the clear meaning of the Constitution until the just moral position is added to the document.110

Of course, judges may well disagree about the meaning of a constitutional provision that emerges from consideration of contemporaneous sources and subsequent events. As indicated in the preceding material in this Chapter, different judges may well view arguments of text, context, history, practice, and precedent very differently. In addition, judges may disagree about the extent to which these sources suggest that judges should pay attention to certain consequences.

In contrast to these views, the defenders of "non-interpretive" review argue that, to some extent, judges must update the Constitution to deal with contemporary community problems and to achieve sound social results. As Professor Perry has stated, "The justification for the practice, if there is one, must be functional: if noninterpretive review serves a crucial governmental function that no other practice realistically can be expected to serve, and if it serves that function in a manner that . . . accommodates the principle of electorally accountable policymaking, then that function constitutes the justification for noninterpretive review."111

A number of commentators have phrased this debate over non-interpretive review as being a debate among "originalist" versus "non-originalist" perspectives.112 Despite this use by some commentators, the terms "interpretive" and "non-interpretive" are used in this book to describe this debate for the following reason: virtually all commentators, and all judges, claim that their approach to constitutional interpretation is consistent with the original intent of how the framers and ratifiers would have wanted the Constitution interpreted, and thus is an "originalist" approach. Because of disagreements about exactly how the framers and ratifiers intended the Constitution to be interpreted, virtually all judges and commentators are able to make non-frivolous arguments that their approach is consistent with the framers and ratifiers' intent. For example, Professor Perry has noted that even Justice Brennan's liberal instrumentalist approach toward constitutional interpretation, discussed in Chapter 11, can be plausibly argued to be a version of "originalism."113 For this reason, the term "originalist" does not serve to distinguish any of these approaches from each other. As Perry stated, “That difficulty helps explain why it is so hard to locate a real, live nonoriginalist, whether a judge or, even, academic theorist."114 However, the terms "interpretivism" and "non-interpretivism" can be used in a way to distinguish among competing approaches to constitutional interpretation. Accordingly, the terms “originalist” and “non-originalist” are used in this book only to describe the difference between constitutional interpretation that does claim the

111 Perry, supra note 105, at 275.

113 Id. at 687 n.54.

114 Id. at 687.
goal of interpretation is to follow what the framing and ratifying generation intended, as virtually all judges and most commentators claim, and the possibility of a claim that constitutional interpretation should not be only about what they intended by their words and actions. This issue is discussed at § 8.4 ("originalism versus non-originalism" discussed), § 8.4.1 ("originalism") & § 8.4.2 ("non-originalism").

§ 5.4.2 Interpretive Prudential Considerations

As noted at § 5.4.1, interpretive prudential consideration can involve consideration of consequences from three different perspectives: (1) the contemporaneous sources of constitutional text, purpose, context, and history; (2) the subsequent event sources of practice and precedent; and (3) the mainstream normative concern with whether the decision would advance a particular background principle of justice or social policy that the judge believes is embedded in the law.

One example of “contemporaneous” prudential consideration, category (1) listed above, comes from Professor Bobbitt’s discussion of prudential considerations in Constitutional Fate. Specifically, Professor Bobbitt focused most of his attention on prudential considerations in terms of contextual structural arguments about the proper role of the judiciary, particularly the limited role favored by Holmesian Justices such as Justices Holmes, Brandeis, and Frankfurter, and commentators such as Professor Alexander Bickel. As Bobbitt stated, “The devices that Bickel contended the Court had used and should continue to use in the service of prudence include discretionary standing, the grant of certiorari and the dismissal of appeal, the doctrines of vagueness, ripeness, and political questions, and others.” Many of these prudential arguments are summed up in the famous case of Ashwander v. Tennessee Valley Authority, discussed at § 17.1.3.2, which also included the prudential arguments that courts should construe statutes to avoid constitutional problems if possible, and courts should not formulate a rule of constitutional law broader than required by the precise facts of the case. The prudential principles that help structure the political questions doctrine, in addition to the textual concern with whether there exists a textually demonstrable constitutional commitment to a coordinate branch of government, are discussed at § 17.3.4.4 nn.553-55.

A second example of “contemporaneous” prudential consideration involves the Court’s creation of a number of specific prudential principles to govern the issue of whether a party has standing to sue, the case is ripe for resolution, and whether the case is moot. Even if a party has satisfied the textually-mandated Article III requirements for standing, ripeness, and mootness, a party’s case still may not be justiciable based upon the Court’s prudential consideration of the consequences of hearing the case. The prudential principles on standing are discussed at § 17.3.1.4; ripeness at § 17.3.2; and mootness at § 17.3.3. These prudential principles are all best viewed as based on the text of Article III that the Court will only hear “cases” and “controversies.”

A third example of “contemporaneous” prudential consideration suggests that judges must be sensitive to consequences in order to ensure that the framers and ratifiers’ purposes, revealed in part by history, are adequately carried out. As phrased by Justice Breyer, courts must often be sensitive

to “the purposes, the effects, the practical virtues” of some governmental action, understood in part by “deliberative” use of past historical experiences, and interpret the Constitution giving deference to those virtues, in addition to the formal “logic” of the “language of the Constitution.”  

In general, these three examples of prudential considerations, based upon consideration of consequences in light of constitutional text, context/structure, and purpose/history, promote an approach to judicial interpretation of judicial restraint. In contrast, prudential consideration of consequences can also take place against a background of practice and precedent, category (2) listed above, or “mainstream normative” prudential consideration, category (3). Such use more often leads to a charge of judicial activism. An example of such “subsequent event” prudential consideration occurred in Planned Parenthood v. Casey, discussed at § 27.3.4.1. In Casey, the joint opinion of Justices O’Connor, Kennedy, and Souter noted that abortion is “an act fraught with consequences” both for the pregnant woman and others, and it is relevant that it is “intimate and personal” because the constitutional definition of liberty arrived at by a reasonable elaboration of precedents protects “the most intimate and personal choices a person may make in a lifetime.” For this reason, despite certain arguments of social practice about the role of women as bearer of children, “Her suffering is too intimate and personal for the State to insist, without more, upon its own vision of the woman’s role, however dominant that vision has been in the course of our history and our culture.”

An example of “mainstream normative” prudential consideration, category (3) listed above, also occurred in Planned Parenthood v. Casey. The joint opinion in Casey noted, “At the heart of liberty is the right to define one’s own concept of existence, of meaning, or the universe, and of the mystery of human life. Beliefs about these matters could not define the attributes of personhood were they formed under compulsion of the State.” The joint opinion did not defend this passage based on specific sources of reasoning, like text, specific history, legislative and executive practice, or the core holdings of precedents. As Justice Scalia observed in dissent regarding the issue of abortion, "(1) the Constitution says absolutely nothing about it, and (2) the longstanding traditions of American society have permitted it to be legally proscribed." The core holdings of precedent do not directly support the result in Casey, Chief Justice Rehnquist noted in dissent, because, "Unlike marriage, procreation, and contraception, abortion involves the purposeful termination of potential life.” Instead, the joint opinion used general interpretive sources of reasoning, like a reasoned elaboration of the general reasoning in the Court’s precedents, to elaborate the background moral principle embedded in the law concerning what is at “the heart of liberty.” As the joint opinion noted, “Our law affords constitutional protection to personal decisions relating to marriage,

118 Id. at 851.

119 Id. at 980 (Scalia, J., joined by Rehnquist, C.J., and White & Thomas, JJ., dissenting).

120 Id. at 952 (Rehnquist, C.J., joined by White, Scalia & Thomas, JJ., dissenting).
procreation, contraception, family relationships, child rearing, and education. . . . These matters, involving the most intimate and personal choices a person may make in a lifetime, choices central to personal dignity and autonomy, are central to the liberty protected by the Fourteenth Amendment.”

A second example of “mainstream normative” prudential consideration concerns the heightened intermediate scrutiny used in modern cases involving discrimination against illegitimate children. As the Court said in Weber v. Aetna Casualty & Surety Co., cited at § 26.3.2 n.111, “[I]mposing disabilities on the illegitimate child is contrary to the basic concept of our system that legal burdens should bear some relationship to individual responsibility or wrongdoing. Obviously, no child is responsible for his birth and penalizing the illegitimate child is ineffectual – as well as an unjust – way of deterring the parent.” This background moral principle embedded in the law was used in Plyler v. Doe, discussed at § 26.2.2.1.B, to support heightened scrutiny in a case involving the denial of the children of illegal immigrants the right to a public school education. Not surprisingly, Plyler v. Doe, like Casey, was decided over the dissents of formalist and Holmesian judges, whose positivist perspective on the nature of the judicial task rejects such normative resort to background principles embedded in the law, as discussed at § 2.3.2.2, and reflected in Table 3.4.

A third example of such “mainstream normative” prudential consideration has occurred in the recent sequence of cases dealing with the unconstitutionality of “grossly excessive” punitive damage awards under a substantive due process analysis, as reflected in cases like State Farm Mutual Automobile Insurance Co. v. Campbell and BMW of North America, Inc. v. Gore, discussed at § 27.1.2.4. As Justices Scalia and Thomas noted in dissent in these cases, the results in the cases are not supported by any specific text of the 14th Amendment, or specific historical evidence surrounding the adoption of the 14th Amendment, or any specific legislative or executive practice in the states or federal government regarding the issue of punitive damages. Instead, the majority in these cases based their decision on general reasoning concerning background moral principles involving “[e]lementary notions of fairness enshrined in our constitutional jurisprudence,” involving in part “harkening back to the Magna Carta” and the “basic unfairness of depriving citizens of life, liberty, or property, through the application not of law and legal processes, but of arbitrary coercion.”

In his book, Constitutional Fate, Professor Bobbitt also discussed examples of ethical argumentation based upon background moral principles or social policies embedded in the law. For example, in Moore v. City of East Cleveland, discussed at § 27.3.3.1.B, the Court struck down a city ordinance

121  Id. at 851 (joint opinion of O’Connor, Kennedy & Souter, JJ.).

124  State Farm, 538 U.S. 408, 429 (2003) (Scalia, J dissenting); id. (Thomas, J., dissenting);

125  State Farm, 538 U.S. at 416-18, citing BMW v. Gore, 517 U.S. at 574-75.
limiting occupancy of a dwelling unit to members of a nuclear family. Professor Bobbitt noted, “Justice Powell placed the decision on an ethical ground – one based on the American ethos and not shared by all cultures – that values and utilizes extended kinship. [Powell wrote:] ‘Ours is by no means a tradition limited to respect for the bonds uniting the members of the nuclear family. The tradition of uncles, aunts, cousins, and especially grandparents sharing a household along with parents and children has roots equally venerable and equally deserving of constitutional recognition.’”126

Professor Bobbitt also noted that the early Contracts Clause opinion in *Fletcher v. Peck*, discussed at § 22.1.1, was an example of such reasoning. Bobbitt noted, “In *Fletcher* the Supreme Court confronted a more than ordinarily corrupt legislature that had enacted by statute a series of land grants giving away vast tracts of state lands to its patrons. When the legislature was turned out by an enraged electorate, its successor proceeded to revoke the land grants. The Court held invalid the later, revoking statute. Marshall’s opinion offers both textual and ethical grounds. The statute was unconstitutional, he wrote, ‘either by general principles which are common to our free institutions, or by the particular provisions of the Constitution.’”127

One of the most prominent examples of such background normative reasoning occurred in Justice Douglas’ opinion for the Court in *Griswold v. Connecticut*.128 In *Griswold*, Justice Douglas noted that while no specific text in the Bill of Rights or 14th Amendment supported a generic right to privacy, inferences drawn from the penumbras of the First, Third, Fourth, and Fifth Amendments, which protect various aspects regarding privacy of associations, privacy in not having soldiers’ quartered in one’s home, privacy against unreasonable searches and seizures, and privacy in the form of a privilege against self-incrimination, supported recognizing a right of privacy for married couples using contraceptives in their home. Justice Douglas also based a right of marital privacy on the fact that marriage “is a coming together for better or worse, hopefully enduring, and intimate to the degree of being sacred.” Justice Goldberg’s concurrence also found a constitutional right of marital privacy based on “the traditional relation of the family – a relation as old and as fundamental as our entire civilization,” even though such a right is not mentioned in the Constitution.129

§ 5.4.3 Non-Interpretive Prudential Considerations

As noted at § 5.4.1, one approach to prudential considerations holds that courts should go beyond the first three categories of prudential considerations to consider a fourth, more radical, category of normative concern with whether the decision would advance a principle of justice or social policy that is not embedded in existing legal doctrine. Under this fourth, non-interpretive approach, the judge should balance the principles of justice or social policy embedded in the Constitution against the consequences of such an interpretation for the judge’s sense of what principles of justice or social

---

128 381 U.S. 479, 482-86 (1965) (Douglas, J., opinion for the Court).

129 *Id.* at 495-96 (Goldberg, J., joined by Warren, C.J., and Brennan, J., concurring).
policy should be part of the Constitution. As described by Professor John Hart Ely, these non-interpretive sources of value can derive from a supposed community consensus or tradition, or values that the judge thinks the community eventually will hold, or the judge's own values.\textsuperscript{130}

Two main kinds of non-interpretive prudential considerations can influence a judge's views about the meaning of a constitutional provision if non-interpretive review is permissible. One approach holds that courts should consider principles of justice that the judge believes should be part of the Constitution in deciding how to interpret a particular constitutional provision. The other approach focuses upon arguments of sound social policy. As discussed at §§ 2.4 nn.42-43 & 3.4 nn.93-106, general differences can be noted between principles of justice and social policy argumentation. As Professor Ronald Dworkin wrote, "[T]he standard that automobile accidents are to be decreased is a policy, and the standard that no man may profit by his own wrong is a principle."\textsuperscript{131} A similar discussion of principles versus policies was done by Yale Law School Professor Harry Wellington.\textsuperscript{132} Of course, a judge following a non-interpretive theory of prudential considerations might decide that the judge should take into account both principles and policies, and thus adopt both approaches toward non-interpretive review.

The case of \textit{Atkins v. Virginia} provides an example of non-interpretive review in practice. In \textit{Atkins},\textsuperscript{133} Justice Stevens wrote for a 6-3 Court that the execution of mentally retarded persons is cruel and unusual punishment under the Eighth Amendment. In so doing he relied in part on non-interpretive considerations, saying that the Constitution contemplates that "in the end our own judgment will be brought to bear on the question of the acceptability of the death penalty under the Eighth Amendment." Not surprisingly, this more extreme use of normative reasoning, going beyond principles or policies embedded in existing legal doctrine to considering norms based upon the judge’s own views, provoked a particularly angry dissent from the formalist and Holmesian judges on the Court, whose positivist perspective on the nature of the judicial task rejects normative reasoning of any kind. Justice Scalia, dissenting with Chief Justice Rehnquist and Justice Thomas, objected in strong terms to this approach, stating, "Seldom has an opinion of this Court rested so obviously upon nothing but the personal views of its members."\textsuperscript{134}

A more limited justification for the result in \textit{Atkins} may be possible based upon “mainstream normative” prudential consideration alone, prudential category (3) listed above. As Justice Stevens stated in his majority opinion, consideration of contemporary American legislative and executive

\begin{footnotes}

\end{footnotes}
practice suggests that the practice of executing mentally retarded persons “has become truly unusual, and it is fair to say that a national consensus has developed against it,” and additional evidence makes it clear “that this legislative judgment reflects a much broader social and professional consensus.”

This use of legislative, executive, and social practice to elaborate a general background norm against execution of the mentally retarded is consistent with mainstream normative prudential consideration.

If one rejects background normative prudential consideration, and sticks to prudential arguments based upon text, context, history, practice, and precedent alone, prudential categories (1) and (2) only, the result in *Atkins* is much harder to justify. As Chief Justice Rehnquist noted in his dissent:

The Court pronounces the punishment cruel and unusual primarily because 18 States recently have passed laws limiting the death eligibility of certain defendants based upon mental retardation alone, despite the fact that 19 other States besides Virginia continue to leave the question of proper punishment to the individuated consideration of sentencing judges or juries familiar with the particular offender and his or her crime. I agree with Justice Scalia that the Court’s assessment of the current legislative judgment regarding the execution of defendants like petitioner more resembles a *post hoc* rationalization for the majority’s subjectively preferred result rather than any objective effort to ascertain . . . an evolving standard of decency.

CHAPTER 6: THE FORM OR SHAPE OF CONSTITUTIONAL INTERPRETATION

§ 6.1  Introduction to Defining Constitutional Interpretation

As discussed at § 1.2.1, formal causes for Aristotle are the “form or definition” of the object to be studied. Thus, the “formal” cause of a “silver bowl” is the “shape” that the bowl is to take. With respect to constitutional interpretation, that shape depends upon how the formal constitutional doctrine is defined. This depends, in turn, on how an interpreter chooses to balance the various material sources of interpretation. This must be done for each material source: text, context, history, practice, precedent, and prudential considerations.

As will be seen, just as different makers of silver bowls may have different and distinctive shapes to their bowls, yet each represents a kind of bowl, unless it becomes so flat that the shape becomes a plate, or so round that it becomes a vase, different interpreters may choose to balance the material sources of interpretation somewhat differently, and yet within broad guidelines each represents a legitimate kind of constitutional interpretation, that is, is still a kind of bowl, not a plate or a vase. It should be noted that the intent in this Chapter is not to resolve the question raised by these interpretive differences of which interpretive theory should be adopted by the Court in some ultimate normative sense. Rather, the intent is to focus on the different choices that interpreters confront, to note how different judges in the formalist, Holmesian, instrumentalist, and natural law traditions have resolved these choices in different ways, and to note some strengths and weaknesses of each.

§ 6.2  Treatment of Contemporaneous Sources of Interpretation

§ 6.2.1  Treatment of Text

§ 6.2.1.1  The Debate Between Subjective versus Objective Interpretation of Text

For all judges and all styles of interpretation, the text of the Constitution is the starting point in determining the intention of the framers and ratifiers of the Constitution. As noted at § 5.2.1, there is a debate within constitutional interpretation, as within statutory interpretation, whether text should be given a subjective or an objective interpretation.

The case for subjective interpretation is that it attempts to reflect accurately the actual subjective intent of the drafters of any instrument to be interpreted. That, after all, is what interpretation attempts to do. However, two major criticisms have been leveled against subjective interpretation. First, as stated in its classic form in 1930 by Professor Max Radin, of the University of California-Berkeley School of Law, there is no “single” person whose subjective intent we are endeavoring to discover when interpreting a statute. Applied to constitutional interpretation, the same objection would be that the framers and ratifiers were a large and heterogeneous group, each member of which may have had a different subjective intent. Further, even if one could surmount this problem, there

---

2 Max Radin, Statutory Interpretation, 43 Harv. L. Rev. 863, 870-72 (1930).
is the additional problem of how to determine the actual subjective intent of even a single drafter or ratifier. Evidentiary problems with determining internal mental intent pose problems for a subjective theory of interpretation. This is particularly true the farther one moves from the document’s initial drafting, so that the judge does not necessarily share, or have experienced, the contextual background of the drafting.3

While acknowledging such theoretical objections, supporters of subjective interpretation have responded from a pragmatic perspective. In 1930, Harvard University Law School Professor Jerome Landis responded to Radin’s attacks on determining “intent” or “motive.” Professor Landis’ response, as well as Radin’s attack, focused on the problem of determining legislative intent in the context of statutory interpretation. However, as noted above, the same concern exists with the determining the intent of any representative assembly, including the framers and ratifiers of the Constitution. Professor Landis responded:

The assumption that the meaning of a representative assembly attached to the words used in a particular statute is rarely discoverable has little foundation in fact. The records of legislative assemblies, once opened and read with a knowledge of legislative procedure, often reveal the richest kind of evidence. To insist each individual legislator beside his aye vote must also have expressed the meaning he attaches to the bill as a condition precedent to predicting an intent on the part of the legislator, is to disregard the realities of legislative procedure. Through the committee report, the explanation of the committee chairman, and otherwise, a mere expression of assent becomes in reality a concurrence in the expressed views of another. A particular determination thus becomes the common possession of the majority of the legislature, and as such a real discoverable intent.4

More recently, Justice Breyer has responded to a Radin-like attack in similar terms. His comments were again focused on the legislative intent of Congress, but they are equally relevant to determining the intent of the framers and ratifiers of the Constitution. He stated:

Conceptually, however, one can ascribe an “intent” to Congress in enacting the words of a statute if one means “intent” in its, here relevant, sense of “purpose,” rather than sense of “motive.” One often ascribes “group” purposes to group action. A law school raises tuition to obtain money for a new library. A basketball team stalls to run out the clock. A tank corps feints to draw the enemy’s troops away from the main front. Obviously, one of the best ways to find out the purpose of any action taken by a group is to ask some of the group’s members about it. But, this does not necessarily mean that the group’s purposes and the members’ motives or purposes must be identical. The members of the group participating in the group activity – indeed, whose actions are necessary conditions for its action – may have different, private motives for their own actions; but that fact does not necessarily change the proper characterization of the group’s purpose. Perhaps several key members of the faculty voted for the tuition increase in order to please the Dean. Is a better library any the less the object of the

---

3  Id.

**law school’s action? . . .** All this is to say that ascribing purposes to groups and institutions is a complex business, and one that is often difficult to describe abstractly. But that fact does not make such ascriptions improper. In practice, we ascribe purposes to group activities all the time without many practical difficulties.5

The second major criticism leveled against subjective interpretation focuses on constitutional grounds. As phrased by Radin, even if legislative intent were knowable, that should not be viewed as having the power to bind courts, because the legislators’ function is not to impose their respective wills, but to pass statutes.6 As phrased more recently by Justice Scalia:

[D]espite frequent statements to the contrary, we do not really look for subjective legislative intent. We look for a sort of “objectified” intent – the intent that a reasonable person would gather from the text of the law, placed alongside the remainder of the corpus juris. As Bishop’s old treatise nicely put it, elaborating upon the usual formulation: “[T]he primary object of all rules for interpreting statutes is to ascertain the legislative intent; or, exactly, the meaning which the subject is authorized to understand the legislature intended.” And the reason we adopt this objectified version is, I think, that it is simply incompatible with democratic government, or indeed, even with fair government, to have the meaning of a law determined by what the lawmaker meant, rather than by what the lawgiver promulgated. . . . It is the law that governs, not the intent of the lawgiver.7

Justice Breyer has responded to this critique as follows:

The “statute-is-the-only-law” argument misses the point. No one claims that legislative history [or other evidence of congressional “intent”] is a statute, or even that, in any strong sense, it is “law.” Rather, legislative history [and other evidence] is helpful in trying to understand the meaning of the words that do make up the statute or the “law.”8

---

6 Radin, *supra* note 2, at 870-72.

In many cases, of course, practically speaking there will be little difference between the two approaches. Both subjective and objective evidence of the text will support the same interpretation in the case before the court. This is particularly true to the extent that the same sources of meaning are consulted to determine either subjective intent or objective meaning.

For example, Justice Holmes always spoke of searching for objective meaning, not subjective intent. As Holmes noted, “[W]e ask not what this man meant, but what those words mean in the mouth of a normal speaker of English, using them in the circumstances in which they were used.” Justice Felix Frankfurter, a follower of Holmes, similarly noted, “We are not concerned with anything subjective. We do not delve into the minds of the legislators or their draftsmen, or committee members... Legislation has its aim. ... That aim, that policy is... evinced in the language of the statute, as read in light of other external manifestations of purpose.” However, as discussed at § 10.2.1.3 nn.19-22, despite this view both Justices Holmes and Frankfurter welcomed use of legislative history to determine the meaning of a statute, an approach more consistent with a concern about the subjective intent of the drafters, rather than a pure objective approach to the words’ meaning. Thus, in practice, the Holmesian approach to interpretation follows more closely the Landis/Breyer approach to interpretation stated above rather than the Radin/Scalia approach. As a matter of terminology, this approach can be denominated a “practical objective” approach toward determining the drafters’ purpose, rather than the “pure objective” approach of Radin and Scalia.

Reflecting the natural law concern with the drafters’ purposes in interpreting documents, discussed at § 3.4 nn.88-91, interpretation at traditional common law reflected the Holmesian/Landis/Breyer practical, objective focus on purpose, although, as discussed at § 6.2.3.1, the weight of the evidence suggests that legislative history was inappropriate for the court to consider at traditional common law. Professor Leslie Goldstein has observed that for Chief Justice Marshall, and most judges in the founding era, the “intent” of the Constitution was not the subjective “intent” of the minds of the framers, but rather the “intent” gleaned from applying traditional modes of interpretation and canons of construction to the document’s text. Similarly, with respect to issues like contract interpretation, judges followed a practical, objective approach to determining issues of offer and acceptance.

In the 19th century, Immanuel Kant’s “will theory” provided the intellectual backdrop to issues of interpretation. As Justice Holmes remarked in 1897, “To an imagination of any scope the most far-reaching form of power is not money, it is the command of ideas. ... Read the works of the great...

---

German jurists, and see how much more the world is governed today by Kant than by Bonaparte.”¹³
From Kant’s perspective, the individual’s will was critical, and thus the subjective theory rose in
prominence. This happened for common-law, statutory, and constitutional interpretation with the
rise of the formalist era’s “deductive reasoning reminiscent of Enlightenment rationalism.”¹⁴

For example, in contract cases during the 19th century, there was an increased use of subjective “will
theory” rhetoric, including the so-called “meeting of the minds” approach to contract formation.¹⁵
This subjective approach to contract formation completely triumphed in some countries, like France,
where the Enlightenment rationalist approach, based not only on Kant but also on Rousseau, was
stronger.¹⁶ In the Slaughter-House Cases,¹⁷ which ushered in the formalist era on the Supreme Court
in 1873, the Court focused more on the subjective intent of the framers and ratifiers of the 14th
Amendment, rather than the traditional common-law modes of interpretation. The Court asked,
“Was it the purpose of the fourteenth amendment . . . to transfer the security and protection of all
the civil rights which we have mentioned, from the States to the Federal government . . . [T]hese
consequences are so serious, . . . so great a departure from the structure and spirit of our institutions
[that w]e are convinced that no such results were intended by the Congress which proposed these
amendments, nor by the legislatures of the States which ratified them.”

This subjective interpretation approach “reminiscent of Enlightenment rationalism” differs from the
traditional common-law style of reasoning of Chief Justice Marshall and most courts of the founding
era, as noted above at § 6.2.1.1 n.11. It also differs from modern approaches to constitutional
interpretation that have predominated since 1937.¹⁸ However, such a traditional formalist approach,
grounded in the search for the specific, subjective intent of the drafter, did reflect Thomas
Jefferson’s approach to constitutional interpretation, as discussed at § 7.1, and has continued to be
supported by some contemporary formalist commentators, like Raoul Berger, as discussed at § 9.3.4.

In the 20th century, the critiques of subjective interpretation have been viewed more strongly. Some
critics have adopted a strong rejection of anything subjective, as indicated in the “pure objective”
approach of Max Radin and Justice Scalia, which reflects a modern formalist approach to issues of
interpretation, as discussed at § 9.2.1.1. A more practical critique of subjective interpretation is
reflected in Justice Breyer’s quote above, where he indicated that defenders of some consideration
of subjective intent in interpretation have moved away from legislative “motive” toward the more
practical objective search for legislative “purpose,” the approach of courts at traditional common

Page 138
law. Professor Perillo noted the same dynamic in the context of contract interpretation, stating that even when the courts in the 19th century spoke of the subjective theory, in practice they often still focused on practical objective evidence of intent. While the “pure objective” approach of Radin and Scalia is not the majority approach today, a majority of judges have opted for the “practical objective” approach to interpretation represented by Breyer, Landis, and Holmes. As stated by Professor John Kernochan, in the context of an article about statutory interpretation:

Some scholars prefer to abandon the concept of intent and to substitute an “objective” concept of legislative purpose so as to avoid the suggestions of subjective design thought to inhere in the term “intent.” In this latter view, purpose is to be elicited from the Act and its context, not from the minds of legislators. But intent is a concept which has historically been used and is still in use in the courts. It is viable if it is steadily recognized that intent must be related to the enacted words of the statute, that one must be on guard as to the attenuated sense of the term when foresight is limited or nonexistent, and that aside from judicial notice of pertinent social facts, it is generally to be established from the text and documented context. Whichever rubric is adopted – legislative intent or “objective” purpose – the role of the legislature’s purpose, as far as we can establish it, is preeminent. In the end, if the problems are understood and articulated, the difference in these rubrics does not seem to be one of overriding importance.

In contract interpretation, this practical objective approach has also triumphed. As Professor Perillo has noted, “At the turn of the twenty-first century, although the objective theory still dominates, subjective elements are more freely considered.” Justice Scalia complaints about contemporary constitutional interpretation also reflect majority rejection of his “pure objective” approach there.

As Professor Kernochan indicated, the debate between subjective versus objective approaches to interpretation may make little difference in practice. In most cases, subjective focus on the interpretive community of the framers and ratifiers, or objective focus on the text adopted from the perspective of a reasonable person, will yield similar results, particularly to the extent the framers and ratifiers were reasonable people and used words in that way. Reflecting a similar view about constitutional interpretation, Justice Scalia has acknowledged, “But the Great Divide with regard to constitutional interpretation is not that between Framers’ intent and objective meaning, but rather between original meaning (whether derived from Framers’ intent or not) and current meaning.” This is the issue on whether to adopt a “static” or “living” model for constitutional interpretation, discussed at §§ 6.3.1-6.3.2 & 6.3.4. The other contemporary critical debates regarding constitutional

---

22 See Scalia, supra note 7, at 17-20.

23 Id. at 38.
or statutory meaning turn on whether two sources of meaning are ever appropriate to consider in the act of interpretation: constitutional or legislative history, discussed at § 6.2.3.1, and social practice, discussed at § 6.3.3.

§ 6.2.1.2 \textbf{The Debate Between Literal and Purposive Interpretation of Text}\n
In considering constitutional text, as in considering statutory text, a judge must decide whether to read the text only literally, and thus risk missing the spirit, or purpose, behind why the text was adopted, or whether to interpret the provision in light of both its letter and spirit. Judge Learned Hand once wrote that there is "no surer way" to misread a document than "to read it literally."\textsuperscript{24} Justice Holmes wrote, "[T]he general purpose is a more important aid to the meaning than any rule which grammar or formal logic may lay down."\textsuperscript{25} Professor Lon Fuller once asked, "[I]s it really ever possible to interpret a word in a statute without knowing the aim of the statute?"\textsuperscript{26} On the other hand, it has been noted that purposes are elusive, and that judges may see purposes in text that reflect the judge's own views, rather than the views of the drafters. As Justice Kennedy stated in \textit{Public Citizen v. United States Department of Justice},\textsuperscript{27} "The problem with spirits is that they tend to reflect less the views of the world whence they come than the views of those who seek their advice."

Skepticism with use of purposes to help determine the drafters' intent appears most prominently among formalist jurists. Formalists are most concerned that attempting to determine a provision's purpose, or purposes, is not a clear, mechanical process that can yield unambiguous results.\textsuperscript{28} For this reason, many formalist jurists will consider arguments of purpose only if the provision's literal meaning is either ambiguous or absurd.\textsuperscript{29} In such a case, since consideration of literal meaning alone has failed to produce an adequate result, resort to arguments of purpose become justified.

A different concern with purposes is that purposes not be used to override clear text. Placed in context, this is the specific concern of the sentence quoted above from \textit{Public Citizen}. In \textit{Public Citizen},\textsuperscript{30} Justice Kennedy objected to cases where "the Court overrode the plain language, drawing

\begin{itemize}

  \item \textsuperscript{30} 491 U.S. at 474.
\end{itemize}
instead on the background and purpose of the statute” to reach a different result. This concern is shared not only by formalist judges, but is typical also of a natural law approach, as discussed below with respect to Justice Story’s and William Blackstone’s views on not allowing the spirit or purpose of a text to override clear textual meaning, and a Holmesian approach, as discussed below with respect to Judge Learned Hand’s and Justice Felix Frankfurter’s views on purposes and legislative history not being used to override clear textual meaning. Thus, it is not surprising that Chief Justice Rehnquist and Justice O’Connor joined in Justice Kennedy’s concurrence in Public Citizen.

Once the spirit or purposes of a constitutional provision are determined, the judge must decide to what extent these purposes will be allowed to override the literal meaning of the text when conflicts arise. Factors which might be relevant in making this determination include the clarity of the textual language (the more clear the language, the more weight it is given); how much conflict exists between the letter and spirit of the provision (a clear conflict between letter and spirit suggests either that the language’s text was not well-drafted or the judge has misidentified the provision's purposes); and does the literal meaning trample on fundamental rights otherwise protected (suggesting that the literal meaning is not well-drafted, given the commitment to protect the fundamental right).

In terms of the theories of interpretation prevalent when the Constitution was drafted, Professor Crosskey noted in his book Politics and the Constitution, “[T]he over-all purpose of a document was stated carefully in general terms; details were put in, only where, for some particular reason, details seem required; and the rest was left to the rules of interpretation customarily followed by the courts. [This mode of interpretation was] calculated to give a just and well-rounded interpretation to every document, in the light of its declared general purpose; or, if its purpose is not declared, then, in light of its apparent purpose, so far as this could be discovered. . . . ’[T]he reason and spirit [of a law]; or the cause which moved the legislator to enact it’ – it is, says Blackstone, ‘the most universal and effectual way of discovering the true meaning of a law, when the words are dubious.’” Blackstone’s caveat, however, is important to remember. If the words are not “dubious,” the words themselves, and not the law’s reason or spirit, are the most “effectual way” to determine meaning.

In his 1833 book Commentaries on the Constitution of the United States, Justice Story similarly reflected this balanced approach toward literal versus purposive interpretation. He noted, "No construction of a given power is to be allowed, which plainly defeats, or impairs its avowed objects. . . . This rule results from the dictates of mere common sense; for every instrument ought to be so construed, ut [res] magis valeat, quam pereat [so that the venture at hand may succeed, not fail]."

---

32 William Crosskey, Politics and the Constitution 363-66 (1953). While certain aspects of Professor Crosskey’s constitutional critique were controversial at the time of publication, and remain so today, see Robert C. Power, The Textualist: A Review of the Constitution of 1787: A Commentary, 84 Nw. U. L. Rev. 711, 713-16 (1990), and sources cited therein, Professor Crosskey’s summary of the natural law theory of interpretation, cited here, is not particularly controversial.

33 Joseph Story, Commentaries on the Constitution of the United States § 428 (1833).
Further, Story stated, "While, then, we may resort to the meaning of single words to assist our inquiries, we should never forget, that it is an instrument of government we are to construe; and, as has been already stated, that must be the truest exposition, which best harmonizes with its design, its objects, and its general structure." On the other hand, as Story noted, "It has been observed with great correctness, that although the spirit of an instrument, especially of a constitution, is to be respected not less than its letter; yet the spirit is to be collected chiefly from the letter. It would be dangerous in the extreme, to infer from extrinsic circumstances, that a case, for which the words of an instrument expressly provide, shall be exempted from its operation."

Holmesian jurist Judge Learned Hand made a similar point about considering background purposes in constitutional interpretation in his 1958 Oliver Wendell Holmes, Jr. Lecture at Harvard. He stated, “For centuries it has been an accepted canon of interpretation of documents to interpolate into the text such provisions, though not expressed, as are essential to prevent the defeat of the venture at hand [ut res magis valeat quam pereat]; and this applies with especial force to the interpretation of constitutions, which, since they are designed to cover a great multitude of necessarily unforeseen occasions, must be cast in general language, unless they are constantly amended.” Holmesian jurist Justice Felix Frankfurter described the interpretation theory of Holmes under the headings “Proliferation of Purpose” and “Search for Purpose,” while simultaneously noting that courts should only use such evidence of purpose, or evidence of legislative history, to advance the intent of the drafters of a document, not to enlarge or narrow it. As Justice Frankfurter stated, “While courts are no longer confined to the language, they are still confined by it.”

The Supreme Court addressed this approach toward interpretation in a number of early 19th-century cases. For example, in the famous and important case of McCulloch v. Maryland, Chief Justice Marshall stated, "A constitution, to contain an accurate detail of all the subdivisions of which its great powers will admit, and of all the means by which they may be carried into execution, would partake of the prolixity of a legal code, and could scarcely be embraced by the human mind. It would probably never be understood by the public. Its nature, therefore, requires that only its great outlines should be marked, its important objects designated, and the minor ingredients which compose those objects be deduced from the nature of the objects themselves. . . . Let the end be legitimate, let it be within the scope of the constitution, and all means which are appropriate, which are plainly adapted to that end, which are not prohibited, but consist with the letter and spirit of the
constitution, are constitutional." Similarly, Justice Story stated in Martin v. Hunter's Lessee,40 "The constitution unavoidably deals in general language. It did not suit the purposes of the people, in framing this great charter of our liberties, to provide for minute specifications of its powers, or to declare the means by which those powers should be carried into execution. It was foreseen that this would be a perilous and difficult, if not an impracticable, task. The instrument was not intended to provide merely for the exigencies of a few years, but was to endure through a long lapse of ages, the events of which were locked up in the inscrutable purposes of Providence." In the famous case of Gibbons v. Ogden,41 the Court also relied on the purposes behind adoption of the Commerce Clause. The Court stated, "The power over commerce, including navigation, was one of the primary objects for which the people of America adopted their government, and must have been contemplated in forming it. The convention must have used the word in that sense."

This natural law and Holmesian resort to arguments of purpose in every case, with the caveat that purposes should not be allowed to override clear, textual commands of the Constitution or a statute, is the majority approach in the courts today.42 Any formalist-inspired limitation on resorting to arguments of purpose only if the literal, or plain, meaning of the text is ambiguous or absurd, discussed at § 9.2.1.1, is not the current majority approach. Equally, any instrumentalist view that purpose can override clear textual meaning, particularly if the purpose is supported by background principles or policies embedded in the law, discussed at § 11.2.1.1, is not part of the current majority approach either. Even more so, any “radical” instrumentalist or “Platonic Guardian” natural law view, noted at § 3.3 nn.57-58, whose radicalism might suggest that arguments of purpose should trump clear constitutional or statutory text if that would advance arguments of justice or sound social policy that are not even embedded in the law, is naturally no part of the current majority approach.

§ 6.2.2 Treatment of Context

Context refers to material associated with a text, including the general background structures that surround the text’s drafting and ratification. The structures traditionally recognized as being critical to the Constitution’s drafting and ratification are judicial review, federalism, separation of powers, and checks and balances. All judges have at some time consulted context. The basic question is whether to give context a restrictive or receptive use.

§ 6.2.2.1 Treatment of Context: Restrictive versus Receptive Use

Any interpreter must decide whether to give arguments of context a restrictive or receptive use. The differences among judges relate to relative weight, particularly with respect to use of the various verbal and policy maxims of construction that were noted at § 5.2.2.1.

---

40 14 U.S. (1 Wheat.) 304, 326 (1816).
41 22 U.S. (9 Wheat.) 1, 190 (1824).
42 See generally § 6.2.3.1 nn.77-90.
An example of receptive use of context appears in Justice Story’s *Commentaries on the Constitution of the United States*. He stated, "In construing the constitution . . ., we are, in the first instance, to consider, what are its nature and objects, its scope and design, as apparent from the structure of the instrument, viewed as a whole, and also viewed in its component parts." Even those receptive to contextual interpretation, however, recognize limitations on its use. For example, the view that verbal maxims of construction must be used cautiously is an old, traditional view of the common law. As Justice Story reminded us, while "[t]hese maxims, rightly understood, and rightly applied, undoubtedly furnish safe guides to assist us in the task of exposition . . . they are susceptible of being applied, and indeed are often ingeniously applied, to the subversion of the text, and the objects of the instrument." As with verbal maxims, policy maxims are also mere rules of thumb that can be overridden by other considerations.

While most judges fully embrace contextual review, some judges, notably formalists, may minimize elements of context, particularly policy maxims, on grounds of promoting certainty and predictability in the law. For example, Justice Scalia has questioned the value of the policy maxim that remedial statutes are to be liberally construed on grounds that determining what non-penal statutes are sufficiently “remedial” for purposes of this maxim of construction is indeterminate. Focusing on the problem of indeterminacy more generally, Justice Scalia has noted:

> How “narrow” is the narrow construction that certain types of statute are to be accorded; how clear does a broader intent have to be in order to escape it? Every statute that comes into litigation is to some degree “ambiguous”; how ambiguous does ambiguity have to be before the rule of lenity or the rule in favor of Indians applies? How implausible an implausibility can be justified by the “liberal construction” that is supposed to be accorded remedial statutes? And how clear is an “unmistakably clear” statement? . . . [T]hese artificial rules increase the unpredictability, if not the arbitrariness, of judicial decisions.

[Nevertheless, Justice Scalia does acknowledge:] Perhaps for some of the rules the price is worth it. There are worse things than unpredictability and occasional arbitrariness. Perhaps they are a fair price to pay for preservation of the principle that one should not be criminally liable for an act that is not clearly prescribed; or the principle that federal interference with state sovereign immunity is an extraordinary intrusion.

---

43 Story, supra note 33, § 405.

44 Id. § 448.

47 Scalia, supra note 7, at 28.
Even judges who embrace contextual interpretation recognize that the farther one moves from specific interpretive tasks to engage in more general interpretive reasoning, contextual interpretation becomes more problematic. As Professor Reed Dickerson noted, “Despite the importance of context, however, the document remains central, because it is the main instrumentality that the author relies on to carry his message. . . . Under normal circumstances, nothing else has equal dignity or significance in marking out the content of his communication. At best, context plays a supporting, subordinate role.”

As with the debate between text and purpose, the intent here is not to resolve questions regarding when, or how much, weight should be given to various elements of context, including verbal and policy maxims. Rather, the intent is to note that such considerations have always played a part in constitutional interpretation, and different judges are more or less receptive to such use.

§ 6.2.2.2 Treatment of Judicial Review

With respect to the Constitution, the Supreme Court has asserted explicitly a power of authoritative interpretation since 1803 in Marbury v. Madison, discussed at § 17.1.2.1. The existence of that structural feature immediately raises the question of what degree of deference the Court might give, during judicial review, to the actions and views of other departments of government.

For more than a century after Marbury, the Court took the view that courts should be willing to rule that certain governmental action was unconstitutional if the Court concluded that the other sources of meaning supported that finding. There was no policy of any special deference to legislative or executive action. For example, in Dred Scott v. Sandford, toward the end of the natural law period in 1857, the Court approached the constitutionality of the Missouri Compromise regarding slavery without giving any special deference to Congress, as discussed at § 25.1 text following n.13. During the formalist era, the Court routinely struck down legislative attempts to regulate economic matters under the doctrine of Lochner v. New York, as discussed at § 27.3.2.1. On the other hand, during this time the courts did not take the view that they had a special role in protecting certain kinds of constitutional rights that called for a special interpretive technique when considering these rights. They applied the same approach toward judicial review to any constitutional provision.

This remains the basis of the formalist and natural law approach today, as discussed at §§ 9.2.2.2 & 12.2.2.2. For example, after quoting Chief Justice Marshall’s admonition in McCulloch v. Maryland regarding constitutional interpretation and deducing “objects” from constitutional text, cited above at § 6.2.1.2 n.39, Justice Scalia continued in his book, A Matter of Interpretation, supra note 7, at 37-38.
“[T]he context of the Constitution tells us not to expect nit-picking detail, and to give words and phrases an expansive rather than narrow interpretation – though not an interpretation that the language will not bear. . . . [This] is not strict construction, but it is reasonable construction.”

The flaws represented by the specific decisions of the Court in *Dred Scott*, and later in *Lochner v. New York*, did call into question for some judges and commentators the general interpretive technique of the natural law and formalist courts regarding judicial review. For example, as noted at § 5.2.2.2.A n.50, in 1893 Professor Thayer took the view that courts should defer to governmental action out of respect for the other branches of the federal government, or out of respect for state governments, unless the unconstitutionality of the governmental action is "so clear that it is not open to rational question." Under this approach, only if contemporaneous sources and subsequent events clearly indicate that the government's action is unconstitutional – rather than merely on balance leading to that conclusion – should the Court find the governmental action unconstitutional.

This approach, warmly embraced by Holmes and other Holmesian jurists, was the basis for Justice Holmes’ dissent in *Lochner*, and Holmes’ repeated dissents in later formalist-era cases which followed *Lochner*, discussed at § 27.3.2.1, and dissents by Holmes in formalist-era cases limiting Congress’ power to regulate under the Commerce Clause, discussed at § 18.2.2. An approach related to Thayer’s, but slightly less deferential to the other branches of government, counsels judges to exercise caution and restraint in deciding cases. This approach is reflected in Justice Brandies’ opinion for the Court in *Ashwander v. Tennessee Valley Authority*, discussed at § 17.1.3.2. This latter approach reflects a moderate version of Holmesian decisionmaking, as opposed to the more extreme Holmesian deference to government represented by the approach of Thayer. Some version of this Holmesian deference represented the approach of a majority of Justices on the Supreme Court between 1937-1954, as discussed at § 14.2.3.

At the other extreme from this posture of judicial deference, a judge might conclude that courts have a special role to play in our democratic system in protecting certain kinds of constitutional rights. For example, as discussed § 5.2.2.2.A, some judges may believe that courts have special obligations to provide extra protection for the disadvantaged or unempowered in society. Other judges may believe that courts have special obligations regarding protecting individuals' civil rights or civil liberties. This is the approach adopted by most instrumentalist jurists, who perceived flaws in the Holmesian deference-to-government approach when applied to issues of civil rights and civil liberties. As a reaction against Holmesian deference, this approach predominated on the Court between 1954-86, as discussed at §§ 11.2.2.2 & 14.2.4.

As discussed at § 14.2.5, a reaction against this kind of instrumentalist judicial activism has resulted in a majority of the Supreme Court returning to either a natural law, Holmesian, or formalist approach toward judicial review in the years following 1986.

§ 6.2.2.3 Treatment of Federalism

With regard to federalism, a judge must consider the relative power of the federal government versus the power of state governments in our constitutional system. Some judges in our history have tended to have a "states' rights" orientation. They have pointed to the 10th Amendment’s reservation of power to the states and other provisions in the Constitution that recognize the existence and power of states. This approach is reflected in *National League of Cities v. Usery*, 55 where a 5-4 Court held in 1976 that Congress could not apply federal wage and hour provisions to state employees. Other judges have been oriented toward viewing the Constitution as sanctioning stronger federal power. They note that the 10th Amendment reserves to the states or the people only those powers not delegated to the federal government. Thus, if the power is delegated, no 10th Amendment challenge should be possible. In this view, the states are adequately protected from excessive federal power by such structural features as the composition of Congress, with two Senators from each state and House of Representative members elected on a state by state basis, and the power of Governors to lobby Congress on matters of state concern. This approach is reflected in *Garcia v. San Antonio Metropolitan Transit Authority*, 56 which in 1985 overruled *National League of Cities v. Usery*. As detailed at §§ 18.4.1-18.4.5, the Supreme Court has had a wavering line of authority on this matter.

During our Nation’s history, the two major political parties have disagreed over issues of federalism. In the period before the Civil War, the major federalism issues involved slavery and tariff policy. The Federalist Party, and its later incarnation in the Whig Party and the Republican Party, favored broader federal power over these matters. The Democratic Party of Jefferson and Jackson was more in favor of states’ rights. During this period, Federalist judges, like Chief Justice Marshall, favored broader federal power, while Democratic judges, like Chief Justice Taney, favored states’ rights.

After the Civil War resolved these issues in favor of federal power, federalism issues turned to matters of federal regulation of both economic and civil rights matters. Since the Civil War, conservatives in both the Republican and Democratic parties have resisted such federal economic and civil rights legislation, as part of a conservative pro-business and conservative pro-traditional right to discriminate basis, and thus have emphasized states’ rights on these issues; liberals in both the Republican and Democratic parties have embraced federal power to legislate on these matters.

Since the 1960s, the Republican Party has become more conservative as a party, and the Democratic Party has become more liberal. This has happened in part because many conservative Democrats, particularly in the South, have gradually switched parties and become Republican, following the Democratic Party under President Lyndon Johnson becoming associated with federal legislation like the Civil Rights Act of 1964 and the Voting Rights Act of 1965. As the Republican Party has become more conservative as a party, some moderate Republicans, particularly in Northern States, have begun to vote more often Democratic. This trend was dramatically emphasized in the presidential election in 2000, with the Democratic candidate, Vice-President Al Gore, winning most of the Northern and Pacific states that formed the base of President Abraham Lincoln’s election as

---

a Republican in 1860, while the Republican candidate, Governor George W. Bush, won most of the Southern and Western States, that were the base of the Democratic Party in 1860. As reflected at §§ 17.2.4.2-17.2.4.3 regarding 11th Amendment state sovereign immunity doctrine, and Chapter 18 on federalism issues generally, since the 1960s conservative judges, typically Republican, more often have favored states’ rights than liberal judges, typically Democrats, who have favored federal power.

§ 6.2.2.4 Treatment of Separation of Powers and Checks and Balances

With regard to separation of powers, a judge must ask whether the framers and ratifiers adopted a strict separation of powers approach, or whether they adopted a constitution that focuses more on sharing of powers and checks and balances. In an opinion joined by all Justices on the Court except Justice Scalia, Justice Blackmun wrote in *Mistretta v. United States*:

In applying the principle of separated powers in our jurisprudence, we have sought to give life to Madison’s view of the appropriate relationship among the three coequal Branches. Accordingly, we have recognized, as Madison admonished at the founding, that while our Constitution mandates that ‘each of the three general departments of government [must remain] entirely free from the control or coercive influence, direct or indirect, of either of the others,’ *Humphrey’s Executor v. United States*, 295 U.S. 602, 629 (1935), the Framers did not require – and indeed rejected – the notion that the three Branches must be entirely separate and distinct.

... In adopting this flexible understanding of separation of powers, we simply have recognized Madison’s teaching that the greatest security against tyranny – the accumulation of excessive authority in a single branch – lies not in hermetic division between the Branches, but in a carefully crafted system of checked and balanced power within each Branch.57

Additional Court opinions, as well as the opinions of most commentators, have supported this view that the framers and ratifiers adopted a sharing of powers approach to the issue of checks and balances.58 For example, as Justice Kennedy has noted, “This is not to say that each of the three Branches of government must be entirely separate and distinct, for that is not the governmental structure of checks and balances established by the Framers.”59 In contrast, as commentators have noted, a formalist approach, focused more on the literal text of the Constitution and developing “bright-line rules” to foster “restraint in judging,” and less on purpose, context, and history, is likely to adopt more of a strict separation of powers approach.60 The text of the Constitution provides in

Article I, § 1, “All legislative Powers herein granted shall be vested in a Congress of the United States”; Article II, § 1, “The executive Power shall be vested in a President of the United States of America”; and Article III, § 1, “The judicial Power of the United States, shall be vested in one supreme Court, and in such inferior Courts as the Congress may from time to time ordain and establish.” Thus, dissenting from the Court’s adoption of a sharing of powers approach in Morrison v. Olsen, Justice Scalia stated, “[The majority’s opinion] is not analysis; it is ad hoc judgment. And it fails to explain why it is not true – as the text of the Constitution seems to require, . . . all purely executive power must be under the control of the President.” This difference between these two approaches to separation of powers issues is explored at §§ 19.1-19.2 & 19.4.

A second separation of powers issue involves whether the judge is more sympathetic to exercises of legislative or executive power in cases where the two come into conflict. From the time of the Constitution until today, the Federalist/Whig/Republican party has always been more sympathetic to exercises of executive power, while the Jefferson/Jackson/Democratic party has always been more suspicious of executive power and more trusting of the legislative branch. Thus, judges appointed by Republican presidents tend to favor broad grants of executive power to the president. Judges appointed by Democratic presidents tend to restrain executive power in favor of legislative prerogatives. Some conservative Democratic judges, however, like Chief Justice Vinson and Justice Reed during the 1950s, have tended to share the Republican predisposition for executive power. This aspect of separation of powers doctrine is explored in terms of Court decisions at § 19.3 nn.35-36.

The reasons for these predispositions are not altogether clear. It may be that more conservative individuals, typically Republican, are more comfortable with a “corporate” model of administration, with a strong CEO, and clearly-defined lines of authority, while more progressive individuals, with their faith in the “people,” prefer the most representative branch of government, the legislature. Certainly at the time of the founding, it was Jefferson and his associates who favored the legislative branch, and were more supportive of the strong notions of legislative supremacy consistent with the French Revolution, while conservatives, like Hamilton, favored stronger executive power closer to that of the English King, although without the King’s power to declare war.

§ 6.2.3 Treatment of History

§ 6.2.3.1 Legislative History versus Other Historical Sources

As noted at § 5.2.3.2, any interpreter must decide which historical sources to use: (1) legislative history of the provision in question, like notes of the Constitutional Convention, records of state

ratifying conventions, or House or Senate statements made during consideration of constitutional amendments; (2) thoughtful contemporaneous statements during ratification of the Constitution, like The Federalist Papers; (3) existing legislative and executive practice, and existing judicial precedents, at the time the provision was drafted and ratified, mostly in the United States, but also English practice and precedent, to the extent history suggests that the English experience is relevant to understanding the choices made by the framers and ratifiers; and (4) other typical sources of historical inquiry (evidence of general social practice on a particular issue, newspaper accounts, statements of respected organizations, reliable evidence of public opinion generally, etc.).

Sources (2) and (3) listed above are routinely viewed by judges as appropriate to use. For example, as noted at § 5.2.3.2 n.68, even in the context of criticizing the use of legislative history, Justice Scalia embraced use of The Federalist Papers to help guide constitutional interpretation. 63 With regard to legislative history, source (1) listed above, most commentators have stated that in the late 18th and early 19th century the prevailing mode of interpretation, in both England and the United States, was that the legislative history of a provision should not be considered in determining its meaning. Thus, notes of the Constitutional Convention, or statements made on the floor of the Congress while considering constitutional amendments, were not proper to consider, while contemporaneous statements about the meaning of the Constitution, like The Federalist Papers, were proper to consider. 64 There is some evidence, however, that traditional common law courts in England and courts in the early post-revolutionary period in the United States did rely, to some extent, on drafting history, as did the First Congress in debating issues of constitutional power. 65

All commentators agree, however, that any limitation on using documents like notes of the Constitutional Convention gradually died out during the 19th century in America. Thus, notes of the Constitutional Convention, or House or Senate statements about amendments, became proper to use as history to determine the framers and ratifiers' intent during the second half of the 19th century. 66 This use likely reflects the increased prominence during the 19th century of Kant’s subjective “will theory” of interpretation, discussed at § 6.2.1.1 nn.13-18, and thus resort to materials of legislative or constitutional history to determine better the framers and ratifiers’ actual subjective intent.

66 See Baade, supra note 64, at 1043-62.
The “practical objective” approach of the 20th century in America, discussed at § 6.2.1.1, agrees with this use of material intrinsic to drafting. As stated in the famous 1940 statutory interpretation case of United States v. American Trucking Associations, Inc.,67 "When aid to construction of the meaning of words, as used in the statute, is available, there certainly can be no 'rule of law' which forbids its use, however clear the words may appear on 'superficial examination.'" Indeed, even the English rule has been modified to permit limited use of “statements by a minister or other proponent of the bill” where “the legislative language is ambiguous or obscure, or if it would lead to an absurd result.”68

During the 1950s, Justice Jackson questioned the result in American Trucking in his concurring opinion in Schwegmann Bros. v. Calvert Distillers Corp.69 He supported an approach reflected in the modified English rule cited above. In a case focused on statutory interpretation, he stated:

Resort to legislative history is only justified where the face of the Act is inescapably ambiguous, and then I think we should not go beyond Committee reports, which presumably are well considered and carefully prepared. . . . [T]o select casual statements from floor debates, not always distinguished for candor or accuracy, as a basis for making up our minds what law Congress intended is to substitute ourselves for the Congress in one of its most important functions. . . . It is the business of Congress to sum up its own debates in its legislation. . . .

Moreover, there are practical reasons why we should accept whenever possible the meaning which an enactment reveals on its face. Laws are intended for all our people to live by; and the people go to law offices to learn what their rights under those laws are. Here is a controversy which affects every little merchant in many States. Aside from a few offices in the larger cities, the materials of legislative history are not available to the lawyer who can afford neither the cost of acquisition, the cost of housing, or the cost of repeatedly examining the whole congressional history. Moreover, even if he could, he would not know any way of anticipating what would impress enough members of the Court to be controlling.70

During his service on the Court, Justice Jackson’s critique of legislative history was not adopted by a majority of the Court, or a majority of commentators. A sample response was as follows:

[Justice Jackson’s argument represents] a neat bundle of specious reasoning. The first [few] sentences are an argument that statutory clarity is preferable to judicial resort to legislative history. Of course it is. But the court that is confronted with an unclear statute cannot choose between statutory clarity and the use of legislative history; the choice having to do with legislative history is to use it or to guess about legislative intent.

67 310 U.S. 534, 543-44 (1940).

70 Id. at 395-97.
Even if the time and energy of counsel and of judges is in some cases expended on legislative history that fails to throw useful light on specific issues, the pursuit is not wholly wasted. Throughout the English-speaking world during the present century, dissatisfaction has often been expressed about the inadequate understanding by judges of social purposes behind major enactments. Can it be that the judges . . . of the United States, by reason of frequent resort to legislative histories, have benefitted in some measure, even when the particular legislative history has been found unhelpful on the immediate problem? Does extensive use of legislative history force the judges to keep in closer touch with democratic desires?  

Of course, the practical problems mentioned by Justice Jackson are less acute for constitutional interpretation than for statutory interpretation. The number of such sources are relatively limited to sources like notes of the Constitutional Convention, records of state ratifying conventions, and House or Senate statements made during consideration of constitutional amendments. Particularly today, such sources are more readily available to attorneys in small and large offices alike, with many accessible through the Internet. Even for statutory interpretation issues, Internet searches have the capacity to make legislative history materials more readily available than in the past, though the cost of such access, if access is limited to fee-based services such as Westlaw or Lexis, may still pose problems for small law firms, solo practitioners, and members of the general public.

Justice Scalia's appointment to the Supreme Court in 1986 reinvigorated questioning the use of legislative history, in both statutory and constitutional cases. Justice Scalia has stated, “My view that the objective indication of the words, rather than the intent of the legislature, is what constitutes the law leads me, of course, to the conclusion that legislative history should not be used as an authoritative indication of a statute’s meaning.” Under this approach, interpretation should focus on the plain meaning of text, augmented by consideration of the text of related provisions, traditional maxims of statutory construction, plus any objective historical evidence of meaning, such as for the Constitution, The Federalist Papers. In its most extreme form, this view suggests that use of legislative history is unconstitutional, as it gives effect to statements by congressional committees or statements on the floor by individual legislators, not Congress as a whole.

During the 1980s, Justice Scalia's “New Textualism” approach gained some support, particularly among Chief Justice Rehnquist and Justices O'Connor and Kennedy, although their support was not

72 Scalia, supra note 7, at 29-30.

During the 1990s, Justice Thomas also indicated support for the New Textualism model of interpretation.75 During the 1990s, however, support waned on the Court for Justice Scalia's New Textualism model of interpretation. Only Justice Thomas remained a consistently faithful ally.77 Justices Stevens, Souter, Ginsburg, and Breyer clearly rejected the New Textualism model of interpretation.78 Although initially sympathetic to Justice Scalia's approach, Chief Justice Rehnquist, and Justices O'Connor and Kennedy, typically rejected it as well.79 The one limitation on this rejection may be for cases where the statutory or constitutional text is crystal clear. Just as natural law and Holmesian judges are reluctant to let arguments of purpose override clear text, discussed at § 6.2.1.2 nn.30-42,

77 See, e.g., Holder v. Hall, 512 U.S. 874, 932-35 & n.28 (1994) (Thomas, J., joined by Scalia, J., concurring) (criticizing use of legislative history and citing with approval Justice Jackson's admonition that "[r]esort to legislative history is only justified when the face of the [statute] is inescapably ambiguous."); United States v. Carlton, 512 U.S. 26, 39 (1994) (Scalia, J., joined by Thomas, J., concurring) ("The Court attempts to minimize the amendment's harshness . . . , quoting some post-amendment legislative history (another oxymoron) to show that despite the uncontested plain meaning of the statute, Congress never meant it to apply . . . .")

78 See, e.g., Holly Farms Corp. v. NLRB, 517 U.S. 392, 399 & n.6 (1996) (Ginsburg, J., for the Court) (legislative purpose and legislative history critical in making sure statutory exemptions are not "expansively interpreted" contrary to legislative intent); Bank One Chicago N.A. v. Midwest Bank & Trust Co., 516 U.S. 264, 276-77 (1996) (Stevens, J., joined by Breyer, J., concurring) (legislative history is "useful to conscientious and disinterested judges trying to understand the statute's meaning"); American National Red Cross v. S.G., 505 U.S. 247, 252-64 (1992) (Souter, J., for the Court) (precedent, purpose, and legislative history used to augment the ordinary meaning).

they are reluctant to let legislative history “cloud” a text that is “clear.”

Currently, a majority of the Court seems to follow an approach to the use of legislative history sketched out by Justice Breyer. Under that approach, literal text, purpose, context, and precedent are all initially considered. Legislative history may be used to move beyond literal interpretation of a text and to aid consideration of purpose. Prudential considerations can be used as long as they reflect aspects of text, context, history, practice, and precedent, and are not an attempt by the judge to impose the judge’s own sense of justice or sound social policy in the decision. Legislative history is particularly useful, Justice Breyer has noted, in five kinds of cases: "(1) avoiding an absurd result; (2) preventing the law from turning on a drafting error; (3) understanding the meaning of specialized terms; (4) understanding the 'reasonable purpose' a provision might serve; and (5) choosing among several possible 'reasonable purposes for language in a politically controversial law.'”

This approach also permits use of executive or administrative agency practice to help guide interpretation of a provision. This is supported by *Chevron, U.S.A., Inc. v. National Resources Defense Council, Inc.*, which held that the Court will defer to a reasonable construction of a statute by the agency charged with its implementation if the statute is “silent or ambiguous,” although such construction will not overcome the “expressed intent of Congress.” It is also supported by *Auer v. Robbins*, which held that an administrative rule may receive substantial deference if it interprets the issuing agency's own ambiguous regulation. As discussed at § 9.2.2.1 nn.48-51, the principle of *Chevron* deference is limited by *United States v. Mead Corp.*, citing *Skidmore v. Swift & Co.*, where the Court said that *Chevron* deference applies only when the agency has been delegated authority by Congress to make rules of law.

Justice O'Connor's opinion in *Bailey v. United States* represents a good example of this approach. In the context of a statutory interpretation case, Justice O'Connor noted, “We start, as we must, with the language of the statute. . . . We consider not only the bare meaning of the word but also its

---

See e.g., O'Neal v. McAninch, 513 U.S. 432, 437, 441-43 (1995) (Breyer, J., for the Court) (after considering text and context, the opinion continued, "First, precedent supports our conclusion. . . . Second, our conclusion is consistent with . . . basic purposes. . . . [O]ur rule has . . . administrative virtues [which] are not determinative, but offer a practical caution against a legal rule that, in respect to precedent and purpose, would run against the judicial grain."); Milwaukee Brewery Workers' Pension Plan v. Jos. Schlitz Brewing Co., 513 U.S. 414, 416, 425-31 (1995) (Breyer, J., for the Court) (reliance on statutory text, purpose, and legislative history to interpret the statute).

Breyer, supra note 5, at 861.

519 U.S. 452, 461-64 (1997).

placement and purpose in the statutory scheme. ‘The meaning of statutory language, plain or not, depends on context.’ ... [C]anon[s] of construction [are also used]. ... The amendment's [legislative] history ... casts further light on Congress' intended meaning."

If statutory text is clear, however, a 5-4 majority of the Court held in 2005 in Exxon Mobil Corp. v. Allapattah Services, Inc. that legislative history should not be consulted at all. This occurred over the dissents of Justices Stevens, O’Connor, Ginsburg, and Breyer. The majority opinion also indicated that the legislative history, even if consulted, would not change the majority’s result. Given Justice Souter’s consistent willingness in prior cases to resort to legislative history in all cases, it is difficult to believe Exxon Mobil represents a break from the majority of the Court being willing to consider legislative history, but just not let it “cloud” a text otherwise “clear.” This seems confirmed by Zedner v. United States, where in 2006 all members of the Court, except Justice Scalia, joined an opinion making reference to legislative history, even though the text of the statute, standing alone, was not held to be ambiguous, although at least one district court has concluded that Exxon Mobil represents such a clear break from prior practice.

Most modern jurists, except formalists, tend to favor rejection of the New Textualism approach. This result is consistent with the basic premises of the natural law model of interpretation of the 18th and 19th centuries, updated to reflect contemporary use of legislative history as an aid in statutory or constitutional interpretation. For example, as Chief Justice Marshall noted in United States v. Fisher, “Where the mind labours to discover the design of the legislature, it seizes everything from which aid can be derived.” This is true even though Justice Marshall might well be "shocked" by the contemporary use of legislative history. As indicated above, at § 6.2.3.1 nn.64-66, Chief Justice Marshall lived in the traditional natural law age when resort to legislative history to aid interpretation was not the norm. Even at that time, however, Chief Justice Marshall pushed the limits of the traditional non-use of legislative history, for example using statements in a legislative committee report as “part of the record” in the case, a fact used by Justice White to support his belief in the use of legislative history generally. In that case, Wisconsin Public Intervenor v. Mortier.

89 6 U.S. (2 Cranch) 358, 386 (1805). On use of legislative history as an aid to understanding the context of statutory and constitutional enactments, see McGreal, supra note 8, at 1255-73.

Justice Scalia criticized Justice White’s extension of Marshall’s use of legislative history as part of the factual record in a case to support use of legislative history in an act of interpretation.

§ 6.2.3.2 Specific versus General Historical Intent

A second issue with respect to history is determining the level of generality within which historical insights should be viewed. For example, a judge engaged in an historical inquiry could remain focused on the specific examples seemingly held by the framers and ratifiers about a particular provision of the Constitution. On the other hand, a judge could focus on the general concept held by the framers and ratifiers about a provision. An intermediate position holds that whether the interpreter should focus on the specific examples held by the framers and ratifiers about a provision, or their general concepts, depends on the provision in question. To the extent a provision is "relatively direct, specific, and focused," this may suggest that the framers and ratifiers intended the provision to reflect only detailed, specific choices. If so, judges should naturally remained focused on those choices. Where history suggests instead that the framers and ratifiers embedded in the Constitution broad concepts, like those dealing with the First Amendment, Equal Protection Clause, and Due Process Clause, history may suggest that the framers and ratifiers intended "to provide no hard-and-fast answers . . . , and to let the answers develop over time in common-law fashion."

For example, as noted at § 4.4.1 n.103, natural law judges tend to view the Establishment Clause as reflecting an Enlightenment-based natural law concept of separation of church and state. Justice Kennedy stated in *Lee v. Weisman*, ""[T]he lesson of history that was and is the inspiration for the Establishment Clause [is] the lesson that in the hands of government what might begin as a tolerant expression of religious views may end in a policy to indoctrinate and coerce." That concept would likely counsel a judge to find unconstitutional such practice as officially organized prayer in public schools, despite the fact that such prayer was a specific example thought constitutional by the framers and ratifiers as determined by "historical practices and understandings."

Similarly, as Justice Ruth Bader Ginsburg noted during her confirmation hearing, the general concept of equality in the Declaration of Independence and the Equal Protection Clause of the 14th Amendment is broad enough to embody a principle of equal rights for women, despite the fact that the specific views of Thomas Jefferson and others in the 18th and 19th century were not ready for women to be equal participants in public life. During her confirmation hearing, Justice Ginsburg quoted Jefferson that "[t]he appointment of women to public office is an innovation for which the public is not prepared, nor am I." Nevertheless, as Justice Ginsburg noted, she presumed that if Jefferson were alive today he would have a different specific view on the role of women in public

93 *Id.* at 631-32 (Scalia, J., joined by Rehnquist, C.J., and White & Thomas, JJ., dissenting).

life based on the general concept of equality in which Jefferson believed – each individual's equal and unalienable right to "life, liberty, and the pursuit of happiness."

In addition, sometimes changed social practice will require an individual to change views because the general concept in which the individual believes now interacts with the social environment in a different way. For example, Justice Ginsburg has noted that one of the main reasons the Supreme Court changed its specific views in gender discrimination cases in the 1970s was the Court's newly-formed conclusion that the differential treatment of women and men in certain statutes was "burdensome to women," and thus violated the Court's concept of equality.95 She attributed this result in part to the "rapid growth in women's employment outside the home, attended and stimulated by a revived feminist movement; [and] changing patterns of marriage and reproduction," all of which made the Court better able to see that women were being "unfairly constrained" by laws "ostensibly to shield or favor" them. This result required an interplay among "change in society's practices, constitutional amendment, and judicial interpretation."96

Such reasoning from general moral concepts to specific conclusions is, of course, a mainstay of much philosophic inquiry, particularly in the Enlightenment tradition. The goal of such reasoning is to convince a person who wishes, consistent with the Enlightenment tradition, to apply consistently a general concept in which the individual believes, that the person may have to adjust one or more specific views that currently are not consistent with that general concept. Through this process, a dynamic is created whereby over time more of an individual's specific views will be a reflection of reasoned elaboration of general moral concepts applied to current social practices, rather than the individual's specific views merely being the product of the individual's past experiences, unthinking adherence to custom or tradition, idiosyncratic preferences, or prejudice. This tension between moral reasoning based upon reason versus adherence to custom or tradition is discussed in greater depth at §§ 15.4.1 & 16.1-16.2.

Given their normative approach to the nature of the judicial task, natural law and instrumentalist judges are the most likely to embrace such general use of concepts. This is particularly true for natural law judges, given their special commitment to precedent and reasoned elaboration of the law, discussed at §§ 3.4 nn.93-106 & 4.3.2 nn.87-89. Applied to constitutional interpretation, this process would require the Court to adopt a reasoned elaboration of the general moral concepts placed into the Constitution, such as the moral principles of equal protection and due process of law. Justice Kennedy has remarked, "[R]eason, which is the distinguishing mark of the human race, must be embodied in the law if our civilization is to aspire to excellence."97 In this way, the understanding of a constitutional concept may evolve over time.

96 Id. at 17, 20-21.

97 Anthony Kennedy, Commencement Address, University of the Pacific, McGeorge School of Law (May 21, 1988).
From an instrumentalist perspective, Justice Brennan similarly showed a preference for resort to such general concepts in constitutional reasoning. In a 1986 article, he stated, "A position that upholds constitutional claims only if they were within the specific contemplation of the Framers in effect establishes a presumption of resolving textual ambiguities against the claim of constitutional right. It is far from clear what justifies such a presumption." Indeed, Justice Brennan noted about specific history, "Typically, all that can be gleaned is that the Framers themselves did not agree about the application or meaning of particular constitutional provisions and hid their differences in cloaks of generality.” And in terms of general historical intent, Justice Brennan said, “As augmented by the Bill of Rights and the Civil War amendments, this text is a sparkling vision of the supremacy of the human dignity of every individual. . . . It is a vision that has guided us as a people throughout our history,” that vision animating criminal defendant’s rights, equal protection rights, due process rights, and “broad and deep rights of expression and of conscience.”

At times, even Holmesian judges have evidenced a willingness to interpret constitutional provisions in light of general concepts. For example, regarding the issue of the Equal Protection Clause and the constitutionality of segregated schools, Judge Robert Bork wrote, “The Court cannot conceivably know how [the framers and ratifiers] would have resolved [specific] issues had they considered, debated and voted on each of them. Perhaps it was precisely because they could not resolve them that they took refuge in the majestic and ambiguous formula: the equal protection of the laws. But one thing the Court does know: [the Equal Protection Clause] was intended to enforce a core idea of black equality against governmental discrimination.”

With respect to the issue of incorporation of the Bill of Rights under the 14th Amendment Due Process Clause, Holmesian Justice Frankfurter made a similar point. Justice Frankfurter concluded that due process involves "those canons of decency and fairness which express the notions of justice of English-speaking peoples . . . . These standards are not authoritatively formulated anywhere as though they were prescriptions in a pharmacopoeia. But [judges] must move within the limits of accepted notions of justice." Justice Frankfurter made a similar point when discussing statutory interpretation, noting that "the purpose which a court must effectuate is not that which Congress should have enacted, or would have. It is that which it did enact, however inaptly, because it may fairly be said to be imbedded in the statute, even if a specific manifestation was not thought of, as is often the very reason for casting a statute in very general terms." Regarding the Equal Protection Clause issue in Brown v. Board of Education, Justice Frankfurter’s position was similar

100 Robert H. Bork, Neutral Principles and Some First Amendment Problems, 47 Ind. L.J. 1, 14 (1971). For discussion of Judge Bork as adopting Holmesian interpretation theory, see § 10.2.1.3.

102  Frankfurter, supra note 10, at 538-44.
to that expressed by Judge Bork above, concluding that while the specific intent of the framers and ratifiers was not unambiguously clear, the core ideal of equal protection meant that segregated schools denied African-American children equal protection of the laws. 103

Despite this occasional resort to general historical reasoning, most Holmesian judges are more comfortable with primary reliance on specific historical intent, as discussed at § 10.2.1.3. Given their preference for legal decisionmaking to be as predictable, certain, and mechanical as possible, formalist judges are the most resistant to using general historical intent, as discussed at § 9.2.1.3.

§ 6.3  Treatment of Subsequent Developments

§ 6.3.1  Treatment of Legislative and Executive Practice

One approach toward subsequent legislative or executive practice under a constitutional provision states that a court should be sensitive to subsequent legislative and executive practice only to the extent such practice aids understanding of, and is faithful to, the meaning of the constitutional provision at ratification. This is the approach adopted by those who believe in the static Constitution whose meaning does not change over time, typically formalist jurists. From this perspective, as Justice Scalia has stated, the alternative view of a living Constitution is incompatible with the “antievolutionary purpose of a constitution.” 104 For such jurists, events occurring after ratification are relevant only to the extent they illuminate what the Constitution meant at the time of ratification. For example, the views of the First Congress in 1789, filled with persons who played a large role in drafting the Constitution, have been held to have special relevance in determining constitutional meaning, as stated by the formalist-era Court in Myers v. United States, cited at § 5.3.2.1 n.87.

A second approach toward legislative or executive practice states that later legislative or executive practice under a particular constitutional provision can provide a gloss on meaning. For example, James Madison “consistently thought that 'itusus,' the exposition of the Constitution provided by actual governmental practice and judicial precedents, could 'settle the meaning and the intention of the authors.'” 105 Indeed, Madison himself noted about constitutional interpretation, "[T]he early, deliberate, and continued practice under the Constitution, as preferable to constructions adapted on the spur of occasions, and subject to the vicissitudes of party or personal ascendencies" is relevant in determining constitutional meaning. 106 As noted at § 5.3.2.1 n.92, though as a congressman in 1791 Madison opposed Congress creating a national bank as unconstitutional, in 1815 and 1816,

104  Scalia, supra note 7, at 44.

105  Powell, supra note 64, at 939.

when Madison was President, Madison supported the bank's constitutionality. This was based upon "repeated recognitions under varied circumstances of the validity of such an institution, in acts of the Legislative, Executive, and Judicial branches of the Government, accompanied by indications, in different modes, of a concurrence of the general will of the nation."\textsuperscript{107}

Throughout constitutional history, this approach has been adopted by natural law, Holmesian, and instrumentalist jurists. The classic case of \textit{McCulloch v. Maryland} provides a good example of this principle at work during the original natural law era. As indicated, President Madison changed his position between 1791 and 1816 on the constitutionality of Congress incorporating a national bank based upon legislative, executive, and social practice ("a concurrence of the general will of the nation"), as well as judicial precedents. The Supreme Court noted this practice, as well as judicial precedents, stating in \textit{McCulloch},\textsuperscript{108} "[T]his can scarcely be considered an open question, entirely unprejudiced by the former proceedings of the nation respecting it. The principle now contested was introduced at a very early period of our history, has been recognized by many successive legislatures, and has been acted upon by the judicial department, in cases of peculiar delicacy, as a law of undoubted obligation."

The Court also referred to paying deference to a course of legislative and executive practice in other important early 19\textsuperscript{th}-century cases. In \textit{Martin v. Hunter's Lessee},\textsuperscript{109} the Court stated, "Hence [the Constitution's] powers are expressed in general terms, leaving to the legislature, from time to time, to adopt its own means to effectuate legitimate objects, and to mold and model the exercise of its powers, as its own wisdom and the public interests should require." In \textit{Gibbons v. Ogden},\textsuperscript{110} one issue was how to interpret the phrase "commerce among the states" regarding Congress' power to regulate traffic on navigable rivers. In defining the word "commerce" to include navigation, the Court noted a history of legislative and executive action so defining commerce. As the Court stated, "If commerce does not include navigation, the government of the Union has no direct power over that subject, and can make no law prescribing what shall constitute American vessels, or requiring that they shall be navigated by American seamen. Yet this power has been exercised from the commencement of the government, has been exercised with the consent of all, and has been understood by all to be a commercial regulation."

In the 20\textsuperscript{th} century, Holmesian Justice Frankfurter made this same point in the context of subsequent executive action. As noted at § 5.3.2.1 n.93, Justice Frankfurter stated in his concurrence in \textit{Youngstown Sheet and Tube Co. v. Sawyer},\textsuperscript{111} "[A] systematic, unbroken, executive practice, long pursued by the knowledge of Congress and never before questioned, engaged in by Presidents who

\textsuperscript{107} See Paul Brest, Sanford Levinson, J.M. Balkin & Akhil Reed Amar, \textit{Processes of Constitutional Decisionmaking} 17 (4\textsuperscript{th} ed. 2000), \textit{quoting} Madison's letter to Congress on the matter.

\textsuperscript{108} 17 U.S. (4 Wheat.) 316, 401 (1819).

\textsuperscript{109} 14 U.S. (1 Wheat.) 304, 326-27 (1816).

\textsuperscript{110} 22 U.S. (9 Wheat.) 1, 190 (1824).

\textsuperscript{111} 343 U.S. 579, 610-11 (1952).
have also sworn to uphold the Constitution, making as it were such exercise of power part of the structure of our government, may be treated as a gloss on ‘executive Power’ vested in the President."

Justice Holmes also underscored this point in *Missouri v. Holland.* Justice Holmes stated there, "[W]hen we are dealing with words that are also a constituent act, like the Constitution of the United States, we must realize that they have called into life a being the development of which could not have been foreseen completely by the most gifted of its begetters. It was enough for them to realize or to hope that they had created an organism; it has taken a century and has cost their successors much sweat and blood to prove that they created a nation. The case before us must be considered in light of our whole experience and not merely in that of what was said a hundred years ago."

As discussed at § 10.2.2.1, because the Holmesian style of interpretation involves a strong component of deference to the other branches of government, this view that legislative and executive practice can create a gloss on meaning to the Constitution is embraced more strongly by Holmesian judges than by judges in any of the other judicial decisionmaking traditions. On the other hand, even for Holmesian judges, a pattern of legislative and executive action typically cannot create a gloss on meaning that can override the framers and ratifiers' clear intent. For example, in *INS v. Chadha,* discussed at § 19.4.2.1 nn.76-79, Justice Rehnquist joined the majority opinion which held that Congress may not act legislatively through a one-house veto, despite congressional practice of including such veto provisions in many statutes for 50 years prior to *Chadha,* because the one-house veto violated the literal text of the bicameralism and presentment clauses of Article I. However, as noted at § 19.4.2.1 nn.81-82, Holmesian Justice White did find a way, in his solo dissent in *Chadha,* to defer to the legislative practice of a one-house veto by concluding that the purposes of the bicameralism and presentment clauses were met in *Chadha,* even if not their literal terms.

Instrumentalist judges have also been willing to use legislative and executive practice as a gloss on meaning to guide constitutional interpretation. For example, in *Griswold v. Connecticut,* Justice Goldberg, joined by Chief Justice Warren and Justice Brennan, enthusiastically embraced the view that in determining what rights are fundamental under substantive due process analysis the Court should look to the “traditions and collective conscious of our people” and “from experience with the requirements of a free society.” Similarly, in *Bowers v. Hardwick,* Justice Stevens, joined by Justices Brennan, Marshall, and Blackmun, noted that “Georgia’s prohibition on private, consensual sodomy has not been enforced for decades” and that the “record of nonenforcement, in this case and in the last several decades, belies the Attorney General’s representations about the importance of the State’s selective application of its generally applicable law.”

112 252 U.S. 416, 433 (1920).

§ 6.3.2  **Treatment of Judicial Precedents**

As noted at § 5.3.3.1 nn.97-98, court decisions interpreting a constitutional provision fix the meaning of the Constitution for the jurisdiction covered by that court, unless the court changes its mind or is reversed by a higher court. In theory, there are two different approaches to when a court may change its mind. Under one approach, a court will change its mind, that is, overrule a prior decision, if the court decides that the earlier court "got it wrong." A second approach holds that a sequence of court decisions can provide a gloss on meaning to the Constitution. This can change what the Constitution means in the same fashion as legislative and executive practice can provide a gloss on meaning.

This “gloss on meaning” approach is grounded in the way documents had been interpreted for centuries under the English common law, and was so understood by the framers and ratifiers of our Constitution. Professor Jefferson Powell has written about James Madison, "He consistently thought that 'usus,' the exposition of the Constitution provided by actual governmental practice and judicial precedents, could 'settle the meaning and the intention of the authors.' Here, too, [Madison] was building on a traditional foundation: the common law had regarded usage as valid evidence of the meaning of ancient instruments, and had regarded judicial determinations of that meaning even more highly." 116 James Madison stated in a letter to Judge Spencer Roane that a constitution's meaning, "so far as it depends on judicial interpretation," is established by "a course of particular decisions." 117

Justice Scalia has said about this approach, “Yes, it is the common law returned, but infinitely more powerful than what the old common law ever pretended to be, for now it trumps even the statutes of democratic legislatures. . . . The starting point of the analysis will be Supreme Court cases, and the new issue will presumptively be decided according to the logic that those cases expressed." 118

The natural law style of interpretation, grounded in the 18th- and 19th-century traditional way of interpreting documents, embraces this approach toward precedent, as discussed at § 12.2.2.2.

Under this approach, a sequence of court decisions can provide a gloss on meaning that alters a constitutional provision's interpretation as gleaned from examining the other sources of constitutional meaning. Thus, it would take something more to overrule a prior decision than just a later court deciding that the earlier court "got it wrong." As noted at § 4.3.2 n.87, the factors that might be used to provide this extra impetus to overrule a precedent include: (1) the prior decision turns out to be unworkable in practice; (2) the decision has been rendered inconsistent or irreconcilable with related doctrines or its conceptual underpinnings have been removed or weakened by later decisions, or later legislative or executive action; (3) a changed understanding of facts has undermined the factual basis of the precedent; (4) the decision is inconsistent with some strongly held principle of justice or social welfare policy; and (5) the decision is inconsistent with the “rule of law.” The natural law Justices on the Supreme Court – Justices O’Connor, Kennedy, and Souter – discussed these factors in *Planned Parenthood v. Casey*, where they noted that "a decision to overrule should rest on some special reason over and above a belief that a prior case was

116 Powell, *supra* note 64, at 939.

117 *Id.* at 939 n.280.

wrongly decided.”119 Specific examples in the context of constitutional adjudication of each of these five factors which suggest a precedent should be overruled are discussed at §§ 7.3.3-7.3.4.

To varying extents, formalist, Holmesian, and instrumentalist judges reject this “gloss on meaning” approach towards precedents. This rejection naturally occurs under the formalist approach, which embraces the view of a static Constitution that has one, fixed correct meaning. This rejection also occurs by those who believe that while legislative, executive, or social practice may appropriately create a “gloss” on meaning, judicial precedents should not have that force. This is true for Holmesian judges, who emphasize legislative and executive practice as part of the Holmesian predisposition to defer to government, discussed at § 10.2.2.1, and instrumentalist judges, who also emphasize social practice, as noted at §§ 6.3.3 & 11.2.2.1.

As discussed at § 4.3.1 nn.75-77, for positivist judges, as a theoretical matter, precedents should have no force of law, as the positive law exists independent of the judge. Thus, any prior judicial opinion, if viewed as erroneous by a current judge, should be entitled to no weight. Despite this theoretical model, as a practical matter most positivist judges will give some respect to the core holdings of precedent either as a matter of following “settled law” or following decisions on which there has been “substantial reliance,” as discussed at § 4.3.2 nn.79-86. Specific examples in the context of constitutional adjudication of formalist and Holmesian judges following precedents based on “settled law” or “substantial reliance” are discussed at § 7.3.2 nn.104-27.

For instrumentalist judges, the normative nature of the judicial task means that as a theoretical matter the judge should give some “gloss on meaning” respect to judicial precedents because of judges normative role in developing legal doctrine. However, as cited at § 3.3 n.54, as a practical matter, under the instrumentalist “Grand Style” of judicial decisionmaking “precedent is carefully regarded, but if it does not make sense it is ordinarily re-explored.”120 This willingness to “re-explore” precedent based on whether the judge concludes the precedent “makes sense” has meant that in practice instrumentalist judges tend to be the least faithful to following existing precedents, as discussed at §§ 4.3.1-4.3.2. Specific examples in the context of constitutional adjudication of this instrumentalist predeliction for not following precedents are discussed at § 7.3.2 nn.128-33.

§ 6.3.3 Treatment of Social Practice

As positivists who believe that all law emanates from the sovereign will, formalist and Holmesian jurists have been reluctant ever to permit use of mere social practice as evidence to determine the meaning of constitutional provisions. Thus, Justices Scalia and White, and Chief Justice Rehnquist, were among the four Justices in Stanford v. Kentucky121 who concluded that establishing traditions under the 14th Amendment substantive due process analysis depended upon whether that tradition

120 Karl Llewellyn, On the Current Recapture of the Grand Tradition, in Jurisprudence: Realism in Theory and Practice 215, 217 (1962). This passage is cited in full at § 3.3 n.54.

was established from consideration of legislative enactments and their application, and not from other indicia, such as public opinion polls, the views of interest groups, and the positions adopted by various professional associations. Similarly, in *Atkins v. Virginia*, 122 a case striking down the death penalty for mentally retarded criminals, Chief Justice Rehnquist, joined by Justices Scalia and Thomas, noted in dissent, “[T]he Court’s decision to place weight on foreign laws, the views of professional and religious organizations, and opinion polls . . . finds little support in our precedents and, in my view, is antithetical to considerations of federalism, which instruct that any ‘permanent prohibition upon all units of democratic government must [be apparent] in the operative acts (laws and the application of laws) that the people have approved.’” Consistent with this premise, Chief Justice Rehnquist’s view was that only legislative and executive practice, in the form of “the work product of legislatures and sentencing jury determinations,” should be “the sole indicators by which courts ascertain the contemporary American conceptions of decency for purposes of the Eighth Amendment.” Resort to non-juridical events, like social practice, should never be considered.

Despite this view, there is an argument, discussed at §§ 10.2.1.3 & 10.2.2.1, that a true Holmesian would reject the view in *Stanford v. Kentucky* that evidence of social practice should be limited to "laws and the application of laws" for purposes of determining our societal traditions. This approach would follow Justice Holmes' view in *Lochner v. New York* that our tradition derives from both "our people and our laws," 123 though not foreign laws. Nevertheless, perhaps because of the Holmesian posture of deference to government, as represented in constitutional adjudication by the views of Professor Thayer and others, noted at § 6.2.2.2 nn.53-54, some Holmesian jurists have adopted the *Stanford* limitation of looking only to legislative and executive practice to determine traditions.

Natural law and instrumentalist jurists, as followers of a normative approach to law, are more willing to consider normative considerations from whatever source, including social practice, particularly in the United States, but also the world community generally. The classic example regarding practice in the United States, as noted at § 6.3.1 n.107, involved James Madison, who while President in 1815-16 relied on the social practice of “indications, in different modes, of a concurrence of the general will of the nation” to support the constitutionality of Congress creating a national bank. With regard to social practice in the world community generally, this can be justified for instrumentalist judges as part of prudential consideration of sound social policy, as discussed at § 11.2.2.1. For natural law judges, this can be justified to the extent the provision being interpreted is viewed as incorporating a natural law principle of universal applicability, whose contours can better be understood by considering social practice from around the world, as discussed at § 12.2.2.1.

For example, in *Atkins v. Virginia*, 124 discussed at § 23.2.1.4, a 6-3 Court majority, composed of natural law and instrumentalist Justices, discussed social practice, both in the United States and in the world generally, in addition to legislative and executive practice, raising concerns about the constitutionality of the death penalty for mentally retarded criminals. The Court noted, “Although

---

123  198 U.S. 45, 75-76 (1905) (Holmes, J., dissenting).
these factors are by no means dispositive, their consistency with the legislative evidence lends further support to our conclusion that there is a consensus among those who have addressed the issue.” In a speech following criticism, and calls for impeachment, of Court members for reliance on international opinion in Atkins and other cases, Justice Stevens commented that there is a vast difference between considering the thoughtful views of other scholars and judges in foreign countries, as well as in America, and treating international opinion as controlling the interpretation of the Constitution. He said, “We should not be impeached for the former, and we are not guilty of the later.”

From an instrumentalist or natural law perspective, these views are correct.

It should be noted that Justice Kennedy joined this majority opinion in Atkins, despite his having joined with Justices Scalia and White, and Chief Justice Rehnquist, in Stanford v. Kentucky. As discussed at § 12.4.1, Justice Kennedy has an occasional inclination for the formalist style of interpretation. In Atkins, however, he returned to the traditional natural law interpretive methodology. As discussed at § 27.3.4.2, in his majority opinion in Lawrence v. Texas, which ruled unconstitutional state laws banning sodomy, Justice Kennedy also relied in part upon broader arguments of social practice, including the “values we share with a wider civilization” and opinions of “the European Court of Human Rights.”

§ 6.3.4 General Observations on Static versus Living Constitutions

As Justice Scalia noted, discussed at § 6.2.1.1 n.23, “[T]he Great Divide with regard to constitutional interpretation is not that between Framers’ intent and objective meaning, but rather between original meaning (whether derived from Framers’ intent or not) and current meaning.” This is the issue whether the Constitution should have a static, fixed meaning or should its meaning evolve over time. As indicated in the materials at §§ 6.3.1-6.3.3, only formalist judges adhere to a strict static meaning approach. To various extents, the Holmesian, natural law, and instrumentalist decisionmaking styles are willing to embrace some aspects of subsequent considerations, particularly legislative, executive, and social practice and judicial precedents, to provide some “gloss” on meaning to the Constitution.

In this regard, it may be useful to underscore the difference between Justice Scalia’s formalist model of interpretation and the natural law model of James Madison, which was shared by Madison’s co-authors of the The Federalist Papers, Alexander Hamilton and John Jay, who was the first Chief Justice of the United States Supreme Court, as well as by Chief Justice John Marshall, Justice Story, and other influential participants and judges of the framing and ratifying generation. As discussed at § 7.1, the major figure of the founding era to adopt a formalist-sounding, static model of constitutional interpretation was Thomas Jefferson. Thus, to extent that certain contemporary groups, like The Federalist Society, tend to support a formalist model of constitutional interpretation, an approach shared by Justices Scalia and Thomas, it would be more historically accurate if the

---

125 Justice Stevens Speaks Out on Attacks, National Law Journal 6 (June 6, 2005).

visage they placed on their promotional materials was that of Thomas Jefferson, not James Madison. Although Madison shared Jefferson’s views on the substance of constitutional doctrine regarding basic federalism issues, as discussed at §§ 18.1.1, 18.1.2 & 18.2.1.1, James Madison, like most framers and ratifiers, did not adopt a formalist style of interpretation, as noted throughout Chapter 12 on the natural law style of interpretation. In contrast to formalism, the natural law style of interpretation embraces an evolutionary theory of constitutional interpretation, as discussed generally at §§ 4.1 nn.8-12, 6.3.1-6.3.3 & 12.2.2, and specifically at § 12.3.3 nn.115-28. In addition, as discussed at § 8.4.1, a true “jurisprudence of original intent,” in former Attorney General Edwin Meese’s famous phrase, would support Madison’s natural law style of interpretation – not Jefferson’s quasi-formalism, nor Holmes’ deference-to-government theory of interpretation, nor Earl Warren’s instrumentalism.

§ 6.4 Prudential Considerations
§ 6.4.1 Possible Instrumentalist Use of Non-Interpretive Prudential Considerations

As noted at § 5.4.1, one major issue regarding prudential considerations is the extent to which judges should use non-interpretive prudential consideration of the judges’ own views in their decisions. Formalist and Holmesian judges, having a positivist understanding of law that all law emanates from the sovereign will, and not even in part from the judge’s will, naturally strongly reject the use of non-interpretive prudential considerations. As a theoretical matter, mainstream instrumentalist judges also reject such use, purporting to rely only on background social policies embedded in the law to resolve leeways in the law, not the judge’s own views. For example, at her confirmation hearing, Justice Ginsburg stated, “My approach [towards judging] is rooted in the place of the judiciary . . . in our democratic society. The Constitution’s preamble speaks first of ‘we the people’ and then of their elected representatives. The judiciary is third in line. . . . [O]ne of the most sacred duties of a judge is not to read her convictions into the Constitution.” As noted at § 3.3 nn.57-58, only a “radical” instrumentalist judge may be willing to embrace in theory non-interpretive prudential considerations.

In practice, however, the line between the judge’s own views and contemporary social views embedded in the law may be difficult to determine, as was explained by Justice Cardozo at § 3.3 nn.60-61. Particularly during the instrumentalist era of the Supreme Court, 1954-86, certain decisions were challenged as being best explained by reference to such non-interpretive prudential considerations. For example, in 1978 Professor John Hart Ely remarked, "The Court's current constitutional jurisprudence . . . involves the Court in the merits of the policy or ethical judgment sought to be overturned." This criticism has continued past the end of the instrumentalist era. For

---

example, in 1997 Justice Scalia remarked, “Worse still, however, it is known and understood that if that logic [of existing precedents] fails to produce what in the view of the current Supreme Court is the desirable result for the case at hand, then, like good common-law judges, the Court will distinguish its precedents, or narrow them, or if all else fails overrule them, in order that the Constitution might mean what it ought to mean. Should there be . . . a constitutional right to die? If so, there is. Should there be a constitutional right to reclaim a biological child put out for adoption by the other parent? Again, if so, there is. If it is good, it is so.”

§ 6.4.2 Possible Natural Law Use of Non-Interpretive Prudential Considerations

Regarding the natural law approach, the matter is similarly complex. Two basic approaches could be taken. One view is to embrace non-interpretive consideration of principles of justice. Under this approach, whether or not the framers and ratifiers of the Constitution intended each clause to embody natural law principles, judges should take that view today. Thus, judges should always read the Constitution's words against the backdrop of natural law theory. This would require judges to pay great respect to the ordinary meaning and purpose of the words used in the Constitution, but would always permit judges to resort to natural law philosophy in the final instance "so as to check meaning and purpose by an all-things-considered value judgment that acts as a safety-valve against wildly absurd or unjust results." In its most extreme form, as noted at § 12.2.2.3 nn.72-73, such an approach to judicial decisionmaking would place judges in the role of Platonic Guardians, deciding constitutional cases in order to promote the judge's natural law vision of the "just state."

A second approach, more consistent with the “social contract” natural law approach to judicial decisionmaking dominant during the framing and ratifying of our Constitution, noted at § 3.4 nn.84-87, holds that judges should resort to natural law principles in interpreting the Constitution only to the extent that particular clauses of the Constitution were drafted with natural law principles in mind, discussed at § 12.2.2.3 nn.74-75, 80, or to the extent a case can be made that the framers and ratifiers themselves intended judges to resort to natural law principles outside the written text of the Constitution to supplement it, discussed at § 12.2.2.3 nn.76-79. However, under either version of this “social contract” approach, where clear constitutional provisions do not reflect a sound natural law position, as in the case of slavery under the United States Constitution before the 13th Amendment, judges should follow the clear meaning of the Constitution until the natural law position is properly added to the document.

Virtually all Supreme Court Justices in our constitutional history have rejected the “radical instrumentalist” or "Platonic Guardian" model of judicial decisionmaking. The natural law decisionmaking tradition of our society follows the Marshall Court's approach to the issue of slavery: if the Constitution has clearly adopted an unsound position from the perspective of natural

law, it is up to legislative action, constitutional amendment, or, in Locke’s phrase discussed at § 12.2.2.3 n.80, the people's reserved right of revolution, to correct the problem.

In addition to being inconsistent with the framers and ratifiers' approach to judicial decisionmaking, an additional weakness of the "Platonic Guardian" method is that there is no assurance that Supreme Court Justices personally will hold natural law principles that are in fact sound from the perspective of reason. For example, Chief Justice Taney's opinion in Dred Scott v. Sandford, discussed at § 25.1 nn.9-16, permitted slave owners to continue to have enforceable rights to their slaves even if they brought their slaves into "free" states. This holding went beyond the compromise on slavery struck in the Constitution, and was an attempt to impose on free states a natural law vision contrary to the abolitionist's anti-slavery natural law views. Justice Taney's vision sprang from economic natural law arguments concerning property rights and the slave as property (and in no sense a citizen), a position not part of the original constitutional compromise, nor supported by reason, which would oppose slavery by granting to each person equal concern and respect, as discussed at §§ 16.1 & 16.2.1. However, as a matter of custom and tradition, Justice Taney's views were held by numerous individuals, particularly in the South, before the Civil War, as noted at § 25.1 nn.3-6.

Of course, under the traditional natural law model of judicial decisionmaking, if some governmental action is unconstitutional judges have a duty to so hold, even if other branches may object. For example, in Worcester v. State of Georgia, the Supreme Court held that Georgia's anti-Cherokee laws were unconstitutional because the Indian tribes are a "distinct [sovereign] community . . . in which the laws of Georgia can have no force." This decision was made over the expressed objection of President Andrew Jackson, who "apocryphally" is reported to have said, "John Marshall made his decision; now let him enforce it." Of course, under the traditional natural law model of judicial decisionmaking, if some governmental action is unconstitutional judges have a duty to so hold, even if other branches may object. For example, in Worcester v. State of Georgia, the Supreme Court held that Georgia's anti-Cherokee laws were unconstitutional because the Indian tribes are a "distinct [sovereign] community . . . in which the laws of Georgia can have no force." This decision was made over the expressed objection of President Andrew Jackson, who "apocryphally" is reported to have said, "John Marshall made his decision; now let him enforce it."

It has been noted that Worcester did not prevent United States regulation of the Native Americans in Georgia, and shortly after Worcester, President Jackson embarked on a policy that "forced most Cherokees to march on the 'Trail of Tears' to forced relocation in Oklahoma." The Worcester case is a good reminder of the limits of judicial power to influence events in the absence of a willing Congress, President, and/or the people to go along. As Alexander Hamilton noted in The Federalist Papers No. 78, the federal judiciary lacks ultimate "influence over either the sword or the purse," and thus "may truly be said to have neither FORCE nor WILL but merely judgment; and must ultimately depend upon the aid of the executive even for the efficacy of its judgments."

Because they were immersed in the Anglo-American system of judicial decisionmaking, the framers and ratifiers' views concerning text, context, history, practice, and precedent were grounded in the grand traditions of the Anglo-American common law system. As noted, this approach rejects non-interpretive review. However, this approach does favor such principles as reasoned elaboration of

---

133 60 U.S. (19 How.) 393 (1857).
135 See Brest, Levinson, Balkin & Amar, supra note 107, at 121.
136 Id.
the law, fidelity to precedent, deciding cases on narrower grounds where possible, and deciding most
cases only after full briefing and argument.137

The principle of "reasoned elaboration" also includes clearly defined tests that work in practice;
coherence and consistency in legal categories; and avoidance of functional balancing tests that are
situation-specific and not easily reconcilable with other aspects of legal doctrine, unless
contemporaneous sources and subsequent events mandate use of such tests. All of these
considerations are consistent with the prudential consideration of a proposed decision’s
consequences in light of text, context, history, practice, and precedent, and thus represent an
interpretive approach toward prudential considerations.138

§ 6.4.3 General Use of Interpretive Prudential Considerations

The remaining issues concerning prudential considerations involve the weight to be given to the
remaining three kinds of prudential arguments: (1) the contemporaneous sources of constitutional
text, purpose, context, and history; (2) the subsequent event sources of practice and precedent; and
(3) the mainstream normative concern with whether the decision would advance a particular
background principle of justice or social policy that the judge believes is embedded in the law. As
a matter of theory, each of the four decisionmaking styles should use these prudential considerations
consistent with their general approach to judicial decisionmaking.

For example, the formalist style, with its static model of constitutional interpretation, should resort
only to category (1)’s contemporaneous sources of prudential argumentation. The Holmesian style,
with its “deference-to-government” model of a living Constitution, should be willing to add category
(2)’s subsequent events of legislative and executive practice. The natural law style should be willing
to add category (3)’s prudential consideration of background principles of justice. The
instrumentalist style should be willing also to consider category (3)’s prudential consideration of
social policy. Reflecting a positivist theory of judicial decisionmaking, formalist and Holmesian
judges reject category (3)’s resort to background principles or policies embedded in the law, as noted
at § 2.3.2, and reflected in Table 3.4.

Specific examples of each of these uses of prudential considerations in the context of constitutional
adjudication is discussed when addressing each of the judicial decisionmaking styles at §§ 9.2.2.3,
10.2.2.3, 11.2.2.3 & 12.2.2.3. As the discussion there will indicate, in practice each of the
decisionmaking styles has remained substantially faithful to their theoretic approach, although

(Souter, J., concurring in part and concurring in the judgment) (discussing deciding cases on
narrower grounds, the importance of full briefing and argument, and reasoned and consistent
elaboration of the law).

138 For one attempt describing "how the various types of argument are combined or weighed
against each other" based on "the normatively best understanding that is reasonably consistent with
what actually happens in . . . constitutional interpretation," see Fallon, supra note 21, at 1243-68.
occasionally there has been some slippage, like a formalist judge occasionally giving at least some minimal consideration to prudential consideration of category (2)’s subsequent events. This is similar to formalist use of legislative or executive practice. For example, despite theoretic objection under a static Constitution to ever using subsequent events as a source of interpretation, Justice Scalia will consider a specific tradition of legislative enactments since 1868 to influence the meaning of liberty under the Due Process Clause of the 14th Amendment, as discussed at § 9.2.2.1.

§ 6.4.4 Concluding Observations

Fuller description of the precise choices made by formalist, Holmesian, natural law, and instrumentalist jurists regarding use of text, context, history, practice, precedent, and prudential considerations in the context of constitutional adjudication is reserved for Chapters 9-12. Detailed Tables reflecting the choices made by each of these four decisionmaking styles appear at Tables 9.3, 10.3, 11.3 & 12.3. However, the materials presented in Chapters 1-6 do permit some initial conclusions to be drawn. These conclusions are summarized below in Table 6.4.1 & 6.4.2.

As noted in Table 6.4.1, in theory the formalist style of interpretation uses only contemporaneous sources of meaning because of its belief in a static model of constitutional interpretation. Among contemporaneous sources, the formalist style places greatest weight on the specific interpretive tasks, viewing general kinds of reasoning as entitled to lesser weight because such general reasoning does not yield as specific, certain, mechanically derived answers as specific interpretive tasks. As discussed at § 7.1, specific interpretive tasks – like those involving the plain meaning of text; verbal maxims; specific historical evidence, particularly involving specific historical intent; or the core holdings of precedent – are more capable of being applied through deductive logic. In contrast, more general interpretive tasks – like those involving determining purposes behind text; resort to background structural arguments; resort to general historical evidence, particularly as reflected in general historical intent; reasoned elaboration of the law; or prudential consideration of background principles or policies embedded in the law – involve greater use of the inferential logic of inductive reasoning. As noted at § 4.1, the formalist style of interpretation is the style most comfortable with deductive modes of reasoning. For this reason, the formalist style is the most comfortable with placing greater reliance on specific interpretive tasks, such as only considering “general” arguments of purpose if the provision’s “specific” literal meaning is ambiguous or absurd, as noted at § 6.2.1.2.

With regard to subsequent considerations, while in theory formalists will not rely on such sources, based on their static constitution model, in practice most formalists will give some weight to specific legislative or executive practice, as noted at § 6.4.3, as well as some precedential weight to the core holdings of cases which are “settled law” or on which there has been “substantial reliance,” as noted at § 6.3.2. Most formalists will give no weight, however, to such general interpretive tasks as reasoned elaboration of the law, as noted at § 6.3.2; resort to general social practice, as noted at § 6.3.3; or background principles or policies embedded in the law, as noted at § 6.4.3.

Holmesian jurists, with their functional focus on a doctrine’s purposes, are more willing to embrace the general kinds of contemporaneous source reasoning, like arguments of purpose, than are formalist jurists, as noted at § 6.2.1.2. Given their deference-to-government posture, discussed at §§ 3.2 & 6.2.2.2, Holmesian jurists are the most willing to give great weight to arguments of legislative or executive practice. Because of their functional attitude, they are also more willing than
formalists to consider prudential arguments of text, context, history, practice, and precedent, as well as slightly more willing to follow the core holdings of precedents based upon “substantial reliance,” as noted at § 6.3.4. As positivists, however, Holmesian jurists share with formalists a rejection of judicial reasoned elaboration of the law, as noted at § 6.3.2; and a rejection of judicial resort to background principles of justice or social policies to resolve leeways in the law, as noted at § 6.4.3.

The main differences between natural law and instrumentalist jurists are the natural law great respect for precedent and reasoned elaboration of law, not shared by instrumentalists, as discussed at §§ 4.3.2 & 12.2.2.2; the instrumentalist great focus on prudential considerations, which reflects a concern with achieving justice given the “situation-sense” of each case, as discussed at § 3.3; and the instrumentalist willingness to consider background principles of social policy, a willingness rejected by the natural law focus on background principles of justice alone, as discussed at § 3.4.

As indicated in Table 6.4.1, the Holmesian, natural law, and instrumentalist styles of interpretation all give “great weight” to contemporaneous sources of meaning, with one exception. As noted at § 6.2.1.2 n.25, Justice Holmes wrote, "[T]he general purpose is a more important aid to the meaning than any rule which grammar or formal logic may lay down." Based upon this statement, the functional Holmesian and instrumentalist judges tend to give greater weight to arguments of purpose than literal text, as discussed in greater depth at §§ 10.2.1.1 & 11.2.1.1. Predominantly, however, the differences among Holmesian, natural law, and instrumentalist interpretation styles lie in the weight given to subsequent considerations. As to these considerations, Holmesian judges give greatest weight to arguments of practice; natural law judges give greatest weight to arguments of precedent; and instrumentalist judges give greatest weight to prudential considerations. The approaches give “lesser weight” to the other subsequent considerations which are not their predominant focus, sometimes giving only minimal “some weight” to sources about which they are most skeptical, or “no weight” to sources whose use they reject. For example, all Holmesian judges reject use of background principles or policies embedded in the law, as discussed at § 6.4.3.

Table 6.4.2 summarizes the different predispositions of conservative versus liberal judges. As discussed at § 6.2.2.3, on issues of federalism, conservative judges tend to prefer states’ rights, while liberal judges tend to favor exercises of federal power. As discussed at § 6.2.2.4, on separation of powers issues, conservative judges tend to favor the executive, while liberal judges tend to favor the legislative branch. On individual rights, conservative judges tend to focus on the protection of economic rights, for both individuals and businesses, while liberal judges tend to focus on the protection of non-economic, civil/political rights, as discussed at § 21.2.1.2. As noted at § 4.4.2, and discussed at §§ 9.3.3, 10.3.3, 11.3.3 & 12.3.3, each style of decisionmaking has conservative and liberal variations. However, as discussed at § 11.3.3 nn.61-62, in general conservatives tend to favor tradition and the status quo, which more often suggests the static constitution model of formalism, or the Holmesian deference-to-government model, while liberals tend to favor instrumentalism, which authorizes judges prudentially to aid the unempowered in the progressive reform of society.

Formalism: For contemporaneous sources, great weight given to specific interpretive tasks and lesser weight given to general kinds of reasoning. For subsequent considerations, no weight given in theory, but some weight given in practice to specific interpretive tasks, while no weight given even in practice to general kinds of reasoning.

Holmesian: Great weight to all contemporaneous sources, except literal or plain meaning of text, which is given lesser weight, based upon Holmes’ functional observation, noted at § 6.2.1.2, that “general purpose is a more important aid to the meaning than any rule which grammar or formal logic may lay down.” For subsequent considerations, great weight to legislative or executive practice; lesser weight to the other specific interpretive tasks; perhaps some weight to social practice, following Justice Holmes, or no weight to social practice, following Chief Justice Rehnquist and Justice White, as discussed at § 6.3.3; no weight in theory or practice to the other general kinds of reasoning.

Natural Law: Great weight to all contemporaneous sources. For subsequent considerations, great weight to core holdings of precedent and reasoned elaboration of the law; lesser weight to the other specific interpretive tasks and social practice and background principles of justice embedded in the law; no weight in theory or practice to social policies embedded in the law or principles of justice or social policies not so embedded, unless a more radical, Platonic Guardian kind of natural law judge, as discussed at § 6.4.2.

Instrumentalism: Great weight to all contemporaneous sources, except literal or plain meaning of text, which is given lesser weight, based upon the functional observation, noted at § 6.2.1.2, that “general purpose is a more important aid to the meaning than any rule which grammar or formal logic may lay down.” For subsequent considerations, great weight to prudential considerations of text, context, history, practice and precedent, and principles of justice or social policies embedded in the law; lesser weight to legislative or executive practice and social practice; some weight to core holdings of precedent and reasoned elaboration of the law; no weight in theory or practice to principles of justice or social policies not so embedded, unless a more radical kind of instrumentalist judge, as discussed at § 6.4.1.

CHAPTER 7: EFFICIENT CAUSES OF CONSTITUTIONAL INTERPRETATION

As noted at § 1.2.1, in Aristotle’s example of a silver bowl, the efficient cause of the silver bowl is the “hammering of the silversmith” to make the material cause, silver, into the shape of a bowl. Likewise, this Chapter deals with the efficient causes of the form of constitutional decisionmaking. This involves the techniques used by judges in dealing with the materials of text, context, history, practice, precedent, and prudential considerations in order to “hammer out” decisions on constitutional law. Discussed with specific reference to constitutional law, these techniques are the approach to judicial reasoning as predominantly deductive or inductive, discussed at § 7.1; the adoption of legal doctrine as categorical rules or balancing tests, as elements to meet or factors to weigh, as rules or standards, and as questions of law versus questions of fact, discussed at § 7.2; the treatment of precedent in a narrow or broad fashion or as having a gloss on meaning or not, discussed at § 7.3; and aspects of the judicial process, including the nomination and confirmation process for Supreme Court Justices; the process by which cases get decided, including the rules regarding Supreme Court adoption of cases through grants of petitions for certiorari, mechanism of Supreme Court consideration of cases in judicial conference, the process of selecting a Justice to write the Court’s opinion, and the possible writing of concurring and dissenting opinions; and rules of judicial recusal, discussed at § 7.4.

§ 7.1 Deductive versus Inductive Reasoning

As noted at § 4.1 nn.1-6, judicial reasoning in common-law, statutory interpretation, or constitutional law cases can adopt either a deductive or an inductive mode of reasoning. Regarding constitutional adjudication, judicial reasoning tends to be more deductive in areas where the constitutional provision is phrased in relatively detailed, specific terms, and thus where adjudication is more like statutory interpretation. In contrast, for constitutional provisions phrased more generally, like the First Amendment’s provision that “Congress shall make no law . . . abridging the freedom of speech” or the 14th Amendment’s provision that “no State shall . . . deny to any person equal protection of the laws,” judicial elaboration has tended to be more inductive in form.

As noted at § 6.2.1.1 nn.13-18, the “Enlightenment rationalist” mode of interpretation follows a more deductive mode of analysis. This “Enlightenment rationalist” approach provided the intellectual basis for the French Revolution and the adoption of the Napoleonic Code, the first great code of the modern era in civil-law countries. The premise of this approach was that the people make the law, place it in codes, and then the judges by deductive logic merely follow the law that the people have laid down. This approach underlays not only the French Revolution, but also the analytic positivism of Jeremy Bentham and John Austin in the late 18th century and early 19th century England. Although this formalist, deductive model of interpretation predominated on the courts in America in the context of the conservative ideology of the formalist era of 1873-1937, as discussed at §§ 13.1 & 14.2.2, the fact that the same approach toward judicial decisionmaking was adopted by the reformists of the French Revolution and by Bentham in England underscores that the approach can also be consistent with progressive ideology. This approach can be particularly attractive to progressives where judges are perceived as adjuncts to a conservative executive branch, as in 18th-century France and England, rather than an independent third branch of government.
From the perspective of constitutional interpretation, the most salient feature of this “deductive” methodology is the more willing embrace of the “specific interpretive tasks” listed in Table 6.4.1, rather than resort to “general interpretive reasoning.” Specific interpretive tasks, like those involving the plain meaning of text, verbal maxims, specific historical intent, legislative or executive practice, or the core holdings of precedent, are more amenable to being applied through deductive logic. In contrast, more general interpretive tasks, like those involving determining purposes behind text, resort to background structural arguments, use of concepts which emerge from general historical intent, determination of social practice from various sources, general reasoned elaboration of the law, or prudential consideration of background principles or policies embedded in the law, involve greater use of the inferential logic of inductive reasoning.

For instance, the examples of “mainstream normative” prudential considerations in cases like Planned Parenthood v. Casey, Plyler v. Doe, BMW v. Gore, and Griswold v. Connecticut, discussed at § 5.4.2 nn.117-29, all involved various amounts of inductive reasoning that was used to determine the content of the background moral principles involved in the case. Cases focused more on literal text and specific historical evidence, such as the focus on the literal text of the Bicameralism and Presentment Clauses used in INS v. Chadha, discussed at § 6.3.1 n.113, involved more elements of deductive reasoning. As noted at § 4.1 n.13, the formalist style of interpretation is the style most comfortable with deductive modes of reasoning. The formalist style of interpretation is thus the most comfortable with placing greater reliance on specific interpretive tasks, as noted in Table 6.4.

Of the framing and ratifying generation, the most prominent individual to have adopted a theory of constitutional interpretation similar to a formalist, deductive model of interpretation was Thomas Jefferson. As noted by Professor David Mayer, in The Constitutional Thought of Thomas Jefferson, Jefferson adopted this approach, as did Bentham in England, in order to limit the discretion of judges, whom Jefferson viewed with suspicion. He was concerned that judges, particularly those “weaned on the ‘honeyed Mansfieldism’ of Blackstone,” would use any broader style of reasoning to frustrate the legitimate will of the people.1 For example, as noted at § 3.4 n.91, the natural law style of interpretation embraces the “Rule of Heydon’s Case” regarding equitable interpretation of a statute in light of its “mischief to be remedied.” Blackstone and Mansfield warmly embraced this style of interpretation.2 In contrast, reflecting a more formalist style of interpretation, Jefferson wrote, “Relieve the judges from the rigour of text law, and permit them, with pretorian discretion, to wander into it’s [sic] equity, and the whole legal system becomes uncertain.”3 A few other

---

3 Id. at 1010, quoting a letter from Thomas Jefferson. In a diary from his days at Harvard Law School in 1842, later President Rutherford B. Hayes reported on Jefferson’s view of Chief Justice Marshall’s use of “equity” and other non-formalist natural law reasoning, “Thomas Jefferson said: ‘When conversing with Marshall, I never admit anything. So sure as you admit any position to be good, no matter how remote from the conclusion he seeks to establish, you are gone. So great is his sophistry, you must never given him an affirmative answer, or you will be forced to grant his conclusion. Why, if he were to ask me whether it were daylight or not, I’d reply, “Sir, I don’t know,
Jeffersonians of the same era shared in Jefferson’s theories of interpretation.4

A classic debate during the first two years of our Nation’s founding occurred over whether the Constitution, as a whole, and specifically its provisions dealing with the commerce and spending powers, should be dealt with in a deductive or inductive fashion. Specifically, this debate involved the constitutionality of Congress creating a national bank. Jefferson’s views to President Washington in 1791 on this issue are instructive of Jefferson’s approach to constitutional interpretation. Professor David Mayer noted that in deciding that Congress did not have such a power Jefferson focused on:

the words of Article I, the enumerations of congressional power, construed (as Jefferson would later put it) “according to the plain and ordinary meaning of its language, to the common intendment of the time and those who framed it.” “The incorporation of a bank, and other powers assumed by this bill, have not . . . been delegated to the U.S. by the Constitution,” Jefferson concluded, arguing that they were neither “among the powers specifically enumerated” nor “within either of the general phrases” of Article I [§ 8].5

Regarding the “specifically enumerated” powers, Jefferson noted that the bill to create the national bank laid no taxes, borrowed no money, and regulated no commerce. Regarding the commerce clause, Jefferson adopted a literal definition of commerce. Professor Mayer noted:

The creation of a bank, [Jefferson] maintained, was exactly like the creation of a bushel of wheat or the mining of precious metals; and the creation of a subject of commerce was not the same as the regulation of commerce. “To erect a thing which may be bought and sold, is not to prescribe regulations for buying and selling.”6

Jefferson also gave a literal interpretation to the two “general phrases” of Article I, § 8, the “general welfare” clause and the “necessary and proper” clause. He combined this literal interpretation with contextual arguments of related provisions. The “general welfare” clause provides: “The Congress shall have the Power to lay and collect Taxes, Duties, Imposts and Excises, to pay the Debts and provide for the common Defence and general Welfare of the United States; but all Duties, Imposts and Excises shall be uniform throughout the United States.” Jefferson read this phrase as a single power to “collect Taxes, Duties, Imposts, and Excises,” that power granted “in order” to pay the “Debts, and provide for the common Defence and general Welfare of the United States,” subject to the requirement of uniformity. Interpreting the “general welfare” clause as a separate grant of power beyond a power to tax, which would permit Congress “a distinct and independent power to do any

4 See, e.g., James B. Staab, The Tenth Amendment and Justice Scalia’s “Split Personality,” 16 J.L. & Pol. 231, 244-51 (2000) (citing Virginia Supreme Court Chief Justice Spencer Roane, and House members and Senators John Taylor and John Randolph, all Jefferson allies)

5 Mayer, supra note 1, at 190-91.

6 Id. at 191.
act they please, which might be for the good of the Union,” Jefferson noted, would “render all the preceding and subsequent enumerations of power completely useless” and would run against the “established rule of construction” dealing with related provisions that a phrase should be given a meaning that “will allow some meaning to the other parts of the instrument, and not that which would render all the others useless.”7

The same argument can be made about the language “provide for the common Defence.” If that provision were viewed as a separate grant of power, rather than merely one purpose for which taxes may be raised, it would render superfluous the other provisions in Article I, § 8, cls. 11-16 regarding Congress having the power to declare war, raise and support armies and navies, and provide for organizing, arming, and disciplining of Militias. In addition, under the “last antecedent” maxim of construction, discussed at § 5.2.2.1.A n.37, if the “pay the Debts” and “provide for the general Welfare” clauses were intended to be independent powers, then the modifier regarding “uniform” “Duties, Imposts and Excises” should have been placed just after the listing of the power to “lay and collect Taxes” which it modifies. Inclusion of that language at the end of the passage suggests that there is just one power of collecting taxes, which the final clause of the passage modifies.

Jefferson’s argument regarding the Necessary and Proper Clause of Art. I, § 8, cl. 18 similarly followed a literal interpretation combined with arguments of context. As Professor Mayer noted:

[all of the remaining powers in Article I, § 8] can all be carried into execution without a bank, Jefferson argued; “a bank is not necessary, and consequently not authorised by this phrase.” The argument, of course, turns on the meaning of the adjective necessary, which Jefferson contrasted with convenient. . . . “[I]f such a latitude of construction be allowed to this phrase as to give any non-enumerated power, it will go to every one, for there is no one which ingenuity may not torture into a convenience . . .” [and thus] the necessary and proper clause “would swallow up all the delegated powers, and reduce the whole to one phrase as before observed” in Jefferson’s discussion of the general welfare clause.8

Following a subjective mode of interpretation, Jefferson also relied on evidence of the subjective intent of the drafters of the Constitution. Professor Mayer stated, “Jefferson further argued, relying on a piece of historical information undoubtedly furnished to him by Madison: the power of Congress to incorporate a bank – ‘the very power now proposed as a means’ – was considered and ‘rejected as an end’ by the Constitutional Convention.”9

In contrast to this approach, Alexander Hamilton’s advice to President Washington on why the bank bill was constitutional approached the issue from the perspective of the traditional common-law style of interpretation. This approach emphasized more than did Jefferson “general kinds of reasoning” rather than Jefferson’s focus on “specific interpretive tasks.” Hamilton argued that there are three kinds of governmental powers: “express powers,” “implied powers” and “resulting powers.”

7  Id. at 191-92.

8  Id. at 192-93.

9  Id. at 192.
“Resulting powers” are based upon background principles of government embedded in the law from “the whole mass of the powers of the government, and from the nature of political society.” The policy maxim that governmental powers “ought to be construed liberally, in advancement of the public good” was used to rebut Jefferson’s argument about a restrictive meaning to be given to the Necessary and Proper Clause. Hamilton also indicated that determining express, implied, or resulting powers can be based by induction from “fair reasoning & construction . . . – taking as guides the general principles & general ends of the government.” In addition, Hamilton noted that Jefferson’s interpretation of the Necessary and Proper Clause was “to give it the same force as if the word absolutely or indispensibly had been prefixed to it.” Not only was such a reading inconsistent with the specific interpretive task of resorting to related provisions, since, as noted at § 5.2.2.1.C n.46, the phrase “absolutely necessary” was used in Article I, § 10, but only the phrase “necessary and proper” was used in Article I, § 8, but also such a construction “would beget endless uncertainty & embarrassments” since “few measures of any government would stand so severe a test.”

It was Hamilton’s approach, combined with 20 years of legislative and executive practice and judicial precedents supporting the bank’s constitutionality, that Chief Justice Marshall relied upon in the Court’s decision in 1819 to uphold the power of Congress to incorporate a bank in McCulloch v. Maryland, discussed at § 18.1.2. Following the prevailing mode of interpretation at the time, which prevented resort to legislative or constitutional history, discussed at § 6.2.3.1 n.64, Marshall made no reference in his opinion to the internal deliberations of the Constitutional Convention.

To state that Jefferson relied more on “specific interpretive tasks” than did Hamilton is not to state that Jefferson ignored “general kinds of reasoning.” Like most formalists, he just gave them lesser weight than arguments of literal meaning, verbal maxims, related provisions, or specific historical intent. Of course, regarding arguments of purpose and structural arguments of federalism, Jefferson and Hamilton had very different views. Reflecting a states’ rights view, discussed at § 5.2.2.2.B, Jefferson believed that “the capital and leading object [of the Constitution] was to leave with the States all authorities which respected their own citizens only, and to transfer to the United States those which respected citizens of foreign or other States; to make us several as to ourselves, but one as to all others.” For Hamilton, and Chief Justice Marshall in McCulloch v. Maryland, greater domestic power was reposed in the federal government under the dual theory of sovereignty. McCulloch v. Maryland is discussed further at § 18.1.2.

The “deduction versus induction” issue was important regarding the issue of Congress’ power to incorporate a national bank because a decision on that matter influenced how to view the entire scope of federal power, as discussed at § 18.1.2 text following n.43. In addition, Jefferson’s
approach must be considered against a backdrop of Jefferson’s view that since “the earth belongs in usufruct to the living,” each new generation has the right to make for itself a new Constitution.\textsuperscript{15} Under such a view, the Constitution would not be intended to endure for ages, but only until the next Constitution was adopted. A static, deductive model of interpretation makes better sense in such circumstances, for needed flexibility can come from newly-adopted constitutional language. Jefferson supported such a static model. As Jefferson phrased the point, “on every question of construction, [we] carry ourselves back to the time when the Constitution was adopted, recollect the spirit manifested in the debates, and instead of trying what meaning may be squeezed out of the text, or invented against it, conform to the probable one in which it was passed.”\textsuperscript{16} Thus, for initiatives that Jefferson supported, but which were of questionable constitutionality under his model of interpretation, like use of federal monies for internal improvements, Jefferson “felt that amendment of the Constitution” was the proper means of action, rather than creative judicial interpretation.\textsuperscript{17} Even concerning the Louisiana Purchase, which was a very popular action, Jefferson preferred a constitutional amendment to ratify the purchase. As stated by Professor Mayer, “Although he eventually acquiesced in the Louisiana Purchase without the constitutional amendment that he believed was necessary to sanction it, what is noteworthy is the degree to which he agonized over what may be fairly regarded as a technical question. Indeed, he was willing to jeopardize the acquisition of Louisiana, despite its immense strategic importance, in order to save the principle of strict [textual] construction.”\textsuperscript{18}

As noted at § 4.1 nn.11-12, despite Jefferson’s support, the view of constantly newly-adopted Constitutions was rejected by the framing and ratifying generation, including James Madison. For Madison, “too frequent appeals to the people to ‘new-model’ government would ‘in great measure deprive the government of that veneration, which time bestows on every thing, and without which perhaps the wisest and freest governments would not possess the requisite stability.’”\textsuperscript{19} Chief Justice Marshall remarked in \textit{McCulloch},\textsuperscript{20} “This provision is made in a constitution, intended to endure for ages to come, and consequently, to be adapted to the various crises of human affairs. To have prescribed the means by which government should, in all future time, execute its powers, would have been to change, entirely, the character of the instrument, and give it the properties of a legal code.” Unlike the detailed Constitutional Codes that emerged during the 19\textsuperscript{th} and 20\textsuperscript{th} centuries in civil-law systems, the United States Constitution was not intended to be such a document. Imposing a style of interpretation on it that fits better with documents drafted as a code, like formalism’s focus on literal text, discussed at § 9.2.1.1, would be inconsistent with how the Constitution was drafted. Similarly, requiring formal constitutional amendment for every evolutionary change in

understanding of a natural law concept placed into the Constitution would be inconsistent with how
the framers and ratifiers would have expected the constitutional amendment process to have to work
given a natural law style of interpretation, and thus inconsistent with the degree of difficulty that the
framers chose for the amendment process, as discussed at § 20.1.1.3 nn.20-21.

§ 7.2 The Form or Shape of Constitutional Law Doctrine

The form or shape of constitutional doctrine is dependent on whether the doctrine is phrased as a
categorical rule or a balancing test; as elements to meet or factors to weigh; as a rule or standard;
and as a question of law, a question of fact, or a mixed question of law and fact. As noted at § 4.2.2,
both balancing tests and categorical rules can adopt the structure of elements to meet or factors to
weigh. In the following material, examples of each of these forms or shapes of constitutional
document are presented. Discussion of balancing tests that adopt the structure of elements to meet
or factors to weigh appears at § 7.2.1. Discussion of categorical rules that adopt elements to meet
or factors to weigh appears at § 7.2.2. Discussion of constitutional doctrines phrased as rules versus
standards appears at § 7.2.3. Discussion of issues arising from doctrine being phrased as questions
of law, questions of fact, or mixed question of law and fact, and the related issue of whether the
document adopts a subjective or objective approach to factual or legal issues, appears at § 7.2.4.

§ 7.2.1 Balancing Tests in Constitutional Doctrine: The “Base Plus Six” Model of
Review

As discussed at § 4.2.1 nn.23-24, a balancing test is a test that involves a cost-benefit analysis of
means and ends – in Professor Aleinikoff’s terms “a head-to-head comparison with competing
interests.”21 The logic of this cost-benefit analysis results in every balancing test including three
basic components. First, there is question of what principles or policies are involved, that is, what
are the ends to be achieved by the doctrine. Against the backdrop of these ends, the means of the
action under review are examined both for the benefits achieved by the means (the benefit) and the
burdens imposed by the means (the cost) as part of the cost-benefit analysis. Thus, balancing tests
inevitably involve a three-part consideration of ends, benefits, and burdens.

As discussed at § 4.2.2, two kinds of balancing tests are possible. One kind of balancing test
structures the three considerations of ends, benefits, and burdens as factors to weigh. This is the
classic kind of balancing test, where consideration of ends, benefits, and burdens are thrown together
and weighed one against the other. As noted at § 4.2.2 nn.28-30, the procedural due process cases
based upon Mathews v. Eldridge and the dormant commerce clause cases involving Pike v. Bruce
Church’s “clearly excessive burden” analysis are classic examples of factor balancing tests.

In applying this kind of balancing test, there is an issue of whether the challenger has the burden of
establishing that the governmental action is unconstitutional, or whether the government has the
burden of establishing that the action is constitutional. Sometimes, as in each of the two cases cited
above, the burden is on the challenger to establish the unconstitutionality of the governmental action.

21 T. Alexander Aleinikoff, Constitutional Law in the Age of Balancing, 96 Yale L.J. 943, 945
Cases under the Contracts Clause that involve the government substantially impairing the contract obligations of their own contracts have a similar structure. For example, in \textit{United States Trust Co. v. New Jersey},\textsuperscript{22} discussed at § 22.1.4 nn.29-30, the challenger has the burden of showing – given the three-part factor balancing of the state’s “legitimate” interest; the statute’s means, including whether the benefits of the statute could be served “equally well” by an “evident and more moderate course”; and the “burden” on individual contract rights – that the burden was not “reasonable and necessary” given the statute’s benefits.

However, sometimes the burden shifts to the government. For example, in dormant commerce clause cases where the state regulation facially discriminates against interstate commerce, such as \textit{Maine v. Taylor},\textsuperscript{23} discussed at § 20.3.2.1.D n.194, the Court balances (1) the state’s legitimate interest in the regulation; (2) whether the benefits could be achieved as well by available non-discriminatory alternatives; and (3) the burden on interstate commerce, but the burden shifts to the government to establish the constitutionality of its regulation. In the First Amendment area, when considering the right of government workers to speak on matters of public concern, the government has the burden to establish in cases like \textit{Pickering v. Board of Education of Will County, Illinois},\textsuperscript{24} discussed at § 30.2.2.1 nn.17-2, that (1) the government’s “legitimate” ends; (2) given the means by which the governmental action achieved these benefits, including whether the ends “could be promoted through less drastic action”; (3) “outweigh” the “burden” on the individual’s First Amendment rights. The Fifth Amendment Takings Clause balancing test in \textit{Dolan v. City of Tigard},\textsuperscript{25} discussed at § 22.2.5.1 nn.9-13, requires the government to establish a “rough proportionality” between the government’s burden on the individual and the individual’s burden on society. This test was explicitly related in \textit{Dolan} to search and seizure doctrine,\textsuperscript{26} which places the burden on the government to establish under the Fourth Amendment balancing test that any search and seizure is “reasonable,” discussed at § 23.2.1.1 n.59.

A second kind of balancing test structures the balancing in terms of elements to meet. For example, as noted at §§ 26.1.1.1 n.12 & 26.1.1.2 nn.52-53, under the Equal Protection Clause the Court has organized the three inquiries into ends, benefits, and burdens as separate elements to meet. Thus, under minimum rational review, the legislation has to (1) advance legitimate government ends, (2) be rationally related to advancing these ends, and (3) not impose irrational burdens on individuals. Under intermediate review, the legislation must (1) advance important or substantial government ends, (2) be substantially related to advancing these ends, and (3) not be substantially more burdensome than necessary to advance these ends. Under strict scrutiny, the statute must (1) advance compelling governmental ends, (2) be substantially and directly related to advancing these

\end{thebibliography}
ends, and (3) be the least restrictive effective means to advance these interests.

In its phrasing of intermediate review, the Court has used the term “narrowly drawn” to reflect both the substantial relationship and not substantially more burdensome than necessary elements of intermediate scrutiny. In its phrasing of strict scrutiny, the Court has used the terms “precisely drawn” or “necessary” to reflect the fact that at strict scrutiny the statute must directly advance its ends and be the least restrictive effective means of doing so. Unfortunately, sometimes the Supreme Court has used the phrase “narrowly drawn” under strict scrutiny. To reflect the rigor of strict scrutiny analysis, and to separate this approach from the more flexible “substantially” narrowly drawn analysis used at intermediate review, the terms “precisely tailored” or “necessary” are better terms to use than “narrowly tailored” for the strict scrutiny “least restrictive alternative” test. The term “necessary” is used in the rest of this book when discussing the strict scrutiny test.

As discussed at §§ 26.1.1.1 n.13-21 & 26.1.1.2 nn.44-51, the first inquiry under each of these three balancing tests is what governmental ends support the statute’s constitutionality. Depending on the standard of review, the governmental interests must be legitimate or permissible; important, substantial, or significant; or compelling or overriding. To reflect the most common terminology used by the Court, the terms legitimate governmental interests, important or substantial governmental interests, and compelling governmental interests are used in the remainder of this book. Of course, the governmental interest to support a statute may be illegitimate, and thus not support the statute under any standard of review. For example, in a sequence of cases, the Court has stated that prejudice against interracial marriage, prejudice against the mentally impaired, and animus against politically unpopular groups, such as hippies in communes, or homosexuals, are illegitimate governmental interests.

---

27  See, e.g., Board of Trustees of the State Univ. of New York v. Fox, 492 U.S. 469, 480 (1989) (“narrowly drawn” phrased used).

The second inquiry under each of these three balancing tests concerns the relationship between the statute’s means and how it advances those governmental ends. Depending on the standard of review, the statute must have a rational relationship to its ends, a substantial relationship, or a substantial and direct relationship. 32 This relationship inquiry has two parts: (1) the extent to which the statute fails to regulate all individuals who are part of some problem (the underinclusiveness inquiry); and (2) the way in which the statute serves to achieve its benefits for those whom the statute does regulate (the service inquiry). 33 As discussed at § 27.1.2.1 nn.43-45, though under a pristine analysis the Court probably should consider only the underinclusiveness inquiry under Equal Protection Clause analysis, and reserve the service inquiry for Due Process Clause analysis, the Court has not typically disciplined its analysis in this way.

The third inquiry focuses on the burdens imposed by the statute’s means. Depending on the standard of review, the statute’s burden must be not irrational, not substantially more burdensome than necessary, or the least restrictive burden that would be effective in advancing the governmental interests. 34 This burden inquiry also has two parts: (1) the extent to which the statute imposes burdens on individuals who are not part of the problem that is being regulated (the overinclusiveness inquiry); and (2) the amount of the burden on individuals who are properly regulated by the statute (the oppressiveness or restrictiveness inquiry). 35 Again, though under a pristine analysis the Court probably should consider only the overinclusiveness inquiry under Equal Protection Clause analysis, and reserve the restrictiveness inquiry for Due Process Clause analysis, the Court has not disciplined its analysis in this way either. As discussed at § 27.1.2.1 nn.43-45, in theory a statute that is neither underinclusive nor overinclusive, but which only minimally serves the government’s interests, or greatly burdens individuals, does not deny a citizen equal protection of the laws, because the law is equally applied to all similarly situated parties. It may, however, deny the citizen substantive due process if the burden is sufficiently great compared to the minimal benefit that is achieved.

While these three standards of review are clearly identified in modern Supreme Court doctrine, two other standards of review have been used in modern doctrine. These standards reflect variations on the three inquiries of governmental interests, relationship to benefits, and burdens. As noted, under intermediate review, the legislation must: (1) advance important or substantial government interests, (2) be substantially related to advancing those interests; and (3) not be substantially more burdensome than necessary to advance these interests. Strict scrutiny requires an increased level of scrutiny for each of these three questions. Under strict scrutiny, the statute must: (1) advance compelling governmental interests; (2) be directly related, as well as substantially related, to advancing those interests; and (3) be the least restrictive effective means of doing so.

32 See Kelso, supra note 30, at 1288-97.
33 Id. at 1281.
34 Id. at 1298-1305.
35 Id. at 1281.
The first additional level of review continues the intermediate level of scrutiny for elements one and three of the balancing test, but increases the level of scrutiny under the second prong from the intermediate level of substantial relationship to the strict scrutiny level of direct relationship. This is the test used to determine the constitutionality of commercial speech regulations. As the Court stated in Central Hudson Gas & Electric Corp. v. Public Service Commission,36 discussed at § 30.3.2.1 nn.228-30, “[W]e ask whether the asserted governmental interest is substantial. [Next] we must determine whether the regulation directly advances the governmental interest asserted, and whether it is not more extensive than necessary to serve that interest.” Because it adds one strict scrutiny component (direct relationship) to an otherwise intermediate test, this level of review can be called intermediate review with bite. Use of the terminology “with bite” to reflect a heightened version of a level of review is common in modern constitutional terminology.37

A second additional level of review adopts the strict scrutiny requirement for both elements one and two, but continues the intermediate level of scrutiny for element three. Because this level adopts two of the three levels of strict scrutiny, but waters down element three to an intermediate level of inquiry, this additional level can be called "loose" strict scrutiny. The most recent use of this standard of review occurred in the equal protection case of Bush v. Vera,38 discussed at § 26.2.1.5 nn.278-81. In that case, although generally applying a strict scrutiny compelling governmental interest analysis to a case of race discrimination, the majority, per Justice O’Connor, “reject[ed], as impossibly stringent, the District Court’s view of the narrow tailoring requirement, that ‘a district must have the least possible amount of irregularity in shape, making allowances for traditional districting criteria.’” Instead, the Court adopted the intermediate prong three requirement that the racial redistricting only not be “substantially more [burdensome] than is ‘reasonably necessary.’”

Two earlier Supreme Court cases implicitly adopted such a loose strict scrutiny option in the context of race-based affirmative action in the employment context. In Paradise v. United States,39 discussed at § 26.2.1.4.C nn.229-32, a four-Justice plurality stated that despite a strict scrutiny approach the affirmative action remedial plan was not required to satisfy the least restrictive alternative test. In Fullilove v. Klutznick,40 discussed at § 26.2.1.4.B nn.220-23, three Justices did not apply a least restrictive alternative analysis in a case they said was consistent with a strict scrutiny approach. However, in an opinion authored by Justice O’Connor, the Court clearly adopted traditional rigorous strict scrutiny for race-based affirmative action in the context of employment of construction workers in Adarand Constructors, Inc. v. Pena,41 discussed at § 26.2.1.4.C nn.242-

45, following Justice O’Connor’s dissent in Paradise, discussed at § 26.2.1.4.C nn.233, where she criticized the Paradise plurality for not adopting traditional rigorous strict scrutiny in a race-based affirmative action case. Despite this criticism of loose strict scrutiny in Paradise and Adarand, the adoption by Justice O’Connor of loose strict scrutiny in her majority opinion in Bush v. Vera suggests that this standard of review has become part of modern Supreme Court doctrine, at least for racial redistricting cases.

This development of intermediate review with bite and loose strict scrutiny is a good thing for purposes of predictable and principled application of the law regarding standards of review. The addition of intermediate review with bite and loose strict scrutiny creates four clearly defined levels of heightened scrutiny, each one more rigorous than the preceding standard of review on only one element of the three-pronged standard of review balancing test. Thus, there is basic intermediate review (with all three elements of the standard of review reflecting an intermediate approach toward the governmental interests, benefits, and burden inquiries); intermediate review with bite (two elements intermediate, the benefit element strict scrutiny); loose strict scrutiny (two elements strict scrutiny, only the burden inquiry intermediate); and traditional strict scrutiny (all three elements strict). These levels of scrutiny provide a step-ladder approach toward standards of review, with each higher level of scrutiny clearly more rigorous than the preceding level.

Each of these levels of scrutiny is also clearly defined in terms of doctrinal inquiries that have been discussed in prior cases. These levels thus provide predictability, along with flexibility, which are useful goals in developing an approach toward standards of review. Furthermore, because each level is composed of elements which are used in many cases, there are plenty of precedents available on how to apply the standard, even if few cases have used that precise standard. For example, although few cases have applied loose strict scrutiny, there are plenty of strict scrutiny cases on “compelling” governmental interests and “directly related” advancement of benefits, and plenty of intermediate review cases on what the “not substantially more burdensome than necessary” test requires.

Taken together, this discussion has suggested there are seven different balancing tests used by the Supreme Court in various cases. These seven tests can be organized in terms of the level of rigor required for the governmental action to be constitutional. At one extreme is the minimum rational review balancing test. Under this test, the governmental action is constitutional unless the challenger can establish that the action is not supported by any legitimate governmental end, or is not rationally related to advancing a legitimate governmental end, or imposes an irrational burden on individuals. As discussed at §§ 26.1.1.1 nn.22-24 & 26.4.1 n.439, in applying this test, the Court gives “substantial deference” to the government’s judgment concerning the legitimacy of the ends and the rationality of the means. As discussed at § 26.1.3 nn.83-91, the Court permits “any conceivable legitimate end” to be used to make the action constitutional.

---

Slightly more rigorous than this test are the two factor balancing constitutional tests. These tests are more burdensome on the government than minimum rational review because even if the governmental action is rationally related to advancing a legitimate governmental end and does not impose an irrational burden on individuals, if the burden is too great and the benefit is too small, the governmental action will still fail the factor balancing test because the burden will be “clearly excessive,” as under dormant commerce clause review, discussed at § 20.3.2.1.D nn.196-208; or not “reasonable and necessary,” as under Contracts Clause review, discussed at § 22.1.4 nn.29-33; or not “roughly proportionate,” as under Takings Clause review, discussed at § 22.2.5.1 nn.97-103; or some other phrasing of not being “reasonable,” as under Fourth Amendment search and seizure doctrine, discussed at § 23.2.1.1 nn.58-59.

As discussed in Part IV, when considering each of these doctrines in greater depth, the Court does not give the same kind of “substantial deference” to the government’s judgment regarding either the ends advanced or the means employed when applying these factor balancing tests. Nevertheless, some “deference” to the government is still given, discussed at § 21.2.4.3 nn.110-12. However, these tests are less burdensome on the government than intermediate review or strict scrutiny, since both of the factor balancing tests permit the governmental action to be justified using legitimate government interests, rather than the important or substantial governmental interests of intermediate review, or the compelling governmental interests of strict scrutiny.

Because the two factor balancing tests permit resort to legitimate governmental interests, they are best understood as versions of rational review. To give these tests names which reflect that aspect of their approach, the first factor balancing test, where the burden is still on the challenger to prove the unconstitutionality of the governmental action, similar to the burden under minimum rational review, can be called “basic rational review” or “second-order” rational review. It is “basic” because each of the various factor balancing tests adopt some linguistic version of the requirement that the governmental action be basically “reasonable” or not “excessive,” given a balancing of means and ends. It is “second-order” because it is the least rigorous of the balancing tests that are more rigorous than minimum rational review. The second factor balancing test, where the burden shifts to the government to justify the constitutionality of its action, can be called “rational review with bite” or “third-order” rational review, since all the linguistic variations of this balancing test place the burden on the government, and thus are more rigorous than basic rational review.

The four kinds of heightened scrutiny tests of intermediate review, intermediate review with bite, loose strict scrutiny, and strict scrutiny all involve cases where the government has the burden of proving the constitutionality of its action. They all require more than mere legitimate interests to support the governmental action. Thus, they are all more rigorous than any of the three versions of rational review: minimum rational review, basic rational review, and rational review with bite. In sum, there are thus seven different balancing tests that the Court applies in various cases.

These seven balancing tests – the “base” of minimum rational review, “plus six” other standards of heightened review – are summarized in Table 7.2:

</table>
In deciding which of these seven balancing tests to apply, the Court considers a range of at least nine factors that suggest either that the base level of minimum rational review should be applied, or one of the six more rigorous standards of review should be used. These nine factors are discussed at § 26.1.2.1 nn.57-67. In addition to this analysis, sometimes the Court will use an elements to meet approach to determine if any balancing test needs to be triggered. For example, as discussed at § 22.1.4 nn.27-28, not every burden on contract rights today triggers application of the Contracts Clause balancing test. Only “substantial impairments” of contract rights trigger a Contracts Clause analysis. Once this element of “substantial impairment” is met, the question then becomes under the nine-factor analysis whether considerations like deficiencies in the political process suggest that a second-order rational review balancing test should be used, as for government infringement of its own bond obligations, or whether only a minimum rational review test should be employed, as is standard today under the Contracts Clause for routine government regulation. As discussed at §§ 22.1.1-22.1.5, during the traditional natural law and formalist eras, the Court applied a categorical Contract Clause doctrine. Only the modern Contracts Clause doctrine reflects this balancing approach. As noted at § 4.2.1 nn.33-35, traditional natural law judges and formalist judges had a greater predisposition for categorical tests rather than balancing approaches, while modern natural law judges and instrumentalist judges have a greater predisposition for balancing tests.

Given this understanding of the Court’s current practice regarding these seven balancing tests of the constitutionality of governmental action, a danger of increased confusion and unpredictability exists if proliferation of levels continues. This could happen if:

1. The Court adopts additional kinds of inquiries different than the three basic inquiries used under minimum rational review, intermediate scrutiny, and strict scrutiny (e.g., language relating to an “exceedingly persuasive justification” in United States v. Virginia, rather than requiring either legitimate, important, or compelling governmental interests, discussed at § 21.2.4.1);
2. Additional mixings and matchings occur for different kinds of scrutiny for the governmental interests, relationship to benefits, and burden inquiries (e.g., use of a rational relationship to an important governmental interest test, as phrased in Timmons v. Twin Cities Area New Party, discussed at § 21.2.4.2); or
3. The "base plus six" standards are not clearly acknowledged (discussed at § 21.2.4.3).

Unfortunately, each of these concerns are real, given some language in current Supreme Court cases. These concerns are addressed in depth at §§ 21.2.4.1-21.2.4.3, as part of the discussion there of the general structure of individual rights doctrine in constitutional law. For purposes of the discussion here, it is useful to note that it would be best for the Court to stick with seven levels of review and not engage in any unnecessary and confusing additional proliferation. Given the three basic inquiries of governmental ends, relationship to benefits, and burdens, and three levels of scrutiny for each inquiry (i.e., legitimate, important, or compelling governmental ends; rational, substantial, or direct relationship to benefits; and not irrationally burdensome, not substantially more burdensome than necessary, or least restrictive alternative), mathematically there are 27 possible permutations of levels of review. With the addition at rational review of the factor balancing tests of second-order and third-order rational review, their various linguistic variations, and the possibility of placing the burden of proof on the challenger or the government in any of these levels of scrutiny, the number of possible permutations rises to more than 64. Practical reasonableness, however, a
hallmark of the common law,\textsuperscript{43} suggests that the Court should resist such a proliferation in possible
tests where there is no demonstrated need for such additional levels. Of course, this does not mean
that the Court should not adopt a variation within a level of review if institutional needs so counsel.
For example, in \textit{Fiallo v. Bell},\textsuperscript{44} the Court noted the extra level of deference, more than the usual
“substantial deference” of minimum rational review, given to congressional regulations of
immigration and naturalization, where “Congress regularly makes rules that would be unacceptable
if applied to citizens.”

If seven levels of review are going to be used, the seven levels most in current use provide the
soundest foundation on which to base doctrine. Of course, the Court could choose to scrap the levels
of review, and adopt either a “sliding scale” approach or some new theory entirely separate from the
current doctrinal approach.\textsuperscript{45} Practical considerations and historical experience suggest such a move
would be neither a good idea nor likely to be adopted by a majority of the Court.

As typically defined, a sliding scale approach “considers such factors as the constitutional and social
importance of the interests adversely affected and the invidiousness of the basis on which the
classification was drawn. . . . Those who favor a sliding scale believe that it would lead to more
candid discussion of the competing interests and therefore provide overall better decision making.”\textsuperscript{46}
Such a sliding scale approach would not be a good idea because it provides too little guidance for
lower courts faced with resolving constitutional disputes and thus provides lower courts with too
much discretion in applying the sliding scale standard. This is particularly true given the growth in
the dockets of the lower federal courts, which makes it “essentially impossible for the Court to
engage in meaningful ‘error correction.’”\textsuperscript{47}

Recent proposals to adopt a new theory of constitutional review are most often made by progressive
constitutional theorists disappointed at the conservative result of some current doctrinal outcome.
With regard to such proposals for the Court to abandon current precedents and strike out on its own,

Professor John Hart Ely’s caution of two decades ago is still relevant: “[T]here is absolutely no assurance that the Supreme Court’s life-tenured members will be persons who share your values.”48

In any event, the fact that versions of the standards of review appear in so many doctrines suggests strong institutional support at the Supreme Court for doctrine to be developed in that way. Further, unlike the experience in France during the French Revolution, where much old doctrine was thrown out in favor of new doctrine developed by non-judicial actors and imposed through the Napoleonic Code, there are few examples in our common-law system of judges rejecting doctrines so well-developed and entrenched as the standards of review. Perhaps the only similar example would be the Supreme Court’s rejection in 1937 of the formalist-era Court’s substantive due process approach in *Lochner v. New York* and commerce clause approach in cases like *Hammer v. Dagenhart*. As discussed at § 14.2.3 nn.59-63, that rejection was a product of the well-known constitutional conflict between President Roosevelt and the Court, including President Roosevelt’s proposal of the so-called “The Court Packing Plan of 1937.” No conflict of that magnitude is on the horizon today.

§ 7.2.2  **Categorical Tests in Constitutional Doctrine**

As noted at § 4.2.1, doctrines phrased as categorical tests, like doctrines phrased as balancing tests, can adopt an approach of either elements to meet or factors to weigh. When a doctrine is phrased as a set of elements, this means that for the doctrine to apply the court must conclude that each element of that doctrine is met independently of the other elements. In the simplest case, these elements arise from the plain language of the Constitution or the ordinary dictionary definition of words used in the Constitution.

For example, as noted at § 6.3.1 n.113, and discussed in greater depth at § 19.4.2.1, the Court held in *INS v. Chadha*49 that a one-house veto by Congress of an INS determination regarding deporting an individual from the United States was unconstitutional. The Court reached this conclusion by adopting a categorical rule that all legislative action must comply with the Bicameralism and Presentment requirements in Article I of the Constitution. The Court adopted this test primarily because the plain language of the Constitution states that all legislation must result from a step-by-step deliberative process of both houses passing the same bill (bicameralism) and then sending that bill to the President for signature or veto (presentment). A one-house, or even a two-house, congressional veto of executive branch action does not literally comply with that process.

A doctrine where the ordinary dictionary definition of words used in the Constitution determines the elements to meet is the categorical rule against Bills of Attainder. As discussed at § 23.2.2.1, the text of the Constitution merely states a ban on legislative “Bills of Attainder.” The plain language

---

in the Constitution does not define that term any further. However, based upon the ordinary
dictionary definition, a Bill of Attainder is a “legislative punishment of an identifiable individual.”
Thus, in cases like *Nixon v. Administrator of General Services*, the Court has phrased the Bill of
Attainder doctrine as requiring that the act must be “legislative”; it must be directed against “an
identifiable individual”; it must constitute “punishment.” Each of these elements must be met
independently of the others for the act to be unconstitutional.

Where the Constitution’s text is not so specific or susceptible to easy dictionary definition, the Court
is faced with the choice of whether to phrase the categorical test in terms of elements to meet or a
set of factors to weigh. Because the text of the Constitution is not so specific in these kind of cases,
the general judicial predispositions of the Justices become more critical. As discussed at § 4.2.2,
the formalist, traditional natural law, and Holmesian styles of interpretation have a greater
predisposition for doctrine phrased as elements to meet than the modern natural law and
instrumentalist styles of interpretation, which are more willing to embrace doctrine phrased as
factors to weigh.

One example of this difference is the political questions doctrine. As discussed at §§ 17.3.4.1-
17.3.4.3, during the traditional natural law, formalist, and Holmesian eras of American law, 1789-
1954, the categorical ban on the Court deciding political questions was phrased in terms of whether
certain elements were met. In the words in 1803 of *Marbury v. Madison*, the test was whether
there exists “a constitutional or legal discretion” so that “nothing can be more perfectly clear than
that their acts are only politically examinable.” In political question cases like *Luther v. Borden* in
1849, or *Coleman v. Miller* in 1939, the Court refused to adopt a factor weighing approach. Since
1954, the political questions doctrine has been phrased as a weighing of factors, as discussed at §
17.3.4.4. Thus, in 1962 in *Baker v. Carr*, the Court stated that the factors to weigh under the
political questions doctrine concern whether: (1) there is a textually demonstrable constitutional
commitment to a coordinate branch of government; (2) there is a lack of judicially manageable
standards; (3) the issue calls for resolution of a non-judicial policy decision; (4) the decision would
represent a lack of respect for other branches of government; (5) there is need for finality; and (6)
there is a potentiality of embarrassment from multifarious pronouncements on the particular issue.

A second example of a categorical approach to doctrine that uses factor analysis today is the state
action doctrine. The Court has stated as a categorical matter that to bring a case under most
individual rights provisions in the Constitution state action is needed. As discussed at § 21.1.2.5
nn.38-40, in *Edmonson v. Leesville Concrete Co., Inc.*, the Court summarized modern state action
doctrine as involving a consideration of three factors to determine if state action exists: (1) “the

---

51 5 U.S. (1 Cranch) 137, 166 (1803).
52 *Coleman*, 307 U.S. 433, 454 (1939); *Luther*, 48 U.S. (7 How.) 1, 42 (1849).
extent to which the actor relies on governmental assistance and benefits”; (2) “whether the actor is performing a traditional governmental function”; and (3) “whether the injury caused is aggravated in a unique way by the incidents of governmental authority.” Discussed at § 21.1.2.5 n.42, the Court similarly adopted a factor weighing approach in Brentwood Academy v. Tennessee Secondary School Athletic Association, focusing on the “entwinement” of the private and governmental actors. “Entwinement” is best understood as an aspect of factor (1) of the Edmonson opinion. This factor approach was criticized in Brentwood by formalist Justices Thomas and Scalia, Holmesian Chief Justice Rehnquist, and occasionally formalist-leaning natural law Justice Kennedy. In dissent, they adopted a phrasing of state action doctrine more in terms of elements, stating, “[W]e have found a private organization’s acts to constitute state action only when the organization performed a public function; was created, coerced, or encouraged by the government; or acted in a symbiotic relationship with the government. Justice Kennedy’s formalist leanings are discussed at § 12.4.1.

Sometimes, in deciding what kind of categorical test to adopt, the Court has explicitly considered a number of factors that led to that particular conclusion. As noted at § 4.2.1 n.31, some commentators have called this “definitional” balancing, exemplified by the holding in New York v. Ferber that a balancing of interests suggests that the distribution of child pornography is not protected by the First Amendment. To the extent that Ferber adopted a categorical view that child pornography is not protected by the First Amendment, Ferber is best conceived as adopting a categorical approach to doctrine based upon a weighing of factors that led to that decision. Professor Tribe has used the term “categorical definitions” to describe this kind of case.

In addition to Ferber, another good example of this kind of case involves the conclusion in Nixon v. Fitzgerald that the President should have absolute immunity from civil damage action lawsuits for official actions taken while President. As discussed at § 20.1.4.2.A nn.66-68, the Court in Fitzgerald balanced a number of factors to conclude that a categorical absolute immunity should apply in these kind of cases. However, as discussed at § 20.1.4.2.A nn.60-61, 69-74, these same factors suggested to the Court that only a factor balancing qualified immunity approach was appropriate for Presidential immunity when raised in the context of a criminal trial, as in United States v. Nixon, or for unofficial actions, including unofficial actions taken by the President before the President took office, as in Clinton v. Jones.

56 Id. at 305 (Thomas, J., joined by Rehnquist, C.J., and Scalia & Kennedy, JJ., dissenting).
§ 7.2.3  Rules versus Standards in Constitutional Doctrine

As noted at § 4.2.3, a third issue that courts must confront when faced with the task of defining doctrine is whether to phrase some part of the doctrine as a rule or a standard. As typically defined, doctrines are phrased as rules when the elements or factors embody specific definitions capable of relatively mechanical application. Doctrines phrased as standards embody more general definitions, such as that behavior must be reasonable. Thus, in the classic torts example, Holmes’ view that automobile drivers should “stop, look, and listen” at railroad crossings was an example of a rule; Cardozo’s view that the negligence of automobile drivers at railroad crossings should be based upon whether they acted “reasonably under the circumstances” was an example of a standard.60

Not surprisingly, given their focus on reducing judicial discretion through analytic, logic treatment of settled positive law, formalists have the greatest predisposition to frame doctrine as rules. As Professor Sullivan noted in her classic article, The Justices of Rules and Standards, “Justice Scalia, more than any current Justice, favors operative rules and condemns operative standards.”61 As Justice Scalia stated in an article entitled The Rule of Law as a Law of Rules, “[B]y making the mode of analysis relatively principled or relatively fact-specific, the courts can either establish general rules or leave ample discretion for the future.”62 In her article, Professor Sullivan discussed a number of examples where Justice Scalia has preferred doctrine to be phrased as rules, including cases involving the dormant commerce clause, separation of powers, the Free Exercise Clause, and Takings Clause doctrine.63 Professor Sullivan concluded:

These . . . examples taken together suggest that Justice Scalia’s model for judicial rulemaking in constitutional law is that not of the common law, but of the civil code. Here is the codifier at work: first, state the general rule; second, rationalize the existing messy pattern of cases by grandfathering in a few exceptions and doing the best you can to cabin their reach; and third, anticipate future cases in which the rule might be thought problematic and dispose of them in advance by writing sub-paragraphs and sub-sub-paragraphs qualifying the rule with clauses beginning with “unless” and “except.”64

63  Sullivan, supra note 61, at 83-89.

64  Id. at 87.
Professor Sullivan noted in her 1992 article, “If Justice Scalia leads the charge for rules on the current Court, Justice Stevens is his most consistent, standard-bearing antagonist.” With respect to each example cited by Professor Sullivan where Justice Scalia favored a rule-based approach, Justice Stevens was on the opposite side, endorsing a standard-based approach. In a number of these cases, Justice Stevens also supported a factor balancing approach, as is the case under the dormant commerce clause *Pike v. Bruce Church* test, which Justice Scalia rejects, as discussed at § 20.3.2.3 nn.237-38. As indicated in Table 4.1, instrumentalist judges have a predisposition for balancing tests, factor analysis, and standards. Professor Sullivan noted Justice Stevens’ “commitment to multi-factored contextual analysis and his opposition to rule-based or categorical decisionmaking.”

Of course, doctrine phrased as standards of “reasonableness” creates concerns similar to those discussed at § 3.3 nn.59-62 regarding the difficulty of determining Cardozo’s “objective social values” to guide instrumentalist decisionmaking. For instrumentalists, that difficulty would not be viewed as a major problem, because the judge can resort to “objective social values” to determine the “reasonableness” of behavior. For the other decisionmaking styles, that difficulty raises a more serious question whether the judge has too much discretion in judicial decisionmaking.

As discussed at § 3.4 nn.81-84, 93-106, the natural law approach handles this problem by limiting judicial discretion through great respect to precedent; use of background moral principles only embedded in the law, not background social policies; and by resort to custom. Regarding what defense the “standard-favorers” might offer against the criticism that use of standards gives judges too much discretion, Professor Sullivan noted:

> The answer that the defenders of common-law reasoning gave was something like “custom,” or widely shared social practices. The usual criticism of such notions is that in a deeply heterogenous society we have no single culture and so reliance on “custom” is no constraint at all. Nonetheless, Justices O’Connor, Kennedy, and Souter seem to believe that, however heterogeneous our culture, some concepts are so entrenched, so basic, like bedrock, that they furnish points of reference from which those who apply standards can proceed. When judges rely on such bedrock concepts, they need not worry that they are making it all up out of whole cloth. Consider, for example, coercion . . . .

A collection of a number of these “bedrock” moral principles – such as “no person should be permitted to profit from his own wrong”; “promises should be kept”; and “arbitrary coercion is wrong” – is presented at § 12.2.2.3 text following n.81. The relationship between social custom and reason under a natural law approach is discussed at § 15.4.1 nn.50-56.

As noted at § 4.2.3 n.60, because of their desire for certainty in the law, Holmesian judges have a predisposition for doctrine to be phrased more in terms of rules, rather than standards. Holmes’ preference for the “stop, look, and listen” rule is just one of a number of examples of Holmes’

---

65 *Id.* at 88.

66 *Id.*

67 *Id.* at 93.
preference for rules over standards. On the other hand, the functional aspect of the Holmesian approach means that a Holmesian judge may be slightly more willing to embrace a standard-like approach if that would better do justice to the functional purposes behind the law. Thus, among the four areas cited by Professor Sullivan at § 7.2.3 n.63, Holmesian Justices like Chief Justice Rehnquist and Justice White have been willing to embrace the modern dormant commerce clause doctrine, discussed at § 20.3.2.2, or modern separation of powers doctrine, discussed at § 19.1, which reject Justice Scalia’s formalist, rule-based approach to these doctrines. On the other hand, these Holmesian Justices have been willing to embrace Justice Scalia’s rule-based approach in the context of cases involving the Free Exercise Clause, discussed at § 32.2.2.5 nn.253-56, or Justice Scalia’s rule-based approach to the Takings Clause in *Lucas v. South Carolina Coastal Council*, discussed at § 22.2.5.1 nn.95-96.

## § 7.2.4 Law versus Fact in Constitutional Doctrine

As discussed at § 4.2.4, a fourth issue that courts must confront when faced with the task of defining the content of any legal doctrine is whether the relevant rule or standard, embedded in some element to meet or factor to weigh, which is part of a categorical test or a balancing approach, is phrased as an issue of fact or an issue of law. If the doctrine is phrased as an issue of fact, resolution of that doctrine will be initially for the trier of fact. Under usual rules of civil procedure, that finding will be entitled to deference on appeal and the appellate court will apply some variation of a “clearly erroneous” standard, which requires finding that the trier of fact “abused its discretion” in some manner. In contrast, if the doctrine is phrased as an issue of law, it will be decided by the trial court judge, and will not be entitled to deference on appeal. Instead, the appellate court will decide “de novo” if the trial court’s determination on the issue of law was “erroneous” or not.

The Ninth Circuit Court of Appeals *en banc* decision in *Southwest Voter Registration Education Project v. Shelley*, which overturned the panel decision to stop the California recall election of Governor Gray Davis, is a good example of this aspect of constitutional doctrine at work. The *en banc* opinion noted that a trial court’s decision to grant or deny a preliminary injunction is a question of fact reviewed under the “abuse of discretion” standard, while the district court’s interpretation of legal principles is a question of law for “de novo” review. Since the issue before the court was whether or not the district court’s decision denying a preliminary injunction was correct, the “abuse of discretion” standard was appropriate to apply, and the *en banc* opinion concluded that “the district court did not abuse its discretion in concluding that plaintiffs will suffer no hardship that outweighs the stake of the State of California and its citizens in having this election go forward as planned.”

This issue of whether the relevant aspects of any particular doctrine are questions of law or fact will be discussed for each doctrine in Part IV, Chapters 17-32. As will be seen, certain doctrines are phrased as “mixed questions of law and fact.” With respect to these doctrines, the relevant question is what level of deference is given on appeal, that is, whether or not the district court’s determination of this mixed question of law and fact is given deference on appeal. For example, as discussed at § 20.3.2.1.D nn.204-08, a district court’s factual decisions on how strong a state interest is for purposes of applying the *Pike v. Bruce Church* factor balancing test under dormant commerce clause

---

68 344 F.3d 914, 917-20 (9th Cir. 2003).
review is a question of fact entitled to deference on appeal. However, the question whether that state regulation constitutes a “clearly excessive” burden on interstate commerce is viewed as a “mixed question of law and fact” given no deference on appeal and examined under a “de novo” standard.

For some doctrines, whether the issue is one of law or fact may be a matter on which the Court has not given clear guidance. For example, under the rational review, intermediate review, and strict scrutiny element balancing tests, the issue of whether some governmental interest is illegitimate, legitimate, important, or compelling is not clearly stated to be a question of law or fact. Similarly, the issues of whether the statutory means are rationally, substantially, or directly related to the ends, or whether the burden is irrational, substantially more burdensome than necessary, or the least restrictive alternative, are not clearly questions of law or fact.

As discussed at § 26.1.4 nn.100-02, the better view is that the extent of the government’s benefit, and conclusions about how much the government’s actions advance governmental ends or burden individuals in their operation, are fact questions subject to the “clearly erroneous” standard of deference on appeal. The ultimate conclusions about whether some governmental end is illegitimate, legitimate, important, or compelling, or whether the means are rationally related, substantially related, or directly related to the ends, or whether some burden is irrational, substantially more burdensome than necessary, or the least restrictive alternative, are best conceived as mixed questions of law and fact for “de novo” review by courts on appeal.

An additional issue regarding law and facts is whether the doctrine should adopt either a subjective or an objective approach toward the determination of some fact. Related to the issue of whether a court should adopt a subjective or an objective approach toward interpretation of documents, discussed at §§ 5.2.1 & 6.2.1.1, the issue here is whether any particular doctrine should require subjective “actual” knowledge or an objective “reason to know.”

For example, in determining when executive officials should be immune from damage lawsuits if their behavior violated someone’s constitutional or statutory rights, a court has six different options from which to choose: (1) absolute immunity from being questioned; (2) must show lack of both subjective and objective knowledge that the behavior was unlawful to be liable; (3) must show only a lack of subjective good faith to be liable (a pretext inquiry); (4) must show only a lack of objective good faith to be liable (a reasonably prudent person would have known the behavior was unlawful); (5) must show either a lack of subjective or objective good faith to be liable; or (6) without regard to what subjectively the person knew, or objectively what the individual should have known, liability can be based on what the actual facts are, as determined in court. As discussed at § 20.1.4.2.B nn. 84-87, in Harlow v. Fitzgerald, the Court adopted option (4) above, focusing on whether the executive official violated “clearly established statutory or constitutional rights of which a reasonable person would have known.” This case overruled that aspect of Butz v. Economou which had suggested, as in option (5), that subjective knowledge could also trigger a finding of liability.69

This issue of subjective or objective knowledge arises in other areas of the law. For example, in defamation law, under *New York Times Co. v. Sullivan*, a finding of “actual malice” requires that the individual had a subjective mental state of reckless disregard for the truth, option (3) above, as discussed at § 30.2.1.1 nn.149-52. As discussed at § 30.2.2.1 n.191, the issue of what kind of objective versus subjective standard to adopt was the focus of *Waters v. Churchill*, concerning the rights of government workers to speak on matters of public concern.

In *Waters*, a four-Justice plurality adopted a combined subjective-objective approach, option (5) above, which allowed governmental action based upon an objectively reasonable investigation into what the employee had said, provided that the employer also actually subjectively believed the results of the investigation. A concurring opinion adopted option (3) above, requiring only that the employer subjectively believed in a valid reason for acting after an investigation, and thus the action against the employee was not a pretext for illegitimate motives. A dissenting opinion adopted option (6) above, requiring the court to determine for itself what was said, not what the employer either subjectively or objectively believed after their investigation.

§ 7.3 Dealing with Precedents

As noted at § 5.3.2, judicial precedents are one of the sources used in constitutional interpretation. While the Constitution does not directly address what weight should be given to precedent, arguments of context, history, practice, precedent, and prudential considerations all suggest that some traditional common-law theory of precedent was intended to form part of the “judicial power” referred to in Article III of the Constitution. As Hamilton observed in *The Federalist Papers* No. 78, “To avoid an arbitrary discretion in the courts, it is indispensable that they should be bound down by strict rules and precedents.” Thus, as a constitutional norm, Congress could not command the Court to adopt a particular theory of precedent. However, as noted at § 9.2.2.2 n.55, some formalists, based on a lack of specific text in the Constitution regarding use of precedent, have argued for such a congressional power under the Necessary and Proper Clause.

As noted at § 6.3.2, where precedents are viewed as having a gloss on meaning, the precedent will be given great weight in later cases. Even when a precedent is not treated as having a gloss on meaning, the precedent still has some weight, particularly if it represents settled law or is a precedent upon which individuals have substantially relied. In addition, as noted at § 4.3.4, judges sometimes adopt a narrow, or strict, use of precedent, particularly when trying to distinguish a prior case from

---

71 *Id.* at 689-92 (Scalia, J., joined by Kennedy & Thomas, JJ., concurring).

72 *Id.* at 694-99 (Stevens, J., joined by Blackmun, J., concurring).

the present case. Under this use of precedent, courts limit the preceding case to its “core holding.” In contrast, when language in the prior case is welcomed by the present court, the court may refer not only to the core holding of the preceding case, but also to its “general reasoning.” The court may use that reasoning to help justify the result in the present case, a broad, or loose, use of precedent.

The following material will provide greater content to these observations by using examples from contemporary constitutional adjudication. The first set of examples, at § 7.3.1, deal with the issue of a narrow, or strict, use of precedent versus a broad, or loose, use of precedent. The second set of examples, at § 7.3.2, deal with the issue of following or overruling precedents, assuming the precedent does not have a gloss on meaning. The third set of examples, at § 7.3.3, deal with reasons to follow or overrule a precedent, assuming that the precedent does have a gloss on meaning. The fourth set of examples, at § 7.3.4, deal with the procedural issues regarding the “rule of law” and how they impact whether to follow or overrule a precedent.

§ 7.3.1 Strict versus Loose Use of Precedent

§ 7.3.1.1 Cases Focusing on the Core Holding of Precedent, Not its General Reasoning

As noted at § 4.3.4, independent of the decision whether to follow or overrule a precedent, a court must first decide what the precedent means. In their treatment of precedent, courts sometimes adopt a narrow, or strict, use of precedent, particularly when trying to distinguish a prior case from the present case. Under this use of precedent, courts limit the preceding case to its “core holding.” On the other hand, when language in the prior case is welcomed by the present court, the court may refer not only to the core holding of the preceding case, but also to its “general reasoning.”

A good example of the difference between considering the core holding of a precedent versus its general reasoning occurred in United States v. Morrison,74 discussed at § 18.2.5 nn.116-18. In Morrison, Justice Souter, joined by Justices Stevens, Ginsburg, and Breyer, followed the general reasoning of the instrumentalist-era precedents, which permitted Congress to regulate any activity under the Commerce Clause with an affect on interstate commerce. Based upon congressional findings regarding the economic impact of violence against women, Justice Souter’s opinion supported congressional power to pass the Violence Against Women Act of 1994. Justices Stevens, Ginsburg and Breyer, as discussed at § 11.3.2, and Justice Souter, as discussed at § 12.4.3, have tended to be the Justices on the modern Court most sympathetic to the results in instrumentalist-era decisions. In contrast, Chief Justice Rehnquist, along with Justices O’Connor, Scalia, Kennedy, and Thomas, are not as enamored with instrumentalist-era precedents. Thus, they tend to follow only the core holdings of these cases. In Morrison, this meant upholding Congress’ power over economic criminal activity, as in Perez v. United States, which involved extortionate credit transactions, but concluding that regulation of noneconomic, criminal conduct, an issue not directly before the Court in the instrumentalist-era cases, could not be justified under Congress’ Commerce Clause power.

A similar split has appeared in cases involving the criminal justice system. For example, in *Pennsylvania Board of Probation v. Scott*, the Supreme Court was faced with the question whether to apply the exclusionary rule to bar the introduction at parole revocation hearings of evidence seized in violation of the parolees’ Fourth Amendment rights. As discussed at § 23.2.1.1 nn.95-98, dissenting with Justices Ginsburg and Breyer, Justice Souter argued that the deterrent function of the exclusionary rule is implicated just as much in a parole revocation proceeding as in a criminal trial. Thus, the general reasoning of the trial cases should apply equally to the revocation proceeding. In contrast, Justice Thomas’ majority opinion, joined by Chief Justice Rehnquist and Justices O’Connor, Scalia, and Kennedy, noted that no prior precedent had explicitly addressed the applicability of the exclusionary rule to parole revocation hearings. Thus, no prior core holding governed the case.

A similar split occurred in *Ramdass v. Angelone*. At issue in *Ramdass* was whether to extend Justice Blackmun’s opinion in *Simmons v. South Carolina*, which had held that where the state puts the defendant’s future dangerousness in issue in a death penalty case, due process requires the jury to be informed if a life sentence would be without the possibility of parole. As discussed at § 23.2.1.2 nn.149-54, the defendant had not yet become parole ineligible because a separate court had not yet entered judgment on a jury’s verdict that would make the defendant parole ineligible. Justice Stevens’ dissent, joined by Justices Souter, Ginsburg and Breyer, argued the “acute unfairness in permitting the State to rely upon a recent conviction to establish a defendant’s future dangerousness while simultaneously permitting the State to deny that there was such a conviction when the defendant attempts to argue that he is parole ineligible” and that “[e]ven the most miserly reading of the opinions in *Simmons*” supports the defendant’s argument in this case. In contrast, the majority noted that technically the defendant was not parole ineligible at the time the jury instruction was given, and thus the core holding of *Simmons* did not directly govern resolution of the case.

§ 7.3.1.2 Cases Building on Welcome Precedents

If the facts of a current case are perceived to be only somewhat similar to those of a precedent, instead of being closely analogous, then "following" the precedent may really be "extending" it past its “core holding.” This way of treating a precedent involves building on a precedent with which the judge agrees, often by resort to the “general reasoning” in the prior opinion.

A representative example of the Supreme Court building on a welcome precedent occurred in 1995. In 1969, the Court had held in *Powell v. McCormack* that Congress has no power to exclude by simple majority vote any person, duly elected by constituents, who had the three qualifications for

---

76 530 U.S. 156, 169, 175-78 (2000) (plurality opinion of Kennedy, J., joined by Rehnquist, C.J., and Scalia & Thomas, JJ.); citing Simmons v. South Carolina, 512 U.S. 154, 156 (1994); id. at 179-81 (O’Connor, J., concurring in the judgment); id. at 182 (Stevens, J., joined by Souter, Ginsburg & Breyer, JJ., dissenting).

membership specified in the text of the Constitution, although based upon literal text Congress may expel a member from Congress by a 2/3 vote. In 1995, the Court extended Powell to the states by holding in U.S. Term Limits, Inc. v. Thornton, that states, like Congress, lack the power to add to the qualifications of age, citizenship, and residency that are prescribed for members of Congress by the Constitution. Justice Stevens’ majority opinion, joined by Justices Kennedy, Souter, Ginsburg, and Breyer, found in actions taken during the Convention and in the post-Convention ratification debates, an intent that the qualifications in the Constitution be fixed and exclusive. Justice Stevens cited Justice Story, who said in his treatise on the Constitution that "the states can exercise no powers whatsoever, which exclusively spring out of the existence of the national government, which the constitution does not delegate to them. . . . No state can say, that it has reserved, what it never possessed." Justice Stevens also noted that congressional and state practice since the Constitution was ratified also supported this view. Justice Stevens added that recognizing a power in the states to add qualifications would violate a fundamental principle of representative democracy that the people should choose whom they please to govern them. In support, he cited McCulloch v. Maryland, wherein Justice Marshall said that the government of the Union is a government that emanates from the people. Justice Kennedy, concurring, elaborated on this theme. He stated that there “can be no doubt, if we are to respect the republican origins of the Nation and preserve its federal character, that there exists a federal right of citizenship, a relationship between the people of the Nation and their National Government, with which the States may not interfere.”

In contrast, Justice Thomas dissented, joined by Chief Justice Rehnquist and Justices O'Connor and Scalia. Justice Thomas argued that where the Constitution is silent about the exercise of a particular power, the Federal Government lacks that power and the states enjoy it. According to Justice Thomas, Powell was not relevant, as its core holding dealt only with the power of Congress to impose additional qualifications on House members, not the power of the states. He said the ultimate source of constitutional authority is the consent of the people of each individual state, not the consent of the undifferentiated people of the Nation as a whole. With respect to reserved state powers, Justice Thomas noted that the core holding of McCulloch v. Maryland did not indicate that the question depended on whether the states had enjoyed the power before the framing.

83 Id. at 845 (Kennedy, J., concurring).
84 Id. at 845-55 (Thomas, J., joined by Rehnquist, C.J., and O’Connor & Scalia, JJ., dissenting).
A second example of building on welcome precedents comes from abstention doctrine. In 1971, the Court held in *Younger v. Harris*\(^{85}\) that because of respect for "Our Federalism," the federal courts, as a matter of comity, should not enjoin, unless in exceptional circumstances, a state criminal action if prosecution was begun before proceedings on the merits had occurred in the federal action. *Younger* was extended in later cases, including *Juidice v. Vail*\(^{86}\) in 1977, where the Court required abstention from adjudicating a challenge to a state's contempt process, in an on-going state action, because the state's interest in maintaining its judicial system was a sufficiently great interest.

In 1987, the Court extended *Younger* again to civil actions in *Pennzoil Co. v. Texaco, Inc.*\(^{87}\). This extension was slightly more problematic, because although The Anti-Injunction Act bars federal courts from enjoining proceedings in state courts, it contains several exceptions, including express authorization by Congress.\(^{88}\) In 1972, the Court had held in *Mitchum v. Foster* that suits under 42 U.S.C. § 1983, the primary vehicle to enjoin enforcement of unconstitutional state actions, were an exception expressly authorized by Congress. Nevertheless, the Court held in *Pennzoil* that a federal court in a § 1983 action may not enjoin a plaintiff who has prevailed in a state trial court from executing the judgment in plaintiff's favor pending an appeal to a state appellate court. Justice Powell, with Justices Rehnquist, White, Scalia, and O'Connor, said that a state has an important interest here, as it had an important interest in *Younger* and *Juidice*, in the enforcement of its orders and judgments in its courts.\(^{89}\)

Justices Brennan and Marshall disagreed with this conclusion, and argued that *Younger* should be limited to its core holding involving criminal or quasi-criminal proceedings, and not apply to civil proceedings, especially when plaintiff brings a § 1983 action. Their opinion, laying the groundwork for a later narrow interpretation of *Pennzoil*, interpreted the majority opinion as based on the unique factual circumstances of the case, including the "open courts" provision of the Texas Constitution.\(^{90}\)

§ 7.3.1.3 Cases Emphasizing An Aspect of a Precedent With Which the Judge Agrees

Another way to "follow or extend" a precedent involves targeting an aspect of the prior precedent with which the judge agrees, and then emphasizing that part of the precedent. This can occur when the later court focuses on some aspect of the general reasoning in the prior opinion, and then resolves the case according to that aspect without considering other things the prior court said in its opinion.

\(^{85}\) 401 U.S. 37 (1971).

\(^{87}\) 481 U.S. 1 (1987).

\(^{88}\) 28 U.S.C. § 2283.

\(^{90}\) Id. at 19, 21 n.* (Brennan, J., joined by Marshall, J., dissenting).
An example of the technique of emphasizing part of a prior precedent with which the judge agrees occurred in *Nixon v. United States*.\(^91\) In *Nixon*, the Court held that a nonjusticiable political question was presented by a challenge to the Senate's vote in the trial of an impeachment case where the Senate had acted on the basis of a report from a special Senate Committee, together with a transcript of its proceedings. The proceedings were challenged as violating the Impeachment Trial Clause, Art. I, § 3, cl. 6. It provides that the "Senate shall have the sole power to try all Impeachments."

For the Court, Chief Justice Rehnquist cited language from *Baker v. Carr* indicating that six factors tend to be relevant in political questions cases. These six factors are: whether there is a textually demonstrable constitutional commitment of the issue to a coordinate political department; a lack of judicially discoverable and manageable standards for resolving it; an initial policy decision of a non-judicial kind is required to resolve it; a need to respect a decision already made; a need for finality; or avoidance of embarrassment.\(^92\) In *Nixon*, Justice Rehnquist focused on the first two of these factors, the ones linked most closely with text and the traditional judicial role, rather than the other factors which involve more prudential considerations. Justice Rehnquist noted that use of the word "sole" suggested that the Senate alone was intended to determine whether an individual should be acquitted or convicted, and that the word "try" lacks sufficient precision to afford any judicially manageable standard.\(^93\) He also noted that historical sources supported this conclusion.\(^94\) Although mentioning all six factors, the opinion did not embrace fully the broad six-factor balancing approach of Justice Brennan's *Baker v. Carr* opinion, giving only cursory treatment to the other factors.\(^95\)

In contrast, Justice White, joined by Justice Blackmun, concluded that an argument based upon text and a lack of judicial manageable standards alone was unpersuasive. Instead, engaging in a broader inquiry into prudential considerations required by the six-factor approach in *Baker v. Carr*, Justice White concluded that the historical evidence suggests a deep concern of the Framers with a basic system of checks and balances underlying the separation of powers. A balance is achieved by having the Senate control by its impeachment power the otherwise largely unaccountable judiciary, with judicial review ensuring that the Senate adheres to a minimal set of procedural standards in conducting impeachment trials.\(^96\) Justice Souter also traced the political questions doctrine back to broader consideration of the six factors listed in *Baker v. Carr*. He concluded that unusual circumstances, such as a coin-toss by the Senate, might make judicial interference appropriate even though prudential considerations would ordinarily counsel silence.\(^97\)

\(^93\) *Nixon*, 506 U.S. at 228-33.
\(^94\) *Id.* at 233-35.
\(^95\) *Id.* at 235-36.
\(^96\) *Id.* at 240-50 (White, J., joined by Blackmun, J., concurring).
\(^97\) *Id.* at 251-53 (Souter, J., concurring).
§ 7.3.1.4  

Cases Manipulating a Precedent to Claim it is Merely Being Followed

A final way to "follow or extend" a precedent is to elevate some general statement that may have been dictum into the status of a holding, or find implicit in the precedent a principle broader than anything stated in the case, and use it as a premise in the case at hand. When a court does this, the court is really manipulating the prior precedent to claim that today's court is merely following or extending prior law.

Instrumentalist Justices have been particularly creative in interpreting and grouping precedents in order to show that they support, or at least are not inconsistent with, a result believed just in the particular case or for society generally. A well-known example is Justice Brennan's opinion in *Frontiero v. Richardson*, which said that the Court, when engaging in equal protection review, could find "implicit support" for applying strict scrutiny to gender classifications in *Reed v. Reed*, even though Chief Justice Burger's opinion in that case explicitly stated that the test in a gender discrimination case was whether the different treatment based upon gender bears a rational relationship to a legitimate state objective.

This tactic, however, is not reserved exclusively for instrumentalist Justices. For example, Holmesian Justice Rehnquist creatively interpreted prior precedents in *Paul v. Davis* to hold that there is no reputational interest under the liberty component of 14th Amendment procedural due process analysis. Chief Justice Rehnquist also engaged in a creative interpretation of commercial speech precedents in *Posadas De Puerto Rico Associates v. Tourism Company of Puerto Rico*, although that creative interpretation was overruled ten years later in *44 Liquormart, Inc. v. Rhode Island*. Formalist Justice Scalia applied the skill in *Employment Division v. Smith*, by reinterpreting prior Free Exercise Clause cases to require the combination of a free exercise claim with another fundamental right in order to trigger strict scrutiny.

---

98  411 U.S. 677, 682 (1973), discussed § 26.3.1.2 n.362.

99  404 U.S. 71, 75-76 (1971), discussed § 26.3.1.2 n.361.

102  517 U.S. 484 (1996), discussed § 30.3.2.1 nn.246-48.

103  494 U.S. 872, 881-82 (1990), discussed § 32.2.2.5 nn.253-56.
In general, as discussed at § 4.3.4, the judicial decisionmaking styles differ in their general predispositions regarding narrow/strict versus broad/loose use of precedents: instrumentalist judges tend more toward narrow use of precedent, followed by formalist judges and Holmesian judges. Natural law judges are the most willing to extend precedents in light of a general principle found therein, a broad or loose use of precedents. As these examples make clear, however, in any individual case, judges from any of the four styles of interpretation may resort to a narrow or broad use of precedent depending upon whether or not they favor the substantive result of the precedent.

§ 7.3.2 Following or Overruling Precedent Without Regard to Whether There is a Gloss on Meaning: The Considerations of Settled Law and Substantial Reliance

To the extent that precedents are viewed as having no gloss on meaning, whether a prior precedent is rightly or wrongly decided carries great weight. Yet even when precedents are so viewed as having no gloss on meaning, they still have some weight in future decisionmaking, particularly if they represent settled law or there has been substantial reliance by individuals.

As discussed at § 4.3.2 nn.79-80, Justice Scalia has defined such “settled law” as “long-standing and well-accepted principles (not out of accord with the general practices of our people, whether or not they were constitutionally required as an original matter).”

Justice O’Connor has stated that precedents represent “settled law” when they have become “integrated into the fabric of the law.”

In deciding whether a precedent represents or has produced settled law, many factors may be relevant. As discussed at § 4.3.2 nn.81-83, the age of the precedent is certainly one factor, but it is not the sole determining factor. Judges may also ask whether the precedent case was itself a departure from prior precedents and gave little weight to established traditions. A third factor is whether or not the precedent is susceptible of principled application.

As noted at § 4.3.2 nn.84-87, formalist judges in particular give special weight to this consideration in their treatment of precedent. Thus, four examples are presented here from opinions by formalist Justices Scalia and Thomas with respect to voting not to overrule a case because it represents settled law. First, as noted at § 4.3.2 n.84, although Justices Scalia and Thomas do not themselves believe that the framers and ratifiers of the 14th Amendment intended the Due Process Clause to incorporate selectively the Bill of Rights, they have indicated a willingness not to challenge the instrumental-era cases which incorporated almost all of the Bill of Rights into the 14th Amendment, because it is a matter of settled law. As Justice Scalia, joined by Justice Thomas, noted in *TXO Production Corp. v. Alliance Resources Corp.*, "I am willing to accept the proposition that the Due Process Clause of the [14th] Amendment, despite its textual limitation to procedure, incorporates certain substantive guarantees specified in the Bill of Rights; but I do not accept the proposition that it is the secret repository of all sorts of other, unenumerated, substantive rights."

---

A second example comes from Employment Division v. Smith.\textsuperscript{107} In that case, the Court, per Justice Scalia, held that strict scrutiny should not be applied when a neutral, generally applicable law is challenged by a free exercise claim unconnected with some other constitutional protection, such as freedom of speech or the press.\textsuperscript{108} Nonetheless, the Court indicated in Smith a willingness to continue using strict scrutiny in the context of unemployment compensation cases, based on the 1963 instrumentalist-era precedent of Sherbert v. Verner and its progeny.\textsuperscript{109}

A third example appears in Justice Thomas' concurrence in United States v. Lopez.\textsuperscript{110} Focusing on the literal meaning of commerce and on the specific intent of the framers and ratifiers of the Constitution, Justice Thomas concluded that the Court's recent Commerce Clause jurisprudence and the "substantial affects" test were wrong because the Court had drifted too far from the original understanding of the Commerce Clause. However, Justice Thomas noted that it may be too late to undertake a fundamental reexamination of precedents written in the last 60 years. He said, "Consideration of stare decisis and reliance interests may convince us that we cannot wipe the slate clean."\textsuperscript{111} It may nonetheless be possible, Justice Thomas noted, for the Court to at least "temper" its Commerce Clause jurisprudence. Justice Thomas said that if Congress could regulate all matters that substantially affect interstate commerce, there would have been no need for many of the specific grants of power in Art. I, § 8.\textsuperscript{112} This aspect of the Lopez case is discussed at § 18.2.5 nn.103-09.

A fourth example comes from Justice Scalia's opinions in dormant commerce clause cases. Justice Scalia has indicated he would abandon traditional court scrutiny of state regulations under the dormant commerce clause unless the state statute involves "rank discrimination against citizens."\textsuperscript{113} Even so, he and Justice Thomas have stated that they will follow the result of traditional dormant commerce clause analysis for current cases involving state laws "indistinguishable from a type of law previously held unconstitutional by the Court [based] on stare decisis grounds."\textsuperscript{114}

Despite this willingness to follow "settled law," most formalists will not go beyond the core holdings of these precedents to adopt the general reasoning of these precedents. Unlike the natural

\textsuperscript{107} 494 U.S. 872 (1990).

\textsuperscript{108} Id. at 881.

\textsuperscript{109} Id. at 883-85, citing Sherbert v. Verner, 374 U.S. 398 (1963), and its progeny.

\textsuperscript{111} Id. at 601 n.8.

\textsuperscript{112} Id. at 588-89, 601-02.

\textsuperscript{113} Tyler Pipe Indus., Inc. v. Washington State Dep't of Rev., 483 U.S. 232, 265 (1987) (Scalia, J., concurring in part and dissenting in part).

law approach, discussed at § 12.2.2.2, formalists are not willing to follow a “reasoned elaboration” of the general reasoning in prior precedents if the formalist concludes that the precedents’ general reasoning is flawed. As Justice Scalia phrased the point in his dissent in Planned Parenthood v. Casey,115 “Roe was plainly wrong – even on the Court’s methodology of ‘reasoned judgment,’ and even more so (of course) if the proper criteria of text and tradition [tradition encompassing history and legislative and executive practice, as discussed at § 9.2.2.1 nn.40-47] are applied.”

A second reason to follow a precedent even if it was wrongly decided is that individuals have substantially relied on the precedent. It is a familiar notion in many branches of the law that where individuals have substantially relied to their detriment on some promise, or some represented state of affairs, other individuals may be estopped from changing or denying that state of affairs in order to protect the reliance interest.116 This can also be true of precedents. As Justice Brandeis observed in Burnet v. Coronado Oil & Gas Co.,117 “Stare decisis is usually the wise policy, because in most matters it is more important that the applicable rule of law be settled than that it be settled right.”

In Payne v. Tennessee, Justice Rehnquist noted that cases involving contract and property rights are the ones most likely to engender the kind of substantial reliance that is important from the perspective of stare decisis. More broadly, the principle of not overruling cases that give rise to substantial reliance is likely to have the most force where overruling would upset settled expectations upon which people have justifiably relied by making serious financial, business, employment, or other similar kinds of important commitments. In contrast, according to Justice Rehnquist, cases involving procedural or evidentiary rules are not as likely to involve such substantial reliance.118 Justice Rehnquist noted in Payne,119 “Applying these general principles, the Court has during the past 20 Terms overruled in whole or in part 33 of its previous constitutional decisions.” Reflecting a connection between settled law and substantial reliance kinds of considerations, Justice O’Connor noted in Adarand Constructors, Inc. v. Pena,120 “[A] long-established precedent that has become integrated into the fabric of the law . . . is likely to have engendered substantial reliance.”

The extent to which a person's substantial reliance on prior cases is reversible or not is an important, although often unstated, aspect of this analysis. In the classic case of substantial reliance, an individual has made a financial or employment decision based on the current state of the law. If the

116 See, e.g., Restatement 2d, Contracts § 90 (promissory estoppel); Strong v. County of Santa Cruz, 542 P.2d 264, 266 (Cal. 1975) (equitable estoppel).

119 Id. at 828 & n.1.

law changes, there is no practical way to return the person fully to the status quo. Time has passed, and other financial or employment opportunities have gone by the board. In a practical sense, reliance is irreversible. Yet there are other cases where, if the law changes, persons can modify their behavior with respect to the new law, and their prior reliance is reversible. Such cases do not present the same kind of compelling circumstances for application of *stare decisis* based upon reliance concerns.

In general, because Holmesian judges are more attuned to this functional inquiry into whether individuals have actually irreversibly relied than are judges from a more analytic tradition, such as formalist or natural law judges, Holmesian judges can be predicted to be more sensitive to the existence of actual irreversible reliance before applying this restraint to overruling precedent. For example, the joint opinion of Justices O’Connor, Kennedy, and Souter in *Planned Parenthood v. Casey* noted that one reason not to overrule *Roe* was substantial reliance on *Roe*. The joint opinion noted that for two decades people have organized intimate relationships assuming abortion would be an option if contraception should fail. However, while reliance did exist during the 20 years between *Roe* and *Casey*, 1973-92, that kind of reliance is not irreversible. If *Roe* were overruled, nothing would bar people in the future from organizing their intimate relationships knowing that abortion might not be legally available in certain states should contraception fail. The joint opinion noted, “[The] hypothesis [is] that reproductive planning could take virtually immediate account of any sudden restoration of state authority to ban abortion.” Accepting this hypothesis as true, Chief Justice Rehnquist noted in dissent, “[A]ny traditional notion of reliance is not applicable here.”

In response, it could be argued, as did the joint opinion in *Casey*, that women have made many irreversible decisions regarding education, jobs, and social companions during the 20 years between *Roe* and *Casey*, based on an assumption that they would have the reproductive freedom granted by *Roe*. The joint opinion stated, "The ability of women to participate equally in the economic and social life of the Nation has been facilitated by their ability to control their reproductive lives. . . . While the effect of reliance on *Roe* cannot be exactly measured, neither can the certain cost of overruling *Roe* for people who have ordered their thinking and living around that case be dismissed." These arguments were critiqued in Chief Justice Rehnquist's dissent. Justice Rehnquist observed:

The joint opinion turns to what can only be described as an unconventional – and unconvincing – notion of reliance, a view based upon the surmise that the availability of abortion since *Roe*

125 *Id.* at 856.
has led to “two decades of economic and social developments” that would be undercut if the error of Roe were recognized. The joint opinion's assertion of this fact is undeveloped and totally conclusory. . . . Surely it is dubious to suggest that women have reached their “places in society” in reliance upon Roe, rather than as a result of their determination to obtain higher education and compete with men in the job market, and of society's increasing recognition of their ability to fill positions that were previously thought to be reserved only for men.126

Despite this Holmesian willingness to follow “settled law” or precedents upon which individuals have “substantially relied,” most Holmesian jurists will not go beyond the core holdings of these precedents to adopt the general reasoning of the precedents. As a positivist approach to law, Holmesians share with formalists a reluctance to follow a judicial “reasoned elaboration” of the reasoning in precedents if the Holmesian concludes that the precedents’ general reasoning is flawed, based upon the Holmesian analysis of text, context, history, practice, and prudential considerations.

Judicial embrace of such “reasoned elaboration of law” is adopted more by judges following a normative perspective on the judicial task, as is true for natural law judges, as discussed at § 12.2.2.2. Holmesian jurists thus differ from the natural law approach to “reasoned elaboration of law.” For this reason, it is not surprising that Holmesian Chief Justice Rehnquist and Justice White, and formalist Justice Thomas, all joined formalist Justice Scalia’s dissent in Planned Parenthood v. Casey, where he stated, “Roe was plainly wrong – even on the Court’s methodology of ‘reasoned judgment,’ and even more so (of course) if the proper criteria of text and tradition are applied.”127

Because instrumentalist jurists embrace the notion of an evolving constitution to cope with current problems and current needs, they do not want to be straight-jacketed by a reasoned elaboration of precedents if those precedents are against the instrumentalist's view of text, context, history, practice, and prudential considerations. Thus, instrumentalist judges have been quite willing to overrule precedents, and create new doctrine, if they think that the old doctrine was wrongly decided, or is wrong for society today. As noted at § 4.3.2 text following n.78, this consideration – and this consideration alone – of whether the prior precedent is rightly or wrongly decided carries greatest weight with instrumentalist judges. This is true even if the prior precedent appears to represent settled law, there has been substantial reliance on the precedent, or no additional reason is present that calls for the precedent to be overruled. Thus, as noted in Table 4.3, instrumentalist judges tend to be the judges least likely to follow precedent, and thus most willing to overrule precedent.

Such overrulings occurred frequently between 1963 and 1969, when the instrumentalist-era Warren Court consisted of a majority of 5 Justices willing to recognize new rights by providing additional constitutional protections against governmental action in numerous areas of the law.128 In 1963, the five Justices were Chief Justice Warren, along with fellow liberal instrumentalists Justices Douglas,

126  Id. at 956-57 (Rehnquist, C.J., joined by White, Scalia & Thomas, JJ., dissenting).

127  Id. at 983 (Scalia, J., joined by Rehnquist, C.J., and White & Thomas, JJ., dissenting).

Brennan, and Goldberg, joined in many cases by Justice Black, who as a liberal formalist shared the liberal outlook of the liberal instrumentalists on the Court, particularly with respect to his view that all of the Bill of Rights are fundamental and should be incorporated into the Due Process Clause, as noted at §§ 9.4 nn.91-92 & 27.2.3 nn.117-19. Justice Fortas, another liberal instrumentalist, replaced Justice Goldberg in 1965. In 1967, with the confirmation of Justice Thurgood Marshall, who replaced Holmesian Justice Tom Clark, 5 liberal instrumentalists became seated on the Court, in addition to the liberal formalist Justice Black. As Justice Brennan noted, “As late as 1961, I could stand before a distinguished assemblage of the bar at New York University’s James Madison Lecture and list the following as guarantees that had not been thought to be sufficiently fundamental to the protection of human dignity so as to be enforced against the states: the prohibition against cruel and unusual punishments, the right against self-incrimination, the right to assistance of counsel in a criminal trial, the right to confront witnesses, the right to compulsory process, the right not to be placed in jeopardy of life or limb more than once upon accusation of a crime, the right not to have illegally obtained evidence introduced at a criminal trial, and the right to a jury of one’s peers. The history of the quarter-century following that Madison Lecture need not be told in great detail. Suffice it to say that each of the guarantees listed above has been recognized as a fundamental aspect of ordered liberty.”129 This perspective continued to have considerable influence during the years of the Burger Court, 1969-86, although it was tempered because only four instrumentalists remained on the bench: Justices Brennan, Marshall, Blackmun, and Douglas or, after 1975, Justice Stevens.130

Of course, where the proper social policies would be advanced by maintaining an adherence to instrumentalist-era precedents, an instrumentalist judge may be as willing as any other judge to emphasize the importance of precedents, as revealed by Justice Thurgood Marshall's dissent in Payne v. Tennessee. There, he stated, “Because I believe this Court owes more to its constitutional precedents in general and to Booth and Gathers in particular, I dissent.”131 However, given the willingness of instrumentalist judges to embrace the overruling of precedents between 1954 and 1986, one must take with a grain of salt Justice Marshall's statements in Payne on the importance of stare decisis, or perhaps presume that Marshall was merely "tweaking the nose" of the formalist, Holmesian, and natural law judges in Payne, all of whom refused to follow precedent in the case. If so, that plan certainly worked. Justice Scalia’s concurrence in the case, joined by Justices O’Connor and Kennedy, responded, “The response to Justice Marshall’s strenuous defense of the virtues of stare decisis can be found in the writings of Justice Marshall himself... It seems difficult for those who were in the majority in Booth to hold themselves forth as ardent apostles of stare decisis.”132 Naturally, the true test of how strongly a judge adheres to precedent is not how much a judge counsels following a precedent with which the judge agrees, but whether the judge

132 Id. at 833-34 (Scalia, J., joined by O’Connor, J., & Kennedy, J., concurring).
is willing to follow a precedent with which the judge disagrees. Even in Payne itself, the instrumentalist judges did not make a fetish over the need to follow precedent based on reliance.\textsuperscript{133}

Judges following different interpretation styles may disagree about whether some precedents are rightly or wrongly decided. Divergent views on the correctness of Roe v. Wade present an obvious example.\textsuperscript{134} Disagreements on the constitutionality of school prayer in Lee v. Weisman provide another example.\textsuperscript{135} Sometimes the formalist approach may be alone in dissent, as in the independent prosecutor case, Morrison v. Olson.\textsuperscript{136} Other times, the instrumentalist approach may be alone in dissent, as in the state action case, Hudgens v. NLRB.\textsuperscript{137} And even when judges agree about the result in a case, different interpretation styles can lead them to disagree about the rule laid down to justify the result, as in the substantive due process case of Michael H. v. Gerald D.\textsuperscript{138} For instrumentalist jurists, it is these considerations, rather than faithfulness to precedent, that drive most decisions.

\textbf{§ 7.3.3 Following or Overruling Precedent Assuming the Precedent Has Created a Gloss on Meaning}

As noted at § 6.3.2 nn.116-19, for some judges a sequence of court decisions, that is, a reasoned elaboration of precedent, can provide a gloss on meaning that changes what the Constitution means. Thus, the question is not just what the other sources of interpretation suggest about a constitutional provision's meaning. Instead, just as the common law changes over time in response to court decisions, the proper meaning of a constitutional provision can change over time in response to court decisions elaborating its meaning in a particular way. Judges who believe very strongly in this traditional common-law commitment may choose to follow precedents they believe are wrongly decided even if those precedents do not represent settled law and there has been no substantial reliance upon them. Instead, under this approach to precedent, one or more additional reasons are needed before the court should depart from a prior judicial opinion. The judges who most often have this extra commitment to precedent are judges in the natural law tradition, as discussed at § 12.2.2.2.

As noted at § 4.3.2 n.87, based upon recent cases, including the joint opinion of Justices O’Connor, Kennedy, and Souter in Planned Parenthood v. Casey, the additional reasons which suggest that a precedent should be overruled can be grouped under five headings: (1) the precedent is unworkable

in practice; (2) the precedent creates an inconsistency or incoherence in the law; (3) a changed understanding of facts has undermined the factual basis of the precedent; (4) the precedent represents a substantially wrong or substantially unjust interpretation of the law; or (5) the precedent raises concerns about a commitment to the "rule of law." The Supreme Court has also discussed these factors in the context of statutory interpretation, as discussed at § 4.3.2 nn.88-89. The first four of these reasons are discussed at §§ 7.3.3.1-7.3.3.4. Because it involves a number of related doctrines, the final reason focusing on the “rule of law” is considered at § 7.3.4.

§ 7.3.3.1 The Precedent is Unworkable in Practice

If a doctrine is considered unworkable in practice, a court may well overrule it. One ground for concluding a doctrine unworkable is that it has the practical result of immersing the courts in a resource-squandering activity. An example involving this kind of unworkability occurred in the 1995 case, Sandin v. Conner.\(^\text{139}\) As discussed at § 27.4.2.3 nn.319-24, in determining whether prison regulations created a protected liberty interest, the Court had held in 1983 in Hewitt v. Helms\(^\text{140}\) that courts should ask whether the state had issued merely procedural guidelines, which would not create a liberty interest, or had used language of mandatory character, which would create a liberty interest. Hewitt had built upon Wolff v. McDonnell,\(^\text{141}\) decided in 1974, where a prisoner had been given a protected liberty interest by a state statute that bestowed a mandatory sentence reduction for good behavior, subject to change for serious misconduct. The Court had said that the interest conferred was one of "real substance." In Sandin, the Court abandoned Hewitt, noting that it had produced two undesirable effects. First, it had led to the involvement of federal courts in resource-squandering day-to-day management of prisons. Second, it had created disincentives for states to codify prison management procedures. The methodology adopted in Sandin was to ask whether the prison regulation represents a dramatic departure from the basic conditions of the sentence.\(^\text{142}\) Applying this more workable test, the Court held that disciplining a prisoner by 30 days of segregated confinement, which did not inevitably affect the duration of the sentence, and which was under conditions mirroring those imposed by administrative and protective custody, did not present the significant deprivation in which a state might conceivably have created a liberty interest.\(^\text{143}\)

Another example of resource-squandering activity occurred in First Amendment obscenity doctrine. As discussed at § 30.1.3 nn.83-87, during the 1960s appellate courts had to determine for themselves whether various books or movies were obscene.\(^\text{144}\) That approach was overruled in 1973 in Miller

\(^\text{142}\) 515 U.S. at 482-84.

\(^\text{143}\) Id. at 484-87.

v. California, discussed § 30.1.3 nn.88-91, which placed the primary burden of those findings on district court juries.

A second kind of unworkable situation occurs where the test articulated by the Supreme Court is difficult to apply and leads to the specter of continuing splits in lower court decisions. In 1976, in a 5-4 opinion, the Court held in National League of Cities v. Usery that the 10th Amendment prevents Congress from applying its Commerce Clause power in a manner that directly displaces the freedom of states to "structure integral operations in areas of traditional government functions" unless, as stated in Justice Blackmun's concurrence, which was the critical fifth vote for the majority’s result, the federal interest is very strong and state compliance would be essential. As a result, Congress could not apply to state employees the Fair Labor Standards Act’s maximum hour and minimum wage provisions.

In 1985, in Garcia v. San Antonio Metropolitan Transit Authority, the Court overruled National League of Cities. Justice Blackmun's principal justification for changing his mind and voting to overrule a case in which he had concurred nine years earlier was that National League had proved unworkable in practice. In particular, Justice Blackmun explained that National League required courts to determine what are "traditional governmental functions," as opposed to "non-traditional governmental functions" or "non-governmental functions." Nine years of experience with National League had shown the difficulty of drawing this distinction. Justice Blackmun stated in Garcia:

Just how troublesome the task has been is revealed by the results reached in other federal cases. Thus, courts have held that regulating ambulance services, licensing automobile drivers, operating a municipal airport, performing solid waste disposal, and operating a highway authority are functions protected under National League of Cities. At the same time, courts have held that issuance of industrial development bonds, regulation of intrastate natural gas sales, regulation of traffic on public roads, regulation of air transportation, operation of a telephone system, leasing and sale of natural gas, operation of a mental health facility, and provision of in-house domestic services for the aged and handicapped, are not entitled to immunity. We find it difficult, if not impossible, to identify an organizing principle [in these decisions]. The constitutional distinction between licensing drivers and regulating traffic, for example, or between operating a highway authority and operating a mental health facility, is elusive at best.

Furthermore, Justice Blackmun did not see any way in Garcia that the Court could ever develop a principled approach to this issue. He rejected the possibility of developing workable guidelines based upon distinctions between governmental and proprietary activities, or a pure historical approach to traditional governmental functions, or determination of what is "uniquely" a

---

148 Id. at 538-39 (citations omitted).
governmental function, or an "essential" governmental function.\textsuperscript{149}

Justice Blackmun also noted that in any event it was "unsound in principle" for the Court to try to determine what are "essential" governmental functions because that improperly, but "inevitably invites an unelected federal judiciary to make decisions about which state policies it favors and which ones is dislikes."\textsuperscript{150} This more pure instrumentalist reason for overruling \textit{National League of Cities} – that it should be overruled just because its doctrine is wrong – had earlier appeared in Justice Stevens' concurrence in \textit{EEOC v. Wyoming}.\textsuperscript{151} There is, of course, a real debate on the Court over whether the general principle announced in \textit{National League} is rightly or wrongly decided. That issue is discussed when considering issues of federalism and the 10\textsuperscript{th} Amendment at \textsection 18.4.4.

Another example of a doctrine being limited in practice because of its apparent doctrinal unworkability is \textit{Lemon v. Kurtzman}.\textsuperscript{152} Under \textit{Lemon}, when a law is challenged under the Establishment Clause, the government must establish that: (1) the law has a secular governmental purpose; (2) the law does not have a principal or primary effect to advance religion, although it may incidentally advance religion; and (3) the law does not further excessive governmental entanglement with religion. Between 1971 and 1992, the "\textit{Lemon test}" was applied in a large number of cases dealing with the meaning of the Establishment Clause. As discussed at \textsection 32.1.2.4 nn.57-75, court decisions drawing the distinctions called for by the \textit{Lemon} test have proven difficult to explain on any principled basis. This is true not only for the second prong of \textit{Lemon} concerning what is the difference between a "principal or primary" advancement of religion versus merely "incidentally" advancing religion, but also for trying to determine whether "excessive entanglement" exists and whether the government has a “secular” purpose or only a “religious” purpose.

Thus, since 1992, the Court has been increasingly ignoring \textit{Lemon} when rendering its decisions. For example, in \textit{Board of Education of Kiryas Joel Village School District v. Grumet},\textsuperscript{153} Justice O'Connor explicitly phrased the unworkability aspect of \textit{Lemon} in terms of \textit{Lemon}'s unsuccessful attempt to create a unitary analysis of Establishment Clause doctrine, an attempt that had clearly proven unworkable in the context of free speech doctrine. In \textit{Lamb's Chapel v. Center Moriches Union Free School District},\textsuperscript{154} Justice Kennedy, concurring, stated that citation to \textit{Lemon} was unsettling and unnecessary, and Justices Scalia and Thomas, concurring, noted, "Like some ghoul in a late-night horror movie that repeatedly sits up in its grave and shuffles abroad, after being

\textsuperscript{154} 508 U.S. 384, 396 (1993) (Kennedy, J., concurring in part & concurring in the judgment); \textit{id} at 398 (Scalia, J., joined by Thomas, J., concurring in the judgment).
repeatedly killed and buried, \textit{Lemon} stalks our Establishment Clause jurisprudence once again." While \textit{Lemon} might eventually be overruled, as indicated at § 32.1.4, between 1993-2006 it was not formally overruled as there was not yet a clear five-person majority on the Court for a separate test.

\textbf{§ 7.3.3.2 The Precedent Creates Inconsistency or Incoherence in the Law}

If a prior case is perceived to be "out-of-sync" with related law, judges are more likely to call for its overruling. This is particularly true for formalist or natural law judges, whose analytic perspective on the nature of law, as discussed at §§ 2.2 & 2.4, make them more sensitive to logical anomalies in legal doctrine. For formalist judges, this consideration will be one of the factors used to determine whether a precedent represents settled law. As noted at § 4.3.2 n.82, a case is less likely to be viewed as settled if the precedent case was itself a departure from prior precedents and gave little weight to established traditions. For natural law judges, even if for other reasons the precedent case does not represent settled law, the precedent should still be followed unless this reason of inconsistency, or one of the other additional reasons, exist that call for the precedent to be overruled.

A series of cases where inconsistency with related law was involved concerns race-based affirmative action, discussed generally at § 26.2.1.4. In the fountainhead case, \textit{Regents of the University of California v. Bakke},\textsuperscript{155} decided in 1978, five Justices struggled to determine what level of review should apply to governmental affirmative action programs based upon race. Justice Powell, whose vote was decisive, concluded that strict scrutiny should be applied to affirmative action, just as strict scrutiny is applied to laws which discriminate against minority groups. Justice Brennan, on behalf of four Justices, wrote that only intermediate scrutiny should be applied to race-based affirmative action, although strict scrutiny is applied to discrimination against racial minorities.

With regard to state affirmative action programs, the dispute between Justices Brennan and Powell was resolved in 1989 in \textit{Richmond v. J.A. Croson Co.}\textsuperscript{156} In \textit{Croson}, the Court majority applied strict scrutiny to a state affirmative action program, basing its conclusion in part on the logical consistency of applying the same standard of review to discrimination against individuals, no matter what their race. In dissent, Justice Marshall, joined by Justices Brennan and Blackmun, would have applied intermediate scrutiny, based on the "benign" purpose to remedy prior discrimination.\textsuperscript{157}

Regarding federal affirmative action programs, however, Justice Brennan assembled a five-Justice majority for application of the intermediate standard of review in \textit{Metro Broadcasting, Inc., v. FCC},\textsuperscript{158} a case involving a congressional program that gave racial preferences for new broadcast

\textsuperscript{155} 438 U.S. 265, 291 (1978) (Powell, J., announcing the judgment of the Court); \textit{id.} at 356-59 (Brennan, J., joined by White, Marshall & Blackmun, JJ., concurring in the judgment in part & dissenting in part).

\textsuperscript{156} 488 U.S. 469, 494 (1989) (O’Connor, J., opinion for the Court).

\textsuperscript{157} \textit{id.} at 528 (Marshall, J., joined by Brennan & Blackmun, JJ., dissenting).

licenses and in certain proceedings for the sale of existing radio and television stations. The majority in Metro Broadcasting was made up of four liberal instrumentalist judges, who typically argued for intermediate scrutiny, and Justice White, whose Holmesian deference, particularly to the federal government, apparently led him to distinguish between the state affirmative action program in Croson and federal affirmative action programs. The majority noted in Metro Broadcasting,159 "It is of overriding significance in these cases that the FCC's minority ownership programs have been specifically approved – even mandated – by Congress." Justice Brennan also based his reasoning in part on Fullilove v. Klutznick,160 a 1980 case of federal affirmative action where the Court did not clearly choose between applying intermediate or strict scrutiny. It must be noted also that Justice White joined Justice Brennan's opinion in Bakke, which applied intermediate scrutiny to a state affirmative action program. This suggests support by Justice White for intermediate scrutiny, although Justice White also joined Justice Powell's opinion in Bakke which applied strict scrutiny.161

In part, Justice Brennan’s reasoning was also based on the fact that our nation has experienced and continues to experience various forms of racism. As stated by Justice Marshall, dissenting in Richmond v. J.A. Croson Co.,162 "My view has long been that race-conscious classifications designed to further remedial goals 'must serve important governmental objectives and must be substantially related to achievement of those objectives' in order to withstand constitutional scrutiny." This requirement of a substantial government interest is readily met by an intent to remedy the effects of past discrimination, or to create diversity where that can produce significant benefits. Applying intermediate review, instrumentalist Justices Brennan, Marshall, and Blackmun did not find that any affirmative action program reviewed by the Court during their service on the bench failed substantially to relate to the achievement of goals that were important.

Five years after the Metro Broadcasting decision, four of the five Justices in the majority had retired from the Court (Justices Brennan, Marshall, Blackmun, and White). In Adarand Constructors, Inc. v. Pena,163 the Court overruled Metro Broadcasting, and held that to the extent, if any, that Fullilove held federal racial classifications subject to less than strict scrutiny, it was no longer controlling.

160 448 U.S. 448, 491-92 (1980) (Burger, C.J., joined by White & Powell, JJ., announcing the judgment of the Court) (same result under either strict scrutiny or intermediate scrutiny); id. at 495-96 (Powell, J., concurring) (strict scrutiny should be applied); id. at 517-23 (Brennan, J., joined by Marshall & Blackmun, JJ., concurring in the judgment) (intermediate scrutiny should be applied).
161 Bakke, 438 U.S. at 356-59 (Brennan, J., joined by White, Marshall & Blackmun, JJ., concurring in the judgment in part & dissenting in part); id. at 387 n.7 (White, J., opinion, joining in part Justice Powell’s opinion, Part III-A, adopting a strict scrutiny approach).
Justice O'Connor's majority opinion noted that the justification for strict scrutiny was initially explained by Justice Powell in *Bakke*. She said the principle of strict scrutiny was not abandoned in *Fullilove*, was put in place by *Croson*, erroneously abandoned in *Metro Broadcasting*, and now in *Adarand* was being restored. Focusing on *Metro Broadcasting* as a precedent, Justice O'Connor first noted that because the Equal Protection Clause protects individuals of all races equally, *Metro Broadcasting* had wrongly applied a different level of scrutiny to race-based discrimination against any individual, whether white, African-American, Asian-American, Hispanic, or other ethnic background. Second, she noted that *Metro Broadcasting* had not become part of the fabric of the law and, because it was such a recent decision, it had not given rise to substantial reliance. Thus, it was ripe for overruling. Turning to consideration of an additional reason, which is usually necessary for natural law jurists to overrule precedent, Justice O'Connor noted that *Metro Broadcasting* was inconsistent with the rest of Equal Protection Clause and Due Process Clause doctrine. That doctrine treats individuals as individuals and applies the same level of review to discrimination for or against a respective group, as in the case of gender-based discrimination, where discrimination for or against women or men, based upon gender, triggers the same intermediate level of review. The Court also cited in *Adarand* a number of other cases, in areas as diverse as the law relating to double jeopardy, to whether members of the military may be tried in court-martial proceedings for non-service related crimes, and to antitrust law, where the Supreme Court had overruled prior precedents based on "inconsistency" with "accepted and established doctrine."

Four Justices dissented in *Adarand*. Justice Souter, who had joined with Justices O'Connor and Kennedy in *Casey*, dissented in *Adarand*, and was joined in dissent by Justices Ginsburg and Breyer. Justice Souter noted that since the challengers in this case had not identified any factual premises on which *Fullilove* rested as having disappeared since the case was decided, *stare decisis* compelled its application, and that gave *Metro* an adequate foundation. However, despite the fact that no factual circumstances had changed between *Fullilove* and *Adarand*, that is just one of the possible additional reasons that can be used to justify overruling a precedent, as discussed at § 7.3.3.3. The reason cited by Justice O'Connor, inconsistency with related law, is an independent reason that can justify a precedent being overruled. Justice Stevens, also dissenting, with Justice Ginsburg, reiterated the instrumentalist position that a number of reasons support using a standard of review that gives some deference to congressional efforts to create affirmative action programs. Governing impartially, he said, does not require that courts ignore the moral and constitutional difference between a policy designed to perpetuate a caste system and one that seeks to eradicate racial subordination.

169 *Id.* at 242-49 (Stevens, J., joined by Ginsburg, J., dissenting).
An additional example of the Court overruling a prior case thought to be inconsistent with developed doctrine can be found in 44 Liquormart, Inc. v. Rhode Island,170 discussed at § 30.3.2.1 nn.246-48. The question in Liquormart was whether to follow what had become the standard application of the Central Hudson test for commercial speech, which requires an intermediate review analysis into whether the regulation at issue was sufficiently narrowly tailored to achieve substantial governmental ends, or whether to follow an earlier case, Posadas de Puerto Rico Associates v. Tourism Co. of Puerto Rico,171 where the Court, in an opinion by Justice Rehnquist, gave greater deference to the governmental choice of activity. A majority of the Court said in Liquormart that Posadas was wrongly decided in terms of the level of protection given under standard commercial speech doctrine. Justice Stevens’ plurality opinion stated, "The Posadas majority's conclusion . . . cannot be reconciled with the unbroken line of prior cases . . . . Because the decision in Posadas marked such a sharp break from our prior precedent, . . . we decline to give force to its highly deferential approach." Chief Justice Rehnquist, author of the Posadas opinion, joined in a concurring opinion that agreed that Posadas should be overruled, although Justice Rehnquist did not join in Justice Stevens' plurality opinion which explained in full the reasons for its overruling.

The Court’s opinion in Lawrence v. Texas,172 discussed at § 27.3.4.2 nn.259-64, represents another such example. The majority opinion in Lawrence overruled Bowers v. Hardwick because Bowers was not settled law, in part because it had suffered “serious erosion from our recent decisions in Casey and Romer”; there had been no substantial reliance on Bowers; and Bowers was inconsistent with related law because “precedents before and after its issuance contradict its central holding.”

§ 7.3.3.3 A Changed Understanding of Facts Undermines the Precedent

A third reason for overruling or limiting a precedent is that new information casts doubt on its factual assumptions. This doubt may arise from new discoveries concerning legislative or constitutional history, or new discoveries concerning the perceived consequences of a proposed interpretation or application. In one of the most famous examples of this principle at work, the Court in Brown v. Board of Education173 perceived that although public education was scant when the Civil War Amendments were drafted and ratified, public education by 1954 had come to be the most important function of state governments and a vital opportunity if persons were to be readied for participation in society. Further, by 1954 the Court had developed the conviction that legally enforced segregation had deleterious effects on minority students. As a result, a unanimous Court held that anything to the contrary in Plessy v. Ferguson174 was overruled. The joint opinion referred

170 517 U.S.484, 509-14 (1996) (plurality opinion of Stevens, J., joined by Kennedy, Souter & Ginsburg, JJ.); id. at 528-32 (O’Connor, J., joined by Rehnquist, C.J., and Souter & Breyer, JJ., concurring in the judgment).

174 163 U.S. 537 (1896).
to this fact in *Casey*, stating, "While we think *Plessy* was wrong the day it was decided, see *Plessy*, [163 U.S. at] 552-564 (Harlan, J., dissenting), we must also recognize that the *Plessy* Court's explanation for its decision was so clearly at odds with the facts apparent to the Court in 1954 that the decision to reexamine *Plessy* was on this ground alone not only justified but required."175

A second famous example of a critical change in factual perception can be seen in the overruling of *Lochner v. New York* by *West Coast Hotel v. Parrish*.176 As the joint opinion stated in *Planned Parenthood v. Casey*,177 “[T]he lesson seemed unmistakable to most people by 1937, that the interpretation of contractual freedom protected [by *Lochner*] rested on fundamentally false factual assumptions about the capacity of a relatively unregulated market to satisfy minimal levels of human welfare. . . . The facts upon which the earlier case had premised a constitutional resolution of social controversy had proven to be untrue, and history's demonstration of their untruth not only justified, but required the new choice of constitutional principle." In contrast to this view, Chief Justice Rehnquist said in his dissent in *Casey* that the joint opinion's approval of the overruling of *Plessy* and *Lochner* on grounds that the Nation and the Court had learned new lessons in the interim, was "at best a feebly supported, post hoc rationalization for those decisions." The opinions in those cases, said Rehnquist, both rested simply on a judgment that the Court had been mistaken – not whether the public had changed its beliefs. Thus, without regard to any additional reason, Chief Justice Rehnquist, a Holmesian judge, joined by the other Holmesian and formalist Justices on the Court, supported the overruling of *Plessy* and *Lochner*.178 This willingness to support overruling of a precedent without the presence of an additional reason to overrule is consistent with the premise of this section that the additional reason justification for overruling precedent is the special province of natural law judges, like Justices O’Connor, Kennedy, and Souter in the joint opinion in *Casey*.

§ 7.3.3.4  The Precedent is Substantially Wrong or Represents a Substantial Injustice

A fourth reason that may justify to a natural law judge an overruling of wrongly-decided precedent is when the prior opinion is "inconsistent with [a] sense of justice"179 or is "so clearly [an] error that its enforcement [is] for that very reason doomed."180 The post-instrumentalist Supreme Court has applied this doctrine most forcefully in cases raising structural issues of constitutional law. As

175  *Casey*, 505 U.S. at 863 (joint opinion of O’Connor, Kennedy & Souter, JJ.).

177  *Casey*, 505 U.S. at 861-62 (joint opinion of O’Connor, Kennedy & Souter, JJ.).

178  *Id.* at 960-63 (Rehnquist, C.J., joined by White, Scalia & Thomas, J.J., dissenting). For discussion whether *Plessy* and *Lochner* were “wrong the day they were decided” or wrong based on a changed understanding of facts, see Jack M. Balkin, “Wrong the Day it Was Decided”: *Lochner* and Constitutional Historicism, 85 Boston U.L. Rev. 677 (2005).

Page 217
Justice Kennedy has noted, structural issues are those involving "separation of powers, checks and balances, judicial review, and federalism."¹⁸¹ Thus, instrumentalist-era precedents that reflect a different vision of separation of powers, checks and balances, judicial review, or federalism than held by post-instrumentalist Justices, are among the cases ripe for narrowing or overruling because they appear to many non-instrumentalist Justices to be substantially wrong.

One example of this process at work involves the narrowing of federal governmental power under the Commerce Clause that occurred in United States v. Lopez.¹⁸² In Lopez, for the 5-4 majority, Chief Justice Rehnquist held it beyond Congress' Commerce Clause power to bar the possession of a gun around a school because that kind of event, not being an economic activity, had nothing to do with commerce and did not substantially affect interstate commerce. Prior to Lopez, there had been an unbroken line of unsuccessful challenges to exercises of congressional Commerce Clause power, extending all the way back to 1937.¹⁸³ Chief Justice Rehnquist distinguished these cases from Lopez on the ground that they had sustained regulations of activities that arose out of or were connected with commercial transactions which, viewed in the aggregate, substantially affected interstate commerce. Here, in contrast, the criminal statute by its terms had nothing to do with "commerce" or any sort of economic enterprise.¹⁸⁴

Justice Kennedy, concurring with Justice O'Connor, brought federalism concerns clearly to the surface in his opinion. Justice Kennedy noted that he saw the case in terms of broad principles reflecting the role of the Court and the significance of federalism in the whole structure of the Constitution. Justice Kennedy reflected that of the various structural elements in the Constitution, the Framers had made a unique contribution to political science and political theory by their insight that freedom was enhanced by the creation of two governments, rather than one. However, if the federal government could take over the regulation of entire areas of traditional state concern, such as education, that are beyond the realm of commerce, in the ordinary and usual sense of that term, the boundaries between the spheres of federal and state authority would blur and political responsibility would become illusory. Also, local programs for the prohibition of guns would be in danger of displacement by federal authority. These structural concerns supported departing from the line of precedents since 1937 supporting congressional power under the Commerce Clause.¹⁸⁵

¹⁸⁴ 514 U.S. at 555-65.

¹⁸⁵ Id. at 573-82 (Kennedy, J., joined by O'Connor, J., concurring).
Justice Souter's dissent in *Lopez* picked up on faithfulness to another aspect of structural concerns: the role of the court in a case involving minimum rational review. Under standard minimum rational review, the Court defers to legislative judgments about whether a rational connection exists between means and ends, in this case whether there is rational connection between gun-related school violence and interstate commerce, unless the congressional judgment is wholly irrational, which Justice Souter said was not true in this case.\(^{186}\) Justice Breyer in his dissent also noted that it was rational for Congress to think that such a connection exists.\(^{187}\) Justice Souter, agreeing, said in his dissent that he was thus not convinced that following the 60 years of precedent supporting exercises of federal authority would represent a substantial error in this case.\(^{188}\) The various arguments for and against the majority opinion in *Lopez* are discussed at § 18.2.5 nn.100-15.

Another example of a post-instrumentalist majority on the Court overruling a “federalism” precedent felt to be substantially wrong is *Seminole Tribe of Florida v. Florida*, which overruled *Pennsylvania v. Union Gas Co.* In *Seminole Tribe*, both the majority and dissenting opinions said that cases that present a substantially wrong understanding of the 11th Amendment should be overruled, or limited. A 5-4 Court had held in *Union Gas*\(^{189}\) that Congress, when exercising its Commerce Clause power, could authorize lawsuits in federal court against States on federal question grounds, even though the 11th Amendment limitation on federal court jurisdiction was ratified after the Commerce Clause. Justice Brennan's reasoning was that when the states ratified the Constitution they consented to suits against them in federal courts based on congressionally created causes of action. This result was supported by the fifth vote of Justice White, who wrote a concurring opinion that said he disagreed with much of Brennan's reasoning. Thus, while this 1989 case was not within the usual time frame for an instrumentalist decision, the holding and the reasoning of Justice Brennan’s plurality opinion were instrumentalist in tone.

In *Seminole Tribe*,\(^{190}\) Chief Justice Rehnquist adopted the reasoning of the *Union Gas* dissent to claim that this understanding of the 11th Amendment was clearly wrong. As Justice Rehnquist noted in his 5-4 majority opinion, the result and rationale in *Union Gas* departed from established understanding of the 11th Amendment and undermined the accepted function of Article III, since never before had the Court suggested that the bounds of Article III could be expanded by Congress operating under any constitutional provision except the Fourteenth Amendment.

Justice Souter, dissenting, with Justices Ginsburg and Breyer, took issue with Justice Rehnquist's conclusion that the Court's decision in *Union Gas* was substantially wrong. Instead, Justice Souter concluded that, based upon constitutional text and history, the famous old 11th Amendment case of

Hans v. Louisiana was substantially wrong in holding that because a state could plead sovereign immunity against a noncitizen or alien suing the state, for that reason a state must enjoy the same protection in a suit by one of its own citizens.\textsuperscript{191} Beyond that, Justice Souter contended that the Court in Hans had misread statements in The Federalist and that Hans wrongly did not even consider whether Congress could abrogate the state's sovereign immunity by statute. Justice Souter explored historical materials to show that even those framers who expected common-law immunity to survive ratification were talking about diversity jurisdiction, a position supported by the discussion at \S 17.2.4.2 nn.223-24, and that American political thought at the time of framing had so revolutionized the concept of sovereignty that it would have been illogical to call for the immunity of a state against the jurisdiction of the national courts.\textsuperscript{192}

Regarding their approach to precedent, although Justice Souter disagreed with Chief Justice Rehnquist and the majority opinion over which prior 11\textsuperscript{th} Amendment case was wrongly decided, they both agreed that a wrong precedent regarding an 11\textsuperscript{th} Amendment federalism issue was sufficiently wrong that it should not be followed. Justice Souter did not call for Hans to be explicitly overruled, however, because Hans had not proven unworkable, did not conflict with later doctrine, and facts had not changed to undermine its premises. Rather, he stated that because Hans was wrongly decided, the Court should permit Congress "to abrogate" the Hans principle if Congress so wished.\textsuperscript{193} Justice Stevens also dissented in Seminole Tribe.\textsuperscript{194} The various arguments for and against the majority opinion in Seminole Tribe are discussed at \S 17.2.4.2 nn.217-24.

A third example where a majority of the current Court concluded that federalism concerns required a change in doctrine occurred in the 10\textsuperscript{th} Amendment case of New York v. United States. Following Garcia's overruling of National League of Cities on grounds of unworkability, discussed at \S 7.3.3.1 nn.146-51, it was unclear what role remained for the 10\textsuperscript{th} Amendment as a matter of constitutional law. New York revived the 10\textsuperscript{th} Amendment, to a limited extent. From the perspective of following or overruling precedent, the most important fact in New York is that Justice O'Connor's opinion for the Court did not call for Garcia to be overruled, despite her having dissented in that case.\textsuperscript{195} Instead, Justice O'Connor seemed reconciled in New York to the expansion of federal power allowed by Garcia. As she stated in New York,\textsuperscript{196} "The Federal Government undertakes activities today that would have been unimaginable to the Framers in two senses: first, because the Framers would not have conceived that any government would conduct such activities; and, second, because the

\textsuperscript{196} 505 U.S. 144, 157 (1992) (O'Connor, J., for the Court).
Framers would not have believed that the Federal Government, rather than the States, would assume such responsibilities. Yet the powers conferred upon the Federal Government by the Constitution were phrased in language broad enough to allow for the expansion of the Federal Government's role." However, Justice O'Connor noted in New York that despite this expansion, any federal action that "commandeers" a state legislative process was too wrong to stand as a precedent.

The central question in New York was whether, consistent with the 10th Amendment, Congress could encourage states to deal with low-level radioactive waste by requiring them either to accept ownership of waste generated within their borders or to provide regulations according to instructions by Congress. Justice O'Connor distinguished Garcia by noting that Garcia involved the authority of Congress to subject state governments to generally applicable laws, that is, situations where Congress sought to subject states to the same legislation that applied to private parties. Here, Congress was seeking to use the states as implements of federal regulation, to direct or motivate them to regulate in a particular field or in a particular way. Justice O'Connor's opinion pointed to statements in several cases, actions in the Constitutional Convention, and statements in The Federalist Papers and the ratification campaign, all of which, in her judgment, showed an intent that Congress should have power to regulate, not commandeer.

Justice O'Connor also noted that in The Federalist Papers No. 27 Hamilton spoke about extending the authority of the federal government to citizens, "the only proper objects of government." The Convention had rejected the New Jersey plan for the reason, among others, that it might require the Federal Government to coerce the states into implementing legislation. These statements were accompanied by dicta from prior cases that had stated Congress may not simply "commandee[r] the legislative processes of the States by directly compelling them to enact and enforce a federal regulatory program." To hold otherwise would not be merely wrong, but substantially wrong, and thus this aspect of the federal regulation involved in the case needed to be ruled unconstitutional. The Court extended New York in Printz v. United States, holding that the federal government also cannot commandeerv state executive or state administrative officials. The various arguments for and against the majority in New York and Printz are discussed at § 18.4.5 nn.236-48.

A fourth area of governmental structure where the post-instrumentalist Court has altered instrumentalist doctrine when it concluded such doctrine to be substantially in error involves the power of Congress to enforce the Civil War Amendments – the 13th, 14th, and 15th Amendments. The instrumentalist era saw substantial changes in the Court’s perception of Congress’ power to enforce the Civil War Amendments. These changes were based in part on the Court's perception that the prior cases were wrongly decided from the perspective of instrumentalist social policy. As discussed at § 28.2, the post-instrumentalist Court has not reversed or limited the line of 13th Amendment instrumentalist precedents, though neither has it used them to expand federal protections. The instrumentalist line of cases involving congressional power under the 14th and 15th

---

197 Id. at 174-80.

Amendments have been more vigorously questioned, and in some cases overruled, as discussed at §§ 28.3-28.4.

A fifth area of structural concerns where the modern Court has been willing to cut back on instrumentalist-era precedents involves the law of taxpayer and citizen standing. Prior to the 1960s, it was established that the plaintiff had to suffer a distinct injury personal to him or her in order for the federal courts to have constitutional authority to hear the plaintiff's claim. During the instrumentalist era, however, the Court said that earlier cases contained overgeneralized language and that standing was merely a prudential matter. Justice Brennan stated in 1962 in Baker v. Carr, “Have the appellants alleged such a personal stake in the outcome of the controversy as to assure that concrete adverseness which sharpens the presentation of issues upon which the court so largely depends for illumination of difficult constitutional questions? That is the gist of the question of standing.” Six years later, Chief Justice Warren cited this language with approval in Flast v. Cohen, where the Court found standing for federal taxpayers to raise an Establishment Clause challenge to government spending that reached some parochial schools. The Chief Justice said that “in terms of Article III limits on federal court jurisdiction, the question of standing is related only to whether the dispute sought to be adjudicated will be presented in an adversary context and in a form historically viewed as capable of judicial resolution.” Flast suggested a wide expansion in the concept of standing. All that was needed was some kind of personal stake in the outcome, relating to the status asserted by the plaintiff, which assured concrete adverseness in the litigation.

However, since the demise of the Warren Court instrumentalist majority in 1969, that has not been the impact of Flast as a precedent. Instead, the desire by non-instrumentalist Justices to preserve the separation of powers by enforcing traditional limitations on standing has outweighed the instrumentalist policy of seeking to accomplish justice by keeping the judicial system open to any claimant who has a cause of action. In 1982, Justice Rehnquist wrote for the Court in Valley Forge College v. Americans United for the Separation of Church and State, Inc. that an irreducible minimum for Article III standing is that the plaintiff must show that “he personally has suffered some actual or threatened injury as a result of the putatively illegal conduct of the defendant . . . and that the injury 'fairly can be traced to the challenged action,' and ‘is likely to be redressed by a favorable decision.’” As discussed at § 17.3.1.3.D, while Congress has some role to play today in enlarging standing by creating new causes of action, this role is limited. However, as noted at § 17.3.1.4.B, the specific holding of Flast remains. As a matter of settled law, it is still true that standing exists for litigants relying, as taxpayers, on the Establishment Clause to curb federal spending programs.

---

201 369 U.S. 186, 204 (1962).

204 See, e.g., Bowen v. Kendrick, 487 U.S. 589, 618 (1988) ("[W]e have consistently adhered to Flast and the narrow exception it created to the general rule against taxpayer standing.")
A sixth area where concerns about the correctness of prior precedent has led the Court to overrule a case deals with checks against official misconduct under the Due Process Clause, discussed at § 27.4.1. In 1981, the Court held in Parratt v. Taylor\textsuperscript{205} that a loss, negligently caused by a state official, could be an actionable deprivation within the meaning of the due process clause. Five years later, in 1986, at the beginning of the post-instrumentalist era, the Court held in Daniels v. Williams\textsuperscript{206} that the word "deprive" in the Due Process Clause connotes more than a negligent act. It proceeded to overrule Parratt to the extent it said that lack of due care by a state official may "deprive" an individual of life, liberty, or property under the Fourteenth Amendment.

Writing for the Court in Daniels, Chief Justice Rehnquist gave two main reasons for concluding that Parratt was substantially wrong. First, he said that historically the guarantee of due process was applied to deliberate decisions of government officials. No case before Parratt had held otherwise. He said this reflects the fact that the Due Process Clause, like the Magna Carta, was intended to secure individuals from the arbitrary power of government – from the use of power for oppression. In contrast, lack of due care "suggests no more than a failure to measure up to the conduct of a reasonable person. . . . To hold that injury caused by such conduct is a deprivation within the meaning of the Fourteenth Amendment would trivialize the centuries-old principle of due process of law."\textsuperscript{207} Second, although the Constitution deals with large concerns of governors and governed, it does not purport to supplant traditional tort law in laying down rules of conduct to regulate liability for injuries that occur by living together in society, which includes lack of due care by prison officials. To support this conclusion, Justice Rehnquist cited in Daniels\textsuperscript{208} two cases as analogies, Estelle v. Gamble, where it was said that "medical malpractice does not become a constitutional violation merely because the victim is a prisoner," and Baker v. McCollan, saying the same about false imprisonment due to state action.

One practical consequence of this analysis in § 7.3.3 is that those who would advocate before the Court that an instrumentalist-era precedent should be overruled or limited should do more than contend that the precedent was wrongly decided, does not represent settled law, and there has been no substantial reliance on the precedent. Reference should also be made to one or more of the additional reasons that justify overruling precedents discussed in § 7.3.3. As a theoretical matter, the Supreme Court's reluctance to overrule precedents absent some additional reason beyond a perception that the case was wrongly decided is an appropriate stance for a modern natural law Court to take, given the natural law decisionmaking style's great respect for prior judicial work-product, commitment to reasoned elaboration of the law, and a view that calls for changes in the law to be largely the province of the legislative branch\textsuperscript{S}.

\textsuperscript{206} 474 U.S. 327, 330-31 (1986).

\textsuperscript{207} Id. at 331-32.

\textsuperscript{208} Id. at 332-33, citing Estelle, 429 U.S. 97, 106 (1976); Baker, 443 U.S. 137, 146 (1979).
§ 7.3.4    The Precedent Raises Concerns About the Rule of Law

Because they were immersed in the Anglo-American system of judicial decisionmaking, the framers and ratifiers’ views concerning text, context, history, practice, and precedent were grounded in the grand traditions of the Anglo-American common law system. This approach favors such principles such as reasoned elaboration of the law, deciding cases on narrower grounds where possible, and deciding most cases only after full briefing and argument.\(^\text{209}\) Additionally, there has been a concern that judicial decisionmaking reflect the “rule of law” rather than merely the “will” of decisionmakers. Some aspects of the “rule of law” are reflected in Lon Fuller’s “inner morality” of the law, discussed at § 2.3.1 n.29. Additionally, the rule of law is a way of saying that “rules and procedures of a legal system must meet – or at least strive to meet – tests or standards, which are drawn from fairness and justice. . . . Every official is accountable; every rule, every decision, must be justified by some grant of authority. . . . The result is a system in which official discretion – what officials can do using their own judgment – is restrained.”\(^\text{210}\) Four principles are presented here to give concrete expression to the constitutional implications arising from concern about the “rule of law.”

§ 7.3.4.1    The Retroactivity Concern

Today's post-instrumentalist Court has disagreed with the holdings of several instrumentalist precedents relating to whether newly announced rules of constitutional law should be applied to all pending cases or only prospectively, that is, only as to conduct in the future. Starting at the very beginning of the original natural law period, and carrying through the formalist and Holmesian eras, the theory of judicial review was, as stated in Marbury v. Madison, that it is the duty of the judicial department to "say what the law is."\(^\text{211}\) That principle had been taken to imply that any rule of law stated in a case, even a newly discovered rule, should be applied not only in the future but, also, to conduct and cases that preceded the decision – at least all cases not fully resolved. This rule was based on the belief "that the duty of the court was not to 'pronounce a new law, but to maintain and expound the old one.'"\(^\text{212}\) Before the instrumentalist era, the Court had recognized "a general rule of retrospective effect for the constitutional decisions . . . subject to [certain] limited exceptions."\(^\text{213}\)

\(^{211}\) 5 U.S. (1 Cranch) 137, 177 (1803).

\(^{212}\) Linkletter v. Walker, 381 U.S. 618, 622-23 (1965) (citing 1 W. Blackstone, Commentaries 69 (15th ed. 1809)).

Despite this long tradition, in 1965 an instrumentally oriented Supreme Court, treating the matter as one of policy, held in *Linkletter v. Walker*\(^{214}\) that the Constitution neither prohibits nor requires retrospective effect. Exercising its newly discovered freedom, the Court held that newly imposed constitutional rules of criminal procedure should be applied only prospectively when criminal proceedings were challenged in a collateral review. The Court elaborated upon *Linkletter* in 1967 in *Stovall v. Denno*\(^{215}\) to hold that the "criteria guiding resolution of the question implicate (a) the purpose to be served by the new standards, (b) the extent of the reliance by law enforcement authorities on the old standards, and (c) the effect on the administration of justice of a retroactive application of the new standards." This precedent was extended in 1969, when the Court held in *Desist v. United States*\(^{216}\) that it would not apply new constitutional criminal rules to events that preceded the decision, even in cases on direct appeal. Concurring in *Mackay v. United States*,\(^{217}\) Justice Harlan said, “[T]he Court's assertion of power to disregard current law in adjudicating cases before us that have not already run the full course of appellate review, is quite simply an assertion that our constitutional function is not one of adjudication but in effect of legislation.”

Despite Harlan's concerns, the *Desist* approach was extended to civil cases in 1971, when the Supreme Court decided *Chevron Oil v. Huson*.\(^{218}\) Under *Huson*, a new principle of law should be applied only prospectively depending on whether retrospective operation would further or retard the purpose of the rule, and whether retrospective application would produce substantially inequitable results.

The post-instrumentalist Court has reverberated to Justice Harlan's views. Reverting to traditional theory, the Court reversed *Desist* and *Huson* in *Griffith v. Kentucky*.\(^{219}\) Decided in 1987, *Griffith* held that all new rules for criminal prosecutions would be applied to all cases on direct review, with no exceptions. The Court said that the integrity of judicial review requires the Court, after declaring a new rule in adjudicating a case, "to apply that rule to all similar cases pending on direct review." This principle was extended in 1993 in *Harper v. Virginia Department of Taxation*.\(^{220}\) In *Harper*, the Court said, “Our approach to retroactivity heeds the admonition that ['t]he Court has no more constitutional authority in civil cases than in criminal cases to disregard current law or to treat similarly situated litigants differently.'" This extension of *Griffith* was locked into place in 1995

\(^{214}\) 381 U.S. 618, 629-40 (1965).

\(^{215}\) 388 U.S. 293, 297 (1967).

\(^{216}\) 394 U.S. 244, 246 (1969).

\(^{218}\) 404 U.S. 97, 105-09 (1971).

\(^{220}\) 509 U.S. 86, 97 (1993) (citation omitted).
when the Court stated in *Reynolds v. Casket Co. v. Hyde*, 221 “[W]hen (1) the Court decides a case and applies the (new) legal rule of that case to the parties before it, then (2) it and other courts must treat the same (new) legal rule as ‘retroactive,’ applying it, for example, to all pending cases, whether or not those cases involve predecision events.”

Despite this doctrine, for cases on collateral review, such as federal habeas corpus actions challenging the constitutionality of state criminal proceedings, the Court's does not apply new procedural rules retroactivity, under the doctrine of *Teague v. Lane*. 222 This doctrine acknowledges the state’s substantial reliance in following what were then constitutional practices. The Court still applies new substantive rules retroactivity, and will apply procedural rules retroactivity if they fall within one of *Teague's* two narrow exceptions: a new rule that places "certain kinds of primary, private individual conduct beyond the power of the criminal law-making authority to proscribe," or if it involves "those procedures that . . . are 'implicit in the concept of ordered liberty.'" 223

§ 7.3.4.2 Response to Political Pressure Concern

Another affront to the rule of law would occur if the Court's decision in a case was based, or was perceived to have been based, not upon proper legal argumentation, but as a response to political pressure. This reason was explicitly used by the joint opinion in *Planned Parenthood v. Casey* as one reason for not overruling *Roe v. Wade*. The joint opinion stated in *Casey*, 223 "The Court must take care to speak and act in ways that allow people to accept its decisions on the terms the Court claims for them, as grounded truly in principle, not as compromises with social and political pressures having, as such, no bearing on the principled choices that the Court is obliged to make."

Taking a slightly different stance regarding this issue, but acknowledging how important it is that the Court not be perceived as giving in to political pressure, Chief Justice Rehnquist noted in *Casey* that the Court in *West Coast Hotel v. Parrish* and *Brown v. Board of Education* had acknowledged and corrected its previous errors in *Lochner* and *Plessy*, even though there was great pressure to overrule those cases. Further, public protests should not alter the normal application of *stare decisis*, "lest perfectly lawful protest activity be penalized by the Court itself." 224 Justice Rehnquist went on to say that the Court should never make its decisions with a view toward speculative public

---

224 Id. at 960 (Rehnquist, C.J., joined by White, Scalia & Thomas, JJ., dissenting), citing *Parrish*, 300 U.S. 379 (1937); *Brown*, 347 U.S. 483 (1954).
perceptions. The Court's legitimacy is enhanced by faithful interpretation of the Constitution. Justice Scalia agreed with Rehnquist, but found the joint opinion even more unsatisfactory than did Justice Rehnquist. Justice Scalia said that he was "appalled" by the Court's suggestion that the decision whether to overrule an erroneous constitutional decision must be strongly influenced against overruling by the substantial and continuous public opposition it has generated.

§ 7.3.4.3 Decision Not Based Upon Full Briefing and Argumentation

A third concern about the rule of law is whether the original precedent was decided only after full briefing and argument on the issue, or without the benefit of briefing and argumentation. For example, in *Church of the Lukumi Babalu Aye, Inc. v. City of Hialeah*, Justice Souter noted that Justice Scalia's reasoning in *Employment Division v. Smith*, which altered Free Exercise Clause doctrine, was not the product of full briefing and argument on the issue of changing standards in Free Exercise Clause cases. Thus, Justice Souter indicated in *Hialeah* less reluctance to overrule *Smith* since it did not have the imprimatur of consideration after full briefing and argument. As Justice Souter stated, "[A] constitutional principle announced *suo sponte* is entitled to less deference than one addressed on full briefing and argument."

§ 7.3.4.4 Plurality versus Majority Opinions

A fourth consideration regarding the rule of law is whether the reasoning in a precedent commanded the support of five or more members of the Supreme Court, or whether it was only a plurality opinion. Naturally, a plurality opinion is entitled to less weight than a majority opinion. For example, in *Seminole Tribe of Florida v. Florida*, discussed at § 17.2.4.2 nn.217-24, the Court noted that Justice Brennan's opinion in *Pennsylvania v. Union Gas Co.* was a 4-Justice plurality, and thus entitled to lesser precedential weight than if it had been a majority opinion. If the majority opinion is accompanied by one or more concurrences, that can also weaken the force of the precedent, particularly if the concurrences suggest different theories or approaches, and the votes of the concurring Justices are necessary to form the majority. For example, in *Youngstown Sheet & Tube Co. v. Sawyer*, discussed at § 19.3.1 nn.28-32, Justice Black's more formalist opinion for the Court on the extent of presidential power was undercut by the Holmesian functional understanding of presidential power adopted in the concurring opinions of Justices Frankfurter and Jackson.

226 *Id.* at 998-1001 (Scalia, J., joined by Rehnquist, C.J., and White & Thomas, JJ., dissenting).

229 343 U.S. 579, 587-88 (1952); *id.* at 610-14 (Frankfurter, J., concurring); *id.* at 635-38 (Jackson, J., concurring).
Occasionally members of the Court have implied that a precedent involving a 5-4 vote, with the four in dissent vigorously contesting the majority opinion, may be entitled to less weight than a 6-3, 7-2, 8-1, or 9-0 case. For example, in *Payne v. Tennessee*, \(^{230}\) discussed at § 4.3.2 n.86, in overruling two key precedents, Chief Justice Rehnquist remarked, “*Booth* and *Gathers* were decided by the narrowest of margins, over spirited dissents challenging the basic underpinnings of those decisions.”

**§ 7.4  The Process of the Supreme Court Decisionmaking**

**§ 7.4.1  General Judicial Predispositions That May Affect Every Case**

One aspect of the reasoning process in deciding cases involves the general judicial predispositions that a judge may bring to the case. These were addressed with respect to judges generally at § 4.4. As noted there, given the judge's interpretive style, a judge is likely to view provisions of the Constitution though the interpretive style generally favored by the judge. Thus, formalist judges may tend to see the framers and ratifiers as formalists, Holmesian judges see them as Holmesian, and so forth. Furthermore, the political views that judges bring to the courts may also have some impact, and perhaps great impact, on how the Constitution is interpreted. In addition, some judges, because of past experiences or idiosyncratic preferences, may have a view about a particular doctrine which is inconsistent with the judge's general views. Further, in some cases a judge may prefer a particular party, or that party's lawyer, to the other party, or that party's lawyer, though rules regarding judicial recusal are meant to prevent such bias from affecting case resolution.

In addition to these considerations, the outcomes and opinions in cases are also influenced by the process by which individuals are appointed or elected to courts, the process by which cases get decided and written, and rules regarding judicial recusal. With particular reference to the Supreme Court, the process by which individuals are appointed or elected to courts is discussed at § 7.4.2; the process by which cases get decided and written is discussed at § 7.4.3; and rules regarding judicial recusal, as well as limitations on judicial speech, both during campaigns for judges who are elected to office, and limitations that apply to all judges while on the bench, are discussed at § 7.4.4.

**§ 7.4.2  The Process by Which Judges are Appointed or Elected to Courts**

Under the Appointments Clause of Article II, to become a Justice of the United States Supreme Court, an individual must be nominated by the President, and confirmed by a majority vote in the Senate. As discussed at § 19.4.3, for lower federal court judges, as for many officials in the executive branch, the Appointments Clause gives Congress the option of vesting the appointment “in the President alone, the Courts of Law, or in the Heads of Departments,” as long as such judges are viewed as “inferior officials.” Congress has consistently rejected this option for federal district court and court of appeals judges who have the same Article III protections as Supreme Court Justices of life-tenure “during good Behaviour” and salary which “shall not be diminished during their Continuance in Office.” Thus, these lower federal court judges are subject to the Presidential

nomination and Senate confirmation process. Details regarding life-tenure and salary protections are discussed at § 20.1.4.3 n.97.

In practice, Presidents often consult with Senators from a particular state, particularly if they are of the same political party, before making nominations to the lower federal courts in that state. As discussed at § 17.2.3.1 nn.159-62, some specialized federal judges, such as Patent Court judges, Court of Claims judges, or Tax Court judges, are not viewed as Article III judges and do not have the life-tenure and salary protections. Under existing congressional statutes, the Patent Court and Court of Claims judges must get Senate confirmation, while Tax Court judges are merely appointed by the “President alone.” Appointment of Administrative Law Judges who adjudicate claims within administrative agencies, such as social security disability claims or immigration and naturalization claims, typically occur by the “Heads of Departments” without Senate confirmation.

Each state has its own process for selecting judges for the state courts, including each state Supreme Court. This process varies widely from state to state. However, there are four main ways judges are selected: (1) election to office in a partisan election, that is, running as a member of a political party; (2) election to office in a non-partisan election, that is, running without being able to designate oneself as a member of a political party; (3) initial appointment by the Governor or state legislature to judicial office, but then running in a retention election some specific number of years later; or (4) a hybrid system, with different procedures (election versus appointment) depending on whether a Supreme Court or lower court position.

With respect to the Supreme Court, the number of Supreme Court Justices is determined by Congress. Initially, during the First Congress, there were 6 Supreme Court Justices. To deprive Jefferson of an appointment, the lame-duck Federalist Congress reduced this to 5 in 1801, but it was restored to 6 in 1802 by the Jeffersonian Congress. As the United States expanded and grew during the first half of the 19th century, Congress gradually increased this number in 1807 to 7; in 1837 to 9; and in 1863 to 10. Following President Lincoln’s assassination in 1865, the Republican-dominated Congress, wishing to deprive Lincoln’s Democratic Vice-President, Andrew Johnson, of the ability to nominate Supreme Court Justices, reduced the number of Justices in 1866 to 7. Once Johnson left office, Congress increased the number of Justices back to 9 in 1869, where it remains today, as provided in 28 U.S.C. § 1. As discussed at § 14.2.3 nn.59-63, in 1937 President Roosevelt proposed to Congress that it increase the size of the Court to 15, adding one new Justice for every Justice then over 70 years of age, ensuring Roosevelt could have “packed” the Court with Justices voting to uphold his New Deal legislative agenda. When the Court began to uphold New Deal legislation anyway, the need for the court-packing plan evaporated, and Congress rejected the plan.

As might be expected, when the President and a majority of the Senate are of the same political party, the nomination and confirmation process has been relatively smooth. For most of the period before the Civil War, there were Democratic Presidents and a Democratic-controlled Senate. For most of the period after the Civil War until the Great Depression, there were Republican Presidents

and a Republican-controlled Senate. However, as the experience with the Republican Congress and Democratic President Johnson suggests, when the Senate and the President are of different parties, the nomination and confirmation process may not be as smooth.

For example, before the Civil War, Presidents who were not Democrats, John Quincy Adams, John Tyler, and Millard Fillmore, had a total of 9 nominations to the Supreme Court not approved by the Senate, either because the nominations were withdrawn, postponed, not acted upon, or rejected by majority vote. Democratic Presidents during the same period only had 2 nominations ultimately not approved, one each by Polk and Buchanan. President Jackson’s original nominations of Roger Taney to be a Justice were rejected twice, based in part on Taney’s role as Acting Treasury Secretary in removing federal funds from the Second National Bank in 1833, an act consistent with Jackson’s veto of a bill to reauthorize the Bank. That veto provoked a censure vote of the President by the Senate in 1834, and a rejected of Taney’s confirmation to be Treasury Secretary, the first Cabinet appointment not approved by the Senate. After the November 1834 elections, the new Democrat-controlled Senate confirmed Taney to be Chief Justice in 1836, and the censure was expunged in 1837. Between the Civil War and the Great Depression, there were two Democratic Presidents, Grover Cleveland and Woodrow Wilson. Grover Cleveland’s nominations to the Court shared the pro-business perspective of the Republicans in the Senate, and thus were easily confirmed, as noted at § 14.2.2. Woodrow Wilson’s nominations of conservative jurists, like Justice McReynolds, similarly were easily confirmed. When President Wilson nominated a liberal jurist, Louis Brandeis, he was subjected to a 4-month delay before the Republican Senate finally confirmed him.

More recently, there have been a greater number of times where tension between a President of one party and a Senate with a different agenda have provoked confirmation battles. During the 1960s, Democratic President Johnson’s nomination of liberal, African-American activist Thurgood Marshall to the Court provoked a 3-month delay by conservative Republicans and conservative Democrats before he was confirmed. In 1968, President Johnson’s nomination of his close friend Associate Justice Abe Fortas to become Chief Justice was delayed until the Fortas nomination was withdrawn, with Justice Fortas also retiring from the Court. Two of Republican President Nixon’s nominations to the Court in 1970, Judges Clement Haynesworth (defeated 55-45) and Harold Carswell (defeated 51-45), were not approved, before the Democratic-controlled Senate finally confirmed Nixon’s third choice, Judge Harry Blackmun. Two of Republican President Reagan’s nominations to the Court in 1987, Judges Robert Bork (defeated 58-42) and Douglas Ginsburg (nomination withdrawn once marijuana use while a Harvard Law School student and professor became known), were not approved, before the Democratic-controlled Senate finally confirmed Reagan’s third choice, Judge Anthony Kennedy. Republican President George Bush’s nomination of Judge Clarence Thomas to the Court provoked a lively confirmation battle in 1991, before Judge Thomas was confirmed by the Democratic-controlled Senate on a narrow 52-48 vote.232

Regarding the general statistical profile of confirmed Justices, updated to account for the confirmations of Chief Justice Roberts in 2005 and Justice Alito in 2006, one author has noted:

---

232 On Supreme Court nominations generally, see Henry J. Abraham, Justices, Presidents, and Senators: A History of the U.S. Supreme Court Appointments from Washington to Clinton (1999).
Since 1789, there have been [110] justices. There have been [17] chief justices; [98] associate justices; with five chiefs having first served as associates. On average, a new justice has joined the Court every 22 months, and the . . . drought of 11 years [between 1994 and 2005 was] the longest in over 180 years, since the administration of President James Monroe.

On average, each justice has served 15 years. The longest tenure of a justice has been 36 years (Justice William Douglas). Five others have served 34 years. The shortest service was just four months (Chief Justice John Rutledge's recess appointment). Age at the time of appointment has ranged from 32 to 69 years with a median age of 54. The oldest justice (Justice Oliver Wendell Holmes) retired at age 90.

Twenty-eight justices have been appointed from a lower federal court; 22 from a federal executive office; 22 from a state court; 18 from the private practice of law; eight from the U.S. Senate; four from the U.S. House; three from governorships; and three from law schools. Five justices previously served as Solicitor General.

Fifty-one justices have been Democrats (or their predecessor, Democrat-Republican) and 46 have been Republicans (or their predecessor, Federalist). Twelve of the [110] justices have been appointed from a political party different than that of their appointing presidents.

Justices have been appointed from 32 states, with the most coming from New York (15), Ohio (10), Massachusetts (9), Pennsylvania and Tennessee (6 each). Only two of the [110] justices have been women, and only two have been African-American. To the extent known, the justices have been predominantly Episcopalian (28), other Protestant (25) and Presbyterian (17). [ Eleven] have been Roman Catholic and seven have been Jewish. [On the Court as of 2006, five Justices are Roman Catholic (Chief Justice Roberts, and Justices Scalia, Kennedy, Thomas, and Alito); two are Jewish (Justices Ginsburg and Breyer); one is Episcopalian (Justice Souter), and one is other Protestant (Justice Stevens).]

Those who have served as chief justice have taken many different paths to the position. Most notably, only half of chief justices had prior judicial experience. Indeed, the chief justices have come to their position more by political experience than by technical legal experience. For example, two came from Secretary of the Treasury; two from Secretary of State; two from a governorship; two from U.S. Attorney General; and one each from a federal appeals court, the U.S. Senate, a state supreme court, private practice and the presidency. Three were elevated from positions as associate justice. [Two had served earlier as associate justices, but left the Court, and then returned later as Chief Justice: the recess appointment of Chief Justice Rutledge in 1795, and the appointment of Chief Justice Hughes in 1930. Hughes had been Governor of New York from 1907-10 and an associate justice from 1910-16. He left the Court in 1916 to run as the Republican nominee for President, but lost to Woodrow Wilson in that election. Chief Justice Rehnquist was confirmed directly from his associate justice position in 1986.]233

Nominations and confirmations of judges to the lower federal courts have typically not provoked the same kind of confirmation battles. Those judges must follow the precedents of the Supreme Court, and thus do not have the same kind of power to make law. However, given the growth in the dockets of the lower federal courts, and the Court only taking about 100 cases each year, it is “essentially impossible for the Court to engage in meaningful ‘error correction’ [today].” Thus, the judicial predispositions of individuals nominated for the lower federal courts, particularly courts of appeals rather than mere district courts, has taken on greater importance in the Senate confirmation process.

Historically, Presidents have tended to appoint judges to the lower federal courts that commanded sufficient mainstream support that they could be confirmed by filibuster-proof majorities in the Senate. Prior to 2000, there were no successful filibusters of judicial nominations to the lower federal courts. For example, during 1977-80 and 1993-94, when Democratic Presidents Carter and Clinton, respectively, were supported by a Democratic-controlled Senate, each of their nominations to the federal courts attracted more than 60 votes. Neither of these Presidents tried to “squeeze through” judicial appointments on a bare 50 plus one basis, even though their nominations could have moved easily through the Democratic-controlled Senate Judiciary Committee and brought to a Senate vote. Indeed, the Senate confirmed 99% of Clinton’s first-term judicial nominees without a roll-call vote.

Since 2000, President George W. Bush has tried to place individuals on the lower federal courts who could be approved on a 50 plus one basis, but who could not command a filibuster-proof 60 votes. While President Bush’s attempt is within the President’s power given the Appointments Clause, this attempt is inconsistent with the general practice of Presidents for 200 years in making lower federal court appointments. This attempt provoked the Democrats in the Senate to filibuster a number of these nominations on grounds that the individuals were not mainstream nominations, although the Democrats did not filibuster all such nominations. For example, during President Bush’s first term in office, the Senate confirmed 3 of President Bush’s judicial nominations by a bare majority of 50 plus one, but less than 60 votes: Dennis H. Shedd (4th Circuit; confirmed 55-44); Jeffrey Sutton (6th Circuit; confirmed 52-41); and Timothy M. Tymkovich (10th Circuit; confirmed 58-41). In one case during President Reagan’s term in office, a judge to a courts of appeals was approved in 1986 by a bare majority vote: Daniel Manion (7th Circuit; confirmed 48-46). His nomination could have been successfully filibustered by the Democratic minority, but was not. In one case during President’s Clinton term in office, a judge to a court of appeals was confirmed despite more than 40 votes in opposition: William A. Fletcher (9th Circuit; confirmed 57-41). Had all 41 of those individuals voted for a filibuster, that nomination could have been filibustered, but was not.

---

As the start of President Bush’s second term in 2005, President Bush renominated 7 judges for court of appeals positions whom the Democrats had filibustered during his first term. In order to defeat the expected Democratic filibuster of these nominations, the Majority Leader of the Senate, Bill Frist, indicated a willingness to invoke what was called “the nuclear option” of changing the Senate rules to no longer require 60 votes to end a filibuster if the filibuster involved a judicial nomination, without the usual requirement of a two-thirds vote in the Senate to change Senate rules. When a Democratic Senator would complain about this violation of Senate procedure, Senator Frist indicated his intent to ask the Senate to disregard the complaint, which could be done by a majority vote of the Senate, and proceed to consider the judicial nomination anyway.

Since the two-thirds requirement for changing Senate Rules is nowhere stated in the Constitution, Senator Frist’s plan would not violate any clear text in the Constitution, although it would be inconsistent with legislative practice. As a matter of internal Senate procedure, however, any complaint by Democrats in the Senate would likely be viewed as a political question by the Court and not ruled upon, as are Senate procedures regarding impeachment proceedings, discussed at § 17.3.4.5 nn.571-73. With no prospect of judicial relief from Senator Frist’s plan, Democratic leaders in the Senate indicated that if Senator Frist invoked the “nuclear option” that they would retaliate by using other Senate rules to slow down or, in some cases, halt other Senate business.

Before the “nuclear option” was triggered, a group of 14 Senators, 7 Republicans and 7 Democrats, reached a compromise. This compromise was critical because those Senators held the controlling votes on whether to support continued Democratic filibusters on certain judges, or to support Senator Frist’s call for disregarding valid Senate rules by a majority Senate vote. That compromise called for each Senator to reject support for the “nuclear option,” but for 5 of the 7 nominations to proceed to a full vote in the Senate, and for later filibusters to be used only in “extreme circumstances.” Based on this compromise, as of June, 2005, all 5 of those nominations were approved, with three of the judges confirmed with more than 40 votes in opposition: Priscilla Owen (5th Circuit, confirmed 56-43); Janice Brown (D.C. Circuit, confirmed 56-43); William Pryor (11th Circuit, confirmed 53-45).

How this will affect the nature of judicial nominations in the future remains to be seen. Prior to 1980, there were no examples among the more than 3,000 appointments to the federal district courts or courts of appeals where the nominee received less than 60% support in the Senate. This ensured that the judges were perceived by a clear majority in the Senate as deserving confirmation, and meant that most federal judges were conservative, centrist, or liberal, but not on the extreme left or right. Only one judge for President Reagan and one judge for President Clinton were approved with more than 40 Senators in opposition. Between 2001 and 2005, President Bush had 6 federal judges confirmed in this matter. Under the 14-Senator compromise, more such confirmations may occur in the future.

---

This new practice raises the possibility that judges more on the extremes of the political spectrum may be appointed to the federal bench than has occurred during the Nation’s first 200 years. Of course, many Republicans in the Senate supporting President Bush’s nominations take the position that these judges may be conservative, but that they are not on the extreme right. In some later Democratic administration, many Democrats in the Senate may take the position that any Democratic President’s nominations are merely centrist or liberal, and not on the extreme left. What seems clear is that Presidents in the future will feel slightly more comfortable nominating judges to the federal bench that can command 50 plus one support, but not 60 votes, than has occurred for most of our Nation’s history. Whether this change resulted from increased scrutiny given by Democratic Senators filibustering mainstream conservative nominations, which precipitated the “nuclear option” threat, as Republicans tend to allege, or was the product of President Bush nominating more extreme conservative judges than earlier Republican Presidents, and trying to get them confirmed by any means, as Democrats tend to allege, no doubt depends, in part, on one’s political perspective.239

As a final wrinkle on this process, the President has the power under Article II text to appoint federal officials, including judges, without Senate confirmation, even if those officials would normally require confirmation, if the Senate is not in session. Such “recess” appointments last only until the end of the next session of Congress (under current practice the end of the next calendar year). Although the President’s power under the Recess Clause may have been initially intended to apply only when the vacancy was created during a Senate recess, traditional practice permits Presidents to make recess appointments as long as the appointment is made during a Senate recess, as discussed at § 19.4.3.1. Presidents of both parties have used the power occasionally to appoint judges during a Senate recess who were blocked by the Senate. President Clinton used that power to appoint Roger Gregory to the 4th Circuit in December, 2000. President Bush used that power to appoint Charles Pickering, Sr. to the 5th Circuit in January, 2004, and William Pryor, Jr. to the 11th Circuit in February, 2004.

§ 7.4.3 The Process by Which the Supreme Court Decides Cases

Since 1988, all cases reach the Supreme Court by exercise of its discretionary power to grant petitions for a writ of certiorari, except for a few cases certified by a lower federal court of appeals or which, by specific act of Congress, may be directly appealed from a district court. The writ of certiorari, which must be petitioned for within 90 days of judgment below, is granted if at least 4 Justices vote in favor. Five Justices are necessary to form a majority for a decision if all 9 Justices vote, although under 28 U.S.C. § 1 only a quorum of 6 Justices is necessary for a decision, and by Court practice a ‘tie’ vote, of say 4-4, results in affirming the lower court but with no precedential

239 On the role of “ideology” in Senate consideration of Supreme Court nominations, see generally Emery G. Lee, III, The Federalist in an Age of Faction: Rethinking Federalist No. 76 on the Senate’s Role in the Judicial Confirmation Process, 30 Ohio N.U.L. Rev. 235 (2004); Symposium on Ideology in Judicial Selection, 15 Regent U.L. Rev. 1 (2002-2003). On use of the filibuster, or the alternative practice of Senator “holds” on judicial or executive branch nominations, which if such a “hold” is respected by a majority of Senators avoids a filibuster and “cloture” vote requiring 60 votes to end the filibuster, see generally Catherine Fisk & Erwin Chemerinsky, In Defense of Filiubusting Judicial Nominations, 26 Cardozo L. Rev. 331 (2005).
value. Under Court rules, decisions are official only when announced, so if Justices die or retire after voting in conference, but before the decision is announced, their votes do not count.240

The volume of certiorari petitions makes it impossible for every Justice to examine the papers in every instance and much of this work is delegated to law clerks, selected by the Justices, to do the initial screening.241 While each Justice can vote to grant certiorari for any reason whatsoever, Rule 10 of the Supreme Court states that cases more likely to receive certiorari occur when the lower court: (1) “has entered a decision in conflict with” another court on “an important federal question”; (2) “has so far departed from the accepted and usual course of judicial proceedings, or sanctioned such a departure by a lower court, as to call for an exercise of this Court’s supervisory power”; (3) “has decided an important question of federal law that has not been, but should be, settled by this Court”; or (4) “has decided an important federal question in a way that conflicts with relevant decisions of this Court.” The pre-1988 history regarding Court jurisdiction, and the few non-certiorari cases that exist today, are discussed at § 17.2.2.2[S.

The process of deciding a case is described in “A Visitor’s Guide to Oral Argument.”242 The Guide explains that following a grant of certiorari each party files its legal brief so that the Justices are familiar with the positions each party is advocating. In most cases, each party presents an oral argument. The Guide continues by noting the schedule for the usual one-hour-long argument per case, and that, between arguments, the Justices are busy writing opinions, deciding which cases to hear in the future, and reading briefs for the next argument sessions. The Guide notes that the Court grants review in approximately 100-120 of the more than 7,000 petitions filed with the Court each Term, although in recent years the Court has granted review in only 80-100 cases each Term.

There is no fixed schedule for reaching decisions, but all cases argued during a Term of Court, which by statute since 1873 has begun in October, and since 1916, as codified at 28 U.S.C. § 2, the “first Monday in October,” are decided before the summer recess begins, usually the end of June, except in the rare circumstance of a case held over for the next Term. The Guide continues: “During an argument week, the Justices meet in a private conference, closed even to staff, to discuss the

240 See generally Ira P. Robbins, Justice By the Numbers: The Supreme Court and the Rule of Four – Or Is It Five, 36 Suffolk L. Rev. 1 (2002); Edward A. Hartnett, Ties in the Supreme Court of the United States, 44 Wm. & Mary L. Rev. 643 (2002).

242 The Guide is available at the Court and is published in Stern, Gressman, Shapiro & Geller, Supreme Court Rules, 1997 Revisions (BNA Inc., 1997).
cases and to take a preliminary vote on each case. If the Chief Justice is in the majority on a case decision, he decides who will write the opinion. He may decide to write it himself or he may assign that duty to any other Justice in the majority. If the Chief Justice is in the minority, the Justice in the majority who has the most seniority assumes the assignment duty.” Although there is no official requirement, and it was different in the time of Chief Justice John Marshall, who tended to write a majority of the Court’s opinions himself, as noted at § 4.3.4 n.98, current practice is that each Justice is assigned roughly the same number of cases to write each Term. The consequences of having one majority opinion of the Court, rather than the English practice of each judge writing an opinion, is discussed at § 4.3.4 n.99.

The conference, although private, has been described by several of the Justices. Justice Clark has said that upon entering the conference room, each Justice shakes hands with the others. The Chief Justice handles the order of business, which usually involves: (1) determining which written opinions are ready to be announced, (2) discussing and voting on cases which have been argued during the week, (3) considering miscellaneous motions, (4) discussion and dealing with certiorari petitions and appeals, and (5) other items, such as Federal Rules or building items, budget, and salaries. When dealing with matters requiring a vote, the Chief Justice states his views, and makes his recommendation. Other Justices comment in order of seniority and a vote is taken.

With respect to order of voting, Chief Justice Rehnquist has written, “For many years there has circulated a tale that although the discussion in conference proceeds in order from the Chief Justice to the junior justice, the voting actually begins with the junior justice and proceeds back to the Chief Justice in order of seniority. I can testify that, at least during my fifteen years on the Court, this tale is very much of a myth; I don’t believe I have ever seen it happen at any of the conferences that I have attended.” This quote suggests that each Justice usually indicates his or her vote at the first opportunity to comment. In a few cases, a Justice may pass or indicate that the case should be decided. Based predominantly on reliable notes from Justice Powell between 1973 and 1986, such passing happened more often during the 1970s and 1980s by Chief Justice Burger, at a rate slightly higher than 10%, and Justice Rehnquist when he was Chief Justice, at a rate slightly higher than 5%, with all Associate Justices passing at less than 5%, and most below 2%. It has been speculated that this difference is explained by the fact that passing would preserve the Chief Justice’s option to vote with the majority and assign who writes the opinion.

With respect to the mechanism by which drafts of opinions are circulated, the Guide says, “Draft opinions are privately circulated among the Justices until a final draft is agreed upon. When a final decision has been reached, the Justice who wrote the opinion announces the decision in a public

---

243 See Mark V. Tushnet, Understanding the Rehnquist Court, 31 Ohio N.U. L. Rev. 197, 201-02 (2005) (stating that Chief Justice Rehnquist tried to follow a “rather rigid rule” about this).

Court session and may deliver a summary of the Court’s reasoning. Meanwhile, the Public Information Office releases the full text of the opinion to the public.” Of course, before the decision is announced, time is allowed for concurring and dissenting opinions to be circulated and responded to by other Justices.

During the natural law and formalist eras, more than 80% of the cases were by unanimous decision, while since 1937, differences among Holmesian, instrumentalist, modern natural law, and modern formalist Justices have meant more concurring and dissenting opinions. Typically, these opinions indicate a “respectful” concurrence or dissent, although in some cases the language used is more “caustic.” See generally John P. Kelsh, The Opinion Delivery Practices of the United States Supreme Court 1790-1945, 77 Wash. U.L.Q. 137 (1999) (80% of the decisions unanimous before 1937); Marie A. Failinger, Not Mere Rhetoric: On Wasting or Claiming Your Legacy, Justice Scalia, 34 U. Tol. L. Rev. 425 (2003) (discussion of more caustic concurring or dissenting opinions).

In a few cases, the Court’s opinion will not be identified as written by a particular Justice, but will be announced as a per curiam opinion of the Court. Typically, these opinions indicate a “respectful” concurrence or dissent, although in some cases the language used is more “caustic.” See Paul H. Edelman & Suzanna Sherry, All or Nothing: Explaining the Size of Supreme Court Majorities, 78 N. Car. L. Rev. 1225 (2000).

For court of appeals cases, judges sit in 3-judge panels, and a similar process is employed of circulating a majority opinion and allowing for concurring and dissenting opinions. Prior to appeal to the Supreme Court, a litigant can petition for an “en banc” review by a larger panel of court of appeals judges, traditionally all judges on the Circuit, but for the large Ninth Circuit a panel of 11 judges, where the decision is alleged inconsistent with the Circuit’s precedent. See generally Laura Krugman Ray, The Road to Bush v. Gore: The History of the Supreme Court’s Use of the Per Curiam Opinion, 79 Neb. L. Rev. 517 (2000).

A chief judge could, for example, select senior or district court judges on an ideological basis, [Further,] discretion . . . arises from the authority of a chief judge of a circuit to approve senior judges or district court judges who are added to the pool when determining panel composition. A chief judge could, for example, select senior or district court judges on an ideological basis, making the panel more likely to agree with the majority’s reasoning. See generally Christopher P. Banks, The Politics of En Banc Review in the “Mini-Supreme Court,” 13 J.L. & Pol. 377 (1997).
skewing the biases of the circuit and altering the outcome in at least some instances.  

§ 7.4.4 Rules Regarding Judicial Speech and Recusal

Codes of judicial conduct regulate the speech and conduct in which judges may engage. For state courts, each state will have adopted its own Code of Judicial Conduct. In practice, these state rules are all substantially based on the ABA Model Code of Judicial Conduct. Reflecting separation of powers concerns, this will typically have been done by the state Supreme Court in that state, not the legislature. Reflecting the greater control given to Congress over the federal courts, discussed at § 17.2.3.1, the federal system is governed by congressional rules, principally in 28 U.S.C. § 455, based on recommendations from the United States Supreme Court.

In addition, the Judicial Conference of the United States, the administrative arm of the federal judiciary, has adopted a Code of Conduct for United States Judges. As provided in 28 U.S.C. § 331, the Judicial Conference is chaired by the Chief Justice of the Supreme Court, and includes the Chief Judges of all the Federal Circuit Courts of Appeals, the Chief Judge of the Court of International Trade, and a district judge from each judicial circuit. Because the Judicial Conference holds no specific statutory grant of authority to enact binding ethical rules, there is no enforcement power behind their provisions. Nevertheless, their provisions are often given "great persuasive weight." Canon 3E of the ABA Model Code of Judicial Conduct and the similar Canon 3C of the Code of Conduct for United States Judges address recusal and disqualification. Congress intended that its official statutory rule in § 455 also conform to the ABA Model Code of Judicial Conduct. Thus, these Codes all have similar provisions and are intended to assure that judges do not engage in speech or behavior that compromises, or appears to compromise, the impartiality of the judge.

Two main kinds of rules have been adopted. One set of rules deal with the issue of conflict of interest and judicial recusal. These rules are based, in part, on constitutional concerns with ensuring litigants their Fifth or 14th Amendment due process rights in every case (Fifth Amendment for federal cases; 14th Amendment for state cases), and, in the case of criminal trials, the Sixth Amendment right to a fair trial. The American Bar Association's Model Code of Judicial Conduct Canon 3E(1), adopted in 1990, which provides the basis for the state and federal codes, provides:

(1) A judge shall disqualify himself or herself in a proceeding in which the judge's impartiality might reasonably be questioned, including but not limited to instances where:
(a) The judge has a personal bias or prejudice concerning a party or a party's lawyer, or personal knowledge of disputed evidentiary facts concerning the proceeding;
(b) The judge served as a lawyer in the matter in controversy. 

---

judge previously practiced law served during such association as a lawyer concerning the matter, or the judge has been a material witness concerning the matter;
(c) The judge knows that he or she, individually or as a fiduciary, or the judge's spouse, parent or child wherever residing, or any other member of the judge's family residing in the judge's household, has an economic interest in the subject matter in controversy or in a party to the proceeding or has any other more than a de minimis interest that could be substantially affected by the proceeding;
(d) The judge or the judge's spouse, or a person within the third degree of relationship to either of them, or the spouse of such a person: (i) is a party to the proceeding, or an officer, director, or trustee of a party; (ii) is acting as a lawyer in the proceeding; (iii) has acted as a judge in the proceeding; (iv) is known by the judge to have an economic interest that could be substantially affected by the proceeding; (v) is to the judge's knowledge likely to be a material witness in the proceeding.

The previous version of this provision in the 1972 Model Code stated that in such situations a judge "should disqualify," while the 1990 Model Code mandates that the judge "shall disqualify." Although most courts construed the 1972 Code's "should disqualify" to signify a mandatory duty anyway, disqualification under the 1990 Code clearly became mandatory. The Preamble to the 1990 Code explains, "When the text uses 'shall' or 'shall not,' it is intended to impose binding obligations the violation of which can result in disciplinary action. When 'should' or 'should not' is used, the text is intended as hortatory and as a statement of what is or is not appropriate conduct but not as a binding rule under which a judge may be disciplined." Of the 49 states that have adopted some form of the ABA Code, Montana being the one exception, 33 use the term "shall" to describe the judge's responsibility to disqualify, while Alabama, Colorado, Delaware, Idaho, Iowa, Louisiana, Maryland, Massachusetts, Mississippi, New Hampshire, New Jersey, New York, North Carolina, Oklahoma, Pennsylvania, and Washington use the term “should.” Not surprisingly, Montana also "has a code of judicial conduct that 'bear[s] some degree of similarity to the Model Codes.'" Speech concerning the issues raised in a case that later comes before the court can raise an issue of impartiality. For example, Justice Scalia recused himself in a case reviewing the Ninth Circuit’s ruling that the words “under God” in the Pledge of Allegiance violated the Establishment Clause because, prior to the Court granting certiorari in the case, Justice Scalia had stated in a speech before a Knights of Columbus Chapter that he thought the ruling was a mistaken attempt “to exclude God from the public forums and from public life.” In contrast, mere friendship with a government official whose official actions come before the Court is typically not enough to require recusal. Justice Scalia provided a well-reasoned and well-documented defense of this principle in his refusal

254 Leslie W. Abramson, The Judge’s Relative is Affiliated with Counsel of Record: The Ethical Dilemma, 32 Hofstra L. Rev. 1181, 1183 n.12 (2004).

to recuse himself in *Cheney v. United States District Court for the District of Columbia*, 257 after participating in a hunting trip with a group of 12 other individuals, including Vice-President Cheney.

A second set of rules deal with the issue of permissible judicial speech in the context of campaigns for office, in those states where judges are elected. This issue is discussed at § 30.4.2.4 nn.332-38, which addresses First Amendment issues related to judicial speech and election campaigns.

In terms of who makes the decision to recuse, states administer motions to disqualify in three ways: (1) permit the challenged judge to exercise discretion and rule on the motion; (2) restrict the challenged judge to a determination of the sufficiency and timeliness of the motion, but then require the case to be transferred for decision on the merits of recusal; or (3) require the challenged judge to transfer the motion immediately upon receipt of the motion without ruling on its substance or facial compliance. 258

The rules regarding disqualification in the federal system are governed for district court judges by 28 U.S.C. § 144. Section 144 provides that a party may file in “good faith” one affidavit per case alleging the judge “has a personal bias or prejudice either against him or in favor of any adverse party.” When filed, “another judge shall be assigned” to rule on recusal.

For court of appeals judges and Justices of the Supreme Court, the practice is that each judge or Justice makes his or her own decision on whether to be recused from a case. 259 As a possible explanation for why appellate judges are granted greater flexibility to rule on their own recusal, as opposed to a single judge hearing a case, as at the trial court level, it has been noted, “A panel of judges can balance out one judge who has, for example, a view on abortion or the death penalty. On the Supreme Court there are nine different views to act as a check and balance procedure.” 260

---

CHAPTER 8: THE PURPOSES OR ENDS OF CONSTITUTIONAL INTERPRETATION

As noted at § 1.2.1, the final cause or end of Aristotle’s silver bowl is the purpose for which the bowl is intended. From an Aristotelian perspective, the purpose of constitutional interpretation is to produce an array of judicial decisions that create and apply constitutional doctrine in a manner that embodies the purposes or ends of constitutional law. Fuller treatment of these ends is included in Part IV, at Chapters 17-32, as part of discussion on the details of the various constitutional doctrines. This Chapter will provide an overview, or summary, of these various constitutional ends.

It might be supposed that constitutional decisions would contain evaluations of consequences in terms of the goals stated in the preamble to the Constitution. That preamble states: “We the People of the United States, in Order to form a more perfect Union, establish Justice, insure domestic Tranquility, provide for the common defence, promote the general Welfare, and secure the Blessings of Liberty to ourselves and our Posterity, do ordain and establish this Constitution for the United States of America.”

Opinions of the Justices, however, have not dealt with this language as if it were operative text. Instead, to find intended ends, they have looked to the specific details of constitutional text, context, history, practice, precedent, and prudential considerations. Among the goals discovered there are: government efficiency, advanced by the twin ends of competent decisionmaking and uniformity of results; the prevention of tyranny; certainty and predictability in law; fundamental fairness in each case; the protection, either directly or indirectly, of individual rights or group rights; the protection, either directly or indirectly, of autonomy rights or rights to substantially equal results; civil peace; material prosperity through economic growth; scientific progress; and rational liberty.

Although the Court has not organized its consideration of ends in this way, they can be organized consistent with the preamble to the Constitution, and consistent with an Aristotelian analysis of causes, to provide a structured account of the various ends of constitutional adjudication. So organized, these ends can be viewed as falling under one of the following four general categories:

1. Allocating government power (material causes).
2. Producing well-formed doctrine that gives principled treatment to constitutional text and precedent (formal causes).
3. Reconciling government power and individual rights (efficient causes).
4. Conducting a search for original or non-original intent (final causes).

Decisions whose primary ends involve the structure, or material base, of government include relations among government and the people, among the federal government and state governments, and among the branches of government. These cases are dealt with in Chapters 17-20. A summary of the ends involved in these cases, particularly balancing the ends of government efficiency versus the prevention of tyranny, is discussed at § 8.1. These ends primarily reflect those aspects of the preamble that focus on forming “a more perfect Union, . . . insure domestic Tranquility, provide for the common defence, [and] promote the general Welfare.”

---

1 U.S. Const. pmbl.
References in opinions to ends that relate to producing well-formed doctrine, including the Court’s treatment of constitutional text and precedent, are discussed at § 8.2. These ends, which particularly involve balancing the goals of certainty and predictability in law versus the goal of fundamental fairness in each case, relate to the language in the preamble regarding the goal to “establish Justice.” Chapters 21-24 deal with the development of those constitutional doctrines that are principally connected to “establish Justice.”

The efficient causes of the ends of constitutional law, that is, what causes the form or shape of the ends to change, is reflected most in the changing perspectives, particularly since 1937, on how to accommodate the need for adequate governmental power with the need to protect individual rights, particularly in fast-changing areas of the law like due process, equal protection, the freedom of speech, and the religion clauses. In a broad sense, all of these issues are related to the language in the preamble regarding the need to “secure the Blessings of Liberty to ourselves and our Posterity.” These cases particularly involve the protection, either directly or indirectly, of individual or group rights, and the protection, either directly or indirectly, of autonomy rights or rights to equal results, as discussed at § 8.3. Treatment of these issues in the context of the Civil War Amendments and their protection of individual rights, including due process and equal protection, is discussed in Chapters 25-28. Treatment of these issues in the context of the various protections of the First Amendment, including freedom of speech and the religion clauses, is discussed in Chapters 29-32.

The final cause of the ends of constitutional law involves the purpose of constitutional interpretation, that is, whether the judge adopts an originalist or non-originalist decisionmaking approach. An originalist approach aims at arriving at interpretations of the Constitution that comport with what the framers and ratifiers intended. A non-originalist approach believes that constitutional decisionmaking should also reflect concepts of justice and social policy that are not necessarily part of what the framers and ratifiers intended. In this view, permissible ends of judicial interpretation are decisions that make certain desirable consequences more likely or make certain undesirable consequences less likely. This issue is related to how one should interpret that part of the preamble which states, “We the People of the United States . . . do ordain and establish this Constitution for the United States of America.” As noted at § 8.4.1, from an originalist perspective, four goals of the framing and ratifying generation were critical: civil peace; material prosperity through economic growth; scientific progress; and rational liberty. These ends are reflected in the specific goals stated in the preamble to “establish Justice, insure domestic Tranquility, provide for the common defence, promote the general Welfare, and secure the Blessings of Liberty to ourselves and our Posterity.”

Whether the Court has succeeded in the effort to advance appropriate constitutional ends depends in part on the eye of the beholder because it depends on the beholder’s views about the process of constitutional interpretation. As discussed in Chapters 5, 6, and 7, within the ambit of American jurisprudence a number of different views are possible, and can be found in Supreme Court opinions on such things as what material is relevant in the process of constitutional interpretation, how to weigh the various kinds of relevant materials, and what techniques of reasoning to employ in deciding constitutional cases, given the proper ends of constitutional interpretation.

The Justices, speaking for themselves, a plurality, or a majority, often identify in their opinions some value or end judged to be a desirable consequence of the decision or an undesirable consequence of deciding otherwise. Sometimes such consequences are acknowledged to be influential in the
interpretation process, typically by relating them to purposes of the framers and ratifiers or to some constitutional text. Other times, however, the reference is not identified as a factor that influenced interpretation or application. Even so, the consequence can be regarded as a final cause of decisionmaking because it is presented as something toward which or away from which the decision tends. A practical impact of this fact is that it behooves advocates before the Court always to consider the value of identifying what consequences or values may hinge on the decision, regardless of how well that can be worked into the advocate’s formal argumentation on constitutional meaning.

No attempt has been made in this Chapter to present an exhaustive list of consequences referred to as ends by the Justices. That is dealt with more completely in consideration of individual cases in Part IV. On the other hand, there are enough references in Chapter 8 to make clear the considerable extent to which constitutional decisionmaking has included reference to values or consequences, some of which are not explicit in constitutional text, context, or history, but which derive from practice, precedent, or prudential considerations. In total, the Court’s constitutional decisionmaking, considering all of its various causes, forms a philosophy or jurisprudence that reflects the Court’s view on the principles or ends that our democratic society embodies, or, as discussed at § 8.4.2, from a non-originalist perspective should embody, in its culture, as reflected in its legal system.

§ 8.1 Allocating Government Power: Forming a More Perfect Union

James Madison wrote in *The Federalist Papers*, “What is government, but the greatest of all reflections on human nature? If men were angels, no government would be necessary. If angels were to govern men, neither external nor internal controls on government would be necessary. In framing a government which is to be administered by men over men, the great difficulty lies in this: you must first enable the government to control the governed; and in the next place oblige it to control itself.” Madison’s admonition suggests two great ends in the appropriate allocation of governmental power: efficiency (the ability of government to “control the governed”) and the prevention of tyranny (the requirement that government is able “to control itself”). The end of efficiency is usually advanced by the twin ends of competent decisionmaking and uniformity of results. These ends are relevant in each of the areas of governmental powers discussed at §§ 5.2.2.2 & 6.2.2.2: judicial review, federalism, separation of powers, and checks and balances.

§ 8.1.1 Judicial Review

When Chief Justice John Marshall and his colleagues evaluated consequences that related to the structure or operation of government, they envisioned as desirable a strong judicial branch and a powerful federal government, but with limits on government power that would preserve traditional rights considered to be “natural.” When the Court first justified judicial review over acts of Congress in *Marbury v. Madison*, discussed at § 17.1.2.1, Chief Justice Marshall said, “It is emphatically the province and duty of the judicial department to say what the law is.” This view is based in part of the belief that judges are more competent in the task of determining the

---

2 The Federalist Papers No. 51 (Madison).

3 5 U.S. (1 Cranch) 137, 176 (1803).
constitutionality of action than officials in the other, more political, branches of government. As Lord Coke’s stated in his famous reply in 1607 to James I’s claim that since law was founded upon reason, the king could decide cases as well as judges, “[T]rue it was, that God had endowed his Majesty with excellent Science, and great Endowments of Nature, but his Majesty was not learned in the Laws of his Realm of England, and Causes which concern the Life, or Inheritance, or Goods, or Fortunes of his Subjects, are not to be decided by natural Reason but by the artificial Reason and Judgment of Law, which Law is an Act which requires long Study and Experience, before a Man can attain to the Cognizance of it.” The natural law tradition in 18th- and 19th-century America, followed by Chief Justice Marshall, shared this belief in “the artificial reason of the law.”

A second reference in *Marbury* to the consequences of not recognizing judicial review over acts of Congress focused on the prevention of legislative tyranny. Marshall stated:

> This doctrine [not recognizing the power of judicial review] would subvert the very foundation of all written constitutions. It would declare than an act, which, according to the principles and theory of our government, is entirely void, is yet, in practice, completely obligatory. It would declare, that if the legislature shall do what is expressly forbidden, such act, notwithstanding the express prohibition, is in reality effectual. It would be giving to the legislature a practical and real omnipotence, with the same breath which professes to restrict their powers within narrow limits. It is prescribing limits, and declaring that those limits may be passed at pleasure.\(^5\)

Regarding judicial review by the Supreme Court over state action, including decisions by state courts, Justice Story held that the Court possessed such a power in *Martin v. Hunter’s Lessee*, discussed at § 17.1.2.2. Regarding consequences, he noted that the result was not motivated by a lack of respect for state tribunals, but rather a concern with uniformity. Justice Story stated:

> A motive of another kind, perfectly compatible with the most sincere respect to state tribunals, might induce the grant of appellate power over their decisions. That motive is the importance, and even necessity for uniformity of decisions throughout the whole United States, upon subjects within the purview of the constitution.\(^6\)

Despite the Court’s broad claim to be the ultimate authoritative source of constitutional law, or perhaps because of it, the Court has denied jurisdiction in a wide variety of circumstances because of respect for other branches or limits on judicial process, as discussed at §§ 17.2-17.3. On the other hand, the Court has sought to protect national uniformity on what is understood to be constitutional law, even if that has a restrictive effect on states. For example, when it is alleged that the Court lacks jurisdiction to review a state court decision because the case rests on an adequate and

---

\(^5\) 5 U.S. at 178.

\(^6\) 14 U.S. 304, 347-48 (1816).
independent state ground, the Court will assume there are no such grounds if it is not clear from the state court’s opinion itself. Justice O’Connor explained that “it cannot be doubted that there is an important need for uniformity in federal law, and that this need goes unsatisfied when we fail to review an opinion that rests primarily upon federal grounds and where the independence of an alleged state ground is not apparent from the four corners of that opinion.”

The ends of governmental efficiency versus the need to prevent tyranny have also been used to justify the justiciability doctrines of standing, ripeness, mootness, and political questions. For example, the rule that a complainant must have standing to invoke federal jurisdiction, discussed at § 17.3.1, has been justified as implied in Article III’s textual reference to cases and controversies. However, Justices have also noted that the requirement of standing reflects a concern with competent judicial decisionmaking. Justice Kennedy has stated:

This requirement is not just an empty formality. It preserves the vitality of the adversarial process by assuring both that the parties before the court have an actual, as opposed to professed, stake in the outcome, and that “the legal questions presented . . . will be resolved, not in the rarefied atmosphere of a debating society, but in a concrete factual context conducive to a realistic appreciation of the consequences of judicial action.”

The Court’s ripeness doctrine reflects a similar concern with ensuring the ability of courts to make competent judicial decisions. As discussed at § 17.3.2, a case is ripe for decision in a federal court only if plaintiff has suffered a specific present harm or plaintiff seeks to enjoin a specific proceeding that is threatened or underway so the case has an imminence and reality.

The Court’s mootness doctrine, discussed at § 17.3.3, presents another issue about the nature of judicial proceedings. For example, in DeFunis v. Odegard, the majority dismissed as moot a case challenging a law school’s affirmative action admissions program because the plaintiff, who had not brought a class action, was assured of graduation from the school. The case no longer touched the legal relations of the parties, and the issue was not capable of repetition yet evading review because future challenges would arise. Four Justices in dissent focused on efficient judicial decisionmaking, noting that the questions would inevitably return to the Court. They stated, “Because avoidance of repetitious litigation serves the public interest, that inevitably counsels against mootness determinations, as here, not compelled by the record. . . . Although the Court should, of course, avoid unnecessary decisions of constitutional questions, we should not transform principles of

---

avoidance of constitutional decisions into devices for sidestepping resolution of difficult cases.”12

The Court’s refusal to decide political questions, discussed at § 17.3.4, also reflects aspects of a balance between the needs of efficient government operations and the prevention of tyranny. Under the six-factor analysis in *Baker v. Carr*,13 if there is not a demonstrable commitment in constitutional text that some issue is a political question, the Court considers factors related to competent decisionmaking (do judicially manageable standards exist to resolve the issue or does the issue call for resolution of a non-judicial policy decision) and the need for uniform results (whether the decision would represent a lack of respect for other branches, is there an unquestioned need for finality, or is there a potential of embarrassment of multifarious pronouncements on the particular issue). The Court addressed the concern with prevention of legislative tyranny in a political questions case when the Court held that whether Congress could refuse to seat an elected representative who met the constitutional requirements of age, citizenship, and residence was not a political question. The Court explained in *Powell v. McCormack* that “both the intention of the framers, to the extent it can be determined, and an examination of the basic principles of our democratic system persuade us that the Constitution does not vest in the Congress a discretionary power to deny membership by a majority vote.”14

These issues regarding judicial review, and their relationship to the ends of government efficiency and the prevention of tyranny, are discussed in greater depth in Chapter 17.

§ 8.1.2 Federalism

Issues of federalism are discussed generally in Chapter 18. In considering the extent of Congress’ power to legislate under the powers enumerated in Article I, Chief Justice John Marshall relied in *McCulloch v. Maryland*15 on constitutional text and context, legislative and executive practice, and judicial precedents, as discussed at § 18.1.2. However, he also relied on reflections about the undesirable consequences of not finding ample power to choose effective means of carrying out the great powers. Marshall stated, “[I]t may with great reason be contended, that a government, entrusted with such ample powers, on the due execution of which the happiness and prosperity of the nation so vitally depends, must also be entrusted with ample means for their execution.”

Modern Justices have also retained concerns with efficient governmental action. However, disagreements exist over where and how to draw the outer limits of federal power. For example, the more conservative members of the Court have found in the 10th Amendment a substantive limitation on federal power. Liberal instrumentalist Justices have not. With respect to the adequacy of federal power and the reserved power of states, the result has been an on-going debate about values and

12 *Id.* at 350.

15 17 U.S. 316, 342-43 (1819).
consequences. In Garcia v. San Antonio Metropolitan Transit Authority,\textsuperscript{16} a 5-4 majority held that by exercising its Commerce Clause authority, Congress could regulate state employment activity without violating the 10th Amendment, as discussed at § 18.4.4. Responding to an argument that the Court was removing Congress from judicial review respecting the scope of such an intrusion on State sovereignty, the majority alluded to views of the framers and said, “State sovereign interests, then, are more properly protected by procedural safeguards inherent in the structure of the federal system than by judicially created limitations on state power.”

Justice Powell, dissenting, had two answers. One focused on a concern with the prevention of tyranny. Justice Powell stated, “By usurping functions traditionally performed by the States, federal overreaching under the Commerce Clause undermines the constitutionally mandated balance of power between the States and the federal government, a balance designed to protect our fundamental liberties.” The second answer focused on the role of judicial review, and the twin ends of competent decisionmaking and the prevention of tyranny. Justice Powell said, “More troubling than the logical infirmities in the Court’s reasoning is the result of its holding, \textit{i.e.}, that federal political officials, invoking the Commerce Clause, are the sole judges of the limits of their own power. This result is inconsistent with the fundamental principles of our constitutional system. . . . At least since Marbury \textit{v}. Madison it has been the settled province of the federal judiciary ‘to say what the law is’ with respect to the constitutionality of acts of Congress.”\textsuperscript{17}

There has also been disagreement on the limits of Congress’ Commerce Clause power. A current majority of the Court has tried to limit federal power under the Commerce Clause in order to preserve some room for local law. As noted at § 18.2.5, Chief Justice Rehnquist concluded in United States \textit{v}. Morrison\textsuperscript{18} that “[t]he Constitution requires a distinction between what is truly national and what is truly local.” Earlier he had noted in United States \textit{v}. Lopez,\textsuperscript{19} “In Jones & Laughlin Steel, the Court warned that the scope of the interstate commerce power ‘must be considered in the light of our dual system of government and may not be extended so as to embrace effects upon interstate commerce so indirect and remote that to embrace them, in view of our complex society, would effectually obliterate the distinction between what is national and what is local and create a completely centralized government.’” These concerns supporting localism have been counterbalanced in some cases by the concern for government efficiency. For example, in 1948 the Court upheld a 1947 rent control Act under the “war power” even though by then the fighting in World War II had ended. To deny such power, the Court said, “would be paralyzing. It would render Congress powerless to remedy conditions the creation of which necessarily followed

\textsuperscript{18} 529 U.S. 598, 617-18 (2000).
\end{flushright}
from the mobilization of men and materials for successful prosecution of the war.”

§ 8.1.3  Separation of Powers

Decisions on the separation of powers also reflect concerns about promoting efficient government versus preventing tyranny. Justice Jackson summed up the consequence intended to occur from application of the separation of powers doctrine in *Youngstown Sheet & Tube Co. v. Sawyer*, stating, “[The] Constitution diffuses power the better to secure liberty.” More recently, Justice Kennedy explained that liberty “is always at stake when one or more of the branches seek to transgress the separation of powers. Separation of powers was designed to implement a fundamental insight: concentration of power in the hands of a single branch is a threat to liberty.” On the other hand, implicit in all separation of powers cases is the additional concern that government retain the ability to engage in effective government action. These issues are discussed in Chapter 19.

§ 8.1.4  Checks and Balances

One kind of check and balance issue involves a separation of powers concern with legislative, executive, and judicial immunities from prosecution. In these cases, the courts have weighed the need to ensure governmental efficiency, in terms of office-holders having immunity from prosecution in the performance of their official duties, versus the concern with preventing tyranny, in terms of holding office-holders accountable for their actions. In some cases, this weighing has led to a finding of absolute immunity, as in legislative immunity cases governed by the “Speech or Debate Clause,” or presidential immunity from lawsuits seeking monetary damages for official actions taken while president, as in *Nixon v. Fitzgerald*. In other cases, this weighing of the factors has led the courts to adopt a balancing test, as in *United States v. Nixon*, where the court balanced the President’s need for confidentiality to ensure competent presidential decisionmaking versus the need to prevent tyranny by ensuring relevant information be produced by the President as part of a criminal trial into executive obstruction of justice. These issues are addressed at § 20.1.4.

A second kind of check and balance issue involves federalism concerns. Modern decisions on national power and federalism reflect concerns similar to those of John Marshall that federal power be adequate, though not unlimited, and that federal law be uniform throughout the land. This is involved in cases concerning preemption; dormant commerce clause doctrine; and Article IV, § 2 Privileges and Immunities Clause doctrine. These issues are discussed at §§ 20.3.1-20.3.3.

---

21  343 U.S. 579, 635 (1952) (Jackson, J., concurring).

In particular, the Court has held although the Commerce Clause, taken literally, is merely a grant of power to Congress, it contains a negative, or dormant, aspect that prevents the states from imposing excessive burdens on interstate commerce. The policy underlying the Court’s concern to bring about this consequence was stated by Justice Jackson in *H.P. Hood & Sons, Inc. v. Du Mond*[^25]: “Our system, fostered by the Commerce Clause, is that every farmer and every craftsman shall be encouraged to produce by the certainty that he will have free access to every market in the Nation, that no home embargoes will withhold his export, and no foreign state will by customs duties or regulations excluded them. Likewise, every consumer may look to the free competition from every producing area in the Nation to protect him from exploitation by any.”

The Court has felt so strongly about achieving this consequence of uniformity of free access to markets that even in the exercise of a state’s unquestioned power to protect the health and safety of its people, as in *Dean Milk Co. v. Madison*[^26] it may not discriminate against interstate commerce if reasonable nondiscriminatory alternatives are available that are adequate to preserve the local interests.

Similarly, in order to preserve uniformity in federal power, in *U.S. Term Limits, Inc. v. Thornton*[^27] the Court barred the states from adding any qualifications on candidates for federal office beyond those mentioned in the Constitution. The majority said that such power was not reserved to the states because electing representatives to the Congress was a new right arising from the Constitution itself. But a predicted consequence, not tied to text or history, was also mentioned. Justice Stevens stated, “Permitting individual States to formulate diverse qualification for their representatives would result in a patchwork of state qualifications undermining the uniformity and the national character that the Framers envisioned and sought to ensure.”[^28] Justice Kennedy, concurring, stated that there “can be no doubt, if we are to respect the republican origin of the Nation and preserve its federal character, that there exists a federal right of citizenship, a relationship between the people of the Nation and their National Government, with which the States may not interfere.”[^29]

### § 8.2 Producing Well-Formed Doctrine that Treats Constitutional Text and Precedents in a Principled Manner: Establishing Justice

The form or format of constitutional decisions depends in large part on whether the doctrine at issue in a particular case encompasses, at one extreme, a categorical test adopting simple sharp-cornered rules as elements of the test, or, at the other extreme, a balancing test adopting broader standards as factors to be weighed. The form is also affected by whether the formal statement of law remains stable or is changed by expanding, limiting, or overruling precedents. In addition to the concerns

[^28]: *Id.* at 822.
[^29]: *Id.* at 845.
with efficiency and preventing tyranny that primarily influence doctrinal choices regarding structural matters of constitutional law, noted at § 8.1, two other ends are often prominent in cases involving individual rights. On the one hand, there is a goal of certain and predictable decisionmaking. On the other hand, there is a goal of fundamental fairness in each case.

A range of constitutional doctrines have remained relatively stable over time, with the ends of those doctrines defined by constitutional text and precedents, and with the biggest shift being a change, as discussed at § 7.2.2, from a categorical, element approach of the traditional natural law and formalist eras of 1789-1937, to greater use of balancing or factor weighing approaches post-1937. Balancing or factors approaches tend to give greater weight to the end of ensuring fundamental fairness in each case, while doctrines phrased in categorical, element terms tend to give greater weight to the concern with certainty and predictability in the law.

As discussed in Chapter 21, the text of most constitutional doctrines regarding individual rights protects the individual only against infringement by some form of state action, not private action. As discussed at § 21.1.1, certain and predictable decisionmaking suggests the state action doctrine would be better framed as an element test; considerations of fundamental fairness in each case suggest that determining where private action is sufficiently connected to state action to trigger a finding of state action is better phrased as a factor approach. As noted at §§ 7.2.2 nn.54-56 & 21.1.5 nn.38-43, currently the Court has adopted a factor approach toward state action, though a formalist-inspired dissent would prefer an element approach. As discussed at §§ 21.2.4.1-21.2.4.3, where the relevant individual rights doctrine is phrased as a balancing approach, the considerations of certainty and predictability suggest the Court should systematize their various balancing approaches around the “base plus six” model of levels of review, discussed at § 7.2.1, rather than adopt a proliferation of different balancing tests reflecting many more different levels of review.

Cases involving economic rights, discussed in Chapter 22, similarly involve this tension between certain and predictable doctrine versus the needs of fundamental fairness. For example, under the Contracts Clause, the Court has sought to resolve conflicts between state police power and protecting expectations growing from a contract. The Court has stated:

[T]he general purpose of the [Contracts] Clause was clear: to encourage trade and credit by promoting confidence in the stability of contractual obligations. . . . Nevertheless, a State “continues to possess authority to safeguard the vital interests of its people.”

Traditionally, the Takings Clause was thought to relate only to a direct appropriation of property. Cases since the 1920s have found a taking when a property regulation went “too far.” The consequences sought to be advanced by modern Takings Clause doctrine were stated by Justice Scalia in Lucas v. South Carolina Coastal Council in terms of fundamental fairness and the prevention of tyranny, where he stated, “If, instead, the uses of private property were subject to

unbridled, uncompensated qualification under the police power, ‘the natural tendency of human nature [would be] to extend the qualification more and more until at last private property disappear[ed].’”

Cases involving non-economic individual rights, such as the rights of criminal defendants, similarly involve a tension between the ends of efficient governmental action versus preventing tyranny by the government, and a concern with certain and predictable doctrine versus fundamental fairness to each party involved in each case. These cases are dealt with in Chapter 23.

As noted at § 4.3.1, each style of decisionmaking, as a practical matter, starts with a presumption that precedents should be followed because of a concern that law have some degree of certainty and predictability. However, as noted at § 4.3.2, there are disagreements over how readily the Court should depart from that presumption and how precedents should be read when determining what has been held. For example, dissenting in Lawrence v. Texas, where the majority invalidated a Texas law criminalizing sodomy, and overruled Bowers v. Hardwick, Justice Scalia criticized the majority opinion for its treatment of precedent. Justice Scalia chided the majority for not paying sufficient heed to the need for stability and certainty in judicial use of precedent, stating:

I do not myself believe in rigid adherence to stare decisis in constitutional cases; but I do believe that we should be consistent rather than manipulative in invoking the doctrine. . . . Three members of today’s majority . . . in Planned Parenthood v. Casey . . . when stare decisis meant preservation of judicially invented abortion rights, [found] the widespread criticism of Roe . . . a strong reason to reaffirm it. . . . Today, however, the widespread opposition to Bowers, a decision resolving an issue as “intensively divisive” as the issue in Roe, is offered as a reason in favor of overruling it.

A response to Justice Scalia’s critique, from the perspective of the joint opinion in Casey criticized in this passage, would be that the opposition to Bowers was reflected not merely in political protest, but in a broad pattern of legislative, executive, and social practice rejecting enforcement of the state sodomy laws at issue in Bowers. In contrast, there was not the same level of substantial legislative, executive, and social practice rejecting Roe v. Wade, even though the level of political protest in both cases was substantially more equal. Each member of the Court has acknowledged that response to political protest is an inappropriate factor in judicial decisionmaking, as discussed at § 7.3.4.2. Given this legislative, executive, and social practice, the holding in Bowers was inconsistent with related doctrine regarding a right of privacy, as discussed at § 7.3.3.2, in a different way than Roe. This supported a different result regarding adherence to precedent in Casey versus Lawrence.

Justice Scalia made another strong criticism of the Court’s treatment of precedent when he dissented in Planned Parenthood v. Casey. The controlling plurality in that case said it was reaffirming the central holding of Roe, but it abandoned the trimester analysis and created an “undue burden” test.

---

for accommodating the clash between the state’s interest in potential life and a pregnant woman’s interest in choosing an abortion. Justice Scalia responded by saying:

It is particularly difficult . . . to sit still for the Court’s lengthy lecture upon the virtues of “constancy,” of “remain[ing] steadfast,” of adhering to “principle.” Among the five Justices who purportedly adhere to Roe, at most three agree upon the principle that constitutes adherence (the joint opinion’s ‘undue burden’ standard) – and that principle is inconsistent with Roe. . . . To make matters words, two of the three, in order thus to remain steadfast, had to abandon previously stated positions.35

While Justice Scalia’s critique of the plurality opinion is factually accurate, a response from the Justices in the joint opinion in Casey might be that constancy, in the form of certainty and predictability, is not the only goal involved in the pursuit of justice. Rather, the end of fundamental fairness, while also advancing the ends of government efficiency versus the prevention of tyranny, supports the result in Casey of protecting the “core” principle in Roe v. Wade of providing women with protection from undue (“tyrannical”) burdens on abortion rights, while permitting greater governmental choice (“efficiency”) to enact less-than-undue burdens on abortion rights.

These kinds of issues regarding judicial reasoning are particularly important where constitutional text does not provide clear specific answers, and the judges are more on their own in the development of constitutional doctrine. For example, the concerns with certainty versus fairness are particularly relevant in deciding how to interpret the opened-ended language in the Ninth Amendment’s provision that “the enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people.” The Ninth Amendment is discussed in Chapter 24.

§ 8.3 Reconciling Government Power and Individual Rights: Securing the Blessings of Liberty to Ourselves and Our Posterity

Decisions relating to the protection of individual rights regarding liberty reflect concerns that there be an appropriate balance between the need for effective government versus the need to prevent governmental tyranny, and the need for certain and predictable doctrine versus fundamental fairness in protecting various aspects of liberty, including personal privacy, equal treatment, freedom of speech, and the free exercise of religion. In addition to these ends, there is also the question whether the liberty interest involved protects, directly or indirectly, individual rights or group rights, or protects autonomy rights or rights to substantially equal results.

This difference in perspective between individual versus group rights is clearly apparent in cases on affirmative action. As discussed at § 26.2.1.4, a current majority of the Supreme Court believes that the 14th Amendment was intended to protect individual rights. Thus, any program that advantages some individuals because of race, and thus disadvantages other individuals, must be justified by strict scrutiny. The dissenters say that the 14th Amendment was more about protecting racial minorities, particularly African-Americans, as a group, and thus to level the playing field for

35 Id. at 997 (Scalia, J., joined by Rehnquist, C.J., and White & Thomas, JJ., dissenting).
racial minorities it is sufficient to test racially-based affirmative action programs by intermediate scrutiny.\textsuperscript{36}

The difference between autonomy rights versus rights to equal results often arises in constitutional law with respect to issues of government funding. Under the autonomy model, constitutional rights are there to protect individuals \textit{from} government regulation, and to ensure individuals have \textit{equal opportunities} to compete. The opposing view is that individuals should be better guaranteed \textit{equal results}, not just equal opportunity, and thus government should have some affirmative obligation to provide individuals \textit{funding}, not merely freedom from government regulation. This broader set of rights was suggested by President Roosevelt in his “Second Bill of Rights” State of the Union speech in 1944, and as appears in many modern European Constitutions and the Constitution of Japan.\textsuperscript{37}

In terms of modern philosophic treatises, an approach that argued that the better concept of equality is equality of results, rather than equality of opportunity, appeared in John Rawls’ book, \textit{A Theory of Justice}, published in 1971. An approach that argued that the better concept of equality is equality of opportunity appeared in Robert Nozick’s book, \textit{Anarchy, State, and Utopia}, published in 1974. A non-originalist jurist would need to decide, in part, which of these approaches represents the better approach to equality, or whether both should be rejected, since both begin first with a concept of individual rights, rather than focusing on group rights. Such a focus on group rights, combined with a focus on a right to funding, often appears in the constitutions of socialist states, like the People’s Republic of China, or the Soviet Union and Eastern European countries during the Cold War.

For an originalist jurist, the question would be not which approach is better in some normative sense, but which approach best represents the views of the framers and ratifiers of various constitutional provisions. As discussed with respect to various doctrines in Part IV, the predominant view during all eras of American constitutional law has supported an individual rights and autonomy view of constitutional provisions.\textsuperscript{38} Of course, rare exceptions exist, such as the Sixth Amendment right to counsel funded by the government for indigent criminal defendants, discussed at § 23.2.1.3.C.

\textbf{§ 8.3.1 \hspace{1em} Securing the Blessings of Liberty Under the Civil War Amendments}

The major provisions of the Civil War Amendments – the ban on slavery or involuntary servitude in the 13\textsuperscript{th} Amendment, the Due Process and Equal Protection Clauses of the 14\textsuperscript{th} Amendment, and

the ban on racial discrimination in voting rights of the 15th Amendment – all involve aspects of securing the blessings of liberty, broadly defined, to ourselves and our posterity. These provisions of the Constitution are dealt with in Chapters 25-28.

As discussed at § 27.3, in determining what activities and relationships should be constitutionally protected liberty interests under the substantive aspect of the Due Process Clause, the Court has held that the Constitution affords protection to personal decisions relating to marriage, procreation, contraception, family relationships, and child rearing. The rights in these cases are defined as rights of individuals to be free from unwarranted governmental regulation, not as group rights, even a group as small as a married couple. Thus, although Griswold v. Connecticut based its holding on the rights of married persons to have access to contraceptives, Eisenstadt v. Baird soon expanded that right to include all individuals. As stated in Eisenstadt, “If the right of privacy means anything, it is the right of the individual, married or single, to be free from unwarranted governmental intrusion into matters so fundamentally affecting a person as the decision whether to bear or beget a child.”

This value of individual liberty was underscored in Lawrence v. Texas, where the Court held that substantive due process was denied by a law that criminalized sodomy. Writing for the majority, Justice Kennedy said that the statute furthered no legitimate state interest that could justify its intrusion into the personal and private life of individuals. Along the way he concluded that the law did not deal solely with a sexual practice. Instead, its purpose and effect was to control a personal relationship involving the exercise of personal autonomy.

The controlling analysis, said Justice Kennedy, citing Justice Stevens’ dissent in Bowers v. Hardwick, was that “the fact that the governing majority in a State has traditionally viewed a particular practice as immoral is not a sufficient reason for upholding a law prohibiting the practice.” The consequences at stake in affirming an application of that proposition to strike down the Texas law were said to be that the “case does involve two adults who, with full and mutual consent from each other, engaged in sexual practices common to a homosexual lifestyle. The petitioners are entitled to respect for their private lives. The State cannot demean their existence or control their destiny by making their private sexual conduct a crime.” In terms of ends, individuals are protected from governmental tyranny over this aspect of their personal lives.

In cases under the Equal Protection Clause, the Court has similarly engaged in an analysis of consequences based upon the rights of individuals to equal treatment under the law. As stated in

---

42 Id. at 577, citing Bowers, 478 U.S. 186 (1986) (Stevens, J., dissenting).

43 Id. at 578.
Adarand Constructors, Inc. v. Pena, a case involving federal race-based affirmative action, it is a “basic principle that the Fifth and Fourteenth Amendments to the Constitution protect persons, not groups.” The same focus on the detrimental impact of racial discrimination on individuals was at the core of the Court’s decision in the famous case of Brown v. Board of Education, where the Court held that racial segregation in public schools was a denial of equal protection. Chief Justice Warren said that it was impossible to determine what the framers intended with respect to the matter as there was scant history relating to the 14th Amendment’s intended effects on public education. It was clear, however, that education currently was perhaps the most important function of government, and equal protection was not provided merely by equalizing buildings, curricular qualifications, and salaries of teachers, and other “tangible factors” because of the educational impacts upon individual children of racial discrimination in the public schools. Chief Justice Warren noted:

Segregation of white and colored children in public schools has a detrimental effect upon the colored children. The impact is greater when it has the sanction of the law; for the policy of separating the races is usually interpreted as denoting the inferiority of the negro group. A sense of inferiority affects the motivation of a child to learn. Segregation with the sanction of law, therefore, has a tendency to [retard] the educational and mental development of negro children and to deprive them of some of the benefits they would receive in a racial[integrated] school system.

In Grutter v. Bollinger, a 5-4 majority of the Court upheld racial affirmative action in the admissions program of the University of Michigan Law School on the ground that there was a compelling interest in securing the educational benefits of a diverse student body. The admissions program could take race into account for that purpose. A number of consequences were mentioned in support of allowing this inequality. Two of the most important reflected a concern with efficient government action. They were phrased as “[e]ffective participation by members of all racial and ethnic groups in the civil life of our Nation is essential if the dream of one Nation, indivisible, is to be realized,” and “[i]n order to cultivate a set of leaders with legitimacy in the eyes of the citizenry, it is necessary that the path to leadership be visibly open to talented and qualified individuals.”

§ 8.3.2 Securing the Blessings of Liberty under the First Amendment

The provisions of the First Amendment also reflect the broad concern with ensuring the “Blessings of Liberty to ourselves and our Posterity.” Thomas Jefferson once penned the famous remark, “I have sworn upon the altar of God eternal hostility against every form of tyranny over the mind of man.” Remarks on the value of free speech, expressed by Justice Brandeis and joined by Justice Holmes, though first expressed in dissent, have in time found their way into Court precedents.

---

Alluding to the ends of free speech doctrine, Justice Brandeis said in *Whitney v. California*:

Those who won our independence believed that the final end of the State was to make men free to develop their faculties, and that in its government the deliberative forces should prevail over the arbitrary. They valued liberty both as an end and as a means. They believed liberty to be the secret of happiness and courage to be the secret of liberty. They believed that freedom to think as you will and to speak as you think are means indispensable to the discovery and spread of political truth; that without free speech and assembly discussion would be futile, that with them, discussion ordinarily affords adequate protection against the dissemination of noxious doctrine; that the great menace to freedom is an inert people; that public discussion is a political duty; and that this should be a fundamental principle of American government.48

Compelled affirmation of belief, such as requiring school children to recite the salute to the flag, was declared unconstitutional in *West Virginia State Board of Education v. Barnette*. Justice Jackson there made clear that it was important to avoid such compulsion of any individual by government tyranny over the mind of man. He did so in this oft-quoted language:

If there is any fixed star in our constitutional constellation, it is that no official, high or petty, can prescribe what shall be orthodox in politics, nationalism, religion, or other matters of opinion or force citizens to confess by word or act their faith therein. If there are any circumstances which permit an exception, they do not now occur to us.49

Cases involving the separation of church and state also reflect a concern with individual liberty and protection against government tyranny. For example, as discussed at § 32.1.2.2 nn.21-24, in the 1947 case of *Everson v. Board of Education*,50 the Court upheld in a 5-4 decision a New Jersey statute that authorized the reimbursement of parents for money expended by them on transportation of their children to school on buses operated by a public transportation system, including parents whose children attended parochial schools. In his majority opinion in that case, Justice Black noted:

A large proportion of the early settlers of this country came here from Europe to escape the bondage of laws which compelled them to support and attend government favored churches. The centuries immediately before and contemporaneous with the colonization of America had been filled with turmoil, civil strife, and persecutions, generated in large part by established sects determined to maintain their absolute political and religious supremacy. . . . [People] reached the conviction that individual religious liberty could be achieved best under a government which was stripped of all power to tax, to support, or otherwise to assist any or all religions, or to interfere with the beliefs of any religious individual or group.51

49 319 U.S. 624, 642 (1943).

50 330 U.S. 1, 17-18 (1947).

51 *Id.* at 8-9, 11.
In 2002, in *Zelman v. Simmons-Harris*, discussed at § 32.1.3.1.B.1 nn.135-38, a 5-4 Court upheld an Ohio school voucher program against a challenge that it violated the Establishment Clause. Chief Justice Rehnquist’s majority opinion relied primarily on an analysis of precedents, emphasizing that the Court had upheld programs, as in *Everson*, that are neutral with respect to religion, and that the financial aid involved in the case reached religious schools only as the result of private choices — here the choice of parents below the poverty line to send their children to religious schools rather than to non-religious private schools. Judges in both the majority and dissent in *Zelman* referred to ends involved in the case. Justice Thomas, concurring, focused on concerns of efficient education, particularly efficient education for minority students. He stated, “While the romanticized ideal of universal public education resonates with the cognoscenti who oppose vouchers, poor urban families just want the best education for their children, who will certainly need it to function in our high-tech and advanced society. . . . If society cannot end racial discrimination, at least it can arm minorities with the education to defend themselves from some of discrimination’s effects.”

Dissenting, Justice Breyer, joined by Justices Stevens and Souter, focused more on the concern with the potential for religious conflict raised in Justice Black’s opinion in *Everson*. Justice Breyer stated, “In a society composed of many different religious creeds, I fear that this present departure from the Court’s earlier understanding risks creating a form of religiously based conflict potentially harmful to the Nation’s social fabric.” Another form of risk was explored in the dissent of Justice Souter, joined by Justices Stevens, Ginsburg, and Breyer. Justice Souter wrote, “When government aid goes up, so does reliance on it; the only thing likely to go down is independence. If Justice Douglas in [*Board of Education v. Allen*] was concerned with state agencies, influenced by powerful religious groups, choosing the textbooks that parochial schools would use, how much more is there reason to wonder when dependence will become great enough to give the State of Ohio an effective veto over basic decisions on the content of curriculum? A day will come when religious schools will learn what political leverage can do, just as Ohio’s politicians are now getting a lesson in the leverage exercised by religion.”

A similar tension between the needs of governmental efficiency versus a concern with individual liberty and protection from tyranny exists in Free Exercise Clause cases. For example, in 1990 in *Employment Division v. Smith*, discussed at § 32.2.2.5 nn.253-56, the Court rejected a claim that the Free Exercise Clause denied the State of Oregon the power to include religiously inspired peyote use within its general criminal prohibition on the use of that drug. The challenger called on the Court to apply a heightened level of scrutiny, as had been done in *Sherbert v. Verner*, with respect to a state’s refusal to pay unemployment compensation to a woman who refused to work on Saturday

---

53 *Id.* at 682-83 (Thomas, J., concurring).

54 *Id.* at 728-29. (Breyer, J., joined by Stevens & Souter, JJ., dissenting).

because it was her sabbath. The majority limited *Sherbert* to its specific facts, and applied only minimum rational review. Focusing on a concern with government efficiency, Justice Scalia explained:

[The] government’s ability to enforce generally applicable prohibitions of socially harmful conduct, like its ability to carry out other aspects of public policy, “cannot depend on measuring the effects of a governmental action on a religious objector’s spiritual development.” To make an individual’s obligation to obey such a law contingent upon the law’s coincidence with his religious beliefs, except where the State’s interest is “compelling” – permitting him, by virtue of his beliefs, “to become a law unto himself,” contradicts both constitutional tradition and common sense.57

Four Justices in the case emphasized the potential harm to individual religious liberties if government could regulate religious practices under a bare minimum rational review standard.58 All of these First Amendment issues are discussed in greater depth in Chapters 29-32.

§ 8.4 **Originalist versus Non-Originalist Approaches to Constitutional Interpretation**

There are two main approaches that a judge could adopt in deciding what is the final goal or end of constitutional interpretation: an originalist approach or a non-originalist approach. An originalist approach refers back to some aspect of the framers and ratifiers’ intent or action to justify a decision. A non-originalist approach bases the goal of constitutional interpretation in part on consideration of some justification independent of the framers and ratifiers’ intent or action.

As discussed at § 8.4.1, from an “original intent” perspective, the various interpretation questions discussed in Chapter 6 would be answered by trying to determine how the framers and ratifiers would have answered the questions. This would involve issues such as whether to adopt a subjective “original intent” approach to interpretation, or to focus on “original public meaning” as determined from the perspective of an “objective reasonable observer,” discussed at § 6.2.1.1; whether to focus on the specific examples held by the framing and ratifying generation about a particular provision of the Constitution or their general concepts, discussed at § 6.2.3.2; whether to adopt a “static” or “living” Constitution model of interpretation, discussed at §§ 6.3.1-6.3.4; and how to use “interpretive” and “non-interpretive” prudential considerations, discussed at §§ 6.4.1-6.4.4.

In contrast, as discussed at § 8.4.2, from a non-originalist perspective, the question of what interpretation theory to adopt would be answered by considering: (1) what is the best interpretation theory in terms of yielding the best consequences for society, a “consequentialist” approach; or (2) what theory of interpretation is best reflected in existing doctrine, a “current majority” or “Dworkian” approach; or (3) what theory of interpretation is most likely to be reflected in the future,

57 *Id.* at 885 (citations omitted).

58 *Id.* at 891-97 (O’Connor, J., joined as to Parts I & II by Brennan, Marshall & Blackmun, JJ., concurring); *id* at 907-09 (Brennan, J., joined by Marshall, J. & Blackmun, J., dissenting).
if that can be determined, a “progressive historicist” approach; or (4) whether to adopt a “pluralist” model of interpretation reflecting some combination of original intent, consequentialist, current majority, and progressive historicist reasoning. Such a non-originalist justification for interpretation could end up, of course, supporting some version of interpretive, static constitutional interpretation. For example, Professor Randy Barnett has argued for his version of “originalism” as an approach to constitutional interpretation not on “original intent” grounds that the approach was favored by the framers and ratifiers of the Constitution, but rather on consequentialist grounds.59 Thus, the approach is not really an “originalist” approach, but rather “consequentialist” in nature. Other authors have similarly supported their interpretation theories on non-originalist grounds. For example, among recent authors, Professor Cass Sunstein has supported “minimalist” constitutional interpretation where the Court is not sure of the proper judgment on “consequentialist” grounds; Professor James Fleming has argued for his version of “constitutional democracy” on “current majority” or “Dworkinian” grounds; and Professor James Fallon Jr. has argued for his interpretation theory on “pluralist” grounds.60

§ 8.4.1 An Originalist Approach: Following the Framers and Ratifiers’ Intent or Action

Under an originalist approach, a judge should always attempt to illuminate some aspect of the framers and ratifiers’ intent or action. The question for an originalist is how the framers and ratifiers expected their Constitution to be interpreted. Under an originalist theory, a judge should not read into the Constitution values different than those that would be expected by the framers and ratifiers. No matter how bad the judge thinks the consequences are of a particular interpretation, if a conclusion follows from an originalist consideration of sources of meaning, that meaning should be adopted.61 This approach is supported by viewing our constitutional enterprise as based on the Lockean concept of the “social contract” entered into by the framers and ratifiers, discussed at § 3.4 nn.84-87, and the judicial oath to “preserve, protect and defend” the Constitution into which they entered. As stated in the preamble, “We the People of the United States . . . do ordain and establish this Constitution for the United States of America.”

Under such an originalist approach, the judge must decide what theory of interpretation the framers and ratifiers intended to be applied: formalist, Holmesian, instrumentalist, or natural law. The question is not which theory of interpretation is best in some normative sense. Rather, the question is what does history suggest about the views of the framers and ratifiers on theories of interpretation. In particular, if some framers or ratifiers favored one theory of interpretation, and other framers or ratifiers favored another theory, the question is whether it is possible to come to some conclusion

about whether any theory was predominantly favored by the framing and ratifying generation, or by later framers and ratifiers for the interpretation of constitutional amendments.

For example, as discussed at § 6.2.1.1, there is a real debate on whether to adopt a subjective or objective approach to contract, statutory, or constitutional interpretation. A subjective approach focuses on the framers and ratifiers’ intent; an objective approach focuses on the framers and ratifiers’ action in adopting certain texts that are to be interpreted. As discussed at § 6.2.1.2., there is also a real debate over the proper weight to be given literal meaning versus purpose in interpretation. As discussed at § 6.2.3.1, there is also a debate over the proper use of material internal to drafting, such as legislative history or Notes of the Constitutional Convention. Further, as discussed at §§ 6.3.1-6.3.4, there is a debate over whether to adopt a model of a “living” versus a “static” Constitution. For a true originalist, resolution of these questions would not depend upon the judge’s own views about the best way to resolve these issues; rather, the question should be how would the framing and ratifying generation have expected judges to resolve those questions.

This analysis can get somewhat complicated to the extent that one concludes that the framing and ratifying generation believed in the model of a living Constitution – whether under a subjective intent approach, or as a matter of original meaning viewed from the perspective of an objective reasonable person at the time. As discussed at §§ 6.3.1-6.3.3, under such a model later legislative, executive, or social practice, or judicial precedents, can change the meaning of a constitutional provision. In such a case, it would be faithful to their theory of interpretation to interpret the Constitution today differently than they would have interpreted it years ago. In short, interpretation according to original meaning does not commit the interpreter to a static or fixed view of the Constitution, as it would for a formalist, as discussed at § 9.2.2.1. Instead, the original meaning of a provision can incorporate the principle that the provision was capable of evolution over time.

For example, as noted at § 5.3.2.1 n.92, and discussed in greater detail at § 18.1.2 nn.25-27, President James Madison concluded that a national bank was constitutional in 1815 and 1816 based upon practice and precedent, while never departing from his stated view in 1791 that a national bank was unconstitutional then. Similarly, under a living model of constitutional interpretation, the non-use of legislative or constitutional history in the late 18th century would not be conclusive on whether legislative or constitutional history should be used today. Given later practice and precedent, the framers and ratifiers might support judicial use of legislative or constitutional history today, even though they did not make use of it themselves.

In general, as discussed at § 4.4.1, the general predisposition of many jurists is to believe that the framers and ratifiers shared whatever theory of interpretation the jurist thinks is best. Thus, judges or commentators who feel comfortable with a formalist model of interpretation often conclude that the framers and ratifiers were predominantly formalists; Holmesian judges or commentators tend to view the framers and ratifiers as predominantly Holmesians; and so forth. Since there were many framers and ratifiers, and no votes by any framer or ratifier on the specific question of what theory of interpretation that framer or ratifier endorsed, there is no conclusive evidence regarding the best way to resolve this issue. Nonetheless, the following comments can be made.

The formalist, or analytic positivist, theory of jurisprudence found its first great spokesman in the Englishman John Austin, who published in 1832 his great book, *The Province of Jurisprudence*
Determined. One can find increasing discussion and acceptance of his ideas in the United States in the second half of the 19th century in all three areas of law: common law, statutory interpretation, and constitutional law. The Holmesian theory of decisionmaking found its first great spokesman in Oliver Wendell Holmes, Jr., who published in 1881 his great book, *The Common Law*, as a reaction against the formalist mentality of his times. That theory became more prominent during the first half of the 20th century. The instrumentalist theory of decisionmaking found its first great spokesman in Benjamin Cardozo, who published in 1921 his great book, *The Nature of the Judicial Process*. That theory became more prominent during the second half of the 20th century.

In the 17th and 18th centuries, however, virtually all discussion and writing about law and theories of interpretation approached the topic from the perspective of some version of natural law. Even Thomas Jefferson’s more formalist theory of interpretation, discussed at § 7.1, is best understood in this light, as discussed below at § 8.4.1 nn.107-10. A true originalist, therefore, is likely to find that the predominant view of the framing and ratifying generation was adherence to some version of natural law on either grounds of subjective original intent or objective original public meaning.

In general, there were two competing natural law approaches in the 18th century to which the framing and ratifying generation would have turned for guidance: the classic/Christian natural law tradition and the Enlightenment natural law tradition. Under the Enlightenment tradition, the ultimate source of natural rights is based upon human reason. This led to placing a high value on freedom of speech and religious toleration, and it supported a belief in civil peace, material prosperity through economic growth, scientific progress, and rational liberty. Under the classic/Christian tradition, the ultimate source of rights is God’s reason and will. As discussed below, at § 8.4.1 nn.85-94, in the 18th century this supported ends that were more conservative, aristocratic, and elitist.

The classic/Christian natural law tradition developed from Aristotle, through the Stoics and Cicero, to Augustine and Aquinas, and affected such English writers as Richard Hooker in the 16th century and the mature Edmund Burke in the 18th century. The qualifier “mature” is used here because although there is some debate on how much Burke's political philosophy evolved during his lifetime,62 it is probably more accurate to refer to the "mature" Edmund Burke when connecting Burke to the classic/Christian natural law tradition, rather than to the Enlightenment natural law tradition. Earlier in his career, Burke was more associated with "Whig," "reformist," and Enlightenment rhetoric. However, by the time of the French Revolution, and in part because of it, Burke had moved to the "conservative," "Tory," or "traditional" camp that rejected Enlightenment abstract theorizing of rights based on reason, and a hypothetical “social contract” replacing a “state of nature,” in favor of reform based on social connectedness arising from concrete, actual historical customs and traditions of family, locality, church, social class, and nation, not abstract theorizing.63

---

This tradition has been described by Professor James McClellan as "classical and Christian, in the tradition of Cicero, Aquinas, Hooker, and Burke." As described by McClellan, this "older and once dominant traditional natural law, encompassing the classical and Christian tradition, subscribed to the view that a Divine Being, ruler of the universe through an eternal and universal law, is the supreme lawgiver, and that natural law is an emanation of God's reason and will.

This tradition is also the tradition closer to the views of William Blackstone, as McClellan noted when discussing the influences of "Christianity, the common law, and such legal and political thinkers as Blackstone and Burke," and contrasting these influences with the Enlightenment's "philosophical methods and rationalistic ideas." Professor Grant Gilmore similarly concluded in his book, *The Ages of American Law*, that Blackstone was more in the classic tradition than in the Enlightenment tradition. In his book, Professor Gilmore noted that while Blackstone's attempt to organize and restate the existing law of England in his *Commentaries on the Laws of England* was a classic kind of Enlightenment enterprise, Blackstone's goal was to preserve the substance of existing pre-Enlightenment legal categories from erosion, and thus preserve the substance of the classic tradition. Gilmore stated, "Blackstone's celebration of the common law of England glorified the past. . . . [C]hanges in an already perfect system can only lead to harm in ways which will be beyond the comprehension of even the most well-meaning and far-sighted innovators. . . . Indeed, the Blackstonian construct well may be taken as a conservative reaction to the fundamental changes which English judges were making in the apparently settled rules of English law. Using the tools of eighteenth-century analytical 'philosophy', Blackstone was in effect constructing a dike which, it could be hoped, would hold back the encroaching tide." The use of natural law reasoning in support of the existing common law of England has long roots from Bracton in the 13th century to Blackstone in the 18th century.

As noted by Professor Stephen Presser, this classic/Christian tradition is also the tradition embraced by some of the early Federalist judges, including Justice Samuel Chase. Like Edmund Burke, Chase was more associated in his youth with the reformist, Enlightenment spirit, but as he got older he also moved more into the traditionalist and conservative camp. More generally, as Presser noted, "In the Declaration of Independence, of course, natural law was cast in the form of natural rights to life, liberty, and the pursuit of happiness which governments were formed to perfect, pursuant to Locke’s *Second Treatise of Government* [an Enlightenment approach]. In the hands of the first federal

65 *Id.* at 70.

66 *Id.* at 73.

judges, however, natural law was more about circumscribing the actions of government to protect traditional rights of property and person than it was about the creation of expansive new individual rights.”  

During the pre-Civil War period, Whig lawyers and judges, the political heirs of the Federalists, tended to share the Blackstonian focus on tradition, stability, and order. 

This tradition is what many writers think of when they use the term “natural law,” that law being an emanation of God’s reason and will. Of course, the classic natural law approach of Aristotle, the Stoics, or Cicero, and the Christian natural law approach are not identical in every respect. For example, Aristotle held the view that some men are by nature slaves, while the Stoics and Cicero rejected that view in favor of the equality of all men. They nevertheless did not call for the abolition of slavery, viewing it as the appropriate status for some individuals based upon the superior status of the conqueror, or the degraded condition of the conquered. The Christian natural law tradition, in its best moments, has rejected slavery as always immoral. However, St. Thomas Aquinas’ incorporation of Aristotelian notions into his *Summa Theologica* during the 13th century included the view that slavery was justifiable in some circumstances, quoting Aristotle in support.

Aristotle’s continuing influence through Aquinas that some men are by nature slaves, combined with the acceptance of slavery of conquered individuals by Cicero, was used by some Christian natural law writers, and even by some Popes, during the late middle ages to support mistreatment of the indigenous native population of the Americas during the period of Spanish and Portuguese colonization. Slavery was understood “in terms of the *ius gentium*, that is, in terms of the world as it existed, not as it ought to have been.” This is consistent with natural law at the time being based on custom and concrete operational thought, discussed at § 15.4.1 nn.50-56. For example, during the 15th century Pope Nicholas V wrote *Dum Diversas*, which granted to the kings of Spain and Portugal the right to reduce any “Saracens [Muslims] and pagans and any other unbelievers” to perpetual slavery; and during the 16th century, Pope Paul confirmed that “any individual may freely

---

75 See id. at 76-91 (colonization period); id. at 93 (*ius gentium*).
buy, sell, and own slaves. Runaway slaves were to be returned to their owners for punishment.”

Influence of Aristotle and Aquinas supported the “natural justice” of the African slave trade by pro-slavery Americans before the Civil War, as discussed at § 25.1.

This analysis is inconsistent, of course, with the basic biblical imperative that all individuals are created by God, and thus entitled to equal natural rights. It has been noted, “The Abolitionist movement emphasized Jesus’ and St. Paul’s general statements concerning love, the equality of all persons, and the ‘Golden Rule’ (treating one’s fellow humans as one expects to be treated by others).” Throughout the 17th, 18th, and 19th centuries, mainstream Christian natural law, supported by the reasoning of Enlightenment natural law philosophy, gradually rejected the Aristotelian view, and came strongly to support the abolition of slavery as contrary to natural law. It has been noted, “Jurists and moral philosophers had justified the legal basis of slavery according to the doctrine enunciated in Aristotle’s Politics . . . . The origins of the abolition movement were . . . heavily influenced by the appropriation of Enlightenment ideology and the emergence of a network of non-conformist religious groups informed by radical dissenting Protestantism.”

As with biblical passages regarding the earth not moving and the sun revolving around the earth, modern Christian doctrine rejects the view that passages in the Bible regarding slavery are authoritative. Rather, such passages are viewed as mere references to historical practices and understandings existing in the ancient world, which the broader principles in the Bible reject. For example, Pope Leo XIII stated in 1888 that “through absolute forgetfulness of our common nature, and of human dignity, and the likeness of God stamped upon us all, it came to pass that in the contentions and wars which then broke out, those who were the stronger reduced the conquered into slavery; so that mankind, though of the same race, became divided into two sections, the conquered slaves and their victorious masters.” In 1965, the Vatican II document, Pastoral Constitution on the Church in the Modern World, stated, “Whatever violates the integrity of the human person, such as mutilation, torture . . . , whatever insults human dignity, such as . . . slavery, prostitution and selling of women and children . . . all these things and others like them are infamous. . . . Human institutions . . . should be bulwarks against any kind of political or social slavery and guardians of basic rights under any kind of government.”

80 Final Abolition, supra note 78, at 4.
Despite such differences between classic Aristotelian doctrine and modern Christian natural law, there still remains a clear distinction between the classic/Christian tradition which rests on Aristotelian and Thomist foundations, and the Enlightenment tradition of the English, Scottish, and French Enlightenments. Similarly, there are naturally differences between Protestant and Catholic natural law traditions, such as the traditional Catholic natural law concept of the “just price” versus the Protestant’s tradition of greater acceptance of market capitalism, which may be relevant to interpreting provisions like the Takings Clause, and differences among Protestant traditions, such as differences among Baptists, Methodists, and Anglicans, which may be relevant to interpreting provisions like the Establishment Clause. As has been noted, “The framers lived in a world in which differences among Baptists, Methodists and Anglicans – not to mention Catholics – were very serious indeed.” When compared to the Enlightenment tradition, however, these other religiously grounded traditions all fall on the classic/Christian, not Enlightenment, side of the divide.

The second main natural law tradition of the 18th century was the Enlightenment natural law tradition of the English, Scottish, and French Enlightenments. This 17th- to 18th-century tradition included such writers as Hobbes, Locke, and Berkeley of the English Enlightenment; Hutchenson, Hume and Adam Smith of the Scottish Enlightenment; and Montesquieu, Rousseau, and Voltaire of the French Enlightenment. Under these approaches, rights derive from man and man’s reason. According to Professor McClellan, the Enlightenment "natural rights" tradition is "characterized by its rationalism, secularism, and radicalism . . . . Highly individualistic, [this tradition] rejected the divine origin of natural law, exalted the autonomy of human reason, and exhorted the mind of man to look for a law of nature in the secularized state of nature." As Professor Jefferson Powell has noted, the Enlightenment tradition of rational liberty is based on an "understanding of human nature as constituted by 'basic deliberative capacities' and by the potential for 'some measure of self-direction.' On that basis, liberalism pursues 'the preservation and enhancement of human capacities for understanding and reflective self-direction' as 'the core of the liberal political and moral vision.'"

One major difference between the classic/Christian and Enlightenment natural law traditions concerns which natural law principles will likely be viewed as incorporated into the Constitution's text. The set of natural law rights that are derived from Enlightenment philosophy is materially different from the set of rights that emerge from a classic or Christian natural law methodology. Stated briefly, the Enlightenment project emphasized four central goals of liberalism: "civil peace, material prosperity through economic growth, scientific progress, and rational liberty." The

---

83 McClellan, supra note 64, at 71.
Enlightenment view of religion emphasized religious toleration.\textsuperscript{86} Enlightenment philosophy prized free speech very highly.\textsuperscript{87} Regarding political participation and democratic ideology, the Enlightenment concept of the social contract meant, as stated in 1788 by "the London Revolutionary Society, perhaps the key voice of English opposition ["Whig"] ideology, . . . '(1) That all civil and political authority is derived from the people; (2) That the abuse of power justifies resistance; (3) That the right of private judgment, liberty of conscience, trial by jury, the freedom of the press, and the freedom of election ought ever to be held sacred and inviolable."\textsuperscript{88} These views were embraced by the Democratic Party of Jefferson and Jackson.

In contrast, the natural law principles that flowed from Burke, Blackstone, and others in the 18th century classical/Christian natural law tradition were more elitist, aristocratic, and conservative. As Professor Ernest Young noted, Burke rejected the Lockean social contract and the Enlightenment faith in moral theory produced by human reason.\textsuperscript{89} Politically, Burke was on the "conservative" or "Tory" side of 18\textsuperscript{th}-century British politics, not the "Whig" side. As Professor Presser has noted, "The conservatives, as would Burke in 1791, conceived of the state as an organic entity, with hierarchical control, and a single set of correct answers to political problems to be elaborated and pronounced from the top down. Sovereignty in England, in other words, rested not in the people but in the 'holy trinity' of crown, lords, and commons."\textsuperscript{90} Under the standard "classic and Christian" approach of this time, judicial decisionmaking should reflect the view that Christian principles form the base of the common law, and the Constitution.\textsuperscript{91} This view would be particularly relevant for provisions in the Constitution like the First Amendment Free Exercise and Establishment Clauses, discussed in Chapter 32. While members of the Federalist Party embraced these views more readily, their political successors, the Whigs, embraced more the English Whig political ideology, which was necessary in the American context to remain a viable political party. Of course, as noted at § 8.4.1 n.71, the Whigs still shared the Blackstonian focus on stability and order.

Regarding the 18\textsuperscript{th}-century approach to freedom of speech and the press, Blackstone’s theory was developed against a background of protection of the state and easy resort to seditious libel, as Professor Leonard Levy has noted.\textsuperscript{92} However, by 1798, Professor Levy noted, "The Virginians [and their political leaders Thomas Jefferson and James Madison] repudiated Blackstone on freedom of the press and his distinctions between liberty and licentiousness and between prior restraint and

\end{itemize}
subsequent punishment. They argued that political opinions must be free from legal restraints and could not be measured or protected by the test of 'truth.'\textsuperscript{93} Levy also discussed James Madison's "Report of 1800 by the Virginia House of Delegates," which provided in Madison's "characteristically brilliant exposition" Madison's views on why "the common law [of libel as stated by Blackstone] could not be permitted to explain the terms used in the First Amendment."\textsuperscript{94} This issue of the early views regarding the First Amendment freedom of speech is discussed at § 29.1.1.

While many English, Scottish, and French Enlightenment writers contributed to the development of the Enlightenment tradition in the 17th and 18th century, it probably is true that the general political philosophy of John Locke had the greatest influence on the framing and ratifying generation. As Professor Rogers Smith has noted, "Locke is crucial . . . because the political philosophy of liberalism is historically linked with a whole range of distinctive developments that are best encompassed in his writings."\textsuperscript{95}

Of course this does not mean that Locke is the authoritative oracle for all aspects of Enlightenment liberalism. As Smith noted, "Four goals were central to Locke's original vision of liberalism: civil peace, material prosperity through economic growth, scientific progress, and rational liberty. . . . [However,] [l]iberals differed significantly on how these goals were to be achieved, particularly on how much positive governmental activity was needed to secure them."\textsuperscript{96} Furthermore, on some matters, like separation of powers doctrine, "the authorities on whom the colonists relied most often for such devices were the liberal heirs of the . . . Florentine tradition of republican discourse, such as James Harrington, Montesquieu, and Hume, and also the continental publicists, especially Vattel and Burlamaqui."\textsuperscript{97} On matters of international law, the writings of 17th-century Dutch Philosopher Grotius were influential.\textsuperscript{98}

More generally, the Lockean tradition and the civic Republican tradition of Harrington and others differed on a number of specific aspects of their approach. In particular, the Lockean concept of limited government focused on protecting liberty and property rights not adequately protected in the state of nature. The civic Republican tradition focused more on the role of government to help

\begin{itemize}
\item \textsuperscript{93} \textit{Id.} at 309.

\item \textsuperscript{95} Smith, supra note 85, at 15.
\item \textsuperscript{96} \textit{Id.} at 18.
\end{itemize}
promote civic virtue in society. In discussing the differences between these two approaches, Professor Mark Tushnet has noted:

The liberal [Lockean] tradition stresses the self-interested motivations of individuals [sometimes called possessive individualism] and treats the collective good as the aggregation of what individuals choose . . . . Although it acknowledges the role of public institutions in providing the framework for individual development, the liberal tradition insists that such institutions be neutral toward competing conceptions of the good and tends to emphasize the risks of governmental overreaching. The republican tradition, seeing public institutions as important means by which private character is shaped, is less suspicious of government. . . .

[Republicans] understood that people would sometimes heed the call of self-interest rather than of public interest. They were therefore intensely worried about what they called corruption, the use of public offices for private interest. . . . They argued that alterations in institutional design can constrain corruption directly, by limiting opportunities in which self-interest can overcome civic-mindedness, and indirectly, by reinforcing the citizenry’s dedication to the public interest.

The republican tradition saw diffusion of power as an important element in institutional design. Federalism . . . makes it easier for citizens to participate. . . . Small scale dialogues lead citizens to understand that each of them has to subordinate self-interest to the public business if civic projects are to occur at all . . .

. . . . Legislatives might become corrupt and disregard the plain meaning of the Constitution, but the independence given the judges makes it unlikely that they too will be corrupted.

As this discussion suggests, and Professor Tushnet noted, “[A]s the framers considered questions of fundamental institutional design, they discovered that liberalism and civic republicanism converged on some important matters.” More generally, as between the Enlightenment tradition and the classical/Christian natural law tradition, the 17th- and 18th-century civic Republican tradition was more part of the Enlightenment tradition. Professor Jefferson Powell noted, "While some advocates of the civic republican interpretation of the founding view republicanism as antithetical to liberalism, republicanism is better understood as a possible historical complement to liberalism. . . . Even those whose commitment to Enlightenment politics was the most undeniable [citing James

---

101 Id. at 7.
Madison, among others] saw no inconsistency in invoking the necessity of [the civic Republican concept of] civic virtue to free government as well.102

Because of these historical facts, determining the precise influences on the framers and ratifiers is likely to be controversial. As the preceding discussion suggests, there is a debate over whether the framers and ratifiers of our Constitution were influenced more by classic Lockean or classic civic Republican ideology. There are also debates over the influence on the framers and ratifiers of the Scottish versus the English Enlightenment. For example, the Declaration of Independence phrased “unalienable” rights as rights to “life, liberty, and the pursuit of happiness,” reflecting the “moral sense” of the Scottish Enlightenment of Frances Hutcheson, David Hume, and Adam Smith, and their view of “sympathy,” rather than “life, liberty, and property,” reflecting the focus of Locke and the English Enlightenment.103 The Scottish Enlightenment was closer in this manner to the civic Republican tradition, and the French Enlightenment’s phrasing of “liberty, equality, and fraternity.” The Due Process Clause of the Fifth Amendment, of course, adopted the Lockean concept that no person may be deprived of “life, liberty, or property without due process of law.” This phrasing was also used in the Due Process Clause of the 14th Amendment. However, as stated in 1923, in one of the foundational cases for modern 14th Amendment substantive due process doctrine, Meyer v. Nebraska,104 “liberty” includes “those privileges long recognized at common law as essential to the orderly pursuit of happiness by free men,” the phrasing of the Scottish Enlightenment.105

Of course, there could also be debates over the influence of Adam Smith or John Locke during the pre-Civil War period leading up to the framing and ratifying of the 13th and 14th Amendments. As discussed at § 13.1 nn.5-16, both Adam Smith and John Locke were influential in the development of the common law in the pre-Civil War period. Further, as discussed at § 8.4.1 nn.62-94, there can be a debate surrounding the respective influence of classic/Christian versus Enlightenment natural law reasoning in the 18th and 19th centuries, particularly as it affected the Federalist, Democratic, Whig, Republican, and other political parties.

As discussed at § 16.2, the most cognitively-advanced rendition of the 18th-century natural law commitment to a reasoned approach to individual liberty and equality, whether phrased in Scottish, English, or French Enlightenment terms, or civic Republican terms, involves giving all individuals “equal concern and respect.” Under this modern rendition, the requirement of “equal concern and respect” rejects the self-interest of “possessive individualism,” and is perhaps closest to the civic Republican tradition. As discussed at § 16.2, the precise contours of this modern natural law are

---

104 262 U.S. 390, 399 (1923), interpreting U.S. Const. Amend. XIV.

105 On all these varied influences, see generally Alan Gibson, Interpreting the Founding: Guide to the Enduring Debates Over the Origins and Foundations of the American Republic (2006).
dependent upon the logical elaboration of reason, which all of these approaches claimed as their intellectual foundation, without regard to any particular customary or traditional specific practice, or general aspiration, of any particular 17th-century or 18th-century natural law writer.

For this reason, as noted at § 12.3.3 nn.115-28, any specific substantive disagreements among the 17th-century and 18th-century natural law approaches are not as critical from a modern perspective as the view that each viewed natural rights as an evolutionary project of greater, and more enlightened, understanding of the demands of reason as applied to human nature. That more precise understanding would lead all of these traditions toward a convergence of their views based on that new understanding. Further, each viewed constitutional interpretation as intended to carry out the purposes of the framers and ratifiers, with those purposes heavily influenced by the natural law tradition and an expectation that the then-current natural law style of drafting documents would be understood and applied so that courts would interpret legislation and the Constitution in light of that tradition. While that model likely adopted more of an objective reasonable person approach toward interpretation, rather than a subjective original intent, as discussed at §§ 6.2.1.1 n.11 & 12.2.1.3 nn. 35-38, whether the focus is on framers’ intent at the Constitutional Convention, ratifiers’ intent, or original public meaning, all adopted a natural law approach toward interpretation.

In sum, both the classical/Christian and Enlightenment natural law traditions, in whatever version one adopts, shared many aspects of the common-law methodology of judicial decisionmaking. As discussed by Professor Ernest Young in *Rediscovering Conservatism: Burkean Political Theory and Constitutional Interpretation*,106 the 18th-century and 19th-century natural law judicial decisionmaking tradition utilized a wide range of arguments regarding constitutional interpretation, including consideration of constitutional text and purpose, constitutional structure, the history of the framing and ratifying period, subsequent legislative and executive practice, and subsequent judicial precedents under the Constitution, which were held to constitute a gloss on meaning.

Professor Jefferson Powell has noted that this "progressive" mode of reasoning, dependent on judicial "tradition," was shared by Madison on the Republican side of early American politics, and by Alexander Hamilton and Chief Justice John Marshall on the Federalist side.107 Although some on the Republican side, including Thomas Jefferson, as noted at § 7.1 nn.15-20, adopted arguments that viewed "constitutional propositions [as] deductions from static principles" from which "no argument from subsequent precedent, practice, or experience could change," that approach to interpretation was rejected by early and continuous Supreme Court practice.108 Adopted by Jefferson in America, and Jeremy Bentham in England, that “static principles” approach was a forerunner of the formalism, or analytic positivism, made popular a generation later by John Austin in England.

Although this “quasi-formalist” or “static principles” argument of some early Jeffersonian Republicans is based upon one version of “Enlightenment rationalist” thinking, as noted at § 7.1

107 See Powell, *supra* note 84, at 95-100.

108 Id. at 92-95, 97-100, 117.
nn.1-4, and confirmed by Professor Powell, the "progressive" or non-static mode of reasoning also flows from a proper understanding of the Enlightenment philosophic enterprise. As Professor Powell stated, the "progressive" or "tradition-dependent" approach of Madison, Hamilton, and Marshall "shared the overall individualism of the Enlightenment," and the substantive principles that emerged in 19th-century America from "the common-law vision of discourse as tradition-dependent" were "thoroughly liberal: individualism, society as an artificial social compact, human relationships as the intersection of autonomous rights-bearers, the supremacy of the national empire over local communities."

This "progressive" use of tradition that embraced Enlightenment substantive principles differs from the "classic and Christian" use of tradition in writers like Blackstone, whose intent was to freeze existing law with classic/Christian principles, not to let it develop in progressive directions based upon the Enlightenment general concepts placed into the Constitution by the framers and ratifiers. Thus, while the “static principles” judicial decisionmaking methodology of some of the early Republicans, like Jefferson, did lose out on the Court to the progressive common-law methodology, this does not mean that the classic/Christian natural law approach prevailed. Instead, the common-law methodology of Madison, Hamilton, and Marshall won. This methodology consists of engaging in reasoned elaboration of the Enlightenment moral and political concepts placed into the Constitution by the framers and ratifiers. This approach agrees with Jefferson and other Jeffersonian Republicans in rejecting Blackstone and Burke as models for substantive natural law. It disagrees with Jefferson, however, by rejecting the “static principles” of the “Enlightenment rationalist” approach in favor of the traditional common-law methodology of the natural law tradition. This aspect of the natural law tradition is discussed in greater depth at §§ 12.2.1.3 & 12.2.2.1-12.2.2.3.

In the Anglo-American context, this view that rights emerge from the common-law process of judicial, legislative, and executive interaction is often called a “natural rights” or “common law” approach. While, analytically, one can draw a distinction between a “natural rights” approach based upon deducing principles of justice from an application of “reason,” and a “common law” approach grounded in judicial elaboration of societal “custom,” writers and scholars in the 18th century often confused “custom” and “reason,” and for them, a natural law approach toward “reason” was consistent with the “common law” methodology that emphasized “custom.” This confusion is addressed in an article by Professor James Q. Whitman entitled, Why Did the Revolutionary Lawyers Confuse Custom and Reason?, discussed at § 15.4.1 nn.53-56. Thus, although properly distinct in our understanding today, it is historically accurate to place “common law” and Enlightenment “natural rights” on one side of the 18th-century natural law debates, and the classic/Christian natural law tradition on the other side.

Despite these observations, a judge might conclude that the framers and ratifiers were predominantly formalists, or in any event shared Jefferson’s views regarding strict textual interpretation, discussed

109 Id. at 92-95, 117.
110 Id. at 94, 117.
at § 7.1. Under this view, the “original intent” of the framers and ratifiers would be for constitutional interpretation to give text a meaning fixed at the time of ratification. Alternatively, a judge might conclude that the framers and ratifiers expressed both specifics on some matters and general purposes in others, but that their “original intent” included a general purpose that the will of the people should prevail in virtually all circumstances. This result puts lawmaking power in the hands of the people’s representatives and calls for courts to exercise considerable deference to legislative and executive decisions, as under the Holmesian decisionmaking style. However, as both these approaches are positivist approaches to law, as discussed at §§ 3.1-3.2, and the framing and ratifying generation were predominantly believers in natural law, as discussed at § 8.4.1 nn.62-94 and at §§ 12.2 & 12.3.3, neither of these approaches likely reflects their views.

On the other hand, a judge might conclude that the “original intent” of the framers and ratifiers was for the courts to be sensitive not only to text and history, but also to contemporary views of social policy when interpreting and applying the Constitution. This is particularly true given that the content of values held in society tend to shift from time to time. Such a judge might conclude that the framers and ratifiers, aware of this fact and, in the words of McCulloch v. Maryland,112 “it is constitution we are expounding,” intended for the Constitution to be a living document whose meaning, as determined by judges, would evolve to encompass contemporary values relating to social policy, the instrumentalist style of Chief Justice Earl Warren. Under a natural law, social contract theory, that is not the role for judges, as noted at § 3.4 nn.84-87, 95-106. Thus, this is not likely the intent of the framers and ratifiers either. Additional reasons why it is unlikely the framers and ratifiers adopted any of these non-natural law approaches appear at §§ 13.1, 14.2 & 15.4.1.

§ 8.4.2 A Non-Originalist Approach: Reflect Justice or Sound Social Policy

§ 8.4.2.1 Non-Originalist Approaches Defined

An alternative approach to constitutional interpretation concludes that a judge should be committed in part to defining the end of constitutional interpretation as advancing some principle of justice or social policy independent of the framers or ratifiers’ beliefs, rather than interpreting the Constitution only in the manner advocated by the framers and ratifiers. Most judges do not affirmatively state that they hold this view, because the accepted social and political view in the United States, required for election by the people or appointment by the Governor in state courts, or nomination by the President and confirmation by the Senate in the federal system, is based on the social contract model and the judicial oath, which adopt the originalist approach. Nevertheless, some judges may secretly adopt this non-originalist approach toward interpretation and decide cases on that basis. A number of commentators on the law also share such a non-originalist view.

Under a non-originalist approach, the judge or commentator first has to decide what principles of justice or sound social policy should be advanced. With regard to principles of justice, should it be, as Justice Scalia has remarked, “the philosophy of Hume, or of John Rawls, or of John Stuart Mill,
or of Aristotle?"\(^{113}\) With regard to social policy, should it be the jurist’s own values,\(^{114}\) the values of a supposed community consensus or social tradition,\(^{115}\) the values that the jurist believes the community eventually will hold,\(^{116}\) or as some unspecified combination of all of the above?\(^{117}\) In terms of a typology of approaches, these approaches reflect four kinds of justificatory reasons: (1) what is the jurist’s own view as to the best interpretation theory in terms of yielding the best consequences for society in terms of principles of justice and/or social policy, a “consequentialist” approach; (2) what theory of interpretation is best reflected in existing doctrine, a “current consensus or tradition” approach, sometimes called a “Dworkian” approach, as noted at § 13.1 n.38; (3) what theory of interpretation is most likely to be reflected in the future, what the “community eventually will hold,” if that can be determined, a “progressive historicist” approach; or (4) a “pluralist” model of interpretation reflecting some “unspecified combination” of original intent, consequentialist, current majority, and progressive historicist reasoning.

Once a decision is made regarding what justificatory reason to adopt, the judge or commentator would then need to decide which interpretation style best advances those justificatory reasons. Whichever approach is adopted, it will be adopted because the judge believes that approach will best advance the principles of justice or social policy reflected in those justificatory reasons. The beliefs of the framers and ratifiers on matters of interpretation will not be critical to a non-originalist judge.

For example, a non-originalist judge based on “consequentialist” reasoning might decide to adopt a decisionmaking style, like instrumentalism, which permits greater resort to justice or social policy considerations. A non-originalist judge who is more analytically oriented, however, might place more importance on elaboration of law in terms of logic and doctrinal consistency, as under natural law. Alternatively, such a non-originalist judge might conclude that the best model of judicial interpretation is to acknowledge the “power of the purse” of the legislative branch, and the “power of the sword” of the executive branch, and thus adopt an interpretation style, like the Holmesian style, which places great reliance on deference to legislative and executive practice. Indeed, a non-originalist judge might decide to adopt a formalist judicial decisionmaking style because the judge thinks that a formalist style is best in terms of better promoting such elements as certainty and predictability in the law, and reducing as much as practicable opportunities for judicial activism.

\(^{113}\) Antonin Scalia, \textit{A Matter of Interpretation} 45 (1997).

A judge following a “current consensus” or “current majority” or “Dworkian” theory of justification would need to ask what interpretation style best reflects the current majority view. As reflected by the discussion at § 13.1, such an approach would have been most likely to adopt a traditional natural law model of interpretation between 1789-1873; a formalist approach between 1973-1937; a Holmesian approach between 1937-54; and an instrumentalist approach between 1954-86. Since 1986, no dominant majority approach has existed, although, as noted at § 13.4, the swing votes on the Supreme Court since 1986 have reflected a modern version of natural law which is broadly consistent, as noted at § 16.4, with Dworkin’s concept of “equal concern and respect.”

One weakness of this mode of justification is that it cannot explain why the interpretive approach should ever change, or criticize the interpretive approach of another era. For example, as discussed at §§ 26.2.1.1.B-26.2.1.1.D, the Supreme Court’s approach to race discrimination changed from the Plessy v. Ferguson doctrine in 1897, which focused on existing customs and traditions to determine reasonableness of legislation action, to Brown v. Board of Education in 1954, which focused more on the reasoned demands of human dignity and not treating any individual as a second-class citizen. From a “current majority” theory of justification, the Court could say after 1954 that race discrimination cases should follow Brown, but would have no grounds to reject Plessy as inappropriate for 1897 if the Plessy doctrine was consistent with majority legal doctrine in 1897, which it was, as discussed at § 26.2.1.1.B. Nor can this approach provide a justification for changing the legal approach from Plessy to Brown. This weaknesses in criticizing existence practice also applies to a Burkean version of natural law, which is based more on existing traditions, than Enlightenment natural law, based on the demands of reason, as discussed at § 12.3.3 nn.116-28.

Under a “progressive historicist” theory of interpretation, the focus of legal justification is on the theory of interpretation most likely to be reflected in the future. As discussed at §§ 15.4.1, an approach based on cognitive and moral developmental psychology suggests that the historical progression noted at § 13.1 from traditional natural law, to formalism, Holmesian, instrumentalism, and then a modern version of natural law, is no historical accident, but reflective of background forces based upon the logic of progressive reason. From this perspective, the views an enlightened community “eventually will hold” will also reflect a modern version of natural law. The growing convergence among Western industrialized democracies for judicial review based upon a modern version of natural law, noted by Justice Scalia in speeches in 2006, and discussed at §§ 12.3.3 nn.125-28 & 17.1.4 nn.65-70, is consistent with this view of progressive historicist reasoning.

In addition, as discussed at §§ 16.1-16.3, there are reasons to believe that the best moral theory from a “consequentialist” perspective also reflects a modern natural law approach. To the extent this is true, then the natural law theory of interpretation would be supported on all grounds of legal justification: subjective “original intent” or objective “original meaning” grounds, as discussed at § 8.4.1, and “consequentialist,” “Dworkinian,” and “progressive historicist” grounds, discussed here.

§ 8.4.2.2 Non-Originalism versus Originalism in Individual Cases

In any individual case, there may be an issue of whether a particular decision was the product of originalist or non-originalist decisionmaking. This issue is particularly prominent in the case of opinions of instrumentalist Justices, whose acknowledged use of background social policies in decisionmaking can be expected to provoke the criticism, noted at § 6.4.1, that the judge crossed the
line from actual background social policies, which might reflect an originalist approach if the framers and ratifiers were instrumentalists, into clear non-originalist judicial decisionmaking. Of course, if the framers and ratifiers were not instrumentalists, then resort to actual background social policies would be inappropriate anyway, as reflecting the wrong kind of originalist interpretation.

This concern is most likely to arise in cases where the right involved is not explicitly stated in the Constitution. For example, in *Griswold v. Connecticut*,118 discussed at § 27.3.3.2 nn.209-11, Justice Douglas justified invalidating a ban on contraception as applied to married persons by stating, “Marriage is a coming together for better or for worse, hopefully enduring, and intimate to the degree of being sacred. It is an association that promotes a way of life, not causes; a harmony in living, not political faiths; a bilateral loyalty, not commercial or social projects. Yet it is an association for as noble a purpose as any involved in our prior decisions.”

There seems little question but that the views of Justice Douglas on the nature of marriage had far greater impact on the decision than did reliance on explicit constitutional text. This raises the question whether this aspect of *Griswold* reflected originalist or non-originalist reasoning. As a fundamental right of marriage was acknowledged even during the formalist era in 1923 by formalist judges in *Meyer v. Nebraska*, as discussed at § 27.3.2.3, Justice Douglas’ conclusion in *Griswold* regarding fundamental marital rights is not clearly a departure from what at least formalist-era judges believed were historical views in which the framers and ratifiers would have believed.

Another famous example of possible non-originalist reasoning can be found in Justice Blackmun’s majority opinion in *Roe v. Wade*.119 In that opinion, the Court’s protection of a woman’s right to terminate her pregnancy was initially analyzed in terms of historical analysis of the state of abortion regulations at the time of the founding in 1789 and in 1868 at the time of the ratification of the 14th Amendment, analysis of legislative and executive practice between 1868 and 1973, and discussion of precedent and analogies to previous cases on the right to privacy, although those previous cases did not involve the same kind of intentional termination of potential life.120 However, that analysis was immediately followed by an allusion to the severely injurious consequences that would follow from denying the right. Justice Blackmun stated, “Specific and direct harm medically diagnosable even in early pregnancy may be involved. Maternity, or additional offspring, may force upon the woman a distressful life and future. Psychological harm may be imminent. Mental and physical health may be taxed by child care. There is also the distress, for all concerned, associated with the unwanted child, and there is the problem of bringing a child into a family already unable, psychologically and otherwise, to care for it.”121 It seems clear that these consequences affected the decision in *Roe*, as discussed at § 27.3.3.3 n.223. Since this paragraph is based upon social policy concerns, not on text, purpose, or any background moral principle embedded in the law, this paragraph marks the Blackmun opinion as representing an instrumentalist approach.

118 381 U.S. 479, 486 (1965).
120 Id. at 129-53.
121 Id. at 153.
Whether the opinion is originalist or non-originalist depends upon whether one views the particular policies advanced in the paragraph as policies sufficiently widely held to be part of the background social policy of the times. Not surprisingly, no such paragraph was included in the joint opinion in Planned Parenthood v. Casey, which affirmed the core principles of Roe, discussed at § 27.3.4.1 nn.243-48, as that opinion was written by the natural law Justices O’Connor, Kennedy, and Souter. As noted at § 3.4 nn.95-106, natural law judges reject background social policy reasoning of any kind, whether based on originalist widely-held social policy premises, or on non-originalist grounds.

Another opinion that presents a similar problem of originalist or non-originalist reasoning is Plyler v. Doe. In Plyler, in a 5-4 opinion by Justice Brennan, the Court held under the Equal Protection Clause that Texas could not deny undocumented children the free public education that it provided to children who are citizens of the United States or legally admitted aliens. One explanation for the result in Plyler, as discussed at § 5.4.2 n.123, was application of the background moral principle that individuals should not be punished for things over which they have no control. This principle supported natural law Justices joining the majority in Plyler, as did Justice Powell, because the children of illegal aliens are not responsible for being in this country. Their parents are responsible. In addition, Justice Brennan added a social policy reason for the decision. Reasoning from the consequences of denying education to such children, he stated, “[E]ducation provides the basic tools by which individuals might lead economically productive lives for the benefit of us all. In sum, education has a fundamental role in maintaining the fabric of our society. We cannot ignore the significant social costs borne by our Nation when select groups are denied the means to absorb the values and skills upon which our social order rests.”

As in Roe, whether this reason is a possibly originalist background social policy or non-originalist judicial activism depends on how wide-spread the social policy is held. In either case, this social policy would support liberal instrumentalists embracing the opinion in Plyler, as did all the liberal instrumentalists on the Court at the time, Justices Brennan, Marshall, Blackmun, and Stevens, as discussed at § 26.2.2.1.B nn.337-41. The background moral principle regarding individual responsibility engendered the support of Justice Powell, although it was not enough for Justice O’Connor to join the majority. This difference between Justices Powell and O’Connor is discussed at § 12.4.2 nn.191-93. As could be expected, formalist Chief Justice Burger, and Holmesian Justices Rehnquist and White, who reject any form of natural law background moral principle reasoning or instrumentalist social policy reasoning, dissented in Plyler. The dissent specifically accused the majority of relying on non-originalist social policy argumentation in making its decision."
PART III: THE EFFICIENT CAUSES OF CONSTITUTIONAL LAW

Efficient causes involve consideration of that aspect of a phenomenon which causes things to change, like the “hammering of the silversmith” in Aristotle’s silver bowl example, noted at § 1.2.1. Decisions on constitutional law are hammered out by application of the four judicial decisionmaking styles to the facts of particular cases in light of the available materials for interpretation. These four interpretation styles are thus the efficient causes of constitutional decisionmaking. The first sub-part of Part III will describe these efficient causes in detail. Chapter 9 will discuss formalism; Chapter 10 will discuss the Holmesian style of interpretation; Chapter 11 will discuss instrumentalism; Chapter 12 will discuss natural law.

For each of the four interpretation styles, there are a number of variations. For example, for any style of interpretation there can be judges who reflect an extreme version of that style or a moderate version. There will also be a difference depending upon whether the judge adopts a conservative or liberal version of that style. Thus, after an initial discussion of the basic elements of an interpretation style, each Chapter will consider aspects of these variations.

Each one of these four styles in their interpretive methodology place greater emphasis on one or the other of Aristotle’s four causes. The four styles and their related causes are: formalism (formal causes); Holmesian (material causes); instrumentalism (efficient causes); and natural law (final causes). Under the formalist style of interpretation, the formal definitions embodied in the law are the most critical element of interpretation to resolve hard cases that inevitably arise. For the Holmesian style, the material history or experience that lies behind a rule, and that frames the rule’s purpose, is the most critical element of interpretation to resolve hard cases. Instrumentalist sensitivity to social reality and change leads them to focus on the efficient causes of contemporary social policy when resolving leeways in the law that exist in hard cases. For natural law, the final cause or purpose of law is to reflect society’s background moral principles, where leeways exist in the law. Attention to such background moral principles is thus the most critical element of the natural law interpretation style in resolving hard cases.

The second sub-part of Part III discusses the causes that help explain why a majority of Justices on the Supreme Court at different times in our Nation’s history have adopted one of the four judicial decisionmaking styles. In discussing these efficient causes of why the dominant interpretation style in different eras has changed, Chapter 13 focuses on the formal fact of changes in American legal history from an initial natural law era, through formalist, Holmesian, and instrumentalist eras, to a modern natural law era today. Chapter 14 focuses on the material cause of these changes, that is, the changing background of social and political events in society which forms the material base from which constitutional law emerged in its various eras. Chapter 15 focuses on aspects of cognitive and moral developmental psychology that are part of the efficient causes related to explaining changes in the majority approach from one judicial era to the next. Finally, Chapter 16 relates the cognitive and moral developmental stages and the judicial eras to issues of contemporary societal development, the final cause or end of legal change being to reflect such societal developments.
CHAPTER 9: FORMALIST CONSTITUTIONAL INTERPRETATION

§ 9.1 Introduction to Formalist Decisionmaking

As discussed at § 3.1, being a positivist theory of law, the formalist sees the judge as an impartial declarer of the law who attempts to decide cases in light of existing positive law. Being an analytic, positivist theory of law, formalism has a preference for clear, bright-line rules that are capable of mechanical application. Thus, in its purest form, the formalist decisionmaking style views the judge's role as the logical, mechanical restatement of the meaning placed into the Constitution by the framers and ratifiers. The elements of this formalist style of interpretation are discussed at § 9.2.

As discussed at § 9.3, during the 20th century there have been on the Court extreme formalists, such as Justices Van Devanter, McReynolds, Sutherland, and Butler in the 1920s and 1930s, and Justice Scalia on the Court today. There have also been moderate formalists, such as Chief Justice Hughes and Justice Owen Roberts in the 1930s; Chief Justice Burger, during the 1970s and 1980s; and Justice Thomas on the Court today. All of these formalists are examples of conservative formalists. Justice Hugo Black, who served on the Court from 1939 to 1973, was an example of a liberal, extreme formalist. There are formalists who follow a subjective approach to interpretation, and thus place great reliance on the specific historical intent of the framers and ratifiers, such as commentator Raoul Berger. In contrast, most formalists, including Justices Scalia and Thomas, follow an objective approach to interpretation and thus place greater reliance on literal text. Finally, as exists with respect to each style of interpretation, a judge who predominately follows one style may have an affinity for another style. As discussed at § 9.3.2, Chief Justice Hughes and Justice Roberts had a slight affinity for Holmesian interpretation. As discussed at § 9.4, Chief Justice Burger also had a slight affinity for the Holmesian style; Justice Thomas has a slight affinity for natural law; Justice Black had a slight affinity for instrumentalism.

§ 9.2 Defining the Formalist Style of Constitutional Interpretation

§ 9.2.1 Treatment of Contemporaneous Sources of Interpretation

§ 9.2.1.1 Treatment of Text

On the question of subjective versus objective interpretation of text, most formalist jurists have followed the general temper of their times. Thus, during the 19th century, when Kant’s subjective will theory was predominant, as discussed at § 6.2.1.1, most formalists focused on the subjective intent of the drafter, whether under the “meeting of the minds” approach to contract law, or “intent of the legislator” approach to statutory interpretation, or “intent of the drafters and ratifiers” approach to constitutional law. As discussed at § 9.3.4, there are still some contemporary formalist jurists, like Raoul Berger, who support and follow a subjective approach to interpreting the Constitution that, in certain cases, can lead to a different result than is reached under an objective approach.

During the 20th century, the objective approach to interpreting text gained greater prominence. Particularly for formalists, inquiry into the subjective "in-fact" intent of any individual can be a messy proposition. Thus, formalist judges today typically dispense with original subjective intent
in favor of asking what a text’s words mean, since determining that meaning can be done in a more mechanical fashion. The formalist approach today was perhaps best stated by Justice Scalia in 1997, when he noted in *A Matter of Interpretation* that “[w]e look for a sort of ‘objectified’ intent – the intent that a reasonable person would gather from the text of the law, placed alongside the remainder of the corpus juris.”¹ In addition to certainty and predictability, Justice Scalia has given another reason for adopting this objective approach. He has said, “And the reason we adopt this objectified version is, I think, that it is simply incompatible with democratic government, or indeed, even with fair government, to have the meaning of a law determined by what the lawmaker meant, rather than by what the lawgiver promulgated. . . . It is the law that governs, not the intent of the lawmaker.”²

In the context of deciding a case, Justice Scalia phrased this point in 1991 by stating, “We are to read the words of the text as any ordinary Member of Congress would have read them.”³ While in most cases this phrasing will yield the same result as the phrasing above, logically there is a difference between interpretation according to how a “reasonable person” would read the law and interpretation according to a “reasonable” or “ordinary Member of Congress.” If the focus of interpretation is on the best way to determine subjective congressional intent, the “ordinary Member of Congress” phrasing would be more appropriate. If the focus is on notice to the average citizen, the objective “reasonable person” phrasing would be more appropriate. In most cases, of course, the same result is likely to be achieved under either phrasing. Particularly given formalism’s focus on clear, bright-line rules that are capable of formal, mechanical application, the better approach may be to focus on how a “reasonable person” would interpret the text, rather than attempt to delve into how a “reasonable Member of Congress” might have an interpretation different than that of a “reasonable person.” The “reasonable person” phrasing is reflected in Justice Scalia’s more recent 1997 writing.

On the question of literal meaning versus purpose in interpreting constitutional provisions, all formalist jurists emphasize the literal, plain meaning of the words.⁴ Formalists are concerned that attempting to determine a provision's purpose, or purposes, is not a clear, mechanical process that can yield unambiguous results. As stated by Professor Schauer, “The language in which a rule is written and the purpose behind that rule can diverge precisely because that purpose is plastic in a way that literal language is not. . . . It is because purpose is not reduced to a concrete set of words that it retains its sensitivity to novel cases, to bizarre applications, and to the complex unfolding of the human experience.”⁵ In contrast, formalists have a preference for clear, bright-line rules. For

---

² *Id.*
⁵ Schauer, *supra* note 4, at 532.
example, in *Jerome B. Grubart, Inc. v. Great Lakes Dredge & Dock, Co.*, Justice Thomas, joined by Justice Scalia, noted, "The test I have proposed would produce much the same result as the Sisson analysis without the need for wasteful litigation over threshold jurisdictional questions [based on the purposes of admiralty jurisdiction]. . . . Sisson . . . is easily replaced with a bright-line rule."

Three variations of the formalist approach have appeared in Anglo-American legal history regarding use of purpose. They are the Literal Rule, the Golden Rule, and the Plain Meaning Rule. Under the Literal Rule, the court should follow a text’s literal meaning even if that meaning leads to an absurd result. This literal meaning would be determined from considering the dictionary meaning of the text's words, as supplemented by basic rules of grammar as reflected in traditional grammatical maxims of construction. Thus, as stated in the 1892 English case of *Regina v. City of London Court Judge*, "If the words of an Act are clear, you must follow them, even though they lead to a manifest absurdity." Under this approach, only if the text is ambiguous, and thus has no plain meaning, should be court depart from what the text literally requires.

This pure literalness approach has attracted some adherents at various points in Anglo-American legal history. One author reports, "In theory, at least, this approach has attracted the attention of a number of courts, and was particularly popular in England in the Nineteenth Century. One reason for that popularity was the strong belief by the English courts in the primacy of Parliament. Paradoxically, the literal rule also attracted adherents because it limited the scope of legislation. For that reason, literalness was prevalent in [the United States] at the turn of the [20th] century, when judicial hostility toward the legislature reached its peak." Despite these observations, the United States Supreme Court never adopted such an extreme approach in practice. Indeed, even concerning lower courts, Judge Learned Hand stated in *Usatorre v. The Victoria*, "One school says that the judge must follow the letter of the law absolutely. I call this the dictionary school. No matter what the result is, he must read the words in their usual meaning and stop where they stop. No judges have ever carried on literally in that spirit, and they would not be long tolerated if they did."

A second version of formalism is the Golden Rule. The Golden Rule differs from the Literal Rule in that under the Golden Rule the plain meaning of a text should not be followed if it leads to an absurd result. Thus, a court should depart from literal text, whether statutory or constitutional text, if the text is ambiguous or the literal meaning would create an absurd result. Under this approach, factors outside the "literal" text can affect interpretation if "predictability, stability, and decisionmaker restraint" are not decreased too much and literalism would lead to "especially

---

7 1 Q.B. 273, 290 (1892).

9 172 F.2d 434, 441-42 n.16 (2nd Cir. 1949)
outrageous" results. As stated in the famous English case of *Grey v. Pearson*,11 "[T]he grammatical and ordinary sense of the words is to be adhered to, unless that would lead to some absurdity, or some repugnancy with the rest of the instrument, in which case the grammatical and ordinary sense of the words may be modified so as to avoid the absurdity and inconsistency but no further." Similar is the famous American case of *Hamilton v. Rathbone*. In *Hamilton*, the Supreme Court stated:

The general rule is perfectly well settled that, where a [text] is of doubtful meaning and susceptible upon its face of two constructions, the court may look into prior and contemporaneous acts, the reasons which induced the act in question, the mischiefs intended to be remedied, the extraneous circumstances, and the purpose intended to be accomplished by it, to determine its proper construction. But where the act is clear upon its face, and when standing alone it is fairly susceptible of but one construction, that construction must be given to it.12

A third version of formalism is represented by the Plain Meaning Rule. Carefully stated, the Plain Meaning Rule does not constrain a court from considering purposes stated on the face of the text when determining the plain meaning of language. As Chief Justice Marshall's classic phrasing of the Plain Meaning Rule indicated in *Sturges v. Crowninshield*,13 "any other provision of the same instrument" may be consulted, including statements of purpose, to determine plain meaning. The same result occurred in *United States v. Fisher*,14 where Chief Justice Marshall considered the statute's title, purpose, and statutes in pari materia to help determine the text's meaning, stating, "It is undoubtedly a well-established principle in the exposition of statutes, that every part is to be considered, and the intention of the legislature to be extracted from the whole." In contrast, under the Golden Rule as stated in *Hamilton*, cited above at § 9.2.1.1 n.12, "the purpose intended to be accomplished" by the statute and the "mischief to be remedied" cannot be considered to create an ambiguity even if that purpose is stated in the statute itself. This refusal to consider purposes stated in the document itself in determining plain meaning applies even more strictly under the Literal Rule of *City of London County Judge*, cited above at § 9.2.1.1 n.7.

This aspect of the difference between the Golden Rule and Plain Meaning Rule of interpretation has not always been carefully noted by courts. For example, American courts have occasionally held that the Plain Meaning Rule constrains a court from considering purposes stated on the face of the

---

14 6 U.S. (2 Cranch) 358, 386-90 (1805).
text. Some courts have also held that the Plain Meaning Rule counsels a court not to consider such material intrinsic to the text as the text's title and preamble. As Chief Justice Marshall's use of the Plain Meaning Rule in Sturges and Fisher makes clear, however, such a narrow view of what material is properly considered is rejected under a proper application of the Plain Meaning Rule.

As discussed at § 9.3.2, in American legal history the more extreme formalist judges, such as Justices Sutherland, Van Devanter, McReynolds, and Butler, have typically adopted the Golden Rule of interpretation. In contrast, moderate formalist judges, like Chief Justice Hughes or Justice Roberts in the 1930s, have more often adopted the Plain Meaning Rule of interpretation, evincing a willingness always to consider statutory or constitutional purposes reflected in the statute or Constitution itself during the act of interpretation. On this issue, Justice Scalia typically adopts the extreme formalist position of the Golden Rule, concluding that arguments based upon purpose are appropriate to consider only if the text is ambiguous or the text's plain meaning is absurd, while Justice Thomas is more willing to adopt a moderate formalist position, allowing “purpose” and “structure” to be considered, in addition to literal meaning, in the initial act of “textual” interpretation. While all judges start interpretation with text, non-formalist Justices do not place inordinate weight on literal dictionary meanings.

§ 9.2.1.2 Treatment of Context

As noted in Table 5.1, and discussed at § 6.2.2.1, among the four basic arguments of context, two involve relatively specific interpretive tasks: verbal maxims and related provisions. The other two involve more general kinds of reasoning: policy maxims and arguments of structure. Because of the formalist preference for certain and predictable decisionmaking, formalist judges tend to be more receptive to arguments of context that involve specific interpretation.

For this reason, most formalist judges will resort not only to ordinary meanings of words, but also to verbal maxims of construction to help determine the plain meaning of text. For example, Justice Scalia “has invoked some of the venerable canons of statutory interpretation” in deciding cases, as noted at § 5.2.2.1. This use of verbal maxims is not dependent upon a prior finding that the plain meaning of the text is ambiguous or absurd. Rather, resort is had to verbal maxims in the initial determination of what is the plain meaning of the text.

---

18 See generally Samuel A. Thumma & Jeffrey L. Kirchmeier, The Lexicon Has Become a Fortress: The United States Supreme Court’s Use of Dictionaries, 47 Buffalo L. Rev. 227 (1999).

19 Zeppos, supra note 17, at 1616.
With regard to arguments of related provisions, the formalist position is slightly more complicated. A narrow view, sometimes adopted by extreme formalists who adhere to the Literal or Golden Rule, rejects use of related provisions to aid in determining plain meaning, stating that the court is only to look to the provision under consideration to determine its plain meaning, unless the provision under construction is first determined to be ambiguous or absurd. Adherents of this narrow view argue that because related provisions are outside the particular provision being interpreted, such provisions should not be considered unless the provision being construed is ambiguous or absurd. This is the position adopted by the Supreme Court in the 1899 case of Hamilton v. Rathbone.20

A broader view, adopted more often by moderate formalists who adhere to the Plain Meaning Rule, counsels that like use of a provision's title, preamble, or statements of purpose on the face of the document, use of related provisions is always appropriate to determine a text's plain meaning. As Professor Reed Dickerson has noted, such use reflects “a sincere attempt by the courts to ascertain the [plain] meaning of the [text] as read in its proper context.”21 On this issue, Justice Scalia appears to adopt the broader, moderate approach that permits use of related provisions, both related provisions within a statute and statutes in pari materia, to determine a text's plain meaning.22

The formalist concern with ambiguous results leads most formalists to minimize arguments of context that involve more general reasoning, unless that argument yields clear, determinate insights or the literal meaning produces an absurd result. Thus, while most formalists often use verbal maxims, some formalist judges will embrace traditional policy maxims of construction only to help resolve ambiguities in literal meaning or to deal with absurd literal results. Justice Scalia’s cautionary observations regarding policy maxims, discussed at § 6.2.2.1, is evidence of this kind of concern.

With regard to arguments of structure, formalist judges are the least likely of the four interpretation styles to embrace fully such arguments when compared to arguments of literal text. For example, regarding the structural issue of separation of powers, formalist judges tend to be the least likely to allow general observations of the framer and ratifiers’ background theory of separation of powers and checks and balances to determine case results. Instead, formalist judges are likely to focus more on constitutional text. For example, as discussed at § 6.2.2.4 n.61, Justice Scalia stated in dissent in Morrison v. Olson,23 “[The majority’s opinion] is not analysis; it is ad hoc judgment. And it fails to explain why it is not true – as the text of the Constitution seems to require, . . . all purely executive power must be under the control of the President.” Justice Scalia was also the sole dissenter in Mistretta v. United States,24 where the majority also used general separation of powers observations to support a sharing of powers approach, as quoted at § 6.2.2.4 n.57.

21 Reed Dickerson, The Interpretation and Application of Statutes 232-33 (1975).

22 See Zeppos, supra note 17, at 1615.

Even when adopting general separation of powers reasoning, the formalist preference for clear, bright-line rules leads most formalists to adopt a strict separation of powers approach toward separation of powers issues, rather than the sharing of powers approach adopted by the other three interpretation styles. As Professor Rebecca Brown has noted, “The formalist approach is committed to strong substantive separations between the branches of government . . . Moreover, formalism, at least as promoted by Justice Scalia, appears to be concerned . . . with forcing the Court to adhere to bright-line rules to foster predictability and restraint in judging.” This difference between the formalist and non-formalist approaches to separation of powers doctrine is explored at § 19.4.

With regard to structural arguments of federalism, the formalist approach to congressional power under the Commerce Clause, as discussed at § 18.2.2, was dominated by literal interpretation of the terms “commerce” and “among the states,” with little focus on whether the results reached by that approach were consistent with the background theory of federalism in which the framers and ratifiers believed regarding the need for uniform federal regulation of commerce. Further, to the extent a formalist approach would consider background theories of federalism, the strong predisposition is for a theory of federalism that would yield clear, bright-lines for areas for federal versus state power. As discussed at § 9.3.3, conservative formalists have tended to adopt bright-line rules that favor state power; liberal formalists have tended to adopt bright-line rules favoring federal power.

Regarding the issue of judicial review, once the premise of judicial supremacy of *Marbury v. Madison* is accepted, formalist judges, like natural law judges, adopt the analytic view that courts should be willing to rule that certain governmental action is unconstitutional if the Court concludes that the other sources of meaning support that finding. Under this approach, there is no functional consideration of the role of courts, as there is under a Holmesian or instrumentalist approach, as discussed at §§ 5.2.2.2 & 6.2.2.2. Thus, an analytic approach will apply the same approach toward judicial review to any constitutional provision. As Justice Scalia has stated, “[T]he context of the Constitution tells us not to expect nit-picking detail, and to give words and phrases an expansive rather than narrow interpretation – though not an interpretation that the language will not bear . . . . [This] is not strict construction, but it is reasonable construction.”

On the other hand, the exercise of judicial review is not specifically authorized by the text of the Constitution. As discussed at § 17.1.1, judicial review was supported in *Marbury v. Madison* by arguments of the purpose of having a written Constitution, general separation of powers arguments regarding the “province of the judicial department to say what the law is,” and related provisions in the Constitution regarding bills of attainder, the ex post facto clause, the treason clause, and other such provisions. Because judicial review is not authorized by specific text, perhaps it is not surprising, as discussed at § 17.1.4, that among the most vigorous questioners of judicial exercise of the *Marbury v. Madison* power have been formalist commentators. As discussed at § 17.1.4, because of their posture of judicial deference to governmental action, some Holmesian

---

26 See, e.g., Scalia, supra note 1, at 37-38.

Page 284
commentators have also questioned judicial exercise of the *Marbury v. Madison* power of judicial review.

§ 9.2.1.3 Treatment of History

As discussed at § 6.2.3.1, one major issue regarding use of history involves the permissibility of aiding interpretation by resort to materials intrinsic to the drafting of a document, such as legislative history of a statute, or Notes of the Constitutional Convention for constitutional interpretation. Despite disagreements among the Literal Rule, Golden Rule, and Plain Meaning Rule on issues of purpose and context, all three agree on the impermissibility of using legislative history to help determine the plain meaning of a text. Absent an ambiguous statute under the Literal Rule, or an ambiguous statute or absurd plain meaning under the Golden Rule or Plain Meaning Rule, all three rules preclude resort to bits of intrinsic history to ascertain the plain meaning of a text.27

An even more extreme approach toward intrinsic material is represented in the traditional English version of the Golden Rule, which precludes resort to such material even if the text being interpreted is ambiguous or absurd.28 Justice Scalia has written in favor of this approach, stating, “My view that the objective indication of the words, rather than the intent of the legislature, is what constitutes the law lead me, of course, to the conclusion that legislative history should not be used as an authoritative indication of a statute’s meaning.”29 Justice Scalia continued, “What is most exasperating about the use of legislative history, however, is that it does not even make sense for those who accept [subjective] legislative intent as the criterion. It is much more likely to produce a false or contrived legislative intent than a genuine one.”30 Thus, Justice Scalia concluded in 1997, “[I]f not for reasons of principle then for reasons of practicality, I have not used legislative history to decide a case for, I believe, the past nine terms. Frankly, this has made very little difference (since legislative history is ordinarily so inconclusive).”31

Prior to this time, Justice Scalia appeared to accept the American Golden Rule, which permits resort to legislative history where the literal meaning of the text is ambiguous or absurd. For example, in 1989, Justice Scalia stated in *Green v. Bock Laundry Mach. Co*32 that legislative history is appropriate to consider where "a statute, if interpreted literally, produces an absurd . . . result." It may be appropriate to note that the House of Lords recently changed their view, and adopted the American Golden Rule, which now permits English judges to consult legislative history of a

31 Id. at 36.

32 490 U.S. 504, 527 (1989) (Scalia, J., concurring in the judgment).
“statement made by a minister or other proponent of the bill” where “the legislative language is ambiguous or obscure, or if it would lead to an absurd result.”33 Thus, while Justice Scalia appears to have moved in the direction of the traditional English Golden Rule, the English courts have moved in the direction of the American Golden Rule.

As noted at § 5.2.3.2 n.69, a second issue regarding history concerns the use of historical sources such as social practice, newspaper accounts, statements of respected organizations, or reliable evidence of public opinion generally. If such events occur before ratification of a provision, they are properly denominated general historical evidence. If such events occur after ratification, they are properly denominated social practice. In either case, most formalists are reluctant to allow such general evidence to affect interpretation. As noted at § 6.3.3 n.121, Justice Scalia’s plurality opinion in Stanford v. Kentucky34 concluded that whether a right is so “deeply rooted in this Nation’s history and tradition” depends upon whether that tradition is established from “operative acts (laws and the application of laws),” that is, legislative and executive practice, and not from “public opinion polls, the views of interest groups, and the positions adopted by various professional associations.”

As discussed at § 5.2.3.3 nn.70-78, another issue regarding history is what level of generality should be used when viewing historical evidence. Because formalists are concerned about the possible ambiguity represented by a broad-based approach to historical intent, the formalist approach places greatest weight on the specific historical views held by the framers and ratifiers on specific issues, rather than any general historical intent, an aspect of what Professor Bobbitt called ethical argumentation, discussed at § 5.1 n.9. Thus, whether referring to evidence of traditions occurring before ratification, which is properly denominated history, or evidence of traditions after ratification, denominated practice, the typical formalist position agrees with Justice Scalia in Planned Parenthood v. Casey,35 citing Michael H. v. Gerald D., that the Court should start its analysis with, place great weight upon, and not “disregard,” the “most specific level at which a relevant tradition protecting, or denying protection to, the asserted right can be identified.” As a result, the formalist approach typically rejects the dynamic of reasoned elaboration of concepts based upon ethical argumentation, as did Justice Scalia in Casey,36 where he criticized, though clarified that Michael H. did not involve the rejection in all circumstances of, the “philosophical abstraction” of “reasoned judgment” about general historical intent. For this reason, the formalist approach is tied more to the specific historical views of the framers and ratifiers, views which may be the product of unthinking adherence to tradition, idiosyncratic preferences, or prejudice, as discussed at §§ 6.2.3.2 & 16.1.

36 505 U.S. at 891-92.
§ 9.2.2  Treatment of Subsequent Developments

§ 9.2.2.1  Legislative, Executive, and Social Practice

Because the formalist style views the judge's role as the logical, mechanical restatement of the meaning placed into the Constitution by the framers and ratifiers, theoretically the formalist style should focus exclusively on contemporaneous sources of meaning. Only such sources, not subsequent events or prudential considerations, are directly related to the specific meaning placed into the Constitution by the framers and ratifiers. This understanding follows from viewing the Constitution as a static document, where the meaning of a constitutional provision, fixed at the time of ratification, can only be changed by later formal constitutional amendment. As Justice Scalia has stated, the alternative view of the living Constitution is incompatible with the “antievolutionary purpose of a constitution.” However, as noted at § 12.3.3 nn.123-28, a living Constitution is not incompatible with an “antimajoritarian purpose” of a Constitution.

Based on the fact that in theory contemporaneous sources of meaning are exclusively used, and thus the Constitution has a strictly fixed meaning, rather than a living meaning, some individuals have called the formalist approach a “strict constructionist” approach to the Constitution. However, the formalist approach does not adopt a strict, or narrow, construction of constitutional text. While there is a policy maxim of strict construction of penal statutes, as noted at § 5.2.2.1.B, that policy maxim does not apply to constitutional provisions in general. Thus, as noted at § 3.1 nn.14-16, Justice Scalia has rejected use of the phrase “strict constructionist” to describe this formalist, or “textualist,” approach to constitutional interpretation. As Justice Scalia was cited at § 9.2.1.2 n.26, the formalist focus on literal text “is not strict construction, but it is reasonable construction.” As discussed at § 1.1, Justice Scalia’s phrase of “textualism” is not used to describe this interpretation style in this book because all four judicial decisionmaking styles start their constitutional analysis with “text.” In any event, as noted at § 3.1 n.16, Justice Scalia has embraced the term “formalism” as well.

This formalist emphasis on a static Constitution is not necessarily synonymous with interpreting the Constitution according to the “original intent” of the framers and ratifiers. As discussed at § 8.4.1, the framers and ratifiers may well have had more in mind the natural law theory of interpretation with which they were more familiar, with its greater emphasis on purpose, general historical intent, and practice and precedent creating a “gloss” on meaning, as discussed at §§ 12.2.1.1-12.2.2.3. Certainly early Congresses, President Washington, and the Marshall Court interpreted the Constitution in this manner. In contrast, under the formalist static view, subsequent developments should be used only to the extent they help illuminate what the provision meant at ratification. For example, the views of the First Congress in 1789 regarding Presidential removal power were used in this way in the formalist-era 1926 case of Myers v. United States, quoted at § 5.3.2.1 n.87.

37 Scalia, supra note 1, at 44.

39 See, e.g., id. at 218-27 (summarizing early congressional, executive, and judicial practice).
Despite these views regarding limited use of considerations of subsequent events, in practice most formalists make one exception regarding legislative or executive practice. Most formalists will allow a continued and consistent legislative or executive practice that indicates a clear tradition on a specific issue to provide some gloss on constitutional meaning. For example, even Justice Scalia will consider a tradition of legislative enactments since 1868 to influence the meaning of liberty under the Due Process Clause of the 14th Amendment. However, for Justice Scalia, this gloss affects meaning principally to the extent of "the most specific level at which a relevant tradition protecting, or denying protection to, the asserted right can be identified." Furthermore, such a tradition will not be allowed to override clear text in the Constitution. For example, in Planned Parenthood v. Casey, Justice Scalia indicated in dicta his view that the clear text of the Equal Protection Clause requires a "color-blind" Constitution that overrides specific historical traditions, such as banning interracial marriages, or, presumably, permitting segregated public schools.

It should be noted that this "color-blind" interpretation of the Equal Protection Clause differs from the initial formalist-era interpretation of equal protection. As discussed at § 26.2.1.1.B, that initial interpretation was the "separate, but equal" doctrine of Plessy v. Ferguson. However, just as no modern formalist would likely counsel a return to the Lochner-era interpretation of liberty as protecting "liberty of contract," discussed at § 27.3.2.1, no modern formalist, except perhaps for Raoul Berger, discussed at § 9.3.4, would likely counsel return to the "separate, but in form equal" doctrine of Plessy. In Casey, Justice Scalia rejected both Lochner and Plessy.

In addition, reflecting the "positivist" view that law is an emanation of sovereign will, for most formalists a judge in determining an evolving tradition should not consider social practice evidence, such as "public opinion polls, the views of interest groups and the positions adopted by various professional associations." Rather, "[a] revised national consensus . . . must appear in the operative acts (laws and the application of laws) that the people have approved." Even more so, from this "positivist" perspective, the views of foreign precedents are not relevant in interpreting the United States Constitution, although they may be relevant with respect to identifying customary international law or interpreting treaties jointly ratified by the United States and other countries.

---

40 See, e.g., David M. Zlotnick, Justice Scalia and his Critics: An Exploration of Scalia’s Fidelity to his Constitutional Methodology, 48 Emory L.J. 1377, 1394-98 (1999).

43 Id. at 980 n.1.

As noted at § 4.3.1 n.75, Justice Scalia has made it clear that respect for stare decisis “is not part of my originalist philosophy; it is a pragmatic exception to it.” Similarly, this use by Justice Scalia and other formalists of legislative or executive practice that indicates a clear tradition on a specific issue to provide some gloss on meaning is best viewed as a pragmatic exception to formalist reliance on contemporaneous sources only. Such an exception helps ensure that the formalist approach will be useful not only as an academic exercise but “as a workable prescription for judicial government.”46 Indeed, given use of such material by all three other interpretation styles, limited formalist use of such material can be understood as deference to the “settled law” of Supreme Court precedents on use of legislative and executive practice, or perhaps justified as based on the “substantial reliance” individuals may have based on existing government practices.47

It is perhaps useful to note that, with regard to statutory interpretation, most formalists will similarly allow later administrative agency practice to provide some gloss on meaning to the statute, even though such later agency practice is not directly indicative of the “static” meaning of the statute at the time of passage. As has been noted, "Justice Scalia is a fierce, sometimes strident defender of Chevron," the case most closely associated with the principle of judicial deference to agency interpretation of statutes, unless that interpretation is contrary to the expressed intent of Congress.48

In fact, reflecting his preference for bright-line rules capable of easy, mechanical application, Justice Scalia dissented in United States v. Mead Corp.,49 where the remaining Justices limited Chevron deference to cases “when it appears that Congress delegated authority to the agency generally to make rules carrying the force of law,” that delegation more likely to occur when the agency acts pursuant to “notice-and-comment rulemaking or formal adjudication.” In contrast, the Court said in Mead that agency interpretations in “policy statements, agency manuals, and enforcement guidelines” are not entitled to Chevron deference, but only to Skidmore deference, which only requires the Court to consider the persuasiveness of the agency’s analysis given the “specialized experience and broader investigations and information” available to the agency and the “value of uniformity in its administrative and judicial understandings of what a national law requires.”50

46 Scalia, supra note 1, at 140.

Dissenting from this approach, Justice Scalia concluded in his Mead dissent that “all authoritative agency interpretations of statutes they are charged with administering deserve deference.” In Justice Scalia’s view, the majority’s approach will mean more judicial activism, since in more cases “ambiguity in legislative instructions to agencies is to be resolved not by the agencies, but by the judges,” and will mean more uncertainty and “protracted confusion” in the law, as the courts try to determine which kind of agency action is appropriate for the stronger Chevron deference, and which kind of agency action is appropriate only for the “empty truism” of Skidmore deference that a judge “should take into account the well-considered views of expert observers.”

§ 9.2.2.2 Judicial Precedents

Because of their concern with certainty and predictability of the law, the overruling of a case thought to be wrongly decided by a formalist judge is restrained if the precedent has become "settled law.” As noted at § 4.3.2 n.85, Justice Scalia made this point in his dissent in Planned Parenthood v. Casey, stating: “Justices should do what is legally right by asking two questions: (1) was Roe correctly decided? (2) Has Roe succeeded in producing a settled body of law. If the answer to both questions is no, Roe should undoubtedly be overruled.”

As discussed at § 4.3.2 n.79, Justice Scalia has defined such “settled law” as “long-standing and well-accepted principles (not out of accord with the general practices of our people, whether or not they were constitutionally required as an original matter).” In deciding whether a precedent represents or has produced settled law, many factors may be relevant. As discussed at § 4.3.2 nn.80-83, the age of the precedent is one factor, but other factors involve whether the precedent case was itself a departure from prior precedents and gave little weight to established traditions, and whether the precedent is susceptible of principled application. Justice Scalia has made it clear that this respect for stare decisis “is not part of my originalist philosophy; it is a pragmatic exception to it.” If stare decisis is not constitutionally required as part of the “judicial power” of the courts, but merely a pragmatic exception to it, it could be argued, as noted at § 7.3 n.73, that Congress by statute could direct how much weight this prudential principle should have, just as Congress can overrule prudential principles of standing, discussed at § 17.3.1.4. However, even under such an approach, it still could be argued that such a power would undermine the Marbury v. Madison

51 Id. at 241, 243, 245, 250 (Scalia, J. dissenting).

53 Scalia, supra note 1, at 138.

54 Id. at 139-40. See generally Can Originalism Be Reconciled with Precedent?: A Symposium on Stare Decisis, 22 Const. Com. 257-348 (2005).

principle that it is “the province of the judicial department to say what the law is,” as applied in cases like United States v. Klein, discussed at § 17.2.3.1 n.153, which limited Congress’ ability to direct the courts how to decide cases – in Klein the effect of a presidential pardon.

With respect to voting not to overrule a case because it represents settled law, four examples from opinions by formalist Justices Scalia and Thomas are discussed at § 7.3.2 nn.106-14. These examples concern cases involving the Due Process Clause, Free Exercise Clause, Commerce Clause, and dormant commerce clause analysis. Despite this willingness to follow “settled law,” most formalists will not go beyond the core holdings of precedents to adopt the precedent’s general reasoning. Unlike the natural law approach’s great respect for precedent, discussed at § 12.2.2.2, the formalist “pragmatic exception” permitting limited deference to precedent is typically not willing ever to let a “reasoned elaboration” of the precedent provide a “gloss” on meaning that would counsel the formalist to follow that general reasoning as “settled law” where the formalist concluded that the precedents’ general reasoning was flawed, based upon the formalist analysis of text, context, history, and practice. As Justice Scalia phrased the point in his dissent in Planned Parenthood v. Casey, 56 “Roe was plainly wrong – even on the Court’s methodology of ‘reasoned judgment,’ and even more so (of course) if the proper criteria of text and tradition [history and practice] are applied.”

§ 9.2.2.3 Prudential Considerations

As noted at § 5.4.1, prudential consideration can involve arguments concerning the consequences of a particular judicial decision from the perspective of: (1) the contemporaneous sources of constitutional text, context, and history; (2) the subsequent event sources of practice and precedent; (3) the mainstream normative concern with whether the decision would advance a particular background principle of justice or social policy that the judge believes is embedded in the law; or (4) the more radical normative concern with whether the decision would advance a principle of justice or social policy that is not so embedded in existing legal doctrine. As discussed at § 6.4.3, the formalist style of interpretation, with its static model of constitutional interpretation, resorts primarily to category (1)’s contemporaneous sources of prudential argumentation.

As discussed at § 5.4.2, examples of prudential argumentation in category (1) involve considering the consequences of a particular judicial decision from the perspective of text, context, and history. This includes use of the prudential principles to help govern the issue whether a party has standing to sue under the textual requirement of Article III that the dispute involve a “case” or “controversy,” discussed at § 17.3.1.4; prudential considerations in light of structural arguments about the proper role of the judiciary, noted in Ashwander v. Tennessee Valley Authority, discussed at § 17.1.3.2; and prudential considerations suggesting judges must be sensitive, in Justice Breyer’s language, to “the purposes, the effects, the practical virtues” of some governmental action, in addition to the “formal” “logic” of the “language of the Constitution.” 57 Just as formalist judges emphasize literal text and

the logic of language over purpose, as discussed at § 9.2.1.1, formalist judges give much less weight to this third kind of prudential consideration of purpose, as opposed to prudential considerations that derive from literal text or structural considerations. As discussed at § 11.4 nn.101-09, Justice Breyer, who embraces this third kind of prudential consideration, is best understood as a moderate instrumentalist judge with some natural law and Holmesian leanings, and in no sense a formalist.

Reflecting formalist predispositions, formalist jurists are the least likely of all the interpretation styles to embrace vigorous use of even category (1)’s prudential consideration of text, context, and history. Any use of prudential considerations inevitably invites judges today, subsequent to ratification, to substitute their prudential views for the views of the framers and ratifiers. As Justice Scalia has noted, “I do not think, however, that the avoidance of unhappy consequences is [an] adequate basis for interpreting a text.”58 This concern is even greater, of course, for category (2)’s prudential consideration in light of subsequent legislative and executive practice or judicial precedents, which specifically invites prudential consideration of events subsequent to ratification.

Prudential consideration category (3), which permits consideration of background principles of justice or social policy that the judge believes are embedded in the law, is completely out-of-bounds to a formalist judge. The formalist approach adopts a positivist perspective on the nature of the judicial task that rejects such normative background principles reasoning, as discussed at §§ 2.3.2.2 & 3.1. Naturally, the formalist approach is even more adverse to the legitimacy of using category (4)’s non-interpretive prudential arguments of justice or sound social policy not embedded in the law to affect the meaning of a constitutional provision. For positivists, social policy arguments are for the politically elected branches of government, the legislative and executive branches, not the courts. As Justice Scalia phrased this point in 2002 in a case regarding applying the death penalty to the mentally retarded, “‘[T]he Constitution,’ the Court says, ‘contemplates that in the end our own judgment will be brought to bear on the question of the acceptability of the death penalty under the Eighth Amendment.’ . . . The arrogance of this assumption of power takes one’s breath away.”59

In his dissent in Casey, Justice Scalia quoted a similar observation by Justice Curtis in 1857 in his dissent in Dred Scott v. Sandford. Justice Curtis wrote, “[W]hen a strict interpretation of the Constitution, according to fixed rules which govern the interpretation of law, is abandoned, and the theoretical opinions of individuals are allowed to control its meaning, we have no longer a Constitution; we are under the government of individual men, who for the time being have power to declare what the Constitution is, according to their own views of what it ought to mean.”60

Under a formalist approach, if a particular constitutional interpretation leads to an unsound policy result, the response should be for the political branches of government to follow the formal process of amendment in Article V of the Constitution, as was Jefferson’s approach, noted at § 7.1 nn.17-18.

---

That requires 2/3 of the House and Senate to vote in favor of a constitutional amendment, and then
3/4 of the states to ratify the amendment, or for 3/4 of the states to call for a Constitutional
Convention. This process regarding constitutional amendments, including the question whether the
framers and ratifiers would have adopted this difficult amendment process if they expected the
Constitution to be given a formalist kind of interpretation, is discussed at § 20.1.1.3.

§ 9.3 Variations in the Formalist Approach

§ 9.3.1 Summary of the Basic Formalist Approach

Before considering variations in the formalist approach, it may be useful to sum up the basic points
of agreement among all the variations of formalism. The basic sources of constitutional meaning
were summarized in Table 5.1. A further elaboration of this Table appeared at Table 6.4.1. Using
these Tables as a backdrop, the following Table 9.3 summarizes the basic formalist approach with
respect to each source of constitutional meaning.

Entries listed in boldface in Table 9.3 represent the sources most utilized by formalist jurists, that
is, those sources given great weight by formalists. Entries listed in italics represent other sources
formalist jurists will use, particularly if the boldface sources produce an ambiguous or absurd result,
but these sources are typically given lesser weight. Entries underlined in the Table represent sources
underplayed or of limited use by formalist jurists, that is, sources given only some weight. Entries
combined with a strike-through mark indicate sources not used by formalist jurists.

</table>
Regarding entries listed in boldface versus italics, the listing of “related provisions” appears in boldface in this Table reflecting the moderate formalist willingness always to consider related provisions in determining a text’s plain meaning, as discussed at § 9.2.1.2. For extreme formalists, the listing of “related provisions” should appear in italics, given their view of resorting to “related provisions” only in the event that the plain meaning of a text is ambiguous or absurd. The listing for specific historical intent, as revealed by specific historical evidence, is listed in boldface as that is the best kind of historical evidence from the perspective of a formalist jurist. The more general the evidence or intent becomes the less likely it is that a formalist jurist will give it great weight, as discussed at § 9.2.1.3 nn.35-36. Thus, general historical intent from general historical evidence is of limited use by formalist jurists.

Entries underlined in this Table represent sources underplayed or of limited use by formalist jurists. As noted at § 9.2.2.1, formalist jurists theoretically reject any use of subsequent considerations in favor of original “contemporaneous to drafting and ratification” sources of interpretation. However, in practice, most formalist jurists will use practice arguments to the limited extent of a clear and consistent legislative or executive practice on a specific tradition. As discussed at § 9.2.2.2, formalist jurists will follow judicial tradition of core holdings of precedents if they represent “settled law.” As discussed at § 9.2.2.3, formalist jurists will make limited use of prudential considerations of practicality, particularly those related to possible interpretations based upon a formalist analysis of the boldface sources of text, context, and history, which often support notions of judicial restraint, as noted at § 5.4.2 nn.115-16. A description of the formalist approach embodying these aspects of “originalism, traditionalism, and restraint” has been described by Professor Michael McConnell.61

Entries combined with a strike-through mark indicate sources never used by formalist jurists, either in theory or practice. These involve arguments of social practice, reasoned elaboration based upon the general reasoning in judicial precedents, and prudential arguments based upon subsequent considerations, whether embedded in the law or not so embedded.

Because the formalist approach is unique in placing great weight only on the specific interpretive tasks involving contemporaneous sources of meaning, the formalist approach may yield with some regularity a different result than all the other interpretation styles regarding interpretation of a constitutional provision. As noted at § 1.1, in each Term of the Court since 1991, there have usually been a few 7-2 cases where formalist Justices Scalia and Thomas were alone in dissent. At least five such cases involving constitutional law issues were decided between 2000-2004.62 At least five such

cases involving statutory interpretation issues were decided between 2000-2004.63

§ 9.3.2 Extreme versus Moderate Formalism

Some formalist judges are extreme in their formalism, in that their reliance on literal text, verbal maxims, and specific historical intent so dominates their interpretation that it substantially drowns out reliance on the other contemporaneous sources – purpose, related provisions, policy maxims, structure, and general historical intent – as well as even limited reliance on practice, precedent, or prudential considerations of text, context, and history. Other formalist judges are more moderate and thus are willing to give these other sources their regular formalist weight, particularly if such weight were given in precedents or legislative and executive practice. A few examples from Commerce Clause, substantive Due Process, and Contracts Clause doctrine may help illuminate this difference.

With respect to the Commerce Clause, the formalist-era Court between 1873 and 1937 gave the phrase “commerce . . . among the several States” a narrow reading that prevented Congress from regulating much economic activity under the Commerce Clause, as discussed at § 18.2.2. This occurred either because: (1) the formalist-era Court viewed the activity as not literally being “commerce,” but instead “manufacturing,” “mining,” or “agriculture,” or (2) the activity was not literally commerce “among the States,” that is, not literally “interstate” commerce. An extreme formalist judge would follow this literal approach to its complete logical conclusion, while a moderate formalist judge might be willing to depart from extreme literalism in some cases.

For example, in 1903 in Champion v. Ames, the Court was faced with the first of these two questions, whether Congress could criminalize the carrying of lottery tickets across state lines based on the view that carrying such lottery tickets was a regulation of “commerce.” The 4-Justice extreme formalist dissent, taking a literal approach to its logical conclusion, stated, “If a lottery ticket is not an article of commerce, how can it become so when placed in an envelope or box or other covering, and transported by an express company? To say that the mere carrying of an article which is not an article of commerce in and of itself nevertheless becomes such the moment it is to be transported from one State to another, is to transform a non-commercial article into a commercial one simply because it is transported. I cannot conceive that any such result can properly follow.”64

In contrast, the 5-Justice majority in Champion v. Ames adopted a more moderate view in noting that “the lottery company offered a large capital prize, to be paid to the holder of the ticket”; that the statute properly regulated only the “interstate” transportation of the ticket; and that cases before
1873, such as *Gibbons v. Ogden* in 1824, had concluded that a practical understanding of the term “commerce,” as well as specific legislative and executive practice of early Congresses, had led to the conclusion that “navigation” and “traffic,” in addition to “buying” and “selling,” were activities covered by “commerce” under the Commerce Clause. The majority, composed of Justice Harlan, joined by Justices Brown, White, McKenna and Holmes, followed this moderate approach.\(^{65}\)

In terms of their overall decisionmaking styles, Justices Brown, White, and McKenna are probably best categorized as moderate formalist judges. Justice Holmes is, of course, a Holmesian. This Justice Harlan, like the second Justice Harlan discussed at § 10.4, is probably best categorized as a Holmesian, with an affinity for natural law. Justices Brown and White are clearly formalists of some kind, as they joined the formalist majority in *Plessy v. Ferguson*,\(^{66}\) noted at § 9.2.2.1 and discussed at § 26.2.1.1.B, while Justice Harlan’s solo dissent in *Plessy* was based on a Holmesian focus on the purpose of “separate, but equal” segregation to disadvantage African-Americans. Justices Brown and McKenna also joined the formalist majority in *Lochner v. New York*,\(^{67}\) discussed at § 27.3.2.1, while Justices Harlan and Holmes filed dissents. The difference between Justice Holmes more pure Holmesian dissent in *Lochner*,\(^{68}\) which rejected the entire formalist “liberty of contract” analysis, versus Justice Harlan’s greater natural law respect for precedent and working within the *Lochner* framework in his dissent, is discussed at § 27.3.2.1 nn.150-54. Reflecting a moderate formalism, Justice White joined Harlan’s dissent in *Lochner*, although Justice White was in the majority in *Allgeyer v. Louisiana*, the foundational “liberty of contract” case on which *Lochner* was based.\(^{69}\)

In 1914, the Court was faced in *Houston, East & West Texas Railway v. United States (The Shreveport Rate Cases)*\(^{70}\) with the second of the two commerce clause issues stated above, whether the federal government could regulate railroad rates not only between Shreveport, Louisiana and Dallas, Texas, clearly “interstate commerce,” but also between Dallas, Texas and Houston, Texas, literally “intrastate commerce.” The majority opinion, reflecting a moderate formalist approach, made an exception to pure literalism and focused on the purpose behind the Commerce Clause and a practical, or prudential, construction of the clause. The Court concluded, “Wherever the interstate and intrastate transactions of carriers are so related that the government of the one involves the control of the other, it is Congress, and not the State, that is entitled to prescribe the final and dominant rule, for otherwise Congress would be denied the exercise of its constitutional authority and the State, and not the Nation, would be supreme within the national field.” Two extreme

\(^{67}\) 198 U.S. 45, 52 (1905).

\(^{68}\) *Id.* at 74 (Holmes, J., dissenting).

\(^{69}\) *Id.* at 65 (Harlan, J., joined by White & Day, JJ., dissenting); *Allgeyer*, 165 U.S. 578, 583 (1897).

\(^{70}\) 234 U.S. 342, 351-52 (1914); *id.* at 360 (Lurton, J., joined by Pitney, J., dissenting).
formalists dissented without opinion. Probably they concluded that the federal government could not regulate the intrastate rate, since that was literally intrastate commerce, not interstate commerce.

The 1934 substantive due process case of Nebbia v. New York\(^1\) provides another example of this difference between extreme and moderate formalism. In Nebbia, the issue was whether a milk control ordinance was unconstitutional as an infringement on the Lochner era’s concept of “liberty of contract.” Under that doctrine, government was prevented from economic regulation that burdened individual’s “liberty of contract” unless the regulation was one of health or safety, morals, or was regulating a business “affected with the public interest.” As noted by the majority in Nebbia, one definition of “affected with the public interest” – a definition reflecting more extreme formalist literalness – “is one in which property is devoted to an enterprise of a sort which the public itself might appropriately undertake, or one whose owner relies on a public grant or franchise for the right to conduct the business, or in which he is bound to serve all who apply; in short, such as is commonly called a public utility; or a business in its nature a monopoly.” Based on such a definition, the extreme formalists on the Court in the 1930s – Justices Sutherland, Van Devanter, McReynolds, and Butler, described by some as “the Four Horsemen” – held that the dairy industry was not a business affected with the public interest and thus the state statute at issue was unconstitutional under the Lochner doctrine. The reference to the “Four Horsemen” is not a favorable reference to “the Four Horsemen” of Notre Dame football during the 1920s, but rather a negative reference to the Four Horsemen of the Apocalypse: War, Famine, Pestilence, and Death.\(^2\)

In contrast, a definition based on the purpose of regulation would hold that “[t]he phrase ‘affected with the public interest’ can, in the nature of things, mean no more than that an industry, for adequate reason, is subject to control for the public good.”\(^3\) Adopting this definition, the two moderate formalists on the Court in the 1930s, Chief Justice Hughes and Justice Roberts, joined the three non-formalists, Justices Brandies, Stone, and Cardozo, to permit state regulation of the dairy industry as a “business affected with the public interest.” As discussed at §§ 14.2.2 nn.46-51 & 27.3.2.1 nn.154-62, such a moderate formalist approach tempered the Lochner doctrine during most of its existence. Lochner turned out “to be neither the stuff of libertarian dreams nor of Progressive nightmares.”\(^4\)

A further example of this difference between moderate and extreme formalists occurred in 1934 in Home Building & Loan Association v. Blaisdell.\(^5\) This case involved whether a state statute providing for a 2-year moratorium on foreclosures of real estate mortgages to deal with the financial

---

\(^1\) 291 U.S. 502, 531 (1934).

\(^3\) 291 U.S. at 536.

\(^5\) 290 U.S. 398, 450, 453-54 (1934) (Sutherland, J., joined by Van Devanter, McReynolds & Butler, JJ., dissenting).
crisis caused by the Great Depression was constitutional or an infringement of the Contracts Clause, which provides, “No State shall . . . pass any . . . Law impairing the Obligation of Contracts.” Looking predominantly to literal text and specific historical intent, the Four Horsemen said in dissent, “A candid consideration of the history and circumstances which led up to and accompanied the framing and adoption of this clause will demonstrate conclusively that it was framed and adopted with the specific and studied purpose of preventing legislation designed to relieve debtors especially in time of financial distress.” The dissent emphasized the formalist view that contemporaneous sources should dominate constitutional interpretation, because the Constitution should have a fixed meaning at the time it is adopted. As phrased by the dissent, “The Constitution is a written instrument. As such its meaning does not alter. That which it meant when adopted, it means now.”

The moderate formalist majority, per Chief Justice Hughes, did not directly challenge this position, but did note, “While emergency does not create power, emergency may furnish the occasion for the exercise of power.”76 Looking to Court opinions from the founding era, the majority noted that those opinions had given greater weight to the purpose of the Contracts Clause, not a rigid literalism. Chief Justice Hughes noted that Justice Johnson had stated in Ogden v. Saunders,77 a case from 1827, “It appears to me, that a great part of the difficulties of the cause, arise from not giving sufficient weight to the general intent of this clause in the constitution, and subjecting it to a severe literal construction . . . [T]o assign to contracts, universally, a literal purport, and to exact from them a rigid literal fulfilment, could not have been the intent of the constitution.” The two moderate formalists on the Court, Chief Justice Hughes and Justice Roberts, again joined the 3 non-formalists on the Court to form a majority, just as they did in Nebbia v. New York, decided the same year.

In reaching this decision, the moderate formalist majority opinion of Chief Justice Hughes also chided the dissent. Chief Justice Hughes stated:

If by the statement that what the Constitution meant at the time of its adoption it means to-day, it is intended to say that the great clauses of the Constitution must be confined to the interpretation which the framers, with the conditions and outlook of their time, would have placed upon them, the statement carries its own refutation. It was to guard against such a narrow conception that Chief Justice Marshall uttered the memorable warning: “We must never forget, that it is a constitution we are expounding . . . .” When we are dealing with the words of the Constitution, said this Court in Missouri v. Holland, . . . “we must realize that they have called into life a being the development of which could not have been foreseen completely by the most gifted of its begetters. . . . The case before us must be considered in the light of our whole experience and not merely in that of what was said a hundred years ago.”78

This passage suggests an affinity by Chief Justice Hughes and Justice Roberts for the Holmesian approach, based on the citation to Missouri v. Holland, an opinion by Justice Holmes, as noted at § 6.3.1 n.112, and the acceptance of some limited version of a living Constitution based upon the

76  Id. at 426 (Hughes, C.J., for the Court).

78  Id. at 442-43 (citations omitted).
purpose of the Constitution to “endure for ages to come.” It was the shift in votes by Chief Justice Hughes and Justice Roberts in 1937 in Commerce Clause and Substantive Due Process cases that brought an end to the formalist era and singled the beginning of the Holmesian era, as discussed at §§ 13.1 nn.17-23 & 14.2.3 nn.59-63.

As indicated by these cases, during the formalist era of the Supreme Court, 1873-1937, the basic doctrine reflected a moderate formalist approach toward the Constitution. There were never 5 extreme formalists on the Court at any one time, although sometimes, as between 1895-1903, with the four dissenters in Champion v. Ames, or between 1922-37, with the Four Horsemen, 4 extreme formalists were simultaneously on the Court for extended periods of time.

§ 9.3.3 Conservative versus Liberal Formalism

During our Nation’s history, the two major political parties have typically had disagreements over the federalism issue of state versus federal power, and the separation of powers issue of legislative versus executive power. As discussed at § 6.2.2.3 regarding federalism, in the period before the Civil War, the major federalism issues involved slavery and tariff policy. The Federalist Party, and their later incarnation in the Whig Party and the Republican Party, favored broader federal power over these matters. The Democratic Party of Jefferson and Jackson was more in favor of states’ rights. After the Civil War resolved these issues in favor of federal power, federalism issues turned to matters of federal regulation of economic and civil rights matters. Since that time, conservatives in both the Republican and Democratic parties have resisted such federal economic and civil rights legislation, and emphasized states’ rights on these issues; liberals in both the Republican and Democratic parties embraced federal power to legislate on these matters. Thus, the conservative formalist majorities on the Court during the first third of the 20th century – conservative Republicans like Chief Justice Taft, or Justices Van Devanter, Butler or Sutherland, or conservative Democrats, like Justice McReynolds – were very protective of states’ rights, as discussed in Chapter 18.

As discussed at § 6.2.2.3, since the 1960s the Republican Party has become more conservative as a party, and the Democratic Party has become more liberal. Thus, today, conservatives/Republicans more often favor states’ rights, while liberals/Democrats more often favor federal power. As discussed in Chapter 18, recent conservative formalists, like Chief Justice Burger, and Justices Scalia and Thomas, tend to favor states’ rights. The one liberal formalist on the Court in the last 50 years, Justice Black, favored federal power while voting to uphold New Deal regulation in the 1930s and 1940s and grants of power to Congress under the Commerce Clause during the 1960s.

As discussed at § 6.2.2.4, with respect to legislative versus executive power, the Federalist/Whig/Republican party has always been more sympathetic to exercises of executive power, while the Jefferson/Jackson/Democratic party has always been more trusting of the legislative branch. Given these facts, conservative formalists, more likely to be appointed by Republican presidents, are more likely to favor broad grants of executive power to the president. In contrast, liberal formalists, more likely to be appointed by Democratic presidents, are more likely to restrain executive power in favor of legislative prerogatives. As discussed in Chapter 19, recent conservative formalists, like Chief Justice Burger, and Justices Scalia and Thomas, tend to favor broad grants of executive power. The one liberal formalist on the Court in the last 50 years, Justice Hugo Black, limited executive power, as in Youngstown Sheet & Tube Co v. Sawyer in 1952, discussed at § 19.3.1 n.28.
§ 9.3.4  Literal Text versus Specific Historical Intent Formalism

There is one additional major variation of the formalist approach. As indicated at §§ 9.2.1.1 & 9.2.1.3, formalists place great weight on literal text and specific historical intent. Among these two sources, formalists who follow an objective approach to meaning place greater emphasis on literal text. Those who follow a subjective approach place greater emphasis on specific historical intent.

For example, in his writings commentator Raoul Berger rejected the "textualist"-driven formalism of Justice Scalia and argued for a formalist "originalism" that would hold that the specific historical intent of the framers and ratifiers should be determinative, and that all sources of historical inquiry, including any reliable evidence of societal traditions, should be examined to determine these views. In contrast, reflecting an objective approach to interpretation, more dominant in the 20th century, as discussed at § 6.2.1.1 nn.18-22, Justices Scalia and Thomas have rejected subjective interpretation and Raoul Berger’s criticism of Brown v. Board of Education on the specific historical intent grounds that segregated schools were wide-spread and thought permissible in 1868 when the 14th Amendment was adopted. Dissenting in Planned Parenthood v. Casey, Justice Scalia stated his view that the literal meaning of “equality” requires a "color-blind" Constitution, which overrides specific historical traditions, such as banning interracial marriages or, presumably, permitting segregated public schools or some limited affirmative action based on historical practices of the post-Civil War Republican Congress, noted at § 26.2.1.4.A n.210. Where literal text is not so clear, as for defining “liberty” under substantive due process analysis, and how that differs from “license,” Justice Scalia will rely more on specific historical practices, as noted at § 27.1.1 nn 10, 12-14.

As a version of formalism, Raoul Berger’s approach disagrees with the standard natural law model, with its willingness to consider fully both letter and purpose, and both specific historical intent, where present, and general kinds of ethical argumentation. Of course, Raoul Berger's approach, like all formalist theories, is in contrast to the more activist interpretation style of instrumentalism. Raoul Berger also disagreed with the Holmesian approach and its broader use of purpose, general historical intent, and practice. For example, Berger disagreed with Holmesian Justice Frankfurter for his statement, in a file memorandum concerning Brown, that "the equality of laws enshrined in a constitution which was 'made for an undefined and expanding future' . . . is not a fixed formula defined with finality at a particular time."

83  Berger, supra note 79, at 131-33.

Page 300
§ 9.4 The Formalist Approach, Combined with Affinity for Another Style

As exists with respect to each style of interpretation, a judge who predominately follows one style of interpretation may have an affinity for another style. Among formalist Supreme Court Justices in the second half of the 20th century, the best examples of this are Chief Justice Burger, who occasionally demonstrated an affinity for the Holmesian style; Justice Thomas, who has suggested an affinity for natural law; and Justice Black, who was accused of an affinity for instrumentalism.

In his decisions, Chief Justice Burger reflected more of a moderate formalism reminiscent of Chief Justice Hughes and Justice Owen Roberts. As noted at § 9.3.2 n.78, Chief Justice Hughes and Justice Roberts shared an occasional affinity for Holmesian interpretation. Chief Justice Burger’s occasional affinity for Holmesian interpretation is perhaps best seen in his joining the majority in Posadas De Puerto Rico Associates v. Tourism Company of Puerto Rico, a First Amendment case involving commercial speech. In that case, per Holmesian Justice Rehnquist, the Court held that Puerto Rico may restrict ads for casino gambling aimed at residents. As discussed at § 30.3.2.1 n.246-48, Posadas adopted a Holmesian deference-to-government approach to commercial speech doctrine. In contrast, a formalist approach toward commercial speech tends to be more supportive of a bright-line rule protective of free speech. For example, in 44 Liquormart, Inc. v. Rhode Island, Justice Thomas, concurring with the majority’s overruling of the deferential approach of Posadas, stated that where the state has not outlawed or directly restricted transactions within its own borders, all attempts to dissuade legal choices by citizens by keeping them ignorant are impermissible.

Justice Thomas’ affinity for a natural law style of interpretation, particularly of the classic or Christian kind, has been noted by some commentators. For example, Professor Stephen Presser has compared Federalist Justice Chase and “Clarence Thomas or any other Supreme Court Justice who might embrace an historically valid American natural law jurisprudence.” Further, Justice Thomas did comment during his confirmation hearing that “to understand what the framers meant . . . it is important to go back and attempt to understand what they believed,” which was a theory of “natural rights,” but that in interpreting the Constitution, “You don’t refer to natural law or any other law beyond that document [the Constitution].” However, in his decided cases, Justice Thomas interpretation style most often mirrors that of Justice Scalia, not natural law. As Professor Rodney Smith noted early on, Justice Thomas has “fallen under the sway” of Justice Scalia.

---

85  517 U.S. 484 (1996); id. at 518-26 (Thomas, J., concurring).
Occasionally, however, Justice Thomas departs from voting with Justice Scalia in a manner suggesting the influence of natural law. For example, Justice Thomas has focused on the natural law principle of proportionality to favor parties who were at a disadvantage relative to the government. For example, in *Sims v. Apfel*,^89^ Justice Thomas joined with natural law Justices O’Connor and Souter, along with instrumentalist Justices Stevens and Ginsburg, to hold that a social security claimant did not waive judicial review of an issue even though the claimant failed to exhaust that issue by presenting it to the Social Security Appeals Council for review. In *United States v. Bajakajian*,^90^ Justice Thomas joined Justice Souter, along with instrumentalists Justices Stevens, Ginsburg, and Breyer, to hold that forfeiture of an entire amount of money, $357,144, merely for failure to report that the money was concealed in defendant’s luggage, was a violation of the principle of proportionality embedded in the Excessive Fines Clause.

With respect to Justice Black and instrumentalism, Justice Harlan’s concurrence in *Griswold v. Connecticut* is perhaps most telling. In *Griswold*,^91^ Justice Black supported once again his bright-line rule that the 14th Amendment Due Process Clause incorporated all of the Bill of Rights, but no other rights. In response, Holmesian Justice Harlan noted that this approach does not guarantee that a judge will not resort, in some cases, to arguments of social policy. Justice Harlan remarked:

*Johnston’s* approach does not rest on historical reasons, which are of course wholly lacking, but on the thesis that by limiting the content of the Due Process Clause of the Fourteenth Amendment to the protection of rights which can be found elsewhere in the Constitution, in this instance the Bill of Rights, judges will thus be confined to “interpretation” of specific constitutional provisions, and will thereby be restrained from introducing their own notions of constitutional right and wrong into the “vague contours of the Due Process Clause.”

...[Judicial “self-restraint” is an indispensable ingredient of sound constitutional adjudication, [but] the formula suggested for achieving it is more hollow than real. “Specific” provisions of the Constitution, no less than “due process,” lend themselves as readily to “personal” interpretations by judges whose constitutional outlook is simply to keep the Constitution in supposed “tune with the times.” Need one go further than to recall last Term’s reapportionment cases, Wesberry v. Sanders and Reynolds v. Sims, where a majority [including Justice Black] “interpreted” “by the People” and “equal protection” to command “one person, one vote,” an interpretation that was made in the face of irrefutable and still unanswered history ...?^92^

---

^89^ 530 U.S. 103, 112 (2000) (Thomas, J., for the Court).

^90^ 524 U.S. 321, 344 (1998) (Thomas, J., for the Court). In a few cases, Justice Thomas has given even less respect to precedent and to rule-based doctrine than Justice Scalia, whose views are noted at § 4.3.1 nn.75-77 & § 4.2.3 nn.54-56, in favor of a conclusion supported by a formalist reading of literal text alone. Randy E. Barnett, *Scalia’s Infidelity: A Critique of “Faint-Hearted” Originalism*, 75 U. Cin. L. Rev. 7, 2006 (Justice Thomas only true “originalist” on the Court).

^92^ *Id.* at 500-01 (1965) (Harlan, J., concurring).
CHAPTER 10: HOLMESIAN CONSTITUTIONAL INTERPRETATION

§ 10.1 Introduction to Holmesian Decisionmaking

As discussed at § 3.2, the Holmesian approach, as a positivist theory of law, shares with the formalist approach a strong belief in judicial restraint and a limited role for the judge who attempts to decide cases in light of existing positive law. However, because the Holmesian approach is a functional approach to decisionmaking, not an analytical approach, the Holmesian judge does not have a predisposed preference for rigidly mechanical application of rules. As Oliver Wendell Holmes stated in *The Common Law*,1 "The life of the law has not been logic; it has been experience. The felt necessities of the time, the prevalent moral and political theories, intuitions of public policy, avowed or unconscious, even the prejudices which judges share with their fellow-men, have had a good deal more to do than the syllogism in determining the rules by which men should be governed." Thus, as Holmes stated in *New York Trust Co. v. Eisner*,2 "[A] page of history is worth a volume of logic." The basic elements of this Holmesian style of constitutional interpretation are discussed at § 10.2.

As discussed at § 10.3, in the 20th century there have been on the Court extreme Holmesians, such as Justice Holmes himself and Justices Brandeis and Frankfurter, and moderate Holmesians, such as Justices Jackson, the first and second Harlans, and Stewart. Justices Frankfurter and Brandeis would both be described as liberal Holmesians, while Justices Holmes, Stewart, and both the first and second Harlans would be described as conservative. Justice Jackson would best be described as a centrist Holmesian. Among other Justices on the Vinson Court, Chief Justice Vinson and Justices Reed, Minton, and Clark can properly be described as moderate, conservative Holmesians. Among Justices on the Warren Court, Justice Whittaker was a moderate, conservative Holmesian. Among Justices on the Burger and Rehnquist Courts, Chief Justice Rehnquist is best categorized as an extreme, conservative Holmesian, while Justice White was an extreme, liberal Holmesian. Noteworthy Holmesians on the Courts of Appeals include Judge Learned Hand, who was never nominated to the Supreme Court, and Judge Robert Bork, who was nominated but was not confirmed. Noteworthy commentators espousing Holmesian themes include Professor James Bradley Thayer in the late 19th century, as discussed at § 10.2.1.2 n.16, and University of Texas School of Law Professor Lino Graglia today.3

Finally, as exists with respect to each style of interpretation, a judge who predominately follows one style may have an affinity for another style. As discussed at § 10.4, moderate Holmesians Justice Harlan and Stewart occasionally demonstrated a slight affinity for natural law. Despite being an extreme Holmesian most of the time, Chief Justice Rehnquist had a slight affinity for formalism. Justice White had a slight affinity for instrumentalism.

---

2 256 U.S. 345, 349 (1921) (Holmes, J., for the Court).

§ 10.2 Defining the Holmesian Style of Constitutional Interpretation

§ 10.2.1 Treatment of Contemporaneous Sources of Interpretation

§ 10.2.1.1 Treatment of Text

Regarding the question of subjective versus objective interpretation of text, the Holmesian approach follows Justice Holmes, who always spoke of searching for objective meaning, not subjective intent. As Holmes noted, “[W]e ask not what this man meant, but what those words mean in the mouth of a normal speaker of English, using them in the circumstances in which they were used.”\(^4\) Justice Felix Frankfurter, a follower of Holmes, similarly noted, “We are not concerned with anything subjective. We do not delve into the minds of the legislators or their draftsmen, or committee members. . . . Legislation has its aim. . . . That aim, that policy is . . . evinced in the language of the statute, as read in light of other external manifestations of purpose.”\(^5\) However, as discussed at § 10.2.1.3, despite this view both Justices Holmes and Frankfurter welcomed use of legislative history to determine the meaning of a statute, an approach more consistent with a concern about the subjective intent of the drafters, rather than a pure objective approach to the words’ meaning. Thus, in practice, the Holmesian approach to interpretation follows much more closely the Landis/Breyer practical objective approach to interpretation, as discussed at § 6.2.1.1 nn.9-10, rather than the Radin/Scalia pure objective approach.

Being a functional approach to judicial decisionmaking, and not an analytic approach, the Holmesian approach tends to emphasize the functional purpose behind a constitutional or statutory provision, not merely the word’s formal, literal meaning. As Justice Holmes stated in United States v. Whitridge,\(^6\) "[T]he general purpose is a more important aid to the meaning than any rule which grammar or formal logic may lay down." In an article on statutory interpretation, Justice Felix Frankfurter made the same point regarding the importance of considering purpose in interpreting any document.\(^7\) Judge Learned Hand, a similar believer in the Holmesian style of judicial restraint, made a similar point about considering background purposes in constitutional interpretation in his 1958 Oliver Wendell Holmes, Jr. Lecture at Harvard. He stated there, "For centuries it has been an accepted canon in interpretation of documents to interpolate into the text such provisions, though not expressed, as are essential to prevent the defeat of the venture at hand [ut res magis valeat quam pereat]; and this applies with especial force to the interpretation of constitutions, which, since they are designed to cover a great multitude of necessarily unforeseen occasions, must be cast in general

\(^4\) Oliver Wendell Holmes, Jr., A Theory of Interpretation, 12 Harv. L. Rev. 417, 417-18 (1899).

\(^6\) 197 U.S. 135, 143 (1905) (Holmes, J., for the Court).

\(^7\) Frankfurter, supra note 5, at 538-44 (discussing the interpretation theory of Holmes under the headings "Proliferation of Purpose" and "Search for Purpose").
language, unless they are constantly amended.\textsuperscript{8} Columbia University School of Law Professor Louis Lusky similarly commented on use of the maxim \textit{ut res magis} to ensure that judicial review is "not confined to the written text but still kept within some verifiable, 'principled' limit."\textsuperscript{9} Use of this maxim to advance the purposes behind a document is also consistent with the natural law sensitivity to purpose, as discussed at § 6.2.1.2 nn.32-38, when considering Justice Story’s citing with approval the \textit{ut res magis} maxim of construction. Of course, as noted at § 6.2.1.2 nn.30, 42, if the literal text of the provision is clear, both Holmesian and natural law judges will be reluctant to let a contrary meaning derived from purpose override the clear meaning of the statutory or constitutional provision.

\section*{§ 10.2.1.2 Treatment of Context}

This same functional concern leads Holmesians to be sensitive to arguments of context, in addition to arguments of text and purpose, in order to effectuate the true intent of the framers and ratifiers. As noted by Holmes, “A word generally has several meanings, even in the dictionary. You have to consider the sentence in which it stands to decide which of those meanings it bears in the particular case, and very likely will see that it there has a shade of significance more refined than any given in the wordbook.”\textsuperscript{10} Holmesian judges are quite willing to resort to verbal or policy maxims of construction to interpret text, as long as those maxims are not used rigidly, or mechanically, but are always related back to the functional goal of determining the drafter’s intent. As stated by Justice Frankfurter, “[T]hese rules of construction are not in any true sense rules of law. So far as valid, they are what Mr. Justice Holmes called them, axioms of experience. . . . Out of them may come a sharper rephrasing of the conscious factors of interpretation; new instances may make them more vivid but also disclose more clearly their limitations. Thereby we may avoid rigidities which, while they afford more precise formulas, do so at the price of cramping the life of law.”\textsuperscript{11}

Holmesian judges are also sensitive to arguments of related provisions, understanding that any particular text must be read against the backdrop of related provisions to get functionally its full intended meaning. As Justice Frankfurter stated:

\begin{quote}
Frequently the sense of a word cannot be got except by fashioning a mosaic of significance out of the innuendoes of disjointed bits of statute. Cardozo phrased this familiar phenomenon by stating that “the meaning of a statute is to be looked for, not in any single section, but in all the parts together and in their relation to the end in view.” And to quote Cardozo once more on this phase of our problem: “There is a need to keep in view also the structure of the statute, and the relation, physical and logical, between its several parts.” The generating consideration is that legislation is more than composition. It is an active instrument of government which, for
\end{quote}

\textsuperscript{8} Learned Hand, The Bill of Rights 14 (1958).

\textsuperscript{10} Holmes, supra note 4, at 417.

\textsuperscript{11} Frankfurter, supra note 5, at 544-45, citing Boston Sand & Gravel Co. v. United States, 278 U.S. 41, 48 (1928) (Holmes, J., opinion ).
purposes of interpretation, means that laws have ends to be achieved.\textsuperscript{12}

With regard to arguments of constitutional structure, this same functional concern leads Holmesians to adopt a pragmatic, sharing of powers, checks and balances approach to issues of separation of powers, as discussed at § 19.4.3.1,\textsuperscript{13} and to be sensitive to the functional needs of governmental power when considering federalism issues of federal versus state power, as discussed at § 18.2.3.\textsuperscript{14} As discussed at § 10.3.3, following the same conservative versus liberal bias that exists for formalist jurists, conservative Holmesians, like Chief Justice Rehnquist, tend to favor the executive branch and the states; liberal Holmesians, like Justice White, tend to favor the legislative branch and the federal government.

This functional concern with sensitivity to the needs of governmental power also animates the Holmesian view concerning the proper role of the courts regarding issues of civil rights. As discussed at § 3.2 nn.24, 37-40, the role of the law, in Holmes' view, was to accommodate to what the dominant group in society wants. As Holmes famously stated, "The first requirement of a sound body of law is, that it should correspond with the actual feelings and demands of the community, whether right or wrong."\textsuperscript{15} Thus, in Holmes' view, legislatures, as representatives of the majority in our democratic society, are the proper balancers of public policy in society, not courts.

As noted at § 10.1, the Holmesian approach rejects the pure logic of the formalists in favor of the "felt necessities of the times" and "intuitions of public policy." Because of the difficulty sometimes in determining these "felt necessities" or "intuitions of public policy," Holmesian judges are very cautious before deciding that some "intuition" in a constitutional provision renders governmental action unconstitutional. Thus, while formalist and Holmesian jurists, as positivists, share a belief in judicial restraint, the extreme Holmesian approach adopts as a general theory Professor Thayer's extremely strong judicial restraint view that courts should defer to governmental action out of respect for the other branches of government, the dominant forces in society, unless the

\textsuperscript{12} Id. at 538 (citations omitted).

\textsuperscript{13} See, e.g., Morrison v. Olson, 487 U.S. 654 (1988) (Rehnquist, J., opinion for the Court), discussed § 19.4.3.1.

\textsuperscript{14} See, e.g., NLRB v. Jones & Laughlin Steel Corp., 301 U.S. 1 (1937) (Congress can regulate any activity, even though it has an intrastate character when separately considered, if the activity has such a close and substantial relation to interstate commerce that control is appropriate to attain a legitimate end); United States v. Darby, 312 U.S. 100 (1941) (a purpose to control some aspect of local activity is irrelevant; Congress can exclude from interstate commerce all goods produced in substandard conditions because Congress can choose means reasonably appropriate to a legitimate end even though that involves control of intrastate activities); Wickard v. Filburn, 317 U.S. 111, 124 (1942) (even if an activity is local, it can be regulated by Congress if it exerts a substantial economic affect when taken together with actions of others similarly situated; testing Congress' power by using the relevance of economic affects "has made the mechanical application of legal formulas no longer feasible."). These cases are discussed at § 18.2.3.

\textsuperscript{15} Holmes, supra note 1, at 36.
unconstitutionality of the governmental action is "so clear that it is not open to rational question."  

As one author has noted, “Holmes’ job at the Supreme Court consisted of, in many instances, reviewing the constitutionality of actions of a legislature. In such cases, Holmes forged his famous attitude of deference.”  

A modern version of this approach appears in the works of University of Texas Law School Professor Lino Graglia, cited at § 10.1 n.3. As discussed at § 9.2.1.2, there is no such extreme deference to the government under the formalist approach to judicial review.

A moderate Holmesian approach does not go as far as Professor Thayer, but does counsel judicial restraint before determining that some governmental action is unconstitutional. This is reflected in the prudential factors summarized in Justice Brandeis’ opinion for the Court in Ashwander v. Tennessee Valley Authority, and in Professor Alexander Bickel’s “passive virtues” approach, both discussed at § 17.1.3.2, and in Justice Frankfurter’s plurality opinion in Poe v. Ullman, joined in, among others, by Justice Whittaker, finding Poe not ripe for resolution, discussed at § 27.3.3.2 n.206. It is also embodied in Professor John Hart Ely’s approach to constitutional interpretation in Democracy and Distrust.  

In that book, Professor Ely advanced the view that courts should be “representation-reinforcing” in their decisionmaking, making the political process, which reflects the dominant forces in society, more efficient, but deferring to the political process where that process is efficient.

§ 10.2.1.3 Treatment of History

The Holmesian approach’s functional concern with text, purpose, and context is equally reflected in the Holmesian approach regarding history. This functional concern means that a Holmesian judge will engage in broad-based historical inquiry, using both specific and general historical evidence, to help determine a provision's purpose and context. This broad-based historical inquiry in constitutional interpretation mirrors the Holmesian approach to statutory interpretation, as discussed at § 3.2 nn.43-47, which always permits resort to legislative history in order to help determine the legislature's intent, as noted at § 6.2.1.1 nn.9-10. As stated in the 1940 case, United States v. American Trucking Associations, Inc., "When aid to construction of the meaning of words, as used in the statute, is available, there certainly can be no 'rule of law' which forbids its use, however clear the words may appear on 'superficial examination'.” Thus, this approach rejects any formalist Literal, Golden, or Plain Meaning Rule limitation on resort to legislative history materials.

19 310 U.S. 534, 543-44 (1940).
Of course, as with statutory interpretation, under the Holmesian approach to the Constitution a judge must be careful to use historical evidence only to advance the intent of the framers and ratifiers, not to enlarge or narrow it. As Justice Frankfurter noted when talking about statutory interpretation, "Spurious use of legislative history must not swallow the legislation so as to give point to the quip that only when the legislative history is doubtful do you go to the statute. While courts are no longer confined to the language, they are still confined by it."20

One commentator has made the argument that Judge Learned Hand, a famous Holmesian judge, might change his mind and would not consult legislative history today given the spurious use of legislative history over the last generation.21 Justice Scalia made the same point about Dean Jerome Landis’ support in the 1930s of using legislative history. Justice Scalia stated, “I think that Dean Landis, and those who joined him in the prescription of legislative history as a cure for what he called ‘willful judges,’ would be aghast at the results a half century later. On balance, it has facilitated rather than deterred decisions that are based upon the courts’ policy preferences, rather than neutral principles of law.”22 Whether or not Judge Hand or Dean Landis would agree with these observations, one can never know. As discussed at § 6.2.3.1 nn.75-90, recent Holmesian justices on the Supreme Court, like Justice White or Chief Justice Rehnquist, have routinely used legislative history, although, in the case of Chief Justice Rehnquist, with some reservations.

Likewise, a true Holmesian would reject the formalist extreme focus on evidence of specific historical intent, and would be willing to consider fully whether history suggests that the framers and ratifiers intended a particular provision to reflect a general ethical concept. For example, such an historical investigation might reveal that the general concept at the base of the Equal Protection Clause is one of racial equality.23 Thus, a principled Holmesian would be willing to interpret the Equal Protection Clause in light of this general concept, an aspect of what Professor Bobbitt called ethical argumentation, discussed at § 5.1 n.9, and not merely in light of the specific examples held by the framers about equal protection, as might a specific historical intent formalist like Raoul Berger, as discussed at § 9.3.4. As cited at § 6.2.3.2 n.100, Holmesian Judge Robert Bork wrote:

> The Court cannot conceivably know how [the framers and ratifiers] would have resolved [specific] issues had they considered, debated and voted on each of them. Perhaps it was precisely because they could not resolve them that they took refuge in the majestic and ambiguous formula: the equal protection of the laws. But one thing the Court does know: [the Equal Protection Clause] was intended to enforce a core idea of black equality against...

20 Frankfurter, supra note 5, at 543-44.

governmental discrimination. It has been noted that in deciding cases Judge Bork was not a “textualist,” in the sense of being a formalist, nor did he search for the framers and ratifiers’ “subjective intent.” Rather Judge Bork searched for the “objective” understanding of how a reasonable person of the time would have interpreted the words used, combined with a deference to government mentality, all of which reflects a Holmesian approach.

Justice Frankfurter made the same point about a judge being willing to consider both specific and general historical intent when discussing statutory interpretation. He noted, “[T]he purpose which a court must effectuate is not that which Congress should have enacted, or would have. It is that which it did enact, however inaptly, because it may fairly be said to be imbedded in the statute, even if a specific manifestation was not thought of, as is often the very reason for casting a statute in very general terms.”

As noted at § 9.2.1.3 n.35, whether referring to evidence of traditions occurring before ratification, which is properly denominated history, or evidence of traditions after ratification, denominated practice, the typical formalist position is that of Justice Scalia in Michael H. v. Gerald D. that the Court should predominantly consider “the most specific level at which a relevant tradition protecting, or denying protection to, the asserted right can be identified.” As noted above, the Holmesian approach rejects such limited use of historical evidence. Thus, Justice Scalia’s position was rejected by Holmesian Justice White in Michael H., as well as being rejected by the natural law and instrumentalist Justices in the case. Only Chief Justice Rehnquist joined Justice Scalia’s “specific tradition” analysis in the case. As discussed at § 10.4, Chief Justice Rehnquist had an occasionally affinity for the formalist style of interpretation.

26 Frankfurter, supra note 5, at 538-44.

27 491 U.S. 110, 127 n.6 (1989) (Scalia, J., joined by Rehnquist, C.J., announcing the judgment of the Court).

28 Id. at 132 (O’Connor, J., with Kennedy, J., concurring in part); id. at 132-34 (Stevens, J., concurring in the judgment); id. at 136-37 (Brennan, J., joined by Marshall & Blackmun, JJ., dissenting) (“[O]nly one other Member of the Court [Chief Justice Rehnquist] fully endorses Justice SCALIA’s view . . . .”); id. at157-60 (White, J., joined by Brennan, J., dissenting).
Despite this rejection of Justice Scalia’s “specific tradition” approach in theory, considerations of general interpretive predispositions, discussed at § 4.4.1, suggest that Holmesian judges are less likely than natural law judges to conclude that the framers and ratifiers intended a particular provision of the Constitution to reflect a general natural law concept, because the Holmesian approach rejects any notion of natural rights as "naive," noted at § 3.4 n.92. Instead of concluding the framers and ratifiers expected some concept to evolve over time in response to natural law reasoning and an interplay between social change and constitutional concepts, Holmesian judges are more likely to conclude that the framers and ratifiers expected the concept to remain static.

This is mostly a product of the fact that the Holmesian approach to judicial decisionmaking is a positivist approach, and thus shares the formalist view that judges should not test their decisions by an external standard of moral rightness. Judges holding such a view are more likely to conclude that the framers and ratifiers of a provision had in mind some specific intent that it is the task of the judge to implement. For example, dissenting in Wallace v. Jaffree, Justice Rehnquist relied upon historical evidence of the specific intent of the framers and ratifiers of the Establishment Clause, and contrasted that with any general concept of separation of church and state that might be developed from reliance on the general views of Thomas Jefferson or James Madison. Justice White indicated in his dissent in Wallace that he appreciated Justice Rehnquist's explication of history.

Nevertheless, to the extent that a Holmesian judge can be convinced from general historical evidence, or otherwise, that the framers and ratifiers themselves embedded in the Constitution a particular general concept that was expected to be elaborated over time by judges against a background of purpose and context, a Holmesian judge should remain faithful to that intent. For example, with respect to the issue of incorporation of the Bill of Rights under the 14th Amendment's Due Process Clause, Justice Frankfurter's conclusion was that due process involves "those canons of decency and fairness which express the notions of justice of English-speaking peoples . . . . These standards are not authoritatively formulated anywhere as though they were prescriptions in a pharmacopoeia. But [judges] must move within the limits of accepted notions of justice."30

§ 10.2.2 Treatment of Subsequent Developments

§ 10.2.2.1 Legislative, Executive, and Social Practice

Because of the Holmesian posture of deference to government, a Holmesian will quite willingly allow a continued and consistent legislative or executive practice on an issue to provide a gloss on meaning. As stated by Justice Frankfurter in his concurrence in Youngstown Sheet and Tube Co. v. Sawyer, "[A] systematic, unbroken, executive practice, long pursued by the knowledge of Congress and never before questioned, engaged in by Presidents who have also sworn to uphold the Constitution, making as it were such exercise of power part of the structure of our government, may be treated as a gloss on 'executive Power' vested in the President." Justice Holmes had underscored

31 343 U.S. 579, 610-11 (1952) (Frankfurter, J., concurring).

Page 310
this point 30 years earlier in Missouli v. Holland, stating, "[W]hen we are dealing with words that are also a constituent act, like the Constitution of the United States, we must realize that they have called into life a being the development of which could not have been foreseen completely by the most gifted of its begetters. It was enough for them to realize or to hope that they had created an organism; it has taken a century and has cost their successors much sweat and blood to prove that they created a nation. The case before us must be considered in light of our whole experience and not merely in that of what was said a hundred years ago."

On the other hand, as a positivist theory of law, a pattern of legislative and executive action should not be allowed to create a gloss on meaning that can override the framers and ratifiers' clear intent. For example, in INS v. Chadha, Justice Rehnquist joined the majority opinion which held that Congress may not act legislatively through a one-house veto, despite congressional practice of including such veto provisions in many statutes for 50 years prior to Chadha, because the one-house veto violated the literal text of the bicameralism and presentment clauses of Article I. As discussed at § 10.3.3 n.79, despite this fact Holmesian Justice White preferred to defer to the extensive legislative practice of one-house and two-house vetoes that had occurred for the 50 years prior to Chadha, concluding this practice was consistent with the purposes of bicameralism and presentment.

Justice White’s dissent in Chadha reveals the extent to which some extreme Holmesian jurists will go in order to defer to legislative and executive practice. Further, the Holmesian posture of judicial deference to the other branches of government, discussed generally at § 3.2, constantly reminds Holmesian jurists that it is up to the legislature and executive to respond to social change and "the felt necessities of the times," not the courts. Reflecting this fact, virtually all Holmesian references to a notion of evolving concepts in the Constitution occur in the context of a deference-to-government decision.

With regard to social practice, a true Holmesian would reject the formalist view in Stanford v. Kentucky, discussed at § 9.2.1.3 n.34, that historical investigation or evidence of social practice should be limited to "laws and the application of laws" for purposes of determining our societal traditions. Instead, a true Holmesian would follow Justice Holmes' view in Lochner v. New York that our tradition derives from both "our people and our laws." Nevertheless, perhaps because of the extreme Holmesian posture of deference to government under Professor Thayer’s approach,

---

32 252 U.S. 416, 433 (1920) (Holmes, J., for the Court).
36 198 U.S. 45, 75-76 (1905) (Holmes, J., dissenting).
some extreme Holmesians have adopted the *Stanford* limitation of looking only to governmental acts, that is, legislative and executive practice, to determine traditions. Of course, even under the broader view of Holmes, judges should only consider American social practice. As a positivist theory of law, like formalism, as discussed at § 9.2.2.1 n.45, foreign laws or foreign social practice are not relevant considerations to interpreting the United States Constitution, unless directly related to choices made by the framers and ratifiers, such as for English practice at the time of ratification. Such directly related foreign practices have been denominated by some as “geneological comparativism,” as discussed at § 5.2.3.2 n.67.

§ 10.2.2.2 Judicial Precedents

As a positivist theory of law, the Holmesian approach shares the formalist concern with certainty and predictability of the law. However, as a functional approach, certain and predictable rules are prized more for their functional utility in helping society better govern itself, rather than being prized for their logical clarity or doctrinal neatness. As cited at § 3.2 n.26, Professor Patrick Kelley noted:

Holmes believed a judge could do a number of things to improve the law within the limits imposed by his society’s prevailing beliefs. First, a judge can increase the effectiveness of current law in achieving its socially desirable consequences by making it more fixed, definite, and certain. . . . So, too, the positivist judge ought to adhere strenuously to the doctrine of *stare decisis*, as that makes the law more reliable, certain, and knowable, and hence more effective in achieving its socially beneficial consequences.

As Chief Justice Rehnquist stated in *Payne v. Tennessee*, 39 “*Stare decisis* is the preferred course because it promotes the evenhanded, predictable, and consistent development of legal principles, fosters reliance on judicial decisions, and contributes to the actual and perceived integrity of the judicial process. Adhering to precedent ‘is usually the wise policy, because in most matters it is more important that the applicable rule of law be settled than it be settled right.’” For this reason, Holmesian judges share the formalist view, discussed at § 9.2.2.2, that wrongly decided cases should not be overruled if they represent "settled law.”

In addition, it is a familiar notion in many branches of the law that where individuals have substantially relied to their detriment on some promise, or some represented state of affairs, other individuals may be estopped from changing or denying that state of affairs in order to protect the individual’s reliance interest. This can also be true of precedents. As Chief Justice Rehnquist

observed in *Payne v. Tennessee*, “Considerations in favor of *stare decisis* are at their acme in cases . . . where reliance interests are involved.” This issue of “substantial reliance” being an important consideration in deciding to follow a precedent was discussed at § 7.3.2 nn.116-26. As noted there, because Holmesian judges are more attuned to this functional inquiry into whether individuals have actually substantially relied than are judges from a more analytic tradition, such as formalist or natural law judges, Holmesian judges can be predicted to be more sensitive to the existence of actual substantial reliance before applying this restraint to overruling precedent.

Despite this Holmesian willingness to follow “settled law” or precedents upon which individuals have “substantially relied,” most Holmesian jurists will not go beyond the core holdings of these precedents to adopt the general reasoning of the precedents, as noted at § 7.3.2 n.127. As a positivist approach to law, Holmesians share with formalists a reluctance to let a judicial “reasoned elaboration” of the reasoning in prior precedents provide a “gloss” on meaning to the Constitution if the Holmesian concludes that the precedents’ general reasoning is flawed, based upon the Holmesian analysis of text, context, history, practice, and prudential considerations. As Holmesian Justice Brandies was cited at § 4.3.1 n.7, “[T]his Court has often overruled its earlier decisions. The Court bows to the lessons of experience and the force of better reasoning.”

Such a judicial “gloss” on meaning is embraced by judges adopting a normative perspective on the judicial task, as is true for natural law judges, as discussed at § 12.2.2.2. Holmesian jurists thus differ from the natural law approach to “reasoned elaboration of law.” For this reason, it is not surprising that Holmesian Chief Justice Rehnquist and Justice White, and formalist Justice Thomas, all joined formalist Justice Scalia’s dissent in *Planned Parenthood v. Casey*, where he stated, “*Roe* was plainly wrong – even on the Court’s methodology of ‘reasoned judgment,’ and even more so (of course) if the proper criteria of text and tradition are applied.”

§ 10.2.2.3  **Prudential Considerations**

As a functional approach, the Holmesian approach embraces using prudential considerations to ensure that decisions advance functionally the proper consequences in light of the Constitution’s text, context, history, practice, and precedent. Thus, of the four categories of prudential considerations listed at § 5.4.1, Holmesian judges will follow the prudential categories (1) and (2): (1) the contemporaneous sources of constitutional text, context, and history; and (2) the subsequent event sources of practice and precedent. Particularly because of the Holmesian posture of judicial restraint, the structural prudential factors listed in *Ashwander v. Tennessee Valley Authority*, discussed at § 17.1.3.2, are the particular province of Holmesian judges.

On the other hand, as a positivist theory of law, the Holmesian approach shares with the formalist approach a rejection of the propriety of normative background principles reasoning, as discussed at

---

§§ 2.3.2.2 & 3.2. Thus, prudential consideration category (3), which permits consideration of background principles of justice or social policy that the judge believes are embedded in the law, is out-of-bounds to a Holmesian judge. The Holmesian approach is even more adverse to the legitimacy of using category (4)’s non-interpretive prudential arguments of justice or sound social policy not embedded in the law to affect constitutional interpretation. Particularly for Holmesian judges, such non-interpretive review represents an usurpation by courts of their proper role in our democratic system. As Holmesian Justice Felix Frankfurter noted about statutory interpretation, a judge should not use a provision's words as “'empty vessels into which [the judge] can pour anything he will' -- his caprices, fixed notions, even statesmanlike beliefs in a particular policy.”

Justice Frankfurter’s dissent in West Virginia State Board of Education v. Barnette is even more direct on this point. As Frankfurter noted, “As a member of this Court I am not justified in writing my private notions of policy into the Constitution, no matter how deeply I may cherish them or how mischievous I may deem their disregard. . . . It can never be emphasized too much that one’s own opinion about the wisdom or evil of a law should be excluded altogether when one is doing one’s duty on the bench.” Chief Justice Rehnquist has made the same point. In an article focusing on the topic of an evolving Constitution, Chief Justice Rehnquist embraced Justice Holmes' notion of an evolving Constitution based upon sensitivity to legislative and executive practice, as stated in Missouri v. Holland, but rejected an evolving Constitution based upon judicial consideration of evolving social values used to strike down statutes of democratically elected representatives.

§ 10.3 Variations in the Holmesian Approach

§ 10.3.1 Summary of the Basic Holmesian Approach

As with the formalist approach, it is useful to sum up the basic points of agreement among Holmesian jurists before considering variations in the Holmesian approach. The basic sources of constitutional meaning were summarized in Table 5.1. A further elaboration of this Table appeared at Table 6.4.1, which summarized the basic approach of each of the four judicial decisionmaking styles to using these sources. Using these Tables as a backdrop, the following Table 10.3 summarizes the basic Holmesian approach with respect to each source of constitutional meaning.

Entries listed in boldface in Table 10.3 represent the sources most utilized by Holmesian jurists, that is, those sources given great weight by Holmesians. Entries listed in italics represent other sources Holmesian jurists will use, but these sources are typically given lesser weight. Entries underlined represent sources underplayed or of limited use by Holmesians, that is, sources given only some weight. Entries combined with a strike-through mark indicate sources not used by Holmesian jurists.

In Table 10.3, the listings of “literal or plain meaning of text” appears in italics, while the listing of “purpose or spirit of text” appears in boldface because of Holmesian functional greater reliance on purpose versus literal text. As Justice Holmes was cited at § 10.2.1.1, "[T]he general purpose is a more important aid to the meaning than any rule which grammar or formal logic may lay down." The listing of “general historical evidence” appears in boldface reflecting the Holmesian willingness always to consider such general historical evidence. Regarding historical intent, however, the listings for general historical intent appear only in italics because of the Holmesian predisposition to conclude that the framers and ratifiers had in mind some specific historical intent that it is the task of the judge to implement, not a general concept, as discussed at § 10.2.1.3. Thus, while embracing both specific and general historical evidence fully, Holmesian judges usually use this evidence in support of a search for specific historical intent. The listing for “legislative or executive practice” appears in boldface because of the strong Holmesian predisposition of deference to the other branches of government as part of Holmesian deference to the dominant forces in society, and belief in a living Constitution, at least to the extent of being deferential to later legislative or executive views on the constitutionality of various courses of governmental action.

The listing for “core holdings of precedent” appears in italics, rather than underlined as in Table 9.3 summarizing the formalist approach, because of the Holmesian greater willingness to follow precedents both which are “settled law” and precedents on which individuals have “substantially relied.” As discussed at § 4.3.2, and reflected in Table 4.3, Holmesian judges are somewhat more willing than formalist judges to follow the core holdings of precedents. The listings for the “text, context, and history” prudential considerations, as well as “practice and precedent” prudential considerations, appears in italics because of the receptiveness of the Holmesian approach, as a pragmatic, functional approach to law, to consider prudential considerations in categories (1) and  

Page 315
Entries underlined in this Table 10.3 represent sources underplayed or of limited use by Holmesian jurists. The underlining of “social practice” reflects the position embraced by Justice Holmes himself, as noted at § 10.2.2.1. Some extreme Holmesian jurists have taken the Stanford position that social practice should never be used. For these Holmesians, “social practice” should be listed with a strike-through mark.

Entries combined with a strike-through mark indicate sources never used by Holmesian jurists in theory or practice. These involve reasoned elaboration of law, and prudential arguments of background principles of justice or social policy, whether embedded in the law or not so embedded.

As summarized, the Holmesian approach is an intermediate approach between the formalist great reliance on plain meaning of text, and the natural law and instrumentalist willingness to consider not only arguments of purpose, structure, verbal maxims, and general historical evidence, which Holmesian judges will consider, but also general background principles of justice or social policy embedded in the law, which Holmesian judges will not consider. As an intermediate approach, there are thus few cases where Holmesian judges are alone in dissent. However, the Holmesian greater predisposition for deference to legislative and executive practice has meant that in a few cases Holmesian judges have been alone in dissent. Two prominent examples of this strong deference-to-government posture are Justice White’s solo dissent in INS v. Chadha, discussed at § 19.4.2.1 nn.81-82, which would have upheld a congressional one-house veto, and Justice Rehnquist’s solo dissent in Wengler v. Druggists Mutual Insurance Co., discussed at § 26.3.1.2 n.369, which would have continued to apply minimum rational review in cases of gender discrimination, rather than an intermediate level of review.

§ 10.3.2  Extreme versus Moderate Holmesians

Just as there are extreme and moderate formalists, there are also extreme and moderate Holmesians. An extreme Holmesian judge places tremendous reliance on the fundamental Holmesian principle of deference to government. Such a judge embraces fully Professor Thayer’s view on the limited role for judicial review, discussed at § 10.2.1.2 n.16. In contrast, a more moderate Holmesian, while adopting the principle of respect for legislative and executive practice, will be more willing to give the other sources of constitutional interpretation – text, context, history, precedent, and prudential considerations – their due. The split between Justices Frankfurter and Jackson in 1943 in West Virginia State Board of Education v. Barnette provides a good example of this difference.

The issue involved in Barnette was whether a local school board could require all teachers and pupils to salute and pledge allegiance to the Flag. In his extreme Holmesian deference-to-government dissent, Justice Frankfurter quoted extensively from Professor Thayer’s famous law

---

46 319 U.S. 624 (1943).

47 Id. at 647, 649, 669 (Frankfurter, J., dissenting) (citations omitted).
review article, noting Thayer’s statement, “Let [courts] consider how narrow is the function which the constitutions have conferred on them – the office merely of deciding litigated cases; how large, therefore, is the duty intrusted to others, and above all to the legislature. It is that body which is charged, primarily, with the duty of judging of the constitutionality of its work.” Justice Frankfurter cited a passage from Holmes, stating, “When Mr. Justice Holmes, speaking for this Court, wrote that ‘it must be remembered that legislatures are ultimate guardians of the liberties and welfare of the people in quite as great a degree as the courts,’ . . . he went to the very essence of our constitutional system and the democratic conception of our society.” Justice Frankfurter acknowledged that were “my purely personal attitude relevant, I should wholeheartedly associate myself with the general libertarian views in the Court’s opinion, . . . [but] it would require more daring than I possess to deny that reasonable legislators could have taken the action which is before us for review.”

In contrast, the Court’s majority opinion in Barnette, authored by Justice Jackson, for a 6-3 Court, took a more moderate Holmesian position, balancing the legislative action against the requirement, even under a Holmesian approach, that legislative acts that are clearly unconstitutional must be deemed so. As Jackson noted, “The very purpose of the Bill of Rights was to withdraw certain subjects from the vicissitudes of political controversy, to place them beyond the reach of majorities and officials and to establish them as legal principles to be applied by the courts. One’s right to life, liberty, and property, to free speech, a free press, freedom of worship and assembly, and other fundamental rights may not be submitted to vote; they depend on the outcome of no elections.”

A case from 1952, Beauharnais v. People, provides another example of this difference between Justices Frankfurter and Jackson. In this 5-4 case, Justice Frankfurter was in the majority, while Justice Jackson was in dissent. In the majority opinion for the Court, Justice Frankfurter upheld a state criminal libel statute which forbade, among other things, any person from exhibiting any lithograph which portrayed lack of virtue of a class of citizens. Making extensive reference to existing state practices regarding such statutes, Frankfurter concluded that “we would deny experience to say that the Illinois legislature was without reason in seeking ways to curb false or malicious defamation of racial and religious groups.” In contrast, Justice Jackson, in dissent, concluded that the law infringed on due process and the freedom of speech. Justice Jackson based his opinion on the approach of Justice Holmes and Justice Brandeis considering criminal libel statutes in cases such as Abrams v. United States, Schaefer v. United States, and Near v. Minnesota. Justice Jackson concluded that under these precedents the “Illinois statute, as applied in this case, seems to me to have dispensed with accepted safeguards for the accused.”

52 Id. at 299.
Different reactions to the issues presented in *Baker v. Carr* and *Reynolds v. Sims* also provide an example of the difference between an extreme and moderate Holmesian approach. The basic issue in these cases was whether the Court should declare that questions of malapportioned legislative districts were political questions for the legislative and executive branches to resolve, discussed at § 17.3.4.4, or whether the Court should mandate under the Equal Protection Clause a “one person/one vote” requirement in the reapportionment of legislative districts, discussed at § 26.5.3 n.520. An extreme deference-to-government position would hold that such an issue is a political question for legislative and executive consideration only. This view appeared in Justice Frankfurter’s dissent in *Baker v. Carr*, which was joined by Justice Harlan.

A more moderate deference-to-government approach, based on John Hart Ely’s “representation-reinforcing” model of judicial decisionmaking, discussed at § 10.2.1.2 n.18, would hold that malapportioned legislative districts represent a deficiency in the political process that courts need to correct, particularly since incumbents elected under the existing malapportioned scheme could not be realistically expected to correct the problem on their own. This view supports the votes of moderate Holmesians, like Justices Clark and Stewart, who voted with the majority in *Baker v. Carr* and *Reynolds v. Sims*. More generally, this view supports the approach toward the Equal Protection Clause and Due Process Clause in paragraph 4 of *United States v. Carolene Products Co.*, discussed at § 26.1.2.2 nn.68-80, which provides for special court scrutiny in cases where deficiencies may exist in the political processes, including for legislation which impacts against discrete and insular minority groups who may not be able to protect themselves adequately in the political process.

On this *Reynolds v. Sims* issue, it is important to note that, reflecting their Holmesian deference-to-government posture, Justices Clark and Stewart did not embrace Chief Justice Warren’s more instrumentalist opinion that adopted the “one person/one vote” standard. Justice Clark noted that the “Court goes much beyond the necessities of this case in laying down a new ‘equal population’ principle for state legislative apportionment.” Justice Clark would have preferred to decide the case on simple rational basis grounds, holding that the apportionment at issue in the case was an irrational “crazy quilt.” Justice Stewart, in a companion case, *Roman v. Sincock*, similarly voted to strike down a malapportioned districting on rational basis grounds. Indeed, in another companion case, *Lucas v. Forty-Fourth General Assembly of Colorado*, Justices Clark and Stewart dissented from applying the “one person/one vote” standard and concluded that the legislative districting in that case met the rational basis standard. This preference for rational basis scrutiny under the Equal Protection Clause is typical of a Holmesian deference-to-government approach, as discussed at § 26.1.2.2 nn.73-80. In his concurrence in *Reynolds*, Justice Stewart also emphasized that part of the majority’s opinion which concluded that “it was proper for the District Court, in framing a

56 377 U.S. 713, 744 (1964) (Stewart, J., joined by Clark, J., dissenting).
57 377 U.S. at 588-89 (Stewart, J., concurring).
remedy, to adhere as closely as practicable to the apportionments approved by the representatives of the people of Alabama, and to afford the State of Alabama full opportunity, consistent with the requirements of the Constitution, to devise its own system of legislative apportionment.” This sensitivity to the other branches of government is also typical of a Holmesian style of interpretation.

This analysis of *Baker v. Carr* and *Reynolds v. Sims* along the lines of extreme versus moderate Holmesians leaves the votes of Justices Harlan and White to explain. As a moderate Holmesian, one might have expected Justice Harlan to join with Justices Stewart and Clark. As an extreme Holmesian, one might have expected Justice White, once he joined the Court in 1962, to adopt Justice Frankfurter’s view in *Reynolds v. Sims*. But each voted in the opposite direction.

As discussed at § 10.4, Justice Harlan had an affinity for the natural law style of interpretation, particularly its great respect for precedent. As noted at § 17.3.4.3 n.552, pre-*Baker v. Carr* precedents strongly supported the Frankfurter view that reappointment was a political question. As has been noted, Justice Brennan’s majority opinion in the case “coolly shatter[ed] decades of precedent.”58 This, alone, can help explain Justice Harlan’s vote in *Baker v. Carr*. Further, as noted at § 10.2.1.2, conservative Holmesians tend to defer more to state governments than liberal Holmesians, who tend to emphasize more aspects of federal power. Justice Harlan’s dissent in *Baker v. Carr* emphasized this issue of states’ rights very heavily.59

On the other hand, by the time Justice White was on the Court, *Baker v. Carr* had already been decided and a clear majority of the Court was going to find malapportioned legislative districting to be unconstitutional. The real issue in *Reynolds v. Sims* was thus the question of the appropriate remedy. As discussed at § 10.3.3, when dealing with the power of federal courts to enforce rights against states, Justice White, as a liberal Holmesian judge with a predisposition to favor federal power, often joined liberal instrumentalist Justices in favor of broad federal court remedial power.

§ 10.3.3  **Conservative versus Liberal Holmesians**

With regard to the structural issues of federalism and separation of powers, the same conservative/liberal split that applies to formalist judges also applies to Holmesian judges. This difference is particularly important for Holmesian judges, since they have the strong predisposition for deference to the government in their decisions. The issue posed by these cases is which governmental entity to defer to most, state versus federal government, or executive branch versus legislative branch. In general, for the same reasons discussed at § 9.3.3, conservative Holmesians, like conservative formalists, are more likely to be appointed by Republican presidents, and are more likely to favor states’ rights and broad grants of executive power to the president. In contrast, liberal Holmesians, more likely to be appointed by Democratic presidents, are more likely to favor exercises of federal power and to restrain executive power in favor of legislative prerogatives.

59 369 U.S. at 330-34 (Harlan, J., joined by Frankfurter, J., dissenting).
This difference can be seen in the famous Steel Seizure case of *Youngstown Sheet & Steel Tubing Co. v. Sawyer*. In this case, the more centrist and liberal Holmesians, Justices Jackson and Frankfurter, held against the President’s exercise of power. In contrast, the more conservative Holmesians on the Court, Chief Justice Vinson, and Justices Reed and Minton, supported President Truman’s executive action to seize the steel mills. *Youngstown Sheet* is a good reminder that, particularly in the period before the 1960s, Democratic Presidents sometimes appointed conservative Justices to the Court, particularly Southern conservatives, as part of the existing Democratic coalition of the time. When that happened, those conservative Holmesian Justices did tend to vote as conservatives, different than the way most Democratic-appointed judges would vote today.

As discussed in Chapters 18-20, with respect to more recent Holmesian Justices on the Court, Chief Justice Rehnquist, as a conservative Holmesian, appointed by Republican President Nixon, often was on the side of protecting states’ rights and executive prerogatives. In contrast, Justice White, a liberal Holmesian, appointed by Democratic President Kennedy, was often on the side of protecting federal power, with special deference given to the prerogatives of Congress.

Justice White’s votes are a particularly good example of a liberal Holmesian judge. As a committed Holmesian, Justice White, like Chief Justice Rehnquist, dissented in *Roe v. Wade* on the grounds that abortion regulation is consistent with state legislative practice. Justice White, along with Justice Rehnquist, also refused to extend the right of privacy to cover homosexual sodomy in *Bowers v. Hardwick*. In each of these cases, Justice White deferred to the political processes to decide which rights to protect.

Where the question was not the existence of a constitutional right, however, but a matter of federal power to enforce a right that unquestionably exists, Justice White often joined with liberals on the Court in favor of broad federal power. Thus, in the school desegregation cases, Justice White often joined with other liberals to uphold broad federal judicial power to enforce *Brown v. Board of Education*, including joining in dissent Justices Douglas, Brennan, and Marshall in favor of interdistrict school remedies in *Milliken v. Bradley*. In a number of close cases involving the state action doctrine, such as *Reitman v. Mulkey*, *Flagg Bros., Inc. v. Brooks*, and *Lugar v. Edmondson Oil Co., Inc.* Justice White joined with liberals to conclude that state action existed, and thus federal judicial review was triggered. Justice White also dissented in *Banco Nacional de Cuba v.*

\[60\] 343 U.S. 579, 589 (1952) (Frankfurter, J., concurring); *id.* at 592 (Jackson, J., concurring); *id* at 667 (Vinson, C.J., joined by Reed & Minton, J.J., dissenting).

Sabbatino, declaring, “I am dismayed that the Court has, with one broad stroke, declared the ascertainment and application of international law beyond the competence of the court of the United States in a large and important class of cases.” Reflecting his Holmesian posture of deference, Justice White noted, “If my view had prevailed I would have stayed further resolution of the issues in this Court to afford the Department of State reasonable time to clarify its views in light of the opinion. In the absence of a specific objection [by the executive branch], I would have proceeded to determine the issue and resolve this litigation on its merits.” In a similar later case where the executive branch did express its views that the Court should not get involved, First National City Bank v. Banco Nacional de Cuba, Justice White joined Justice Rehnquist’s plurality opinion deferring to executive branch wishes in the case.

As a liberal Holmesian, Justice White was a strong supporter of the prerogatives of the federal government in cases involving the 10th and 11th Amendments. For example, with respect to the 10th Amendment, Justice White joined Justices Brennan, Marshall, and Stevens in dissent in National League of Cities v. Usery and in Gregory v. Ashcroft, and joined the majority opinion overruling Usery and upholding federal regulatory power in Garcia v. San Antonio Metropolitan Transit Authority. Justice White also dissented with Justices Blackmun and Stevens in New York v. United States, arguing that the federal government has the constitutional power to “commandeer” state legislative processes for federal aims. With respect to the 11th Amendment, Justice White joined Justices Brennan, Marshall, Blackmun, and Stevens in Pennsylvania v. Union Gas Co. to give Congress the power to abrogate a State’s 11th Amendment immunity when acting pursuant to the Commerce Clause. This case was overruled 5-4 in Seminole Tribe of Florida v. Florida, after Justices Brennan, White, Marshall, and Blackmun had all left the Court. In all of these 10th and 11th Amendment cases, conservative Holmesian Justice Rehnquist was on the other side.

66 Id. at 472.

68 426 U.S. 833, 856 (1976) (Brennan, J., joined by Marshall & White, JJ., dissenting); id. at 880 (Stevens, J., dissenting).

70 469 U.S. 528, 530 (1985) (Blackmun, J., for the Court).

71 505 U.S. 144, 188 (1992) (White, J., joined by Blackmun & Stevens, JJ., concurring in part and dissenting in part).

72 491 U.S. 1, 45, 55 (1989) (White, J., concurring in the judgment in part).

Justice White was also a strong supporter of congressional power under the 14th Amendment and the Commerce Clause. Justice White joined Justice Brennan’s majority opinion in *Katzenbach v. Morgan*,74 over the dissents of conservative Holmesians Justices Harlan and Stewart. Justice White also joined Justice Brennan and Marshall in their opinion granting Congress broad power under § 5 of the 14th Amendment in the fragmented case of *Oregon v. Mitchell*.75 A particularly prominent example of Justice White’s deference to Congress occurred in *Metro Broadcasting, Inc. v. FCC*.76 In that case, Justice White joined Justices Brennan, Marshall, Blackmun, and Stevens to hold that federal race-based affirmative action should be tested by intermediate scrutiny, despite Justice White’s view in *Richmond v. J.A. Croson Co.* that state and local race-based affirmative action triggered strict scrutiny. The majority opinion stated in *Metro Broadcasting*,77 “It is of overriding significance in these cases that the FCC’s minority ownership programs have been specifically approved – indeed mandated – by Congress.” As with *Pennsylvania v. Union Gas Co.*, *Metro Broadcasting* was overturned by a 5-4 vote, this time in *Adarand Constructors, Inc. v. Pena*,78 decided once again after Justices Brennan, White, Marshall, and Blackmun had all left the Court.

Justice White’s dissents in *INS v. Chadha* and *Bowsher v. Synar* are also quite instructive. In *Chadha*, eight members of the Court were convinced that the specific language in the Constitution requiring Congress to exercise legislative power only through the bicameralism and presentment clauses meant that a one-house veto of administrative agency action was unconstitutional. Based upon a strong predisposition to defer to Congress, Justice White struggled to find a way to uphold what he referred to as “a necessary check on the unavoidably expanding power of the agencies, both executive and independent, as they engage in exercising authority delegated by Congress.”79 As discussed at § 19.4.2.1 nn.81-82, Justice White was able to conclude that functionally bicameralism and presentment were met, even if literally they were not complied with in the case.

In *Bowsher*, the majority struck down the Gramm-Rudman-Hollings balanced budget Act based upon clear precedent preventing Congress from having removal power over an individual exercising executive functions. Justice White, in dissent, found a way to uphold “one of the most novel and far-reaching legislative responses to a national crisis since the New Deal,” stating the congressional removal power has “laid dormant” for many years, and thus that power does not pose “a genuine threat to the basic division between the lawmaking power and the power to execute the law.”80

74 384 U.S. 641, 643 (1966); *id.* at 659 (Harlan, J., joined by Stewart, J., dissenting).
77 497 U.S. 547, 563 (1990) (Brennan, J., for the Court) (intermediate scrutiny applied).
With respect to deference to executive power, however, Justice White was less willing to engage in the same kind of deferential review. This, too, is typical of the liberal Holmesian approach. Thus, in *Nixon v. Fitzgerald*, Justice White refused to give the President absolute immunity from suit for money damages for official acts as President. The majority, including conservative Holmesians Justices Rehnquist and Stewart, gave the president absolute immunity from such lawsuits.

§ 10.4 The Holmesian Approach, Combined with Affinity for Another Style

As previously noted, sometimes a judge may predominantly adopt one interpretation style, but have an affinity for some other decisionmaking style in some cases. For example, most of Chief Justice Rehnquist’s votes are in line with the position likely to be taken by a conservative, extreme Holmesian. In some cases, however, Chief Justice Rehnquist has indicated an affinity with a formalist approach. For example, on the issue of the use of legislative history in statutory interpretation cases, Chief Justice Rehnquist has indicated, more than other Holmesian jurists in the 20th century, greater sympathy toward adopting the formalist Golden Rule or the Plain Meaning Rule to ban the use of legislative history unless the plain meaning of the statute is ambiguous or absurd. Thus, in a number of cases in the 1970s and 1980s, Justice Rehnquist raised questions about the use of legislative history where the statute appeared plain on its face, thus supporting formalists like Chief Justice Burger and Justices Scalia and Thomas in such questioning. In later cases, Chief Justice Rehnquist abandoned any such formalist limitation on use of legislative history.

As discussed at § 10.3.3, most of Justice White’s votes with extreme instrumentalists like Justice Douglas, Brennan, Marshall, or moderate instrumentalists, like Justices Blackmun and Stevens, can be explained as consistent with the approach of a liberal Holmesian. However, there are a few cases that cannot be so explained. They suggest that Justice White had a slight affinity in some cases for the instrumentalist approach. For example, as noted at § 4.4.3 n.107, Justice White's background and beliefs regarding his strong commitment to civil rights, may have affected his decision to join Justice Brennan's more instrumentalist, pro-civil rights majority opinion in *United Steelworkers v.*

---

81 547 U.S. 731, 751-58 (1982) (Powell, J., for the Court); id. at 764 (White, J., joined by Brennan, Marshall & Blackmun, JJ., dissenting).

82 *See, e.g.*, United Steelworkers v. Weber, 433 U.S. 193, 221 (1979) (Rehnquist, J., dissenting) (“Accordingly, without even a break in syntax, the Court rejects ‘a literal construction of [the statute]’ in favor of newly discovered ‘legislative history.’”); Tennessee Valley Auth. v. Hill, 437 U.S. 153, 184 n.29 (1978) (Burger, C.J., opinion) (“When confronted with a statute which is plain and unambiguous on its face, we ordinarily do not look to legislative history as a guide to its meaning.”); Nicholas S. Zeppos, *Justice Scalia’s Textualism: The “New” New Legal Process*, 12 Cardozo L. Rev. 1597, 1599 (1991). This issue is addressed at §§ 6.2.3.1 nn.72-75.

84 *See Kate Stith, Byron R. White, Last of the New Deal Liberals*, 103 Yale L.J. 19, 26-27 (1993).
Weber, discussed at § 3.3 nn.65-68, rather than following his more typical Holmesian approach and join Justice Rehnquist’s more judicially restrained Holmesian dissent. Reflecting his general predisposition towards Holmesian interpretation, Justice White later rethought his vote in Weber.

A Holmesian jurist could also have an affinity for a natural law style of interpretation. As discussed at § 27.3.3.2, Justice Harlan’s approach in Poe v. Ullman and Griswold v. Connecticut blended aspects of a Holmesian focus on the “novelty of the legislative enactment” with a natural law “reasoned elaboration of the law.” As Justice Harlan stated in Poe, “[The] full scope of liberty guaranteed by the Due Process Clause cannot be found in or limited by the precise terms of the specific guarantees elsewhere provided in the Constitution. This ‘liberty’ is not a series of isolated points pricked out in terms of [such specific guarantees as speech and religion]. It is a rational continuum which, broadly speaking, includes a freedom from all substantial arbitrary impositions and purposeless restraints.” The natural law concern with “articulate consistency,” discussed at § 3.4 nn.93-94, is also reflected in Justice Harlan’s concern that his decisions reflect reasoning based upon “neutral principles.” Indeed, Professor Kent Greenawalt concluded in 1978 that Justice Harlan’s efforts to perform his responsibilities in accordance with a neutral principles model of adjudication were unparalleled among modern Supreme Court Justices. This notion of background principles of liberty, and respect for articulate consistency, was also prevalent in the views of Justice Jackson, particularly in his role as Chief Prosecutor of Nazi war criminals at Nuremberg.

Justice Harlan also had a great respect for precedent, typical of the natural law decisionmaking style. With regard to this respect for precedent, it has been noted that Justices O’Connor, Kennedy, and Souter “have taken as their model the second Justice Harlan. . . . ‘Respect for the Court,’ Harlan once wrote to another Justice, ‘is not something that can be achieved by fiat.’ . . . The true conservative, Harlan believed, adhered to stare decisis, normally following even precedents against which he had originally voted.” Justice Stewart also had this great respect for precedent. For example, as discussed at § 27.3.3.3 n.226, though dissenting in Griswold, Justice Stewart adopted the general reasoning of Griswold to join the majority opinion in Roe v. Wade. In contrast, Holmesians without this affinity for natural law, like Chief Justice Rehnquist and Justice White, dissented in Roe on grounds that abortion regulation is consistent with state legislative practice, and were unwilling to support Roe based on the general reasoning of the Court’s opinion in Griswold.

85 443 U.S. 193, 205-07 (1979); id. at 219 (Rehnquist, J., dissenting).

CHAPTER 11: INSTRUMENTALIST CONSTITUTIONAL INTERPRETATION

§ 11.1 Introduction to Instrumentalist Decisionmaking

As discussed at § 3.3, under an instrumentalist approach the judge must test the formulation of each rule by its purpose or policy. As a functional approach, where the reason for the rule stops, there stops the rule. As a normative approach, the judge should take into account principles of justice or social policy where leeways exist in the law. These leeways can be created because no law exactly covers the particular situation, ambiguities exist in a particular law which does apply, or two or more conflicting rules each arguably apply. The instrumentalist approach to law generally is perhaps best summed up in the classic works of Justice Benjamin Cardozo and Professor Karl Llewellyn.¹

As discussed at §§ 5.4.1 & 5.4.2, an instrumentalist judge could follow an interpretive approach to deciding constitutional cases and take into account only those background principles of justice or social policy embedded in the Constitution or existing legislative, executive, or social practice, or judicial precedents. However, as noted at §§ 5.4.3 & 6.4.1, as an historical matter the instrumentalist approach has always been accused of a willingness to embrace non-interpretive review. As Professor Michael Perry has said, "The decisions in virtually all modern constitutional cases of consequence . . . cannot plausibly be explained except in terms of noninterpretive review, because in virtually no such case can it plausibly be maintained that the Framers constitutionalized the determinative value judgment."² The basic elements of the instrumentalist approach are discussed at § 11.2.

As discussed at § 11.3, in the 20th century there have been on the Court extreme, liberal instrumentalists, such as Justices Murphy and Rutledge during the 1940s; and Chief Justice Warren, and Justices Douglas, Brennan, Goldberg, Fortas, and Marshall, during the Warren Court in the 1960s. There have also been moderate, liberal instrumentalists, such as Justice Byrnes during the 1940s; and Justices Blackmun, Stevens, Ginsburg, and Breyer during the Burger and Rehnquist Courts. There have also been moderate, centrist instrumentalists, such as Chief Justice Stone and Justice Cardozo during the 1930s. Some conservative instrumentalists, such as Judge Richard Posner, have served on the Courts of Appeals. Among the commentators, a number of variations of instrumentalism can be found, including those espousing “non-critical” approaches, such as pragmatism, utilitarianism, or Kantian ideals, and those espousing “critical” approaches, such as Critical Legal Studies, feminist theory, or critical race theory.

As exists with respect to each style of interpretation, a judge who predominately follows one style of interpretation may have an affinity for another style. Thus, as discussed at § 11.4, Justice

Blackmun occasionally demonstrated an affinity for natural law interpretation, as do Justice Ginsburg and Justice Breyer today. Justice Breyer also occasionally has demonstrated an affinity for the Holmesian decisionmaking style. Legal philosopher H.L.A. Hart, while typically advocating an instrumentalist approach, sometimes appeared to support a formalist mode of interpretation.

§ 11.2  Defining the Instrumentalist Style of Constitutional Interpretation

§ 11.2.1  Treatment of Contemporaneous Sources of Interpretation

§ 11.2.1.1  Treatment of Text

The instrumentalist approach typically adopts an objective theory of interpretation, rather than a subjective approach. This reflects that instrumentalism is a 20th-century style of interpretation, and the predominance in the 20th century of objective theories of interpretation, as discussed at § 6.2.1.1 nn.18-22. As Justice Brennan observed about the subjective approach, “Indeed, it is far from clear whose intention is relevant – that of the drafters, the congressional disputants, or the ratifiers in the states – or even whether the idea of an original intention is a coherent way of thinking about a jointly drafted document drawing its authority from a general assent of the states.”

Justice Brennan also noted the practical difficulty of determining subjective intent, stating, “Apart from the problematic nature of the sources, our distance of two centuries cannot but work as a prism refracting all we perceive. . . . It is arrogant to pretend that from our vantage we can gauge accurately the intent of the Framers on application of principle to specific, contemporary questions.”

Despite this rejection of subjective interpretation, the instrumentalist approach is tempered by a willingness to consider all elements of context and history, including legislative history, and subsequent practice and precedent. As Justice Brennan stated, “Current Justices read the Constitution in the only way that we can: as twentieth-century Americans. We look to history of the time of framing and to the intervening history of interpretation.”

Thus, similar to the Holmesian approach, the typical instrumentalist approach to interpretation follows more closely the practical objective approach of Landis/Breyer, discussed at § 6.2.1.1, rather than the pure objective approach of Radin/Scalia. As Justice Brennan remarked, “Thus, if I may borrow the words of an esteemed predecessor, Justice Robert Jackson, the burden of judicial interpretation is to translate ‘the majestic generalities of the Bill of Rights, conceived as part of the pattern of liberal government in the eighteenth century, into concrete restraints on officials dealing with the problems of the twentieth century . . . .’”

As discussed at § 10.3.2, Justice Jackson was a moderate Holmesian on the Court.

4  Id.

5  Id. at 438.

6  Id. at 437, quoting West Virginia State Bd. of Educ. v. Barnette, 319 U.S. 624, 639 (1943) (Jackson, J., for the Court).
With regard to literal versus purposive interpretation of texts, the instrumentalist approach states that the judge must test the formulation and application of each rule by its purpose. As stated by Professor Karl Llewellyn in *Jurisprudence: Realism in Theory and Practice*, and Professor Grant Gilmore in *The Ages of American Law*, where the reason for the rule stops, there stops the rule. Rules are not tested merely by literalness or logical symmetry; rather, rules must be interpreted functionally in light of social ends to which they are the means. Placing greater weight on the purpose of text, rather than literal meaning, Justice Brennan cautioned:

Interpretation must account for the transformative purpose of the text. Our Constitution was not intended to preserve a preexisting society but to make a new one, to put in place new principles that the prior political community had not sufficiently recognized. Thus, for example, when we interpret the Civil War amendments – abolishing slavery, guaranteeing blacks equality under law, and guaranteeing blacks the right to vote – we must remember that those who put them in place had no desire to enshrine the status quo. Their goal was to make over their world, to eliminate all vestige of the slave caste. . . . For the Constitution is . . . a bold commitment by a people to the ideal of libertarian dignity protected through law. . . . As augmented by the Bill of Rights and the Civil War amendments, this text is a sparkling vision of the supremacy of the human dignity of every individual."

Given this similarity in the instrumentalist and Holmesian functional emphasis on purpose, rather than literal text, some authors have used the phrase “pragmatic instrumentalism” to include the functional pragmatism of Holmes and the instrumental pragmatism of modern-day instrumentalism, when distinguishing these two approaches from formalist reasoning. However, there are clear differences between instrumentalist and Holmesian interpretation. The differences among Holmesian Justices Frankfurter, White, and Rehnquist and instrumentalist Justices Douglas, Brennan, and Marshall underscore this fact.

The main difference between these two approaches is the instrumentalist’s lack of strong Holmesian deference to legislative and executive practice, and the instrumentalist willingness to engage in prudential consideration of background principles of justice and social policy so as to keep the Constitution, in Holmesian Justice Harlan’s prejorative phrase in his concurrence in *Griswold v. Connecticut*, in supposed “tune with the times.” With regard to legislative and executive practice, Justice Brennan has stated:

---

10 381 U.S. at 499, 500-01, discussed § 9.4 n.92.
Faith in democracy is one thing, blind faith quite another. Those who drafted our Constitution understood the difference. One cannot read the text without admitting that it embodies substantive value choices; it places certain values beyond the power of any legislature. Obvious are the separation of powers; the privilege of the writ of habeas corpus; prohibition of bills of attainder and ex post facto laws; prohibition of cruel and unusual punishments; the requirement of just compensation for official taking of property; the prohibition of laws tending to establish religion or enjoining the free exercise of religion; and, since the Civil War, the banishment of slavery and official race discrimination. . . . To remain faithful to the content of the Constitution, therefore, an approach to interpreting the text must account for the existence of these substantive value choices . . . .11

Concerning keeping the Constitution in “tune with the times,” Justice Brennan has remarked, “[T]he ultimate question must be: What do the words of the text mean in our time? For the genius of the Constitution rests not in any static meaning it might have had in a world that is dead and gone, but in the adaptability of its great principles to cope with current problems and current needs. What the constitutional fundamentals meant to the wisdom of other times cannot be the measure to the vision of our time.”12

§ 11.2.1.2 Treatment of Context

The instrumentalist emphasis on functional interpretation means that, like a Holmesian judge, an instrumentalist judge will be sensitive to arguments of context, in addition to arguments of text and purpose. This is so because arguments of context can help a judge place into context the social ends to which a provision is the means. As Justice Frankfurter stated concerning moderate instrumentalist Justice Cardozo’s approach to statutory interpretation, “Cardozo phrased this familiar phenomenon by stating that ‘the meaning of a statute is to be looked for, not in any single section, but in all the parts together and in their relation to the end in view.’ And to quote Cardozo once more on this phase of our problem: ‘There is a need to keep in view also the structure of the statute, and the relation, physical and logical, between its several parts.’ The generating consideration is that legislation is more than composition. It is an active instrument of government which, for purposes of interpretation, means that laws have ends to be achieved.”13

This willingness extends not only to the specific contextual interpretative sources of verbal maxims and related provisions, but also to general contextual interpretation. For example, instrumentalists are quite willing to embrace policy maxims, particularly if those maxims advance a principle of justice or social policy in which the judge believes. For liberal instrumentalists, who tend to have a preference to protect the unempowered in society, this occurs more often for policy maxims such as to construe penal provisions strictly and remedial provisions broadly; presume reasonableness of

11 Brennan, supra note 3, at 437-38.
12 Id. at 438.
the drafters' action; permit no one to profit from his own wrong; and ambiguities in treaties and statutes dealing with Native Americans are to be resolved in favor of Native Americans. Policy maxims not as related to protecting the unempowered are not as likely to be as readily embraced. Thus, liberal instrumentalist judges are not as likely as other judges to rely on maxims such as waivers of sovereign immunity are to be narrowly construed, a clear statement is needed for a federal statute to eliminate state sovereign immunity, a clear expression is needed for a provision to have retroactive application, or statutes in derogation of the common law are to be narrowly construed.

With regard to elements of constitutional structure, the instrumentalist functional concern leads instrumentalisists, like Holmesians, to adopt a sharing of powers approach to issues of separation of powers, and to be sensitive to the functional needs of governmental power when considering issues of state and federal power. Regarding separation of powers issues, Justice Blackmun wrote in *Mistretta v. United States*, 14 “In adopting [a] flexible understanding of separation of powers, we simply have recognized Madison’s teaching that the greatest security against tyranny – the accumulation of excessive authority in a single branch – lies not in hermetic division between the Branches, but in a carefully crafted system of checked and balanced power within each Branch.”

Regarding federalism issues, Justice Blackmun wrote in *Garcia v. San Antonio Metropolitan Transit Authority*, 15 “The essence of our federal system is that within the realm of authority left open to them under the Constitution, the States must be equally free to engage in any activity that their citizens choose for the common weal, no matter how unorthodox or unnecessary anyone else – including the judiciary – deems state involvement to be. Any rule of state immunity that looks to the ‘traditional,’ ‘integral,’ or ‘necessary’ nature of governmental functions inevitably invites an unelected federal judiciary to make decisions about which state policies it favors and which ones it dislikes.” Justice Blackmun continued in *Garcia*, 16 “[T]he principal means chosen by the framers to ensure the role of the States in the federal system lies in the structure of the Federal Government itself. . . . James Madison explained that the Federal Government ‘will partake sufficiently of the spirit [of the States], to be disinclined to invade the rights of the individual States, or the prerogatives of their governments.’ The Federalist No. 46. . . . Any substantive restraint on the exercise of Commerce Clause powers must find its justification in the procedural nature of this basic limitation, and it must be tailored to compensate for possible failings in the national political process rather than to dictate a [judicially mandated] ‘sacred province of state autonomy.’”

This functional concern with the needs of governmental power also animates the instrumentalist view concerning the proper role of the courts in our democratic system. However, unlike a Holmesian approach, the instrumentalist approach does not adopt a deferential posture of judicial restraint. Instead, instrumentalist judges tend to see the judiciary more as a co-equal third branch in a "tripartite" system of government, and thus strongly reject Professor Thayer's rule of striking

down statutes only if their unconstitutionality is “so clear that it is not open to rational question.”17 Under the instrumentalist view, judges, as well as legislators, have a responsibility to advance pragmatically sound social policies, at least where leeways exist in current, positive law. As Justice Brennan observed, "The view that all matters of substantive policy should be resolved through the majoritarian process has appeal under some circumstances, but I think it ultimately will not do. . . . It is the very purpose of our Constitution . . . to declare certain values transcendent, beyond the reach of temporary political majorities. . . . To remain faithful to the content of the Constitution, therefore, an approach to interpreting the text must account for the existence of these substantive value choices and must accept the ambiguity inherent in the effort to apply them to modern circumstances."18

In embracing this interpretive task, Justice Brennan remarked, "[H]undreds of thousands of Americans live entire lives without any real prospect of the dignity and autonomy that ownership of real property could confer. Protection of the human dignity of such citizens requires a much modified view of the proper relationship of individual and state. . . . It has been well said that there is no better test of a society than how it treats those accused of transgressing against it. . . . The constitutional vision of human dignity [also] respects the rights of each individual to form and express political judgments, however far they may deviate from the mainstream and however unsettling they might be to the powerful or the elite."19 Justice Thurgood Marshall similarly argued for the need to view the Constitution with a special focus on "the Bill of Rights and the other amendments protecting individual freedom and human rights."20

§ 11.2.1.3 Treatment of History

With regard to historical context, the instrumentalist's functional concern with text, purpose, and context means that, like a Holmesian, an instrumentalist will engage in broad-based historical investigation to help determine a provision's overall purpose and context. This "broad-based" historical inquiry in constitutional interpretation mirrors the instrumentalist approach to statutory interpretation, discussed at § 3.3 nn.63-75. In the constitutional context, this includes resort to the history surrounding adoption of constitutional provisions, including Notes of the Constitutional Convention for the original Constitution, and legislative history of constitutional amendments.

Like Holmesian judges, instrumentalist judges are willing to adopt a view of history which suggests that the framers and ratifiers intended a particular provision to reflect a general concept, if history suggests such a result. Thus, rejecting the formalist emphasis on specific historical intent, discussed

18  Brennan, supra note 3, at 435-36.

at § 9.2.1.3, Justice Brennan remarked, "A position that upholds constitutional claims only if they were within the specific contemplation of the Framers in effect establishes a presumption of resolving textual ambiguities against the claim of constitutional right. It is far from clear what justifies such presumption."21 Indeed, as Justice Brennan noted about specific historical intent, "Typically, all that can be gleaning is that the Framers themselves did not agree about the application or meaning of particular constitutional provisions and hid their differences in cloaks of generality."22

In terms of general historical background, Justice Brennan noted, “As augmented by the Bill of Rights and the Civil War amendments, this text is a sparkling vision of the supremacy of the human dignity of every individual. . . . It is a vision that has guided us as a people throughout our history.”23

§ 11.2.2 Treatment of Subsequent Developments

§ 11.2.2.1 Legislative, Executive & Social Practice

Like Holmesian judges, instrumentalist judges will permit later legislative and executive practice to provide a gloss on meaning. As Justice Brennan stated, “The Framers discerned fundamental principles through struggles against particular malefactions of the Crown; the struggle shapes the particular contours of the articulated principles. But our acceptance of the fundamental principles has not and should not bind us to those precise, at times anachronistic, contours. Successive generations of Americans have continued to respect these fundamental choices and adopt them as their own guide to evaluate quite different historical practices. . . . For the political and legal ideals that form the foundation of much that is best in American institutions – ideals jealously preserved and guarded throughout our history – still form the vital force in creative political thought and activity within the nation today.”24

This will be particularly true for instrumentalist judges if such practice is consistent with the judge's views of non-interpretive considerations. Where there is a conflict, an extreme or radical instrumentalist judge may follow his or her own views, rather than the views derived from consideration of practice. For example, Justice Brennan was unwilling to change his view regarding the unconstitutionality of the death penalty despite clear legislative, executive, and social practice supporting use of the death penalty in some circumstances.25

Because of their willingness to consider all sources of constitutional interpretation, instrumentalist judges are the most willing to use social practice, as well as legislative and executive practice, to aid in determining traditions under our Constitution. It is no surprise that the most vigorous Court

23 Id. at 439.

24 Id. at 437, 445.

25 Id. at 444.
defense of using such social practices has come in opinions written by instrumentalist Justices, such as Justice Brennan’s dissent in *Stanford v. Kentucky*, and Justice Stevens’ majority opinion in *Atkins v. Virginia.*" As noted in Justice Brennan’s dissent in *Stanford*, "Where organizations with expertise in a relevant area have given careful consideration to the question . . . , there is no reason why that judgment should not be entitled to attention as an indicator of contemporary standards,” and these standards might even involve legislative enactments or views of social organizations “in other countries,” as part of an evolving consensus among nations.

Commentators have also supported such use of a comparative perspective regarding world views on constitutional issues. This can involve not only views of other countries directly relevant to choices made by the framers and ratifiers, that is, “genealogical comparativism,” as defined at § 5.2.3.2 n.67, but also can involve “ahistorical comparativism,” that is, the view of other countries merely for their value in determining sound social policy. Because Holmesian and formalist jurists reject such use of social policy calculations, they reject use of “ahistorical comparativism,” in favor of looking to comparative perspectives only to the extent they reflect “genealogical comparativism.”

These views on history and subsequent practice are consistent with the instrumentalist view that the Constitution is an evolving document that must be interpreted in the context of an evolving society. As Justice Brennan has written, "Those who would restrict the claims of right to the values of 1789 specifically articulated in the Constitution turn a blind eye to social progress and eschew adaption of overarching principles to changes of social circumstance. . . . For the genius of the Constitution rests not in any static meaning it might have had in a world that is dead and gone, but in the

Alford, *In Search of a Theory for Constitutional Comparativism*, 52 UCLA L. Rev. 639, 641-42 (2005) (“original intent,” that is formalist, and deference to “majoritarian” values, that is Holmesian, approaches have little use for comparative constitutionalism, while “natural law” and “pragmatic,” that is, instrumentalist, approaches, have greater use for it.).

Page 332
adaptability of its great principles to cope with current problems and current needs.\textsuperscript{30}

\textbf{§ 11.2.2.2 Judicial Precedents}

Because instrumentalist jurists embrace the notion of an evolving constitution to cope with current problems and needs, they do not want to be straight-jacketed by a reasoned elaboration of precedents if those precedents are against the instrumentalist's view of text, context, history, practice, and prudential considerations. Thus, instrumentalist judges have been quite willing to overrule precedents, and create new doctrine, if they think that the old doctrine was wrongly decided, or is wrong for society today. For example, not only did \textit{Brown v. Board of Education} usher in a new era of equal protection doctrine in 1954, but as Justice Brennan noted in a quote cited at § 7.3.2 n.129, the 25-year history between 1961 and 1986 marked great changes in a number of constitutional law doctrines.

Such changes particularly occurred between 1963 and 1969 when the Warren Court acquired a majority of 5 Justices willing to recognize many new constitutional rights by providing additional constitutional protections in numerous areas of the law. As noted at § 7.3.2 n.128, these Justices were instrumentalists Chief Justice Warren, along with Justices Douglas, Brennan, and Goldberg, who replaced Holmesian Justice Frankfurter in October, 1962, joined in many cases by Justice Black, who as a liberal formalist shared the liberal outlook of the instrumentalists on the Court. Liberal instrumentalist Justice Fortas replaced Justice Goldberg in 1965. In 1967, with the confirmation of Justice Thurgood Marshall, 5 liberal instrumentalists became seated on the Court, in addition to the liberal formalist Justice Black. This perspective continued to have considerable influence during the years of the Burger Court, 1969-86, although it was tempered because only four liberal instrumentalists remained on the Court during those years: Justices Brennan, Marshall, Blackmun, and Douglas or, after 1975, Justice Stevens, who replaced Justice Douglas.

Of course, as noted at § 7.3.2 nn.131-33, where the proper social policies would be advanced by following instrumentalist-era precedents, an instrumentalist judge may be as willing as any other judge to emphasize the importance of precedents, as revealed by Justice Thurgood Marshall's dissent in \textit{Payne v. Tennessee},\textsuperscript{31} where he stated that “this Court owes more to its constitutional precedents in general and to \textit{Booth} and \textit{Gathers} in particular.” The true test of how strongly a judge adheres to precedent, however, is not how much a judge counsels following a precedent with which the judge agrees, but whether the judge is willing to follow a precedent with which the judge disagrees. Even in \textit{Payne} itself, the instrumentalist judges did not make a fetish over the need to follow precedent based on reliance.\textsuperscript{32} Thus, as noted at §§ 4.3.2 & 7.3.2, and reflected in Table 4.3, instrumentalist judges are the least likely of the four decisionmaking styles to follow precedent based on “settled law,” “substantial reliance,” or any “additional reason” that could be named.

\textsuperscript{30} Brennan, \textit{supra} note 3, at 438.

\textsuperscript{32} \textit{Id.} at 850-53 (criticizing the \textit{Payne} reliance formulation).
§ 11.2.2.3  Prudential Considerations

The instrumentalist approach to deciding cases differs from the three other decisionmaking styles most markedly in its willingness to resolve cases where leeways exist by embracing prudential consideration of background principles of justice or social policy embedded in the law. For instrumentalist judges, the act of interpreting the Constitution, a statute, or a common-law rule will often reveal leeways in the law whose resolution by them calls for judicial consideration of background social policy, in addition to prudential considerations directly derivable from text, context, history, practice, and precedent. These leeways can exist because no law exactly covers the particular situation, ambiguities exist in a particular law which clearly does apply, or two or more conflicting rules each arguably apply.

As discussed at § 6.4.1 nn.128-30, it has been argued that some instrumentalist judges have also resorted to the more “radical” prudential consideration of whether the decision would advance a principle of justice or social policy which is not so embedded in existing legal doctrine. Of course, instrumentalist judges typically state that they do not engage in such radical non-interpretive review. For example, Justice Douglas stated in *Griswold v. Connecticut*, "We do not sit as a super-legislature to determine the wisdom, need, and propriety of laws that touch economic problems, business affairs, or social conditions." Similarly, Justice Brennan has stated, “Justice are not platonic guardians appointed to wield authority according to their personal moral predilections. Precisely because coercive force must attend any judicial decision to countermand the will of a contemporary majority, the Justices must render constitutional interpretations that are received as legitimate.” At her confirmation hearing, Justice Ginsburg observed, “My approach [towards judging] is rooted in the place of the judiciary . . . in our democratic society. The Constitution’s preamble speaks first of ‘we the people’ and then of their elected representatives. The judiciary is third in line. . . . [O]ne of the most sacred duties of a judge is not to read her convictions into the Constitution.”

However, as Professor Michael Perry noted in 1981, "[That] is presently beside the point. What matters is that many, indeed most . . modern constitutional cases of consequence . . cannot be plausibly explained except in terms of noninterpretive review." As noted at § 5.4.3 n.130, this non-interpretive review can involve judges embracing values that the judge determines should be part of the Constitution because they reflect a supposed community consensus, or they reflect values the judge thinks the community eventually will hold, or they reflect the judge's own values. In engaging in non-interpretive review, most instrumentalist judges have appealed to both arguments of principle and arguments of social policy. As Professor John Hart Ely observed in 1978, “The Court's current constitutional jurisprudence . . involves the Court in the merits of the policy or ethical judgment

---

33 381 U.S. 479, 482 (1965) (Douglas, J., for the Court).

36 Perry, *supra* note 2, at 265.
sought to be overturned, measuring those merits against some set of 'fundamental' value judgments.\(^{37}\)

Even with respect to interpretive use of social policy considerations, the question arises in the context of constitutional adjudication concerning the legitimacy of using background social policy arguments embedded in the law to render unconstitutional governmental acts of the legislative or executive branches. As phrased by Professor Ely, “It simply makes no sense to employ the value judgments of the majority as the vehicle for protecting minorities from the value judgments of the majority.”\(^{38}\) On the other hand, as Professor Harry Wellington noted, “[Ely’s] criticism, however, overlooks the familiar fact that communities, like individuals, may well violate principles to which they usually adhere. Such inconsistency is most likely in the legislative process, when self-interest is least neutralized by considerations of conscience or moral obligation.”\(^{39}\) Further, the impact of special interest lobbying on the legislative process, and the various checks and balances in the legislative process that make more difficult the passage of legislation, mean that what emerges, or does not emerge, from the legislative process is not a perfect barometer of background social policy. In addition, when faced with an ambiguous provision, it can be argued that the litigants deserve the Court’s best judgment on meaning, not deference to later legislative or executive action.

Because the instrumentalist approach is the most willing to use social policy calculations in its decisionmaking methodology, it is the approach most criticized on grounds of “judicial activism.” This criticism is typically based on accusing instrumentalist judges of five kinds of activism: “judicial legislation” leading to “result-oriented judging” and the “invalidation of the arguably constitutional actions of other branches” based on “departures from accepted interpretive methodology” and, particularly for the Warren Court decisions between 1963-69, “failure to adhere to precedent.”\(^{40}\)

§ 11.3 Variations in the Instrumentalist Approach

§ 11.3.1 Summary of the Basic Instrumentalist Approach

As with the other approaches, before considering variations in the instrumentalist approach it is useful to sum up the basic points of agreement among instrumentalist jurists. The basic sources of constitutional meaning were summarized in a Table appearing at § 5.1. A further elaboration of this Table appeared at Table 6.4.1. Using these Tables as a backdrop, the following Table 11.3 summarizes the basic instrumentalist approach with respect to each source of constitutional meaning.

---

Entries listed in boldface in Table 11.3 represent the sources most utilized by instrumentalist jurists, that is, those sources given great weight by instrumentalists. Entries listed in italics represent other sources instrumentalist jurists will use, but these sources are typically given lesser weight. Entries underlined represent sources underplayed or of limited use by instrumentalist jurists, that is, sources given only some weight. There are no sources not used, and thus listed with a strike-through mark.

The listing of “literal or plain meaning of text” appears only in italics in Table 11.3, as it was under the Holmesian approach, because of the functional Holmesian and instrumentalist greater reliance on purpose. Indeed, instrumentalist judges may be willing to let an argument of purpose override clear literal text, based in part on the “transformative purpose of the text,” as noted at § 11.2.1.1 n.8. The remaining contemporaneous sources are listed in boldface because of the instrumentalist willingness to rely fully upon general kinds of reasoning, including general historical intent, as well as specific interpretive tasks. As Justice Brennan observed at § 11.2.1.3, footnote 22, "Typically, all that can be gleaned is that the Framers themselves did not agree about the application or meaning of particular constitutional provisions and hid their differences in cloaks of generality.”

The listings for prudential considerations categories (1c) and (3) appear in boldface because of the instrumentalist predisposition for prudential considerations reflective of purpose and policy to determine constitutional meaning where leeways exist in the law, as instrumentalist jurists often believe they do. For moderate instrumentalists, the listing for category (3) of “background principles of justice or social policy” should be in italics. This issue is discussed at § 11.3.2. The prudential categories (1a) & (1b) are listed in italics because those judicial restraint considerations are not relied upon as much by instrumentalist judges, who tend to prefer to reach the merits of cases to do justice.
The listings for “legislative and executive practice” and “social practice,” along with prudential use of “practice,” appear in italics, reflecting significant use by instrumentalist jurists, though not as much as arguments of purpose and policy. The listings for “core holdings of precedent” and “reasoned elaboration of law,” along with prudential use of “precedent,” appear underlined, because of the instrumentalist predisposition to underplay the importance of precedent, discussed at § 11.2.2.2.

There are no entries combined with a strike-through mark to indicate sources never used by instrumentalist jurists. As a theoretical matter, the non-radical instrumentalist position is to reject use of background principles “not so embedded” in the law, as discussed at § 11.2.2.3. For these jurists, the phrase “not so embedded” should be accompanied by a strike-through mark. However, that phrase is underlined in Table 11.3 because some instrumentalist jurists in practice sometimes seem to resort to background principles or policies not embedded in the law to resolve leeways, such as Justice Brennan’s views regarding the death penalty, discussed at § 11.2.2.1 n.25.

As the only judicial decisionmaking style willing in theory to use background social policies embedded in the law to resolve leeways in the law, the instrumentalist approach may call with some regularity for a different result than all the other decisionmaking styles. The cases discussed at § 11.3.2 regarding extreme versus moderate instrumentalism provide examples of this fact.

§ 11.3.2 Extreme versus Moderate Instrumentalism

Since the instrumentalist era began in 1954, there have been 6 extreme instrumentalists on the Court, Chief Justice Warren, and Justices Douglas, Brennan, Goldberg, Fortas, and Marshall; and 4 moderate instrumentalists, Justices Blackmun, Stevens, Ginsburg, and Breyer. Prior to that time, during the Holmesian era, from 1937 to 1954, there were 2 other Justices on the Court who were extreme instrumentalists, Justices Murphy and Rutledge, and 2 moderate instrumentalists, Chief Justice Stone and Justice Cardozo.

The main difference between extreme and moderate instrumentalis ts is the extent to which the judge is willing to use background principles of justice or social policy embedded in the law, or perhaps not so embedded, to trump interpretation gleaned from the other sources of constitutional interpretation: text, context, history, practice, and precedent. Extreme instrumentalists are more willing to resort to such arguments than are moderate instrumentalists. This can be seen from the following four kinds of cases.

The first kind of case involves an instrumentalist precedent whose reasoning is sufficiently extreme that even later moderate instrumentalist judges are prepared to overrule it. The most prominent examples of this phenomenon involve cases decided from 1963-69, when an extreme liberal instrumentalist perspective dominated the Court, that were rejected by later more moderate instrumentalist Justices. For example, in Amalgamated Food Employees Union Local 590 v. Logan Valley Plaza, Inc., the Court held in 1968 that a large privately-owned shopping center was the equivalent of the company town in Marsh v. Alabama, and thus state action applied, granting

---

individuals the right of free speech on shopping center property. The Court reached this conclusion despite the fact that the shopping center was only the equivalent of the business district in *Marsh*. There was no showing in the case that the shopping center had its own residential area, police and fire protection, mail delivery system, or other aspects of a public town that existed in *Marsh*. Thus, despite the fact that background policies in favor of free speech supported the result in *Logan Valley*, arguments of text, context, history, practice, and even the precedent of *Marsh* supported the view that running a privately-owned business establishment is not state action.

In 1976, the Court overruled *Logan Valley* in *Hudgens v. NLRB*. The Court held in *Hudgens* that speakers have no constitutional right of access to privately-owned shopping centers. Only extreme instrumentalists Justices Brennan and Marshall dissented from the Court’s overruling of *Logan Valley* in *Hudgens*. Moderate instrumentalist Justice Blackmun was in the majority; Justice Stevens took no part in the consideration of the case.

Cases involving congressional power under the enforcement provisions of the Civil War amendments provide another example. In 1966, in *Katzenbach v. Morgan*, the Court upheld a provision in the Voting Rights Act of 1965 that abolished a state literacy test on the ground that Congress could have concluded that abolishing the literacy test would be helpful in ensuring equal protection, even though the Court itself had held in *Lassiter v. Northampton County Board* that a similar state literacy test did not violate equal protection. As the *Katzenbach* dissent of Justice Harlan and Stewart stated, by this decision the Court was allowing Congress, not the courts, to decide what was a violation of the Equal Protection Clause.

In 1997, this approach was firmly rejected by the Court in *City of Boerne v. Flores*. Despite the possible policy arguments that it would good for society if Congress had the power to define what constitutes a violation of equal protection, Justice Kennedy explained in *Flores* that Congress' enforcement power under § 5 of the 14th Amendment is only a power, as the text states, to “enforce” violations of the Amendment by the states by preventing or remedying violations. It is not a power to “define” what conduct was a violation of the Amendment. Justice Kennedy said that the line between congressional measures that remedy or prevent unconstitutional actions and measures that make a substantive change is not easy to discern, but that "there must be a congruence and proportionality between the injury to be prevented or remedied and the means adopted to that end. Lacking such a connection, legislation may become substantive in operation and effect."
Moderate instrumentalist Justice Stevens joined this opinion in full. Indeed, even by 1980, a 6-3 Court in *City of Rome v. United States* had narrowed the interpretation of *Katzenbach*, presumably in order to keep Justices Blackmun and Stevens in the majority. Writing for the Court, Justice Marshall said that when exercising its enforcement authority under § 2 of the 15th Amendment, Congress may prohibit state action which is not a violation of the 15th Amendment only if the state action perpetuates the effects of prior discrimination and creates a risk of purposeful discrimination in the future.

A second kind of case involves a decision where no prior instrumentalist precedent is involved, but extreme instrumentalists, such as Justice Douglas, Brennan and Marshall, are on one side of the decision, and moderate instrumentalists, such as Justices Blackmun and Stevens, are on the other side. For example, in *Board of Regents v. Roth*, the question was whether a teacher hired on a one-year probationary contract had a property interest sufficient to require the state university to hold a hearing before declining to renew the teacher's contract. In that case, extreme instrumentalists Justices Douglas, Brennan and Marshall would have found a constitutionally protected property interest, with Justice Marshall writing, “In my view, every citizen who applies for a government job is entitled to it unless the government can establish some reason for denying the employment.”

While such a position might be viewed as sound social policy from a liberal instrumentalist perspective, no argument from text, context, history, practice, or precedent prior to *Roth* would support such an expansive view of government obligation under the Constitution. In contrast, moderate instrumentalist Justice Blackmun joined the majority opinion which held that no property interest existed in re-employment because being hired for a fixed term of one academic year secured “absolutely no possible claim of entitlement to re-employment.”

Cases involving the constitutionality of the death penalty represent a similar kind of case. For most of the 1970s and 1980s, only extreme instrumentalists, such as Justices Brennan and Marshall, viewed the death penalty as unconstitutional in all circumstances, based upon their view of sound social policy. More moderate instrumentalists, such as Justices Blackmun and Stevens, were not willing to allow their own views of sound social policy to trump arguments of text, context, history, practice, precedent, and prudential considerations embedded in the law, which would uphold the death penalty for certain cases of murder. Toward the end of his tenure on the Court, however, Justice Blackmun did adopt the Brennan and Marshall view.

---

48 446 U.S. 156, 175-78 (1980).
49 408 U.S. 564 (1972).
50 *Id.* at 588 (Marshall, J., dissenting).
51 *Id.* at 566 (Stewart, J., for the Court, joined, *inter alia*, by Blackmun, J.).
A third example of this difference comes from the cases involving whether certain protections of the Bill of Rights, or other additional aspects of due process of law, are sufficiently fundamental to be incorporated into the 14th Amendment Due Process Clause and applied against the states. As discussed at § 27.2.3, in a number of these cases in the 1940s and 1950s, extreme instrumentalists, such as Justices Douglas, Murphy, and Rutledge, favored incorporation of a wider range of fundamental rights, while moderate instrumentalists, such as Chief Justice Stone and Justices Cardozo and Byrnes, favored a more cautious approach toward incorporation.

A third kind of case involves an extreme instrumentalist precedent being followed by later moderate instrumentalists, but only as to its core holding. Because use of social policy reasoning appears to moderate instrumentalists to be somewhat extreme, but not so extreme as to be overruled, the case is restricted to its core holding. For example, in *Flast v. Cohen*, a 1968 case, the Court found standing for federal taxpayers to raise an Establishment Clause challenge to government spending that reached parochial schools, despite the fact that such generalized grievances are typically not sufficient to grant standing. Later cases, such as *Bowen v. Kendrick*, have limited *Flast* to its core holding by creating a narrow exception to the usual standing rules, available for litigants relying, as taxpayers, on the Establishment Clause to curb federal spending programs.

Despite following the holding of *Flast*, moderate instrumentalists, as well as non-instrumentalists, have not been willing to use *Flast* to let other parties with generalized grievances obtain standing. However, moderate instrumentalist Justices have followed the core holding of *Flast*, and have not looked for creative, but implausible, ways to distinguish the case. An example is *Valley Forge Christian College v. American United for the Separation of Church and State, Inc.* As discussed at § 17.3.1.2.C nn.350-53, the non-instrumentalist Justices on the Court distinguished *Valley Forge* from *Flast* on the ground that *Valley Forge* involved an exercise of appropriating government funds under the Property Clause, rather than the Taxing and Spending Clause. In both cases, however, government funds were being used to support religion. Justice Brennan’s dissent, joined by Justices Marshall and Blackmun, stated that the majority opinion “utterly fails, except by the sheerest form of *ipse dixit*, to explain why this case is unlike *Flast*.” Justice Stevens also dissented in the case.

A fourth kind of case involves instrumentalist-era precedents whose reasoning is perceived by moderate instrumentalists as not so extreme, so that moderate instrumentalists are willing to extend the precedent past its core holding to cover new fact patterns based upon the general reasoning of the precedent and the fact that the social policy is sufficiently embedded in the law that it deserves full consideration. For example, as discussed at § 18.2.4 nn.93-99, *dicta* in some of the instrumentalist-era cases suggested that a finding that the activity being regulated is economic in nature is not required to find congressional power under the Commerce Clause. It would be enough if the activity, whether economic or not, had a significant affects on interstate commerce. These

54 392 U.S. 83, 100 (1968).

57 *Id.* at 491 (Brennan, J., joined by Marshall & Blackmun, JJ., dissenting).
cases did not alter the Commerce Clause test, however, because in each case economic activity was being regulated. For example, the civil rights law in *Heart of Atlanta Motel v. United States* involved the economic transaction of renting a hotel room; the criminal law in *Perez v. United States* involved the economic crime of extortionate credit.58

The case of *United States v. Morrison* raised the economic activity issue. *Morrison* involved the constitutionality of the Violence Against Women Act of 1994 (VAWA). The moderate instrumentalists on the Court, Justices Stevens, Ginsburg, and Breyer, would have upheld congressional power to regulate, based upon the mountain of data assembled by Congress regarding the affects on interstate commerce of violence against women. Under the general reasoning of the instrumentalist-era precedents that would have been enough.59 In contrast, the non-instrumentalist majority replied that it was not enough to find that the cost of crime and work days lost by victims had a substantial affect on commerce. That would permit Congress “to regulate not only all violent crime, but all activities that might lead to violent crime, regardless of how tenuously they relate to interstate commerce.” Instead, the majority, per Chief Justice Rehnquist, concluded that Congress may not regulate “noneconomic, violent criminal conduct based solely on that conduct’s aggregate affect on interstate commerce,” and that, based upon the core holdings of prior precedents, “The regulation and punishment of intrastate violence that is not directed at the instrumentalities, channels, or goods involved in interstate commerce has always been the province of the States.”60

These non-instrumentalist Justices were willing only to follow the core holdings of *Heart of Atlanta* and *Perez* and uphold congressional power to regulate where economic activity was being regulated.

§ 11.3.3  **Conservative versus Liberal Instrumentalism**

The instrumentalist Justices on the Supreme Court over the last 50 years have all been liberal. Thus, their resort to prudential considerations has reflected a liberal predisposition. As summarized at § 6.4.4, and listed in Table 6.4.2, regarding federalism issues, this has meant a predisposition in favor of federal power, whether under the Commerce Clause, 10th Amendment, 11th Amendment, congressional power to enforce the Civil War Amendments, or other such issues. With regard to the separation of powers, this has meant a predisposition in favor of congressional power at the expense of the executive. As noted at § 21.2.1.2, liberal judges tend to be not as concerned with economic regulations that restrain the power of business, while being more suspicious of regulations curtailing civil rights. As noted at §§ 5.2.2.2.A & 6.2.2.2, for liberal instrumentalists the Court should be the guardian of the unempowered, as they may not be adequately protected by the political process.61

---

60  *Id.* at 613, 617-18 (Rehnquist, C.J., for the Court).

It is certainly possible, of course, for an instrumentalist jurist to have a conservative bent. Since conservatives tend to favor tradition and the status quo, and are often more highly represented by the affluent in society to whom the status quo has favored economically, and whose lobbying influence in the legislative and executive branches is thus more potent, it is more likely for a conservative to adopt either the static constitution model of the formalist approach, which favors the status quo; or the deference-to-government model of the Holmesian approach, which favors those with greater lobbying influence; or even the great respect for precedent of natural law, which favors judicial tradition. Nonetheless, a conservative form of instrumentalist judicial activism is a possibility.

The University of Colorado Law Review published a symposium in 2002 entitled, “Conservative Judicial Activism.” Articles in the symposium explored such topics as “Judicial Activism and Conservative Politics” or “Do Liberals and Conservatives Differ in Judicial Activism.” In addition, as noted at § 11.3.4.1 nn.65-66, Judge Richard Posner of the Seventh Circuit Court of Appeals has described his conservative law-and-economics approach as a version of pragmatic instrumentalism. Since 2001, a number of Democrats have questioned whether some of President Bush’s nominations to the federal bench, who they have filibustered, as discussed at § 7.4.2 nn.236-39, were conservative judicial activists willing to legislate from the bench in favor of conservative values, rather than the values in the text, context, history, practice, and precedent of the Constitution or federal statutes.

§ 11.3.4 Other Variations of Instrumentalism

The possible variations of an instrumentalist approach are as numerous as the different possible theories of what constitutes a good society, since different perspectives on what constitutes justice or sound social policy may lead to different instrumentalist decisions if the other sources of interpretation do not provide an unequivocal answer to the issue before the Court. The six approaches discussed below represent a typology of the main schools of contemporary thought regarding theories of how to determine what would constitute a good society. They are divided into the “non-critical” approaches of pragmatism, utilitarianism, and Kantian-based theory, and the “critical” approaches of critical legal studies, feminist theory, and critical race theory.

§ 11.3.4.1 “Non-Critical” Approaches

A. Pragmatism

A workable definition of pragmatism, adopted by Professors Kuklin and Stempel in Foundations of the Law: An Interdisciplinary Primer, is that the pragmatist believes that “[i]mprovement in the human condition occurs step by step through the implementation, testing, and modification of practical measures, not by grandiose proposals or panaceas.” In the American context, the great 20th

century American pragmatist was John Dewey, who is “[p]erhaps best known for his philosophy of education . . . where citizens can be morally and intellectually prepared and encouraged to openly address the evolving, dynamic developments and inevitable conflicts within modern democratic society.”64 Judge Richard Posner has noted that the pragmatic judge “wants to come up with the best decision having in mind present and future needs, and so does not regard the maintenance of consistency with past decisions as an end in itself but only as a means for bringing about the best result in the present case. [Thus, the main difference between a positivist judge and a pragmatic judge] is that the former is centrally concerned with securing consistency with past enactments, while the latter is concerned with securing consistency with the past only to the extent that such consistency may happen to conduce to producing the best results for the future.”65

There are naturally numerous versions of pragmatism, depending upon how one defines what are the “best results for the future.” On substantive matters, pragmatists can exist from “law and economics” theories on the right;66 to "practical legal studies," whose focus is not on one “right” answer, but on a “supportable” answer that emerges from balancing a number of factors through the common-law judicial decisionmaking process to achieve results which are at the center of American politics,67 to consideration of the "feminine voice" in moral developmental psychology, which leads to results more on the left.68 Plenty of additional versions of pragmatism also exist.69 To support the pragmatic focus on the best results for the future rather than the precedents of the past, leeways in the law can be created under a pragmatist approach by appealing to the "new jurisprudence of interpretation," of which the writings of Professor Stanley Fish and Philosopher Jacques Derrida are leading examples, and which emphasize the indeterminacy of any existing linguistic term.70

B. Utilitarianism

Contrary to the pragmatic focus on practical results rather than “grandiose proposals,” utilitarian theory proposes one grand theory to determine the good. As Professors Kuklin & Stempel noted,

64 Id. at 61-62.

“In seeking the state of affairs in which goodness is maximized, universal utilitarianism typically aims for the greatest good for the greatest number. A state of affairs is better, under this version, when aggregated goodness (often expressed in terms of utility) is increased, even when some individuals suffer losses in order to facilitate greater gains by others.”71

As with pragmatism, there are a number of versions of utilitarian theory. For example, “act utilitarians” theoretically require a calculation of utility for every act in which the individual engages. In contrast, “rule utilitarians” adopt “general rules based on cost-benefit analyses of common situations. Under this latter approach, individual acts must be evaluated only when the particular situation is not routine, . . . or when the circumstances take the case away from the core of the stock situation.”72 In addition to universal utilitarianism, there can also be an “egotistic utilitarianism” where a person strives to increase his or her own good irrespective of its effects on others. Most utilitarians “reject egoism or its apparent implication that the interests of others are to be disregarded. Among other reasons, some have argued that self-interest aligns with benevolence in the long run.”73

Among the complications of utilitarianism are the question of whose satisfactions are to count and whether all satisfactions are to count equally. As Professors Kuklin and Stempel noted:

For instance, the utility of foreigners would seem to have the same intrinsic value as that of neighbors. . . . [U]nder this egalitarian view a person in a prosperous nation should send money to the less fortunate nations until the person’s last dollar brings more satisfaction at home. Everyone world-wide would end up with a low but presumably sufficient standard of living. This has been countered somewhat by the observation that radical egalitarianism has high administrative costs (i.e., the strict taxing and policing systems would be very expensive and invasive of privacy); and would hinder utility by eliminating both the positive incentive effects of wealth accumulation (i.e., people would not bother to work as hard if the earnings go elsewhere) and also the concentrated sources of capital required for industrial development (i.e., the money needed to establish a factory comes from people with wealth to spare.) . . . Finally, there is the problem of interpersonal utility comparisons: when tradeoffs in utility are required, how can one actually determine whether, and by how much, the losses of some persons are offset by the gains of others?74

Under utilitarianism, the ends may justify the means. A utilitarian may treat as unimportant certain moral rights promoted by other theories, such as claims to personal liberty and autonomy. For example, “a judge or prosecutor may property convict a person known by them alone to be innocent of a notorious crime if the benefits derived from increased deterrence and community security and appeasement outweigh the pain of the defendant, her family and supporters. . . . While utilitarians

71 Kuklin & Stempel, supra note 63, at 6 (emphasis omitted).

72 Id. at 7 (emphasis omitted).

73 Id. at 6-7 (emphasis omitted).

74 Id. at 7-8.
have rehabilitated their theories by various strategies and empirical assumptions, including the denial that the probable consequences under these and other problematic hypotheticals would actually increase utility, or a rejection of them as too extreme to be relevant to the daily concerns of moralists, they remain as formidable problems that have driven away many erstwhile supporters.”

The most famous utilitarian to deal with these problems of utilitarianism is the 19th-century Philosopher John Stuart Mill. Professors Kuklin and Stempel noted:

Mill argues in his famed utilitarian defense of the precepts of justice that the means to general utility include the recognition of individual rights because the protection of people’s sentiment of justice is socially expedient. In other words, people will be unhappy if justice does not prevail. . . . In order to promote happiness, individuals must [also] have the right to choose what to believe and how to behave. Under Mill’s still prominent “harm principle,” personal autonomy should be protected so long as it is not exercised in violation of the basic interests of others, for example, of their interests in personal security and property. Autonomy is not to be subordinated to the conventions of the majority. . . . Finally, Mill is a strong advocate of free speech. “[F]reedom of opinion, and freedom of the expression of opinion” is necessary “to the mental well-being of mankind (on which all their other well-being depends).”

In reaching such conclusions, Mill’s actual precepts track closely the principles of justice developed according to the logic of rational thought, discussed at § 16.2, but justified on utilitarian grounds.

C. Kantian Approaches

Immanuel Kant, the 18th-century Prussian philosopher, is the fountainhead of all later Kantian approaches. For Kant, an individual’s character is good when the individual acts for the sake of duty alone and not for other reasons such as generosity, sympathy, or benevolence. As Professors Kuklin and Stempel have noted, “In explicating duty, Kant espoused a universalizability principle, the first form of his famous categorical imperative: one should act pursuant to a maxim that could be willed or chosen as a universal law. . . . Kant argued that in doing one’s duty by acting according to universal rules without special exceptions, the actor essentially embodies or exhibits her essence, her humanness, her authenticity. . . . The second form of Kant’s categorical imperative is that all persons as rational beings with autonomy of the will, are to be treated as ends in themselves, and not as a means only to another’s ends. All humans, as ethical beings, are to be respected.”

A number of variations exists regarding Kantian theory. Reflecting a more liberal perspective, Philosopher John Rawls has taken the position that the “Kantian concerns for equality and personal autonomy can be satisfied . . . by a hypothetical social contract in which all persons decide, as free and rational beings from an initial position of equality, the principles which are to assign basic

75 Id. at 8-9.
76 Id. at 57 (citations omitted).
77 Id. at 9-10.
rights and duties and to determine the division of social benefits.’ . . . Rawls writes that two basic principles of justice would be chosen: first, a principle requiring an equal right to liberty; and second (the ‘difference principle’), a principle allowing social and economic inequalities only when they benefit the least advantaged individual and stem from opportunities that are fairly open to all.”78

Reflecting a more conservative perspective, Philosopher Robert Nozick has taken the position that Kant’s concern for personal autonomy and respect for each individual requires a theory of justice in which “each person has natural property rights in her labor, body, and sentiments, and retains such rights except as one may voluntarily transfer these rights to another by contract, gift, or bequest. Any coercive interference with such rights is immoral, including taxation (‘on a par with forced labor’) for any reason other than very restricted common purposes. In this libertarian scheme, the only justifiably organized government is a minimal state, ‘limited to the narrow functions of protection against force, theft, fraud, enforcement of contracts, and so on.”79

A Kantian approach more centrist in its conclusions has been promoted by Philosopher Ronald Dworkin through his Kantian principle that all persons are entitled to “equal concern and respect.”80 A similar principle was stated by 18th-century philosopher and economist Adam Smith in *The Theory of Moral Sentiments*,81 where he concluded that individuals ought to act according to the logic of an “impartial spectator” who gives equal weight to others’ interests as well as his own. This moral principle, central to a well-formed, modern ethical natural law approach, is discussed at § 16.2.

§ 11.3.4.2 Critical Approaches

In contrast to these “non-critical” approaches to the good, “critical” approaches typically involve a sharper critique of the morality of the existing social order. This critique typically sees societies as reflecting some systemic aspect of domination by the stronger over the weaker members of society. This domination can be reflected through class, gender, or racial domination, among others, leading to three versions of critical approaches: critical legal studies, feminist theory, and critical race theory.

A. Critical Legal Studies (CLS)

In *Foundations of the Law: An Interdisciplinary Primer*, Professors Kuklin and Stempel described the Critical Legal Studies (CLS) movement by noting, “The [existing] system’s shortcomings in the view of CLS scholars include: indeterminacy of legal doctrine; undue mystification of the law to exclude outsiders and enhance the power of lawyers; doctrine and procedure structured to obscure the political aspects of law; [and] protection of the interests of the dominant under the guise of

78 Id. at 62 (citations omitted).

79 Id. at 63 (citations omitted).

81 Adam Smith, The Theory of Moral Sentiments (1759).
neutrality. . . . For example, a CLS article may seek to convince the reader that a supposedly objective legal rule really contains imbedded subjective value choices and that even though the rule appears neutral, it falls more heavily upon society’s disempowered.”82

In addition, Professor Kuklin and Stempel noted, “Because the focus of CLS, as the name implies, is criticism, it is often painted as a purely destructive movement. Others see in CLS criticism a basis for championing reforms directed towards making law less hierarchal, less protective of the current elite, and more capable of promoting a progressive political agenda. For example, CLS writings suggest revising the current structure of representative government, . . . and using law’s status as authority to transform society by moving it away from the goal of wealth maximization and toward the achievement of greater rights for those with lower socioeconomic status.”83 Other summaries of CLS address the perspective of CLS that law is "indeterminate" and thus decisions are always grounded in political choices, which tend "systematically" to embody aspects of class bias.84

In an account specifically directed toward constitutional law, Professor Mark Tushnet observed in Red, White and Blue: A Critical Analysis of Constitutional Law,85 “Whenever someone invokes [one of the non-critical] theoretical positions, we can be sure that he or she is about the explain why the values of a particular elite ought to be imposed on people who are not part of the elite.” Similar to the account here of non-critical positions toward judicial decisionmaking, Professor Tushnet referred to the Jurisprudence of History, the formalist position of focusing on original text and specific historical intent, discussed here at § 9.2.1; the Jurisprudence of Democracy, the Holmesian focus on deference to the government and John Hart Ely’s representation-reinforcing model of judicial review, discussed here at § 10.2.1.2; the Jurisprudence of Philosophy, with its focus on natural law styles of reasoning, discussed here at § 12.2; Antiformalism in Constitutional Theory, with the instrumentalist focus on public values as a critical part of judicial decisionmaking, discussed here at § 11.2.2.3; and Intuitionism and Little Theory, that particular brand of instrumentalism rejecting grandiose theory and adopting the pragmatic focus on “balancing of interests” in case-by-case adjudication, discussed here at § 11.3.4.1.A.86 He also referred to Burkean theory, characterizing it as a form of antiformalism, while the Burkean approach is viewed here as a form of a natural law approach, as noted at § 12.1 and throughout Chapter 12, which is how Edmund Burke would have viewed it.

82 Kuklin & Stempel, supra note 63, at 175.

83 Id. at 175-76.

86 Id. at 21-187.
B. Feminist Theory

As its name implies, feminist theory views law through the lens of gender bias. As Kuklin & Stempel noted, “A major part of the feminist project is to examine and criticize the impact of the law in view of the context and experiences of women. Feminists contend that the legal and political establishments have given short shrift to women’s experiences, which have often been episodes of subjugation, frustration, and denial. The assumed neutral viewpoint of law is one that has generally privileged men and promoted a version of reality that simply is not accurate when applied to women, and often other ‘out groups’ as well.”87

As with the other approaches, there are a number of variations of feminist theory. “Cultural feminists tend to . . . see women’s subordination and difference as an outgrowth of women’s social role, primarily the raising of children and the maintenance of families, including the mediation of intra-familial conflict. . . . To radical feminists, the imperfections and inequality of law flow more from gender hierarchy than gender role and almost certainly not from innate biological or psychological differences. Regardless of their disagreements, radical and cultural feminists argue for greater examination of context, reality, tradition, and hierarchy in the law, rather than swift resort to fixed rules or procedures.”88 Plenty of additional versions of feminist theory also exist.89

C. Critical Race Theory

Critical race theory examines legal issues from the perspective of racial bias. Professors Kuklin and Stempel noted, “The point of the exercise is to illuminate the degree to which the current legal system reflects domination by a white majority.”90 Professor Kimberle Chenshaw notes, “To bring a fundamental challenge to the way things are, whites would have to question . . . both the economic and the racial myths that justify the status quo. . . . [A] challenge to the legitimacy of continued racial inequality would force whites to confront myths about equality of opportunity that justify for them whatever measure of economic success they have attained.”91 Such critical race theory has been done from the perspective not just of African-Americans, but from the perspective of other persons of color as well.92

87 Kuklin & Stempel, supra note 63, at 180.
88 Id. at 181 (emphasis added).
90 Kuklin & Stempel, supra note 63, at 181.
§ 11.4 The Instrumentalist Approach, Combined with Affinity for Another Style

As noted with respect to the other interpretation styles, sometimes a judge may predominantly adopt one interpretation style, but demonstrate an affinity for another style in some cases. As a normative approach, the instrumentalist style agrees with the natural law style that judges must be sensitive in deciding cases to considerations of purpose, practice, and prudential considerations. As summarized at § 12.3.1, the main differences between instrumentalist and natural law jurists in our Nation’s history have involved the natural law rejection of background social policy reasoning in both theory and practice and the natural law greater respect for precedent than the instrumentalist approach.

Because moderate instrumentalist judges will use background social policy arguments less than extreme instrumentalisrs, and all judges, no matter what their interpretation style, will rely on precedents to some extent, there is not a sharp distinction between a moderate instrumentalist judge and a natural law judge in many cases. It thus may be relatively easy for a judge adopting one of these two traditions to evolve into the other interpretive style. Furthermore, since most instrumentalist judges do not acknowledge that they may occasionally resort to background social policies not embedded in the law, as discussed at § 11.2.2.3, speeches or testimony at a confirmation hearing of a moderate instrumentalist judge may sound quite similar to that of a natural law judge.

Justice Blackmun is perhaps the best example of a contemporary judge who began his service on the Court deciding cases more as a natural law judge, but whose decisions reflected an instrumentalist approach later in his career. For example, in 1976, in National League of Cities v. Usery, Justice Blackmun balanced the demands of federal versus state power, creating an area for state sovereignty, but noted that federal power should not be outlawed “in areas such as environmental protection, where the federal interest is demonstrably greater and where state facility compliance with imposed federal standards would be essential.” This approach is reminiscent of Chief Justice Marshall’s approach in 1824 in Gibbons v. Odgen, where Justice Marshall carved out an area for state sovereignty, but noted that federal power should not be declared unconstitutional unless the activity is “completely within a particular State, which do not affect other States, and with which it is not necessary to interfere for the purpose of executing some of the general powers of the government.”

However, nine years later in 1985, Justice Blackmun abandoned this balancing approach in Garcia v. San Antonio Metropolitan Transit Authority. In Garcia, he joined with liberal instrumentalisrs Justices Brennan, Marshall, and Stevens, and liberal Holmesian Justice White, to overrule National League of Cities in favor of a strong pro-federal power decision. In 1992, Justice Blackmun also

93 426 U.S. 833, 856 (1976) (Blackmun, J., concurring).

94 22 U.S. (9 Wheat.) 1, 195 (1824) (Marshall, C.J., for the Court).

95 469 U.S. 528, 530 (1985) (Blackmun, J., for the Court).

Page 349
joined Justices Stevens and White in dissent in *New York v. United States*, rejecting a balanced approach towards state sovereignty as to matters of federal “commandeering” of state legislatures, refusing to join the majority opinion that included Justices O’Connor, Kennedy, and Souter.

Justice Blackmun’s decisions in state action cases reveal the same trend. During the 1970s, Justice Blackmun joined a number of non-instrumentalist majority opinions which refused to find state action despite the state’s granting a liquor license to a private restaurant, state regulation of a private utility, or state statutory support for a “self-help” remedy in the context of a private creditor/debtor dispute. In each of these cases instrumentalist Justices Douglas (and later Stevens), Brennan, and Marshall dissented. During the 1980s and 1990s, however, Justice Blackmun became a predictable moderate instrumentalist vote on state action issues, joining Justice Stevens, along with liberal Holmesian Justice White, in the majority finding state action in a number of close cases. Justice Blackmun also joined Justices Stevens and White in the majority finding no state action in cases where only extreme instrumentalist Justices Brennan and Marshall were in dissent.

With regard to statements made at confirmation hearings, a number of recent Justices have made statements at their confirmation hearings that seemed to reflect a natural law model of interpretation. Once on the Court, however, their decisions have leaned more in the instrumentalist direction. For example, at her confirmation hearing, Justice Ginsburg emphasized that “one of the most sacred duties of a judge is not to read her convictions into the Constitution.” In his opening remarks, Justice Breyer suggested aspects of the natural law balance between text and purpose, stating, “That vast array of Constitution, statutes, rules, regulations, practice, procedures – that huge vast web – has a single basic purpose [to help individuals] live together productively, harmoniously, and in freedom. Keeping that ultimate purpose in mind helps guide a judge. . . . I will try to interpret the law carefully in accordance with its basic purposes. . . . I will do my utmost to see that [my] decisions reflect both the letter and spirit of a law that is meant to help [individuals].”

---

96 505 U.S. 144, 188 (1992) (White, J., joined by Blackmun & Stevens, JJ., concurring in part and dissenting in part).

101 Excerpts from Senate Hearings on Supreme Court Nominee, N.Y. Times, July 13, 1994, at A8.
In his confirmation hearing, Justice Breyer also reflected the natural law respect for history, practice, precedent, and prudential considerations. Concerning “liberty” in the Due Process Clause, Justice Breyer noted that in addition to text, “One goes back to history and the values the framers enunciated. One looks to history and tradition, and one looks to the precedents that have emerged over time. One looks as well to what life is like at the present as well as in the past. And one tries to use a bit of understanding as to what a holding one way or the other will mean for the future.”

Once on the Court, however, Justice Ginsburg and Breyer have been associated most often with Justice Stevens, forming a relatively reliable moderately liberal block. A good summary of Justice Ginsburg’s liberal instrumentalist views appears in an article introducing her prior to her giving a speech. The moderate, liberal instrumentalist style of Justice Breyer, with some leanings in the direction of natural law, and for some affinity also for a liberal Holmesian approach, as noted below, was foreshadowed in Justice Breyer’s comments at his confirmation hearing. At that time, he stated, “[The Supreme Court] works within a grand tradition that has made meaningful in practice the guarantees of fairness and freedom that the Constitution provides. Justice Blackmun certainly served that tradition well. Indeed, so have . . . all of those who have served in the recent past: Justice White, Justice Brennan, and Justice Marshall.”

Justice Breyer’s instrumentalist views also appear in his 2005 book, Active Liberty: Interpreting Our Democratic Constitution, where he supports interpretation based on language, purpose, history, tradition, precedent, and prudential consequences. With its focus on judicial interpretation helping to promote participatory democracy, this approach is a version of an instrumentalist “deliberate democracy” theory, discussed at § 15.4.3 nn.92-96. Some commentators have suggested that Justice Souter testified at his confirmation hearing in non-instrumentalist terms, but has decided cases once on the bench as a liberal instrumentalist. As discussed at § 12.4.3, Justice Souter is probably best viewed as a centrist natural law judge, with an occasional affinity for instrumentalism, but not predominantly an instrumentalist judge.

As suggested above, it is possible for an instrumentalist judge to have an affinity for the Holmesian style of interpretation. Both involve functional approaches toward law. Given the liberal instrumentalist predisposition to favor the legislative branch in separation of powers cases, a liberal instrumentalist with Holmesian leanings may be as willing to defer to government decisions in the

---

102 Excerpts from Hearing on Breyer Nomination to High Court, N.Y. Times, July 14, 1994, at D22.

105 Excerpts from Senate Hearings on Supreme Court Nominee, N.Y. Times, July 13, 1994, at A8.

context of some legislative policy judgment or administrative agency judgment made pursuant to legislatively delegated powers, as would a liberal Holmesian judge. For example, Justice Breyer dissented in United States v. Playboy Entertainment Group, Inc.\textsuperscript{107} discussed at § 30.1.4.2 nn.132-33. In this case, the majority opinion, joined by Justice Stevens and Ginsburg, ruled invalid a government regulation banning cable operators from showing sexually-oriented programming unless the programming is fully blocked or shown only when children are not likely to be in the audience. The majority concluded that the regulation was invalid because the government had not shown that the alternative of allowing customers to have their transmissions blocked would be an ineffective alternative. The dissent, written by Justice Breyer, agreed with the government’s statement of facts that the blocking alternative would not be effective because of the difficulty in notifying parents of their rights and because of problems with the blocking technology.

In a number of other cases, Justice Breyer has similarly deferred to government policy in cases where Justices Stevens and Ginsburg were not willing to so defer. For example, Justice Breyer joined the majority opinion in Florida Bar v. Went for It, Inc.\textsuperscript{108} a case involving attorney advertising. In this case, Justice O’Connor applied the standard intermediate scrutiny commercial speech test of Central Hudson Gas & Electric Corp. v. Public Service Commission, discussed at § 30.3.2 nn.228-30, in a very deferential way to uphold a government regulation of attorney advertising. Justices Kennedy, joined by Justices Stevens, Souter, and Ginsburg dissented in the case. In Sims v. Apfel,\textsuperscript{109} a majority of Justices Stevens, O’Connor, Souter, Thomas and Ginsburg held that a social security claimant does not waive judicial review of an issue even though the claimant fails to exhaust that issue by presenting it to the Social Security Appeals Council for review. Justice Breyer, authoring a 4-Justice dissent, would have held for a waiver, supporting the government’s position in the case.

It is also possible for an instrumentalist judge to have formalist leanings in some cases. For example, legal philosopher H.L.A. Hart’s theory of statutory interpretation adopted the instrumentalism of the Legal Process School, discussed at § 3.3 nn.63-64, if the statute’s text was ambiguous. If the text was unambiguous, Hart downplayed arguments of purpose in favor of plain meaning formalism.\textsuperscript{110} Similarly, for constitutional interpretation, it would be possible for a judge to be an instrumentalist most of the time, but a formalist for provisions of the Constitution that were viewed as having a plain meaning. As discussed at § 9.4, Justice Black is perhaps best viewed as predominately a formalist, with instrumentalist leanings. A judge with slightly greater judicial activist tendencies could be an instrumentalist with formalist leanings. Indeed, given Justice

\textsuperscript{107} 529 U.S. 803, 816 (2000); id. at 843-45 (Breyer, J., joined by Rehnquist, C.J., and O’Connor & Scalia, JJ., dissenting).

Harlan’s criticism of Justice Black in *Griswold*, discussed at § 9.4 n.92, Harlan might have viewed Black in exactly that way.
CHAPTER 12: NATURAL LAW CONSTITUTIONAL INTERPRETATION

§ 12.1 Introduction to Natural Law Decisionmaking

As discussed at § 3.4, the natural law approach agrees with the formalist approach that law ultimately should be able to be expressed as a system of logically related, universally valid rules. Thus, law is not just a means to the end of some social value, regardless of what that does to the symmetry of rules. On the other hand, natural law theorists disagree with the positivist conclusion of the formalists and Holmesian judges that law and morals are separable, believing instead that judges should be sensitive to how the law advances standards of natural justice. Under this approach, which predominated during the 18th century and early-to-middle 19th century, as discussed at § 8.4.1 nn.62-111, a judge should pay attention to such principles as reasoned elaboration of the law in light of the law's history and purposes (its "mischief to be remedied"), fidelity to a considered and consistent legislative, executive or social practice, and, most importantly, fidelity to precedent.

This natural law approach toward purpose, history, practice, and precedent was summed up by James Madison discussing constitutional interpretation. It has been noted, "[A]mong the obvious and just guides to [interpreting] the Constitution, Madison listed: '1. The evils and defects for which the Constitution was called for & introduced. 2. The comments prevailing at the time it was adopted. 3. The early, deliberate, and continued practice under the Constitution, as preferable to constructions adapted on the spur of occasions, and subject to the vicissitudes of party or personal ascendencies.'"1

A more complete elaboration of this style of interpretation appears in Justice Joseph Story’s Commentaries on the Constitution of the United States.2 Building on Madison's insights, who had nominated him to the Supreme Court, Justice Story discussed the natural law approach toward separation of powers and federalism, embracing sharing of powers, checks and balances, and the need for a strong federal government. He also indicated an abiding faith in the Anglo-American common law system and its preference for clearly defined legal tests, coherence and consistency in legal categories, and deciding cases on narrower grounds where possible. His faith in the common law also meant he was suspicious of the 19th-century legislative codification movement. It has been noted, "Among the American lawyers and judges of [the early 19th century], Justice Story stands out as possibly the most learned and influential defender of the natural law tradition. To Story it was imperative that American lawyers understand natural law in interpreting and applying the principles of the Constitution and the common law. Being 'a philosophy of morals', natural law was to Story the substratum of the legal system, resting 'at the foundation of all other laws.'"3

---

2 See Joseph Story, Commentaries on the Constitution of the United States (1833).

As discussed at § 8.4.1, in general there were two competing natural law approaches in the 18th century to which the framers and ratifiers would have turned for guidance. One approach was the classic/Christian natural law tradition that developed from Aristotle, through Aquinas, and affected such writers as Blackstone and the mature Edmund Burke. The second natural law tradition of the 18th century was the Enlightenment natural rights tradition of the English, Scottish, and French Enlightenments. As discussed at §§ 8.4.1 & 12.3.3, while there are a number of differences between these two traditions, both the classic/Christian and Enlightenment natural law traditions share many aspects of the common-law methodology of judicial decisionmaking. Thus, any differences between natural law and natural rights generally, or between any particular version of natural law or natural rights, is not critical in terms of general interpretive methodology.  

Professor Ernest Young discussed many of the similarities between Burkean and Enlightenment natural law decisionmaking in an article entitled, Rediscovering Conservatism: Burkean Political Theory and Constitutional Interpretation. He noted that the 18th- and 19th-century natural law judicial decisionmaking tradition utilized a wide range of arguments regarding constitutional interpretation, including consideration of constitutional text and purpose, constitutional structure, the history of the framing and ratifying period, judicial precedents, and legislative and executive practice under the Constitution. As discussed at §§ 12.2.2.1-12.2.2.2, under a natural law approach arguments of practice and precedent are held to constitute a gloss on meaning that alters what the Constitution means, consistent with a “living” model of constitutional interpretation.

The basic elements of the natural law approach are discussed at § 12.2. This natural law approach was the predominant approach to interpretation at our Nation’s founding, and was adhered to by such notable early Justices as Chief Justice Marshall and Justice Story. In the 20th century, as discussed at §§ 12.3-12.4, a few Justices on the Court have similarly approached constitutional interpretation from this natural law perspective: Justices Powell, O’Connor, Kennedy, and Souter. Among these Justices, there are variations concerning the extent of the Justice’s commitment to the natural law emphasis on precedent, discussed at § 12.3.2. There are also variations in terms of which 18th-century natural law theory the judge mostly believes the framers and ratifiers adopted, classic/Christian natural law or Enlightenment natural law, discussed at § 12.3.3.

Finally, as exists with respect to each style of interpretation, a judge who predominately follows one style of interpretation may have an affinity for another style. As discussed at § 12.4, Justice Kennedy occasionally demonstrates an affinity for a formalist interpretation style. Justice O’Connor

4 See generally Symposium: Natural Law v. Natural Rights: What Are They? How Do They Differ, 20 Harv. J.L. & Pub. Ply. 627-731 (1997) (Randy Barnett stated that “natural-law ethics instructs us on how to exercise the liberty that is defined and protected by natural rights”; Michael P. Zuckert used “natural law” to refer to the classic/Christian tradition and “natural rights” to refer to the Enlightenment tradition; Douglas Kmiec noted under that either of these views a difference exists between a “natural law originalism” and Justice Scalia’s textualist/formalist “originalism”).

occasionally demonstrated an affinity for the Holmesian style, as, to a limited extent, did Justice Powell. Justice Souter occasionally demonstrates an affinity for instrumentalism.

§ 12.2  Defining the Natural Law Style of Constitutional Interpretation

§ 12.2.1  Treatment of Contemporaneous Sources of Interpretation

§ 12.2.1.1  Treatment of Text

The 18th-century natural law style of interpretation predated Immanuel Kant’s focus on subjective will, discussed at § 6.2.1.1 nn.13-17. Thus, as has been noted, for Chief Justice John Marshall and the founding generation, the "intent" of the Constitution is not the subjective "intent" of the minds of the framers, but rather the "intent" gleaned from applying traditional modes and canons of construction to the document's text. These modes and canons of construction are what define the natural law method of interpretation.6

This natural law decisionmaking style emphasizes the importance of understanding a provision's purpose. As Professor Michael Moore wrote in A Natural Law Theory of Interpretation,7 "Once a judge determines the ordinary meaning of the words that make up a text and modifies that ordinary meaning with any statutory definitions or case law developments, there is still at least one more task. A judge must check the provisional interpretation from these ingredients with an idea how well such an interpretation serves the purpose of the rule in question. The necessity for asking this question of purpose Lon Fuller made familiar to us in his famous 1958 debate with H.L.A. Hart."

The rules of interpretation ordinarily followed in the 18th century and early 19th century reflected this approach. As Professor William Crosskey wrote about interpretation in the 18th century, "[T]he over-all purpose of a document was stated carefully in general terms; details were put in, only where, for some particular reason, details seem required; and the rest was left to the rules of interpretation customarily followed by the courts."8 This focus on a provision's purpose was most famously stated in "The Rule of Heydon's Case" in 1584. In Heydon's Case,9 Lord Coke stated that a judge should inquire into the "mischief and defect" that the drafter was seeking to remedy and "the

Rev. 885, 887-902 (1985) (reviewing various judicial methods concerning intent, and arguing that the framers and ratifiers did not expect the Constitution to be interpreted according to their personal intentions).

8 William Crosskey, Politics and the Constitution 363 (1953). The full passage from which this excerpt is taken appears at § 6.1.2.2 n.32. See also Louis J. Sirico, Jr., Original Intent in the First Congress, 71 Mo. L. Rev. 687 (2006) (First Congress focused on framers and ratifiers’ general purposes in adopting constitutional text, not specific plain meaning).

9 76 Eng. Rptr. 637, 638 (1584).
true reason for the remedy," and the judge should "make such construction as shall suppress the mischief, advance the remedy, and to suppress subtle invention and evasions for continuance of the mischief . . . and to add force to the cure and remedy, according to the true intent of makers of the act."

The Supreme Court addressed this approach toward interpretation in a number of early 19th-century cases. For example, in *McCulloch v. Maryland*, Chief Justice Marshall stated, "A constitution, to contain an accurate detail of all the subdivisions of which its great powers will admit, and of all the means by which they may be carried into execution, would partake of the prolixity of a legal code, and could scarcely be embraced by the human mind. It would probably never be understood by the public. Its nature, therefore, requires that only its great outlines should be marked, its important objects designated, and the minor ingredients which compose those objects be deduced from the nature of the objects themselves. . . . Let the end be legitimate, let it be within the scope of the constitution, and all means which are appropriate, which are plainly adapted to that end, which are not prohibited, but consist with the letter and spirit of the constitution, are constitutional."

Similarly, Justice Story stated in *Martin v. Hunter's Lessee*, "The constitution unavoidably deals in general language. It did not suit the purposes of the people, in framing this great charter of our liberties, to provide for minute specifications of its powers, or to declare the means by which those powers should be carried into execution. It was foreseen that this would be a perilous and difficult, if not an impracticable, task. The instrument was not intended to provide merely for the exigencies of a few years, but was to endure through a long lapse of ages, the events of which were locked up in the inscrutable purposes of Providence." Justice Story’s support for purposive interpretation is also noted at § 6.2.1.2 nn.33-35.

Following a natural law approach, the Court also relied in *Gibbons v. Ogden* on the purposes behind the Commerce Clause. The Court stated, "The power over commerce, including navigation, was one of the primary objects for which the people of America adopted their government, and must have been contemplated in forming it. The convention must have used the word in that sense."

This approach can be contrasted with the formalist, Holmesian, and instrumentalist styles of interpretation. As many commentators have noted, a formalist approach typically focuses on textual plain meaning devoid of purposive analysis, unless the plain meaning of text is determined to be ambiguous or absurd. In contrast, the natural law style of interpretation is always willing to utilize both the plain meaning (or letter) of a constitutional provision and the provision's purpose (or spirit)

12  22 U.S. (9 Wheat.) 1, 192 (1824).
to help determine constitutional meaning.\textsuperscript{14} For the functional Holmesian or instrumentalist approaches, the purpose of text is given greater weight than the text's literal meaning. As Justice Holmes phrased it in \textit{United States v. Whitridge},\textsuperscript{15} “[T]he general purpose is a more important aid to the meaning than any rule which grammar or formal logic may lay down.” In contrast, under the natural law approach, while the "reason and spirit" of the law can be crucial "where words are dubious," appropriate weight must be given to the plain meaning of words used in a text. As noted at § 6.2.1.2 n.32, the "reason and spirit [of a law]; or the cause which moved the legislator to enact it" – it is, says Blackstone, "the most universal and effectual way of discovering the true meaning of a law, when the words are dubious."\textsuperscript{16} However, if the words are not “dubious,” the words themselves, and not the law's reason or spirit, is the most “effectual way” to determine meaning. Of course, as noted at §§ 6.2.1.2 nn.36-38, if the literal meaning of the text is clear, then even under a Holmesian approach arguments of purpose will not be used to override that literal meaning, even though arguments of purpose are given greater weight by Holmesian judges than by natural law judges in the initial determination of the text’s meaning, as noted at § 10.2.1.1 nn.6-9. For an instrumentalist approach, the purpose of the text may override the text’s literal meaning since “[i]nterpretation must account for the transformative purpose of the text,” as noted at § 11.2.1.1 n.8.

Chief Justice John Marshall's statutory interpretation opinions are instructive regarding the natural law approach to text and purpose. Chief Justice Marshall stated in \textit{United States v. Wiltberger},\textsuperscript{17} "The case must be a strong one indeed, which would justify a court in departing from the plain meaning of words . . . in search of an intention which the words themselves did not suggest." At the same time, Chief Justice Marshall noted in \textit{Schooner Paulina's Cargo v. United States}\textsuperscript{18} that "literal construction" of a statute is but a part of determining the statute's "real meaning," and that meaning is also derived from legislative purpose and interpreting words in other parts of the statute.

\section*{§ 12.2.1.2 \hspace{1em} Treatment of Context}

The next question to ask concerns the role of context in constitutional interpretation, and the interplay among text, purpose, and context. As Justice Story noted in 1833 in \textit{Commentaries on the Constitution of the United States},\textsuperscript{19} "In construing the constitution of the United States, we are, in the first instance, to consider, what are its nature and objects, its scope and design, as apparent from the structure of the instrument, viewed as a whole, and also viewed in its component parts."

\textsuperscript{19} Story, supra note 2, at § 405.
With regard to the elements of structure – issues of separation of powers, federalism, and the proper role for the courts – the 18th-century natural law approach embraced a sharing of powers, checks and balances approach toward separation of powers; a balanced approach toward federal versus state governmental power, which nonetheless acknowledged the need for a strong federal government; and a view that the role of the courts was to hold governmental actions unconstitutional if, on balance, the government violated constitutional limitations.

As Justices O’Connor and Kennedy have noted, their approach does not adopt the static view of the Constitution propounded by formalist judges. Thus, regarding federalism issues, “The Federal Government undertakes activities today that would have been unimaginable to the Framers in two senses: first, because the Framers would not have conceived that any government would conduct such activities; and second, because the Framers would not have believed that the Federal Government, rather than the States, would assume such responsibilities. Yet the powers conferred on the Federal Government by the Constitution were phrased in language broad enough to allow for the expansion of the Federal Government’s role.”

Reflecting a balanced approach between federal and state governmental power, Justice Kennedy discussed in his concurrence in *U.S. Term Limits, Inc. v. Thornton* that the framers and ratifiers adopted a dual theory of sovereignty, “establishing two orders of government, each with its own direct relationship, its own privity, and its own set of mutual rights and obligations to the people who sustain it and are governed by it.” Justice Kennedy added that this theory was embraced by the Court in 1819 in *McCulloch v. Maryland*. Commentators from the conservative Holmesian perspective have criticized Justice Kennedy on the grounds that this theory of federalism is not as deferential to state governments as Chief Justice Rehnquist’s approach. Consistent with her occasional affinity for conservative Holmesian interpretations, discussed at § 12.4.2, Justice O’Connor joined Chief Justice Rehnquist in dissent in *Thornton*, along with conservative, and thus states’-rights oriented, formalists, Justices Scalia and Thomas. Federalism issues are considered in Chapter 18.

The natural law approach to separation of powers was stated by Justice Story in 1833. He said, “[Separation of powers] is not meant to affirm, that [the three branches] must be kept wholly separate and distinct, and have no common link or connection or dependence, the one upon the other, in the slightest degree. The true meaning is, that the whole power of one of these departments should not be exercised by the same hands, which possess the whole power of either of the other departments. . . . ; and, as a corollary, that, in reference to each other, neither of them ought to possess, directly or indirectly, an overruling influence in the administration of their respective powers.” Separation of powers and checks and balances issues are discussed in Chapters 19 & 20.

---

23 Story, *supra* note 2, § 525.
Regarding judicial review, Chief Justice Marshall noted in the famous case of *Marbury v. Madison*, discussed at § 17.1.2.1, that under the American theory of separation of powers, it is the emphatically the province of the judiciary to say “what the law is,” and the Constitution is just as much “law” as statutes or the common law. If two laws conflict, the courts must decide how each operates, and the Constitution is superior to law repugnant to it. Chief Justice Marshall noted that all those who have framed written constitutions contemplate them as forming the paramount law, and thus the courts have a duty to hold governmental actions unconstitutional if, on balance, the courts conclude that the governmental action violates constitutional mandates. 24 This approach reflects an analytic approach to judicial review, similar to the formalist view on the role of the court, discussed at § 9.2.1.2. It rejects the functional views of the Holmesian deference-to-government model of judicial review, discussed at § 10.2.1.2, or the functional instrumentalist role of the court to provide special protection for the unempowered in society, discussed at § 11.2.1.2.

§ 12.2.1.3  Treatment of History

With regard to history, a natural law approach is willing to examine historical sources to help determine a provision's purpose because a natural law approach is sensitive to a provision's purpose. However, as noted at § 6.2.3.1, the prevailing mode of interpretation in the United States and England in the late 18th and early 19th century took the view that it was improper to consider the legislative history of a provision to help determine a provision's meaning. Thus, notes of the Constitutional Convention, or statements made on the floor of the House and Senate during consideration of the first 10 amendments, were not proper to consider, while contemporaneous statements about the meaning of the Constitution that were not part of the formal legislative history, but were part of the public dialogue prior to ratification, like *The Federalist Papers*, were proper to consider. This limitation gradually died out during the 19th century in America. 25

Because this limitation died out in America, Notes of the Constitutional Convention, or House or Senate statements about constitutional amendments, became proper to use as history to determine the framers and ratifiers' intent during the second half of the 19th century. 26 Early natural law opinions are thus more "textualist" than later natural law opinions, which involve more historical "originalism." 27 Given this evolution concerning the appropriate use of constitutional or legislative history to determine the framers and ratifier's intent, the disagreements among commentators over court use of such material in the 18th century and the post-revolutionary war period, discussed at § 6.2.3.1, are of historical interest, but no real jurisprudential interest. All commentators agree that during the 19th century the history surrounding adoption of the Constitution and later constitutional amendments became appropriate to use as an aid in determining the framers and ratifiers' intent.

27  *See, e.g.*, Daniel A. Farber, William N. Eskridge, Jr. & Phillip Frickey, Themes for the Constitution’s Third Century 77-78 (1st ed. 1993) (discussing the early "textualist" nature of Chief Justice Marshall's Supreme Court opinions).

Page 360
So understood, the Plain Meaning Rule, noted § 9.2.1.2 n.21, coupled with a willingness to use related provisions (texts in pari materia), as well as a willingness to use both verbal and policy canons of construction, is virtually identical with the “textualist” natural law approach to interpretation discussed here. Both involve full consideration of context, both permit analysis of drafters’ purposes to determine intent as long as the purposes are derived from considering the document itself, and both reject use of intrinsic material, such as legislative history or Notes of the Constitutional Convention, to determine a text's plain meaning. Perhaps the only main difference would be that the “textualist” natural law approach would phrase the weight given to a text's plain meaning as a "plain meaning presumption" rather than a more rigid "plain meaning rule." Professor Reed Dickerson noted, "At best, there should be no plain meaning 'rule', only a plain meaning 'presumption.' It may also be true that much of the judicial talk about 'plain meaning' is only a device for assigning the burden of persuasion as between parties contending over the meaning of a [text]."  

For example, some of Chief Justice Marshall's statutory interpretation opinions suggest adoption of a “plain meaning rule.” As stated in United States v. Fisher, 29 "[W]here great inconvenience will result from a particular construction, that construction is to be avoided, unless the meaning of the legislature be plain; in which case it must be obeyed." However, other of Marshall's opinions suggest adoption only of a "plain meaning presumption." As stated in United States v. Wiltberger, 30 "The case must be a strong one indeed, which would justify a court in departing from the plain meaning of words . . . in search of an intention which the words themselves did not suggest." In practice, of course, such a theoretical disagreement may not be very important, since if the "inconvenience" is "great" or "strong" enough, most judges will be tempted to conclude that the statute is not "plain" enough for that meaning to be enforced under either a plain meaning rule or a plain meaning presumption approach.

In any event, the “originalist” natural law approach that emerged during the 19th century rejected any limitation on intrinsic material, such as exists under a formalist approach, as discussed at § 9.2.1.3. This “originalist” natural law approach is willing to consider all sources of history, including Notes of the Constitutional Convention for the original Constitution, or legislative history behind later constitutional amendments, to help determine the meaning of the Constitution. As discussed at § 6.2.3.1, this is the approach toward use of legislative history adopted by all the non-formalist Justices on the Court today in cases involving both statutory and constitutional interpretation.

With regard to whether a natural law judge would focus on the specific examples held by the framers and ratifiers about a provision, or their general concepts, the answer depends in part on the provision. To the extent the provision is "relatively direct, specific, and focused," history may suggest that the framers and ratifiers intended the provision to reflect only detailed, specific choices. If so, judges should remain focused on those choices because by "implementing the intent of the Framers, the Court is supposedly not imposing its own vision of policy, but only requiring current

29 6 U.S. (2 Cranch) 358, 386 (1805) (Marshall, C.J., for the Court).
majorities to bow to the original deal, to which we have all implicitly consented."31 Of course, even if "some of the Framers addressed specific issues in clear terms, there remains the problem of aggregating individual views into the collective views of a diverse group of individuals. Different Framers may not have agreed with each other on their interpretation of a provision."32 This problem of aggregating individual framers’ intent to determine a fixed meaning is discussed at § 6.2.1.1 nn.2-5. On the other hand, where history suggests instead that the framers and ratifiers embedded in the Constitution broad natural law concepts, like those dealing with the First Amendment, Equal Protection Clause, and Due Process Clause, history may suggest that the framers and ratifiers intended "to provide no hard-and-fast answers . . ., and to let the answers develop over time in common-law fashion," against a general background of principles of justice derived from political and moral philosophy embedded in the law.33

In short, the natural law style of interpretation will consider both the specific intent of the framers and ratifiers about a constitutional provision and any general legal concept used by the framers and ratifiers in constitutional text to help determine constitutional meaning. In contrast, the formalist approach focuses much more on the framers and ratifiers’ specific intent about the provision's meaning, not its general concept.34 As phrased by Professor Leslie Goldstein, "[Chief Justice] Marshall carefully distinguished between the conscious, specific, policy goal that may have motivated a particular constitutional clause, on the one hand, and the broader, more generalized principle, or rule of law, that the clause established, on the other hand. For Marshall, constitutional law consisted of the latter rather than the former. For [formalists] the choice is the reverse."35 This issue of the differences between a "specific intent" approach and a "general concept" approach is discussed at § 5.2.3.3.

A similar point has been noted by Professor Rodney Smith. He stated, "[Formalists, such as Raoul Berger] examine the text, history and structure of the Bill of Rights to ascertain whether those sources resolve specific questions. Not surprisingly, it is exceedingly rare to find that those sources yield specific interpretive answers to specific questions. The framers of the Constitution, the Bill of Rights and the Civil Rights Amendments largely were natural lawyers, who espoused broad principles and often eschewed the call to resolve specific issues in a specific manner within the Constitution."36 Professor Young has noted about Edmund Burke’s theory of interpretation that “[r]ather than attempt to anticipate future problems and needs, the founders of institutions would do

better to lay out broad standards, then let future generations apply them in particular situations as they come up.”

During his confirmation hearing in 1989, Justice Souter described this approach as following the "original meaning" of the Constitution, rather than following the framers and ratifiers' specific original intent. Justice Souter stated, "[M]y interpretive position is not one that original intent is controlling, but that original meaning is controlling . . . . [Justices ought to identify the] principle that was intended to be established as opposed simply to the specific application that the particular provision was meant to have by, and that was in the minds of, those who proposed and framed and adopted that provision in the first place.” Had some conservative commentators paid closer attention to these words at the time, they would have understood that Justice Souter would interpret the Constitution in a natural law fashion, rather than a formalist, specific historical intent fashion, and would not have been so surprised that his decisionmaking has differed markedly from formalist Justices such as Scalia and Thomas, or Holmesian Justices, like Chief Justice Rehnquist.

The Holmesian model of judicial decisionmaking agrees with the natural law approach that the judge should interpret general constitutional or statutory provisions in light of general concepts embodied in those provisions if history suggests that was the framers and ratifiers' intent, as discussed at § 10.2.1.3. However, the Holmesian and natural law approach to judicial decisionmaking differ in that the natural law approach rejects the strong preference for judicial deference to the legislature typified by the Holmesian approach and reflected in the writings of James Bradley Thayer, discussed at § 10.2.1.2. Further, because the Holmesian approach rejects any notion of natural rights as "naive," discussed at § 3.4 n.92, Holmesian judges are less likely than natural law judges to conclude that the framers and ratifiers intended some concept in the Constitution to reflect an Enlightenment natural law principle. Thus, instead of concluding that the framers and ratifiers expected some concept to evolve over time in response to Enlightenment-style reasoning, Holmesian jurists are more likely to conclude that the framers and ratifiers had a specific meaning in mind which they intended to remain fixed, as discussed at § 10.2.1.3 nn.27-30. Professor Michael Perry has remarked, “Bork and many other enthusiasts of originalism (e.g., former Attorney General Edwin Meese) sometimes seem not to understand that the extent to which the originalist approach to

39 See generally Christopher E. Smith & Kimberly A. Beuger, Clouds in the Crystal Ball: Presidential Expectations and the Unpredictable Behavior of Supreme Court Appointees, 27 Akron L. Rev. 115, 134-35 (1993) (“Thus Souter has disappointed political conservatives, including President Bush, because his judicial conservatism differs from that of Scalia, Thomas, and Rehnquist.”).

40 See generally Young, supra note 5, at 674-81 (discussing Burke's rejection of such a strong model of judicial restraint); Michael Perry, The Constitution in the Courts: Law or Politics? 86-90 (1994) (discussing Thayer's "minimalist" approach toward constitutional interpretation, and its embrace by Justices Holmes and Frankfurter).
constitutional interpretation constrains a judge depends on (what the judge believes to be) the original meaning of the provision: The more specific the original meaning, the greater the constraint; the more general the meaning, the lesser the constraint and the greater the latitude." \(^{41}\) In practice, a predisposition toward specific intent or meaning would track the formalist approach toward specific intent, discussed at § 9.2.1.3.

For example, as noted at § 4.4.1, most modern judges in the natural law judicial decisionmaking tradition view the Establishment Clause as reflecting an Enlightenment-based natural law concept of separation of church and state. As Justice Kennedy stated in *Lee v. Weisman*, \(^{42}\) "[T]he lesson of history that was and is the inspiration for the Establishment Clause [is] the lesson that in the hands of government what might begin as a tolerant expression of religious views may end in a policy to indoctrinate and coerce." Justice Souter, concurring, remarked, "[T]he Framers were vividly familiar with efforts in the Colonies and, later, the States to impose general, nondenominational assessments and other incidents of ostensibly ecumenical establishments," and the Framers intended the Establishment Clause to condemn "all [such] establishments, however nonpreferentialist." \(^{43}\) That concept would counsel a judge to find unconstitutional practices such as officially organized prayer in public schools, despite the fact that such prayer was a specific example thought constitutional by the framers and ratifiers as determined by "historical practices and understandings." \(^{44}\)

### § 12.2.2 Treatment of Subsequent Developments

#### § 12.2.2.1 Legislative, Executive, and Social Practice

The traditional 18th-century mode of interpretation treated a reasoned elaboration of precedents, or repeated legislative or executive practice, as a gloss on meaning. As Professor Jefferson Powell has observed, "[Madison] consistently thought that 'usus,' the exposition of the Constitution provided by actual governmental practice and judicial precedents, could 'settle the meaning and the intention of the authors.'" \(^{45}\) The Burkean approach to interpretation is similar. As Professor Ernest Young has noted, "Burke placed little reliance on the original structure and the theoretical underpinnings of institutions; rather, institutions become effective in meeting the needs of society through a continuing process of adaptation that may or may not be consistent with the original intentions of the founders." \(^{46}\) In 1833, Justice Story similarly supported the practice of drawing inferences from

\(^{46}\) Young, *supra* note 5, at 664.
congressional, executive, and state acquiescence in "more than forty years" of "operation" under the Constitution, and from the "practical exposition of the government itself."47

McCulloch v. Maryland provides a good example of this principle at work. As discussed at § 5.3.2.1, based upon legislative and executive practice Madison changed his position between 1791 and 1816 on the constitutionality of Congress incorporating a national bank. The Supreme Court noted this practice, and subsequent judicial practice, stating in McCulloch,48 "The principle now contested was introduced at a very early period of our history, has been recognized by many successive legislatures, and has been acted upon by the judicial department, in cases of peculiar delicacy, as a law of undoubted obligation."

As discussed at § 6.3.1, the Court also paid deference to legislative practice in Martin v. Hunter's Lessee and Gibbons v. Ogden. In Hunter's Lessee,49 the Court stated, "Hence [the Constitution's] powers are expressed in general terms, leaving to the legislature, from time to time, to adopt its own means to effectuate legitimate objects, and to mold and model the exercise of its powers, as its own wisdom and the public interests should require." In Gibbons,50 the Court stated, "If commerce does not include navigation, the government of the Union has no direct power over that subject . . . . Yet this power has been exercised from the commencement of the government, has been exercised with the consent of all, and has been understood by all to be a commercial regulation."

Because they adopt a normative approach to law, similar to instrumentalist jurists, most natural law jurists will be willing to consider normative considerations from whatever source, including social practice. Thus, in Atkins v. Virginia, discussed at § 6.3.3 nn.124-25, the 6-3 Court majority that considered social practice regarding the death penalty for mentally retarded criminals was composed of the natural law Justices O'Connor, Kennedy, and Souter, as well as the instrumentalist Justices Stevens, Ginsburg, and Breyer. Natural law Justices should be willing to consider even social practice from other countries, not for its social policy value, discussed at § 11.2.2.1, but to the extent that practice helps illuminate a reasoned elaboration of a universal natural law concept placed into the Constitution, something judges did during the original natural law era.51 Since many of the framers and ratifiers believed in natural law, as discussed at §§ 8.4.1, 12.3.3 & 24.1, many of the individual rights in the Constitution were likely intended to have such a universal natural law base.

47 Story, supra note 2, § 391, 408.
50 22 U.S. (9 Wheat.) 1, 186-90 (1824).
51 See generally David Fontana, Refined Comparativism in Constitutional Law, 49 UCLA L. Rev. 539 UCLA L. Rev. 539, 575-83 (2001) (discussing judicial practice from 1789 through the Civil War); Sarah H. Cleveland, Our International Constitution, 31 Yale J. Int'l L. 1 (2006) (discussing cases where the Constitution refers to international law or international law is used as a background principle to identify the territorial scope of the Constitution, the powers of the national government, delineate structural relationships within the federal system, or individual rights.)
Naturally, international sources that can best shed light on that natural law concept would most properly be used, such as European decisions regarding aspects of basic human rights and human dignity, discussed at § 17.1.4 nn.68-70. For example, this explains why it was European views against banning homosexual sodomy, rather than views of other nations around the world, that were used by Justice Kennedy in his opinion in *Lawrence v. Texas*, discussed at § 27.3.4.2 nn.259-64.

§ 12.2.2.2 Judicial Precedents

As an analytic approach to interpretation, the natural law approach shares the formalist belief in the importance of following “settled law.” The natural law approach also shares the Holmesian focus on precedents which have engendered “substantial reliance.” For example, in *Adarand Constructors, Inc. v. Pena*, Justice O’Connor defined “settled law” as doctrine part of the "fabric of the law." In overruling *Metro Broadcasting, Inc. v. FCC* in *Adarand*, Justice O’Connor stated:

> It is worth pointing out the difference between the application of stare decisis in this case and in *Planned Parenthood of Southeastern Pa. v. Casey*. *Casey* explained how consideration of stare decisis informs the decision whether to overrule a long-established precedent that has become integrated into the fabric of the law. Overruling precedent of that kind naturally may have consequences for "the ideal of the rule of law." In addition, such precedent is likely to have engendered substantial reliance, as was true in *Casey* itself. . . But in this case . . . we do not face a precedent of that kind, because *Metro Broadcasting* itself departed from our prior cases – and did so quite recently. By refusing to follow *Metro Broadcasting*, then, we do not depart from the fabric of the law; we restore it.53

In their concurrence in *United States v. Lopez*, Justices Kennedy and O'Connor spoke forcefully about the wisdom of following precedents with respect to the Commerce Clause. They noted, "[T]he Court as an institution and the legal system as a whole have an immense stake in the stability of our Commerce Clause jurisprudence as it has evolved to this point. . . . That fundamental restraint on our power forecloses us from reverting to an understanding of commerce that would serve only an 18th-century economy . . . . Congress can regulate in the commercial sphere on the assumption that we have a single market and a unified purpose to build a stable national economy."

Despite this similarity, the natural law approach differs from both a formalist or Holmesian approach in an important way. Under the natural law approach, a sequence of judicial precedents interpreting a constitutional provision can provide a "gloss" on meaning that can modify the framers and ratifiers' initial specific views. As Professor Powell has noted when discussing the writings of James Madison, under the traditional natural law model, "'usus', the exposition of the Constitution provided by actual governmental practice and judicial precedents could 'settle the meaning and intention of the authors.' Here, too, [Madison] was building on a traditional foundation: the common law had regarded usage as valid evidence of the meaning of ancient instruments, and had regarded judicial

---

53 *Id.* at 233-34 (citations omitted).

54 514 U.S. at 1637.
determinations of the meaning even more highly." As Madison himself said in The Federalist Papers No. 37, “All new laws, though penned with the greatest technical skill and passed on the fullest and most mature deliberation, are considered more or less obscure and equivocal, until their meaning be liquidated and ascertained by a series of particular discussions and adjudications.”

Professor Young made a similar point that Edmund Burke would counsel following a clear, well-established later judicial tradition elaborating the general concept used by the framers and ratifiers in explicit constitutional text, even if it could be shown that the judicial precedents were in contrast to the framers and ratifiers’ original specific views. In contrast, at least one formalist commentator has disagreed with this understanding of a Burkean approach, and has counseled Burkean judges to follow text rather than precedent, both on “original meaning” grounds and on the ground that such an approach best reflects American judicial traditions.

Regarding how precedent gets used, Professor Young noted that Burke would agree with Madison that a “series of particular discussions and adjudications” carries interpretive weight beyond the impact of mere stare decisis. Professor Young stated, "When used as a means of divining the present meaning of a constitutional provision as it has evolved over time, precedent itself functions as a tool of interpretation; rather than offering a reason to adhere to an incorrect interpretation under the doctrine of stare decisis, the force of precedent enters into the initial determination of what the correct interpretation is." In his writing, Professor Dworkin has called this use of precedent the “gravitational force” of precedent, in addition to a precedent’s “enactment force.” In Dworkin’s terminology, the “enactment force” of a precedent focuses on the narrow question of whether to follow an incorrect interpretation under the doctrine of stare decisis based upon practical reasons. Some of these practical reasons are “convenience, reliance on accumulated experience, and the usefulness for planning of being able to predict what a court will decide.” These reasons support the formalist or Holmesian willingness to follow precedents that are settled law or on which substantial reliance exists, because of a concern that the approach follows a “workable prescription for judicial government,” as noted at § 4.3.1 nn.75-77, and elaborated at §§ 9.2.2.2 & 10.2.2.2.

The “gravitational force” of a precedent, however, arises from “the notion of justice that like cases should be treated alike.” This “gravitational force” of a precedent enters into the initial

60  Dworkin, supra note 59, at 1230, citing Greenawalt, supra note 59, at 1008.
interpretation of what the correct interpretation is, as its focus is on “what a chain of precedents requires when properly understood.” This view of reasoned elaboration of the law, where the general reasoning of prior cases exerts an influence on what the doctrine means today, independent of the “enactment force” of the precedent’s core holding, is, according to Dworkin, a “distinctive fact about common law adjudication.” More generally, it is a distinctive fact about constitutional law adjudication when in a common-law mode, as for interpretation of broad concepts placed into the Constitution, where there is a “good deal of the common law type of reasoning in constitutional cases” based on the view that the framers and ratifiers, based on their natural law beliefs, intended “the answers to develop over time in common-law fashion.” As noted at §§ 4.3.1 & 11.2.2.2, while the instrumentalist style of interpretation, as a normative approach to the judicial task, theoretically also embraces this kind of reasoned elaboration of the law, the instrumentalist predisposition to “re-explore” precedent to ensure that the precedent “makes sense” means that instrumentalist judges will give reasoned elaboration of the law very little weight, unless, of course, they substantively agree with the general reasoning in the prior decisions.

Because they were immersed in the Anglo-American system of judicial decisionmaking, the framers and ratifiers’ views concerning text, context, history, practice, and precedent were grounded in the grand traditions of the Anglo-American common law system. This approach, which rejects non-interpretive resort to prudential considerations not embedded in the law, as discussed at § 12.2.2.3, favors principles such as reasoned elaboration of the law, fidelity to precedent, deciding cases on narrower grounds where possible, and deciding most cases only after full briefing and argument. The increased attention since 1986 during the modern natural law era to the principle regarding deciding cases on narrower, more fact-specific grounds, has been called “judicial minimalism” by Professor Cass Sunstein. He has noted that such “minimalism” is most useful in giving flexibility to politically accountable officials in difficult cases at the frontiers of constitutional law where judges would do best to avoid firm rules that they might come to regret.

61 Id. at 1231.

62 Id. at 1230.

64 Farber, Eskridge & Frickey, supra note 27, at 79.

65 See generally Harry W. Jones, Our Uncommon Common Law, 42 Tenn. L. Rev. 443, 450-63 (1975); Charles Fried, The Artificial Reason of the Law, or What Lawyers Know, 60 Tex. L. Rev. 35, 38-49 (1981); Church of the Lukumi Babalu Aye, Inc. v. Hialeah, Fla., 508 U.S. 520, 571-76 (Souter, J., concurring) (discussing deciding cases on narrower grounds, the importance of full briefing and argument, and reasoned and consistent elaboration of the law).

In part, the principle of "reasoned elaboration" includes clearly defined tests that work in practice; coherence and consistency in legal categories; and avoidance of functional balancing tests that are situation-specific and not easily reconcilable with other aspects of legal doctrine, unless contemporaneous sources and subsequent events mandate use of such tests. These notions are implicit in the Payne and Patterson factors, restated in Planned Parenthood v. Casey,67 and discussed at § 7.3.3, for determining when a judge who treats a sequence of precedents as a gloss on meaning, as does a natural law judge, should find the extra impetus to overrule: (1) the precedent is unworkable in practice; (2) the precedent creates an inconsistency or incoherence in the law; (3) a changed understanding of facts has undermined the factual basis of the precedent; (4) the precedent represents a substantially wrong or substantially unjust interpretation of the Constitution; or (5) the precedent raises concerns about a commitment to the "rule of law." As discussed at § 4.3.2 nn.88-89, the Supreme Court has also discussed these same factors in the context of statutory interpretation.68 Reasoned elaboration of the law would also include, in some version, commitment to developing the law according to "neutral principles," as discussed at § 3.4 nn.93-106.69

Although sometimes cited by judges from other decisionmaking styles, these factors are the special province of natural law judges. Most of these factors were discussed in the joint opinion of Justices O'Connor, Kennedy, and Souter in Casey.70 In contrast, the formalist and Holmesian Justices voted in Casey to overrule Roe based upon their conclusions that Roe was wrongly decided, that Roe did not represent settled law, and that no substantial reliance argument existed that required Roe to be affirmed. These judges did not engage in any further analysis of identifying any additional special reason that would justify overruling Roe. Because the instrumentalist Justices in Casey agreed with the holding of Roe, the issue of whether to overrule Roe was not a consideration for them.

§ 12.2.2.3 Prudential Considerations

As discussed at § 6.4.2, two approaches could be taken under a natural law approach toward the appropriateness of non-interpretive resort to prudential considerations not embedded in the law. One view is to embrace non-interpretive consideration of principles of justice not embedded in the law. Under this approach, whether or not the framers and ratifiers of the Constitution intended each clause to embody natural law principles, judges should take that view today. Thus, judges should

67 505 U.S. 833, 855-69 (1992) (joint opinion of Justices O'Connor, Kennedy, and Souter). The factors from Payne, Patterson, and Casey are all discussed at § 4.3.2 nn.86-89.

68 See Neal v. United States, 516 U.S. 284, 295-96 (1996) (Kennedy, J., for the Court); Patterson v. McLean Credit Union, 491 U.S. 164, 173-74 (1989) (Kennedy, J., for the Court), discussed § 4.3.2 nn. 88-89.

always read the Constitution's words against the backdrop of natural law theory. This approach would require judges to pay great respect to the ordinary meaning and purpose of the words used in the Constitution. However, under this approach, judges would always be permitted to resort to natural law philosophy in the final instance "so as to check meaning and purpose by an all-things-considered value judgment that acts as a safety-valve against wildly absurd or unjust results."71

In its most extreme form, such an approach to judicial decisionmaking would place judges in the role of Platonic Guardians, deciding constitutional cases in order to promote the judge's natural law vision of the "just state." This extreme form was criticized by Judge Learned Hand in his famous Oliver Wendell Holmes, Jr. Lecture at Harvard in 1958. As Judge Hand stated, "For myself it would be most irksome to be ruled by a bevy of Platonic Guardians, even if I knew how to choose them, which I assuredly do not."72 Most judges and commentators whosubscribe to some version of natural law theory reject this approach. However, some commentators seem to embrace it.73

A second approach, more consistent with the “social contract” natural law approach to judicial decisionmaking dominant during the framing and ratifying of our Constitution, holds that judges should resort to natural law principles in interpreting the Constitution only to the extent that particular clauses of the Constitution were drafted with natural law principles in mind.74 Under this approach, where clear constitutional provisions do not reflect a sound natural law position, as in the case of slavery in the United States before the 13th Amendment, judges should follow the meaning of the Constitution until the natural law position is properly added to the document.75 Of course, as

74 Michael S. Moore, Do We Have An Unwritten Constitution, 63 S. Cal. L. Rev. 107, 133-37 & n.71 (1989). See also Goldstein, supra note 6, at 2-3, 12-33 (discussing Chief Justice John Marshall's natural law theory of interpretation, and distinguishing it from versions of natural law that embrace some form of non-interpretive review). In her discussion, Professor Goldstein discussed an approach she called "Dworkinism," which she defined as “each generation of American judges is to develop new moral-legal principles (based upon the judges’ personal philosophy).” Id. at 3. As discussed, this approach would embrace some form of non-interpretative review, but it is not clear that it represents a faithful account of Dworkin’s approach to constitutional interpretation. His approach is grounded in interpretation of background principles of justice embedded in the law, or as called by Dworkin, “institutional rights.” Dworkin, Hard Cases, 88 Harv. L. Rev. 1057, 1082 (1975). Such an approach reflects a non-interpretive approach toward prudential considerations.

75 See, e.g., Donald M. Roper, In Quest of Judicial Objectivity: The Marshall Court and the Legitimation of Slavery, 21 Stan. L. Rev. 532 (1969). See also Sanford Levinson, Constitutional
discussed at §§ 8.4.1 & 12.3.3, there can be great disagreement about what version of natural law, if any, any particular framer or ratifier believed. Nevertheless, all of these natural law traditions operated within a similar methodology of judicial interpretation, with slight variations. One of these variations would permit judges to resort to constitutional principles outside those stated in the Constitution to the extent that a case can be made that the framers and ratifiers themselves intended judges to resort to natural law principles outside the written text of the Constitution to supplement it. This variation and other variations are discussed at §§ 12.3-12.4. All of these variations, however, agree that the major provisions of the Bill of Rights and the Civil War Amendments were drafted with the belief that the principles they embodied reflected natural law, as discussed at § 24.1.

No Supreme Court Justice in our history has explicitly adopted the "Platonic Guardian" model of judicial decisionmaking, including no Justice who has adopted a natural law judicial decisionmaking style. The closest a sitting Justice may have come to such an approach is Justice Chase's opinion in the classic 1798 case of Calder v. Bull, a view that was rejected by a majority of the Court. Professor Jefferson Powell has noted about the case, “Chase went out of his way to stress that constitutional argument was not limited to interpretation of the constitutional text: ‘I cannot subscribe to the omnipotence of a state legislature, or that it is absolute and without control; although its authority should not be expressly restrained by the Constitution, or fundamental law.”

Even Chase’s opinion, however, is perhaps best understood as an example of the natural law variation noted directly above at § 12.2.2.3 n.76, with Justice Chase resorting only to natural law principles outside the written text of the Constitution that he believed the framers and ratifiers intended judges to adopt. Professor Powell noted, “Chase expressly based this conclusion on the liberal principle that governmental authority is derived from the consent to the social contract, and that consent to certain governmental actions could never be inferred.” More generally, the natural law tradition of our society has followed the Marshall Court's approach to slavery: if the Constitution has clearly adopted an unsound position from the perspective of natural law, it is up

---

77 3 U.S. 386, 387-89 (1798) (Chase, J., opinion); id. at 395-401 (opinions of Patterson, Iredell & Cushing, JJ.). The case was argued in the absence of Chief Justice Ellsworth.

79 Id. For state court decisions of the same era that take an approach similar to that of Justice Chase, see Suzanna Sherry, Natural Law in the States, 61 U. Cin. L. Rev. 171, 183-96 (1992).
to legislative action, constitutional amendment, or the people's reserved right of revolution, to correct the problem. It may be remembered that Locke’s view was that government “is established by society, and may therefore be disestablished by it. But who is to judge when the government has betrayed its trust to the extent necessary to justify an act of revolution? Locke answers, 'the people.'"80 Under this view, judges should only enforce the natural law principles placed into the Constitution by the framers and ratifiers, or natural law principles that are part of the background principles of justice embedded in the law, with the people's reserved right of revolution perhaps textually recognized by the reservation of other rights “to the people” in the Ninth Amendment, as discussed at § 24.3 nn.20-21.

Natural law judges who reject non-interpretive review will resort to the other kinds of prudential argumentation: (1) the contemporaneous sources of constitutional text, context, and history, (2) the subsequent event sources of practice and precedent, and (3) the mainstream normative concern with whether the decision would advance a particular background principle of justice that the judge believes is embedded in the law. As discussed at § 3.4 nn.93-106, natural law judges reject use of background social policies, believing that balancing policy arguments is appropriate for the legislative and executive branches of government, not the judicial branch. In applying these principles, natural law judges will consider the consequences of the decision in terms of whether the background principle would be advanced. As Professor Dworkin has noted, natural law reliance on principles, but not policies, is perfectly consistent with considering the consequences of a judicial decision, and that decision’s impact on the advancement of those natural law principles.81

As discussed at § 5.4.2, some examples of “mainstream normative” prudential consideration of background moral principles embedded in the law include Planned Parenthood v. Casey’s language regarding “the heart of liberty”; Weber v. Aetna Casualty & Surety Co.’s language regarding “the basic concept of our system that legal burdens should bear some relationship to individual responsibility or wrongdoing”; BMW of North America, Inc. v. Gore’s language regarding grossly excessive punitive damage awards reflecting “basic unfairness of depriving citizens of life, liberty, or property, through the application not of law and legal processes, but of arbitrary coercion”; Moore v. City of East Cleveland’s language regarding the “tradition of uncles, aunts, cousins, and especially grandparents sharing a household along with parents and children”; Griswold v. Connecticut’s example of “a right of marital privacy”; and, as an early example, Chief Justice John Marshall’s Contracts Clause opinion in 1810 in Fletcher v. Peck, which was based “either by general principles which are common to our free institutions, or by the particular provisions of the Constitution.”

Other background moral principles of the Anglo-American common-law tradition include “no person should be permitted to profit from his own wrong” and “persons should behave reasonably under the circumstances,” as noted at § 4.2.3 n.61. As noted at § 7.2.3 n.67, there is the background moral principle that “arbitrary coercion is wrong.” As noted at § 12.3.3 n.136, there is the background moral principle that “where there is a right, there should be a remedy,” and, as noted

---

80 Huntington Cairns, Legal Philosophy from Plato to Hegel 336 (1949), citing John Locke, Second Treatise on Government 240 (1690)

81 Dworkin, supra note 59, at 1204-23.
punishment should be proportionate to the crime. As discussed at § 16.2, the ultimate test of background moral principles in terms of consistency with reason is whether they can be derived from a foundational moral principle of giving each individual “equal concern and respect,” alternatively phrased as “love of neighbor as thyself.”

§ 12.3 Variations in the Natural Law Approach

§ 12.3.1 Summary of the Basic Natural Law Approach

As with the other interpretation styles, before considering variations in the natural law approach it is useful to sum up the basic points of agreement among natural law jurists. The basic sources of constitutional meaning were summarized in a Table appearing at § 5.1. A further elaboration of this Table appeared at Table 6.4.1, which summarized the basic approach of each of the four judicial decisionmaking styles with respect to these basic sources of constitutional meaning. Using these Tables as a backdrop, the following Table 12.3 summarizes the basic natural law approach with respect to each source of constitutional meaning.

Entries listed in boldface in Table 12.3 represent the sources most utilized by natural law jurists, that is, those sources given great weight by natural law judges. Entries listed in italics represent other sources natural law jurists will use, but these sources are typically given lesser weight. Entries underlined in Table 12.3 represent sources underplayed or of limited use by natural law jurists, that is, sources given only some weight. Entries combined with a strike-through mark indicate sources not used by natural law jurists.

</tbody>
</table>
In this Table, both listings of “literal or plain meaning of text” and “purpose” are in boldface because the natural law willingness to consider fully both the “literal” meaning of the text and its “purpose.” All listings for “specific historical intent” and “general historical intent” under both categories “specific historical evidence” and “general historical evidence” are in boldface because of the natural law willingness to consider all equally in cases to which they apply. The listings for “core holdings of precedent” appears in boldface because of the strong natural law respect for precedent and an unwillingness to overrule precedent unless some “special additional reason” is present. The listing of “reasoned elaboration of law” also appears in boldface reflecting the natural law respect for “reasoned elaboration of law,” as discussed at § 12.2.2.2. As discussed at § 12.3.2, however, for a moderate natural law jurist, “reasoned elaboration of law” is not given quite the same weight as the “core holdings of precedent,” and thus should appear in italics.

The listings for “legislative and executive practice” and “social practice” appear in italics, rather than underlined, because of the natural law willingness to consider each of these aspects of practice to determine constitutional meaning, though they are not given the same weight as contemporaneous sources or judicial precedents. The listing for background “social policy” appears with a strike-through mark indicating the natural law rejection of courts resorting to background social policy arguments. The listing of prudential considerations “not so embedded” in the law appears with a strike-through mark indicating the “social contract” version of natural law which has been predominant in our Nation’s history. For a natural law jurist following the Platonic Guardian model of interpretation, the listing for “not so embedded” should appear in italics.

In general, the natural law approach, with its focus on text, purpose, and background principles of justice embedded in the law, is an intermediate approach between the positivist focus on text and purpose (formalism and Holmesian, respectively), and a normative focus on both background principles of justice and social policy (instrumentalism). Thus, there are few cases where the natural law approach is alone in dissent. There are many cases, however, where the natural law approach will reach a result similar to one of the other decisionmaking styles, but will do so based upon its own kind of reasoning. This is particularly true given the great natural law respect for precedent not shared by the other decisionmaking styles. Thus, natural law judges are prone to writing concurring opinions, agreeing with the majority’s result, but for slightly different reasons.

Given the balance on the Court as of the 2004 Term between three Holmesian or formalist Justices (Chief Justice Rehnquist and Justices Scalia and Thomas) and three moderate instrumentalists (Justice Stevens, Ginsburg, and Breyer), such a natural law concurrence may well represent the controlling votes in the case. Under the Court’s approach to precedent, as stated in Marks v. United States, when faced with a fragmented Court, and no majority opinion, lower courts should follow as the “controlling rationale” of the case the opinion of those Justices “who concurred in the judgment on the narrowest grounds.” Since 1986, this has often been a natural law opinion. The joint opinion of Justices O’Connor, Kennedy, and Souter in Planned Parenthood v. Caseaisy is a classic example of this phenomenon. Justice Powell’s approach applying strict scrutiny to a race-

---

based affirmative action program in *Regents of the University of California v. Bakke*, and then concluding that achieving a diverse student body is a compelling governmental interest, is another such example. In *Grutter v. Bollinger*, the Court concluded that it was unnecessary to decide whether Justice Powell’s opinion in *Bakke* represented the controlling vote for purpose of the *Marks* analysis, since the majority decided on its own to adopt Powell’s *Bakke* analysis anyway.

Further, even when natural law Justices join a majority opinion, they may write a concurring opinion that will suggest to a sophisticated reader of Supreme Court opinions a limitation on the majority’s reasoning that could be a controlling factor in later cases. Justices Kennedy and Souter’s concurrence in *Lujan v. Defenders of Wildlife* in a case involving standing, discussed at § 17.3.1.3.A n.395; Justices O’Connor and Kennedy’s concurrence in *Lopez v. United States* in a case involving Congress’ power under the Commerce Clause, discussed at §§ 12.3.2 nn.89-95 & 18.2.5 n.106; and Justice Kennedy’s concurrence in *Kelo v. New London, Connecticut* in a case involving the Takings Clause, discussed at § 22.2 n.52, are three examples of this kind of concurrence.

§ 12.3.2 Extreme versus Moderate Natural Law

Just as there are extreme and moderate formalists, Holmesians, and instrumentalists, there are extreme and moderate natural law jurists. The main point of difference between an extreme and moderate natural law jurist is the extent to which the jurist emphasizes the natural law great respect for precedent, that respect being the special province of natural law jurists, as discussed at § 12.2.2.2.

It is possible in any case that there will be a tension between what the sources of constitutional law other than precedent suggest the answer should be to a constitutional issue, and what the Supreme Court’s precedents hold. Given the great respect natural law judges pay to precedent, this tension between sources and precedent is the most acute for a natural law judge. This is particularly likely to occur for a precedent whose majority was made up, as discussed at §§ 13.1 & 14.2, of formalist-era Justices (1873-1937), Holmesian-era Justices (1937-54), or instrumentalist-era Justices (1954-86). In such a case, the precedent may not reflect how a natural law judge would interpret the Constitution (the natural law era being 1789-1873), making it more likely that a tension may exist.

The clearest recent examples of this tension between judicial precedents and other sources of constitutional law arose in *United States v. Lopez* and *United States v. Morrison*. As Justices

---

Kennedy and O’Connor indicated in their concurrence in *Lopez,* using constitutional law sources other than precedents suggests that Congress overstepped its bounds when it passed the Gun-Free School Zones Act of 1990, relying on the Commerce Clause. Here, “neither the actors nor their conduct has a commercial character, and neither the purposes nor the design of the statute has an evident commercial nexus.” This was further supported by arguments about federalism embedded in the structure of our Constitution, particularly the theory that “two governments accord more liberty than one requires . . . two distinct and discernable lines of political accountability: one between the citizens and the Federal Government; the second between the citizens and the States.” It was also supported by the fact that “education is a traditional concern of the States.”

On the other hand, as Justices Kennedy and O’Connor pointed out, “*Stare decisis* operates with great force in counseling us not to call into question the essential principles now in place respecting the congressional power to regulate transactions of a commercial nature.” Thus, as their concurrence indicated, “deference given to Congress has since been confirmed [and decisions should not be] called into question” when extending the Commerce Clause to uphold civil rights laws with an economic nexus, such as *Katzenbach v. McClung,* which involved banning racial discrimination at public restaurants, or criminal laws with an economic nexus, such as *Perez v. United States,* which involved extortionate credit transactions. Thus, Kennedy and O’Connor “joined the Court’s opinion with . . . observations on what I conceive to be its necessary though limited holding.”

In his dissent in *Lopez,* Justice Souter gave even greater respect to precedent than did Justices O’Connor and Kennedy. Justice Souter observed that for the last 50 years the Court had deferred to rationally based congressional judgments regarding whether Congress was regulating an activity affecting interstate commerce. Applying that deferential standard here would lead to a conclusion that Congress’ exercise of power should be upheld, despite the qualms one might have from text, context, and history arguments alone.

90 *See id.* at 576, 580.

91 *Id.* at 574.

92 *Id.* at 573-74.

95 *Lopez,* 514 U.S. at 568.

96 *Id.* at 603-04, 608 (Souter, J., dissenting).

97 *Id.* at 604-07, 614-15 (concern about abandoning recent results in Commerce Clause cases).
On balance, one can say that a judge might have an extreme natural law view of precedent or a moderate natural law view. Under the extreme view, the judge treats relatively equally as a “gloss on meaning” the precedent’s “core holding” and any “general reasoning” in the precedent that supported the holding. The judge is predisposed to follow that general reasoning as part of “reasoned elaboration of the law.” A moderate view treats the precedent as a “gloss on meaning,” but primarily to the extent of the precedent’s core holding. It is primarily the core holding, therefore, that has, in Dworkin terminology discussed at § 12.2.2.2, the “gravitational force” of precedent.

In *Lopez*, Justice Souter adopted the extreme natural law view of precedent, following the general reasoning of the instrumentalist-era precedents which gave virtual plenary power to Congress to regulate under the Commerce Clause any activity, whether economic or not, that affects interstate commerce, although all the Commerce Clause cases of the instrumentalist era involved economic activity, as noted at § 18.2.4 nn.93-99. This view is broader than most natural law judges would likely find absent those precedents. For example, while Chief Justice Marshall’s opinion in *Gibbons v. Ogden* gave the federal government wide power to regulate under the Commerce Clause, it is clear that Marshall assumed that there were some activities “which are completely within a particular state, which do not affect other states, and with which it is not necessary to interfere, for the purpose of executing some of the general powers of the government.”98 Because over 40 States already had criminal laws outlawing possession of firearms around schools, including Texas where the case arose,99 *Lopez* was a classic case where no federal “interference” was “necessary.”

Despite this conclusion from *Gibbons v. Ogden*, from an extreme natural law perspective it is appropriate to follow the general reasoning in a later pattern of precedents as part of reasoned elaboration of the law, even if those precedents lead to a different result today than would have been reached 200 years ago. Furthermore, it is appropriate to follow the general reasoning of such precedents even if one disagrees with those precedents’ analysis of text, context, history, and practice, unless one of the five special reasons, noted at §§ 7.3.3 & 12.2.2.2 n.67, suggests that the precedent should be overruled. During his confirmation hearing, Justice Souter indicated that while on the New Hampshire Supreme Court he had voted to uphold precedents with which he disagreed and that the rule that the Court should ordinarily adhere to its precedents “is a bedrock necessity if we are going to have in our judicial systems anything that can be called the rule of law.”100

In contrast to this view, Justices O’Connor and Kennedy held in *Lopez* a moderate natural law view of precedent. Under this view, they were willing to follow only the core holdings of the instrumentalist-era cases, not their general reasoning. Thus, they noted that *Katzenbach v. McClung*, which upheld congressional power to pass civil rights law regarding economic transactions, or

98 22 U.S. (9 Wheat.) 1, 195 (1824).

99 See *Lopez*, 514 U.S. at 551, 581.

Perez, which upheld congressional power over economic criminal activities, were still good law. For cases involving regulation of truly economic activity, Congress still has virtually plenary power to regulate. However, for cases that do not involve regulation of economic activity, Justices O’Connor and Kennedy were unwilling to extend the general reasoning in McClung or Perez to cover the Lopez situation, which involved the non-economic issue of possession of a gun near a school.

The same split between Justice Souter and Justices O’Connor and Kennedy occurred in United States v. Morrison.101 Again, Justice Souter followed the instrumentalist-era precedents’ general reasoning, which permitted Congress to regulate any activity under the Commerce Clause that has a significant affect on interstate commerce. Based upon congressional findings regarding the economic impact of violence against women, Justice Souter supported congressional power to pass the Violence Against Women Act of 1994.102 Once again, Justices O’Connor and Kennedy took a moderate approach to precedent, following the core holdings of the instrumentalist-era cases, which upheld the power of Congress to ban economic criminal activity, as in Perez, but joined the Court’s majority opinion which concluded that regulation of noneconomic, criminal conduct, an issue not directly before the Court in the instrumentalist-era cases, could not be justified under Congress’ Commerce Clause power.103

Even if there had been a case on point, Justices O’Connor and Kennedy probably would have called for that case to be overruled. One ground on which natural law judges will vote to overrule precedent is based on the “special circumstance” that such a case would be “substantially wrong,” a conclusion they have applied most forcefully in cases of structural issues of separation of powers, federalism, checks and balances, and judicial review, as discussed at § 7.3.3.4. For Justices O’Connor and Kennedy, the “Constitution requires a distinction between what is truly national and truly local.”104 These cases are all discussed at §§ 18.2.4-18.2.5.

A similar difference among Justices O’Connor, Kennedy, and Souter has also appeared in cases involving the criminal justice system. Typically, where these three Justices have disagreed in criminal cases, it is because Justice Souter has chosen, as in Lopez and Morrison, to follow the general reasoning of instrumentalist-era precedents, which are more favorable to criminal defendants’ rights. In contrast, Justices O’Connor and Kennedy, while not overruling the core holdings of those cases, have distinguished the prior cases, as in Lopez and Morrison, to and reach a result more consistent with their understanding of constitutional text, context, history, and practice, which is often more favorable to the government. A sampling of these cases are discussed at § 23.2.1.1 nn.95-98 & 23.2.1.2.D nn.147-55.

§ 12.3.3  Conservative versus Liberal Natural Law

As with the other decisionmaking styles, there can be a difference between a conservative or liberal version of natural law. Assuming the jurist adopts the “social contract” vision of natural law that rejects non-interpretive resort to background principles of justice not embedded in the law, the difference between conservative versus liberal natural law is manifested most in a different view of which natural law tradition most affected the framing and ratifying of the Constitution. Naturally, a judge will view the text, context, and history of the Constitution differently depending upon which natural law tradition the judge believes the framers and ratifiers predominantly held.

As discussed at § 8.4.1, in general there were two competing natural law approaches in the 18th century to which the framers and ratifiers would have turned for guidance. One approach was the classic/Christian natural law tradition that developed from Aristotle, through Aquinas, and affected such writers as Blackstone and the mature Edmund Burke. As described by McClellan, this "older and once dominant traditional natural law, encompassing the classical and Christian tradition, subscribed to the view that a Divine Being, ruler of the universe through an eternal and universal law, is the supreme lawgiver, and that natural law is an emanation of God's reason and will."105 Conservative natural law jurists tend to be drawn to this 18th-century natural law tradition, and thus are more likely to conclude that this approach substantially influenced the framers and ratifiers of the Constitution. Nevertheless, there are some “progressive” religious natural law thinkers who use religious traditions and passages in religious works regarding support and care for the poor and love of all individuals equally to support a progressive view of the principles in that religious tradition.

The second natural law tradition of the 18th century was the Enlightenment tradition of the English, Scottish, and French Enlightenments. Under this approach, rights derive from man and man’s reason. In the Anglo-American context, rights emerge from the common-law process of judicial, legislative, and executive interaction. This is often called the “natural rights” or “common law” approach. According to McClellan, the Enlightenment tradition is "characterized by its rationalism, secularism, and radicalism . . . . Highly individualistic, [this tradition] rejected the divine origin of natural law, exalted the autonomy of human reason, and exhorted the mind of man to look for a law of nature in the secularized state of nature."106 Liberal and centrist natural law jurists tend to be drawn to this 18th-century natural law tradition, and thus are more likely to conclude that this approach substantially influenced the framers and ratifiers of the Constitution. Nevertheless, there are some “libertarian” natural law thinkers who use Locke’s idea that government was formed to protect “life, liberty, and property” as support for a conservative libertarian agenda.

As noted at § 8.4.1 nn.106-11, the classic/Christian and Enlightenment natural law traditions share many aspects of the common-law methodology of judicial decisionmaking. As discussed by Professor Young, the 18th-century and 19th-century natural law judicial decisionmaking tradition utilized a wide range of arguments regarding constitutional interpretation, including consideration

105  McClellan, supra note 3, at 70.

106  Id. at 71. See Suzanna Sherry, The Sleep of Reason, 84 Geo. L.J. 453, 470 (1996) (noting that an “emphasis on reasoned deliberation . . . pervades the thought of the founding generation.”).
of constitutional text and purpose, constitutional structure, the history of the framing and ratifying period, subsequent judicial precedents, and subsequent legislative and executive practice under the Constitution which was held to constitute a gloss on meaning. As Professor Young stated, "The first point is that none of [these] generally accepted modes of constitutional argument are ruled out."  

Professor Young noted that both of these traditions rejected the "formalist" version of original intent represented by Justice Scalia or Raoul Berger, and the judicial restraint "Holmesian" deference of Chief Justice Rehnquist or Judge Robert Bork. So, too, both traditions reject instrumentalist functional focus, limited concern with analytic requirements, and use of social policy considerations. Despite the similarities between the two natural law traditions, and their uniform rejection of formalist, Holmesian, and instrumentalist styles of interpretation, there are differences between the classic/Christian natural law approach to which Burke is related, and the Enlightenment natural rights approach. These differences affect how conservative natural law jurists, who more likely embrace the classic/Christian form of natural law, differ from liberal natural law jurists, who more likely embrace the Enlightenment natural law approach.

As noted at § 8.4.1 nn.85-105, the principal difference between the two traditions concerns which natural law principles are viewed as incorporated into the Constitution. Stated briefly, the Enlightenment project emphasized four central goals of liberalism: "civil peace, material prosperity through economic growth, scientific progress, and rational liberty." In contrast, the natural law principles that flowed from Burke, Blackstone, and others in the 18th-century classic/Christian natural law tradition were more elitist, aristocratic, and conservative. Professor Stephen Presser noted, "The conservatives, as would Burke in 1791, conceived of the state as an organic entity, with hierarchical control, and a single set of correct answers to political problems to be elaborated and pronounced from the top down. Sovereignty in England, in other words, rested not in the people but in the 'holy trinity' of crown, lords, and commons.

This difference is reflected in a second difference between these two natural law traditions. Under the Enlightenment tradition, "The Lockean and Madisonian political and constitutional philosophy of the protection of inalienable human rights must be central to the originalist interpretation of the American constitutional enterprise." Regarding the classic/Christian tradition, Professor Presser noted, "In the Declaration of Independence, of course, natural law was cast in the form of natural

---

108 Id. at 625-42, 698-706.
rights to life, liberty, and the pursuit of happiness which governments were formed to perfect, pursuant to Locke's Second Treatise of Government. In the hands of the first federal judges, however, natural law was more about circumscribing the actions of government to protect traditional rights of property and person than it was about the creation of expansive new individual rights. This difference is reflected most prominently in the variations between early Federalist judges, such as Justice Chase, who decided cases more from the classic/Christian natural law tradition, versus Chief Justice Marshall, who decided cases more from the Enlightenment natural law tradition.

As discussed at § 8.4.1 nn.62-84, a third difference concerns whether the framers and ratifiers' views were based more on Enlightenment reasoning and commitment to "rational liberty" and "progressive use" of tradition, or based more on classic/Christian use of custom, tradition, practice, and precedent to limit change in the law, as in Blackstone or Burke. Reflecting the potential difficulty in pigeon-holding any particular jurist in one tradition or the other, Justice Story's natural law philosophy has been described as "two-sided: one half modern in the style of Hobbes, Locke, and even Rousseau; the other half classical and Christian, in the tradition of Cicero, Aquinas, Hooker, and Burke. [Story] seems unaware of the basic conflict between natural law and natural rights."

A fourth difference between the two traditions concerns whether only natural law principles placed into the Constitution by the framers and ratifiers can guide constitutional interpretation, or whether natural law principles outside the Constitution can nevertheless form a backdrop to constitutional interpretation. Because of the Enlightenment concept of the social contract and government deriving its legitimacy from the consent of governed, the Enlightenment tradition is to restrict judges to using natural law principles only to the extent those principles were adopted by the framers and ratifiers. The best evidence for such adoption would be explicit language, like that used in the First Amendment, Due Process Clause, and Equal Protection Clause. However, it is at least possible, consistent with the social contract approach, to argue that the framers and ratifiers themselves intended judges to resort to natural law principles outside the written text of the Constitution, and that this understanding was part of the society's social contract, as noted at § 12.2.2.3 n.76. This social contract approach is embedded, of course, in the Enlightenment view that each generation has a natural right of revolution against unjust regimes. That right is discussed at § 24.3 n.20.

Perhaps because England has no written constitution, or because the classic/Christian tradition assumes that natural law is an emanation of God’s will and reason and is not dependent on a social contract, the classic/Christian tradition, at least as represented by Burke, appears more receptive to the argument that judges may occasionally supplement the natural law principles adopted by the framers and ratifiers with natural law principles derived from other sources, including religious ones.

113 See id. See also Goldstein, supra note 6, at 78-84 (also discussing Justice Chase’s versus Chief Justice Marshall's interpretation theories).

114 James McClellan, Joseph Story's Natural Law Philosophy, 5 Benchmarks 85, 86 (1993).

For example, such an insight, that judges have a pre-existing duty to God, appears to lie behind former Alabama Supreme Court Chief Justice Roy Moore’s justification for his refusal in 2003 to order a Ten Commandments monument to be removed from the Alabama Supreme Court building.

However, as Professor Young noted, Burke’s use of tradition to shape judicial decisionmaking is restricted to “something internal to a tradition,” though perhaps at an “aspirational, highly general” level.116 This position suggests that the Burkean approach, at least as Young envisioned it, agreed with the Enlightenment approach that judges should remain faithful to the moral concepts of the framers and ratifiers elaborated in the traditional common-law methodology. Professor Lee Strong has made the same point that the classic/Christian tradition commits the judge to an “original intent” interpretive methodology,117 although Professor Strong confused the Enlightenment natural right of revolution, § 24.3 n.20, with a “non-originalist” interpretive methodology.

Another variation of the classic/Christian tradition is based on Augustine’s views of man as “fallen from grace,” and thus limited in ability to advance properly principles of “reason” and “love.” Professor Graham Walker has argued that the framing and ratifying generation shared this perspective on law. Professor Walker noted that an individual holding these views would counsel judicial restraint in decisionmaking since “if all interpreters partake of a morally vitiated human nature themselves, then responsible judges will be modest, wary, and self-critical as they interpret the Constitution—especially since their interpretive decisions affect many other people.”

Under any of these versions of what the framers and ratifiers intended, a natural law approach does not commit the judge to the view that the concepts embedded in the Constitution have a static content that, when applied to concrete specific problems, have an unchanging meaning. That would not have been the understanding that any drafter would have had under an Enlightenment, Burkean, or Augustinian view. As Professor David Richards has stated from an Enlightenment perspective, "No great political theory, including Locke's, is the last word on its own best interpretation, and critical advances in political theory may enable us better to understand and interpret the permanent truths implicit in the theory and to distinguish these from its lapsing untruths."119 From a Burkean perspective, Professor Ernest Young noted that “the limits of human rationality require a constitution that can adapt in response to unforeseen difficulties, changed circumstances, and outright mistakes that any human endeavor will inevitably entail.”120 From an Augustinian perspective, Professor Walker noted that constitutional concepts are “timeless principles of human nature and political order,” but, with respect to the framers and ratifiers, “[I]ke any of us, their immediate preferences

116 Young, supra note 5, at 689.

119 Richards, supra note 115, at 13.

120 Young, supra note 5, at 668-69.
were sometimes at odds with, and certainly did not exhaust, their aspirations.”

In short, a person who wishes, consistent with a natural law tradition to apply consistently a general concept in which the individual believes, may have to adjust one or more specific views which currently are not consistent with that general concept. Through this process, a dynamic is created whereby over time more of an individual's specific views will be a reflection of reasoned elaboration of general moral concepts applied to current social realities, rather than specific views merely being the product of the individual's past experiences, unthinking adherence to tradition, idiosyncratic preferences, or prejudice. Under this view, while general concepts embedded in the Constitution do not change, and thus the “living” or “evolving” Constitution is not based even in part on a mere reflection of contemporary social policies, as it is in part for an instrumentalist, our understanding of what those general concepts mean when applied to specific fact situations can change over time. This is similar to the view that the principles in foundational religious documents, like the Bible, do not change, but that our understanding of the content of those principles can change, such as the difference between traditional and progressive religious understandings regarding slavery, anti-Semitism, and whether the earth moves around the sun, discussed at § 16.1.

Further, from a natural law interpretation perspective, the framers and ratifiers would wish later generations to give that concept the more enlightened and progressive reasoning, since they were not putting into the Constitution their own fixed, subjective, specific views about some matter, but rather were placing into the Constitution broad natural law principles whose content they believed was independent of their specific views, and which would better be discovered over time through the application of reason. After all, the framers were not “positivists,” like formalist or Holmesians, who would believe, consistent with “positivism,” discussed at § 2.3-2.4, that their task consisted entirely of placing their fixed preferences into the Constitution. Instead, as responsible believers in natural law, the framers would have been somewhat more humble than those who support a fixed, static Constitution give them credit concerning whether their current reasoning at the time of ratification fully reflected a complete understanding of the natural law principles in which they believed. Of course, an Enlightenment perspective is more likely than a Burkean or Augustinian perspective to embrace fully such an evolved understanding of the general intent lying behind such a natural law concept, since the Burkean perspective is tied more closely to evolution based on traditions, not pure reason, and the Augustinian perspective is also wary of the competencies of human reason, as noted at § 12.3.3 n.118.

Such an evolved understanding of “liberty” and “equality” is discussed at §§ 16.1-16.2. As discussed there, this evolved understanding from both the classic/Christian and Enlightenment traditions ends up at the same point, with a foundational principle of “equal concern and respect” for all individuals, alternatively phrased as “love of neighbor as thyself.” Thus, while the 18th-century classic/Christian and Enlightenment traditions did have some substantive disagreements over the content of natural law, those disagreements gradually tend to disappear over time as each tradition moves into its more evolved understanding of the demands of reason and truth.

---

121 Walker, supra note 118, at 154-56.

Justice Souter addressed the point regarding an evolving understanding of principles during his confirmation hearing in 1989. He noted, "Principles don't change but our perceptions of the world around us and the need for those principles do." Justice Kennedy reflected a similar point in 2003 in *Lawrence v. Texas*, which held unconstitutional laws criminalizing consensual sodomy. He noted for the Court, "Had those who drew and ratified the Due Process Clause of the Fifth Amendment or the Fourteenth Amendment known the components of liberty in its manifold possibilities, they might have been more specific. They did not presume to have this insight. They knew times can blind us to certain truths and later generations can see that laws once thought necessary and proper in fact serve only to oppress. As the Constitution endures, persons in every generation can invoke its principles in their own search for greater freedom."

Professor Jefferson Powell has noted that this "progressive" mode of reasoning dependent on judicial "tradition," was shared by James Madison on the Republican side of early American politics, and by Alexander Hamilton and Chief Justice John Marshall on the Federalist side. Although some on the Republican side, including Jefferson, adopted arguments related to a plain meaning approach that viewed "constitutional propositions [as] deductions from static principles" from which "no argument from subsequent precedent, practice, or experience could change," as discussed at § 7.1, that approach to interpretation was rejected by early and continuous Supreme Court practice. Instead, the common-law methodology of Madison, Hamilton, and Marshall won, based on a Constitution "adapted to the various crises in human affairs," as noted at § 4.1 nn.8-12.

From a natural law perspective, rather than a formalist perspective, the critical purpose of a Constitution is not to be “anti-evolutionary,” as Justice Scalia has stated, cited at § 9.2.2.1 n.37, but rather to be “anti-majoritarian.” The point of natural law provisions in a Constitution is to remove certain decisions from the majoritarian democratic process based on the natural rights that individuals have to be free from majoritarian prejudices. As Professor Chemerinsky has noted:

[T]he framers openly and explicitly distrusted majority rule; virtually every government institution they created had strong anti-majoritarian features. Even more importantly, the Constitution exists primarily to shield some matters from easy change by political majorities. The body of the Constitution reflects a commitment to separation of powers and individual liberties (for example, no ex post facto laws or bills of attainder, no state impairment of the obligation of contracts, no congressional suspension of the writ of habeas corpus except in times of insurrection). Furthermore, as Justice Jackson eloquently stated:

The very purpose of a Bill of Rights was to withdraw certain subjects from the vicissitudes of political controversy, to place them beyond the reach of majorities and officials and to establish them as legal principles to be applied by the courts. One's right to life, liberty, and property, to free speech, a free press, freedom of worship and assembly, and other fundamental rights may not be submitted to vote: they depend on the outcome of no

123  *See Garrow, supra* note 38, at 52 (reporting on Souter’s comment at his confirmation hearing); 539 U.S. 558, 572, 578-79 (2003) (Kennedy opinion for the Court in *Lawrence v. Texas*).

124  *See Powell, supra* note 78, at 92-100, 117.
As discussed at § 15.4.1 nn.80-81, from the perspective of natural law, the protection of individual rights to liberty and equality are paramount. As stated in the Declaration of Independence, it is “to secure these rights” that “governments are instituted among men.” Thus, a pluralistic democratic society is viewed not as an end-in-itself, but rather as the best means by which to ensure that society protects and advances the set of universal principles of justice. From that perspective, it would be counterproductive to adopt a Constitution based upon a “static” model of interpretation, since that model would allow for moral progress only when the democratic majority decided to adopt the more enlightened interpretation of the natural law principle. Yet, the whole point of enacting that natural law constitutional provision was to remove that decision from democratic decisionmaking.

For example, when judges, post-1954, have adopted more enlightened interpretations of equal protection and due process to create advances in race relation cases, discussed at § 26.2.1.1.D; gender discrimination cases, discussed at § 26.3.1.2; and cases involving sexual orientation, discussed at §§ 26.4.6 & 27.3.4.2, they have acted consistent with a natural law understanding of those concepts. For the Court to have sat on the sidelines and hoped for the legislative and executive processes alone to deal with those matters would have been a betrayal of what those natural law principles were about. For the most part, the Court did sit on the sidelines on those issues during the formalist and Holmesian eras, from 1873-1954, with little moral progress made on those issues during that time. The major exception to this lack of progress was women being granted the right to vote in 1920, which was the product of an enormous and sustained social movement, noted at § 20.1.1.3 n.27, and not equaled with respect to the Equal Rights Amendment.126

Admittedly, from the “positivist” perspective of formalism and Holmesianism, such a view of judicial review raises clear “counter-majoritarian” difficulties, as discussed in the famous book by Professor Alexander Bickel, The Least Dangerous Branch, in 1962.127 Even from an instrumentalist perspective, which is more committed to developing processes to advance participatory democracy, rather than adopting universal natural law principles of justice, as discussed at §§ 15.4.1 nn.72-76 & 15.4.3 nn.92-96, the “counter-majoritarian” nature of judicial review can still be a "central obsession of modern constitutional scholarship," unless judicial review is linked to aiding participatory governance.128 For countries increasingly reflecting over the past 20 years modern elections.125

126 On the race, gender, and sexual orientation cases generally during the 20th century, see William N. Eskridge, Jr., Some Effects of Identity-Based Social Movements on Constitutional Law in the Twentieth Century, 100 Mich. L. Rev. 2062 (2002).

127 Alexander Bickel, The Least Dangerous Branch 16 (2d ed. 1986).

natural law models of governance, such as the Western European countries and the United States, discussed at § 15.4.1 nn.77-81 (United States) & 16.1 text following n.5 (Europe), judicial review based on such universal natural law concepts is not so problematic, discussed at § 17.1.4 nn.65-70.

In sum, the natural law methodology consists of engaging in reasoned elaboration of the moral and political concepts placed into the Constitution by the framers and ratifiers, while balancing that elaboration against the demands of constitutional text, context, history, legislative and executive practice, and precedents – that balancing critical, for example, in modern substantive due process doctrine, discussed at § 27.3.4. While each judge is theoretically operating from the same historical data, considerations of general interpretive bias, discussed at § 4.4.1, suggest that more conservative judges are more likely to conclude the framers and ratifiers were driven by classic/Christian/Burkean concepts, while more liberal judges are more likely to conclude the framers and ratifiers were driven by Enlightenment concepts. While the discussion at §§ 16.1-16.2 points out that the evolved version of both traditions agree upon moral principles, and thus any disagreement between the two should disappear over time, until that evolved version of each is accepted, differences between traditional classic/Christian natural law and traditional Enlightenment natural law will continue to affect doctrinal outcomes, based upon which tradition the judge believes the framers and ratifiers adopted.

For example, one difference between the classic/Christian and Enlightenment natural law traditions was addressed by the Supreme Court in Alden v. Maine.129 This case involved the question of what sovereign immunity rights states were intended to have upon entering into the constitutional system of governance. As discussed in Justice Souter’s opinion, there were two 18th-century theories of sovereignty, what Souter called the “natural law” approach (reflecting the classic/Christian natural law tradition), and the “common law” approach (reflecting the Enlightenment social contract/common law tradition).130 The classic/Christian natural law tradition adopted a strong theory of sovereign immunity, based upon the King, or Pope, as sovereign, and thus not subject to suit without consent. For Luther, any notion of Papal sovereignty over temporal matters was transferred to the state. As has been noted, "By most accounts, the idea of the sovereign state, an entity exercising 'supreme legitimate authority within a [defined] territory,' grew out of the Protestant Reformation.”131

In contrast, the fully developed Enlightenment theory of the social contract rested sovereignty on common law grounds, which could be limited by later enacted statutes. However, some early Enlightenment thinking, like that of Hobbes or Locke, clearly adopted strong state sovereign immunity notions. Thus, as Justice Souter noted, while Hobbes and Locke rejected religious grounding for natural law, and placed rights in the secular concept of the consent of the governed, they nonetheless retained in their writing the strong theory of state sovereign immunity typical of the classic/Christian natural law tradition. Only in the 18th century, with the more fully developed Enlightenment political philosophy of Montesquieu and others regarding separation of powers and

130 Id. at 763-64 (Souter, J., joined by Stevens, Ginsburg & Breyer, JJ., dissenting).

checks and balances, did the full common law approach to sovereignty emerge.\textsuperscript{132} Thus, Hobbes or Locke do not reflect the well-developed Enlightenment position on sovereign immunity.

Looking over the historical evidence, both at the time of ratification, and legislative, executive and judicial practice soon thereafter, Justice Souter concluded that the framers and ratifiers of the Constitution had more in mind the common law approach, based upon a strong social contract/Enlightenment/common law commitment to natural law. As Justice Souter noted:

There is almost no evidence that the generation of the Framers thought sovereign immunity was fundamental in the sense of being unalterable. Whether one looks at the period before the framing, to the ratification controversies, or to the early republican era, the evidence is the same. Some Framers thought sovereign immunity was an obsolete royal prerogative inapplicable in a republic; some thought sovereign immunity was a common law power defeasible, like other common law rights, by statute; and perhaps a few thought, in keeping with a natural law view distinct from the common law conception, that immunity was inherent in a sovereign because the body that made a law could not logically be bound by it. Natural law thinking on the part of a doubtful few will not, however, support the Court's position.\textsuperscript{133}

Justice Souter also noted that the American Colonies did not enjoy sovereign immunity, that being a privilege understood in English law to be reserved for the Crown alone. He stated:

Several colonial charters, including those of Massachusetts, Connecticut, Rhode Island, and Georgia, expressly specified that the corporate body established thereunder could sue and be sued. Other charters were given to individuals, who were necessarily subject to suit. If a colonial lawyer had looked into Blackstone for the theory of sovereign immunity, as indeed many did, he would have found nothing clearly suggesting that the Colonies as such enjoyed any immunity from suit. "[T]he law ascribes to the king the attribute of sovereignty, or pre-eminence," said Blackstone, and for him, the sources for this notion were Bracton and Acts of Parliament that declared the Crown imperial. It was simply the King against whom "no suit or action can be brought ... even in civil matters, because no court can have jurisdiction over him." If a person should have "a just demand upon the king, he must petition him in his court of chancery, where his chancellor will administer right as a matter of grace . . . ."\textsuperscript{134}

Supporting Justice Souter’s view, there is plenty of evidence that many framers and ratifiers, apart from Hamilton, Madison, and Marshall, believed the Constitution did not grant states any sovereign immunity from individual lawsuits in federal courts.\textsuperscript{135} Further, this approach to sovereign immunity

\begin{footnotes}

\footnotetext{133}{\textit{Id.} at 764.}

\footnotetext{134}{\textit{Id.} at 764-66 (citations omitted).}

\end{footnotes}
reflects an analytically consistent approach that meshes well with a range of background natural law principles, such as “where there is a right, there must be a remedy.” ¹³⁶

On the other hand, there is some evidence, cited by Justice Kennedy in his opinion, supporting the view that the framers and ratifiers of both the original Constitution, and the later 11th Amendment, had more in mind the classic/Christian natural law approach regarding state sovereign immunity.¹³⁷ Indeed, as Justice Souter acknowledged, this is consistent with Hobbes and Locke’s early Enlightenment natural law approach, and is not completely inconsistent with statements made by Hamilton, Madison, and Marshall during the ratification debates that states would retain some sovereign immunity,¹³⁸ although each of their statements tended to support the limited common law/Enlightenment kind of immunity, not the strong classic/Christian kind, as discussed at § 17.2.4.3 nn.242-46. Respect for the principle that “where there is a right, there must be a remedy” also appears in Justice Kennedy’s approach. Justice Kennedy noted in Alden that individuals can bring private actions for injunctive relief against state officials charged with implementing state programs as authorized under Ex parte Young, as discussed at § 17.2.4.2, and that in “ratifying the Convention, the States consented to suits brought by other States or by the Federal Government [and] Congress may authorize private suits against nonconsenting States pursuant to its § 5 enforcement power.” ¹³⁹

It is important to note that the focus of this analysis is not on which natural law approach, if any, the Justices believe is most valid. The relevant question is what was the natural law approach favored by the framers and ratifiers of the Constitution and the 11th Amendment. As Justice Kennedy noted in Alden, “[T]he contours of sovereign immunity are determined by the founders’ understanding, not by the principles or limitations derived from natural law.” ¹⁴⁰

This split between Justices Kennedy and Souter has been played out in a sequence of cases involving the 11th Amendment and related issues of state sovereign immunity.¹⁴¹ In each of these cases, Justice Kennedy, who is more conservative, has adopted a result consistent with the classic/Christian view on sovereignty, while Justice Souter, who is more of a centrist, has adopted the social contract/Enlightenment view. Justice O’Connor, who is more conservative than Souter, has joined

¹³⁷ *Id.* at 713-27 (Kennedy, J., for the Court).

¹³⁹ *Id.* at 755-57 (Kennedy, J., for the Court), citing *Ex Parte Young*, 209 U.S. 123 (1908)).

¹⁴⁰ *Id.* at 734 (Kennedy, J., for the Court).

with Justice Kennedy to form a 5-Justice majority for his views in each of these cases. Since Justice Kennedy’s approach toward state sovereign immunity is consistent not only with classic/Christian doctrine, but with the early Enlightenment doctrines of Hobbes and Locke, and is not completely inconsistent with statements made during the ratification debates by Hamilton, Madison, and Marshall, it is perhaps not surprising that Justice O’Connor would join with Justice Kennedy in these cases, particularly given her predisposition in favor of states’ rights, discussed at § 12.4.2.

This is true even though the mature Enlightenment position would agree with Justice Souter. When Justices Kennedy or O’Connor adopt a position consistent with the classic/Christian tradition, it is almost inevitably because some aspect of the Enlightenment tradition also supports that result. Where the classic/Christian and Enlightenment traditions are on opposite sides of a case, as with abortion rights in Casey, Justices O’Connor, Kennedy, and Souter usually opt for the Enlightenment view. Further, as discussed § 16.2.3, given the fact that the evolved understanding of both the classic/Christian and Enlightenment traditions lead to the same ultimate conclusion, eventually there should not be any split among natural law Justices in terms of the demands of natural law. As noted at § 16.4, the evolved natural law understanding of immunity would support Justice Souter’s views. As noted at § 17.2.4.3, the best historical understanding of the framers and ratifiers’ views on sovereign immunity also supports Justice Souter’s views.

Further discussion of the 11th Amendment, including the views of formalist, Holmesian and instrumentalist judges, appears at § 17.2.4.2. As a general matter, formalists and Holmesian judges are predisposed to adopt a strong theory of state sovereign immunity because they adopt positivist theories of law where the law’s force derives from the will of the sovereign, which can consent to being sued or not. Thus, as Justice Souter noted in Alden,142 “Justice Holmes said so expressly: ‘A sovereign is exempt from suit, not because of any formal conception or obsolete [natural law] theory, but on the logical and practical ground that there can be no legal right as against the authority that makes the law on which the right depends.’” On the other hand, the liberal instrumentalist preference for protecting individual rights against the state has meant that the instrumentalist position is to give a limited reading to the 11th Amendment and related theories of sovereign immunity.143

Views about the Establishment Clause also reflect variations in a natural law approach to the Constitution. The Enlightenment/common law view is reflected in Jefferson’s famous reference to a “wall of separation between church and State,”144 and in the views of James Madison and others at the beginning of our constitutional history that any official endorsement of religion can impair

142 527 U.S. at 796 (Souter, J., joined by Stevens, Ginsburg & Breyer, JJ., dissenting).

This approach underlaid Justice O’Connor and Souter’s adoption in *Lee v. Weisman* of the endorsement test to determine violations of the Establishment Clause. Another application of this approach to the Establishment Clause occurred in the case of *Santa Fe Independent School District v. Doe*. The traditional classic/Christian natural law view is predictably much more accommodating to expressions of religious faith, perhaps concluding that “government could promote a generalized or nondenominational Christianity, so long as it did so in a manner that tolerated non-Christian religions.” As discussed at § 32.1.4, an evolved understanding of both the Enlightenment and classic/Christian traditions would adopt a separation of church and state doctrine along the lines of the endorsement test propounded by Justices O’Connor and Souter.

A Justice viewing the framers and ratifiers as holding a balanced view between the traditional classic/Christian view of accommodation and the traditional Enlightenment/common law view of no endorsement of religion would likely adopt an intermediate approach between these two outcomes – like the no “coercion” or “proselytizing” test propounded by Justice Kennedy in *Lee v. Weisman*. In *Weisman*, Justice Kennedy concluded that a nondenominational prayer at a high school graduation would involve coercion, rejecting the formalist argument that students do not have to attend graduation and thus no coercion is involved. Justice Kennedy stated, “The argument lacks all persuasion. Law reaches past formalism. And to say a teenage student has a real choice not to attend her high school graduation is formalistic in the extreme.” This approach is also reflected in the writings of Professor Michael McConnell, who is now a Tenth Circuit Court of Appeals Judge.

With respect to the other decisionmaking styles, the standard instrumentalist position on the Establishment Clause is even more insistent on a rigid separation of church and state than represented by the endorsement test. This was noted at § 4.4.1, and is discussed at § 32.1.2.4. In general, formalist and Holmesian judges share the accommodationist approach to the Establishment Clause based upon their view that this approach is consistent with the specific intent of the framers.

---

146  505 U.S. at 612-26 (Souter, J., joined by Stevens, J., & O’Connor, J., concurring).

and ratifiers, and the Holmesian preference for deference to government.\textsuperscript{151} Thus, despite not adopting a classic/Christian mode of reasoning, application of this approach would be consistent with the results reached by the dissent in \textit{Santa Fe Independent School District v. Doe}.\textsuperscript{152} And, for Justice Thomas, he may share some sympathy for the classic/Christian mode of reasoning anyway, as noted at § 9.4.

Views about contract and property rights, critical for Contracts Clause and Takings Clause analysis, are also influenced by which natural law tradition the Justice believes the framers and ratifiers held. Similar to the issue of state sovereign immunity, the early Enlightenment approach of John Locke, the classic/Christian tradition of writers like William Blackstone, and the views of some of the early Justices on the Supreme Court, including John Marshall and Joseph Story, have a similar position – strongly supportive of individual contract and property rights.\textsuperscript{153} The later Enlightenment/common law approach placed less emphasis on individual property rights, and more emphasis on the ability of the state to regulate property and contract matters.

For example, it has been noted that while “John Locke stressed the critical importance of private property rights, . . . [p]rotection of private rights . . . has never been an absolute in the U.S. legal system.”\textsuperscript{154} The majority view in the 19\textsuperscript{th} century was that “consequential damages – those from activities that did not involve physical invasions or appropriations of property for a public use, but that nonetheless had physical consequences, such as subsidence occasioned by a road-building project – were not compensable takings.”\textsuperscript{155} Even during the 17\textsuperscript{th} and 18\textsuperscript{th} centuries, famous European philosophers, like Pufendorf, Burlamanqui, and Vattel, held the view that government should “regulate and adjust economic power so as to ‘make life pleasant and agreeable’ for all the ‘fellow creatures’ in the society.”\textsuperscript{156}

\begin{footnotesize}
\begin{enumerate}
\item \textsuperscript{152} 530 U.S. 290, 318 (2000) (Rehnquist, C.J., joined by Scalia & Thomas, JJ., dissenting).
\item \textsuperscript{155} William Michael Treanor, \textit{The Original Understanding of the Takings Clause and the Political Process}, 95 Colum. L. Rev. 782, 792 (1995). \textit{See generally} id. at 794-97, citing \textit{inter alia}, Transportation Co. v. Chicago, 99 U.S. 635 (1879) (“[A]cts done in the proper exercise of governmental powers, and not directly encroaching upon private property, though their consequences may impair its use, are universally held not to be a taking . . . .”).
\end{enumerate}
\end{footnotesize}
The classic early case where the Court split on this issue was the famous 1837 case of Charles River Bridge v. Warren Bridge. There, the majority adopted the Enlightenment/common law approach to permit a state legislature to change a monopoly grant to use of a bridge. The majority noted, “[T]he object and end of all government is to promote the happiness and prosperity of the community by which it is established, and it can never be assumed that the government intended to diminish its power of accomplishing the end for which it was created. . . . A State ought never to be presumed to surrender this power [public grants], because, like the taxing power, the whole community have an interest in preserving it undiminished.”

The dissent, per Justice Story, adopted more the early Enlightenment and classic/Christian approach to try to protect an individual from a newly imposed burden of competition. Justice Story stated, “It is a contract, whose obligation cannot be constitutionally impaired. . . . For my own part, I can conceive of no surer plan to arrest all public improvements, founded upon private capital and enterprise, than to make the outlay of capital uncertain and questionable, both as to security and as to productiveness.”

One can see the same kind of tension among Justices O’Connor, Kennedy and Souter in cases involving the Takings Clause today. As with the state sovereign immunity cases, typically Justices O’Connor and Kennedy opt for the early Enlightenment and classic/Christian approach of strong protection for property rights, while Justice Souter opts for the later Enlightenment/common law approach.

For example, in Eastern Enterprises v. Apfel, Justice O’Connor, in a plurality opinion, held that a taking had occurred when a statute imposed upon a coal company a large, retroactive liability for lifetime health care of former employees and their families. Justice Kennedy concurred in the result, but he found the retroactivity of the statute violated due process without regard to a Takings Clause analysis. In contrast, Justice Souter joined dissenting opinions, which noted that the defendant, while still in the coal business, had participated in negotiations with other operators and miners where there was an understanding that the operators would provide the miners with lifetime health benefits. Thus, new burdens were foreseeable and could be constitutionally imposed.

A similar split, in a case involving whether interest earned on client’s money placed into IOLTA accounts was the client’s property, occurred in Phillips v. Washington Legal Foundation, discussed at § 22.2 nn.43-44.

159 524 U.S. 498, 528-29 (1998) (O’Connor, J., joined by Rehnquist, C.J., and Scalia & Thomas, JJ., announcing the judgment of the Court); id. at 539, 547-50 (Kennedy, J., concurring in the judgment & dissenting in part); id. at 550-51 (Stevens, J., joined by Souter, Ginsburg & Breyer, JJ., dissenting); id. at 553-54 (Breyer, J., joined by Stevens, Souter & Ginsburg, JJ., dissenting).

§ 12.4  The Natural Law Approach, Combined with Affinity for Another Style

Predictably, the natural law judges, Justices O’Connor, Kennedy and Souter, voted together in a majority of cases. Where they split, the Court’s decision was often 5-4, given three conservative positivists, Chief Justice Rehnquist and Justices Scalia and Thomas, on one side of the Court, and three moderate, liberal instrumentalists, Justices Stevens, Ginsburg, and Breyer, on the other side of the Court. For example, Justices O’Connor, Kennedy, and Souter split 2-1 in 146 of the Court’s 150 5-4 cases decided during the 1993-2000 Terms of the Court. In addition to the extreme/moderate and conservative/liberal variations of natural law, another reason that might lead natural law judges to disagree is that one or more of the judges has an affinity for one of the other interpretation styles.

§ 12.4.1  Natural Law Combined with Formalist Interpretation

A natural law judge might have sympathy for the formalist emphasis on certainty and predictability in the law, given that the natural law and formalist theories share an affinity for analytic, as opposed to functional, approaches to the law. Of the current natural law Justices on the Supreme Court, Justice Kennedy has demonstrated the greatest affinity for this aspect of formalist interpretation.

For example, in free speech cases Justice Kennedy has joined Justices Scalia and Thomas dissenting in Madsen v. Woman’s Health Center, Inc., Hill v. Colorado, and Federal Election Commission v. Colorado Republican Federal Campaign Committee. Justice Kennedy’s affinity for formalism also appeared in his joining dissents in a Sixth Amendment case, Gray v. Maryland, and in two

163 530 U.S. 703, 741-42 (2000) (Scalia, J., joined by Thomas, J., dissenting) (regulation of speakers around abortion clinics is content-based, and thus should trigger strict scrutiny); id. at 2516 (Kennedy, J., dissenting) (“In my view, Justice Scalia’s First Amendment analysis is correct.”).

164 533 U.S. 431 (2001) (Thomas, J., joined by Scalia, J., and Kennedy, J., and with whom Rehnquist, C.J. joins as to Part II, dissenting) (Part I concluded that campaign finance statute’s limits on coordinated expenditures between a candidate and a state political party should be tested by strict scrutiny, and the law at issue in this case fails strict scrutiny; Part II concluded that even under the Court’s traditional Buckley analysis the regulations at issue in this case are unconstitutional).

165 523 U.S. 185 (1998) (majority held that only replacing a defendant’s name with a symbol of deletion in a co-defendant’s confession violates the defendant’s right to cross-examine witnesses when the co-defendant refuses to testify; more formalist dissent would have drawn a bright-line
cases involving the rights of Native Americans, *Idaho v. United States*,\(^{166}\) and *Minnesota v. Mille Lacs Band of Chippewa Indians*.\(^{167}\)

An additional example of Justice Kennedy joining a formalist dissent occurred in *Brentwood Academy v. Tennessee Secondary School Athletic Association*.\(^{168}\) There, a majority held that a private state high school athletic association, whose membership included only 16% private and parochial high schools and most of whose officials were employed by the public high schools, was a state actor for purposes of its regulatory rules because of the significant “entwinement” between the State and the association. A more formalist dissent concluded that certainty and predictability in the law requires that the Court restrict finding state action to where the organization “performs a public function; [is] created, coerced, or encouraged by the government; or acted in a symbiotic relationship with the government”; the “entwinement” test is too “unclear.”\(^{169}\)

Similarly, Justice Kennedy will occasionally read a statute in a more formalist fashion than Justices O’Connor and Souter. This has occurred in cases like *Zadvydas v. Davis*,\(^{170}\) *Davis v. Monroe County Board of Education*,\(^{171}\) and *West v. Gibson*.\(^{172}\)

---

distinction between statements that incriminate a defendant directly, and those that only incriminate inferentially, as in this case where the defendant's name is redacted).

\(^{166}\) 533 U.S. 262 (2001) (majority held that the federal government holds, in trust for the Coeur d’Alene Tribe, title to lands underlying portions of Lake Coeur d’Alene and the St. Joe River in Idaho; more formalist dissent held that since official congressional ratification of this trust relationship was not formally completed until after Idaho became a State, Idaho took title to this land on the date Idaho became a State and the trust is invalid).

\(^{167}\) 526 U.S. 172 (1999) (majority held that Chippewa Indians retain certain hunting, fishing, and gathering rights on land they ceded to the United States in 1837, and that President Tyler’s attempt in 1850 to remove the Chippewas from the land lacked statutory or constitutional authority; more formalist dissent held that certainty requires that when a President acts with express or implied congressional authorization, there be a strong presumption of validity, and that President Tyler’s action in terminating these rights under the treaty should be upheld).

\(^{169}\) *Id.* at 305 (Thomas, J., joined by Rehnquist, C.J., and Scalia & Kennedy, JJ., dissenting).

\(^{170}\) 533 U.S. 678 (2001) (statute providing that government “may” detain removable alien beyond 90-day statutory removal period does not authorize indefinite detention, but instead authorizes detention only for a time reasonably necessary to secure removal; more formalist dissent would read the statute literally to give the Attorney General discretion to determine how long the removable alien may be detained).

\(^{171}\) 526 U.S. 629 (1999) (damage action permissible against recipient of funds under Title IX in cases of student-on-student harassment if the recipient is deliberately indifferent to the sexual harassment; more formalist dissent holds that since the literal text of the law only prohibits

Page 394
§ 12.4.2  Natural Law Combined with Holmesian Interpretation

A natural judge might have some sympathy for the Holmesian deference-to-government model of decisionmaking, as did Justice O’Connor. This was particularly true during Justice O’Connor’s early years on the Court between 1981-1984, which were more Holmesian. In these years, her voting patterns were most similar to the voting patterns of Holmesian judges Justices Rehnquist and White. By 1989-1990, Justice O’Connor had moved to joining most often Justices Kennedy and Souter.173

Even after 1984, Justice O’Connor occasionally departed from a standard natural law analysis to join a deference-to-government Holmesian decision. This occurred, for example, when Justice O’Connor joined a Holmesian dissent in the 1989 “flag-burning” case of Texas v. Johnson. The dissent would have created a special exception to free speech law permitting governments to ban flag burning.174 It also occurred in Florida Bar v. Went for It, Inc.,175 a 1995 case involving attorney advertising, where Justice O’Connor wrote the majority opinion applying the standard commercial speech test of Central Hudson Gas & Electric Corp. v. Public Service Commission in a very deferential way to uphold a government regulation of attorney advertising. Justice Kennedy and Souter, along with Justices Stevens and Ginsburg, dissented in the case.

Justice O’Connor’s occasional preference for Holmesian deference to government was also evident in her joining the dissents in the 1998-99 cases of Crawford-El v. Britton;176 Hohn v. United

...misconduct by recipients, the discrimination must be within the control of the recipient).

172 527 U.S. 212 (1999) (EEOC has the legal authority to require federal agencies to pay damages for employment discrimination under Title VII; more formalist dissent holds that the statutes relating to EEOC enforcement did not clearly contain an immunity waiver by the United States).

176 523 U.S. 574 (1998) (majority followed the standard rule that qualified immunity for government officials exists as long as their conduct does not violate clearly established statutory or constitutional rights of which a reasonable person would have been aware; more Holmesian dissent
would have amended the rule to provide greater protection for government officials by permitting immunity if the government official can offer a legitimate reason for the action being challenged and the plaintiff cannot establish that the offered reason is a pretext).

177 524 U.S. 236 (1998) (majority held that the Supreme Court has jurisdiction to review decisions denying applications for certificates of appealability in habeas corpus cases; more Holmesian dissent concluded that Congress intended to prevent further review in habeas cases unless a Court of Appeals judge or a Circuit Justice finds a reasonable basis for an appeal).

178 526 U.S. 314 (1999) (majority held that a guilty plea does not waive the privilege of self-incrimination during the sentencing phase of a case; more Holmesian dissent concluded that the privilege against self-incrimination should not shield a defendant from the natural consequences of the defendant’s uncooperativeness at the sentencing phase).

179 531 U.S. 533 (2001) (majority held unconstitutional as a violation of free speech a welfare reform provision that barred attorneys funded by the federal Legal Services Corporation from accepting cases that challenged welfare laws; more Holmesian dissent would have permitted government limits on individuals receiving government funds).

180 533 U.S. 289 (2001) (majority held that habeas corpus writs are still permissible under certain provisions of the Antiterrorism and Effective Death Penalty Act of 1996 and Immigrant Responsibility Act of 1996; more Holmesian dissent would have held that the relevant statutory provisions barred habeas corpus review, thus deferring to the government by making the government action unreviewable in court).

Justice O’Connor also occasionally read a statute in a more Holmesian deference-to-government fashion than Justices Kennedy and Souter. This occurred in cases like *NASA v. Federal Labor Relations Authority*, 527 U.S. 229 (1999) (Office of the Inspector General representatives employed by NASA are representatives of NASA, so barring a union representative from participating in an investigation is an unfair labor practice; more Holmesian dissent would have deferred to NASA’s position that the OIG inspector was sufficiently independent that the inspector was not a representative of NASA).  

In some cases involving women or children, Justice O’Connor sometimes adopted a less deferential position, more protective of individual rights. For example, Justice O’Connor authored the 5-4 majority opinion in *Davis v. Monroe County Board of Education*, 526 U.S. 86 (1999) concluding that Title IX provides schools can be sued for sexual harassment of students by other students, in addition to acts of sexual harassment by its own employees, if the school is deliberately indifferent to known acts of harassment. The opinion was joined by Justices Stevens, Souter, Ginsburg, and Breyer. On the other hand, it has been noted, “[Justice O’Connor’s] positions generally reflect the view that children are more in need of supervision and restriction than rights. . . . [H]er opinions often confirm the widely held perception that she is conservative in the area of federal-state relationships – generally favoring deference to the state on issues involving the interests of children.”

When he was on the Court from 1971-87, Justice Powell adopted an approach similar to Justice O’Connor, of being predominantly a natural law judge, with some Holmesian leanings. On cases

---

183  125 S. Ct. 2195, 2220 (2005) (O’Connor, J., joined by Rehnquist, C.J., and Thomas, J., as to all but Part III, dissenting).

184  527 U.S. 229 (1999) (Office of the Inspector General representatives employed by NASA are representatives of NASA, so barring a union representative from participating in an investigation is an unfair labor practice; more Holmesian dissent would have deferred to NASA’s position that the OIG inspector was sufficiently independent that the inspector was not a representative of NASA).

185  526 U.S. 86 (1999) (Federal Labor Relations Authority has the power to order federal agencies to bargain mid-term under a collective bargaining agreement; more Holmesian dissent would have deferred to each agency to decide whether to bargain mid-term or not).

188  Perry, supra note 186, at 82. For additional descriptions of Justice O’Connor’s judicial philosophy, with particular reference to women’s and children’s issues, see Eloise Rosenblatt,*The Judicial Philosophy of Justice Sandra Day O’Connor*, 29 Lincoln L. Rev. 131 (2001-02); Judith Olans Brown,*Wendy E. Parmet & Mary E. O’Connell, The Rugged Feminism of Sandra Day O’Connor*, 32 Ind. L. Rev. 1219 (1999).
involving federalism issues, Justice Powell was also a strong supporter of states’ rights.\textsuperscript{189} During the 1970s, Justice Powell was often the swing vote between the four more instrumentalist Justices on the Court (Justices Brennan, Marshall, Blackmun, and Stevens) and the four more formalist or Holmesian Justices on the Court (formalist Chief Justice Burger and Holmesian Justices Stewart, White, and Rehnquist). As has been noted, in a number of these “swing vote” cases, such as “Regents of the University of California v. Bakke, 438 U.S. 265 (1978), Trimble v. Gordon, 430 U.S. 762 (1977), and Branzburg v. Hayes, 408 U.S. 665 (1972),” Justice Powell’s different approach in these cases meant that although “he controlled the disposition,” he was “the only justice adopting his particular view of affirmative action, the rights of nonmarital children, and press rights, respectively.”\textsuperscript{190} His opinion in each of these cases has become the majority approach today.

During the early-to-mid 1980s, when both Justices Powell and O’Connor where on the Court, they voted together a large percentage of the time. For example, during the 1983 Term of the Court they voted together 84.9% of the time; during the 1984 Term, 85.7% of the time; during the 1985 Term, 87.1% of the time; and, during the 1986 Term, 83.3% of the time. During this period, however, Justice O’Connor had a slightly greater affinity for the Holmesian approach than Justice Powell, as she actually voted most often with Justice Rehnquist during the 1981-84 Terms of the Court, although she voted most often with Justice Powell during the 1985 Term of the Court.\textsuperscript{191}

Two examples of this difference between Justice Powell and O’Connor can be seen in the cases of \textit{Plyler v. Doe} and \textit{City of Akron v. Akron Center for Reproductive Health}. In \textit{Plyler v. Doe}, the Court held that Texas could not deny undocumented children the free public education that it provides to children who are citizens of the United States or legally admitted aliens. Justice Powell’s concurrence in the case focused on the background natural law principle that individuals should not be punished for things over which they have no control, which Justice Powell had used in \textit{Trimble v. Gordon} and other cases to justify applying intermediate scrutiny in cases involving illegitimate children. Similarly, Justice Powell reasoned in \textit{Plyler} that the children of illegal aliens are not responsible for being in this country. Their parents are responsible. In contrast, Justice O’Connor joined Chief Justice Burger, and Justices White and Rehnquist, in dissent. Adopting a posture emphasizing more the Court’s limited role in judicial review, and respect for the principle of deference to the other branches of the government, the dissent stated, “[T]he Constitution does not constitute us as ‘Platonic Guardians’ nor does it vest in this Court the authority to strike down

\begin{footnotesize}
\begin{enumerate}
\item[\textsuperscript{190}] Geoffrey R. Stone, Louis M. Seidman, Cass R. Sunstein & Mark V. Tushnet, Constitutional Law lxxxviii (1996) (italics added to the case names).
\end{enumerate}
\end{footnotesize}
laws because they do not meet our standards of desirable social policy, ‘wisdom,’ or ‘common sense.’ We trespass on the assigned function of the political branches under our structure of limited and separated powers when we assume a policymaking role as the Court does today.”

The *Akron* case involved, among other issues, whether a state could require that a second-trimester abortion be conducted in a hospital, rather than an abortion clinic. Justice Powell’s majority opinion concluded that there “can be no doubt that [the statute’s] second-trimester hospitalization requirement places a significant obstacle in the path of women seeking an abortion. A primary burden created by the requirement is additional cost to the women. . . . [A] second-trimester requirement may force women to travel to find available facilities, resulting in both financial expense and additional health risk.” In contrast, the dissenting opinion of Justice O’Connor, joined by Justices White and Rehnquist, adopted an approach more deferential to the government. Justice O’Connor stated, “As the City of Akron points out, there is no evidence in this case to show that the two Akron hospitals that performed second-trimester abortions denied an abortion to any women . . . . In addition, there was no evidence presented that other hospitals in nearby areas did not provide second-trimester abortions. Further, almost any state regulation, including the licensing requirement that the Court would allow inevitably and necessarily entails increased costs for any abortion. . . . A health regulation, such as the hospitalization requirement, simply does not rise to the level of ‘official interference’ with the abortion decision. . . . [and] does not impose an undue burden.”

In terms of later doctrinal development, both Justice Powell’s focus in *Akron* on whether the regulation was a “significant obstacle” to obtaining an abortion, and Justice O’Connor’s focus on whether the regulation was an “undue burden” on abortion rights, foreshadowed the adoption by the natural law Justices O’Connor, Kennedy, and Souter of the “undue burden” standard in *Planned Parenthood v. Casey*. In *Casey*, the term “undue burden” was defined as a short-hand reference for when “a state regulation has the purpose or effect of placing a substantial obstacle in the path of a woman seeking an abortion of a non-viable fetus.” Justice Powell also included language in his *Akron* opinion on the importance of *stare decisis*, language foreshadowing the discussion of *stare decisis* in the joint opinion in *Casey*. Justice Powell stated in *Akron*:

> [A]rguments continue to be made . . . that we erred in interpreting the Constitution [in *Roe v. Wade*]. Nonetheless, the doctrine of *stare decisis*, while perhaps never entirely persuasive on a constitutional question, is a doctrine that demands respect in a society governed by the rule of law. We respect it today, and reaffirm *Roe v. Wade*. . . . There are especially compelling reasons for adhering to *stare decisis* in applying the principles of *Roe v. Wade*. That case was considered with special care. It was first argued during the 1971 Term, and reargued – with

193 *Id.* at 242 (Burger, C.J., joined by White, Rehnquist & O’Connor, JJ., dissenting) (citations omitted).

195 *Id.* at 466-67 (O’Connor, J., joined by White & Rehnquist, JJ., dissenting).

extensive briefing – the following Term. The decision was joined by THE CHIEF JUSTICE and six other Justices. Since *Roe* was decided in January, 1973, the Court repeatedly and consistently has accepted and applied the basic principle that a woman has a fundamental right to make the highly personal choice whether or not to terminate her pregnancy.197

§ 12.4.3 Natural Law Combined with Instrumentalist Interpretation

A natural law judge might also have sympathy for instrumentalist reasoning, as both reject a positivist approach to the law, and share the view that the judicial task has a normative component instead. In a number of cases, Justice Souter has joined with Justices Stevens, Ginsburg, and Breyer to form a 4-Judge block of votes. In most of these cases, Justice Souter’s willingness to join these liberal instrumentalist Justices, which was not shared by Justices O’Connor or Kennedy, can be attributed to Justice Souter’s strong natural law belief in following even the general reasoning of the instrumentalist-era precedents between 1954 and 1986, and not merely their core holdings. This willingness was not shared by Justices O’Connor and Kennedy, as noted at § 12.3.2. Nevertheless, in some of these cases, Justice Souter’s vote cannot be fully explained by that analysis, and one can perhaps see some direct instrumentalist reasoning in some of Justice Souter’s opinions.198

For example, in *Bush v. Vera*,199 discussed at § 26.2.1.5, Justice Souter exaggerated the difficulty of developing standards to govern when a violation has taken place in racial redistricting cases in order to support racial redistricting in favor of minority groups. Justice Souter noted that the Court “has never succeeded in identifying how much is too much, having adopted a ‘predominant purpose’ test that amounts to a practical repudiation of any hope of devising a workable standard.” However, under the general reasoning of the instrumentalist-era precedent of *Village of Arlington Heights v. Metropolitan Housing Development Corp.*,200 discussed at § 26.2.1.2, proof that “discriminatory purpose was a motivating factor” is viewed as a certain enough for discriminatory intent analysis.

As noted at § 26.2.1.5, Justice Souter’s support for racial redistricting was also apparent in *Abrams v. Johnson*.201 In *Abrams*, the majority upheld a district court’s redistricting plan that contained only one African-American majority district in the Atlanta area because creation of a second such district would have required subordinating Georgia’s traditional districting policies to consider race predominantly. Justice Breyer, dissenting with Justices Stevens, Souter, and Ginsburg, held that the court should not have departed from the Georgia legislature’s intent to create two such districts

---

197 426 U.S. at 419-20 & n.1.

around Atlanta. In *Easley v. Cromartie*, the four dissenters in *Abrams* were joined by Justice O’Connor in deferring to the state by concluding that use of race was not a “predominant factor” in the redrawing of the much litigated 12th Congressional District in North Carolina. The dissent would have deferred to the factual judgment of the district court that racial considerations did predominate. In *Lawyer v. Department of Justice*, the four dissenters in *Abrams* were joined by Holmesian Chief Justice Rehnquist in deferring to a three-judge federal district court’s reapportionment of a Florida Senate district. The dissent argued that the district court should first have offered the Florida legislature a more reasonable opportunity to craft its own solution.

Another example of Justice Souter’s occasional affinity for an instrumentalist approach may be in the race-based affirmative action cases. For example, in *Adarand Constructors, Inc. v. Pena*, the majority opinion held that traditional strict scrutiny should be applied to federal, as well as state, race-based affirmative action programs. Justice Souter rejected that approach, thus supporting race-based affirmative action in federal contracting. Of course, Justice Souter’s dissent may also reflect his strong commitment to precedent, and his belief that the Court should follow the precedent of *Fullilove v. Klutznick*, which had upheld a federal race-based affirmative action program regarding government contracting, absent “any factual premises on which *Fullilove* rested having disappeared since that case was decided.”

In addition, Justice Souter will occasionally read a statute in a more instrumentalist fashion than Justices Kennedy or O’Connor. Given the Supreme Court’s recent membership, this usually has meant that in these cases Justice Souter was in dissent with Justices Stevens, Ginsburg, and Breyer. This has occurred in cases like *FDA v. Brown & Williamson Tobacco Corp.*, *Department of Commerce v. United States House of Representatives*, and *Grupo Mexicana de Desarrollo v. Alliance Bond Fund, Inc.* It also occurred in the cases of *Allentown Mack Sales & Service, Inc.*

---

205 529 U.S. 120 (2000) (FDA lacks authority to regulate tobacco products based upon lack of explicit authorization and the FDA’s long-standing view that it lacked jurisdiction; more instrumentalist dissent would have granted FDA the power to regulate tobacco based upon Congress’ overall desire to protect health and new knowledge about the effects of smoking).

206 525 U.S. 316 (1999) (use of statistical sampling in census taking not authorized by the explicit language of the Census Act; more instrumentalist dissent concludes that because sampling might yield a more accurate estimate of population, sampling should be allowed to be used).

207 527 U.S. 308 (1999) (district court does not have power to issue a preliminary injunction preventing defendant from transferring assets in which a non-lien or equitable interest is claimed because such a power was historically unavailable from a court of equity; more instrumentalist dissent holds that as a policy matter such a power would not be that troubling because the plaintiff
In addition, sometimes both Justices Kennedy and O’Connor have interpreted a statute in a formalist or Holmesian fashion, leaving Justice Souter to give a principled natural law interpretation, almost always in such cases joining instrumentalist Justices in dissent. This has occurred in cases like Alexander v. Sandoval, Buckhannon Board v. West Virginia Department of Health & Human Resources, Miller v. French, and Reno v. Bossier Parish School Board, and Carter v. United

208 522 U.S. 359 (1998) (NLRB conclusion that an employer lacked a “good faith reasonable doubt” about a union’s majority support, not supported by record as a whole; more instrumentalist dissent would have deferred to the NLRB’s conclusion, thus supporting a pro-employee result that would have concluded such polling by the employer was an unfair labor practice).

209 524 U.S. 274 (1998) (school district not liable for sexual harassment of a student by a teacher unless the school district official who had authority to institute corrective measures has notice of the teacher’s misconduct and was deliberately indifferent to that information; more instrumentalist dissent would have permitted an action, based on the policy of placing protection of high school students above the school district’s financial concerns).

210 532 U.S. 275 (2001) (majority deferred to the government by following the literal holdings of prior cases, not their more general reasoning, to conclude that Congress did not intend a private right of action to enforce disparate-impact regulations under Title VI of the Civil Rights Act of 1964; dissent noted that a faithful reading of the “prevailing principles of statutory construction” in existence at the time Congress passed the “comprehensive civil rights Act,” as well as dicta in many cases interpreting this statute, would support finding a private right of action in this case).

211 532 U.S. 598 (2001) (plaintiff is not a prevailing party for purposes of obtaining attorneys’ fees when that party has “failed to secure a judgment on the merits or a court-ordered consent decree, but has nonetheless achieved the desired result because the lawsuit brought about a voluntary change in the defendant’s conduct”; dissent followed the instrumentalist-era precedents in the Courts of Appeals which had held the plaintiff was a “prevailing party” if the plaintiff was a “catalyst” for the change).

212 530 U.S. 327 (2000) (Prison Litigation Reform Act read literally in favor of the government to eliminate a court’s traditional equitable authority to suspend an automatic stay of relief after 30 days; dissent would have remanded the case to determine whether the statute provided sufficient time to make the required findings before determining the statute removed a court’s equitable authority).

213 528 U.S. 320 (2000) (majority deferred to government by holding that § 5 of the Voting Rights Act does not prohibit preclearance of a redistricting plan enacted with a discriminatory but nonretrogressive purpose; dissent held that any purpose to give less weight to minority participation in the electoral process is a purpose to discriminate and thus abridges § 5 of the Voting Rights Act).
States.\textsuperscript{214}

\section*{§ 12.4.4 \hspace{1em} Constitutional versus Statutory versus Common-Law Interpretation}

As noted at § 4.4.1, while in theory a judge could adopt one style of interpretation for common-law decisionmaking, and a different style for statutory interpretation, and yet a different style for constitutional law, almost all judges and commentators adopt the same interpretive approach toward each kind of case. This is predominantly because the interpretation styles are based on the individual’s view on the nature of law and the nature of the judicial task, as discussed in Chapter 2, and those views are the same for common-law, statutory, or constitutional cases, as noted in Chapter 3. Of course if one adopted a decisionmaking style based upon other considerations, such as an independent theory of democratic self-government, or some generic “rule-of-law” concern, the interpretive methodologies in common-law, statutory, and constitutional law cases could converge, or they could diverge.\textsuperscript{215}

Despite the fact of convergence regarding decisionmaking styles, almost all judges and commentators, including those in the natural law tradition, have noticed three differences between constitutional and statutory interpretation. First, constitutions tended to be drafted in more general terms, and not contain as many detailed provisions as statutes. Thus, interpretation of constitutions tend to involve more resort to purpose, context, and history kind of considerations, what Chief Justice Marshall called in \textit{McCulloch v. Maryland} “deduc[ing] from the nature of the objects themselves,” cited at § 12.2.1.1 n.10. More statutes can be predominantly determined by the plain meaning of statutory text.

Second, constitutions tend to be drafted to apply for decades with little amendment, while statutes tend to be drafted based on the assumption that statutory amendment is easier, and more likely in case a mid-course correction is needed. Thus, as Chief Justice Marshall said in his famous quote in \textit{McCulloch},\textsuperscript{216} “We must never forget it is a constitution we are expounding” which was "intended to endure for ages to come, and, consequently, to be adapted to the various crises of human affairs."

Third, because of the easier ability to amend a statute than a constitution, most judges will apply the doctrine of \textit{stare decisis} a little more forcefully in cases of statutory interpretation, reasoning that correction of an erroneous statutory interpretation decision can be done more easily by the legislature, while the Court may need to take a greater lead in correcting an erroneous constitutional decision. This principle was noted at § 4.3.2 n.89, in the context of discussing Justice Kennedy’s

\textsuperscript{214} 530 U.S. 255 (2000) (majority deferred to government by adopting a literal approach which held that carrying away something from a bank with an intent to steal was not an included offense for the crime of taking by force or violence any thing of value from a bank, because the lesser offense did not literally include every element of the greater offense; the dissent noted that the majority departed from the old common-law rule that robbery was an aggravated form of larceny).

\textsuperscript{216} 17 U.S. (4 Wheat.) 316, 415, 421 (1819).
majority opinion in *Patterson v. McLean Credit Union* in 1992. All three of these differences were reflected in the passage from Dean Edward Levi, cited at § 4.1 n.6, and following comments.
CHAPTER 13: FORMAL CAUSES AND THE FIVE ERAS OF AMERICAN LAW

The four styles of interpretation detailed in Chapters 9-12 determine in individual cases which results will be “hammered out” at any particular time. The next four Chapters in this book discuss the causes which help explain why a majority of Justices on the Supreme Court at different times in our Nation’s history have adopted one of the four judicial decisionmaking styles. In discussing these efficient causes of why the dominant interpretation style in different eras has changed, Chapter 13 focuses on the formal fact of changes in American legal history from an initial natural law era, through formalist, Holmesian, and instrumentalist eras, to a modern natural law era today. Chapter 14 focuses on the material cause of these changes, that is, the changing background of social and political events in society which forms the material base from which constitutional law emerged in its various eras. Chapter 15 focuses on aspects of cognitive and moral developmental psychology which are part of the efficient cause related to explaining changes in the majority approach from one judicial era to the next. Finally, Chapter 16 relates the cognitive and moral developmental stages and the judicial eras to issues of contemporary societal development, the final cause or end of legal change being to reflect and advance such societal developments.

In the more than 200 years since ratification, the Constitution's interpretation and application have been determined by Supreme Court Justices whose members have reflected different combinations of the four interpretation styles discussed in Chapters 9-12. In general, there are five eras of Supreme Court decisionmaking: (1) the original natural law era of 1789-1873, which corresponds roughly to the Marshall and Taney Courts, with Justice Story as a bridge between the two; (2) the formalist era of 1873-1937, which corresponds to the Court’s treatment of the 1873 Slaughter-House Cases as precedent during the last third of the 19th century and the Lochner v. New York/Hammer v. Dagenhart era of the first third of the 20th century; (3) the Holmesian, New Deal Court era of 1937-54, which involved the rejection of Lochner and Dagenhart against the backdrop of President Roosevelt's “Court-Packing Plan” in 1937; (4) the modern instrumentalist era of 1954-86, which was inaugurated by Brown v. Board of Education and lasted through the Warren and Burger Courts; and (5) the emerging modern natural law era of the Court since 1986.

These eras of Supreme Court decisionmaking are matched by similar eras in the development of American law generally. For example, in 1977, Professor Grant Gilmore published his classic statement of the development of American law, The Ages of American Law. In this book, Professor Gilmore, building on earlier writings by Professor Karl Llewellyn, divided American legal history into three distinct ages: a pre-Civil War Golden Age, a post-Civil war to World War I formalist or conceptualist age, and a modern period which harkens back to the Golden Age of the pre-Civil War period. As discussed at § 3.3, a number of commentators have called this modern period and its

---

approach to law instrumentalism. Gilmore’s understanding of the ages of American law was based on this simple dichotomy of two basic decisionmaking styles: formalism and instrumentalism. This approach reflected prevailing jurisprudential writing at the time that emphasized similarities and differences between formalism and instrumentalism as judicial decisionmaking styles.

As summarized in Chapter 3, and detailed in Chapters 9-12, a more complete typology of judicial decisionmaking styles involves adding the Holmesian and natural law decisionmaking styles to Gilmore’s discussion of formalism and instrumentalism. This addition helps to clarify the ages of American law. The formalist style associated with Langdell and Englishmen John Austin, discussed at § 3.1, is unquestionably the post-Civil War style, and instrumentalism, discussed at § 3.3, was the dominant style for much of the last half of the 20th century. As Professor Kermit Hall noted in The Magic Mirror: Law in American History, an overview of American legal history, "From the Civil War to about 1900 the trend favored the formalistic and conservative judicial approach. . . . The Great Depression was a catalyst for liberal legalism [which] fused the social reformist impulse of Progressivism, the relativism and instrumentalism of legal realism and sociological jurisprudence, and the regulatory responsibility of the state associated with the New Deal."

However, in the formative era of American law, the pre-Civil War period, the dominant mode of legal analysis is better characterized not as Gilmore’s or Llewellyn's earlier instrumentalist Golden Age, but rather as reflecting natural law presuppositions. In this period, judges adopted a normative perspective, a view shared by instrumentalist and natural law judges, as discussed at §§ 3.3-3.4. Thus, judges were sensitive to the consequences that adopting a particular rule would have. As noted by Harvard University Law School Professor and Historian Morton Horwitz in The Transformation of American Law, 1780-1860, “During the last fifteen years of the eighteenth century, one can identify a gradual shift in the underlying assumptions about common law rules. For the first time, lawyers and judges can be found with some regularity to reason about the social consequences of particular legal rules.” In addition, during this period judges recognized that they did, and needed, to make law, particularly common law, which reflected a particular social value system. As Horwitz stated, “What dramatically distinguished nineteenth century law from its eighteenth century counterpart was the extent to which common law judges came to play a central role in directing the course of social change. Especially during the period before the Civil War, the common law performed at least as great a role as legislation in underwriting and channeling

---

As judges began to conceive of common law adjudication as a process of making and not merely discovering legal rules, they were led to frame general doctrines based on a self-conscious consideration of social and economic policies."6

However, unlike the functional perspective of instrumentalism, discussed at § 3.3, during this formative era of American law both lawyers in their argumentation, and judges in their opinions, grounded the underlying legitimacy of their enterprise in a notion of natural law. Law, for them, could be organized and systematized around rational principles, the natural law analytic premise, as discussed at § 3.4, not the instrumentalist functional premise. As Dean Roscoe Pound noted in 1938 in *The Formative Era of American Law*,7 "A mode of thought [natural law] which produced and developed the classical international law, which modernized the civil law so that it could go round the world, which had much influence on the development of equity and the law merchant – the liberalizing agencies in the Anglo-American common law – which was the theoretical basis of much of the best work of Lord Mansfield, of the Declaration of Independence and bill of rights, and of the legislation, judicial decision, and doctrinal writings of the formative era of American law, is not to be rated as nothing in legal history." Indeed, Professor Gilmore himself noted in *The Ages of American Law*,8 "The post-Revolutionary generation of American lawyers approached the problem of providing a new law for a new land as convinced eighteenth-century rationalists."

The characterization of the Pre-Civil War era as one of natural law is not inconsistent with Professor Gilmore’s or Llewellyn's account of judicial decisionmaking. Professors Gilmore, Llewellyn, Horwitz, and others are right that judges during this period shared the instrumentalist premise that judges could, and needed, to make law to advance particular ends, and that this fact distinguished the pre-Civil War judicial decisionmaking style from the post-Civil War style of formalism. To the extent Gilmore, Llewellyn, and Horwitz were focused on a single dichotomy, formalism versus instrumentalism, the pre-Civil War style certainly did not adopt the formalist style. However, once attention is drawn to the two different kinds of normative judicial styles, natural law versus instrumentalism, the natural law character of the pre-Civil War judicial decisionmaking style emerges. The ends that judges advanced during this period were defined not in purely functional terms, but rather in terms of advancing rationally and systematically the dominant natural law vision in America at the time – an Enlightenment vision of the social contract, Adam Smith's theory of competition and economic growth, and John Locke's theory of property rights.

Even writers, like Horwitz, who have used the term instrumentalism to distinguish the pre-Civil War period from the post-Civil War formalist period, have agreed that judges routinely resorted to economic natural law arguments to alter the common law during the pre-Civil War period. As Horwitz stated, "This increasing preoccupation with using law as an instrument of policy is everywhere apparent in the early years of the nineteenth century. Two decades earlier it would have been impossible to find an American judge ready to analyze a private law question by agreeing 'with Professor Smith, in his 'Wealth of Nations', . . . that distributing the burthen of losses, among the

---

6 Id. at 1-2.

8 Gilmore, supra note 1, at 10.
greater number, to prevent the ruin of a few, or of an individual, is most conformable to the principles of insurance, and most conducive to the general prosperity of commerce."9 Similarly, though using the term "instrumental," Professor Kermit Hall stated in his book on American legal history, "The ethical yardstick employed by colonial courts was replaced by a new measure that asked judges to consider how legal rules encouraged economic growth, individual risk taking, and the accumulation of capital . . . . Judges engaged in instrumental activity by using their common law authority to fashion doctrines that expedited and enhanced private business activity and entrepreneurship generally."10 Professor Ronald Dworkin perhaps best stated this point in his conclusion that Professor Horwitz' discussion of changes in a "string of early nineteenth-century cases about the rights of riparian owners" is best understood as a "story of principle," the natural law focus, rather than as a "story of policy," the instrumentalist focus.11 This difference between arguments of principle versus arguments of policy is discussed at §§ 2.4 & 3.4.

As legal historians have observed, this focus on changing the common law to promote economic growth differed from the focus of courts in the colonial period on stability in the law to promote the moral and religious notions of the community and to protect existing economic arrangements.12 Specifically, New York University School of Law Professor and Historian William Nelson noted that the colonial period was a period of ethical unity and community based norms where consensus "was promoted by the fact that nearly all members of society shared common ethical values and imposed those values on the occasional individual who refused to abide by them voluntarily."13 This change in focus is best conceived as a change from an ethical natural law to an economic natural law focus. As Dean Roscoe Pound stated in 1938, "In the nineteenth century, the stabilizing and conserving natural law takes on three forms, ethical, political and economic. The ethical form, in which moral precepts dictated by reason are the ideal, is the oldest, coming from the seventeenth century, where it connects with the theological natural law of the Middle Ages. It is replaced in early nineteenth-century America by the political form in which an ideal of 'the nature of American institutions' or the 'nature of free institutions' or the 'nature of free government' is the starting point. Later, as the stabilizing side of natural law comes to be the one stressed chiefly, an economic ideal of a society ordered by the principles of the classical political economy prevails."14

This change resulted in a number of alterations in traditional common law doctrine. As Professor Horwitz noted, as summarized by Professor Stephen Presser, the property doctrine of "natural flow,"

14 Pound, supra note 7, at 22-23.
which barred riparian owners from interrupting the flow of water to others, was changed to a doctrine of “reasonable use,” which encouraged productive use of water resources. The tort doctrine of “strict liability” in nuisance law was changed to a concept of “negligence,” which freed up entrepreneurial activity by removing the threat of strict liability. In contract doctrine, there was a change from rules focused more on “fair” prices to refusing to set aside contracts for inadequacy of consideration and the “widespread acceptance of the rule of caveat emptor.” Jury discretion “became strictly limited to matters of fact; all questions of law were reserved for the court,” a circumstance not true in 18th-century colonial courts. This change was used to ensure that juries would not frustrate the economic policies of the courts with juries’ customary, ethical views. Merchants and courts worked together to promote “emerging entrepreneurial, transportation, and manufacturing interests of the nineteenth century.”

This evolution from ethical natural law, through political natural law, to economic natural law, as it relates to constitutional law, is discussed at § 14.2.1. The change regarding limiting jury discretion is discussed at § 21.2.4.4. Of course, not every judge, or every lawyer, fully embraced this economic natural law enterprise. Some pre-Civil War judges and lawyers were equally focused on the colonial-era, ethical natural law concern with promoting stability in the law, while still supporting doctrines promoting economic growth.

The Holmesian style of judicial decisionmaking helps clarify the transition between the post-Civil War formalist period and the modern instrumentalist approach. The breakdown of the formalist approach occurred initially because of increasing acceptance after 1900 of Holmes’ functional, realist insight that law serves particular social ends, not the formalist’s insistence on mechanical rule application and logic and symmetry. As Professor Hall noted, "From the Civil War to about 1900 the trend favored the formalistic and conservative judicial approach, but from then through World War I sociological jurisprudence and liberalism gained credibility." Under sociological jurisprudence, there is “a rejection of a 'jurisprudence of concepts,' the view of law as a closed logical order. The shortcomings of formal, logical analysis were noticed as the twentieth century produced new problems for which existing law did not provide solutions.” The Realist Movement, and its relationship to a functional approach to law, is noted at § 2.4 n.40 and § 13.2 nn.52-54.

This acceptance of Holmes’ functional, realist insights began first with respect to the common law and theories of statutory interpretation in the 1910s and 1920s. During this period courts began to

---

18 Hall, *supra* note 4, at 211.

consider the purpose behind common law doctrines and to decide cases more in light of those purposes, rather than using blind adherence to literal doctrinal requirements. As Professor Hall noted, there was greater stress on “the functions of law rather than the abstract conceptualization of it.”20 With regard to statutory interpretation, there was a "gradual" change led by Justice Holmes during the 1910s and 1920s with increasing resort to statutory purposes and legislative history as a supplement to "pure logic."21 The formalist style of interpretation hung on longer on the Supreme Court, however, due to the life-tenure and longevity of some Supreme Court Justices, whose formative years of legal study had taken place during formalism’s heyday at the end of the 19th century under the influence of the theories of Harvard University Law School Dean Christopher Columbus Langdell,22 and who were appointed to the Court during the 1910s and 1920s, as discussed at § 14.2.2. Finally, formalism was rejected by a majority of the Supreme Court in 1937, which resulted in the Court rejecting the Lochner-era formalism of Justices Van Devanter, McReynolds, Sutherland, and Butler, and replacing it with Justice Holmes’ posture of deference to government. After 1937, this posture of deference upheld New Deal-style regulations, as discussed at § 14.2.3.

This breakdown did not immediately lead to instrumentalism, however. Following Holmes, the dominant judicial decisionmaking style immediately post-1937 emphasized that judges should not take into account their own view of background social justice or public policy considerations, but rather should decide cases to reflect the social ends as defined by the dominant groups in society, in our democracy the outcome of the legislative, executive, and administrative processes.23 Increasingly, however, as judges post-World War II became more activist in using the leeways in the law to advance particular public policies that were not being addressed by the other branches of government, the dominant judicial decisionmaking style in all areas – common law, statutory interpretation, and constitutional law – moved to an instrumentalist approach.

Law Professor and Historian G. Edward White called this movement “The Rise and Fall of Justice Holmes.”24 Concerning specific aspects of the law, Professor Kermit Hall noted that with respect to the common law areas of property, contracts, and torts, this change was reflected in modern liberal legalism’s focus on "new property" rights, increased use in contract law of doctrines like reliance and unconscionability, and shifted emphasis in tort law from fault and blameworthiness toward a focus on providing compensation to injured parties. With respect to statutory interpretation, this was reflected in modern developments concerning interpretation of legislation and administrative rules and regulations in light of the Legal Process school’s focus on purposes,

20 See Hall, supra note 4, at 269.

22 See generally Thomas C. Grey, Langdell’s Orthodoxy, 45 Pitt. L. Rev. 1, 6-15 (1983). The promotion by Dean Langdell of a formalist approach toward law is discussed at § 3.1 nn.4-10.

23 See Hall, supra note 4, at 282-85.

discussed at § 3.3 nn.63-75, particularly in the public interest areas of civil rights, consumer rights, and environmentalism. With respect to constitutional law, this was reflected in developments as varied as increased Court protection in cases involving civil liberties, free speech, race and gender issues, and rights of the accused.\footnote{Hall, supra note 4, at 291-303 (common law), 303-08 (statutes and administrative law), 309-32 (constitutional law).} As discussed at § 11.3.2, the heydey of instrumentalism on the Supreme Court was between 1963-69. This aspect of modern Supreme Court doctrine is discussed at § 14.2.4.

Beginning in the 1970s, the dynamic that motivated instrumentalism began to lose its force and came under increasing attack. This attack occurred both at the federal level with respect to constitutional and statutory interpretation,\footnote{See generally John Denton Carter, The Warren Court and the Constitution: A Critical View of Judicial Activism (1973); Louis Lusky, By What Right? (1975); John Hart Ely, Democracy and Distrust (1977) (constitutional critiques); Cass R. Sunstein, Interpreting Statutes in the Regulatory State, 103 Harv. L. Rev. 405 (1989) (statutory interpretation critique).} and at the state level with respect to constitutional, statutory, and common-law decisionmaking.\footnote{See, e.g., Richard Neely, How Courts Govern America (1981) (critique from the perspective of a state court judge).} These attacks against instrumentalism came both from those who would prefer judges to be less activist, writing from either the formalist tradition\footnote{See, e.g., Raoul Berger, New Theories of "Interpretation": The Activist Flight from the Constitution, 47 Ohio St. L.J. 1 (1986); Raoul Berger, "Original Intention" in Historical Perspective, 54 Geo. Wash. L. Rev. 296 (1986); Raoul Berger, The Founders' Views – According to Jefferson Powell, 67 Tex. L. Rev. 1033 (1989); Antonin Scalia, A Matter of Interpretation (1997).} or the Holmesian tradition,\footnote{See, e.g., Robert Bork, The Tempting of America: The Political Seduction of the Law (1986); Edwin Meese, III, The Supreme Court of the United States: Bulwark of a Limited Constitution, 27 S. Tex. L. Rev. 455 (1986); John Hart Ely, Democracy and Distrust (1980).} as well as from commentators who urged adoption of a natural law tradition or a revised version of instrumentalism.

With respect to a natural law tradition, some commentators focused more on looking back to the natural law philosophy of the framing and ratifying generation and to interpreting the Constitution consistent with that natural law philosophy. Some viewed that philosophy as based more on the classic/Christian natural law tradition,\footnote{See, e.g., Milner Ball, Don't Die Don Quixote: A Response and Alternative to Tushnet, Bobbitt, and the Revised Texas Version of Constitutional Law, 59 Texas L. Rev. 787 (1981); Harold Berman, The Interaction of Law and Religion, 31 Mercer L. Rev. 405 (1980); Charles E. Rice, Some Reasons for a Restoration of Natural Law Jurisprudence, 24 Wake L. Rev. 539 (1989).} while others viewed that philosophy more in Enlightenment
natural law terms. Other commentators have focused more on the emergence of some modern version of natural law. That emergence has taken many forms, including economic natural law arguments, as in the law-and-economics movement, political natural law arguments, such as Lon Fuller's *The Morality of Law* or Ronald Dworkin's interpretation theory in *Law's Empire*, discussed below at § 13.1 nn. 37-38, and ethical natural law arguments, with theories as diverse as John Finnis’ updated version of Thomas Aquinas, Robert Nozick’s libertarianism, Bruce Ackerman’s liberalism, and John Rawls’ updated, more leftist neo-Kantian theory.

The term “economic natural law” is used to refer to those theories that judge the rightness of doctrine in terms of whether it promotes economic efficiency. The term "political natural law" is used to refer to those theories that focus on political arrangements and the connection of law to politics, or that focus on a set of conditions for political dialogue to determine ethical values for society, rather than developing from a natural law base some ethical or economic principles to guide society. The term "ethical natural law" is used to refer to those theories that claim to have developed through rational argumentation a set of ethical principles for society. For example, Lon Fuller’s approach represents an example of political natural law because of his view that a legal order is legitimate only to the extent that certain procedural arrangements are followed by the sovereign which give that sovereign political legitimacy. As Fuller stated, "Certainly there can be no rational ground for asserting that a man can have a moral obligation to obey a legal rule that does not exist, or is kept secret from him, or that came into existence only after he had acted . . . ." Ronald Dworkin’s approach is similarly a version of political natural law because of his view that

35 Bruce Ackerman, Social Justice in the Liberal State (1980).

37 Lon Fuller, *The Morality of Law* 39 (1964). This view is summarized at § 2.3.1 nn.28-29.
propositions of law are true if they figure in, or follow from, the principles of justice, fairness, and procedural due process that provide the best constructive interpretation of the community's legal practice, i.e., the best political theory that explains the current legal order.38

Of course, as discussed at §§ 11.3.3 n.62 & 11.3.4.1 nn.65-66, one might classify the law-and-economics movement as a version of conservative pragmatic instrumentalism. This is how former University of Chicago Law School Professor, and now Seventh Circuit Court of Appeals Judge, Richard Posner views his approach. As one of the leading writers in the law-and-economics movement, Posner has written, "I consider myself to be a pragmatic economic libertarian. . . . I do not derive my economic libertarianism views from a foundational moral philosophy."39 However, just as it is probably more accurate to classify the early 19th-century focus on law and economics as a form of economic natural law theory, it may be better to classify the modern law-and-economics movement as an economic natural law approach, rather than a conservative version of instrumentalism. The rejection, cited above, by Judge Posner of foundational moral philosophy as a base for his law-and-economics approach may reflect only Posner's reaction to the critiques in the early 1980s of his attempt to ground law and economics in some foundational moral philosophy.40

With respect to revised versions of instrumentalism, there are a number of possible approaches, both critical and non-critical, as discussed at § 11.3.4. Whether some of these approaches are best categorized as versions of instrumentalism, because they presuppose judicial resort to background social policy to resolve leeways in the law, or are better characterized as some version of modern natural law, because they derive their normative component from background principles alone, may be a matter of dispute in some cases. Critical approaches that presuppose the "social construction of knowledge," and thus the inevitability of social influence in decisionmaking, are probably best characterized as modern versions of instrumentalism. This would include most versions of Critical Legal Studies41 and many versions of feminist or critical race theory. The feminist legal theory that best exemplifies this is the feminist legal theory that shares with the Critical Legal Studies Movement the "[p]ost-modern and post-structural traditions that have influenced left legal critics

38 Ronald Dworkin, Law's Empire 225 (1986). This view is addressed at § 16.2.1 n.16.

[to] presuppose the social construction of knowledge."\textsuperscript{42} The critical race theory included in this category would similarly involve those approaches adopting "critical or modernist approaches."\textsuperscript{43}

Some versions of feminist theory or critical race theory, however, reject the theoretical foundation of post-modern and post-structuralist thought in favor of some "moral realist" vision of our capacity through rational dialogue to develop ethical principles capable of rational defense. As Professor Deborah Rhode noted, "[A] standard critical strategy is to specify conditions under which answers would be generated. Habermas' ideal speech situation has been perhaps the most influential example. Under his theory, beliefs would be accepted as legitimate only if they could have been acquired through full uncoerced discussion in which all members of society participate. Some critical feminists, including Drucilla Cornell and Seyla Benhabib, draw on similar conversational constructs."\textsuperscript{44} Critical race theory that adopts what Professor Richard Delgado has called "conventional, quasi-scientific analysis" would similarly fall into this classification.\textsuperscript{45} Because all of these approaches are based on a belief in the possibility that rational dialogue can develop agreed-upon ethical principles to guide individual behavior, such approaches are probably best characterized as examples of modern ethical natural law.

Similar to these concerns, there is a question of whether some approaches categorized above as examples of modern ethical natural law would be more appropriately cast as revised versions of instrumentalism. For example, Bruce Ackerman’s discussion in \textit{Social Justice in the Liberal State}, cited above at § 13.1 n.35, may be an example of an approach that shares a post-modern and post-structuralist view regarding the social construction of knowledge, rather than the moral realist vision of our capacity through rational dialogue to develop ethical principles capable of rational defense.

The relationship among all these different modern and post-modern instrumentalist and natural law critiques to mainstream instrumentalism is discussed at § 15.4.3. That discussion concludes that they all represent transitional approaches between instrumentalism and a fully-developed, modern ethical natural law theory.

A second table, building on Table 2.4, may help clarify all of these relationships. Under the modified version of Gilmore's views discussed here, and reflected in Table 13.1 below, modes of judicial decisionmaking in American legal history have followed a counterclockwise pattern, from the formative era of ethical, political, and economic natural law; to the post-Civil War era of formalism; to the early 20\textsuperscript{th}-century transition to Holmesian jurisprudence; to Post-World War II instrumentalism; and finally to the emergence of some version of a modern natural law jurisprudence today. Concerning the specific dates for each era of American law, the dates listed in Table 13.1

\textsuperscript{44} Rhode, \textit{supra} note 42, at 636

overlap in each case by thirty years, roughly one generation, in order to underscore the point that there was not a sudden transformation in judicial style, and that in any event it is appropriate always to speak in terms of trends and tendencies of judges, not one approach adopted by all judges deciding cases during any particular time period. As Gilmore himself observed, "All generalizations are oversimplifications. It is not true that, during a given fifty-year period, all the lawyers and all the judges are lighthearted innovators, joyful anarchists, and adepts of Llewellyn's Grand Style – only to be converted en masse during the next fifty-year period to formalism and conceptualism. There are formalists during innovative periods and frustrated romantics during classical periods. When we reconstruct the past, we think we see that in one period the innovative impulse was dominant and that in another period the formalistic impulse was dominant. We are talking about temporary swings in a continuing struggle of evenly matched forces."46

For constitutional decisionmaking, more precise dates for each era are given. This is because, as indicated as the beginning of § 13.1, more precise benchmarks exist for when a majority of the Supreme Court switched to a different decisionmaking style. These more precise benchmarks are discussed at §§ 14.2.1-14.2.5. That discussion, and this Table 13.1, underscore that the framers and ratifiers lived in a predominantly natural law era, not a formalist, Holmesian, or instrumentalist era.

§ 13.2 A Similar Critical Legal Studies Version of American Legal History

Because the foregoing summary of the eras of American law incorporates the generally accepted account of formalism, Holmes, and modern instrumentalism, the summary should not be particularly controversial. Indeed, though mainstream accounts of the development of legal doctrine and a Critical Legal Studies version differ with regard to the oppressiveness of many legal doctrines, as noted at § 11.3.4.2.A, at the level of generality discussed here, this account of the eras of American legal history parallels exactly a Critical Legal Studies version of American legal history as described by Professor Betty Mensch in The History of Mainstream Legal Thought.47 Thus, whether one approaches law from a non-critical or a Critical Legal Studies perspective, the basic eras remain the same.

Under Professor Mensch’s account, the United States initially was in a period of pre-classical legal consciousness, the period defined here as natural law. As Professor Mensch described this period:

In flowery language drawn largely from the natural-law tradition, late-eighteenth and early-nineteenth-century legal speakers made extravagant claims about the role of law and lawyers. Law was routinely described as reflecting here on earth the universal principles of divine justice, which, in their purest form, reigned in the Celestial City. For example, the single most popular legal quotation, for rhetorical purposes, was taken from the Anglican theologian Hooker: "Of law no less can be acknowledged, than that her seat is the bosom of God; her voice harmony of the world."48

Following this period, there arose a period of classical legal consciousness, what Gilmore and others have called formalism. As Mensch stated: "By the 'rule of law' classical jurists meant quite specifically a structure of positivised, objective, formally defined rights."49 Reason, in such an age, is no longer considered as it was by natural law thinkers. Rather, reason is "now conceived, . . . not as embodying universal moral principles and knowledge of the public good [as it was by natural law thinkers] but strictly as the application of objective methodology to the task of defining the scope of legal rights."50 The goal was to produce "a grandly integrated conceptual scheme that seemed, for a fleeting moment in history, to bring coherence to the whole structure of American law."51

This vision of a grandly integrated conceptual scheme motored by an objective methodology to the task of defining legal rights – the formalist dream – broke down, noted Mensch, under the onslaught

48 Id. at 14 (citation omitted).

49 Id. at 18.

50 Id. at 18-19.

51 Id. at 18.
of those who argued that logic was not enough to resolve legal disputes in every case.\textsuperscript{52} As Holmes stated:

\begin{quote}
[W]henever a doubtful case arises, with certain analogies on one side and other analogies on the other, . . . what really is before us is a conflict between two social desires, each of which seeks to extend its dominion over the case, and which cannot both have their way. The social question is which desire is stronger at the point of conflict. The judicial one may be narrower, because one desire or the other desire may have been expressed in previous decisions to such an extent that logic requires us to assume it to preponderate in the one before us. But if that be clearly so, the case is not a doubtful one. Where there is doubt, the simple tool of logic does not suffice, and even if it is disguised and unconscious, the judges are called upon to exercise the sovereign prerogative of choice.\textsuperscript{53}
\end{quote}

Professor Mensch reflected this Holmesian insight in her discussion of the Realist Movement, of which Holmes can be seen as a founding father:

The realists pointed out that no two cases are ever exactly alike; there will always be some difference in the multitude of facts surrounding them. Thus, the "rule" of a former case can never be simply applied to a new case; rather, the judge must choose whether or not the ruling in the former case should be extended to include the new case. That choice is essentially a choice about the relevancy of facts, and these choices can never be logically compelled. Given shared social assumptions, some facts might seem obviously irrelevant (e.g., the color of socks worn by the offeree should not influence the enforceability of a contract), but decisions about relevancy of other distinguishing facts are more obviously value-laden and dependent on the historical context (e.g., the relative wealth of the parties). . . . [For the realists, t]here was no such thing as an objective legal methodology behind which judges could hide in order to evade legal responsibility for the social consequences of legal decision making. Every decision they made was a moral and political choice.\textsuperscript{54}

This Realist legacy led into the fourth period of American law, what Mensch described as attempts at modern reconstruction.\textsuperscript{55} The focus during this period, Mensch stated, was the instrumentalist focus on law as a functional policy science with judges taking a more active role in making explicit policy calculations.\textsuperscript{56} As Professor Mensch described this modern period:

\begin{enumerate}

\item Id. at 24-31.
\item Id. at 25.
\end{enumerate}

Page 417
During the 1940's, Laswell and McDougal at Yale followed out the implications of realism by announcing that since law students were destined to be the policy makers of the future, Yale should simply abandon the traditional law school curriculum and teach students how to make and implement policy decisions. . . . What were once perceived as deep and unsettling logical flaws [were] translated into the strengths of a progressive legal system. For example, the indeterminacy of rules has become flexibility required for sensible, policy-oriented decision making; and the collapse of rights into contradiction has been recast as "competing interests," which are inevitable in a complex, tragic world and which obviously require an enlightened judicial balancing. In other words, we justify as legal sophistication what the classics would have viewed as the obvious abandonment of legality.57

Consistent with the classic account of the eras of American law discussed at § 13.1, Professor Mensch indicated that this attempt at modern reconstruction, while dominating legal discourse since World War II, has lost much of its force and, as of 1982 when her article was written, was under increasing attack from sources as diverse as "natural-law" theories; "representation-reinforcing" theories; "critical legal studies"; "law and economics"; "libertarianism"; and "outsider" jurisprudence by women and persons of color.58

§ 13.3 Results of The Decisionmaking Styles: Constitutional Law Doctrine

Given these analyses of the eras of American law, one way to view the Supreme Court is to note that instrumentalism has been on the wane on the Court with the retirements of Justices Brennan, Marshall and Blackmun between 1989-94. As discussed at §§ 11.3.2 & 11.4, Justices Stevens, Ginsburg, and Breyer have continued to carry on the liberal instrumentalist tradition, at least to a moderate extent. However, the debate on the Court among the remaining non-liberal, instrumentalist Justices, and any new Justices likely to join the Court in the foreseeable future, will more likely concern the three other approaches to decisionmaking: formalism, Holmesian, and natural law.

Of course, as discussed at § 11.3.3, it is certainly possible for a judge to be a conservative instrumentalist. Such a judge might be appointed to the Supreme Court in the near future. As noted at § 7.4.2 nn.236-39, many Democrats in the Senate concluded that some of President Bush’s nominations to the Courts of Appeals between 2001-2006, whom they filibustered, represented a brand of conservative instrumentalist judicial activism. Such a judge would be predisposed to support a conservative agenda by using leeways in the law to advance conservative policy positions.

Alternatively, such a judge might decide that the best way to advance the conservative agenda would be to adopt a formalist or Holmesian decisionmaking style. This judge would not adopt such a style because of an underlying belief that the formalist or Holmesian style represents a more defensible mode of decisionmaking than instrumentalism, but rather would adopt the style because in the existing political and social climate such a style would often lead to a conservative result in practice.

57  Id. at 24.

58  Id. at 31-33.
while at the same time avoiding accusations that the judge was deciding cases in an activist, policy-oriented manner.

A judge adopting such a tactic would simply "parrot" the formalist or Holmesian "line" in deciding cases, knowing that such an approach in today’s political and social climate would likely lead to conservative results most of the time. The only way to determine if such a judge were a true formalist or Holmesian, as opposed to a conservative instrumentalist pretending to be a formalist or Holmesian, would be examine those cases in which a formalist or Holmesian approach would lead to a liberal result and then see if the judge remained faithful to the formalist or Holmesian approach when deciding that case.

For example, regarding the issue of whether there is a due process limitation on punitive damages being awarded in civil cases, the typical conservative position would be to adopt a robust due process limitation in order to protect businesses from large punitive damage awards. The typical formalist position would be to acknowledge that neither the text nor the specific history surrounding the adoption of the Fifth and 14th Amendments contains any such due process limitation. True to their formalist decisionmaking style, both Justices Scalia and Thomas refused in *BMW of North America, Inc. v. Gore* and *State Farm Mutual Automobile Insurance Co. v. Campbell* to impose a due process clause limitation on punitive damage awards, despite that decision working against the typical conservative public policy result.

Of course, a conservative instrumentalist might still follow the formalist or Holmesian approach in a few cases. This would help preserve the illusion that the judge is a committed formalist or Holmesian, and thus preserve the judge's ability forcefully to argue that such an approach ought to be adopted for every case coming before courts. In other words, a conservative instrumentalist might conclude that seeming to remain a formalist or Holmesian purist was more important to the conservative cause than the result in any one case. This may be particularly true if a majority of the Court ended up adopting the conservative result anyway, as occurred in the *Gore* and *Campbell* cases. In any event, since such a judge would typically follow a formalist or Holmesian approach when deciding most cases, that judge would properly be placed in the formalist or Holmesian category, since that would represent how most cases would get decided before that judge. A judge who more routinely departed from the formalist or Holmesian position in such cases in favor of a conservative instrumentalist result, would more properly be viewed as a conservative instrumentalist.

A second aspect of focusing on current doctrinal results relates to modern formalist or modern natural law Justices. To state that there are a number of Justices who approach constitutional issues from the perspective of natural law or formalism today, approaches that dominated prior to 1937, does not necessarily mean that those Justices share the same substantive conclusions of the natural law or formalist Justices of the past on every constitutional issue. Rather, it means they share those

---

60 538 U.S. 408, 429 (2003) (Scalia, J., dissenting); *id.* (Thomas, J., dissenting).

Justices’ general approach to judicial decisionmaking. Adopting that approach in modern times can lead to different substantive conclusions in how to define some aspect of constitutional doctrine today.

For example, as indicated at §§ 12.2.2.1-12.2.2.2, the natural law approach gives great deference to a sequence of judicial precedents, or later legislative and executive practice, as a gloss on meaning. This fact is evident in James Madison's approach to the issue of the constitutionality of the national bank in *McCulloch v. Maryland*. As discussed § 6.3.1 n.107, although initially opposing the bank as unconstitutional in 1791, in 1816 Madison supported the bank's constitutionality based upon repeated recognition by legislative, executive, and judicial actors of its constitutionality between 1791 and 1816. Similarly, Chief Justice Marshall began his opinion in *McCulloch* by noting the presumption of constitutionality in its favor based upon legislative, executive, and judicial practice.

Just as it did for Madison between 1791 and 1816, this gloss on meaning approach may suggest different substantive conclusions today for natural law judges than conclusions that were reached 150 or 200 years ago. For example, in discussing Congress' power under the Commerce Clause in light of any 10th Amendment limitations on that power, Justice O'Connor noted in *New York v. United States* that the "enormous changes in the nature of government" over the past two centuries and the "Court's broad construction of Congress' power under the Commerce and Spending Clauses" support the conclusion that certain federal governmental activities today are constitutional even if those activities were "unimaginable to the Framers." Similarly, in discussing congressional power under the Commerce Clause in *United States v. Lopez*, Justice Kennedy noted that federal power may be broader than conceived in 1820 based upon faithfulness to *stare decisis* and precedents since 1937, and changed economic factors from "an 18th-century economy, dependent then upon production and trading practices that had changed but little over the preceding centuries" to a 20th-century economy based on "a single market and a unified purpose to build a stable national economy.” Of course, despite attention to judicial precedents and legislative and executive practice as a gloss on meaning, natural law judges begin interpretation by focusing on the Constitution's text and purposes. Even with respect to these sources of interpretation, Justice O'Connor noted in *New York*, "[T]he powers conferred upon the Federal Government by the Constitution were phrased in language broad enough to allow for the expansion of the Federal Government's role."

63 17 U.S. (4 Wheat.) 316, 401-02 (1819).

64 *New York v. United States*, 505 U.S. 144, 157 (1992) (O'Connor, J., opinion for the Court). The full passage from which these quotes are taken appears at § 12.2.1.2 n.20.

65 514 U.S. 549, 574 (1995) (Kennedy, J., joined by O'Connor, J., concurring). Justice Souter's dissent in *Lopez* resonates even more strongly with the great natural law respect for *stare decisis*. *Id.* at 603 (Souter, J., dissenting).

66 505 U.S. at 157 (O'Connor, J., for the Court).
By the same token, modern formalist judges can be predicted to differ on some issues from their 1873-1937 counterparts. As indicated at § 9.2.2.2, formalist judges have respect for "settled law." Thus, as noted at § 7.3.2 n.111, in his opinion in United States v. Lopez, 67 Justice Thomas did not call for a complete return to a pure formalist reading of the Commerce Clause. Instead, he called for a balance between existing precedent and the formalist's main reliance on a literal reading of text and a specific historical intent. Similarly, on the issue of incorporation of the Bill of Rights into the Fourteenth Amendment, Justices Scalia and Thomas have indicated that though they do not think such an approach is consistent with literal text or the specific historical intent of the framers and ratifiers, they are committed to recognizing incorporation as a matter of "settled law." 68

In addition, sometimes the traditional and modern formalist positions can differ over the weight to be given to literal text versus specific historical intent if the two are in conflict. For example, as discussed at § 9.3.4, the traditional formalist approach embraced specific historical intent to support segregation in Plessy v. Ferguson. In contrast, the modern formalist approach of Justices Scalia and Thomas embraces literal text to reject Plessy in favor of the literal equality of a “color-blind” Constitution. 69

The same difference between a traditional and a modern Holmesian or instrumentalist approach is also theoretically possible. However, as an historical matter, the heyday of Holmesian decisionmaking was 1937-54, and the heyday of instrumentalism was 1954-86. Since these periods are part of modern constitutional law, there are not many areas where a difference appears between a traditional and modern Holmesian approach, or a traditional and modern instrumentalist approach. However, occasionally a difference can appear. For example, one difference between a traditional and modern Holmesian approach may be found in cases involving gender discrimination. The traditional Holmesian approach, with its deference to governmental action, supported the lack of heightened scrutiny in cases involving gender discrimination that were decided between 1937 and 1954. Chief Justice Rehnquist continued this minimum rational review in his dissents to the 1970s cases that evaluated gender discrimination with an intermediate level of review. However, from a modern Holmesian perspective, Chief Justice Rehnquist eventually became resigned to that intermediate level of review as a matter of “settled law.” 70

Similarly, as discussed at § 10.3.2 nn.53-59, the traditional extreme Holmesian approach was to view questions of gerrymandering as political questions, as represented by Justices Frankfurter and Harlan’s dissent in Baker v. Carr, and, after Frankfurter left the Court, Harlan dissenting in Reynolds

---

Contrary to this position, modern Holmesian Chief Justice Rehnquist was committed to court scrutiny of legislative redistricting, joining Court majorities in *Shaw v. Reno*\(^{72}\) and its progeny, discussed at § 26.2.1.5.

These two examples, however, do not undercut the general observation that there is a close similarity between a modern Holmesian approach, such as that of Chief Justice Rehnquist, and the traditional Holmesian approach reflected in Justice Holmes' dissents between 1904-32 and in Supreme Court majority opinions between 1937-54. This observation is even more true regarding instrumentalism, for which the traditional 1954-86 approach remains the modern instrumentalist approach today. As discussed at § 11.3.2, the main difference among Justices adopting an instrumentalist approach is the degree to which they are extreme or moderate instrumentalists.

Given these observations, an informed analysis of the substance of constitutional doctrines typically must take into account six different substantive outcomes. As reflected in the discussion in Chapters 17-32, for most doctrines there is the traditional natural law approach of 1789-1873; the traditional formalist approach of 1873-1937; the Holmesian approach of 1937-54; the instrumentalist approach of 1954-86; a modern formalist approach; and a modern natural law approach.

In deciding cases, the modern natural law and modern formalist approaches use the same interpretive tools as their traditional counterparts, but they may reach slightly different conclusions on some doctrines. For formalist judges, this will typically be based upon differences in perception regarding the meaning of literal text or the specific historical intent of the framers and ratifiers of the Constitution. For natural law judges, this will also sometimes be based on differences regarding the purpose of constitutional provisions or general historical intent of the framers and ratifiers, later legislative and executive practice representing a gloss on constitutional meaning, or the weight given to a changed climate of judicial precedents. As these later sources are not favored much by formalist judges, there will be fewer cases than for natural law judges where modern formalist judges will permit these sources to be determinative of some new constitutional meaning.

### § 13.4 Decisionmaking Styles of the Justices: Current and Recent Past

To conclude this Chapter on the eras of American law, it may be helpful to summarize the general decisionmaking style of the current Justices on the Supreme Court, and those of the recent past. As of the 2004 Term of the Court, there were two formalists, Justices Scalia and Thomas; one Holmesian, Chief Justice Rehnquist; three moderate instrumentalists, Justices Stevens, Ginsburg, and Breyer; and three modern natural law Justices, Justices O’Connor, Kennedy, and Souter. Changes in Court membership since the 2004 Term naturally have affected the Court’s make-up. Although their judicial predispositions may not become clear until after a few years on the Court, the “New Justices Addendum” to this book predicts that Chief Justice Roberts will likely adopt a

---

Holmesian decisionmaking style, with a slight affinity for formalism, like Chief Justice Rehnquist; Justices Alito, Gorsuch, and Kavanaugh will likely adopt a formalist decisionmaking style, similar to Justice Scalia, with a slight affinity for Holmesian deference; and Justices Sotomayor and Kagan will likely adopt a liberal moderate instrumentalist style, similar to Justices Ginsburg and Stevens.

In Table 13.4, the Justices on the Court since 1968 have been positioned so as to reveal their occasional affinities for a different style than their predominant style, as discussed at §§ 9.4, 10.4, 11.4 & 12.4. This underscores that each of the two dichotomies, analytic/functional and positivist/normative, are opposite ends of a continuum along which any judge may fall. With this caveat, the alignment of Justices who served on the Court since 1968 is as follows:

Viewing the categorizations of Justices Alito, Gorsuch, and Kavanaugh as tentative, since 1968 there have been 4 clear formalists on the Court: 2 extreme, conservative formalist, Justices Scalia and Thomas; 1 extreme, liberal formalist, Justice Black; and 1 moderate, conservative formalist, Chief Justice Burger. As noted at § 9.4, Chief Justice Burger had a slight affinity for Holmesian decisionmaking, and thus is placed slightly in the direction of Holmesian decisionmaking. Justice Black had a slight affinity for instrumentalism, and thus is placed partly in that direction. Justice Thomas has a slight affinity for natural law, and thus is placed slightly in that direction. Justice Scalia was more of a pure formalist Justice, with no predisposition in any other direction.

Viewing Chief Justice Roberts’ categorization as tentative, among the 4 other Holmesian Justices who served on the Court since 1968, there have been: 1 extreme, conservative Holmesian, Chief
Justice Rehnquist; 1 extreme, liberal Holmesian, Justice White; and 2 moderate, conservative Holmesians, Justices Harlan and Stewart. As discussed at § 10.4, Chief Justice Rehnquist had a slight affinity for formalism. Thus, he is placed slightly in that direction. Justice White had a slightly affinity for instrumentalism, particularly regarding federal court power to enforce remedies and in cases involving race discrimination, as discussed at § 10.3.3. He is thus placed slightly in that direction. The natural law affinities of Justices Stewart, and even more so for Justice Harlan, discussed at § 10.4, are reflected in their placement in Table 13.4 as well.

Viewing Justices Sotomayor’s and Kagan’s categorizations as tentative, among the 9 instrumentalist Justices who have served on the Court since 1968, Chief Justice Warren, and Justices Brennan, Marshall, Douglas, and Fortas are placed directly under the heading of instrumentalism, reflecting their core instrumentalist decisionmaking style. They were the 5 extreme, liberal instrumentalists on the Court during the mid-to-late 1960s, with perhaps Justices Douglas and Fortas, listed at the end of the list, being the most extreme, liberal instrumentalists of all. Justices Blackmun, Stevens, Ginsburg and Breyer are placed above the heading of instrumentalism, reflecting a more moderate brand of liberal instrumentalism. As discussed at § 11.4, Justice Blackmun had, and to a slightly lesser extent Justices Ginsburg and Breyer have, an occasional affinity for natural law. Justice Breyer also has an occasional affinity for Holmesian deference to government.

Among the 4 natural law Justices on the Court since 1972, there have been 1 extreme, centrist natural law judge, Justice Souter; and 3 moderate, conservative natural law judges, Justices Powell, O’Connor, and Kennedy. As discussed at § 12.4.1, Justice Kennedy has an occasional affinity for formalism. Justice Powell, and even more so, Justice O’Connor, had an occasional affinity for Holmesian decisionmaking, as discussed at § 12.4.2. As discussed at § 12.4.3, Justice Souter has an occasional affinity for instrumentalism.

For other Justices on the Court during the modern era of Supreme Court decisionmaking (1937 to today), but not on the Court since 1968, the following brief summary indicates their general predispositions, as indicated by the discussions in Chapters 9-12:

6 Formalist Justices: 4 extreme, conservative formalists, Justices Van Devanter, McReynolds, Sutherland, and Butler; 2 moderate, conservative formalists, with Holmesian leanings, Chief Justice Hughes and Justice Owen Roberts.
9 Holmesian Justices: 2 extreme, liberal Holmestrians, Justices Brandeis and Frankfurter; 2 moderate, centrist Holmesians, Justice Jackson, who also had natural law leanings, and Justice Burton; 5 moderate, conservative Holmestrians, Chief Justice Vinson, and Justices Reed, Minton, Clark, and Whittaker.
6 Instrumentalist Justices: 3 extreme, liberal instrumentalists, Justices Murphy, Rutledge, and Goldberg; 3 moderate, centrist instrumentalists, Chief Justice Stone and Justices Cardozo and Byrnes.
0 Natural Law Justices: None other than Justices Powell, O’Connor, Kennedy, and Souter.

Combined with the Justices listed in Table 13.4, during the modern era there have been 13 formalists on the Court, with 7 serving during or before 1937; 14 Holmestrians, with a majority appointed and serving between 1937-1954; 17 instrumentalists, with a majority serving between 1954-1986; and 4 natural law Justices, all appointed and serving during the Burger, Rehnquist, or Roberts Courts.
CHAPTER 14: MATERIAL CAUSES OF THE FIVE ERAS OF AMERICAN LAW

As discussed in Chapter 13, five eras have existed in American law. These eras reflected the four different judicial decisionmaking styles. For constitutional law, these five eras are: a natural law era, 1789-1873; a formalist era, 1873-1937; a Holmesian era, 1937-1954; an instrumentalist era, 1954-1986; and a modern natural law era, 1986-today. As its most elementary level, the material cause of each of these eras of constitutional law were the Presidents who nominated, and the members of the Senate who confirmed, the Justices who sat on the Supreme Court. Identifying the political currents underlying the elections of these Presidents and Senators can help better define the form or shape of these eras of American law. In addition, the case results in these eras of constitutional decisionmaking depended not only on the style of decisionmaking that was applied in the cases, but also on the kind of cases that reached the Court. These cases, in turn, reflected the material reality of what was going on in society with respect to economic and social matters.

This Chapter will present a summary of highlights on how the Court’s decisionmaking has related to economic and social events in society, classifying those events by time into the five eras discussed in Chapter 13. Other highlights appear in Chapters 17-32, where specific cases are discussed and organized in doctrinal fashion as well as by the eras of decisionmaking. Similar to the four judicial decisionmaking styles, there are four approaches to political issues. These approaches are discussed at § 14.1. Details regarding each of the five eras, both in terms of politics and the related economic and social issues that defined each of these eras, are discussed at § 14.2. Fuller discussion of the nature of society and politics in the modern natural law era occurs at § 14.3. A few comments on the possible shape of social, political, and judicial decisionmaking in the future occur at § 14.4.

§ 14.1 Defining Four Approaches to Social and Political Issues

As discussed at §§ 2.2 and 2.3, judges must ask two main questions in deciding cases – the nature of law and the nature of the judicial task. For any politician entering public office, there are also two main questions to ask. These two questions involve the politician’s approach toward fiscal policy and toward social policy. One can have a conservative or progressive approach toward each.

In general, a conservative fiscal approach gives high priority to the balance sheet, matching governmental costs with revenues to try to achieve a balanced budget. In contrast, a progressive fiscal approach puts greater weight on using the government's fiscal resources to provide correctives to the business cycle to promote economic growth and lower unemployment. A progressive fiscal approach is thus willing to run deficits in order to stimulate the economy.

In general, conservative social policy emphasizes the traditional moral values of the majority of the community and is reluctant to have government take over functions that might better be handled by private individuals, community organizations, or religious organizations. For conservatives, the primary obligations of government are national defense and preserving law and order in society. Progressive social policy focuses more on protecting the rights of individuals, particularly the rights of individuals in the minority to dissent. Progressive social policy also responds to identified needs by looking for answers partly in governmental programs that protect individuals' health and safety concerns and provide a safety net for those in need. For progressives, governmental spending needs to reflect a balance between the needs of national defense and preserving law and order versus the
need for social health and safety programs and effective regulation, giving each their appropriate weight.

Just as combining the two possible approaches to the two judicial questions led to four judicial decisionmaking styles, combining conservative and progressive approaches toward fiscal and social policy yields four possible combinations of political perspectives. At one extreme are traditional conservatives who are conservative on both fiscal and social policy. In his heart, and in his rhetoric, though not in the large deficits that occurred during his presidency, President Reagan epitomized this kind of approach. Speaker Newt Gingrich and the House Republican rhetoric carried on this tradition in the 1990s with their emphasis on a balanced budget amendment to the Constitution, combined with a conservative approach toward social policy.

At the other extreme are modern liberals who are progressive on both fiscal and social policy. President Johnson epitomized this kind of approach in the 1960s. It is often associated with the phrase "liberal Democrats in Congress."

Third, there is the traditional liberal approach of the 18th and 19th centuries, which was conservative on fiscal policy, but progressive on social policy. As discussed at § 14.2.1, this was the position of Presidents Jefferson and Jackson in the early 19th century. It is the position of various groups in the center of American political debate today who are looking for a third way between the House Republicans and the liberal Democrats in Congress. Examples of this include: the "Big Tent" strategy of the Republicans; the "New Democrat" strategy of the Democrats; and various independent movements, such as the Reform Party, at least as represented by former Minnesota Governor Jesse Ventura, who described himself as a fiscal conservative and social progressive. California Governor Arnold Schwarzenegger similarly positioned himself as a fiscal conservative, but social progressive in his successful campaign in the California recall election of Governor Gray Davis in 2003.

Finally, there is a modern conservative position, progressive on fiscal policy, but conservative on social policy. President Nixon epitomized this approach with his fiscally progressive comment that "we are all Keynesians now," coupled with his socially conservative "law and order" approach. This position is also reflected in the conservative social policy, but fiscally progressive large deficit policies of Presidents Reagan, George H.W. Bush, and George W. Bush that occurred in response to economic recessions in 1981, 1990, and 2001, respectively. This modern conservative position was also reflected in the socially conservative populism of politicians like former Alabama Governor George Wallace.

Each of these approaches have predominated at various points in American history. As discussed at § 14.2, originally, during the natural law era of 1789-1873, the traditional liberal approach of the 18th and 19th centuries predominated as a matter of politics. During the formalist era of 1873-1937, the traditional conservative approach predominated. During the Holmesian era of 1937-54, the modern conservative position was prominent. During the instrumentalist era of 1954-86, the modern liberal approach predominated. As in constitutional law, its heyday was 1963-69. The predominant approach of the modern era suggests a modern version of the traditional liberal approach.
Of course, the reasons why each of these approaches predominated at any point in time is dependent on a range of social and political considerations. As discussed at § 14.3, as a general matter, the Democratic Party has always billed itself throughout American history as the party of the middle and working classes, laborers and farmers alike. In contrast, the Republican Party, along with its Federalist and Whig predecessors, has billed itself as the party of the business community and traditional White, Anglo-Saxon Protestant religious values. Two groups of swing voters, Southern religious conservatives and minorities, have determined in each era which political party predominantly had the electoral advantage.

When the Democratic Party has captured the substantial allegiance of both Southern religious conservatives and minorities, the Democratic Party has had an electoral advantage. This occurred during the pre-Civil War era, when Southern conservatives and Northern minority groups, such as Irish or Jewish groups, supported the Democratic Party more than the Federalist, Whig, or Republican Parties, and from the Great Depression until the Civil Rights Movement of the 1960s.

The Republican Party has had the electoral advantage when it captured greater allegiance among either of these two groups. The Republican Party thus had the electoral advantage from the Civil War to the Great Depression, when it captured greater allegiance among minority voters, particularly African-American voters, based on the Republican Party’s role in ending slavery and ensuring African-Americans the constitutional right to vote under the 15th Amendment. This right was adequately protected in the North, which was sufficient to preserve the overall electoral advantage of the Republican Party, while African-American voters in the South were disenfranchised as a practical matter as a result of Jim Crow legislation from the 1880s until voting rights acts in 1957 and 1965. Consistent with the proliferation of segregation statutes in the 1880s and 1890s, Democrats in the South “led organized efforts to disenfranchise Black voters. . . . In Louisiana, for example, in 1896 there were 130,344 Black voters. By 1904 there were 1,342. While Louisiana had elected a Black governor, and 123 Black legislators served in the state legislature between 1868 and 1877, by 1890 there were 130,344 Black voters. By 1904 there were 1,342. While Louisiana had elected a Black governor, and 123 Black legislators served in the state legislature between 1868 and 1877, by 1890 the last Black senator left office, followed by the last Black representatives in 1900. There was not another Black member of the legislature until 1890. The Republican Party has also had an increasing electoral advantage since the Civil Rights Movement of the 1960s based on capturing a greater allegiance among Southern religious conservatives. Such conservatives have tended to leave the Democratic Party in favor of the Republican Party, as the other elements of the Democratic coalition, minorities and non-Southern laborers and farmers, particularly as represented by unions, have pushed for progressive social values not shared by Southern conservatives.

At the time of the Great Depression, Franklin Delano Roosevelt was able to bring back minorities to the Democratic coalition by focusing on the shared economic interests of minority families and middle and working class white families. As discussed at § 14.4, for the Democratic Party to bring back sufficient numbers of Southern religious conservatives into the Democratic Party to reestablish the electoral advantage that the Democratic Party had between the Great Depression and the 1960s, a similar message of shared economic interests of minority families and middle and working class white families may be necessary in the post-2000 political climate.

---

§ 14.2 Five Political Eras of American History and Supreme Court Doctrine

§ 14.2.1 The Original Natural Law Era: 1789-1873

The first age of American politics was the traditional natural law era, which existed from 1789 to 1873. The dominant political vision of this age was fiscally conservative and, within the context of 18th-century and 19th-century Western European notions, socially progressive, reflecting the traditional liberal approach of the Enlightenment. This traditional liberal vision was represented during the early part of this era by the Jeffersonian and Jacksonian Democratic Party. Both Jefferson and Jackson were strong believers in a balanced budget and fiscally conservative policies, while being socially progressive in reducing property qualifications on the right to vote and protecting individual economic and civil liberties, like freedom of speech, freedom of religion, and frontiersmen's individual freedom from governmental control.2 Similarly, the dominant judicial vision of this time was protective of the individual on economic rights, and thus took a protective approach to Takings Clause, Contracts Clause, and other economic matters. It has been noted, "[Chief Justice Marshall] called the property right 'sacred.' Marshall considered it to be unequivocally a natural right, thus following such liberal republicans as Locke and Adam Smith."3 Within the context of 18th-century and 19th-century Western European notions, the judicial vision also favored protection of civil rights, and thus was progressive on civil liberties matters where the text of the Constitution so permitted. This was reflected in Jefferson's opening paragraph of the Declaration of Independence with its unalienable rights to “life, liberty and the pursuit of happiness,” in the Constitution's Bill of Rights, and in works such as Thomas Paine's The Rights of Man.4 Of course, with regard to the issue of slavery, the bargain made in the Constitution legitimizing slavery in order to bring the Southern states into the Union did not permit the Justices to do the progressive thing from the perspective of natural law. Instead, even for natural law judges who themselves abhorred slavery, the plain text of the Constitution required them to uphold its constitutionality.5

As noted at § 13.1 nn.14-16, 30-40, there were three facets of this natural law period: ethical, political, and economic. With regard to ethical considerations, the issue regarding freedom of speech was raised with the passage in 1798 of the Sedition Act. The Act criminalized certain forms of politically partisan speech, which the Act termed as “sedition.” Compared with existing English law the Act was progressive, in that it did make “truth” a defense to the Act, which was not true of

2 See generally Alf J. Mapp, Jr., Thomas Jefferson 397-402 (1987) (discussing Jefferson's views as represented in his first inaugural address to the Nation); Arthur M. Schlesinger, Jr., The Age of Jackson 306-21 (1945) (discussing Jacksonian democracy).

4 Thomas Paine, The Rights of Man (1792).

the English sedition laws of the time. England did not establish a defense of truth until 1843. On the other hand, the Act appeared to be motivated primarily by political partisanship, as by its terms it lapsed in 1801, after the Presidential election in 1800. During the campaign of 1800, a number of Jefferson partisans were arrested under the Act. Jefferson and his allies used the passage and enforcement of the Act to brand President John Adams and his administration as hostile to the rights of free speech. After Jefferson’s election in 1800, the Sedition Act was not renewed, in part because of the understanding of Jefferson and his supporters that the Act constituted an infringement on the rights of free speech. The Supreme Court stated in 1964 in New York Times Co. v. Sullivan:

Although the Sedition Act was never tested in this Court, the attack upon its validity has carried the day in the court of history. Fines levied in its prosecution were repaid by Act of Congress on the ground that it was unconstitutional. . . . Calhoun, reporting to the Senate on February 4, 1836, assumed that its invalidity was a matter “which no one now doubts.” . . . Jefferson, as President, pardoned those who had been convicted and sentenced under the Act. . . The invalidity of the Act has also been assumed by Justices of this Court. . . These views reflect a broad consensus that the Act, because of the restraint it imposed upon criticism of government and public officials, was inconsistent with the First Amendment.

Regarding other civil liberties matters, there were few major Supreme Court cases during this period. One major reason for this, as discussed at § 27.2.1 n.95, was that the Bill of Rights was held to apply only to the federal government, and, as discussed below, for political reasons there was little federal regulation before the Civil War. Additionally, as discussed at § 27.2.1 n.96, the Due Process Clause was regarded as covering only procedural matters, and thus was not viewed as a source for substantive protection of rights. With the exception of the issue of slavery, discussed at the end of this section, few ethical natural law issues came before the Supreme Court during this period.

A number of important political natural law issues were addressed. First, the Court addressed a number of issues of separation of powers. The Court made clear its independence from the executive and legislative branches by deciding in 1792 in Hayburn’s Case that the Court had no power to render advisory opinions to those branches. The Court thus made it clear that the federal courts are not administrative agents of the executive or legislative branches. In 1803, the Court rendered its opinion on the topic of judicial review in Marbury v. Madison. With respect to

---

7 376 U.S. 254, 276 (1964).
10 2 U.S. (2 Dall.) 409, 410 (1792).
11 5 U.S. (1 Cranch) 137 (1803).
judicial review, all courts in the United States, and most government officials and the American people, accept three principles rooted in *Marbury* and the 1816 case of *Martin v. Hunter's Lessee*. These principles were reaffirmed in 1958 in *Cooper v. Aaron*, the only Supreme Court opinion signed by all nine Justices. These three principles are:

1. The United States Constitution is our Nation's basic law;
2. It is a judicial duty to say what the law is, and thus whether a federal or state law, on its face or in its application, has violated the Constitution; and
3. With respect to the judiciary in both state and federal courts, decisions by the Supreme Court of the United States are the final authority on the meaning of the Constitution.

As discussed at § 17.2.2, *Marbury* was decided against a background of political disharmony between the Supreme Court, all of whose members had been nominated by Federalist Presidents Washington or Adams, and the Congress and White House, all of whom were in the hands of Jefferson’s party after 1800.

Second, the Court decided a number of important questions of federalism. When the Federalists held office, from 1789 to 1800, Secretary of the Treasury Alexander Hamilton persuaded Congress to adopt a program that favored commercial and manufacturing interests. The program arranged to pay off Revolutionary War debts, and included taxes and tariffs to finance that obligation and to protect infant domestic industries. A national bank was created in 1791 under a 20-year charter to help, among other things, stabilize the currency. The program reflected Federalist interest in establishing a strong pro-business national government. As discussed at § 7.1 n.13, this view was rejected by Jefferson, who believed the federal government should focus on foreign policy matters, leaving domestic matters largely up to the states. Moderate Jeffersonian President James Madison, however, shared some of the nationalist impulses of Hamilton, with whom he had worked to get the Constitution ratified through their joint writings in *The Federalist Papers*. As President in 1816, Madison supported re-creation of a national bank under a new 20-year charter, having experienced the inconvenience of not having a national bank between 1811-16 when trying to finance and pay troops during the War of 1812. Madison’s appointments to the Court between 1809-16, such as Justices Joseph Story and Gabriel Duvall, shared the Federalist vision of the national government.

Supreme Court opinions of this era thus shared the Federalist vision to preserve a broad power in Congress to promote a stable economy and to regulate commerce. In upholding the constitutionality of the creation of a national bank in *McCulloch v. Maryland*, Chief Justice Marshall’s stated the view that the Constitution, emanating from the people, created a government that is limited but supreme in its sphere, and that contains only an outline of great powers. The means for executing those powers were intended to be ample, so that federal laws are constitutional if not expressly

---

12 14 U.S. (1 Wheat.) 304 (1816).
prohibited nor inappropriate for an end within the scope of the Constitution. In *Gibbons v. Ogden*, Chief Justice Marshall added that the power to regulate commerce among the states is a plenary power to make rules on commercial intercourse in all its branches which concern more states than one. Thus, Congress can regulate except for concerns that are “completely within a particular State, which do not affect other States, and with which it is not necessary to interfere for the purpose of executing some of the general powers of government.” The states have reserved powers to regulate commerce for local purposes, as part of their police power, only so long as the state law does not conflict with federal law.

Chief Justice John Marshall’s opinions provided Congress with a basis for extensive regulation of the economy. However, with the exception of tariff policy, Congress remained largely inactive in economic matters before the Civil War. For most of this period, Congress and the presidency were dominated by the Jeffersonian, and later Jacksonian, wings of the Democratic Party. They shared a vision of states’ rights and a limited role for the federal government in domestic matters. Attempts by the occasional non-Democratic president during this era to get Congress to approve large-scale appropriations for internal improvements, such as President John Quincy Adams’ attempts between 1825-28, were rejected. President Jackson refused to re-charter the second national bank in 1836 when its 20-year charter ran out. Indeed, at the time of the Civil War, the Constitution of the Confederate States of America, which was based on the United States Constitution with “appropriate” modifications, such as “[n]o . . . law denying or impairing the right of property in negro slaves, shall be passed,” provided in the Commerce Clause that “neither this, nor any other clause contained in the Constitution, shall ever be construed to delegate the power to Congress to appropriate money for any internal improvement intended to facilitate commerce; except for the purpose of furnishing lights, beacons, and buoys, and other aids to navigation upon the coasts, and the improvement of harbors, and the removing of obstructions in river navigation; in all such cases such duties shall be laid on the navigation facilitated thereby, as may be necessary to pay the costs and expenses thereof.”

In short, from 1800 until 1860, the Jeffersonians and Jacksonians protected agricultural and southern interests by contending for narrow interpretations of congressional power under the Constitution and by opposing most economic regulations proposed in Congress. Thus, although the Supreme Court under Chief Justice Marshall made it constitutionally possible for Congress to exercise extensive regulatory power, that did not occur prior to the Civil War because of Southern political influence. Instead, during antebellum years, the energy of Congress increasingly went into two kinds of debates.

One was a debate over tariff policy. Northern states typically wanted higher tariffs on imported goods in order to protect the newly-developing industries in the North. Southern states typically wanted low tariff policy to make imported goods more affordable, and to prevent retaliation by other countries that might impose higher tariffs on the South’s export industry of cotton and other products. The other debate was over the slavery issue and how it related to the admission of new

---

states and territories and the enforcement of the fugitive slave laws. On balance, because of the influence of the Southern states in the Jefferson/Jackson Democratic coalition, Southern states got substantially what they wanted.\textsuperscript{18}

Nominations by President Jackson between 1829-36 and by later Democratic Presidents moved the United States Supreme Court away from Chief Justice Marshall’s vision and in the direction of states’ rights and Southern interests. The most prominent of these appointments was President Jackson’s selection of Chief Justice Roger Taney to replace Chief Justice Marshall in 1835. Chief Justice Taney served on the Court until 1864. However, because little legislation was passed by Congress on economic matters during this period, few federalism cases occurred in any event.

Against a background of this lack of federal legislation, the states began to encourage economic development in a variety of ways, as by giving favorable tax and substantive law treatment to business corporations and making investments in business activities. When the states sought to avoid disadvantageous contracts, the Marshall Court made use of the Contracts Clause to hold the states to contracts that they had made with private individuals, as in \textit{Fletcher v. Peck} and \textit{Dartmouth College v. Woodward}.\textsuperscript{19} Meanwhile, steam engines began to supplement canals by powering boats and railroads. The states encouraged the development of industries that made use of these powerful new inventions. Many state laws encouraged the industries by devices such as granting eminent domain power and investing public money in private enterprise. Most regulations of business during this time were devised by the states.\textsuperscript{20} Often they were ineffective. Some ended up costing the states a great deal of money, and more than one-half of the state Constitutions were revised by the 1860s to prevent too much state involvement with private industry.\textsuperscript{21}

Reflecting the increased importance of economic natural law during the last half of the natural law era, the Taney Court did render a number of important economic natural law opinions. The first case of this kind was in 1837 in \textit{Charles River Bridge v. Warren Bridge}.\textsuperscript{22} In this case, the question was whether an existing monopoly licensee would be protected, or could a state legislature authorize a competing bridge to be erected. The earlier ethical natural law view of promoting stability and continuity in society by protecting existing economic arrangements, discussed at § 13.1 nn.12-16, and reflected in \textit{Fletcher} and \textit{Dartmouth College}, was rejected in favor of promoting competition. As noted at § 12.3.3 nn.157-58, Justice Story, more traditional and looking to the past, would have protected the monopolist; the Taney Court majority permitted the legislature to promote competition.

\textsuperscript{18} See generally Hall, \textit{supra} note 14, at 92-93, 138-39.

\textsuperscript{19} Fletcher v. Peck, 10 U.S. (6 Cranch) 87 (1810) (a state legislative land grant could not be altered); Dartmouth College v. Woodward, 17 U.S. (4 Wheat) 518 (1819) (state legislature could not change provisions of a college charter because it was a contract).

\textsuperscript{20} See generally J. Willard Hurst, Law and the Conditions of Freedom in Nineteenth-Century United States (1964).

\textsuperscript{21} Hall, \textit{supra} note 14, at 103-04.

\textsuperscript{22} 36 U.S. (11 Pet.) 341 (1837), aff’g 24 Mass. (7 Pick.) 344 (1829).
The second major case of importance was *Swift v. Tyson*. In *Swift*, in an opinion authored by Justice Story, the Court adopted in 1842 the doctrine that there is a federal common law applicable to commercial transactions, which can overrule the commercial common law of state courts, in cases where federal jurisdiction exists, such as diversity jurisdiction in state common law cases where the plaintiff and defendant reside in different states. This federal common law was based on the law of nations with respect to commerce, and the law of nations was thought to rest on natural law. This doctrine was followed on *stare decisis* grounds by formalist-era courts. It was overruled by the Supreme Court in 1938, when Holmesian rejection of natural law led the Holmesian-era Court in *Erie Railroad Co. v. Tompkins* to reject the notion of a federal general common law and required federal courts to apply state contract, tort, and property principles in state law cases in federal court under diversity jurisdiction, as discussed at § 20.3.4 nn. 314-19.

A third important economic natural law case was *Cooley v. Board of Wardens*. In *Cooley*, the Court held in 1851 that some subjects of regulation are in their nature national because they imperatively demand a uniform national rule, and some subjects imperatively demand diversity. Congress has exclusive jurisdiction over the former, but the states have jurisdiction over the latter. As discussed at § 18.2.1.2 nn. 65-70, under *Cooley* the Court decided into which category any subject fits, rather than asking whether Congress had intended federal regulation to preempt state regulation in the area. The opinion freed the pro-states’ rights Taney Court to approve many state economic regulations, such as the Philadelphia port regulations upheld in *Cooley*. This was a useful power at the time because Congress was not acting forcefully to protect persons from certain negative consequences of the new economic activity, such as industrial injuries and injuries to passengers on steamboats and railroads. After the Civil War, the pro-business formalist Supreme Court used the doctrine more to strike down state regulations, as in *Wabash, St. Louis & Pacific Railway Co. v. Illinois*, which held unconstitutional an Illinois railroad regulation as interfering with the exclusive power of Congress to regulate interstate commerce under the *Cooley* doctrine.

The final major economic natural law case of the Taney Court was the Supreme Court’s opinion in 1857 in *Dred Scott v. Sandford*. The Supreme Court’s opinion in *Dred Scott* viewed the issue of slavery through the lens of economic natural law rights of slave owners, rather than ethical natural law arguments against the morality of slavery. As discussed at § 25.1 nn. 9-16, Chief Justice Taney’s opinion, reflecting his and other Justices more pro-Southern sympathies, went beyond the political compromise on slavery adopted in the Constitution, to propose an economic right in the slave owner to take the slave anywhere in the United States and seek the protection of federal law. By questioning the constitutionality of the congressionally-passed “Missouri Compromise,” which in practice had limited slavery to Southern states, the Court’s opinion in *Dred Scott* seemed to permit

slavery as a constitutional right to be imported into Northern states. This decision split the Democratic Party coalition of Northern and Southern Democrats, and galvanized support in the Northern states for the Republican Party, leading to the election of President Lincoln, which led to the Civil War. Given the split in the Democratic Party, caused by the cancer in the party represented by the institution of slavery, the mantel for carrying out the Enlightenment vision of liberty and equality of opportunity represented in the Declaration of Independence passed during the last part of the natural law era to the abolitionists and the Republican Party. In the aftermath of the Civil War, the Radical Republican Congress ensured adoption of the Enlightenment-inspired 13th, 14th, and 15th Amendments, which banned slavery, granted to each person due process and equal protection, and banned racial discrimination in the right to vote. Since these rights now formally appeared in the Constitution, and since Republican Presidents, including Lincoln, tended to nominate Justices reflecting a formalist style of legal reasoning, the Court soon moved into a formalist era.

§ 14.2.2 The Formalist Era: 1873-1937

The second age, the formalist era, lasted from 1873 to 1937. The politics of this era was dominated by Republican administrations catering to business interests and the traditional, conservative moral values of White Anglo-Saxon Protestants. During this period the Democratic Party elected only two Presidents, and both times the Republican Party was split, first when reform Republicans of the 1880s "Mugwumps" backed Grover Cleveland for President, and second when Teddy Roosevelt's "Bull Moose" party split the Republicans in 1912, leading to the election of Woodrow Wilson.

Important to the Republican dominance of politics during this era was the allegiance among minority voters, particularly African-American voters, based on the Republican Party’s role in ending slavery and ensuring in the 15th Amendment that the right to vote could not be denied because of race. As noted at § 14.1 n.1, this right was adequately protected in the North, which was sufficient to preserve the overall electoral advantage of the Republican Party, while African-American voters in the South were increasingly disenfranchised, as a practical matter, as a result of Jim Crow legislation.

---

29 See generally Hall, supra note 14, at 189-210.
This allegiance was different than what had occurred prior to the Civil War. For example, one problem the Federalist Party had in the early 19th century was that their campaign to increase the number of minorities in their party, whom they had ignored during the end of the 18th century, was compromised when their actions did not match their rhetoric. As one author noted, “Nothing is quite as startling as the unabashed zeal with which Federalists courted the minority groups who had been the chief victims of their repressive legislation during the nineties. . . . Before 1800, they had been extremely hostile to ‘united Irishmen’ . . . . After 1800, they sometimes sang a different tune [while] continuing to pander to anti-Hibernian prejudices. . . . In Philadelphia after 1800, . . . a Jew was usually on the most important Federalist electioneering committees . . . . Of course, in other parts of the country Federalists continued to capitalize upon antisemitism.” 30 Similar xenophobic attitudes were represented by groups such as the Know-Nothing Party during the 1840s and 1850s. The Know-Nothing Party, like the earlier Whig Party, formed in 1834, and later Republican Party, formed in 1854, were pre-Civil War alternatives to the Democratic Party of Jefferson and Jackson.

The judicial policy of this era followed the Republican conservatism on both fiscal and social policy. The courts placed a high priority on protecting business from economic regulation, while the courts permitted the traditional moral values of communities to trample on individual civil rights. 31

Regarding civil rights, during and shortly after the ratification process of the Civil War Amendments, while the fervor over the abolition of slavery was still strong, the Radical Republican Congress enacted a number of civil rights laws, including laws intended to prevent racial discrimination by places of public accommodation. However, these laws, and enforcement of other civil liberties protections generally, were shredded by Court decisions during the last third of the 19th century. In 1873, in the Slaughter-House Cases, 32 the Court held that the Civil War Amendments authorized congressional action only against the states, not private individuals; that equal protection was limited to racial matters; that the due process clause offered no substantive protection against deprivation of property; and the Privileges and Immunities Clause of the 14th Amendment only protected a list of federal rights, not state rights. The decision that the 14th Amendment protections authorized congressional action only against the states was reaffirmed in 1883 in The Civil Rights Cases, 33 which invalidated the Civil Rights Act of 1875, an Act which punished racial discrimination in places of public accommodation by fine and possible imprisonment. Civil rights protection for

31 On economic matters, see, e.g., Hammer v. Dagenhart, 247 U.S. 251 (1918) (federal government cannot regulate child labor); Lochner v. New York, 198 U.S. 45 (1905) (New York statute regulating maximum working hours for bakers violates "liberty of contract," part of the 14th Amendment Due Process Clause); Hall, supra note 14, at 231-46. On civil rights matters, see, e.g., Schenck v. United States, 249 U.S. 47 (1919) (protestors of World War I thrown into jail for protest activities); Plessy v. Ferguson, 163 U.S. 537 (1896) (de jure segregation does not violate the Equal Protection Clause as long as the separate facilities are equal); Hall, supra note 14, at 247-66.

32 83 U.S. 36, 72-83 (1873).

racial minorities was further buried by the 1896 holding in *Plessy v. Ferguson* that local customs could be considered in determining whether racial classifications were unreasonable, and that in any event the Constitution protected only civil rights, not social rights, and where one sat on a train was not a civil right.

The Court’s decision in the *Slaughter-House Cases* did not have to be read as narrowly as the Court did in the years following the case. As discussed at § 25.3 nn.55-64, an interpretation of the *Slaughter-House Cases* more faithful to the natural law base of the 14th Amendment is possible. Instead, after 1873, the Court limited the *Slaughter-House Cases* Privileges or Immunities Clause analysis of rights protected by the clause to the literal examples given by Justice Miller of federal privileges or immunities, such as a right of access to seaports and right to petition the government for grievances. As discussed at § 18.2.2, the formalist-era Court limited the Commerce Clause analysis to regulations literally involving commerce, not civil rights statutes that had a substantial affect on commerce. As discussed at § 26.2.1.1.B, the Court adopted a literal interpretation of equal protection of the laws, which held that statutes requiring segregated facilities, or banning interracial marriage, did not deny individuals equal protection of the laws, since the laws literally treated persons of different races equally, in that they were both required to abide by segregation.

As a matter of politics, although minorities, particularly African-Americans, were an important part of the Republican political coalition at the time, helping to ensure Republican Party electoral advantage during this period, they were not welcome by the Southern-dominated Democratic Party of the time. Thus, with nowhere else to go, they could be taken for granted and had little real influence in Republican Party politics either. The Republican-dominated Supreme Court of the formalist era, therefore, gave minority perspectives very little weight, with the exception of cases like *Yick Wo v. Hopkins*, which held that the Equal Protection Clause did apply to any racial minority group, not just African-Americans.

Regarding economic matters, the pro-business part of the Republican coalition did wield great influence in the Republican Party. After the Civil War, Congress initially turned its attention to reconstruction in the South. Meanwhile, there had developed many nationwide businesses as America turned from an agricultural nation into an industrial nation. Until the Interstate Commerce Act regulating the railroads in 1887, however, few federal enactments were passed, as discussed at § 18.2.1.1 n.55. With emerging pressure from middle and working class families of all political preferences for regulation of unregulated corporate power, pressure developed, as Professor Howard Gillman has noted, from within “the post-Reconstruction Republican Party to reconstruct the federal judiciary so that it would become a powerful – and politically insulated – force promoting their program of economic nationalism.” As Professor Gillman noted:

35 118 U.S. 356, 369-74 (1886).

36 Hall, supra note 14, at 93-94, 204-05.

37 Howard Gillman, *The Lochner Era as Partisan Entrenchment: A Political Science Perspective on the Origins of Laissez-Faire Constitutionalism* 1 (AALS Conference on
This role for the federal courts was made possible by [the Republican] party’s fortuitous control of the Presidency and the Senate during most of the postwar period and by its fortuitous short-term control of the entire federal government at key moments – just long enough to entrench its controversial conservative economic agenda in two statutes, the Judiciary and Removal Act of 1875 and the Evarts Act of 1891.

[I]n the wake of the mid-term elections of 1874, where Democrats regained control of the House of Representatives, Republican leaders quickly brought up for consideration in [a] lame duck session . . . a bill to expand the jurisdiction of the federal courts. In contrast to earlier removal legislation which focused on beefing up enforcement of a limited set of civil rights, the main purpose of the Judiciary and Removal Act of 1875 was to redirect civil litigation involving national commercial interests out of state courts and into the federal judiciary. Technically, this meant granting the federal judiciary general “federal questions” jurisdiction – that is, the authority to have original jurisdiction in all civil and criminal cases “arising under” the laws of the United States, and removal jurisdiction in state civil cases that raised issues of federal law or that involved parties from different states.

[As] long as Republicans controlled the House, the Senate, or the presidency, the new role for the federal courts would remain entrenched; and given the power of “eastern capital” in the Senate this veto-point remained strong throughout the period.38

As Professor Gillman noted, to facilitate the Republican agenda of economic nationalism, it was necessary to staff the federal courts with judges who would be “reliable caretakers of this agenda.” Until Grover Cleveland’s inauguration in 1885, the Republican Party controlled the presidency and the Senate. Further, even “Cleveland’s agenda for the Democratic Party” was perfectly consistent with the Republican goal of “economic conservatism and nationalism.” A review of the fifteen justices who were appointed between 1870 and 1893 confirms that they “were selected by presidents and confirmed by senators who carefully noted both their devotion to party principles and ‘soundness’ on the major economic questions of the day,” especially their “attitude toward regulation of interstate commerce by the individual states.”39

Most of these Justices either were former railroad attorneys, had served as railroad directors, or otherwise had “an influential clientele of railroad, banking, oil, coal, iron, and steel interests.” Though these Justices “were not always of one mind on all issues relating to economic nationalism,” these Justices “fit within a fairly narrow ideological space that supported the assigned mission of federal courts during this period.”40

Constitutional Law, June 5-8, 2002) (www.aals.org/profdev/constitutional/gillman.html). Professor Gillman is a Professor of Political Science and Law at the University of Southern California.

As a consequence, as Professor Gillman noted:

Predictably, businesses flocked to these courts seeking more favorable case outcomes and legal doctrines. By January 1, 1878 the federal circuit court in Chicago has 3,045 suits pending, ten times the antebellum average. According to a House of Representatives Report in 1876, diversity cases were “the largest and most rapidly-increasing class of Federal cases,” arising from the rapid economic development and “the formation of numerous great corporations whose business connections extend into many States.”

At the top of this hierarchy the Supreme Court increased its supervisory authority over local economic regulation by invoking the commerce clause with unprecedented frequency and interpreting it to require courts to eliminate barriers to the free flow of interstate goods and services. . . . By 1890, the Commercial and Financial Chronicle commented that “the findings of our highest court are such as to put to rest” the dangers of “Socialistic legislation” and thus mark “an epoch in the industrial and constitutional history of the country.”

The increased caseloads resulting from these developments created real problems with the workload of the existing federal judiciary. Gillman noted:

[T]he preferred Democratic response to these pressures was not an improvement in the ability of federal courts to manage this workload; it was “complete elimination of all jurisdiction based on diverse citizenship.” . . . It was not until 1889, with the start of the 51st Congress, that Republicans once again controlled the House, Senate, and the presidency and were thus in a position to respond as they saw fit to the pressures on federal courts. . . .

The resulting legislation was patchwork reform . . . [It] formally kept both the district and circuit courts but abolished the appellate jurisdiction of the circuit courts, thus leaving them to operate as trial courts alongside the district courts. It also identified defined classes of cases that could be appealed directly from the federal trial courts to the Supreme Court, and then channeled all other appeals through nine newly created circuit courts of appeal, which would have the final say in virtually all diversity suits unless the appellate judges certified that the case should be decided by the United States Supreme Court [or the Supreme Court granted a petition for certiorari]. The three-judge panels on these courts would be made up of one new court of appeals judge for each circuit plus available circuit or district court judges.

The Evarts Act was finally passed in March of 1891 by the lame-duck 51st Congress. . . . The legislation was effective in reducing the Supreme Court’s caseload. The number of cases before the justices fell from 623 in 1890 to 379 in 1891 and 275 in 1892. More importantly, the act – the first significant restructuring of the federal judiciary since the Judiciary Act of 1789 – made it possible for the 1875 jurisdictional changes to persist. It also helped removed some of the traditional localizing pressures on Supreme Court justices caused by circuit-riding. As a consequence, the Supreme Court could continue its development as a truly national institution, pursuing national political agendas by exercising those expanded powers and responsibilities.
that had been assigned to it as a result of the postwar political construction of federal judicial authority.\textsuperscript{42}

The development of the federal judiciary, including the addition of Circuit Courts of Appeals from the nine created in the Evarts Act to the existence today of 11 Circuit Courts of Appeals, the Court of Appeals for the District of Columbia, the Federal Circuit Court of Appeals, and other specialized federal courts, is discussed at § 17.2.3.1 n.146.

Consistent with these pro-business congressional influences on the workload of the federal judiciary during the formalist era, the formalist-era Court limited the ability of the federal government to regulate businesses. Congress was held to have power to regulate under the Commerce Clause only over subjects in interstate commerce or that directly affected interstate commerce. States were held to have exclusive power over intrastate economic activity, and that included manufacturing, agriculture, and mining, because all of this activity occurred before a subject was bought and sold, and thus was not literally commerce, and in any event occurred before the product entered interstate commerce, and thus was not literally commerce among the states,\textsuperscript{43} as discussed at § 18.2.2 nn.71-82. The formalist-era Court did inject some flexibility into its otherwise mechanical reasoning by allowing federal regulation of intrastate activities where that was necessary for effective regulation of interstate activities, as in \textit{The Shreveport Rate Cases} in connection with railroads, or \textit{Swift & Co. v. United States}, regulating an activity that was part of a stream of commerce across state lines, such as the stockyards in Chicago,\textsuperscript{44} discussed at § 18.2.2 nn.83-84.

Even as regards state legislation, the Court found a way to strike down much state legislation as unconstitutional. As discussed at § 27.3.2.1 nn.148-56, although the Court had rejected a substantive due process argument in the \textit{Slaughter-House Cases} in 1873, by 1897, the Court decided in \textit{Allgeyer v. Louisiana}\textsuperscript{45} that the liberty mentioned in the 14\textsuperscript{th} Amendment includes the right to earn a living by any lawful calling, and not to have that right limited by state legislation except for certain specified purposes. In \textit{Lochner v. New York},\textsuperscript{46} decided in 1905, the Court similarly held that the right to make a contract in relation to one's business is part of the "liberty" protected by the 14\textsuperscript{th} Amendment. It could be interfered with only by laws that reasonably relate to the health and safety, morals, or general welfare of the public. Applying that test, the Court invalidated a law that barred a bakery employee from working more than 60 hours a week. The Court said the law was a mere "meddlesome interference" with the rights of the individual because it had no such direct relation

to or substantial effect upon the health of an employee as to justify the court in regarding it as a health law. Justice Holmes, dissenting, with his usual willingness to defer to legislative decisions, said the case had improperly been decided on an economic natural law theory of *laissez-faire*. He said the Constitution does not embody a particular economic theory, and the word "liberty" is perverted unless a rational and fair person necessarily would admit that the law infringes fundamental principles as understood by the traditions of our people and our law.47

In the years immediately following *Lochner*, the Court did invalidate in 1908 state and federal laws that prohibited employers from forbidding their employees to join labor unions,48 a result that inhibited the growth of labor unions during this period. However, between 1907 and 1913, the Court upheld a range of other state and federal labor reform statutes, such as “laws banning child labor, regulating the hours of labor of women, making mining companies liable for their willful failure to furnish a reasonably safe place for workers, and mandating an eight-hour day for federal workers or employees of federal contractors.”49 In 1917, the Court upheld “four very controversial labor reforms: workers’ compensation laws, a federal law that not only limited railroad workers to an eight-hour day but also fixed wages at the level the workers had received when working longer hours, a minimum wage law for women, and a maximum hours law for all industrial workers. The latter ruling seemed to directly contradict *Lochner* and therefore overruled its specific holding *sub silentio.*”50

After 1922, however, four extreme formalists were simultaneously on the Court, with the appointments of Justices Sutherland and Butler in 1922, who joined Justices Van Devanter and McReynolds. From 1922-37, the four extreme formalists needed only one other vote in any case to prevail. These votes could be obtained from moderate formalists like Justice McKenna from 1922-25, or Chief Justice Taft from 1922-30, or Justice Sanford from 1923-30, or Chief Justice

47 *Id.* at 74-76 (Holmes, J., dissenting).

48 Adair v. United States, 208 U.S. 161 (1908) (invalidated state and federal legislation forbidding employers to require employees to agree not to become or remain members of a labor organization during their employment).

50 Bernstein, *supra* note 49, at 350, *citing, inter alia*, Mountain Timber Co. v. Washington, 243 U.S. 219 (1917) (workers’ compensation law); Wilson v. New, 243 U.S. 332 (1917) (railroad workers law); Simpson v. O’Hara, 243 U.S. 629 (1917) (4-4 decision upholding a minimum wage law for women; Justice Brandeis recused himself because he had worked on the case before being appointed to the Court); Bunting v. Oregon, 243 U.S. 426 (1917) (maximum hours law); Adkins v. Children’s Hospital, 261 U.S. 525, 564 (1923) (Taft, C.J., joined by Sanford, J., dissenting) (“It is impossible for me to reconcile the *Bunting* Case and the *Lochner* Case, and I have always supposed that the *Lochner* Case was thus overruled *sub silentio.*”).
Hughes or Justice Roberts from 1930-37. Thus, during this period the *Lochner* doctrine began to be applied more vigorously. A number of reformist labor laws were struck down, including a minimum wage law for women and children, banning use of certain materials in production, regulating the prices of theater tickets, and regulating the entry into a business.51 Most of these decisions adopted a pro-employer or pro-management perspective to the questions of health and safety, morals, or general welfare of the public, and applied rules that did not reflect a sensitive balancing regarding the rights of workers versus the rights of business. Naturally, in virtually all of these cases Holmesian Justices Holmes and Brandeis dissented, as did moderate instrumentalists Justice Stone, who joined the Court in 1925, and Justice Cardozo, who replaced Justice Holmes in 1932.

A more sensitive natural law style of interpretation might have better ensured that true liberty of contract was being advanced, reflecting a more sophisticated approach toward the strengths and weaknesses of the economic natural law theory of *laissez-faire*. Such an approach would reject the oversimplified version of *laissez-faire* represented in Mr. Herbert Spencer’s *Social Statics*, cited by Justice Holmes in his dissent in *Lochner*, in favor of the more sophisticated version represented by Scottish Enlightenment philosopher Adam Smith in his twin books, *The Theory of Moral Sentiments* and *The Wealth of Nations*. As discussed at § 16.2.1 nn.10-11, Adam Smith’s key concept in *The Theory of Moral Sentiments* was that individuals should behave according to the logic of an “impartial spectator.” Such an individual gives other individuals equal concern and respect, “view[ing] him, neither from our own place nor yet from his, but from the place and with the eyes of a third person, who has no particular connection with either, and who judges the impartiality between us.”52 As discussed in *The Wealth of Nations*, the value of competitive markets is to channel any latent selfish passions, which the “impartial spectator,” our conscience, may not succeed in controlling, into moral behavior. In a perfectly competitive market, an egotistic person will behave in the same way as a moral person due to the pressures of supply and demand. Hence, in Adam Smith’s phrase, the “unseen hand” of the market works to the benefit of society.

Adam Smith’s support for competitive markets assumes a number of things. First, market perversions, such as monopolistic or oligopolistic pricing, should not occur. Such perversions distort the fair price that would be determined under ideal competitive conditions. Second, since selfish passions are immoral, any attempt to pervert the market mechanism for one’s own benefit is immoral. Third, Smith does not legitimate unfair dealing between parties in the market, as would

51 Adkins v. Children’s Hospital, 261 U.S. 525 (1923) (minimum wage law for women and children); Weaver v. Palmer Bros. Co., 270 U.S. 402 (1926) (invalid to bar the use of “shoddy” in the manufacture of comfortables where “shoddy” could be made harmless by disinfection or sterilization and there was no evidence of disease having resulted from its use); Tyson & Bro.-United Theatre Ticket Offices v. Banton, 273 U.S. 418 (1927) (invalid to regulate the prices of theater tickets because that power exists only with business that has become affected with a public interest); New State Ice Co. v. Liebmann, 285 U.S. 262 (1932) (invalid to require a certificate of public convenience and necessity of persons who desired to engage in the ice business).

occur when a buyer with less knowledge or less bargaining power is taken advantage of by a seller. Adam Smith may be the prophet of *laissez-faire*, where that term is used to caution governments to keep their hands off well-functioning market mechanisms. But Smith is not the prophet of *caveat emptor*. The impartial spectator calls to us when *caveat emptor* is used to legitimate an unfair bargain that “we value ourselves too much, and others too little.”\(^{53}\) Fourth, when a competitive market is not functioning properly, government regulation is warranted to correct that imbalance. Though not a perfect reflection of Adam Smith’s theories, the economic natural law theories that were used to change common-law doctrine before the Civil War, noted at § 13.1 nn.5-15, reflected this kind of balancing of the needs of economic growth versus fundamental fairness to individuals.

In contrast, the *Lochner*-era courts took few of these more sensitive moral notions of Adam Smith into account in their development of the principle of *laissez-faire*. As discussed at § 27.3.2.1 n.155, they did allow governmental regulation of monopolies on grounds such businesses were “affected with the public interest.” However, in other cases, such as legislation trying to correct the bargaining power disparities between corporations and workers, the *Lochner*-era courts did not follow Adam Smith’s teachings. As a consequence, they freed businesses from a range of public interest economic legislation, which would have been upheld before the Civil War, and which were supported by the post-Civil War Progressive Movement. The Progressive Movement, which began in the 1880s and continued into the 1920s, was a loose collection of groups who had in common a desire that problems of the time, such as achieving economic efficiency and social justice, be dealt with by scientific expertise capable of solving major issues of public interest by methods other than the party politics that had characterized much of the 19th century. Their ideas on child labor laws, antitrust, wage and hour regulation, and the use of administrative agencies have become part of our social culture and legal system today. They also supported the 16th, 17th, and 19th Amendments, dealing with income taxes, direct election of Senators, and granting women the right to vote.\(^{54}\)

Groups today that are concerned about the comparative disadvantage workers face in the United States given less adequate labor, environmental, and safety regulations abroad reflect similar concerns. Adam Smith’s doctrine favors free, but fair, trade, with fairness defined not by reducing American workers to third-world status, but by trade agreements which help workers in those countries get equal rights, so that comparative productivity advantages will determine trade outcomes, not exploitation. Tariffs on goods to equalize the impact of third-world exploitation is not inconsistent with Adam Smith.

Economic growth, such as during the Roaring 20s, meant that as a political matter court decisions striking down Progressive Era legislation did not critically undermine support for the Republican Party. Republican Presidents thus continued to appoint conservative formalists to the Court, such as President Taft appointing Justices Van Devanter and Lamar in 1910 and Justice Pitney in 1912, and President Harding appointing former President Taft as Chief Justice in 1921 and Justices Sutherland and Butler in 1922. Reflecting the Democratic coalition of conservative Southerners and middle and working class families, Democratic President Woodrow Wilson appointed a Southern

\(^{53}\) *Id.* at 223. The full passage from which this quote is taken appears at § 16.2.1 n.11.

conservative formalist to the Court in 1914, Justice McReynolds, but then a liberal Holmesian advocate for middle and working class families, Justice Brandeis, in 1916.

The Great Depression, which began in late 1929, brought President Roosevelt into office in 1932. The Great Depression undermined support for the Republican Party’s economic agenda, and induced a shift in many minority voters to vote Democratic on grounds that the Democratic Party would better protect their economic interests. President Roosevelt’s “New Deal” created many federal agencies to regulate the economy. Before 1937, the Supreme Court declared most of these laws unconstitutional.55 It was the shift in doctrinal results that occurred in 1937 to uphold New Deal regulation that marked the end of the formalist era and the beginning of the Holmesian era, from 1937 to 1954, as discussed next, at § 14.2.3.

§ 14.2.3 The Holmesian Era: 1937-1954

The third age of politics and judicial decisionmaking, the Holmesian age from 1937 to 1954, triumphed when the Supreme Court adopted President Roosevelt’s view that the Court should permit the government to enforce legislation reflecting Roosevelt's progressive view of economic policy. At the same time, the Court continued to allow the traditional moral values of the community to trump individual rights in most cases.56 As has been noted, on most issues of civil liberties, the Holmesian deference-to-government model sides with the government, not the individual.57

In politics as well, this was a period of progressive fiscal policy, but continued conservative social policy. As Professor Hall noted, "Between 1917 and 1945, . . . [r]acism, nativism, and national-security hysteria shaped the legal culture in ways that mocked the rule of law."58 Only at the margins, like President Truman integrating the armed forces, was politics progressive on civil liberties during this era. The witch-hunts of the House Un-American Activities Committee and the McCarthyism of the early 1950s are more typical of the political discourse of this era than robust protection for freedom of speech or freedom for dissent.

Based on shifts in voting patterns caused by the Great Depression, a majority of minority voters were now part of the Democratic coalition. However, their interests were subordinated to the interests of Southern conservatives. It was only after Brown v. Board of Education in 1954, the Civil Rights Act of 1957, the Civil Rights Act of 1964, and the Voting Rights Acts of 1965, that the interests of minority voters began to prevail over the interests of Southern conservatives within the Democratic coalition.

---

56 See Hall, supra note 14, at 271-84.

58 Hall, supra note 14, at 265.
Beginning in 1937, the Court overturned most of the restrictions that the Court had placed on economic regulatory power during the formalist era, with a majority applying Holmesian ideas. In 1937, President Roosevelt sought to enlarge the Court in order to “pack” it with Justices who would change the Commerce Clause and *Lochner*-era formalist approach and would uphold “New Deal” economic regulations. Roosevelt’s specific proposal was to add one new Justice for each current Justice over 70 years of age, if that Justice did not retire within six months. In 1937, this would have given Roosevelt 6 new appointments to the Court, increasing the Court’s membership from 9 to 15, and would have tipped the balance on the Court in favor of upholding “New Deal” regulations.59

As noted at § 7.4.2 text following n.231, as a constitutional matter, it is up to Congress to determine the size of the Court. Before the “Court-Packing Plan” was considered by Congress, Chief Justice Hughes and Justice Roberts, who had sided more often with formalists prior to 1937, but who were moderate formalists with Holmesian leanings, as discussed at § 9.3.2, began to decide cases upholding the power of Congress and the states to regulate economic matters. Given this shift, the “Court-Packing Plan” became unnecessary and it died in Congress during the summer of 1937. At the time, this switch in voting gave rise to the phrase, “the switch in time that saved nine.” As subsequent historical documents reveal, the initial shift in these cases was made at the Court’s weekly conference after the November, 1936 elections, which Roosevelt won in a landslide, but before the “Court-Packing Plan” was announced.60

Beginning in 1937, the Court said that it would make a realistic appraisal of connections between a regulated activity and interstate commerce and if the subject, in the aggregate, substantially affected interstate commerce, it could be regulated by Congress.61 As a result, not one federal commercial law, either on its face or as applied, was declared unconstitutional during the Holmesian era, even though the government grew very substantially in response to the Great Depression and to World War II. The Court also overruled in 1937 cases that had followed *Lochner v. New York*.62 Since 1937, the Court has routinely upheld laws fixing minimum wages and maximum hours, protections for union members, and entry conditions on business.63 There has been no fundamental right to liberty of contract. By 1941, all the Justices on the Court who had opposed New Deal regulations had left the Court, and President Roosevelt was eventually able to appoint seven Justices who agreed with the view that New Deal regulations are constitutional.

62  West Coast Hotel Co. v. Parrish, 300 U.S. 379 (1937).

In respect to social matters, however, the Holmesian Court did little to undo the separate but equal doctrine of *Plessy v. Ferguson*. As discussed at § 26.2.1.1.C, the Court did begin to scrutinize whether various separate accommodations, or separate schools, were in fact equal in practice. If they were not, the Court would rule the practice unconstitutional. Only a few such rulings occurred during the Holmesian era. During World War II, the President ordered the internment of Japanese-Americans located on the West Coast. The Supreme Court acquiesced, although the Court said that restrictions curtailing the civil rights of a single group deserve the “most rigid scrutiny,” a concept that in the hands of the later instrumentalist Warren Court came to have real teeth after 1954. Meanwhile, racial discrimination continued in most phases of society, including employment, public education, places of public accommodation, and employment. On civil rights matters, a Holmesian approach substantially defers to existing governmental practice, as discussed at §§ 3.2 & 10.2.1.2.

§ 14.2.4 The Instrumentalist Era: 1954-1986

The view that World War II had been fought in order to preserve the ideals of democracy abroad and at home affected post-War sentiments regarding civil liberties matters, particularly matters of racial discrimination. The Civil Rights movement was underway in the early 1950s when it was substantially advanced in 1954 by the decision that inaugurated the instrumentalist era, *Brown v. Board of Education*. The Supreme Court held in *Brown* that racial discrimination in public education violated the Equal Protection and Due Process Clauses. In a number of other decisions, the instrumentalist Court outlawed race discrimination in all public facilities and encouraged the drive that was occurring in society toward enhancing the economic status of minorities and women. The Court moved into an age of progressivism on both economic and social policy. While the Supreme Court continued to allow federal and state governments to enforce economic regulation reflecting a progressive view of economic policy, individual rights began to trump majoritarian consensus in many cases.

The instrumentalist era was somewhat unique in American legal history, in that the Court took the lead in pushing for social change, rather than the Justices reflecting changes already existing in the

political order, as the Supreme Court in 1937 had reflected shifts in politics that occurred with President Roosevelt’s election in 1932, or the formalist-era Supreme Court had reflected the shift toward the pro-business perspective of the post-Reconstruction Republican Party after the Civil War. The politics of the Kennedy and Johnson administrations in the 1960s, however, soon caught up and moved to modern liberalism as well. President Kennedy and Johnson’s appointments to the Supreme Court, such as Justices Goldberg, Fortas, and Marshall, solidified a liberal instrumentalist majority on the Warren Court during the mid-to-late 1960s, as discussed at § 11.2.2.2.

As a political matter, even President Richard Nixon, who was personally more conservative on fiscal and social policy than Johnson, proved no challenge to the welfare state modern liberalism of the Democratic majorities in Congress. Thus, many initiatives that we take for granted today as part of the modern liberal state were begun under the Nixon Administration, including the Environmental Protection Agency, the Occupational Health and Safety Administration, the Consumer Product Safety Commission, and the Food Stamp program. President Nixon’s appointments to the Supreme Court, however, shifted the Court away from the clear 5-Justice instrumentalist majority that existed on the Warren Court in 1968 prior to President Nixon taking office in January, 1969. President Nixon’s nominations ended up being somewhat eclectic, with Chief Justice Burger, who replaced Chief Justice Warren, reflecting a moderate formalist approach; Justice Blackmun, who replaced Justice Fortas, ending up a moderate instrumentalist; Justice Rehnquist, who replaced Justice Harlan, reflecting an extreme Holmesian approach; and Justice Powell, who replaced Justice Black, being a forerunner of the modern natural law approach. The decisionmaking styles of these Justices is summarized at §§ 9.4, 10.4, 11.4 & 12.4, and reflected at § 13.4 in Table 13.4.

During this period, women entered the economy in ever greater numbers. As the economy grew more complex, so did the government, at national, state, and local levels. A great network of social programs were created to deal with matters of health and industrial injuries. All of these laws were upheld, as were many spending programs that included conditions regulating the activities of recipients, even if those conditions could not have been mandated under the Commerce Clause.

The most dramatic event in society during this era, however, was the civil rights movement. The Court energize the movement in 1954 by its decision in Brown v. Board of Education. The next great events were passage of the Civil Rights Act of 1964 and the Voting Rights Act of 1965. Among the provisions of the Civil Rights Act was a bar against racial discrimination in employment and places of public accommodation. As discussed at § 18.2.4, in Heart of Atlanta Motel, Inc. v. United States, the Court upheld application of the Act to a motel that served interstate travelers but

had a policy of racial discrimination. That case was extended in *Katzenbach v. McClung*, where the Court allowed the Act to be applied to a restaurant without proof that it had served persons traveling interstate. The Court indicated that the Civil Rights Act could be applied to any restaurant that either serves or offers to serve interstate travelers, or serves a substantial amount of food that had moved in interstate commerce.

The instrumentalist Court also created many new procedural protections for defendants in criminal cases, as discussed at § 23.2. The Court also gave greater protection from discrimination to women and other identifiable groups, such as illegitimate children, as discussed at §§ 26.3.1.2 & 26.3.2.

**§ 14.2.5  The Modern Natural Law Era: 1986-Present**

Since 1986, the Supreme Court has moved away from the liberal activist vision of the Warren Court, and has begun to carve out a majority seemingly committed to returning constitutional law to the natural law judicial decisionmaking philosophy of the framing and ratifying period. After 1986, the post-instrumentalist Court has begun to reflect earlier views on federalism in line with the Marshall Court’s dual theory of sovereignty, in cases like *New York v. United States*, *U.S. Term Limits, Inc. v. Thornton*, and *Printz v. United States*; has enforced limits implicit in the Marshall Court’s opinion in *Gibbons v. Odgen* that Congress can only use the Commerce Clause power to regulate aspects of economic activity, in cases like *United States v. Morrison*; and, harking back to protection given property interests by Chief Justice Marshall in *Dartmouth College v. Woodward*, the Court has made it easier for property owners to prove that a regulation constitutes a taking under the Takings Clause, as in *Dolan v. City of Tigard*. The Court has also interpreted the doctrines of free speech, particularly regarding equal access, and freedom of association to support local private organizations, consistent with de Tocqueville’s observations about early 19th-century America.

These changes are related to political developments since the 1960s. First, the reality of substantially stagnant real wages for most workers during the 1970s and 1980s, produced in part by greater international competition and by higher costs for raw materials, such as the emergence of OPEC and higher oil prices during the 1970s, combined with the increasing budget deficits of the

---

76 United States v. Morrison, 529 U.S. 598 (2000) (Congress lacks the power under the Commerce Clause to make gender-motivated violence a federal crime), discussed § 18.2.5.

77 512 U.S. 374 (1994) (the impact of an exaction demanded as a condition for a building permit must be roughly proportional to the impact of the building permit), discussed § 22.2.5.1.

1970s and 1980s, served to undermine a number of voters' faith in progressive fiscal policy, associated most strongly with President Johnson’s “Great Society” programs of the 1960s. Second, the adoption under the Johnson Administration of civil rights legislation like the Civil Rights Act of 1964 and the Voting Rights Act of 1965, and the national Democratic Party’s support for affirmative action and abortion rights from the 1970s on, pushed a number of Southern religious conservatives into the Republican camp: Nixon’s so-called “Southern Strategy,” used in part by Nixon in his 1968 election campaign and reflected in Kevin Phillips’ famous 1969 book, The Emerging Republican Majority. The resulting elections of Presidents Reagan and George H.W. Bush between 1980 and 1992 led to the appointment of a majority of non-instrumentalist Justices who place more weight than do instrumentalist Justices on federalism, private property rights, and rights of private association in general. This led to an increasing number of 5-4 decisions, with majority opinions joined by Nixon-appointee Chief Justice Rehnquist; Reagan appointees Justices O’Connor, Scalia, and Kennedy; and Bush appointee Justice Thomas.

Many of these cases have remained 5-4 decisions, however, because of the election of President Clinton in 1992. Based on his campaign of focusing on the economic interests of middle and working class families, Clinton was able to bring back into the Democratic fold a sufficient number of middle and working class Southern religious conservatives in order to be elected, winning states like Arkansas, Kentucky, Louisiana, Missouri, and Tennessee in the 1992 and 1996 elections. President Clinton’s two nominations to the Supreme Court in 1993 and 1994, Justices Ginsburg and Breyer, have been moderate liberal instrumentalists. They have joined in a number of 4-person dissents with Justice Stevens, a moderate liberal instrumentalist, as discussed at § 11.3.2, who was appointed by President Ford, and Justice Souter, a natural law judge with instrumentalist leanings and great respect for the instrumentalist precedents of the preceding 30 years, as discussed at §§ 12.3.2 & 12.4.3, who was appointed by President George H.W. Bush.

This make-up of the Supreme Court meant that from 1994-2005 there was a block of 3 conservative positivists, formalist Justices Scalia and Thomas and Holmesian Chief Justice Rehnquist, and a block of 3 moderate liberal instrumentalists, Justices Stevens, Ginsburg, and Breyer. The swing votes were the natural law Justices O’Connor, Kennedy, and Souter. These swing votes moderated instrumentalist doctrine, as noted above at § 14.2.5 nn.75-78, but as natural law judges they were cautious in the way they dealt with instrumentalist-era precedents. For abortion regulations that apply prior to viability, a majority replaced strict scrutiny with a rational basis test, unless the regulation constitutes an undue burden. Even where strict scrutiny applies, review is strict in theory, but not fatal in fact.79 During this time, the level of review remained largely the same for laws regulating freedom of speech. However, it was relaxed for laws that are neutral with respect to religion but which have some incidental benefits to religion, such as state-supported education

---

79 Planned Parenthood v. Casey, 505 U.S. 833, 877 (1992) (“undue burden” is shorthand for a law that has the purpose or effect of placing a substantial obstacle in the path of a women seeking an abortion of a nonviable fetus), discussed at § 27.3.4.1; Grutter v. Bollinger, 539 U.S. 306, 326 (2003), quoting Adarand Constructors, Inc v. Pena, 515 U.S. 200, 234 (1995) (“strict” in theory is not “fatal” in fact), discussed at § 26.2.1.4.D.
programs for disadvantaged students that involve public school teachers or vouchers.\textsuperscript{80} Employed or career women have become an ever more significant part of the Nation’s economy and public life, with the Court continuing vigorous scrutiny of laws containing gender classifications.\textsuperscript{81}

\textbf{\textsection{14.3} Further Details on the Modern Era of American Politics: 1986-2000}

In general, the Supreme Court and its constitutional law decisions have been reactions to developments in society rather than being a stimulus for social change. This is perhaps largely a result of the judicial process itself, because it requires some years for most cases to reach the Court. Only during the instrumentalist era, beginning in 1954, was the Court ahead of the Nation when it decided the leading cases. Reflection on the cases and their societal background lends support to Holmes’ observation that the “substance of the law at any given time pretty much corresponds, so far as it goes, with what is then understood to be convenient; but its form and machinery, and the degree to which it is able to work out desired results, depend very much upon its past.”\textsuperscript{82}

If the connections suggested above between politics and judicial decisionmaking styles have resonance, there should be in contemporary politics a reflection of the tone and debates of the founding period, given the return of constitutional law decisionmaking to the natural law philosophy of the framing era. Some details on that aspect of contemporary society follow.

During the founding period, the two parties that competed for political control were the Federalist party of John Adams and Alexander Hamilton and the Republican Party, later renamed the Democratic Party, of Thomas Jefferson and James Madison. In broad terms, the Federalist party was the party of big business and the active fundamentalists of the New England Puritan tradition. They drew much of their political philosophy from the classic and Christian natural law tradition, which in its English version was represented by Hooker, Blackstone, and Burke. In contrast, Jefferson's party was billed more as the party of the working man, and had its political philosophical roots in the Enlightenment, with religious beliefs a matter for personal conscience, and not for governmental imposition.\textsuperscript{83}

In terms of politics, the Federalist campaigns against Jefferson stressed that he was too liberal and radical in domestic policy, and could not be trusted with foreign policy. As has been noted, “Many [Federalists] attacked Jefferson as a betrayer of Washington and a traitor to his country. . . . A letter . . . printed in the \textit{Connecticut Courant} . . . summarized the questions hurled from many New England pulpits: ‘Do you believe in the strangest of all paradoxes – that a spendthrift, a libertine, or

\textsuperscript{83} \textit{See generally} Mapp, supra note 2, at 399-400.
Jefferson was able to triumph over Adams in 1800, and thereafter his Democratic Party continually triumphed over the Federalists, by being able to command the allegiance of a majority of the middle and working classes, laborers and farmers alike, through a policy of fiscal conservatism, small government, and a balance of powers between the states and the federal government in Washington, while continuing to protect, within the framework of early 19th-century notions of civil liberties, a progressive policy regarding freedom of speech, freedom of religion, and other personal civil liberties. This approach prevented a sufficient number of the middle class from joining the business interests and fundamentalist Christians of the Federalist Party, and their later incarnation in the Whig Party, so that the Democratic party dominated politics during the first half of the 19th century. Only when the issue of slavery split the Northern and Southern Democratic parties after the *Dred Scott* decision in 1857 was the Republican party, the heirs of the Federalists and Whigs, able to build its own majority coalition.

The connections between the modern Republican party and the Federalist Party, with their bases in big business, and their supporters among the professional elite, and Christian fundamentalists, is obvious. So, too, the connections are obvious between the modern Democratic Party and Jefferson's Democratic Party in terms of their base with the working and middle class with a progressive tradition on civil rights matters.

The modern era is also an age, like Jefferson's age, where the swing voters are fiscally conservative and socially progressive. This differs from most politics since 1932, where the Democratic Party could rely on electing a majority to Congress based on promoting a progressive fiscal policy. For most of this period, progressive fiscal policy was viewed as successful in dealing with the Great Depression and as being responsible for the post-World War II economic boom of the 1950s and 1960s. Twenty years of stagnant real wages and sky-rocketing budget deficits during the 1970s and 1980s, however, undermined a majority of voters' faith in progressive fiscal policy, and pushed a number of voters who used to be fiscally and socially progressive modern liberals to adopt a fiscally conservative posture. Thus, not enough fiscally progressive voters remain for the Democratic Party to remain a majority party based upon fiscal progressivism alone.

This new age of politics also differs from the period between the Civil War and the Great Depression. During that period, the Republican party dominated federal politics because of the loyalty of socially progressive voters who viewed the Republican Party as the party that ended slavery and passed the socially progressive Civil War amendments. Although fiscally conservative, these traditional liberal voters of the Enlightenment tradition are not wedded to the Republican Party

---

84 *Id.* at 385-86.

85 *Id.* at 370-74, 377-80.

86 *Id.* at 399-400 (discussing Jefferson's position favoring a balanced budget, states' rights, freedom of speech and religion, and protecting laborers and farmers from corporate oppression).
today, as they were after the Civil War, because they view too many elements in the Republican Party today as too socially conservative. Though socially progressive, these fiscally conservative voters are not wedded to the Democratic Party either because of the Democratic Party's legacy since 1932 of being fiscally progressive.

This analysis suggests that for the Democratic Party to return to being the majority party in Congress and to win the Presidency on a regular basis, Democrats will have to abandon an agenda based solely on the modern liberal coalition of the 1960s which was based on purely fiscally progressive policies. In the modern era of politics, the Democrats will be able to win only by putting together the same coalition that Jefferson did in 1800. This would involve winning back fiscally conservative, socially progressive voters by promoting a smaller, more decentralized government, as in "[t]he age of big government is over," as President Clinton said in his 1996 State of the Union Address; combined with a focus on middle class interests, such as a focus on middle class wages and health care, middle class tax relief, and providing responsible protection for Medicare, Medicaid, and Social Security; and painting the Republicans as the party of big business and a threat to individual liberties of freedom of speech, freedom of religion, and cultural diversity, the modern equivalent of Jefferson's charges against the oppressive and xenophobic character of the Alien and Sedition Acts of 1798.

In response, the modern Republican party has a number of ways to try to defeat this coalition, remain the majority party in Congress, and win the Presidency on a regular basis. One way would be to keep together its base in the business community and fundamentalist Christian voters, while convincing a sufficient number of fiscally conservative, but socially progressive voters to vote Republican on a consistent basis. This would be done by persuading them that the Democratic party is likely to remain too liberal on fiscal matters, and thus Democrats can be predicted to continue to waste their tax dollars on big government programs not directly related to their interests. If the Democratic party does not move to the Jeffersonian vision described above, this Republican argument that the Democrats are "tax and spend liberals" should consistently work, as it did in the congressional elections in 1994, and the presidential elections in the 1980s of Presidents Reagan and Bush against Walter Mondale and Michael Dukakis. Unless the Democratic Party changes and becomes more fiscally conservative, it will continue to be perceived as too liberal, in the modern sense of fiscally and socially progressive, to command majority support today.

A second way for the Republican party to become the dominant party would be to continue to find effective wedge issues to split the Democratic party, as slavery split Northern and Southern Democrats before the Civil War. The debate over affirmative action may be such a wedge issue today. Instead of splitting Northern and Southern Democrats, affirmative action may split white and minority middle and working class Democrats. Of course, President Clinton tried to mitigate the effects of that wedge issue with his comments to "mend, and perhaps eventually end" affirmative action (which was targeted to white middle and working class Democrats), while continuing a socially progressive commitment to remedying the continuing effects of prior racial discrimination (which was targeted to minority middle and working class Democrats).

A third possible way for the Republican Party to become a majority party on a regular basis would be to convince enough fiscally conservative, but socially progressive voters to become conservative on social issues also, and thereby build a majority party based upon socially conservative values
alone. In the earlier natural law era, that attempt failed, as the socially progressive Enlightenment natural law approach to social issues prevailed over the classic and Christian socially conservative tradition of the Federalist party. Similarly, it is unlikely that the Christian Coalition wing of the Republican Party can sufficiently expand its base to make the Republican Party a majority party without resorting to including in the Republican "Big Tent" fiscally conservative, but socially progressive voters. This was tested in part by Pat Buchanan's run for the Presidency. Pat Buchanan tried to build a coalition based upon: (1) the traditional conservatism of Christian Coalition voters; (2) the modern conservatism of Richard Nixon and the George Wallace tradition of socially conservative populism; and (3) embracing the wedge issue of affirmative action, combined with xenophobic rhetoric over immigration. Pat Buchanan’s effort suggests that this combination of voters would not likely be successful in gaining much more than 40% of the electorate in a general election, or perhaps 45% with a very successful “mobilize the base” electioneering strategy.

A fourth way for the Republican Party to become a majority party would be to convince the swing voters that the Republican Party best represents the “Big Tent” mentality. The rephrasing of Republican Party rhetoric as reflecting “compassionate conservatism” may be an attempt to convince socially progressive voters that Republicans share their progressive concern with compassion. The prominence in the Republican Party of elected officials who are more moderate on social issues, such as Governor George Pataki in New York, or Governor Arnold Schwarzenegger in California, is another reflection of this concern. In states like New York and California, social moderation is critical for a candidate to have a good chance at state-wide election.

Campaigning in 1992 as a New Democrat, President Clinton appealed to the Jeffersonian tradition of fiscal conservatism and balanced budget rhetoric, combined with being progressive on social issues. Just as Jefferson was successful against President Adams in 1800, Clinton was successful in 1992 in painting President Bush as being too closely associated with the business elite, and as not caring enough about the middle class. So, too, just as Jefferson was able to tarnish President Adams with being a threat to individual liberties by his support for the Alien and Sedition Acts of 1798, subsequent to the 1992 Republican Convention, Clinton was able to tarnish Bush as being too obsequious to the Christian Coalition-inspired wing of the Republican party.

During his first two years in office, however, Clinton ignored the lessons of Jefferson, and appealed back to the modern liberal wing of the Democratic party, associated with President Johnson's "Great Society" programs, which still controlled the Democratic leadership positions in Congress. Thus, in 1994, the Republicans were able successfully to paint President Clinton as a modern liberal whose campaign as a New Democrat, really an old Jeffersonian Democrat, was just talk. Thus, in 1994, a significant number of fiscally conservative, but socially progressive voters who had split their tickets and supported Presidents Reagan and Bush in the 1980s, while still voting for Democrats in Congress, and who voted both for Democrats in Congress and Governor Clinton in 1992, either did not show up at the polls or supported Republican candidates for Congress.

---

Between 1994 and 2000, the Republicans, led by Speaker Newt Gingrich in the House from 1994-98, paid great attention to their base within the corporate elite and socially conservative voters, and less attention to how the impact of their policies were being perceived by the fiscally conservative, but socially progressive voters, who made the difference in the 1994 congressional elections. Thus, the Republicans left themselves open to the charge of continuing to cater too much to the corporate business elite, in terms of issues like tax policy, and as not being socially progressive enough on middle and working classes issues like Medicare and Medicaid, such as the charge that they wanted to slow the growth in these programs to the point that services would need to be cut, and thus undermining the necessary social safety net in which socially progressive voters believe. In each of the congressional elections of 1996, 1998, and 2000, therefore, Republicans lost seats in Congress.

With respect to the presidential elections in 1996 and 2000, the swing votes were again the same group of voters who were the swing votes in 1992 and 1994: the fiscally conservative, socially progressive voters of the Enlightenment tradition. As the authors of this book wrote early in 1996, “[A] message to grab such voters had to combine, as it did for Jefferson, fiscal conservatism on the budget; a balanced role for the States and the federal government; protection of individual rights, but a recognition, consistent with Enlightenment philosophy, that individuals not only have rights, but responsibilities; and a vision of equal protection which is informed by the Enlightenment perspective that individuals should be given an equal opportunity to compete, but there is no guarantee of equal outcomes for any individual, or for any group, in society. In addition, there was a need to appear to be on the side of the middle and working class, and thus to be concerned about their medical care, their education, and the environment in which they live, while protecting them from exploitation by big business. In such a climate, politically popular tax cuts would need to be clearly linked to providing more money in the pockets of the middle and working class, rather than merely relieving the tax burden for the relatively wealthy.”

During the 1996 campaign, the candidate that best appealed to this tradition was William Jefferson Clinton, not Bob "Jefferson" Dole. Between 1994 and 1996, through both policy actions and rhetoric, President Clinton returned to the New Democrat, Jeffersonian vision, including signing the Welfare Reform Act of 1996, embracing the fiscally conservative goal of balanced budgets, and remarking in the 1996 State of the Union address that “[t]he age of big government is over.” As history records, President Clinton defeated the Bob Dole handily in the 1996 presidential election.

With regard to the 2000 presidential election, an article written by one of the co-authors of this book in the fall of 1998 and published in the summer of 1999, took this Jeffersonian analogy one step further. As that article stated:

Thomas Jefferson defeated John Adams in the presidential election of 1800. . . . During the next few elections, the Federalist Party lost touch with the electorate, principally because their distaste for Thomas Jefferson became the focal point of their political agenda. They ran against the popular Jefferson on grounds of his personal shortcomings. Despite these attacks, Jefferson remained popular with the people because of the “peace, prosperity, and expansion of the country [the Louisiana Purchase]” during his administration. In the election of 1808, Jefferson’s right-hand man, the bland but morally upright James Madison, won easily.

Over the next decade, the Federalist Party fell into disarray. Their core agenda was support for the business community, emphasis that they were the party of morality and traditional Christian values, and attempts to expand their political base to minority groups that they had ignored prior to 1800. This message was ineffective against the Jeffersonian message of fiscal conservatism on the budget; a balanced role for the States and federal government; a recognition, consistent with Enlightenment philosophy, that individuals not only have rights to equal opportunity, but responsibilities; and a political philosophy of being on the side of the common man.91

The article then asked “will today’s Republicans, perhaps faced with similar cultural cross-currents from two centuries ago, be more politically savvy than their Federalist counterparts of yesteryears.”92 In that regard, the article published in 1999, noted:

From 1800 until 1840, only one non-Jeffersonian was elected president: John Quincy Adams, the son of President Adams whom Jefferson defeated in 1800. . . . Quincy Adams adopted the rhetoric of the Jeffersonians, disassociating himself from the rhetoric of the defunct Federalist Party. This suggests that if a Republican candidate emerges who picks up President Clinton’s Jeffersonian themes of “opportunity” and “responsibility”; merges elements of the Christian and Enlightenment traditions with a focus on “love of neighbor as oneself”; steers clear of the mania of personal attacks on Clinton’s character; and happens to be the son of the President whom Clinton defeated in 1992, that candidate might have a chance against the “bland, but morally upright” Al “James Madison” Gore and his wife, Tipper “Dolley Madison” Gore.93

This description of the possibility of a successful Republican campaign is, of course, the campaign run by George W. Bush, the son of the President whom Clinton defeated in 1992. Bush’s focus on “changing the tone in Washington” steered clear of personal attacks, while his campaign, as summarized in his Inaugural Address, touched on the themes of America “since Jefferson” as a land of opportunity where “everyone deserves a chance,” combined with the “responsibility” each of us has “beginning with your neighbor.”94 Had the Republicans done the same thing the Federalist Party did in 1808, when they ran the same candidate, Charles Cotesworth Pickney, that they had run in

91  Id. at 828-30.
92  Id. at 830.
93  Id. at 830 n.80.
1804, the Republicans would have run Bob Dole again in 2000. There is a good chance Al Gore would have been able to win that election, as did James Madison against Pickney in 1808.

As suggested by this analysis, the modern-day Quincy Adams’ chances of prevailing would improve if that candidate could paint Al Gore as not the “bland, but morally upright” modern equivalent of James Madison, but instead “overbearing” and “morally compromised.” For example, the Bush campaign focused on the audible “sighs” of Vice-President Gore during the first Presidential debate as part of creating a media contrast between a more laid-back candidate Bush with a more overbearing Al Gore.\(^{95}\) The Bush campaign focused on tying Al Gore to campaign financing problems and Gore’s embellishments of personal remembrances – the charge of the Bush campaign that Gore was a “serial exaggerator.”\(^{96}\) It would also help to paint Al Gore not as a continuation of Jeffersonian balanced budget, fiscal conservative policies, but instead a tax-and-spend liberal of the classic “Great Society” modern liberal mode. This was reflected in the Bush campaign’s attempt to paint Al Gore as a tax-and-spend liberal in the tradition of Walter Mondale and Michael Dukakis. As then-Governor Bush said during the final Presidential debate, “You [Gore] propose more than Walter Mondale and Michael Dukakis combined. In other words – this is a big spender.”\(^{97}\)

Despite these attempts, Vice-President Gore might still have prevailed in the 2000 election had he run more as did James Madison, the President’s right-hand man on issues of public policy, but with more personal integrity. Instead, Gore choose to run more as “his own man,” a populist with his campaign headquarters in his home state of Tennessee. In terms of historical parallels, Gore’s focus on how George W. Bush’s policies would disproportionately favor corporations and the wealthy was similar to that of the most famous Tennessee populist of the early 19\(^{th}\) century, Andrew Jackson. Indeed, to the extent there are “Clinton” and “Gore” wings of the Democratic Party, they are similar to the “Jeffersonian” and “Jacksonian” wings of the Democratic Party in the 19\(^{th}\) century. For example, Vice President Gore’s acceptance speech at the Democratic National Convention in 2000, while criticized by some as too left-of-center, is in the tradition of Andrew Jackson’s populism. Jackson’s populism, while not resonating within the power elite of his time,\(^{98}\) was embraced by the core rank and file voters of his age.

The election of 2000 was similar, in many respects, to the election of 1824. In that election, as in 2000, there were four candidates for president who attracted more than token support. The four

\(^{95}\) See, e.g., BBC News, *Gore and Bush re-enter the ring* (Oct. 11, 2000) (www.bbc.co.uk, then click on “BBC News”, then search using the article’s title) (“The vice president says he will also tackle the perceived problem he had last week with appearing condescending by sighing and rolling his eyes after his opponent’s answers.”).

candidates in 1824 were Andrew Jackson, who received 153,544 popular votes and 99 electoral votes; John Quincy Adams, who received 108,740 popular votes and 84 electoral votes; Secretary of the Treasury W.H. Crawford, who received 46,618 votes and 41 electoral votes; and Congressman Henry Clay, who received 47,136 popular votes and 37 electoral votes. The four candidates in 2000 were Vice-President Al Gore, Governor George W. Bush, Green Party candidate Ralph Nader, and Reform Party candidate Pat Buchanan. In that election, as in 2000, the candidate who finished first in the popular vote, then Andrew Jackson, lost the presidency to the candidate who finished second in the popular vote, Quincy Adams, because of the operation of the electoral college process.

Under the electoral college process, when no candidate receives a majority of the electoral votes, the election goes to the House of Representatives, where each state gets one vote determined by the majority of that state’s congressional delegation. Regarding the election in 1824, it has been noted, “On the evening of January 9, 1825, Clay visited Adams for a ‘confidential interview,’ the details of which Adams did not report, even in his diary. But shortly thereafter Clay’s supporters swung their votes to Adams, while partisans of Jackson and Crawford screamed that a ‘corrupt bargain’ had been made. When the House of Representatives voted for President on February 9, 1825, Adams received the votes of 13 states, Jackson 7, and Crawford 4. ‘May the blessings of God rest upon the event of this day!’ Adams wrote in his diary. Significantly, when he announced the appointment to his Cabinet, Clay headed the list as Secretary of State.” Each of the preceding three Presidents – Madison, Monroe, and Quincy Adams – had used the position of Secretary of State as a stepping stone to later becoming President.

During the next 4 years, Quincy Adams ran his administration substantially without regard to the closeness of the election, pushing with little modification the policies he ran on in his campaign. Quincy Adams never changed his style of presidency during his entire four years, even as his disagreements with Congress grew. Quincy Adams trusted in the wisdom of his views, along with reading the Bible every morning and night and trusting in the power of God, to see him through.

Some have noted the same strong religious faith in George W. Bush. The result was that, subject to short-term fluctuations, Quincy Adams did not increase his electoral popularity during his term in office, while the forces opposed to Adams coalesced around Andrew Jackson, who swept into power during the election of 1828, ushering in the age of Jacksonian Democracy. Quincy Adams was defeated in 1828, with Jackson receiving 647,276 popular votes and 178 electoral votes to

102 Id. at 62.
Quincy Adams’ 508,064 popular votes and 83 electoral votes.\(^{104}\) Jackson’s triumph over Quincy Adams in 1828 was obtained, in part, upon the perception among Jackson voters that he had been “cheated” out of the 1824 election.\(^{105}\)

\section*{§ 14.4 \ Reflections on the Nature of Politics and the Supreme Court Post-2000}

Although gazing into crystals balls is a perilous enterprise, the following thoughts on the future direction of American politics, and thus possible membership on the Supreme Court, are useful to make. These thoughts, building on the connection between the Bush/Gore election of 2000 and the Quincy Adams/Andrew Jackson election of 1824, are substantially based on an article written by one of the co-authors of this book during 2002, and published in the summer of 2003.\(^{106}\)

In contrast to Quincy Adams’ limited popularity during his term in office, George W. Bush’s popularity became very high as the Commander-in-Chief leading the war on terrorism following the events of September 11, 2001. History predicts, however, that this popularity will not necessarily be long-lasting. The jump in election parallels, skipping over the presidencies of James Madison and James Monroe, and moving from Jefferson’s reelection in 1804 (Clinton’s reelection in 1996) to the Adams/Jackson contest in 1824 (Bush/Gore in 2000), has been matched by the quick moving events of today.

The main occurrences of the Madison and Monroe presidencies were the attack on the nation and the burning of Washington D.C. by the British during the War of 1812 (the attack on the World Trade Center being a similar attack on American soil by an outside enemy today); the “Era of Good Feeling” that resulted from the nation pulling together following the burning of Washington D.C. (the coming together of the nation regarding the war on terror following September 11th being the modern equivalent); and the unraveling of the “Era of Good Feeling” because of the recession of 1819-22, and the different political responses to that economic downturn (the era of partisan politics returning to Washington, D.C. focused on differing economic responses to the recession of 2001). President Monroe was the beneficiary of the “Era of Good Feeling” even during the first part of the recession, and thus won the election in 1820 virtually unanimously, receiving 231 out of 232 electoral college votes, one elector having “cast his ballot for John Quincy Adams, supposedly to preserve for Washington the honor of having received the only unanimous vote.” However, continuation of economic problems over the next few years, and different proposed political responses to it, provoked lively elections in 1824 and 1828.\(^{107}\)

\(^{105}\) See supra text accompanying notes 100-01.

\(^{107}\) On the Madison and Monroe Presidencies, see Whitney, supra note 99, at 45-47, 54-55.
If Bush had been up for reelection in 2002, close to the events of September 11, he might well have
an easy time at reelection. The congressional elections in 2002 reflected President Bush’s
continuing popularity. However, by the time of the reelection campaign in 2004, this boost was
always likely to be diminished, and the campaign was always likely to be close. This is true despite
the attempt by President Bush and his advisers to try to extend the modern “Era of Good Feeling”
boost in popularity into the election in 2004 by continuing to have President Bush front and center
as the face of the war against terrorism. Such a similar boost is likely to be a smart strategy for any
succeeding Republican candidate in 2008 or thereafter. If they are smart, Democrats will preempt
any attempt by Republicans to translate the continuing war on terrorism into a Republican issue by
getting out in front and being as “hawkish” on terrorist regimes as the Republicans.

It should be noted that such hawkishness is good public policy, as well as good politics. Following
the Cold War, the main foreign policy threat today is terrorism, particularly in the form of
development of weapons of mass destruction by rogue nations of “global reach.” As one of the co-
authors of this book wrote in 1999, two years prior to September 11, “Groups that do not embrace
[a] vision of toleration will be tolerated only to the extent that they are isolated or ineffective in their
practices because all individuals should be protected from group domination. This is a necessary
corollary to the fact that . . . moral rights involve ‘the equality of human rights and respect for the
dignity of human beings as individuals,’ a dignity which no society, or community within society,
should be permitted to infringe.”

Of course, this statement of hawkishness does not mean that Democratic candidates need embrace
the unilateralist way foreign policy is being carried out by the Bush administration. Critics of the
Bush Administration foreign policy are likely to continue to contend that some of the Bush foreign
policy is reminiscent of the big bully on the block trying to boss other children around or, with
respect to the Kyoto treaty, the international criminal court, or the United Nations generally, taking
my ball and going home. Nevertheless, unless a Democratic candidate is perceived as being as
strong on national defense as was Andrew Jackson in the 19th century, the chances of the electoral
success of an economic populist message like that of the era of Jacksonian Democracy will be much
reduced. Andrew Jackson had the support of Southern conservatives in his elections as President.
A message of shared economic interests regarding jobs, health care, and education addressed to both
Northern and Southern middle and working class families might work for a Democratic candidate,
but only if the candidate is perceived as sufficiently strong on national defense.

Consistent with the parallel from the earlier natural law period of American politics, and the focus
of swing voters being fiscally conservative, but socially progressive, to be successful Democratic
candidates must avoid the perception that they are fiscally progressive “tax and spend liberals.” Part
of avoiding this perception is the embrace of balanced budgets, as President Clinton did during the
1990s. Part of it too is making the point that government spending measured as a percentage of the
country’s gross domestic product was smaller under Presidents Carter and Clinton than it was under
Presidents Reagan or either Presidents Bush. Under Carter, federal spending “amounted to about
21% of the country’s gross domestic product. That number inched up under Reagan and the elder
Bush to 22%. It declined under Clinton to 20%. When Clinton left office, the federal government

---

108 Kelso, supra note 90, at 826 & n.63.

Page 458
accounted for a smaller part of the domestic economy than any time since the 1960s.”

Perhaps a more accurate characterization of budget priorities since 1968 is that Republican Presidents, reflecting a conservative social agenda, have tended to allocate a greater percentage of government spending to departments like Defense, while Democratic Presidents, reflecting a progressive social agenda, have focused more on achieving an appropriate balance between defense spending and spending on social programs under departments like Health and Human Services or the Environmental Protection Agency. For example, President George W. Bush’s “projected 30 percent rise in defense spending through 2007 would establish a pace only slightly slower than President Reagan’s hikes from 1981-85, the largest ever during peacetime.”

The election in 2004 was different in one important respect than the 1828 election between Andrew Jackson and John Quincy Adams. Al Gore, the Jackson equivalent in the 2000 election, chose not to run again, unlike Jackson who ran again in 1828. However, the candidate who emerged as the Democratic nominee, Massachusetts Senator John Kerry, reflected the Jacksonian populist vision, and had the strongest military record, combined with the size and look of Andrew Jackson. In the election campaign, however, President Bush and his advisers were successful in being able to portray Senator Kerry as not strong enough on national defense, and Senator Kerry, being from Massachusetts, was never able to connect with Southern middle and working class families regarding jobs, health care, and education. Further, President Bush was able to use Democratic support for gay rights as an effective wedge issue to blunt any Democratic inroads into middle and working class families on economic issues, which was critical in key swing states like Ohio or Missouri, states that Clinton won in 1992 and 1996. This issue of gay rights, including the issue of gay marriage, as a political issue now and in the future is discussed at § 16.2.4.

Without regard to any particular election, the basic theme of this analysis remains. Putting to one side the issue of gay rights, where in the short run the conservative social position commands majority support, but eventually the progressive position will prevail, as discussed at § 16.2.4, attracting the controlling votes in contemporary American politics, like in the initial era of American politics, is likely to continue to revolve around an appeal to fiscally conservative, but socially progressive voters. The success of either Republican or Democratic candidates who best appeal to such voters will likely determine the outcome of most future Presidential elections. Republicans who run to their base of socially conservative voters in swing districts or swing states, or for nationwide office, will likely do so at their peril. For example, Margaret Thatcher remade the Tory Party in England as a solid conservative party, pushing the moderate conservatives, or “wets” as they were called, to one side. The Tory party is now a minority party in England. Similarly, the Conservative Party in Canada had adopted a more hard right stance. Only by adopting a more moderate stance, such as advanced by David Cameron in Britain, or Stephen Harper in Canada, do those parties stand chances of electoral success.

---

109 John Balzar, Debunking the Big-Spender Myth, in The Los Angeles Times B17 (Jan. 11, 2002).

While many of President Bush’s policies have catered to his socially conservative base, his speeches have been well-drafted to highlight Bush’s concern for middle-class issues such as education, health care, economic security, the environment, and protecting workers from corporate scandals.  

For example, the Bush campaign in 2000 focused on the tax cuts going to all Americans, particularly those in the middle and working classes, by highlighting examples of middle class voters who would benefit from his tax cut plan at each campaign stop.  As the media reported during the campaign, “[G]overnor [Bush] said yesterday that he is the true patron of the middle class. . . . ‘I don’t believe in the rhetoric that he [Gore] used at his own convention, when he said that only the “right people” will get tax relief. . . . I think the “right people” are all people in America who pay taxes.’”

President Bush’s economic policy rhetoric since then has continued this same theme.

There is, however, a potentially politically dangerous disconnect between the rhetoric of Bush speeches, which is the needed message of “looking out for the middle class” and the reality of Bush policy.  For example, the economic reality of the Bush tax plan actually enacted into law, while cutting income taxes for everyone who pays them, substantially benefitted more the wealthy.

Similarly, despite well-crafted State of the Union speeches, the reality of Bush’s proposed budgets have focused less on the middle class and more on protecting what President Eisenhower called “the military/industrial complex.” The budgets have proposed large increases in defense programs, while proposing cuts in a range of social programs, creating potential long-term threats to Social Security and Medicare, adopted questionable positions on environmental issues like global warming, reduced business regulations of all kinds to the advantage of corporate America, and failed to fund fully domestic programs, such as those involving education, promised earlier.

One major problem of the Federalist Party in the early 19th century was that their actions did not match their rhetoric.  Under Presidents Washington and Adams, the Federalist Party was committed to taking public policy positions independent of politics.  It has been noted, “The men who led the Federalist Party before 1800 – George Washington, John Jay, and the other gentlemen of the old school – believed the sacred duty of a public man was to pursue ‘the common good’ without permitting himself to be distracted by the opinions of his friends and constituents, by opinions merely popular.  In their minds, a politician who sought merely to follow public opinion was derelict

in his duty, devoid of honor and integrity, guilty of wanton and reckless political behavior.” Later, however, the Federalist Party became known as the party that would say anything to get elected. For example, before 1800, the Federalist Party used the argument that “stability” in office-holding was important, a position that supported keeping Federalist office-holders in office. After losing the election in 1800, the Federalist Party adopted the view that “rotation” in office was important, a shift transparently designed for the purpose of encouraging the voters to throw the Jeffersonians out of office who had won the presidential and congressional elections in 1800.116

There is a similar need today for the Republican party to be careful not to create the image that they will do, or say, anything in the course of debate, while failing to live up to their political rhetoric. Similar to the politically-motivated Federalist shift on “stability” versus “rotation” in office after 1800, the Republican zeal for term limits before 1994, which would have helped throw Democratic majorities out of the House and Senate, cooled after 1994 when the Republicans took control of the House and Senate. During the debate on campaign finance reform in 2001, the House Republican leadership offered amendments claiming to advance the cause of campaign finance reform, despite the fact the leadership was committed to killing the bill. Even a balanced columnist like David Broder noted that the Republican behavior during the campaign finance debate gave “hypocrisy a bad name.”117 The realities of Social Security reform proposed by the President in 2005 raise similar concerns. In a quote attributed to Abraham Lincoln, “You can fool some of the people all of the time, and all of the people some of the time, but you cannot fool all of the people all of the time.”118

With regard to possible Supreme Court nominations, the nature of contemporary politics also has relevance. To the extent that the swing voters remain fiscally conservative and socially progressive, this would mean that Presidents would have a more difficult time appointing Justices who do not seem to share that Enlightenment vision. Unquestionably, some conservative Republicans may wish to “pack” the Supreme Court with conservative formalist or Holmesian Justices. Some Democrats might wish to “pack” the Court with liberal instrumentalists. Over time, the more likely confirmations will be Justices in the mold of Justices O’Connor, Kennedy, or Souter. Such a Justice would enhance the influence of the modern natural law style of decisionmaking on the Court.

Consistent with the thesis of this section, however, if President Bush or later Republican Presidents are able to govern successfully from a more conservative perspective, as Republican Presidents did between 1868 and 1932, then a majority of the Justices may come to reflect a conservative formalist interpretation style, as happened on the Court between 1873 and 1937. The Addendum to this book does predict that Chief Justice Roberts will likely reflect a conservative Holmesian style of interpretation, with an occasional leaning in the direct of formalism. Justice Alito will likely reflect a conservative formalist perspective, similar to that of Justice Scalia, with a slight affinity for Holmesian deference. If later Democratic Presidents are able to govern from a more liberal perspective, as they did during the Kennedy and Johnson Administrations, then a majority on the

---

116 Fischer, supra note 30, at 150-51, 161.
Court may once again come to reflect an extreme, liberal instrumentalist perspective, as occurred between 1963 and 1969, or at least reflect a moderate, liberal instrumentalist perspective, as occurred during the remaining years between 1954 and 1986.

With regard to potential connections between contemporary politics and earlier eras of American political and social history, Karl Rove, the President’s chief political advisor, has stated his opinion that contemporary politics is most like the period of 1896 surrounding the election of President William McKinley.\(^{119}\) Conservative pro-business Republican presidents of that era were able to defeat Democratic populist candidates repeatedly, with Democrat William Jennings Bryan being defeated three times for president. The Court during the McKinley era did reflect a conservative, formalist constitutional interpretation style, as discussed at § 14.2.2.

However, as discussed at §§ 15.4.1-15.4.2, for a number of reasons the modern period is not likely to reflect a return to a formalist period, but rather to reflect a modern period of natural law. To the extent the phrase “compassionate conservative” is merely a mask for the “corporate conservatism” of the McKinley era, it is likely that such a “corporate conservative” policy will not prevail in the fullness of time in the modern era. Similarly, to the extent that the Bush Administration rhetoric concerning spreading freedom and democracy throughout the world, which does reflect a modern natural law approach, as discussed at § 15.4.1 nn.77-81, is merely a mask for the McKinley-era view of “manifest destiny” and the expansion of the power of the American “nation state” around the world, that “nation state” policy of “manifest destiny,” like earlier European versions of “manifest destiny,” discussed at § 15.4.2 nn.82, or as it was sometimes called, “White Man’s Burden,”\(^{120}\) will likely not prevail in the fullness of time in the modern era either.

As noted at § 16.3 text following n.79, based upon the long-term results of President Nixon’s “Southern strategy” of the 1960s and 1970s, noted at § 14.2.5, the Republican Party has had the advantage in terms of electoral politics during the 1990s and beginning of the 21st century because the Republican Party has included in its “Big Tent” traditional conservatives, Dixiecrat former Democrats, and Rockefeller Republicans. While a larger number of Dixiecrat Democrats left the Democratic Party over the past 40 years, only a few Rockefeller Republicans left the Republican Party. While the cut-off date for this book is the opening of the Supreme Court’s term in October, 2006, as noted at § 1.1, to the extent the Republican Party commits more completely to the traditional conservative “Dixiecrat” view of social policy, more “Rockefeller Republicans,” particularly in the Northeast and Midwest, may choose to vote Democratic. This would return the parties to more equal competitive balance for the mid-term elections in November 2006, and elections thereafter. S

CHAPTER 15: EFFICIENT CAUSES OF THE FIVE ERAS OF AMERICAN LAW

The four distinct judicial decisionmaking styles, discussed in Chapters 3 and 9-12, have resulted in five eras of American law, as discussed in Chapter 13. As noted in Chapter 14, these five eras are also reflected in changing political and social events. Factors associated with those changes are considered in Chapter 15, particularly factors that can be identified as efficient causes tending to bring about the changes and give them distinctive characteristics.

The basic thesis in this Chapter is that when a critical mass of social actors in any society attain a particular level of cognitive development, social perspective-taking, and moral reasoning, the legal and political institutions in that society will change to reflect that fact. Part of that change in the United States will be the appointment of Justices to the Supreme Court whose views on these matters will more likely reflect the new level of reasoning. These appointments help create and support the progression in American legal history, discussed in Chapters 13 and 14, from the traditional natural law era, through formalism, Holmesian, and instrumentalism, into a period of modern natural law.

To begin with consideration of moral reasoning, the ideals and goals of citizens and judges regarding how society and its laws should be directed are among the underlying efficient causes of political and social events. It is true, of course, that decisions by judges on constitutional matters are hemmed in to a large extent by text, context, history, practice, and precedent, and the facts of particular cases that are before the Court. However, as a consequence of general judicial predispositions, discussed at § 4.4.1, the judge’s views on the content of constitutional text, context, and history are likely to be influenced by the judge’s predispositions regarding moral reasoning. Further, to the extent that society’s legislative, executive, and social practices change to reflect a new kind of moral reasoning, those later practices will be a “gloss” on constitutional meaning for all but formalist judges. For natural law and instrumentalist judges, there is also some room for relying on background moral principles embedded in the law, with those background principles affected by the moral reasoning in society, particularly as reflected in social practices or moral ideals embedded in common-law, statutory, or constitutional doctrine.

Although ideals and goals form the moral reasoning of all persons in society, many variations occur. Some persons judge what is right in terms of following the customs of neighbors and friends in the local community, including customary notions of morality as reflected in traditional religious doctrine. Other persons judge rightness by following either the letter or the purpose of majority-supported rules in society at large. Others may judge rightness by using only rules that have emerged from a process of reasoned choice. Still others may rely on a system that derives rules rationally, starting from a general premise such as “love of neighbor as oneself” or “treat persons with equal concern and respect.” At any given time, one of these perspectives may predominate in a given society, just as one of the judicial decisionmaking styles may predominate for legal reasoning.

As discussed in Chapters 13 and 14, it is clear that there has been a sequential evolution in American legal history with regard to views on the nature of the judicial decisionmaking task, as reflected in the five different eras of judicial decisionmaking. There is a related question of whether there has been a similar sequential evolution in the views of individuals in American history regarding
different kinds of moral reasoning, and whether that sequence is predictable. According to some
scholarly observers, there are regular and predictable stages in terms of how individuals develop in
terms of their cognitive development, social perspective-taking, and moral reasoning skills. Chapter
15 summarizes these stages and shows connections between the evolution of capacities in these
areas and the five eras of American law, as well as in the evolution of societies in general.

The analysis in Chapter 15 begins with Professor Michael Walzer’s views describing five general
kinds of societies that have existed in world history, discussed at § 15.1. Next, Professor Lawrence
Kohlberg’s theory is addressed. Professor Kohlberg’s theory postulates that there is a fixed set of
six stages of moral reasoning through which individuals progress from childhood to becoming an
adult. Each one of Professor Walzer’s kinds of societies can be seen to be related to one of
Professor Kohlberg’s moral reasoning stages, as discussed at § 15.2. These stages of moral
reasoning development in turn replicate what happens during the cognitive maturing process of each
individual, as described by Doctor of Science and Professor Jean Piaget, and during the related
advances in social perspective-taking ability, as described by Professor Robert Selman, as discussed
at § 15.3. When a critical mass of social actors in any society attain a particular level of cognitive,
social perspective-taking, and moral reasoning development, then attitudes toward the political and
legal institutions of that society should tend to reflect that new stage of moral development. In both
American legal and political history in particular, and in the development of societies in world
history in general, this is what one tends to see. The relationships among the stages described by
Piaget, Selman, and Kohlberg, and legal and political history, is discussed at § 15.4. Based upon
this discussion, Chapter 16 addresses how these considerations affect the final cause or purpose of
legal and political change, that is, the ends toward which societies evolve over time.

In order to present and interrelate the views of Walzer, Kohlberg, Piaget, and Selman, even in the
summary form attempted here, it is necessary to introduce their terminology. Many of these terms
are not likely to be familiar to the average reader of legal materials. To overcome this problem, an
effort has been made in the sections which follow to provide examples, analysis, and restatements
that should help make the unfamiliar terms more meaningful to individuals trained in the law. In
addition, it may be helpful to refer ahead, when one of four Tables is mentioned, to that Table, all
of which appear at the end of this Chapter, at § 15.4.4 text following n.106. Although the materials
at the beginning of the Chapter may seem to focus on matters somewhat removed from
constitutional law, the material will soon refocus on constitutional decisionmaking and its relation
to world events.

§ 15.1 Kinds of Societies in World History

In his book, On Toleration,¹ Professor Michael Walzer identified five kinds of societal arrangements
in world history: individual nations in international society, multinational empires, consociations,
nation states, and immigrant societies. Walzer also identified five different approaches toward
diversity: resignation, indifference, stoicism, curiosity, and enthusiastic endorsement.² Although

¹ Michael Walzer, On Toleration 14-36 (1997). Professor Walzer is UPS Foundation
Professor of Social Science at the Institute for Advanced Study in Princeton.

² See id. at 10-11.
Walzer did not make the point explicitly, his discussion showed that each kind of societal arrangement can be associated with one of the approaches to diversity. These associations appear in Table 15.1 at the end of this Chapter, and are discussed below.

Individual nations in international society are associated with resignation. They put up with the different views and traditions of their neighbors because, short of war or economic sanctions, they must. As Professor Walzer phrased it, resignation is defined as “resigned acceptance of difference for the sake of peace.” Individual nations in international society are associated with resignation because, given the nature of international society, “the costs [of intervention] are likely to be high: they involve raising an army, crossing a border, killing and being killed.” Nevertheless, as Walzer noted, individual nations may “use force to stop what is going on if what is going on is awful enough [such as] . . . cruelty, oppression, misogyny, racism, slavery, or torture. . . . [In addition,] intolerable practices in sovereign states might be the occasion for economic sanctions.”

Multinational empires are associated with indifference: the ruler of such an empire tolerates regional variation because it is irrelevant to maintaining power over the empire. Walzer defined indifference as “relaxed, benignly indifferent to difference: ‘It takes all kinds to make a world.’” This attitude is associated with multinational empires because “settled imperial rule is often tolerant – tolerant precisely because it is everywhere autocratic (not bound by the interests or prejudices of any of the conquered groups, equally distant from all of them).”

Consociations, basically multinational empires of only two or three main groups, like Belgium divided into French and Dutch halves, are associated with stoicism. Stoicism is defined by Walzer as “a principled recognition that the ‘others’ have rights even if they exercise those rights in unattractive ways.” The idea of a consociation, Walzer noted, is “a simple, unmediated concurrence of two or three communities (in practice, of their leaders and elites) that is freely negotiated between or among the parties. They agree to a constitutional arrangement, design institutions and divide offices, and strike a political bargain that protects their divergent interests. . . . [E]ach group lives in relative security, in accordance with its own customs.” The main groups in a consociation cannot afford to be indifferent to one another because, unlike a multinational empire, they are too close in space, but rather they must learn to live with one another unmediated by the outside transcendent power of the multinational empire.

Nation states tend to be associated with curiosity: they have basic rules for all citizens in their state, no matter what their background, but these rules leave sufficient leeway for diversity of sub-communities within them. For Walzer, curiosity is defined as “an openness to the others; curiosity; perhaps even respect, a willingness to listen and learn.”\textsuperscript{10} In nation states, toleration is commonly focused not on groups but on their individual participants, who are generally conceived stereotypically, first as citizens, then as members of this or that minority. As citizens, they have the same rights and obligations as everyone else and are expected to engage positively with the political culture of the majority . . . . Minority religion, culture, and history are matters for what might be called the private collective.”\textsuperscript{11} One must note this caveat, however. The curiosity associated with nation states does not extend to enthusiastic endorsement of diverse practices. Thus, as Walzer indicated, “Any claim to act out minority culture in public is likely to produce anxiety among the majority . . . . In principle, there is no coercion of individuals, but pressure to assimilate to the dominant nation, at least with regard to public practices, has been fairly common and, until recent times, fairly successful.”\textsuperscript{12} This attitude is classically described as the “one melting pot” approach to immigrant socialization.

Finally, immigrant societies tend to endorse enthusiastically the diversity of their immigrant subgroups. Walzer defined enthusiastic endorsement as “enthusiastic endorsement of difference: an aesthetic endorsement, if difference is taken to represent in cultural form the largeness and diversity of God’s creation or of the natural world; or a functional endorsement, if difference is viewed, as in the liberal multicultural argument, as a necessary condition of human flourishing, one that offers to individual men and women the choices that make their autonomy meaningful.”\textsuperscript{13} Individual men and women in immigrant society are “encouraged to tolerate one another as individuals, to understand difference in each case as a personalized (rather than a stereotypical) version of group culture – which also means that the members of each group, if they are to display the virtue of tolerance, must accept each other’s different version.”\textsuperscript{14} Walzer indicated that in his view the United States in the last half of the 20th century is the best example of a successful immigrant society.\textsuperscript{15}

\textbf{§ 15.2 Kohlberg’s Six Moral Reasoning Stages}

In his work on the differences in moral reasoning styles of individuals, Professor Lawrence Kohlberg identified six different stages of moral reasoning that individuals progress through from childhood

\begin{itemize}

\end{itemize}
to becoming an adult. The level to which most persons in a society have progressed is closely connected to the kind of society that exists and to the attitudes of its members regarding the toleration of diversity within that society. The first five of Kohlberg’s stages have direct connections to Walzer’s five kinds of societies and their attitudes toward toleration of diversity in society. These associations appear in Table 15.1. In addition, a different approach to toleration typically exists within each of these societies in terms of the individual’s life in any one community in the society versus cross-community toleration within the society. These associations are depicted in Table 15.2. Both of these Tables appear at the end of this Chapter, at § 15.4.4 text following n.106.

Kohlberg’s first stage is the stage of egocentric reasoning about morals. At this stage, individuals will choose self-interest over all else, except when limited by punishment. As Kohlberg noted, “Right is literal obedience to rules and authority, avoiding punishment, and not doing physical harm . . . physical damage to people and property . . . This stage takes an egocentric point of view . . . Actions are judged in terms of physical consequences rather than in terms of psychological interests of others.” This is the classic attitude of individual nations in international society, who pursue their own national self-interest limited only by the specter of economic sanctions or war, with intervention in international society typically involving one country doing physical damage to people or property of another country. In such a society, there is no necessary toleration for individuals in any community, and no cross-community toleration except by resignation. The morality of likely punishment, Kohlberg’s Stage 1, guides the societal approaches to toleration, and strong authoritarian regimes can impose their will on their citizens, and will do so without any moral qualms. As noted at § 15.4.1, this low-level of moral reasoning has no counterpart in the accepted judicial decisionmaking traditions of American judges at any time in our colonial or post-colonial history.

Kohlberg’s second stage of moral reasoning is still egocentric, but with the addition of the principle of equal exchange: if I demand something for myself, others can rightly demand the same thing for themselves. Kohlberg stated, “What is right is following rules when it is to someone’s immediate interest. Right is acting to meet one’s own interests and needs and letting others do the same. Right is also what is fair; that is, what is an equal exchange, a deal, an agreement. The reason for doing right is to serve one’s own needs or interests in a world where one must recognize that other people have their interests too.” This is the attitude of multinational empires, where each sub-community wants to preserve its own traditions, and thereby is willing to tolerate other communities preserving their own traditions by being indifferent to them. In multinational empires, there is no necessary toleration for individuals within any community, but some cross-community toleration exists bred of the Stage 2 principle of equal exchange. Under this principle, if one’s own community wants to impose its standards internally, the same right of imposition should be given to other communities.

17 Id. at 409.

18 Id.
Judicial decision making under the United States Constitution has also displayed a level of moral reasoning that is above this second stage. As discussed at § 15.4.1, at Stages 1 and 2, rules are imposed upon people from above, conforming to the age of Emperors or Kings. Only at Stage 3 are rules the product of democratically agreed-upon consent. In addition, judicial decision making under an Emperor or King is likely to be significantly influenced by political considerations that retard the development of any particular judicial decision making style.

Kohlberg’s third stage, and all his later stages, are closely connected with the American judicial and political eras. The third stage involves moral reasoning based upon the values of the community within which one lives. As Kohlberg defined it, “What is right is living up to what is expected by people close to one or what people generally expect of people in one’s role as son, sister, friend, and so on. . . . It also means keeping mutual relationships, maintaining trust, loyalty, respect, and gratitude. . . . The person relates points of view through the ‘concrete Golden Rule,’ putting oneself in the other person’s shoes. He or she does not consider generalized ‘system’ perspective.” 19 This basis for moral judgment leads to a stoic appreciation of the legitimacy of each community developing its own value system, the basis of life in a consociation. In consociations, there will be some minimal toleration within each community, bred of the basic principle of stoicism that “‘others’ have rights even if they exercise them in unattractive ways.” 20 There is also cross-community toleration bred of the same stoic impulse and Kohlberg’s Stage 3 level of moral reasoning, which involves each community developing its own ethical values to govern behavior of that community. At this stage, each community, through its own interaction and reasoning about concrete problems, what Kohlberg called the “concrete Golden Rule,” develops its own set of customs and expectations.

This concept of individuals setting their own rules for themselves is the critical aspect of the advance from an age of Emperors or Kings to an age of democratic mutual consent. As Professor Walzer noted at § 15.1 n.9, in practice the leaders and elites of the various communities in a consociation freely negotiate a constitutional arrangement, design institutions and divide offices, and strike a political bargain that protects the divergent interests of each community in society. Each group lives in relative security, in accordance with its own customs. As discussed at § 15.4.1 nn.50-59, this kind of society describes America from the Revolutionary War, Articles of Confederation, and the Constitution to the Civil War. Reflecting Stage 3’s focus on community customs, judicial decision making in such a society will be based on the customary interpretation style of that society. As discussed at §§ 8.4.1, 12.3.3, 13.1 & 14.2.1, for the colonial and post-Revolutionary War America, this was the traditional 18th- and 19th-century natural law style of interpretation.

Kohlberg’s fourth stage is the stage of individuals following the rules of society because they are society’s rules. At stage four, “The right is doing one’s duty in society, upholding the social order, and maintaining the welfare of society or the group. What is right is fulfilling the actual duties to which one has agreed. . . . A person at this stage takes the viewpoint of the system, which defines roles and rules. He or she considers individual relations in terms of place in the system.” 21 This is

19 Id. at 410.
20 See Walzer, supra note 1, at 11.
21 Kohlberg, supra note 16, at 410–11.
the attitude of nation states, which define individuals as citizens and apportion responsibilities to
ingividuals as citizens, but recognize that different nations and their citizens may have different rules
that are to be followed. In nation states, greater toleration within communities is likely to exist based
upon Kohlberg’s Stage 4 principle of equal rights of citizenship for all individuals within society
following that society’s rule of law. Cross-community toleration is enhanced in such a nation state
by curiosity about the rules that different groups seek to impose upon themselves. However, as
Professor Walzer noted at §15.1 n.12, in nation states minority religion and culture are matters for
private practice. Claims to act out minority culture in public are likely to produce anxiety among the
majority and be inconsistent with the “one melting pot” approach to socialization. As discussed at
§15.4.1 nn.60-66, America truly became a nation state—“One Nation, Indivisible, with Liberty and
Justice for All,” as stated in the 1892 Pledge of Allegiance—after the Civil War. This Stage 4 rule-
maintaining morality is reflected in the rule-maintaining focus of the formalist decisionmaking style.

Kohlberg’s fifth stage is the stage of social contract thinking: one adopts rules that are the product
of group choice, and values are relative to that group. Under such a view, “What is right is being
aware of the fact that people hold a variety of values and opinions, that most values and rules are
relative to one’s group. These ‘relative’ rules should usually be upheld, however, in the interest of
impartiality and because they are the social contract. Some nonrelative values and rights such as life,
and liberty, however, must be upheld . . . regardless of majority opinion. . . . [L]aws and duties
[should] be based on rational calculation of overall utility: ‘the greatest good for the greatest
number.’”22 Such an approach yields endorsement of the validity of choices made by different groups,
and forms the basis for the enthusiastic endorsement of immigrant societies. In an immigrant society,
there is even greater toleration within communities based upon the larger number of equal citizenship
rights that emerge from Kohlberg’s Stage 5 social contract, which is based on an understanding of
value relativity. Cross-community toleration is enhanced even more by the enthusiastic endorsement
of the diversity aspect of immigrant societies. As noted at §15.1 n.15, Professor Walzer viewed the
United States in the last half of the 20th century as the best example of a successful immigrant society.
As discussed at §15.4.1 nn.72-76, this social values morality is reflected in the instrumentalist style
of judicial decisionmaking and its resort to background social policies to resolve leeways in the law.

Kohlberg’s sixth stage of moral reasoning is the stage of universal principles of ethics based upon
reason, leading to equal respect and dignity for each individual in society. Kohlberg noted, “This
stage assumes guidance by universal ethical principles that all humanity should follow. . . . Particular
laws or social arrangements are usually valid because they rest on such principles. . . . Principles are
universal principles of justice: the equality of human rights and respect for the dignity of human
beings as individuals. . . . The reason for doing right is that, as a rational person, one has seen the
validity of principles and has become committed to them.”23 Walzer does not describe a society
related to such moral reasoning principles. However, such a society can be called a “post-modern”
society, with an approach to toleration based upon rational understanding of diversity and moral
principles based upon rational understanding. As discussed at §§16.2.1-16.2.3, such rational
principles of justice can be generated, and will adopt as the foundational rational principle that of

22 *Id.* at 411-12.
23 *Id.* at 412.
equal concern and respect for others, that is, the basic principle of love of neighbor as oneself, the principle lying at the heart of all major secular and religious philosophic traditions. As discussed at § 15.4.1 nn.77-81, this concern with rational moral principles in society is reflected in a modern natural law approach to judicial decisionmaking.

In addition to these stages, there are transitional stages between each of Kohlberg’s 6 stages of moral reasoning. These transitional stages are important from the perspective of making connections among moral reasoning, cognitive development, and styles of judicial decisionmaking. For example, as noted below, Kohlberg’s transitional Stage 4½ is reflected in the Holmesian style of decisionmaking, which is best understood as a transition between Stage 4 formalism and Stage 5 instrumentalism.

Some of these transitional stages are explicitly identified by Kohlberg. Others are implicit in his writings. Still others must be implied. The transitions from Stages 1 to 2, and 2 to 3, are implicit in Kohlberg’s discussion of the moral principles of Stage 2. As defined by Kohlberg above, at § 15.2 n.18, Stage 2 includes three different concepts. First, there is the concept of following “someone’s immediate interest.” Second, there is the concept of “acting to meet one’s own interests and needs and letting others do the same.” Third, there is the concept of right being “what is fair; that is, what is an equal exchange.” As discussed at § 15.3 nn.28-36, these three related concepts are best conceived as three sub-stages of Stage 2 moral reasoning. The first, following “one’s immediate interest,” is the transitional sub-stage from Stages 1 to 2; the second, “acting to meet one’s own interest and letting others do the same,” is the core moral principle of Stage 2; the third, “what is fair [is] an equal exchange,” is the transitional sub-stage from Stage 2 to Stage 3. Following Kohlberg’s terminology of Stage 4½ to describe the stage between Stages 4 and 5, these three sub-stages can be called Stages 1½, 2, and 2½.

Kohlberg explicitly recognized a transitional stage between Stages 4 and 5. He defined this stage as Stage 4½. At this stage, “[C]hoice is personal and subjective. It is based on emotions, conscience is seen as arbitrary and relative, as are ideas such as ‘duty’ and ‘morally right.’ . . . At this stage, the perspective is that of an individual standing outside of his own society and considering himself as an individual making decisions without a generalized commitment or contract with society.”24 This attitude of relative morality among the citizens of a mature nation state will push the nation state away from its initial “melting pot” approach toward a more full-fledged curiosity of the diversity of views based on the different relative moralities of individuals in society. A mature nation state, populated by people adopting Kohlberg’s Stage 4½ principle of moral relativity, will recognize that the law of the nation state is legitimate not because it is the law, the Stage 4 reason, but because among all different relative views the nation state represents the views of the dominant forces in society.

As discussed at § 15.4.1 nn.67-71, this emphasis on morality emanating from the dominant forces in society is reflected in the Holmesian style of judicial decisionmaking. The moral skepticism of Stage 4½ is matched by Holmes’ skepticism regarding moral reasoning, discussed at § 3.2 nn.32-36. Similar to Kohlberg’s Stage 4½ being a transition between Stages 4 and 5 of individual moral

---

24 Id. at 411.
development, the Holmesian approach represents a transition between formalism and instrumentalism in American legal history.

Just as there is this transitional stage between Stages 4 and 5, there are also transitional stages between Stages 3 and 4, and Stages 5 and 6. As with Stage 4½, the underlying transition involves some greater measure of ethical moral relativity, as the individual is between the more fixed moral ideals of the preceding and succeeding stages. As discussed at § 15.4.1 nn.50-59, and reflected in Table 13.1, at Stage 3 this is reflected in a transition from the ethical natural law of Stage 3 to the greater morally relativistic ideals of political and economic natural law, from which follows the Stage 4 formalist rule-maintaining morality. As discussed at § 15.4.3 nn.88-96, at Stage 5 this is reflected in a transition from instrumentalism to various versions of instrumental political critique, such as the Critical Legal Studies Movement, or modern economic natural law, as in the writings of Richard Posner, or modern political natural law, as in the writings of Ronald Dworkin, as part of a transition to the modern ethical natural law of Stage 6. All of these connections between Kohlberg’s moral reasoning stages and the judicial decisionmaking styles are summarized in Table 15.3 at the end of this Chapter, at § 15.4.4 text following n.106.

§ 15.3 Piaget’s Theory of Individual Cognitive Developmental Stages, Selman’s Social Perspectivism, and Kohlberg’s Moral Reasoning Stages

Kohlberg’s stages of moral development have their roots in stages of individual cognitive development, and the ability of individuals at different stages of cognitive development to take into account more completely other individuals’ perspectives, what is called “social perspectivism” or “role-taking capacity.” As individuals apply increased cognitive skills and role-taking capacities to moral problems, their response to moral dilemmas changes. The best known and most elaborate scheme of cognitive development derives from the work of Jean Piaget. A good summary of social perspectivism or role-taking capacity appears in the work of Robert Selman.25 To appreciate fully Kohlberg’s stages of moral development, and thus to understand better how those moral reasoning stages are related to the judicial decisionmaking styles, summarized at § 15.2 and developed at § 15.4, it is necessary to understand Piaget’s cognitive developmental stages and their connection to Selman’s social perspective-taking stages.

Piaget’s studies into human cognitive development suggest that cognitive development can be broken down into stages through which each individual must pass. The number of stages and the boundaries between them are, of necessity, somewhat arbitrary, but the basic contours of the process are clear.

Initially, from birth to age two, the child is in a “sensori-motor” stage. In this stage, basic conceptions about the nature of the material world begin to be formed. In his work, Piaget identified six sub-stages within this stage, each sub-stage dealing with a particular skill or ability that the child exhibits or learns. For purposes of social perspective-taking and moral development, the most fundamental concept that the child learns during this time is that of individuality and separation from other objects. By the end of this stage, the child is aware that he is separate from other individuals

and objects, and that punishment is therefore particularized to specific individuals for specific actions.  

This advance in cognitive development is mirrored in Selman’s stages of social perspective-taking by the advance at Selman’s Level 0 through the basic sub-stages A and B. These sub-stages have been summarized as follows: “At level A the child may have a sense of the other, but does not distinguish between [the] thought and perceptions of himself and the other. At level B the child clearly distinguishes himself from the other, but does not see any commonality between his thoughts and the other’s.”  

Because the child does not see any commonality between the two, the only reason for not doing what one wants is to avoid being punished, Kohlberg’s Stage 1 level of moral reasoning.

Piaget’s next stage of development, for most children from ages 2 to 7, is called preoperational thought. Piaget broke down this stage into two major sub-stages: preconceptual thought (from two to four years of age) and intuitive thought (from four to seven years of age). In this stage, the child is able to represent objects and events symbolically, and not just act towards them but think about them. However, the child’s thought is characterized by egocentricism. The child finds it difficult to understand how anyone can see things from a point of view different than the child’s own view. As Piaget has stated, “[T]he child supposes that every one necessarily thinks like himself . . . . [H]is logic lacks exactitude and objectivity . . . because the social impulses of maturer years are counteracted by an innate egocentricity.” At this stage, “The preoperational child is completely egocentric. Although he is beginning to take a greater interest in the objects and people around him, he sees them from only one point of view: his own.”

This kind of predictable egocentricism of children can be described as part of the “original sin” of childish ways of thinking. Through experience with objects the child comes to learn that predictions based upon egocentric logic do not always come true. As Piaget stated, “[T]he child, after having regarded his own point of view as absolute, comes to discover the possibility of other points of view and to conceive of reality as constituted, no longer by what is immediately given, but by what is common to all points of view taken together.” Through playing with other children the child is also forced to adapt to and learn about others’ perspectives. As has been noted, playing with others eases the transition from the egocentric stage of rule manipulation to the next two stages of cooperation and cooperation.

---

31 Piaget, supra note 26, at 247.
These advances in cognitive development are mirrored in Selman’s stages of social perspective-taking. Three distinct stages are identified by Selman. The first stage reflects Selman’s Level 0, sub-stages C and D. These levels have been summarized as follows: “Next (level C), the child attributes his own thoughts to the other by putting himself in the other’s position. Given an identity in situation with the other, he naively assumes similarity between the other’s thoughts and his thoughts. . . . [At level D, there begins to develop an awareness] that the other has viewpoints based on his own reasoning, and those may or may not be similar to the child’s.”

These levels reflect the pure egocentricism at the beginning of preoperational thought. At this stage, because the subject assumes a similarity between his own thoughts and those of others, the subject stops to consider only one perspective, his own, the stage of following “one’s immediate interest.” As discussed at § 15.2 text following n.23, this aspect of Kohlberg’s Stage 2 is called in this Chapter Stage 1½.

The next stage identified by Selman is Level 1. As defined by Selman, “At this time there is an awareness of the distinct subjectivity of each person’s own viewpoint. The child recognizes that even when in the same situation as another person, the other may construe it differently than he does. He recognizes further that access to varying information will result in different subjective interpretations. However, he cannot simultaneously entertain both his own and another person’s viewpoint. He also lacks the ability to see himself from the perspective of another person.”

This level of subjective social perspectivism is related to Kohlberg’s Stage 2. As with Stage 2’s precept of “acting to meet one’s own interests and needs and letting others do the same,” there is recognition at this level that others have interests that may be different from yours. However, as with Selman’s Level 1 inability to “simultaneously entertain both his own and another person’s viewpoint,” the Stage 2 child “serves his own needs or interests,” not another’s. Because of Selman’s Level 1 inability to take another’s perspective, no concept of fairness in exchange can develop.

The final development within preoperational thought comes, as Piaget noted, when the child discovers “the possibility of other points of view and to conceive of reality as constituted, no longer by what is immediately given, but by what is common to all points of view taken together.”

This is reflected in Selman’s Level 2 of social perspective-taking. At this level, “There now develops a reciprocal understanding that just as the child himself can view the other as a subject, it is also true that the other can view him as a subject. This awareness that the other can view him as a subject will influence his actions toward the other. The child can also now view himself through the perspective of another. The advance encompassed at this level is limited by the fact that the reflections involved take place sequentially and, therefore, the child is still locked into a dyadic [i.e.,

---

33 Shantz, supra note 27, at 284.

35 Piaget, supra note 26, at 247.
This advance results in two consequences with respect to moral reasoning. First, because the child can take the other’s perspective, a concept of intrinsic fairness toward the other begins to emerge. However, second, because the child viewpoint and another’s viewpoint can only be held sequentially, the child cannot internalize another’s judgment in the child’s own moral reasoning. This combination of fairness toward others without internalizing their view results in a morality that focuses on equal exchanges as the common ground between individual cooperative efforts. This is the morality of Kohlberg’s Stage 2 precept of “what is fair [is] an equal exchange.” As the most advanced kind of Stage 2 moral reasoning from the perspective of Selman’s social perspective-taking categories, that stage is called in this Chapter Stage 2½, as discussed at § 15.2 text following n.23.

The child’s experiences with objects and others leads into Piaget’s third basic stage of cognitive development, the stage of concrete operational thought. At this stage, the child is able to recognize the mutual subjectivity of each person’s view, which allows the individual truly to reflect upon another’s point of view as well as his or her own. As phrased in Selman’s Level 3 of social perspective-taking, “There occurs a mutuality of role-taking. The child becomes aware that each person in a dyadic situation has the capability of a simultaneous knowledge of his own and the other’s subjectivity. [The child] can transcend the immediate dyadic situation to adopt an abstract third-person perspective which permits observation of [the child’s] own interaction with the other and their mutual subjectivity.” Moral reasoning related to this stage of cognitive and social perspective-taking similarly is focused on mutual interpersonal relationships. As defined at Kohlberg’s Stage 3 of moral reasoning, “What is right is living up to what is expected by people close to one or what people generally expect of people in one’s role as son, sister, friend, and so on . . . .” In terms of most individuals’ development, this stage reflects the teenage focus on peer group morality, and the giving of primary loyalty to one’s local community, i.e., one’s team or gang, and its shared beliefs.

During the later stages of concrete operational thought, Piaget noted that the individual begins to be able to recognize not only the mutual subjectivity of each person’s individual view, but also an ability to take group perspectives. This is reflected in Selman’s Level 4 of social perspective-taking. At this level, “The young person by now has generated a generalized other perspective which [the person] knows [is shared] with others. It is a perspective that others in the community may also hold regardless of their social position. It is comprised of an integration of communally shared values, attitudes, and beliefs. There is now an idea of a social system perspective which goes beyond the

Rosen, supra note 34, at 59-60.

Kohlberg, supra note 16, at 410.

See Piaget, supra note 32, at 139-47.
abstract third-person perspective of Level 3 that observes only a specific dyadic interaction.”42 This Level 4 social perspective-taking underlies the advance to Kohlberg’s Stage 4 of moral reasoning. At Kohlberg’s Stage 4, right is defined as “doing one’s duty in society, upholding the social order, and maintaining the welfare of society or the group. . . . A person at this stage takes the viewpoint of the system, which defines roles and rules.”43 At this stage, one’s loyalty is not as much to the community, as at Stage 3, but to the nation as a whole.

The final stage of cognitive development for Piaget is called formal operational thought. The defining feature of formal operational logic is the ability fully to put oneself into others’ perspectives, to think abstractly about propositions and not be mired in one’s own narrow framework, and to recognize that viewpoints other than one’s own must be given proper respect. As Piaget phrased it, “The new feature marking the appearance of [formal operational thought] is the ability to reason by hypothesis. . . . Instead of just coordinating facts about the actual world, hypothetico-deductive reasoning [the scientific method] draws out the implications of possible statements and thus gives rise to a unique synthesis of the possible and necessary.”44 This advance in cognitive reasoning ability is mirrored in Selman’s final stage of social perspectivism, Level 5. At Level 5, “The relatively of socially rooted perspectives is discerned. A perspective which goes beyond the confines of any given society in which one happens to find himself can be adopted.”45

This Level 5 ability is reflected in Kohlberg’s final three stages of moral development: Stages 4½, 5, and 6. As Kohlberg has noted, all these stages are termed “post-conventional” precisely because the moral reasoning in each of these stages goes beyond the confines of any given society’s conventions.46 As discussed in the next section, § 15.4.1 nn.67-81, applying this post-conventional formal operational thought, with its hypothetico-deductive reasoning of the scientific method, to the basic question of the justification for moral rules would cause the adoption of the Stage 4½’s view that moral choice is “personal and subjective” and that whatever values are adopted are merely the product of the dominant forces in society. Applying formal operational thought also to the question of the means by which social ends are advanced would cause a push for fair procedures reflective of other individual’s perspectives in addition to one’s own to implement values that are the product of social contract choice, Kohlberg’s Stage 5. Finally, applying formal operational thought to basic ends themselves would cause adoption of Kohlberg’s Stage 6, which is based upon rational principles of justice about which all rational individuals can agree. Table 15.3, at § 15.4.4 text following n.106, summarizes each of these connections among Piaget’s stages of cognitive development, Selman’s stages of social perspectivism, and Kohlberg’s stages of moral development.

§ 15.4  Moral Reasoning and Societal Development in America and Elsewhere

§ 15.4.1  Cognitive Development and Moral Reasoning Stages as Efficient Causes of the Five Eras of American Judicial Decisionmaking

As noted at the beginning of § 15.2, each one of Professor Walzer’s kinds of societies can be seen to be related to one of Professor Kohlberg’s moral reasoning stages. Consistent with Kohlberg’s moral stages of growth, societies, like individuals, should tend to develop in sequential fashion from one type of society to another. The reason is that when a critical mass of social actors in any society attain a particular level of moral reasoning development, attitudes toward toleration and the moral and legal institutions of that society should tend over time to reflect that new stage of development. Judicial decisionmaking styles will then tend to reflect that stage of development as well. In American legal history, that pattern exists. There is a relationship among the stages described by Kohlberg and the predominant decision methods of the courts, as discussed below. Of course, as discussed at § 15.3, these stages of moral reasoning development in each social actor in society are based upon what happens during the cognitive maturing process of each individual, as described by Piaget.

As noted at § 15.2 n.19, Kohlberg’s third stage involves moral reasoning based upon the values of the community within which one lives. As Kohlberg stated, “The person relates points of view through the ‘concrete Golden Rule,’ putting oneself in the other person’s shoes. He or she does not consider generalized ‘system’ perspective.”47 With respect to the issue of the relationship between moral reasoning and legal and political institutions, Kohlberg noted that Stage 3 is the first stage where democratic institutions are possible because a Stage 3 moral thinker recognizes that people make their own rules for themselves. At Stages 1 and 2, rules are merely imposed upon people from above, which conforms to the age of Emperors or Kings.48 Jean Piaget similarly observed that at early stages of moral development “rules are eternal, due to the authority of parents, of the Gentlemen of the Commune, and even of an almighty God”; it is only later, based on the advance from pre-operational thought to concrete operational thought, that rules are understood to be “the outcome of a free decision and worthy of respect in the measure that it has enlisted mutual consent.”49 Thus, a handy reference guide for determining when a society is evolving from a Stage 1 or 2 society, to a Stage 3 society, is the existence of a democratic revolution. In order for the replacement of the “divine right of kings” mentality by movements of “self-determination” and a desire for “democratic mutual consent,” it often happens that a political revolution must occur.

In Stage 1 or 2 societies, there is not likely to be a strong tradition of judicial independence from the Emperor or King. Judicial decisionmaking in such societies, therefore, is likely to be significantly influenced by political considerations that may retard development of any particular judicial decisionmaking style. Once the age of democracy begins, however, clear connections exist between Kohlberg’s moral developmental stages and the styles of judicial decisionmaking. Table 15.3, at §

47  Id. at 410

48  Id. at 147-68.

15.4.4 text following n.106, includes a summary of these connections among Kohlberg’s stages of moral development and the four judicial decisionmaking styles. Kohlberg’s Stage 3 of “community-based norms” is reflected in the traditional ethical natural law of the colonial period of American legal history; Stage 3½ is reflected in the political natural law of the framing and ratifying period and the economic natural law of early 19th-century America; Stage 4's following “society’s rules” is reflected in post-Civil War formalism; Stage 4½’s precept that values are “personal and subjective,” and thus any society’s values are merely the values of the dominant forces in society, is reflected in the Holmesian style of decisionmaking; Stage 5’s “social contract” model of values arising from democratic participation with a background concern for the “greatest good for the greatest number” is reflected in instrumentalism; Stage 5½ criticism of the inadequacy of such social contract proceduralism is reflected in various critiques of law and politics, including attempts at reconstruction reflected in modern economic and political natural law models; and Stage 6's “rational principles of justice” is reflected in the emergence of modern ethical natural law.

As noted above, Kohlberg’s Stage 3 concerns custom and community expectations where “[w]hat is right is living up to what is expected by people close to one.” This is reflected in the common law decisionmaking style of 18th-century America. As discussed at § 13.1 n.13, Professor and Historian William Nelson noted that this was a period of ethical unity and community based norms where consensus “was promoted by the fact that nearly all members of society shared common ethical values and imposed those values on the occasional individual who refused to abide by them voluntarily.” As Dean Pound phrased it, “[W]e are concerned immediately with the eighteenth century natural law which became embodied for us in the Declaration of Independence and is behind our bill of rights. . . . [This is the] ethical form, in which moral precepts dictated by reason are the ideal . . . .” The law of such a society will develop in response to concrete problems raised for the courts and legislatures as filtered through custom and community expectations. This is the traditional common law, or natural law, approach to law. As Pound stated, “The believers in eighteenth-century natural law did great things in the development of American law because the theory gave faith that they could do them. Application of reason to the details of the received common law was what made the work of the legislative reform movement of enduring worth.”

The democratic political revolution that occurs at Stage 3, however, is likely to be restricted by the limitations of Piaget’s concrete operational thought, discussed at § 15.3 nn.37-40, that lies behind Kohlberg’s Stage 3 level of moral reasoning. Thus, although there may be a concept of equal dignity of each individual based upon the ability to take another’s perspective as well as one’s own, in practice this concept will be limited by the concrete reality of the times. For example, although the Declaration of Independence stated in broad terms that all individuals are “created equal” and entitled to the inalienable rights of “life, liberty, and the pursuit of happiness,” the concrete customary practices in America in the 18th century denied that equality to slaves, women, and even some white men without property, who were all at that time denied various rights, including the right to vote.

52 Id. at 27.
This conflating of “reason” versus “custom” is typical of moral reasoning at the beginning of a democratic era, where moral reasoning may well be based upon concrete operational thought. Professor James Whitman has noted this tendency in 18th-century thought in America, England, and Continental Europe. As stated in his article entitled Why Did the Revolutionary Lawyers Confuse Custom and Reason,53 “This Article offers a general historical account of how the constitutionalist lawyers of the eighteenth-century world came to mingle ideas of customary right with characteristically eighteenth-century ideas of deductive natural law.” As Whitman stated:

Prime among such passages familiar to eighteenth-century readers was Bolingbroke’s famous and influential statement: “By constitution we mean, whenever we speak with propriety and exactness, that assemblage of laws, institutions, and customs, derived from certain fixed principles of reason, directed to certain fixed objects of public good, that compose the general system, according to which the community hath agreed to be governed.”54

The limitations of concrete operational thought are reflected in an important limitation on Stage 3 democratic mutual consent. Because of concrete operational thought, there is a “fusion of fact and norm; when the [individual] first begins to cognize how an actor ought to act rather than how he does act, he has not yet clearly differentiated the two. What is morally right to do, then, tends to be defined in terms of what most people or most occupants of a particular role do in fact do.”55 Thus, as Kohlberg stated, at Stage 3 the conventional morality of one’s peers, friends, and those with whom one interpersonally interacts are of primary importance. As has been noted about Blackstone’s theory of the common law:

The first and most famous principle was the idea that the source of common law is custom: that “the only method of proving, that this or that maxim is a rule of the common law is by showing that it hath been always the custom to observe it.” The second principle was that custom itself was the expression of a nation’s shared values, or, as we might say today, of its public conception of justice. “[R]eason is the life of the Law; nay the common Law itself is nothing else but reason . . . .” The equation of the common law with reason reflects a very special kind of natural law theory, one in which the source of natural justice was as much the people who were governed under the law as some independent moral truth that could be derived through philosophical reason.56

This conflating of custom and reason is precisely the basis for Holmes’ criticism, cited at § 3.4 n.92, that “jurists who believed in natural law seemed to [Holmes] to be ‘in that naive state of mind that accepts what has been familiar and accepted by them and their neighbors as something that must be

54 Id. at 1325 (citation omitted).

accepted by all men everywhere.” As applied to classic Stage 3 natural law that relies on custom as one basis for reason, Holmes’ criticism is right. It is not right, however, if applied to a modern Stage 6 natural law that is based solely on reason, and not on custom. The contours of such a Stage 6 natural law are developed at § 16.2.

Initially, America reflected Kohlberg’s Stage 3 level of concrete operational thought with regard to moral reasoning. In the late colonial period, most persons’ loyalties were directed toward local communities and organizations rather than a nation state. Reflecting the connections noted at § 15.2 between Kohlberg’s Stage 3 and Professor Walzer’s consociation form of society, the Continental Congress and the original Articles of Confederation were clearly consociation forms of government, reflecting current natural law writings on “confederate republics” of continental European writers like Montesquieu, Vattel, and Pufendorf. Even post-Constitution, pre-Civil War America is best conceived as a consociation of Northern and Southern states, similar to Belgium with its French and Dutch halves, rather than a true nation state. For example, not only did Henry Clay and the National Republicans of the 1820s and early 1830s never persuade a majority of voters to adopt their views regarding considering economic development from the perspective of the nation as a whole under “the American system,” but some Southern state courts refused to enforce federal law with which they disagreed. Persons in pre-Civil War America tended to give their primary allegiance to their state and region of the country, not the United States as a whole. As a prominent, but typical, example, despite disagreeing with the successionist movement on the eve of the Civil War, General Robert E. Lee gave his primary allegiance to Virginia and the South, rather than to the United States. When Jefferson spoke of “my country,” he typically meant Virginia.

While the Declaration of Independence and Bill of Rights reflected aspects of Stage 3 ethical natural law based upon certain common values held in society, as Pound noted above at § 15.4.1 nn.51-52, the drafting of the Constitution of the United States also reflected aspects of the Stage 3½ transition from a society based on ethical community norms to a society based on aspects of political natural law. The main features of the Constitution were all structural features of federalism and separation of powers, including the important concept of an independent judiciary. The framers and ratifiers were acutely aware of the possibility of political “factions” and the impact of such factions on law and society, as indicated in famous The Federalist Papers No. 10, which begins, “Among the numerous advantages promised by a well-constructed Union, none deserves to be more accurately developed than its tendency to break and control the violence of faction.” This change in focus influenced society in a number of ways. As Professor Nelson noted in a study of legal change in Massachusetts during this period:

The first breach in the old order occurred in the 1780s, when agrarian debtors, mostly in Western Massachusetts, began organizing politically to complain that existing judicial procedures prejudiced their defense in suits begun by creditors to collect debts. Their argument was that access to justice was one of the rights of man for which the War of Independence had been fought and that the structure of the legal system and the legal profession precluded them from effective access to the courts in debt collection suits. But when they organized to petition the legislature they were met by a counter-organization of lawyers and creditors. During the next decade, for the first time in Massachusetts history, the politics of the state was dominated over an extended period by interest groups . . . divided over a fundamental socioeconomic issue.

Thereafter similar divisions continued to occur. By 1810 the state was split politically over another central social question: whether to retain its religious establishment [of the Congregationalist Church]. Of course, the fact of this division seriously impaired the state’s ancient ethical unity. More important, though, was the outcome of the religious controversy – the effective disestablishment of the church.

Nineteenth-century society was [also the result of an additional] force that emerged during the revolutionary period – a desire for economic growth. Particularly after 1790 the Massachusetts economy grew and changed so rapidly that by 1830 what had been an essentially agrarian subsistence economy, in which commercial activity was confined to a few coastal ports, was transformed into an industrialized market economy of statewide dimension.

This transformation of the economy produced much legal change, the most important element of which was the emergence of legal doctrines that recognized the materialism of the age and legitimated the idea of competition.59

More generally, as quoted at § 13.1 n.14, in 1938 Dean Pound phrased this point about ethical, political, and economic natural law as follows: "In the nineteenth century, the stabilizing and conserving natural law takes on three forms: ethical, political, and economic. The ethical form, in which moral precepts dictated by reason are the ideal, is the oldest . . . . It is replaced in early nineteenth-century America by the political form in which an ideal of 'the nature of American institutions' or the 'nature of free institutions' or the 'nature of free government' is the starting point. Later, as the stabilizing side of natural law comes to be the one stressed chiefly, an economic ideal of a society ordered by the principles of the classical political economy prevails." As applied to constitutional law, this progression in American legal history was addressed at § 14.2.1.

Kohlberg’s fourth stage is the stage of individuals following the rules of society because they are society’s rules. At discussed at § 15.2 n.21, at Stage 4, “The right is doing one’s duty in society, upholding the social order, and maintaining the welfare of society or the group. What is right is fulfilling the actual duties to which one has agreed. . . . A person at this stage takes the viewpoint of the system, which defines roles and rules. He or she considers individual relations in terms of

59 Nelson, supra note 50, at 5-7.
The transition to Stage 4 involves individuals being able to take not only the perspective of those in the immediate community, but to take a system perspective. Thus, at Stage 4, the individual “progresses towards a more balanced or equilibrated system of moral judgment: the diffuse norms of Stage 3 become ‘hardened’ into concrete laws and rules which specifically define right action and which apply equally to all actors.” Nevertheless, because this stage is also reflective of concrete operational thought, there remains a fusion of fact and norm. Thus, “the value of a system of moral rules or laws is not differentiated from the value of maintaining those rules or laws. The rightness of a given system of laws is taken for granted, and the maintenance of law accordingly becomes an end in itself.”

This kind of moral reasoning is reflected in jurisprudential works like John Austin’s *The Province ofJurisprudence Determined* or Hans Kelsen’s *Pure Theory of Law* with its concept of a society’s “basic norm” or “Grundnorm.” At this stage, “each actor must orient to the other’s orientation as part of a larger shared system of roles and rules to which all are oriented. The underlying and defining characteristic of Stage 4, in sum, is the emergence of a stable, balanced, and equilibrated system in which all individuals equally participate and from which all interpersonal or moral judgments are derived.” Any individual challenging the rightness of some existing doctrine is not likely to meet by a Stage 4 thinker with engaged discussion on the topic, but instead is likely to be met by the familiar refrain, “Love it or leave it.”

In the United States, the Stage 3 period ended with the triumph of Union forces at the end of the Civil War, and the ratification of that Union triumph through adoption of the Civil War Amendments to the Constitution. The next stage of American history, after the Civil War, reflected movement toward a Stage 4 nation state, a true Union. As stated in the 1892 Pledge of Allegiance, we became “one Nation, Indivisible, with Liberty and Justice for all.” The Stage 4 concept of the emergence of a “stable, balanced, and equilibrated system in which all individuals equally participate” was reflected in banning slavery and involuntary servitude in the United States (the 13th Amendment); granting each individual born in America citizenship rights, and all persons due process and equal protection rights (the 14th Amendment); and in granting constitutional protection to vote for members of any race (the 15th Amendment), and for women (the 19th Amendment). Of course, reflecting the concrete operational thought basis of Stage 4, liberty and equality were again limited by concrete practices, such as Jim Crow legislation. Kohlberg’s Stage 4 level of moral reasoning is reflected in the formalist approach toward law that predominated after the Civil War. The motto

62 *Id.* at 140-41.

64 Kuhn, Langer, Kohlberg & Hahn, *supra* note 55, at 139-40.
of formalism is that rules are rules and should be followed. This is the same motto held by a Stage 4 thinker in Kohlberg’s system. As noted at § 3.1 n.5, formalism is based on an assumption that law is composed of a system of rationally related rules, and that the judicial task is to apply those rules mechanically to the case at hand. Judges should not make rules; they should merely apply existing law.

In Stage 4, as Professor Walzer noted about nation states, “toleration is commonly focused not on groups but on their individual participants, who are generally conceived stereotypically, first as citizens, then as members of this or that minority. As citizens, they have the same rights and obligations as everyone else and are expected to engage positively with the political culture of the majority . . . . Minority religion, culture, and history are matters for what might be called the private collective.”65 As Walzer indicated, “Any claim to act out minority culture in public is likely to produce anxiety among the majority.”66 This attitude, classically described as the “one melting pot” approach to socialization, was dominant in America during the formalist era from 1873 to 1937.

The transition from Stage 4 to later moral stages is based, as noted at § 15.3 nn.44-46, on the transition from concrete operational thought to formal operational thought. It has been noted:

The transition from concrete to formal operations can be summarized at its most general level as a reversal in the direction of thinking between reality and possibility. At the level of concrete operations the [individual] is limited to a direct organization of empirically given data; possibility is conceived only as a prolongation of operations applied to a given set of concrete data. At the formal operational level, the [individual] attempts to locate reality as one sector within the group of possible transformations; thus, there is a subordination of reality to possibility. The most general and profound result of this reversal is that the [individual] can now reason about propositions removed from their concrete appearance and hence independent of their truth.67

For this reason, as Piaget has stated, formal operational thought “involves different operations from reasoning about action or reality. Reasoning that concerns reality consists of a first degree grouping of operations, so to speak, i.e., internalized actions that have become capable of combination and reversal. Formal thought, on the other hand, consists in reflecting (in the true sense of the word) on these operations.”68 Thus, with regard to moral reasoning:

Initially, the [individual] only makes judgments of fact, what is [the preconventional level of moral reasoning Stages 1 and 2]. [The individual] then becomes capable of making judgments about that fact: i.e., norms or rules applying to fact [the conventional level of moral reasoning Stages 3 and 4]. Only at the most advanced level does [the individual] become capable of

66 Id. at 26.
67 Kuhn, Langer, Kohlberg & Hahn, supra note 55, at 103-04.
68 Piaget, supra note 26, at 149.
second-order operations: operations on operations or judgments about judgments. The subject [thus] makes judgments about a system of moral rules or laws . . . .

Such second-order operations begin at Kohlberg’s transitional stage, Stage 4½, where moral choice is seen as personal, subjective, arbitrary, and relative. At this stage, “the perspective is that of an individual standing outside of his own society and considering himself as an individual making decisions without a generalized commitment or contract with society. . . . This transitional stage in which the [individual] becomes aware of the arbitrariness of [the individual’s] own rule system often takes the form of what can be termed a ‘metaethical regression’: because any system of rules is conceived as arbitrary and the judgments deriving from it accordingly ‘relativistic,’ the [individual] in [this] metaethical mode of judgment rejects all systems of rules or norms.”70 Moral reasoning will thus be based on the values of the dominant forces in society. This stage of moral reasoning is basically a “second-order” reflection on Stage 1’s premise of following rules in order to avoid punishment by the dominant forces in society. In terms of individual development, this stage is reflected in college-age students’ rebellion against the Stage 4 “rules of the system” mentality.

This transitional Stage 4½ and skepticism regarding the validity of any moral system is the basis of Holmesian skepticism. As noted at § 3.2 nn.35-41, Holmes’ view was that law cannot be tested by an external standard of moral rightness. Rather, law is a reflection of the outcome of the dominant political process. Holmes saw, however, that the dominant group in society can change. Thus, law must change to reflect new power relationships and be a means to the end of facilitating that process.

The Holmesian era in American society occurred with the breakdown of the formalist era and its replacement by the posture of Holmesian deference to government. This change was brought about by a sequence of legal commentary, beginning with Holmes, but extended during the first half of the 20th century by Dean Roscoe Pound’s sociological jurisprudence and by Professor Karl Llewellyn and the Realist Movement of the 1920s and 1930s. Their writings undermined unquestioning acceptance in the Stage 4 rule of law mentality in favor of a view that values are “personal and subjective” and that the dominant values of any society are merely those of the dominant forces in society. Emergence of formal operational thought is also reflected in the more explicit analytic reasoning about the structure of rules characterized by the Holfeldian system of rights, duties, privileges, and immunities.71 This deference-to-government mentality triumphed on the Supreme Court between 1937 and 1954.

Of course, it is important to note that which group represents the dominant force in any particular society is a matter of political and social history dependent upon the customs of moral reasoning at

---

69 Kuhn, Langer, Kohlberg & Hahn, supra note 55, at 141.

70 Id.

Stage 3, the version or kind of political and economic natural law adopted at Stage 3½, and the rules adopted during the “rule-maintaining” morality of Stage 4. For example, Stalin’s Soviet Union, Hitler’s Germany, Gladstone and Disraeli’s 19th-century Victorian England, and post-Civil War America, are all examples, from the perspective stated here, of Stage 4 nation states, although they obviously differed greatly in the concrete rules and practices adopted in each of those societies.

Kohlberg’s fifth stage is the stage of social contract thinking: one adopts rules that are the product of group choice, and values are relative to that group. Under such a view, “What is right is being aware of the fact that people hold a variety of values and opinions, that most values and rules are relative to one’s group. These ‘relative’ rules should usually be upheld, however, in the interest of impartiality and because they are the social contract. Some nonrelative values and rights such as life, and liberty, however, must be upheld . . . regardless of majority opinion. . . . [L]aws and duties [should] be based on rational calculation of overall utility: ‘the greatest good for the greatest number.’”

Regarding moral reasoning at Stage 5, Kohlberg noted:

The progression from [Stage 4 and 4½ to Stage 5] is best summarized as a transition from a ‘rule-maintaining’ to a ‘rule-creating’ perspective. The [individual] at Stage 5 becomes concerned with the principle or principles which might generate a given system of rules, rather than the set of rules itself. Stemming from the search for principles in terms of which to base moral judgments, there occurs for the first time a concern with universal natural rights of all humans, in that it is from the existence of such universal human rights that universal principles of moral duty or obligation to others might be derived.

Moral reasoning at this stage, however, only uses rational thought as a means to ends defined in other ways. Since rationality is restricted to means, and the test of rational means can be agreed upon in the form of consistency with the hypothetico-deductive technique of scientific investigation, there is an overriding concern that the means for generating principles be rational. As Kohlberg stated:

The “rights,” or the general welfare consequences, insured by social contract procedures remain to some extent a derivative of these procedures rather than the purpose for their existence. Correlatively, then, the Stage 5 social contract conception yields something less than a set of universal, totally generated moral principles; it yields a universal set of procedural principles but not a universal set of moral oughts.

In such a system, individuals are typically assumed to follow their own rational self-interest, limited by the procedures generated under the Stage 5 social contract to ensure fairness toward all. For this reason, the Stage 5 level of moral reasoning can be understood as reflecting a “second-order” understanding about Stage 2’s principle of self-interested instrumental exchange, the level at which each individual follows his own interest, but recognizes others have an equal right to do the same.

---

73 *Id.* at 141-42.

74 *Id.* at 142.
As noted, because Stage 5 moral reasoning only uses rational thought as a means to ends defined in other ways, there is an overriding concern that the means or process for generating principles be rational. Procedural-based legal approaches, such as the 1950s and 1960s Legal Process School, are one reflection of such an approach. Actual assurance of meaningful participation by all citizens, such as in the Civil Rights Act of 1964 and the Voting Rights Act of 1965, is another reflection. This obsession with process can appear puzzling to individuals who approach questions of morality from Stage 6’s moral reasoning premises. As Professor Laurence Tribe has noted, “The process theme by itself determines almost nothing unless its presuppositions are specified, and its content supplemented, by a full theory of substantive rights and values – the very sort of theory the process-perfectors are at such pains to avoid. If that proposition . . . is correct, it leaves us with a puzzle: why do thoughtful judges and scholars continue to put forth process-perfecting theories as though such theories could banish divisive controversies over substantive values from the realm of constitutional discourse.”

This move to Stage 5 comes about as the individual recognizes the need to work together to achieve the individual’s own ends in a society committed to the public good. This is the stage of instrumentalist reasoning. A judge reasoning from these premises must test the formulation and application of each rule by its purpose or policy to ensure the social ends to which society was committed in passing the law or the Constitution are carried out. Where the reason for the rule stops, there stops the rule. Such an approach yields endorsement of the validity of choices made by different groups. As Professor Walzer indicated, individuals in a society composed of a variety of immigrants are “encouraged to tolerate one another as individuals, to understand difference in each case as a personalized (rather than a stereotypical) version of group culture – which also means that the members of each group, if they are to display the virtue of tolerance, must accept each other’s different version.” As noted at § 15.1 n.15, in Professor Walzer’s view contemporary America, post-\textit{Brown v. Board of Education} in 1954, has been a good example of a successful immigrant society in practice.

Kohlberg’s sixth stage of moral reasoning is the stage of universal principles of ethics based upon reason, leading to equal respect and dignity for each individual in society. Kohlberg noted, “This stage assumes guidance by universal ethical principles that all humanity should follow. . . . Particular laws or social arrangements are usually valid because they rest on such principles. . . . Principles are universal principles of justice: the equality of human rights and respect for the dignity of human beings as individuals. . . . The reason for doing right is that, as a rational person, one has seen the validity of principles and has become committed to them.”

The last stage of moral reasoning, Stage 6, involves applying formal operational thought to basic ends themselves. At this stage, rationality becomes not only a means to solving certain problems, but an end-in-itself. As Kohlberg noted, “The reason for doing right is that, as a rational person, one

---

\(^{76}\) Walzer, \textit{supra} note 1, at 31.

\(^{77}\) Kohlberg, \textit{supra} note 16, at 412.
has seen the validity of [the] principles and has become committed to them."78 These Stage 6 rights “can be phrased in terms of the concept of liberty, equality, reciprocity or simply in terms of the concept of the equal worth of all human beings as ends in themselves, rather than means,”79 or more generally what every rational human being owes to every other rational human being.

In terms of “second-order” reasoning, Stage 6 basically involves taking the concept of equal dignity of each individual that emerged at Stage 3 and transcending the concrete, that is, customary or traditional, limitations on that view that exist at Stage 3, and that form the substantive basis for the system-morality perspective of Stage 4. Thus, any customary or traditional limitations on advancing equal dignity for all individuals – whether slavery; other forms of race, gender, or other kind of discrimination; or simply leaving some children behind – should disappear from Stage 6 moral reasoning. Some of these limitations may have already disappeared based upon earlier events, such as in American history the North defeating the South and abolishing slavery after the Civil War; or segregation of the military replaced by integration during the Holmesian era of the 1940s; or the age of civil rights for minorities and women during the instrumentalist era of the 1960s and 1970s. More complete implementation of the principle of equal dignity for all individuals, such as “leaving no child behind,” or universal health care, should come about as part of a Stage 6 society.

Of course, various individuals in any society may hold moral reasoning precepts of Stages 1, 2, 3, 4, 5, or 6, or one of the transitional stages, even if the dominant legal tradition of that society reflects one style of moral reasoning. Such a disconnect between the dominant legal tradition of a society and individuals in society is more likely for societies at advanced stages of development because each generation of children must be successfully educated to be able to achieve advanced cognitive, social perspective-taking, and moral reasoning skills to embrace fully that advanced level of societal development. For example, in modern Western industrialized societies, there can be expected to be a tension between those who would cling to the Stage 4 melting pot theory of the nation state, with its emphasis on formalist application of the traditional rules of society versus those who embrace the Stage 5 relativism and celebration of the diversity of an immigrant society. In contemporary political rhetoric in the United States, it is the Republican Party that is most associated with traditional moral values and with “melting pot” or “assimilation” rhetoric. It is Republican judges, like Supreme Court Justices Scalia and Thomas, who are most associated with a formalist approach toward law. In contrast, the Democratic Party is more associated with moral relativism, celebration of diversity, and building a political party based upon a coalition of different immigrant groups. It is Democratic judges who more likely reject formalist approaches to law, instead deciding cases in instrumentalist fashion to protect vigorously the free speech and other rights of minority groups.

In such circumstances, issues of federalism may seem particularly important, because in Stage 5 immigrant societies there is pressure for power to devolve from the national center of the nation state to the local immigrant communities. Even those individuals who celebrate the Stage 4 nation state, however, may also prefer power to devolve to states if they perceive the national government as more receptive to Stage 5 diversity notions, while certain state politics are dominated more by

---

78 Id. at 412.
79 Kuhn, Langer, Kohlberg & Hahn, supra note 55, at 142.
traditional Stage 4 notions. This was true during the 40 years of Democratic Party dominance of the federal House of Representatives from 1954-1994, while a number of states, particularly in the South and Mountain West, were dominated by conservative, and increasingly Republican, politicians.

This tension between the melting pot theory and federalism will be superseded, however, if society moves past the nation state/immigrant society debate to Kohlberg’s Stage 6 of moral reasoning: universal rational principles of ethics in a post-modern society. If this occurs, the more important question for a society is what will emerge as the universal principles of justice based upon reason that will guide such a society as it evolves from a modern immigrant society into a post-modern society. In such a post-modern society, basic principles of justice will be based upon universal human rights to which rational individuals have become committed.

Signposts of such a change would involve public debate by both major political parties moving to reflect the Stage 6 principle of equal concern and respect, that is, equal dignity for all individuals or, as encapsulated in the Bible, the principle of “love of neighbor as oneself.” The resonance in modern political debate of the phrase “leave no child behind,” without regard to the merits of any particular “Leave No Child Behind” bill, is one signpost on this road. The view that American society should eventually be able to deal justly with the legacy of past racism and achieve in the future a just color-blind society of equal dignity for all individuals regardless of race or ethnicity is another signpost. Another signpost may be the view that government should be responsive to all citizens, and their concerns with education, health care, the environment, and other such matters, and not merely reflect what emerges from Stage 5 procedurally sound special interest lobbying. The movement to support a “living wage,” not merely a “minimum wage,” may be another signpost.

The move to Stage 6 would reflect the “post-modern” approach to toleration based upon a rational understanding of diversity. Judicial decisionmaking in such a society would most naturally reflect a modern natural law approach based upon rational understanding of moral principles. Groups that do not embrace this vision will be tolerated by the government and the courts only to the extent that they are isolated or ineffective in their practices because at Stage 6 all individuals should be protected from group domination. Because of the perceived universality of these principles of moral judgment, this protection from domination would naturally extend not only to domestic law, but also to rooting out intolerant international groups of global reach.

Under such a Stage 6 moral vision, the protection of individual rights to liberty and equality are paramount. Thus, at Stage 6, a pluralistic democratic society is viewed not as an end-in-itself, as it is at Stage 5, but rather as the best means by which to ensure that society protects and advances the set of Stage 6 universal principles of justice. In short, the protection of liberty and equality for all individuals, and not necessarily any outcome of a democratic process, is what is critical.

As discussed at §§ 16.2.2-16.2.3, the precise content of these rational principles of justice should be the same whether based on Stage 6 secular Enlightenment natural law or Stage 6 religious God-given natural law. Thus, at Stage 6, it would not matter whether members of the society believed in Jefferson’s first, more secular, draft of the Declaration of Independence, which referred to “all men are created equal and independent; that from that equal creation they derive in rights inherent and inalienable, among which are the preservation of life, and liberty, and the pursuit of happiness,”
or the final, more religious, draft which stated that “all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness.” In either case, at Stage 6 the full promise of the Declaration of Independence should be recognized that “to secure these rights” – those rights transcending the concrete limitations of a Stage 3 Declaration of Independence, discussed at § 15.4.1 nn.51-56 – “governments are instituted among men, deriving their just powers from the consent of the governed.” As President George W. Bush stated in a 2003 speech to the National Endowment for Democracy, “We believe that liberty is the design of nature. We believe that liberty is the direction of history. We believe that human fulfillment and excellence come in the responsible exercise of liberty. And we believe the freedom, the freedom we prize, is not for us alone. It is the right and the capacity of all mankind.”

A summary of these connections among Piaget’s stages of cognitive development, Kohlberg’s stages of moral reasoning, and the judicial decisionmaking styles appears in Table 15.3. The connections among Piaget’s view of formal operational thought representing second-order operations, or judgments about judgments, and Kohlberg’s Stages 4½, 5, and 6 representing second-order operations about the moral judgments of the sensori-motor based Stage 1, the preoperational thought based Stage 2, and concrete operational thought based Stages 3-4, discussed at text following notes § 15.4.1 nn.70, 74 & 79, appears in Table 15.4. Both Tables appear at § 15.4.4 text following n.106.

§ 15.4.2 Moral Reasoning and the Eras of Societies In World History

The same stages of societal development that exist in American political and legal history exist in other societies as well. This is not surprising since Piaget, Selman, and Kohlberg have postulated that their cognitive, social perspective-taking, and moral developmental stages are universal stages applicable to all individuals in all cultures. Walzer’s descriptions of kinds of societies and views regarding toleration are similarly postulated to have universal application.

For many Western societies, the 17th and 18th centuries witnessed the end of the Stage 2 multinational empires, and the beginning of Stage 3 democratic institutions. The Glorious Revolution in England of 1688, the American Revolution of 1776, and the French Revolution of 1789, are examples of this. These revolutions exemplify this because Kohlberg’s Stage 3 is the first stage where democratic institutions are possible because a Stage 3 moral thinker recognizes that people make their own rules for themselves. At Stages 1 and 2, rules are merely imposed upon people from above, which conforms to the age of Emperors or Kings. In addition to the democratic revolutions listed above, one can also mention the Chinese Revolution of 1911 and the Russian Revolution of 1917.

81 See Text: Bush on Democracy in the Middle East (Nov. 6, 2003) (remarks delivered at the National Endowment of Democracy) (text from washingtonpost.com, search using terms in the title).
Of course, in some cases, the democratic revolution will not become fully consolidated, and the society will slip back into a Stage 2 society, headed by a different King, Emperor, or Dictator. For example, the French Revolution of 1789 did not end up yielding a stable democracy. Instead, King Louis XVI ended up being succeeded by an Emperor, Napoleon Bonaparte. When he fell in 1814, and was finally defeated at the Battle of Waterloo in 1815, there was a restoration of the Bourbon Monarchy under Louis XVIII. When his successor in 1824, Charles X, tried to restore monarchical control, the impact of Stage 3 democratic notions caused the French citizens to revolt, causing Charles’ abdication, and his replacement by Louis-Philippe, who governed without royal pretense and subject to the ideals of the Napoleonic Code. It was not until 1848 when a new democratic revolution swept through Europe that a more complete Stage 3 Republic came back to France.

In other cases, similar shifts between Kings and Dictators have occurred against the backdrop of professed democratic ideals. For example, Prince Sihanouk was replaced in Cambodia in the 1970s by the Dictatorship of the Proletariat, in the form of Pol Pot and the Khmer Rouge. As with the French Revolution of 1789, this revolution was followed by a period of “Terror,” as the new Stage 2 power elite used their dictatorial power to kill persons whom they perceived either as remnants of the old Stage 2 power elite or as threats to their new control. The self-centered nature of Stage 2 moral reasoning makes such pervasive killing easier to implement, particularly if carried out by uneducated adults or children who reason at Stage 2 levels. As with the French experience in 1815, when Pol Pot fell, there was a return of elements of the old monarchy, in the form of Prince Sihanouk, but with an understanding the society would move over time to building a truer, more democratic society.

After the initial Stage 3 democratic revolutions took place, the 19th and early 20th centuries saw the triumph in most Western societies of the development of true Stage 4 nation states. In addition to that development in the United States, England, France, and Russia following their democratic revolutions mentioned above, one can add to this list the consolidation and unification movements in Italy and Germany during the mid-to-late 19th century, and the development of the nation state mentality, for example, the German Rechtsstaat, soon after that. As has been noted, “[I]n Germany in the 1860s and 1870s . . . an attempt was made to translate into practice the long-cherished ideal of the Rechtsstaat, . . . the definite achievement of the rule of law.” Of course, under their own versions of “Manifest Destiny,” each of these Stage 4 nation states treated their colonies, as opposed to their own citizens, in a Stage 2 multinational empire fashion until well into the 20th century.

At the end of the 20th century, and beginning of the 21st century, the dominant societal change is the evolution of nation states into immigrant societies. The United States is a clear example of this phenomenon, but one sees the same pressures around the world, whether in England (with its Pakistani, Indian, and African populations), France (with its African Muslim population), Germany (with its Turkish population), Spain (with its Basque, Catalan, and other minority communities); South Africa (with its combination of blacks, mixed races, and Afrikaners), or Russia (with its various nationalities). In such societies there is the same tension between a “melting pot” versus “immigrant society” mentality. For example, the French authorities have struggled with whether to allow daughters of devout Muslim parents the ability to wear traditional Muslim headdresses.

---

when they attend French public schools. Eastern European countries, the former Soviet Republics other than Russia, and many Latin American countries are also trying to build Stage 5 pluralistic democracies evolving from fascist or socialist Stage 4 nation states. In many of these societies, endorsement of diversity within immigrant communities has led to pressure for more federalist arrangements to devolve power from a national center to state and local communities.

In contrast to these examples, the break-up of Yugoslavia into Slovenia, Croatia, Serbia, and Bosnia is best understood as an example of the Stage 2 multinational empire of Tito not surviving as a Stage 3 consociation of communities, and thus independent Stage 4 nation states have been created, with the Albanian community in Kosovo ultimately likely to have its own nation state as well.

The Islamic world presents a different kind of problem. Most countries in the Islamic world have just passed through, or about to pass through, the transition from Stage 2 Kingdoms into Stage 3 fledgling democracies. As has been noted, “There is . . . underlying Stage 3 a naive assumption that all values are shared; in other words, it is assumed that all others would evaluate the self or any actor in the same way. . . . [Thus] there is no basis upon which to choose between the conflicting norms or values of different actors in a moral dilemma.” This fact may underlie the belief in many of these countries that one dominant ideology – Islamic fundamentalism – should form the basis of society. This is similar to the ethical natural law unity of colonial America where, as Professor Nelson noted, there was a period of ethical unity and community based norms where consensus “was promoted by the fact that nearly all members of society shared common ethical values and imposed those values on the occasional individual who refused to abide by them voluntarily.”

Within any one community, such a vision may be practical in the short run. A number of American colonies, and a few early American states, had formal state religions during the Stage 3 ethical natural law period of our Nation’s history. Uniting these local communities into a larger political unit, however, required first the stoicism of the consociation model, and then the curiosity toward diversity of the Stage 4 nation state model. This can only happen with some practical separation of church and state, either more formally, as under the United States Constitution, or in practice, as in countries like England, where there is a practical separation on a day-to-day basis despite the official state Church of England. Even in such societies, the concrete customs and traditions may permit a certain amount of discrimination, such as discrimination against Catholics and Jews by the Protestant majority in the United States during the 19th century and early 20th century. In Islamic countries today, tensions between Sunnis and Shiites, and anti-Semitism, represent a similar phenomenon.

86 Nelson, supra note 50, at 3.
Building a pluralistic Stage 5 democracy, with greater respect for a range of immigrant communities in society, represents yet another evolution in societal understandings. The final evolution toward a Stage 6 society represents yet another advance in societal understandings. At that stage, intolerant attitudes of certain communities are not accepted as legitimate because all individuals should be protected from group domination. For example, a number of Western European countries, like England, France, Denmark, the Netherlands, and others are working on how to integrate Moslem immigrants into the tolerant fabric of their societies. In such countries, this social change has happened over many decades. For that change to happen with a decade or two in the Islamic world, such as integrating fully into society Kurdish, or Coptic Christian, or other minority groups, and protecting them from group domination, would pose a real challenge for those countries.

Of course, each country in the Islamic world poses its own set of problems and has its own unique history. Because of the impact of Kemal Ataturk, Turkey has long been a Stage 4 nation state looking at the present time to evolve into a Stage 5 pluralistic democracy with general respect for human rights. Other countries, such as Pakistan or Egypt, are closer to the Stage 4 nation state model. Still other countries, such as Iran, are in the first 20 years of becoming a Stage 3 democracy. Other countries still maintain the trappings of a Stage 2 Kingdom, while trying to nurture Stage 3 democratic impulses, such as Jordan or, to a lesser extent, Saudi Arabia. Under Saddam Hussein, Iraq was a Stage 4 nation state, though a sinister nation state like Hitler’s Germany or Stalin’s Soviet Union. Whether Iraq can evolve into a Stage 5 pluralistic democracy, as the Bush Administration hopes, or might regress into a Stage 3 fledgling democracy, with a consociation model of different ethnic groups, with community-based norms and Islamic ethical unity imposed, remains to be seen.87

Many African countries pose even greater problems from the perspective presented here. Following the end of the Stage 2 colonial era, the initial steps of many of these countries toward Stage 3 democracies were unsuccessful, and they regressed back into Stage 2 dictatorships of various kinds, with the associated Stage 2 “Terror” by the dominant tribal group. Even where the Stage 3 democratic impulses were stronger, the focus of Stage 3 on community, or tribal, based norms has meant continual ethnic and tribal strife, with associated Civil Wars between certain tribes seeking independence from the dominant tribe in the nation, not unlike the United States Civil War of 1861-65. Even more advanced African countries, like Nigeria, have progressed at best through such Civil Wars to develop a crony-capitalist kind of Stage 4 nation state.

For all of these societies, true advance toward Stage 5 pluralistic democracies, and eventually Stage 6 post-modern societies, will only come about when a critical mass of actors in society become sufficiently educated so that their greater advanced cognitive abilities will create in them sufficient pressure for the higher, associated level of moral reasoning to be reflected in society’s institutions. Given the current educational systems in Africa and the Middle East, most of those systems are a longer way off from producing such a pervasively educated citizenry than one would like. Such improved educational systems, though, are critical for moral growth. The framing and ratifying

87 For a look at the Islamic world, emphasizing the need for social and political change to bring those countries into the culture of modernity, see Bernard Lewis, What Went Wrong: Western Impact and Middle Eastern Response (2002). For discussion about modernity and democracy generally, see Lawrence M. Friedman, Roads to Democracy, 33 Syr. J. Int’l Law & Com. 51 (2005).
generation knew this well. As stated in the third article of the Northwest Ordinance of 1789, drafted by Thomas Jefferson, "Religion, morality, and knowledge being necessary to good government and the happiness of mankind, schools and the means of education shall forever be encouraged." As Daniel Webster observed at the laying of the cornerstone of the Bunker Hill Monument on June 17, 1825, “Knowledge is the only fountain both of the love and the principles of human liberty.” To be as successful as possible, such education needs to be focused in part on developing citizens who will grant other individuals equal concern and respect, which is a significant challenge for many governments, as noted in Meira Levinson’s The Demands of Liberal Education (1999).

Pervasive poverty in many countries makes the challenge these countries face even more difficult. Individuals with few, if any, resources naturally have a tendency to focus more on Stage 1 egocentric obedience to rules to avoid punishment, or Stage 2 following self-interest, while acknowledging that others have the right to do the same, since their primary concern is day-to-day survival. As Bertolt Brecht wrote in his musical, The Three-Penny Opera, “First feed the face, and then talk right and wrong. For even saintly folk, may act like sinners, if they haven’t had, their customary dinners.” For these societies, it is only through a combination of addressing pervasive poverty; working to improve the educational system for both men and women, which will help, among other things, reduce religious strife by creating greater acceptance of diversity; and supporting the growth and stability of democracy, that will make the difference. As an example, this is the agenda of the Clinton Global Initiative, along with working to slow global warming.

An alternative to such internal development might be the imposition from outside of a Constitution and institutions reflecting a higher level of moral reasoning. Following the Civil War in America, the Northern States attempted to impose on the South a higher level of morality, which rejected the Stage 3 customs of the South regarding slavery and racial discrimination, in favor of Stage 4 equal citizenship rights. The difficulties associated with that enterprise, as represented by Ku Klux Klan resistance and bombings, and an 80-year legacy of Jim Crow laws following removal of Union troops in 1877 after a 12-year military occupation, indicates how difficult imposition is even given military occupation. The Bush Administration seems to be facing a similar difficulty in its military occupation of Iraq, following the toppling of Saddam Hussein in 2003, in terms of imposing in Iraq an advanced, pluralistic democratic society, rather than a Stage 3 fledgling democracy like Iran.

As discussed at § 16.1, a number of Western European countries and Canada are at the beginnings of a process of evolving from Stage 5 immigrant societies to Stage 6 post-modern societies. This is true even for a country like Belgium, which historically was best viewed as a Stage 3 consociation. Belgium has long since moved through a Stage 4 transition of being a true nation state to a Stage 5 pluralistic democracy. In contrast, Cyprus, with its Greek and Turkish sections, is probably still best viewed as a Stage 3 consociation. As societies with the highest level of educational achievement among their populace generally, it is not surprising that Western Europe and Canada are at the forefront of this movement. The values these countries represent are shared to a large extent by the so-called “Blue States” of the American North and West Coast. The precise content of Stage 6 moral principles is discussed at § 16.2. The history of the United States Supreme Court since 1954 imposing on recalcitrant states Stage 5, and more recently Stage 6, moral notions by striking down certain Stage 3 and Stage 4 practices as violations of equal protection or due process is discussed at § 16.3. A summary of the possible content of constitutional law at Stage 6 is discussed at § 16.4.
Two final general points are perhaps useful to make. Where societies are at early stages of social development, exploitation and discrimination are likely to be more prevalent, given that the Stage 6 principle of equal concern and respect for all individuals is not accepted as the basic moral principle of social order. This is particularly true for individuals focused on self-interest, as at Stages 1 and 2 of moral development, where punishment or rewards, either from parents, the government, or God, are prime motivators of action. To the extent the power elite can rely upon, or create, customs and traditions which ingrain discrimination against certain members of society, individuals or societies operating at a Stage 3 or 4 level can also reflect extreme kind of exploitative or discriminatory behavior. Naturally, children, and many teenagers, who have not yet developed the cognitive ability of formal operational thought to be Stage 5 or 6 thinkers, are particularly susceptible to being manipulated by such childish focus on self-interest or teenage peer group mentality thinking. As discussed at § 15.4.4 nn.100-02, the moral reasoning of some adults may also reflect some version of Stage 1-4 reasoning, despite greater cognitive reasoning capacities than children.

The worst kinds of genocide typically result from a combination of manipulation of Stage 1-4 moral reasoning notions. Such manipulation is easier among children and teenagers. Use of older children and teenagers to commit mass killings, by Pol Pot in Cambodia, or during the genocide in Rwanda, and the creation of institutions such as the Nazi Youth League in Nazi Germany, are examples of this. In each case, the genocide was supported by Stages 1-2 appeals to self-interest in protecting oneself from the “enemy,” and by Stages 3-4 peer group “gang street” mentality – the Brown Shirts in Germany, or Hutu street gangs in Rwanda, the cadres in Cambodia – who dehumanized the groups to be harmed by creating customs of viewing the groups to be harmed as less than human. Individuals who can truly see things from another’s perspective, the adult level of formal operational thought, are unlikely to enslave or murder fellow human beings in such a fashion.

To defeat such attitudes, and more generally to deal efficiently with individuals who commit crimes, a range of approaches are necessary. For Stage 1 and 2 individuals who engage in unlawful behavior, concrete punishment or rewards will be the most effective means of deterring and punishing activity until such individuals, through successful education, are rehabilitated into higher stages of moral reasoning. For such individuals, appeals to individual conscience, or shame at not conforming to societal expectations, will not likely be as effective motivators as threats of punishment, or promises of rewards for good behavior, from the state or from God.

At the same time, for Stage 3 and 4 individuals, more enlightened customs and traditions need to be infused into the society which reflect better the Stage 6 principle of equal concern and respect. For such individuals, shame at not conforming to secular or religious moral customs and traditions can be an effective motivator of action, in addition to threats of punishment or promises of rewards.

Commitment by the leaders of society to Stage 5 pluralist democratic principles, combined with commitment to Stage 6 respect for universal human rights, will also aid in the process of creating an enlightened society. For individuals who morally reason at the formal operational thought level of Stage 5 or Stage 6, appeals to individual conscience can be an effective motivator of behavior. The more individuals are successfully brought to Stage 5 or Stage 6 cognitive and moral developmental levels of reasoning, the less criminal activity there likely will be, and reduced chances will exist for genocidal or mass terrorist activity.
In educationally more backward societies, the chances are greater for various kinds of immoral behavior, such as some societies in Africa where isolated incidents of slavery still exist, or terrorist activities associated with individuals from societies with less successful educational systems. Of course, even in societies that are more educationally advanced, some individuals in that society will still engage in terrorist activity, either because the particular individual is not cognitively advanced, or has not applied the individual’s cognitive skills to moral reasoning issues, as discussed at § 15.4.4 nn.100-02. In educationally advanced societies, however, there will not be any significant support for slavery, terrorist, or genocidal activities.

§ 15.4.3 Modern Transitional Stages and the Eras of Societies

As noted at § 15.2 text following n.23, between each stage there is a transitional period. The transitional stage between Stages 5 and 6 is called in this Chapter Stage 5½. As with Stage 4½, this underlying transition involves some greater measure of ethical moral relativity, as the individual is between the more fixed moral ideals of the preceding and succeeding stages. At Stage 5½, this takes the form of the moral relativism or anti-foundational ethics associated with philosophers like Richard Rorty, who rejects the possibility of developing rational principles of justice, and who postulates that the best that can be done is some advanced version of pragmatic instrumentalism based on ethnocentric relativity where truth is relative to the standards and practices of any given political community.88 As discussed at § 13.1 nn.37-45, a number of modern critiques of instrumentalism share these premises, such as various versions of critical legal studies, law and economics as developed by Richard Posner, or modern political natural law, as in the writings of Ronald Dworkin in Law’s Empire. Kohlberg, of course, rejected such relativism as the underlying epistomological stance, but other moral developmental psychologists have embraced it.89

Some commentators have also alleged that Kohlberg was mistaken in postulating a Stage 6 of universal principles of justice, and that the highest stage of moral reasoning is some version of Stage 5 utilitarianism, with rational individuals adopting a form of rule utilitarianism to deal with the uncertainty posed by a pure act utilitarian calculation being required in every case.90 The difference between rule utilitarianism and act utilitarianism is discussed at § 11.3.4.1. As discussed at § 16.2, there can also be different attempts to define what are the rational principles of justice that should emerge at Stage 6, and a number of false starts have been made. Indeed, given the fact that most individuals do not apply in any systematized manner the logic of well-developed formal operational thought to all questions of moral choice, it is no surprise that in cross-cultural studies Kohlberg was unable to demonstrate any critical mass of social actors in societies generally reasoning at a Stage

6 level of moral reasoning. Nevertheless, as discussed at § 16.2, development of such Stage 6 universal rational principles of justice can be done.

Because each of the various versions of Stage $5\frac{1}{2}$ moral reasoning are temporary transitional approaches between Stages 5 and 6, any more detailed categorization of their various differences is not of long-lasting practical significance. Indeed, it is less important than trying to unpack all the particularized variations of Stages 3 and $3\frac{1}{2}$ of the 17th and 18th centuries. For those theories, the concrete differences among the more secular English, Scottish, and French Enlightenment traditions, along with the civic Republican tradition of Harrington and others, versus the differences among the various more religious Christian natural law traditions, including the writings of Blackstone and Burke, made some difference in terms of the concrete practices adopted at Stage 3 and $3\frac{1}{2}$ that got formalized at Stage 4. Because Stage 6 moral reasoning is no longer based even in part on traditional customs, but rather on the uniform demands of reason, Stage 6 will embody Dworkin’s concept of “one right answer,” noted at § 2.2.2.4 n.18, but that answer will not be based on Dworkin’s political natural law concept in Law’s Empire of “the best theory” to explain existing customs, laws, and doctrine, noted at § 13.1 n.38, but instead will be based upon reason itself.

From a Kohlbergian perspective, the approach to moral and constitutional reasoning advanced by the many contemporary proponents of “deliberative democracy” represent a Stage $5\frac{1}{2}$ approach to the nature of law and society. Such proponents, such as Professors Amy Gutmann and Dennis Thompson in Democracy and Disagreement, reject a procedurally-focused interest-group or bargaining model of democracy. That model of self-interested bargaining in a procedurally defensible, pluralistic social contract conception of democracy is reflective of Kohlberg’s Stage 5 of moral reasoning, as discussed at § 15.4.1 nn.72-76. Such proponents also reject a view of “constitutional democracy,” at least where the underlying principles of that democracy reflect only the concrete customs and traditions of the members of society. Professors Gutmann and Thompson noted, “Constitutionalists [must] decide what form of majority rule is the most justifiable,” and that form will not be merely the customs and traditions of the dominant forces in society. As discussed at § 15.4.1 nn.50-66, such a constitutional democracy is based on constitutional arrangements where members of society, in practice the leaders and elites, design institutions, divide offices, and strike a political bargain that protects their divergent interests. This is based either on the Stage 3 customs of local communities or states in that society, or the Stage 4 traditions of society in general.

On the other hand, proponents of “deliberative democracy” do not adopt the Stage 6 view that rational principles of justice can be determined on their own, separate from a political process of deliberation by members in society. Reflecting the foundational Stage 6 premise, discussed at § 16.2, that rational thought is not self-centered or egotistic, and thus individuals in society are entitled to equal concern and respect, under “deliberative democracy” each citizen must reject egocentric self-interest in favor of deliberating in a good faith manner based on trying to achieve the common good for society in general, and every member of society is entitled to participate equally in that
debate. However, reflecting Richard Rorty’s Stage $5^{1/2}$ embrace of ultimate value relativity, the proponents of “deliberative democracy” require each individual to reason in a way that justifications for actions could be accepted by individuals having different value beliefs, which are viewed as equally appropriate for individuals to have. As stated by Professors Amy Gutmann and Dennis Thompson, “We do not begin with a common morality, a substantial set of the principles or values that we assume we share, and then apply it to decisions and policies. Nor, for that matter, do we end with such a morality. Rather, the principles and values with which we live are provisional, formed and continually revised in the process of making and responding to moral claims in public life.”

It has been noted by Professor Miriam Galston that legal scholars as diverse as Bruce Ackerman, Mark Tushnet, Robin West, Frank Michelman, Suzanna Sherry, and Cass Sunstein all share an interest in deliberative accounts of public constitutional decisionmaking, as do Professors Christopher Eisgruber and James Fleming.

As Professors Gutmann and Thompson indicated in the quotation just cited, it is likely that persons engaged in a process of deliberative democracy, with the constraints imposed by non-egocentric, good faith deliberation, can reach conclusions on some matters, but that consensus on many ultimate issues may not emerge from such a deliberative process. Without a “common morality” at the “end” of such a process, resolution of moral issues will ultimate have to come from adopting either the customs and traditions approach of Stages 3 and 4, or the rational principles of justice of Stage 6, assuming one rejects the view that whatever emerges from a special interest, bargaining model of Stage 5 is moral, and also rejects, as is typical for a democracy, the pre-democratic moral reasoning stages of Kohlberg’s Stages 1 and 2. The tension between approaches to moral reasoning adopting customs and traditions versus rational principles of justice is discussed at §§ 16.1-16.2.

Of course, as a matter of constitutional law, consideration of constitutional text, context, history, practice, and precedent may preempt the ability of the Court to decide any particular case consistent with background principles of moral reasoning, just as the Court in the pre-Civil War era could not decide cases consistent with the background moral principle of the immorality of slavery. On the other hand, given the natural law commitment to reason in both the Enlightenment and classic/Christian natural law traditions, discussed at §§ 16.2.2-16.2.3, and the views of both Madison and Burke supporting an evolving or living Constitution, as discussed at § 12.3.3 nn.119-28, it can be expected in the context of a post-modern Stage 6 society that broad terms in the Constitution, like those involving liberty or equal protection in the 14th Amendment, will be interpreted by the Court in Stage 6 fashion where leeways exist in the law, even though they were originally adopted in the context of Stage 3 and 3½ democracies. As discussed at § 12.3.3 nn.119, “No great political theory, including Locke’s, is the last word on its own best interpretation, and critical advances in political theory may enable us better to understand and interpret the permanent truths implicit in the theory

94  *Id.* at 12-21, 24-26.

95  *Id.* at 26.

and to distinguish these from its lapsing untruths.” Justice Kennedy reflected the same point in 2003 in *Lawrence v. Texas*, when he noted, “As the Constitution endures, persons in every generation can invoke its principles in their own search for greater freedom.”

To the extent the framers and ratifiers believed in a theory of social and moral progress over time through the application of reason, interpreting their natural law ideals in Stage 6 fashion today would be consistent with the original intent of how the framers and ratifiers would have expected judges to behave, although those ideals were initially interpreted in Stage 3 fashion, given the concrete reality of the times. As discussed at § 6.2.3.2 n.94, this point was made by Justice Ginsburg during her confirmation hearing when she noted that the concept of equality in the Declaration of Independence and the Equal Protection Clause is broad enough to embody a principle of equal rights for women, despite the fact that the concrete views of Thomas Jefferson and others in the 18th and 19th century were not ready for women to be equal participants in public life. Justice Ginsburg stated that she presumed Jefferson would agree with equal rights for women if he were alive today.

Of course, as noted at § 7.1 nn.15-18, Jefferson’s more formalist theory of constitutional interpretation would no doubt have preferred heightened scrutiny for gender discrimination to have been the result of the successful formal constitutional amendment, such as ratification of the Equal Rights Amendment (ERA) during the 1970s, rather than by Court decisions in the same decade. However, the Court decisions of the 1970s that increased scrutiny in gender discrimination cases without regard to the lack of ratification of the ERA, discussed at § 26.3.1.2, are consistent with the natural law theory of interpretation of Madison, Hamilton, and Marshall. In addition, as with Jefferson’s acquiescence in the Louisiana Purchase in 1803, despite no formal constitutional amendment granting him that authority as president, discussed at § 7.1 n.18, Jefferson would likely acquiesce in the Court’s heightened scrutiny in gender discrimination cases if he were alive today.

As a final point, implicit in any discussion regarding moral reasoning and supra-majority rights placed in a Constitution is the question of what role the courts should have in protecting these rights versus these rights being protected by the legislative branch, the executive branch, or the people in general. As noted at § 5.2.2.2, there are a wide range of options, including no judicial review, to the “minimalist” vision of judicial review of Thayer embraced by extreme Holmesians, to an intermediate view of “reasonable construction” based either on formalist or natural law models of interpretation, to a “strong” view of judicial review embraced by extreme instrumentalists. These other options are addressed in the context of a discussion about judicial review at § 17.1.4.

**§ 15.4.4 Critiques of Kohlberg’s Theory of Moral Reasoning Stages**

It must be noted that some commentators, including most prominently Professor Carol Gilligan, have argued that Kohlberg’s stages of moral development are gender-biased and do not reflect a feminine voice in morality. This feminine voice is held to focus more heavily on an “ethic of care” that is more responsive to the “emotional nature of morality” and “the role of empathy” in moral

---

reasoning, rather than Kohlberg’s focus on “a cognitive approach that emphasizes individual commitment to abstract right.” This concern is similar to the 17th- and 18th-century Scottish Enlightenment philosophers, noted at § 16.2.1 nn.9-11, who rejected reason in favor of a “moral sense” philosophy, based on a concern that abstract reason would lead to results favoring too much narrow self-interest.

If the connections stated at § 15.3 between Piaget’s stages of cognitive development and Kohlberg’s stages of moral development are true, then, as a theoretical matter, Professor Gilligan would have to be wrong. Piaget’s stages of cognitive development are based on individuals becoming progressively more advanced in their thinking through their interaction with the environment. That environment, and our scientific, or cognitive, understanding of it, is gender neutral. There is no male and female principles of physics, or male and female principles of chemistry; there are just principles of physics and chemistry. Similarly, there are just progressive stages of cognitive development, and thus progressive stages of moral reasoning.

An alternative view could conclude that the stages of moral development, while perhaps related to stages of cognitive development, are independent stages that have their own internal logic independent of cognitive developmental advances. To defend such an approach persuasively, it would be necessary to postulate some biological mechanism in the brain that would be responsible for an independent sequence of social perspective-taking and moral reasoning stages in each individual. That biological mechanism might be different in men and women, leading to different moral reasoning stages for men and women. What that biological mechanism might be, however, is unclear.

In contrast, the mechanism by which individuals, through their interaction with the environment, become progressively better at cognitive reasoning is clear. This is just the basic progress of scientific understanding of the world around us, and that understanding, as noted above, is gender neutral. Since Kohlberg’s moral reasoning stages, and Selman’s social perspective-taking stages, are directly related to Piaget’s cognitive developmental stages, the moral reasoning stages are similarly gender neutral. As discussed at § 15.3, each succeeding stage of moral reasoning development reflects application of succeeding stages of cognitive development, and thus succeeding stages of social perspective-taking, being applied more completely to moral reasoning questions.

Of course, at any particular time, any individual may not have completely applied increased cognitive developmental skills to that individual’s understanding of moral reasoning. Thus, an individual may be able to engage in advanced cognitive developmental tasks, but still apply moral reasoning concepts related to earlier stages of cognitive development. Kohlberg phrased this point at follows:

To summarize, there is a one-to-one parallelism or isomorphism between cognitive and moral stages, but this correspondence does not mean high or perfect empirical correlation between the two. This is because a person at a given cognitive stage may be one or more stages lower in

---

99 Huhn, supra note 90, at 334-35, discussing Carol Gilligan, In a Different Voice (1982).
morality. Our theory predicts that all children at a given moral stage will pass the equivalent-stage cognitive task, but not all children at the given cognitive stage will pass the equivalent moral task. . . .

These findings support what we all know: you have to be cognitive mature to reason morally [at advanced stage levels], but you can be smart and never reason morally [except at low stage levels].

Studies support the notion that societies with better educational systems tend to produce students reasoning at higher levels of moral reasoning on average than societies with weaker educational systems. Even in advanced Western industrialized democracies, however, a significant percentage of presumably reasonably well-educated college students reason at the Stage 3 and 4 level of concrete customary and traditional secular or religious moral notions. As discussed at §§ 16.1-16.2, for them, customary or traditional ways of thinking form the basis for justification for right action, rather than reasoning based on formal operational thought’s requirement of seeing things fully from other individuals’ perspectives, in addition to one’s own, and thus having a greater respect for diversity of views and requiring equal concern and respect for all individuals in society.

A good example of the difference between Stage 6 and Stages 3-4 moral reasoning occurred in Lawrence v. Texas. As discussed at § 16.2.4 nn.63-70, Justice Kennedy’s majority opinion in Lawrence adopted a Stage 6 perspective in focusing on universal human rights of dignity and autonomy for all individuals in society, including gay and lesbian individuals, not to have their personal lives “demeaned.” In contrast, Justice Scalia’s dissent in Lawrence focused more on concrete customs and traditional majority views “deeply rooted in this Nation’s history” regarding sodomy, reflecting a Stage 3 or Stage 4 approach. No doubt Justice Scalia is just as cognitively smart as Justice Kennedy. Their two opinions, however, reflected resort to different levels of moral reasoning. To the extent the framers and ratifiers of the 14th Amendment believed in a formalist theory of interpretation, Justice Scalia was faithful to a formalist notion of a static Constitution and the Stage 3 and 4 view that concrete customs and traditions disapproving some act are sufficient grounds to conclude that act is immoral. On the other hand, to the extent that the framers and ratifiers of the 14th Amendment believed in a natural law approach to interpretation, then interpreting their aspirations in the 14th Amendment in a more enlightened manner today, such as reflecting Kohlberg’s Stage 6 level of moral reasoning, is exactly what a judge committed to a natural law approach should do, as discussed generally at § 12.2.2, and specifically at § 12.3.3 nn.115-28. That is what Justice Kennedy did in his majority opinion in Lawrence.

100 Kohlberg, supra note 16, at 138.

101 Id. at 23-26.

102 See, e.g., Wangerin, supra note 89, at 1274-75 (“[S]tandardized tests of moral development, of which several exist, indicate that most college age students fall somewhere between Kohlberg's stages three and four.”).

103 539 U.S. 558, 574-75 (2003) (Kennedy, J., opinion, for the Court); id. at 602-04 (Scalia, J., joined by Rehnquist, C.J., and Thomas, J., dissenting).
Despite the conclusion that there is just one gender-neutral set of cognitive developmental stages, and thus one set of gender-neutral moral developmental stages, as an empirical matter it is likely true, as Professor Carol Gilligan has noted, that a greater percentage of women in many societies reason at the level of Stage 3 community-based norms, which are more focused on interpersonal relationships among family, friends, and neighbors, while more men in many societies adopt the Stage 4 “rules are rules” mentality.104 This may be in part a cultural phenomenon, with the morality of home life more centered on Stage 3 notions, the morality of business and the workplace more centered on Stage 4 notions, and the traditional culture relegation of women more to the home, and men to business.105 Perhaps there are even some gender-based predispositions in brain biology. Increased levels of testosterone during fetal development and thereafter seem to be associated more with developing potentialities in the right side of the brain, which is more associated with abstract analytic skills, which can be seen as related more to the Stage 4 “rules are rules” mentality, while reduced levels of testosterone are more associated with developing the left side of the brain or equal coordination between the two, which is more associated with language skills and empathy, which can be seen as related more to the interpersonal nature of Stage 3 moral reasoning.106

In any event, as discussed at § 15.3 nn.37-43, both Stage 3 and Stage 4 levels of moral reasoning are limited moral visions applying only concrete operational thought to derive their premises. Stage 6 moral reasoning, as the second-order operation of both, transcends each. As indicated at §§ 16.2.2 nn.21-24 & 16.2.3 text following n.37, Stage 6 moral reasoning, as the second-order universalization of Stage 3's concrete Golden Rule, adopts a fully-developed Golden Rule of “love of neighbor as oneself” or “equal concern and respect” applied to all individuals in society at all times. This Stage 6 moral reasoning is consistent with the equal concern and respect for other individuals that one associates with Carol Gilligan’s “ethic of care” concerns. As discussed at § 16.2.2 text following n.21, the similar Scottish Enlightenment rejection of rational thought as determinative of moral reasoning, and adoption of a “moral sense” philosophy, is unnecessary from a Stage 6 perspective since rational thought is not self-interested, but focused on equal concern and respect.

For this reason, the actual Stage 6 principles are more reflective of the principles advanced in Carol Gilligan’s feminine voice than the principles she defines as the male principles in Kohlberg’s work. Stage 6 is different than the concrete practices of morality of American society during both its Stage 3 and Stage 4 eras. Stage 6 moral reasoning transcends the concrete prejudices, stereotypes, and discrimination practiced in those eras, whether those prejudices derived from customs in local communities, as at Stage 3, or were system-wide prejudices reflected in enacted law, as at Stage 4. This tension between customs and traditions versus Stage 6 principles of universal human rights is discussed at §§ 16.1-16.2.

104 See Huhn, supra note 90, at 335-39.

As discussed at § 15.3, because formal operational thought involves the ability to engage in abstract reasoning, a perspective can be adopted that goes beyond the confines of any given society in which one happens to find oneself. Given this fact, as discussed at the end of § 15.3 and at § 15.4.1, one way to understand Stages 4½, 5, and 6 is to note that applying formal operational thought to the basic question of the justification for moral rules would cause the adoption of the Stage 4½ view that moral choice is personal and subjective, and that whatever values are adopted are merely the product of the dominant forces in that given society. Applying formal operational thought to the question of the means by which social ends are advanced would support development of rational procedures to implement whatever values are the product of social contract choice, Kohlberg’s Stage 5. Applying formal operational thought to basic ends would cause adoption of Kohlberg’s Stage 6, which is based upon adoption of abstract rational principles about which all rational individuals can agree.

Another way to understand Stages 4½, 5, and 6, as noted at § 15.4.1, is based on the observation that initially, at early stages of cognitive development, the individual is only able to make judgments of fact. From this perspective, rules are given to the individual as facts to follow, the preconventional level of moral reasoning Stages 1 and 2. The individual then becomes capable at concrete operational thought of making judgments about facts, that is, the individual becomes aware that norms or rules are the product of individual judgment, the conventional level of moral reasoning Stages 3 and 4. Only at the level of formal operational thought does the individual become capable of second-order operations: judgments about judgments. From this perspective, Stage 4½ reflects second-order, self-conscious adoption of Stage 1’s premise of following rules in order to avoid punishment by the dominant forces in society. Stage 5 involves second-order, self-conscious adoption of Stage 2’s principle of self-interested instrumental exchange, reflecting the pluralistic, interest group bargaining of Stage 5’s social contract. Stage 6 involves the concept of the equal dignity of each individual, the so-called “concrete Golden Rule,” that emerges at Stage 3 and transcending the concrete, that is, customary or traditional, limitations that exist at Stage 3, and that form the substantive basis for the system-morality of Stage 4. These connections are noted at § 15.4.1 at the following links: Stage 4½, Stage 5, and Stage 6.
CHAPTER 16: FINAL CAUSES AND THE FIVE ERAS OF AMERICAN LAW

§ 16.1 Material Base of Moral Reasoning: Faith in Custom or Reason

Moral reasoning refers to an effort to identify through reasoning how persons ought to behave and what ought to be. Sometimes in philosophy this has been referred to as a search for “the good.” As discussed in Chapter 15, ideas on what is good have differed from one society to another and have changed from time to time within individual societies. The concern in this Chapter is what has been, is, and will be considered the good in American society, to the extent that it becomes reflected in constitutional law. Thus, the central question addressed in this Chapter is what universal principles of justice are likely to emerge for guiding the social, culture, and legal system of the United States, particularly its constitutional law, as the United States evolves from a modern Stage 5 immigrant society into a post-modern Stage 6 society, as can be predicted based upon the analysis in Chapter 15 of Piaget, Selman, Kohlberg, and Walzer. Dealing with this question is relevant for a book on the path of constitutional law because the predominant style of constitutional interpretation and, indeed, constitutional doctrine, has been moving ever closer to what could be expected in a post-modern Stage 6 society.

Of course, decisions on American constitutional law do not begin with an analysis of universal principles of justice. Decisions usually begin with text and then consider context, history, practice, and precedent. However, relevant sources also include prudential consideration of consequences, and the perception of consequences will be influenced by what is going on in society with respect to moral reasoning. Of course, any judge’s vision of what is ideal may undergo change in response to economic developments, developments in science and technology, ideas produced by the culture, and interaction with other societies in the world, as well as be influenced by the personal experiences of the judge. Nevertheless, to the extent that Piaget’s, Selman’s, and Kohlberg’s cognitive, social perspective-taking, and moral developmental stages are universal stages applicable to all individuals in all cultures, these causes of social and moral development should push all societies in generally the same direction. Particularly for natural law or instrumentalist judges, the meaning attributed to general terms in a constitution, such as “liberty” or “equality” in the 14th Amendment of the United States Constitution, will tend to reflect enduring themes in moral reasoning about human rights viewed from that society’s moral reasoning perspective. For example, in Justice Kennedy’s majority opinion in Lawrence v. Texas, he wrote, “Had those who drew and ratified the Due Process Clause of the Fifth Amendment or the Fourteenth Amendment known the components of liberty in its manifold possibilities, they might have been more specific. They did not presume to have this insight. They knew times can blind us to certain truths and later generations can see that laws once thought necessary and proper in fact serve only to oppress. As the Constitution endures, persons in every generation can invoke its principles in their own search for greater freedom.”

---

1 The classic use of this terminology is by Plato, who defined “the good as the highest object of knowledge,” in The Republic of Plato, Chapter XXIII, and by Aristotle, who defined “the good as the aim of action” in his Nicomachean Ethics, Book I.

Under Kohlberg’s theory of moral reasoning stages, any “existing” perspective will necessarily be built on a base of “traditional” views regarding moral reasoning of earlier moral reasoning stages. Contemporary and future searches for the “good” will thus inevitably be influenced by what has been traditional with respect to moral reasoning in the past. As discussed at § 8.4.1, at the time of our Nation’s founding, there were two main Western traditions of moral reasoning about human rights: the Enlightenment natural law tradition and the classic/Christian natural law tradition. These two traditions competed 200 years ago as our society emerged from being ruled by the English multinational empire to forming our own democratic base. The historical fact of these two traditions of moral reasoning about human rights means that it is likely that both traditions will have their own versions of Stage 6 principles. Because Stage 6 moral reasoning is based upon rational principles of justice, however, the universal principles from both traditions should end up looking the same because, as discussed at § 16.2, “reason” is the same whether “God-given” or not.

Many commentators have phrased the contemporary debates over values, the so-called “Culture Wars,” as a debate between religious and secular ideologies. Based upon the discussion in Chapter 15, this is not an accurate way to describe the debate. The real debate is between traditional ideologies, whether religious or secular, which reflect Stage 3 or 4 concrete customary or traditional norms, versus progressive ideology, whether religious or secular, which reflect a Stage 6 understanding of morality based upon reason. For example, as discussed at § 8.4.1 nn.72-76, slavery was supported by the traditional view of Aristotle, the traditional view of the Catholic Church, and the traditional view of many Protestant denominations in pre-Civil War America, particularly in the South, as reflected in the quotes of Jefferson Davis and Reverend Furman, cited at § 25.1 n.4. As noted at § 8.4.1 n.77-80, the progressive ideology of the Enlightenment tradition, coupled with the progressive views of “radical dissenting Protestantism,” supported the abolitionist movement.

The debate over slavery was thus not a religious versus secular debate, but was a debate among various traditional views upholding the long-standing practice of slavery versus progressive views rejecting the morality of slavery. The traditional religious view, of course, focused on the many passages in the Bible which refer without unfavorable comment to the then-existing historical practice of slavery. The progressive interpretation of the Bible focused on the general statements of Jesus and St. Paul concerning love, the equality of all persons, and the reasoned logic of the Golden Rule of treating one’s fellow human as one expects to be treated by others. As phrased in Galatians 3:28, “There is neither Jew nor Greek, there is neither bond nor free, there is neither male nor female: for ye are all one in Jesus Christ.”

The same dynamic applied during the 20th century to the issues of segregation and bans on interracial marriage. The traditional view supported such institutions based on a traditional reading of the Bible, as reflected in the state court opinion in Loving v. Virginia, which stated, “Almighty God created the races white, black, yellow, malay, and red, and he placed them on separate continents. And but for the interference with his arrangement there would be no cause for such marriages. The fact that he separated the races shows that he did not intend for the races to mix.” The progressive Enlightenment view, as well as the progressive Christian view, rejected this justification for racial discrimination as immoral. From the progressive Enlightenment viewpoint, long-standing tradition

3 388 U.S. 1, 3 (1967) (quoting the state trial judge opinion in Loving).
does not make a particular practice moral that denies individuals their “unalienable rights [to] life, liberty, and the pursuit of happiness.” As Justice Kennedy noted in *Lawrence v. Texas*, quoting Justice Stevens’ dissent in *Bowers v. Hardwick*, “[T]he fact that a governing majority in a State has traditionally viewed a particular practice as immoral is not a sufficient reason for upholding a law prohibiting the practice; neither history nor tradition could save a law prohibiting miscegenation from constitutional attack.” From the progressive Christian viewpoint, the Galatians passage that we are “all one in Jesus Christ” also makes such racial discrimination immoral.

Many examples of the same dynamic throughout world history can be given. For example, the traditional Christian view opposed Galileo’s contention that the earth moved around the sun. The Enlightenment faith in science, and the modern Christian view, accept Galileo’s scientific findings as accurate. Passages in the Bible regarding the earth not moving and the sun revolving around the earth are viewed from the modern perspective as mere reference to certain historical views existing in the ancient world that are not authoritative.

In each of these cases, even those who originally held the traditional view have come to acknowledge that the progressive view is just. On these issues, no major religious or secular tradition today attempts to defend the concrete Stage 3 or 4 practices of the past supporting slavery, or segregation, or anti-miscegenation laws, or opposition to the cosmology of Copernicus, Galileo, and Newton. On the other hand, on some issues, like the ordination of women, there is still a split among major religious traditions, with the Catholic Church still clinging to the historical refusal to ordain women, while Protestant religions have long-since moved to the progressive view of Galatians that “there is neither male nor female: for ye are all one in Jesus Christ,” which supports the ordination of women. The Catholic Church has sometimes used the concrete fact that all of the 12 disciples were men to support the refusal to ordain women. But the fact is that all the disciples were of Middle Eastern descent, and yet that has never stopped there being priests of other ethnicities. Further, both race and gender were stated by Christ to be irrelevant, since “there is neither Jew nor Greek, there is neither bond nor free, there is neither male nor female: for ye are all one in Jesus Christ.”

In general, the secular tradition of the Enlightenment seems predisposed to adopt the progressive view on most moral issues. The Enlightenment view is based on faith in man’s progress through reason. Thus, persons approaching natural law from the Enlightenment tradition are typically more willing to discard concrete practices of Stage 3 or 4 societies in favor of principles derived directly from reason at Stage 6. Religious traditions tend to be more predisposed to rely on tradition. This is particularly true for religions with a greater centralized bureaucracy, like the Catholic Church. Thus, it is not surprising that the Catholic Church would cling longer to historical practices like the refusal to ordain women, or the celibacy of priests, than Protestant traditions.

However, as the examples of slavery, segregation, and anti-miscegenation laws indicate, religious natural law is not synonymous with tradition. The pervasiveness of anti-Semitism among traditional Christian doctrine, but its rejection today, is another such example. On each of these issues, there

---

is a progressive Stage 6 interpretation of the Bible based on reasoning from the general precepts in the Bible regarding love, the Golden Rule, and the Galatians precept that “we are all one in Jesus Christ,” which transcends the reliance on either (1) the concrete customs of the past, the Stage 3 interpretation of the Bible, or (2) a formalist reading of the literal passages in the Bible, a Stage 4 interpretation of the Bible. Contemporary debates on social issues are therefore best understood as debates among Stage 3 and 4 moral reasoning traditions versus progressive Stage 6 moral ideals, rather than a debate between religious versus secular perspectives. However, secular perspectives tend to be more predisposed to embrace the Stage 6 moral ideals based on rational thought. In the fullness of time, however, most religious traditions also end up embracing Stage 6 ideology.

As suggested by the discussion above, and elaborated in § 16.2, two main reasons account for the differences between many traditional versus progressive moral ideals. The first reason is an inadequate understanding and embrace of scientific truths, like the Catholic Church’s original demand that Galileo recant his scientific findings. The second reason is the failure of individuals at Stages 3 and 4, which are based on concrete operational thought, to take fully into account other individual’s different perspectives, as can be done by formal operational thought’s more advanced abstract reasoning skills, as discussed at § 15.3 nn.37-46. Because of this, individuals at Stage 3 take the perspective of their local community, which may be predominantly one race, one religion, or dominated in terms of societal power structures by one sex, typically the male. From that perspective, racial, or religious, or gender discrimination against less powerful groups in society may follow naturally. If such discrimination is held in enough communities, it may become part of the Stage 4 moral beliefs of the nation state. For persons at Stage 6, however, who take other person’s perspectives fully into account, such racial, or religious, or gender discrimination is always immoral.

As discussed at § 16.2, these differences between Stages 3 and 4, and Stage 6, have played out on at least 10 different issues over the last 600 years. Organized by whether the predominant flaw in Stage 3 or 4 reasoning was an inadequate embrace of scientific truth, or a failure to see things fully from another’s perspective, and numbered in order from the earliest issue when the Stage 6 value became mainstream, to latter issues where the Stage 6 value is just emerging, these ten issues are:

<table>
<thead>
<tr>
<th>Inadequate Embrace of Scientific Truths</th>
<th>Don’t See Things From Other’s Perspectives</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1) Galileo v. Recantation</td>
<td>(4) Slavery/Apartheid</td>

<tr>
<td>(9) Existence/Creation of “Human Soul” Birth Control Stem-Cell Research Abortion</td>
<td></td>
</tr>
<tr>
<td>(10) Sexual Orientation v. Preference &amp; Anti-Gay Rights</td>
<td></td>
</tr>
</tbody>
</table>

Of course, for many of these issues, both reasons combined to some extent to justify the discrimination. For example, inadequate understanding of racial genetics helped support the view that slavery against African-Americans was moral, based on the view of their genetic inferiority. Predominantly, though, slavery was based on a failure to view the status of enslaved African-
Americans from the same perspective as the status of free whites. The Stage 6 response to this, seeing things from the other person’s perspective in addition to one’s own, was Abraham Lincoln’s famous oft-quoted observation, “As I would not be a slave, so I would not be a master.”

Similarly, part of the discrimination against persons based on sexual orientation is a product of the majority of straight persons in any community failing to take into account, and see things from, the perspective of gay persons. Historically, the predominant justification for the discrimination, however, seems to have been an inadequate scientific understanding that being gay is predominantly the product of a naturally occurring genetic variation, like being left-handed or right-handed, rather than an abnormal sexual preference lifestyle choice. Aspects of this are discussed at § 16.2.4.

On balance, on all 10 of these issues, Western European societies and Canada, with their more educated populace, have moved, or are in the process of moving, to the Stage 6 perspective on these issues. Even with respect to gay rights, all of these countries allow gays to serve openly in the military, and the Netherlands, Belgium, Spain, and Canada have officially adopted gay marriage statutes, with other Western European countries having some extensive form of civil unions. Societies with much weaker educational systems, and thus a greater percentage of individuals at less advanced stages of moral reasoning, like in Africa and the Middle East, still reflect traditional attitudes on many of these issues, including limited rights for women; religious discrimination, including anti-Semitism; and pervasive discrimination based upon sexual orientation. As discussed with respect to America at § 16.3 nn. 79-80, the “Blue States” are closer to the Western European and Canadian model on all these issues; the “Midwest, Plains, and Western Red States” are next in line; and the “Deep South Red States,” have usually had to be brought along. This has occurred either by the Civil War, with respect to slavery, or by Supreme Court decisions since 1954, with respect to segregation; anti-miscegenation laws; more equal rights for women, which were blocked when the “Deep South Red States” refused in mass to ratify the Equal Rights Amendment during the 1970s; abortion rights; and, increasingly, issues of equal civil rights for gays and lesbians.

The recent example of Spain and the issue of gay marriage helps make it clear that these issues are best conceived not as religious versus secular debates, but rather traditional Stage 3 and 4 views versus Stage 6 views. Spain is one of the most Catholic nations on earth, and most Spaniards are devout Catholics. Nevertheless, the majority of Spaniards now support equal rights for gays to marry based on giving gay persons “equal concern and respect” and not treating them as “second-class citizens.” As discussed at §§ 16.2.1-16.2.2, that is exactly the basic moral premise underlying Stage 6 moral reasoning. This decision does not make Spaniards any less religious. It just means that like rejecting the traditional Catholic doctrine that supported slavery during the Middle Ages, or called for Galileo’s recantation, or was pervasively anti-Semitic, or limits birth control options and use of contraceptives even today, the majority of Spaniards have moved to a more progressive understanding of religion and the message of Christ. While over the last 600 years Popes have brought the Catholic Church into the progressive era on slavery, and Galileo, and anti-Semitism, they have not yet done that on theories of evolution versus intelligent design, or birth control, stem-cell research, and abortion, as discussed at § 16.2.3, or the issue of gay rights, discussed at § 16.2.4.

§ 16.2 The Form or Shape of Emerging Stage 6 Moral Reasoning: “Equal Concern and Respect” or “Love of Neighbor as Oneself”

§ 16.2.1 The Philosophic Base of Stage 6 Natural Law Reasoning

The question of the morality of “egotism” or “self-interest” is, of course, central to moral discourse. Some moral philosophers have taken the position that egotism or self-interest is rational, and have built their moral systems on self-interest. Thomas Hobbes in the 17th century,6 Friedrich Nietzsche in the 19th century,7 and Robert Nozick in the 20th century,8 are examples of this. Most moral philosophers, however, reject this view. By various ways, or “prisms” as they can be called, these philosophers banish egocentrism from their account of proper moral reason.

For example, the Scottish Enlightenment philosophers in the 18th century, like David Hume, Frances Hutcheson, and Adam Smith, rejected Hobbes’ rational self-interest in favor of “moral sense” reasoning.9 As Adam Smith stated in The Theory of Moral Sentiments,10 an individual ought to act like an “impartial spectator,” giving equal weight to others’ interests as well as one’s own. This is a version of the basic biblical principle of “love of neighbor as oneself.” Adam Smith stated:

In the same manner, to the selfish and original passions of human nature, the loss or gain of a very small interest of our own, appears to be of vastly more importance . . . than the greatest concern of another with whom we have no particular connection. . . . Before we can make any proper comparison of those opposite interests, we must change our position. We must view him, neither from our own place nor yet from his, but from the place and with the eyes of a third

---

6 See 1 Encyclopedia of Ethics 546 (Becker & Becker eds. 1992) (“[Hobbes’] argument is concerned to persuade people to institute and maintain a sovereign. Given Hobbes’ psychological theory, people will do this only if they believe it is in their self-interest. Hence, self-interest is all that can yield obedience to the laws of nature and political obedience to the sovereign.”), discussing Thomas Hobbes, Leviathan (1651).

7 See 2 Encyclopedia of Ethics 906 (Becker & Becker eds. 1992) (“The morality of an abundant, creative, and egoistic power that Nietzsche describes as the origin of human evolution ultimately becomes the norm of his own ethics.”), discussing Friedrich Nietzsche, Beyond Good and Evil (1886).

8 Robert Nozick, Anarchy, State & Utopia 302 (1974) (“The model is designed to let you choose what you will, with the sole constraint being that others may do the same for themselves and refuse to stay in the world you have imagined.”).

9 See, e.g., Garry Wills, Inventing America: Jefferson’s Declaration of Independence 193-201 (1978), discussing, inter alia, David Hume, An Inquiry Concerning the Human Understanding (1748); David Hume, An Inquiry Concerning the Principles of Morals (1751); Adam Smith, The Theory of Moral Sentiments (1759).

person who has no particular connection with either, and who judges impartially between us. 

When the happiness or misery of others depends in any respect upon our conduct, we dare not, as self-love might suggest to us, prefer the interest of one to that of many. The man within immediately calls to us, that we value ourselves too much and other people too little, and that by doing so we render ourselves the proper object of contempt and indignation of our brethren.11

Immanuel Kant’s view that reason compels an individual “to act only in accordance with a principle that one could will to be a universal law” and for everyone “to treat others always as end-in-themselves, and not as a means to your ends” also rejects egotism, and thus is in direct contrast to Nietzsche’s egocentricism.12 Likewise, John Rawls’ principle that justice derives from individuals agreeing upon rules from “an original position” where no individual will be favored rejects Nozick’s egocentric approach.13 A similar such enterprise is John Finnis’ account of basic human goods, like knowledge and friendship, leading to a rejection of egotism in favor of loving one’s neighbor as oneself as part of “integral human fulfillment.” 14 Ronald Dworkin’s principle of “equal concern and respect” for others, based upon Dworkin’s view of the best interpretation of the existing moral principles of Western industrialized societies, represents a similar rejection of egocentric thought.15

The problem with all of the above accounts occurs when the authors do not stop their moral reasoning with the basic principle upon which they all agree – the principle of “love of neighbor as oneself,” that is, give “equal concern and respect” to others by behaving like an “impartial spectator.” Instead, the authors filter through whichever prism they have constructed for affirming this central moral principle a host of other moral dilemmas from which they derive a host of collateral moral principles unrelated to “love of neighbor as oneself.” Because each prism filters these other problems differently, the authors disagree on these other dilemmas. Each author then attempts to convince the reader that the author’s prism is the right one, relying in part on the fact that the author’s prism handled in an intuitively attractive way the rejection of egocentric self-interest.

12 See 1 Encyclopedia of Ethics 666 (Becker & Becker eds. 1992) (“This yields the first formulation of Kant’s categorical imperative, the Formula of Universal Law: ‘Act only on a maxim which you can at the same time will to be a universal law. . . .This leads Kant to a new formulation of the categorical imperative: ‘Act always so that you treat humanity, in your own person or another, never merely as a means but also at the same time as an end in itself.’”), discussing Immanuel Kant, Groundwork of the Metaphysics of Morals (1785); Immanuel Kant, Critique of Pure Reason (1788)).

14 See generally John Finnis, Natural Law and Natural Rights 59-99 (1980).

15 Ronald Dworkin, Taking Rights Seriously 272-73 (1977) (“Government must not only treat people with concern and respect, but with equal concern and respect.”).
For example, because Dworkin derives his principle of “equal concern and respect” from “the best justification available for the doctrines and devices of law as a whole,” he is logically committed to affirming certain doctrines that are part of that “best justification” that may not be compatible with the generic principle of equal concern and respect. To this extent, Dworkin’s ultimate justification of moral norms is dependent, in part, on the Stage 3 and 4 concrete practices still reflected in existing doctrine, which is why his approach is ultimately a version of political natural law, based on existing political and legal doctrine, not a pure ethical natural law theory, as discussed at § 13.1 n.38.

John Rawls derives his rejection of egocentric self-interest from placing self-interested parties in a hypothetical “original position” and then derives from this a “difference principle” that allows social and economic inequalities only when they benefit the least advantaged individual in society. This “difference principle” is a product of the hypothetical “original position.” Without regard to whether the “difference principle” is rationally derivable from the reasoning of self-interested parties in an “original position,” neither the difference principle nor the original position have anything to do with straightforward moral reasoning about the non-egotistic practice of giving other individuals equal concern and respect.

In like manner, John Finnis’ prism involves postulating seven basic human goods and nine aspects of “practical reasonableness” by which to balance these goods. This postulating of goods, however, is the product of Finnis’ intuitions about what would seem reasonable to him and others, and is not based on any rational derivation from first principles. At the end of the day, his seven basic goods do not embody a straightforward rational analysis about the non-egotistic practice of giving other individuals equal concern and respect.

Similarly, Kant’s principle of “universalizability,” that is, self-interested parties should act “only in accordance with a principle that one could will to be a universal law,” is an artificial device that is not synonymous with a straightforward analysis of non-egotistic thought. Indeed, as Philosopher R.M. Hare noted, the principle of “universalizability” is as consistent with an act utilitarian or rule utilitarian moral philosophy as it is with Kantian moral philosophy.

16 Ronald Dworkin, Law’s Empire 400 (1986) (“The actual, present law, for Hercules, consists in the principles that provide the best justification available for the doctrines and devices of law as a whole.”).

§ 16.2.2  The Enlightenment Form or Shape of Stage 6 Natural Law Reasoning

Two things need to be said about all the previous attempts discussed in § 16.2.1 at trying to provide non-egocentric principles of moral judgment. First, given our contemporary understanding of modern physics, no prism is necessary to affirm the central principle that rational behavior is not self-centered, but must conform to the logic of the “impartial spectator.” Reason, or rational thought, is that thought which conforms to physical reality. For example, it is rational to believe that 2 + 2 = 4 because that is what physical reality confirms. Unlike a Newtonian understanding of physics, where self-centered measurement and reflection was thought to be adequate to comprehend accurately physical reality, in an Einsteinian universe of relativity, it is necessary to give equal concern and respect to others’ frames of reference in addition to one’s own in order to give an adequate account of the physical universe. To be rational in an Einsteinian universe, therefore, requires rejection of an egotistic preference for one’s own frame of reference.21

Children, who do not have the cognitive abilities yet to see things from others’ frames of reference, as indicated at § 15.3 nn.26-36, naturally cannot internalize this principle on their own. Moral philosophers during the 17th-19th century Age of Enlightenment, operating in a Newtonian world, also typically began their analysis with the initial assumption that rational thought was self-interested. They then either affirmed that assumption as a principle of morality, like Hobbes and Nietzsche, or created a prism to alter that principle. This was done either by rejecting pure reason as a moral guide, like the moral sense philosophers of the Scottish Enlightenment, or altering an understanding of pure reason, like Immanuel Kant’s principle of reason willing only that which can be made a universal law. Today, however, given an Einsteinian understanding of rationality, no prism is necessary to affirm the central principle that rational thought is not self-interested.

This principle, that rational thought is non-egocentric, combined with the assertion that moral thought should be rational, supports as moral the foundational principle of most moral traditions: the principle of love of neighbor as oneself, or equal concern and respect for others, or behave according to the logic of the impartial spectator. Moral conclusions directly derivable from this principle are also rational. These include such widely-shared principles such as not taking innocent life, respecting other persons’ bodily integrity and personal property, and not lying to other people for one’s personal gain. More generally, love of neighbor as oneself supports “liberty” of the individual self, but “equality” toward others, and thus “fraternity” with them, the phrasing used during the French Revolution. This view naturally rejects the Stage 2 concept of self-interested “possessive individualism,” as well as the opposite extreme of self-sacrifice or “altruism.” Such pure “altruism” is analytically supported only by the conflation of individual self and others that occurs at early Stage 1. That conflation is discussed at § 15.3 nn.26-27. Instead, Stage 6 supports the impartial spectator’s view of equal concern and respect for both oneself (and thus not self-sacrifice) and others (and thus not possessive individualism).22 In modern terminology, this view supports “five faces of freedom” defined as “self-individuating liberalism” of personal development

21 This point is developed in R. Randall Kelso, Godel, Escher, Bach: More Darkness or Day for Night, 1981 Wis. L. Rev. 822, 847-52 (1981).

22 On this point regarding “possessive individualism” and “altruism,” see id. at 852-55.
and expression, combined with “homeostatic communitarian ideals” of similar rights to development and expression in others, combined with “positive” freedoms to take part equally in government and “negative” freedom from unwarranted government restraint, and a “progressive” agenda.\(^{23}\) For a Stage 6 thinker, these “positive” and “negative” freedoms are not rights in and of themselves, and thus in conflict with the other aspects of freedom, as they might be if used unrestrained for one’s self-interested gains. Those freedoms are instead derivative of equal concern and respect, and thus must be used consistent with equal concern and respect, a view with roots in a Madisonian concept of democracy grounded in the civic republican tradition.\(^{24}\) This view that all these “freedoms” are consistent with one another is similar to the observation made by Pope John Paul II, discussed at § 16.2.3 n.37, that the commandments in the second half of the Decalogue (Commandments 6 -10) are not independent, but merely more detailed elaboration of the principle of love of neighbor as oneself.

It is important to note that this derivation of moral principles from “reason” alone is different than traditional natural law theories that tried to derive moral principles based on an understanding of the “nature of human beings and the world in which they live.”\(^{25}\) Focus on such a supposed “concrete human nature” is predictable for Stage 3 natural law based on “concrete operational thought.” However, a Stage 6 focus on reason will be based on the demands of rational thought alone, and will understand that while reality, and thus rational thought, is the same for all individuals, there is not a fixed “human nature” applicable to all individuals equally given each individual’s unique combination of DNA. Further, while one could try to develop a theory of “adult” human nature based on Piaget’s adult “formal operational thought” that would reign in self-centered desires of childhood, and one of the authors of this book tried just that more than twenty years ago,\(^{26}\) the better approach is to derive rational moral principles directly from reason, rather than trying to argue there is an “adult” human nature that is rational and that should trump irrational emotions and desires. There is no fixed “human nature,” and even if there were, an attempt to isolate aspects of that nature and argue that certain aspects, like advanced cognitive thought, are more “human” than other aspects, like baser emotions or desires, is not ultimately capable of rational justification.

The second point to be made about the attempts discussed in § 16.2.1 at providing non-egocentric principles of morality is the related to this point. To be persuasive in the unnecessary resort to some moral prism in order to banish egotism from rational thought, the philosopher has to defend why that philosopher’s particular prism, though going beyond the rational principle of love of neighbor as oneself, is nonetheless valid. Despite much energy devoted to this problem over centuries of

philosophy, this also cannot be done. An example may help make the point. In ancient times, much
energy was given to the problem of “squaring the circle.” This meant finding a way mathematically,
using fractional algebra, to construct a square, the area of which is equal to the area of a given circle.
Eventually it was shown that there could be no solution to this problem, since the area inside a circle
was a multiple of “pi,” which is an irrational number not capable of fractional representation.27

In the 20th century, Godel’s Theorem has provided the corresponding mathematical proof of the
impossibility of rationally justifying any particular moral prism. Godel’s Theorem proves that no
system of propositions can prove the validity of its own starting premises. Thus, no system of
“moral oughts” can be proven valid based upon other “moral oughts,” since those “moral oughts”
are not a priori valid either. Godel’s Theorem thus confirms that there is no way to make a
“category” jump from an “is” to an “ought,” because that violates the internal logic of the system,
and there are no a priori “oughts” on which to base other “oughts” either. Therefore, despite
elaborate attempts at appealing to “reason” or to “widely-held moral intuitions,” no philosophical
prism is ultimately capable of analytic defense. In short, Hume’s insight from two centuries ago that
there is no way to bridge the gap between “is” and “ought” is confirmed by Godel’s Theorem.28

Despite the view of some to the contrary, Godel’s Theorem does not prove that agreements on what
thought is rational is impossible. It is possible to determine the contours of rational thought, that is,
thought which conforms to physical reality, once an assumption is made that reality exists and
life is not a Kafkaesque dream. Godel’s Theorem does caution, however, that it is impossible to
prove that rational thought is moral. The most one can say is that any moral system different than
the one imposed by rational thought is necessarily irrational. Further, because of Godel’s Theorem,
the only moral system that rationally can be shown to transcend individual preferences, and thus
which can serve as a basis for all persons to agree through informed dialogue, rather than through
force (either military force, psychological conditioning, or social pressure), is the morality of
rational thought.29

In sum, one can say that a rational person would follow the principle of love of neighbor as oneself,
but that any other moral principles not rationally derivable from this principle are not capable of
rational defense. They represent only individual preferences or desires that each individual should
feel free to adopt or not, as long as those principles do not conflict with the principle of love of
neighbor as oneself. This view thus mandates tolerance of other individuals’ practices to the extent

28 See Kelso, supra note 21, at 832 (“What Godel’s theorem cautions is that it is impossible to
choose between functions which go from the level of physical existence [”is”] to the level of self-
referential, metaphysical statement [”ought”].); R. M. Hare, Moral Thinking: Its Levels, Method and
Point 16 (1981) (“Hume’s Law ( ‘ No “ought” from an “is”’), discussing David Hume, A Treatise
on Human Nature (1739). For two entertaining descriptions of this problem, see Louis M. Seidman,
This Essay is Brilliant/This Essay is Stupid: Positive and Negative Self-Reference in Constitutional
Practice and Theory, 46 UCLA L. Rev. 501, 502-06, 538-75 (1998); Arthur Leff, Unspeakable

29 See generally Kelso, supra note 21, at 831-34.
they do not violate the principle of love of neighbor as oneself, but intolerance of individuals who violate this principle by attempting to impose their non-rationally based moral prisms on others. This is similar to Einstein’s theory of relativity, which states as a non-negotiable, absolute truth that one must give equal concern and respect to others’ frames of reference in addition to one’s own to give an adequate account of the physical universe. European countries, therefore, like England, France, Denmark, or the Netherlands, that are moving to express intolerance toward individuals who wish to impose their non-rationally based religious views on others, reflect this Stage 6 insight.

Several examples may help make all of this analysis more concrete. Some members of the Jewish religion feel very strongly in the morality of maintaining a kosher diet. Maintaining a kosher diet is part of their religious tradition – their moral prism – by which they get to the principle of love of neighbor as oneself. Because maintaining a kosher diet does not seem to be plausibly connected to the principle of love of neighbor as oneself, that principle is merely a collateral moral principle of the Jewish prism that other individuals should feel free to accept or reject. Such preference is perfectly fine so long as no attempt is made to impose that principle of a kosher diet on others.

While this example may seem self-evident, a possibly more controversial, but analytically equivalent, example would be the attempt of some individuals to impose on other individuals what is kosher in matters of sexuality. Of course, some coercive sexual practices, like other forms of coercive behavior, will violate the principle of equal concern and respect and loving one’s neighbor as oneself. Some kinds of exploitative sexual practices, even if not directly coercive, would violate this principle as well. Such practices should not be tolerated. However, despite this observation, there are a wide range of sexual practices between competent consenting adults, both heterosexual and homosexual, that do not appear to violate the principle of equal concern and respect.

John Finnis’ prism, as well the prisms of many religious traditions, through which they get to the principle of love of neighbor as oneself, make immoral some of these practices. For example, Finnis has concluded that homosexual acts “on a moral analysis are always objectively wrong, like other essentially masturbatory acts” because in his view of morality a sense of “equal worth and human dignity” requires outlawing such conduct “on the ground that it expresses a serious misconception of, and actually degrades, human worth and dignity, and thus degrades their own personal worth and dignity.” Finnis’ argument, however, has been rightly criticized as being based not on a principled extension of equal concern and respect for others, but as reflecting traditionally held biases implicit in Finnis’ account of basic human goods. To the extent that individuals succeed in imposing on others these collateral biases of their moral prisms, they are not acting in a rationally justifiable manner, and, from the perspective of reason, are not advancing the common good of society.

Of course, some persons, and some religious traditions, argue against homosexuality, or masturbation, or the use of contraceptives, based on the belief that the “purpose” of sexual activity

---

is procreation. Thus, any sexual activity that does not carry the possibility of procreation is immoral. Unless such reasoning can be plausibly derived from the rational principle of equal concern and respect, such a view would be just another prism of collateral moral beliefs that individuals should feel free to adopt or not. It is unclear what that plausible rational derivation would be. “Activities” do not have “purposes.” Only people have purposes that people, themselves, define. If any particular individual’s collateral moral belief is that sexual activity should only be for procreation, that would be fine for that individual, but that view should not be imposed on others. This is true even if that collateral moral belief is embedded in a moral theory or religious doctrine whose foundational principle is the rational principle of love of neighbor as oneself.

With respect to this point, it is true that Aristotle’s view was that objects, in addition to people, have purposes. Through acceptance of this Aristotelian notion in St. Thomas Aquinas’ natural law theory, this view still forms part of much modern Catholic natural law today. Aristotle’s famous example of his thesis on objects was that “an acorn” has a purpose “to grow into an oak tree.” Aristotle stated this as part of his thesis that every phenomena can be understood in light of his four causes, including a final cause, or purpose. For Aristotle, “in the case of non-human nature, the final cause of things is simply its formal cause (that is, its shape, or substance, or essence).” In contrast, human beings “exercise a different kind of final causation that is directed to purposes beyond their own form or shape.” As applied to the actions of individuals, Aristotle is right that individuals do have purposes for which they act. However, from the perspective of science, “acorns,” being non-conscious entities, do not have purposes. Although some “acorns” will grow into “oaks” under the regular order of events, it represents an anthropomorphic fallacy to state that they have a purpose to do so. Pathetic or anthropomorphic fallacy has been defined as “[i]ncorrectly projecting (attributing) human emotions, feeling, intentions, thoughts, traits upon events or objects which do not possess the capacity for such qualities.” Aristotle is wrong in concluding that the two kinds of causation, conscious and non-conscious, are similar and that events or objects have purposes.

Regarding the procreative purpose that conscious individuals may attribute to sexual activity some of the time – as opposed to the irrational view that the non-conscious activity itself has some purpose – it is nevertheless true that sometimes, between consenting adults, the purpose of sexual activity may not be procreative, but may be merely to exercise an inalienable right to “life, liberty, and the pursuit of happiness.” From the perspective of Stage 6 thought, there is nothing immoral about that, because that activity does not appear to deny either party equal concern and respect. The fact that some persons, based on Stage 3 or 4 moral reasoning, may disagree with this analysis because of their customary or traditional views, does not affect this conclusion from a Stage 6 perspective.

§ 16.2.3 The Religious Form or Shape of Stage 6 Natural Law Reasoning

As with secular natural law traditions, religious understanding of moral principles can also been seen to reflect Kohlberg’s various stages of moral reasoning. Thus, there is a Stage 1 child-like

32 Brian Cubbage, Aristotle 2 (www.personal.psu.edu/users/n/b/nbc104/HSAAITIA.html).

understanding of the Bible as God the Father to be obediently followed or else one will be punished. There is a Stage 2 period where some authority figure, like the Pope, similar to the Emperor or King for secular society under the Stage 2 “divine right of Kings,” is viewed as the authoritative interpreter of the Bible. There is the Stage 3 period of the Reformation where interpretations of the community of the faithful, such as in the Baptist, Anabaptists, and others denominations, become more critical, rather than blind adherence to papal interpretations. Many of these denominations end up adopting very literal, or formalist, interpretations of the Bible, which conforms to a Stage 4 interpretation. The spirit of fuller participation by the community of the faithful represented by Vatican II during the 1960s is best viewed as related to procedurally-focused Stage 5. Pope John Paul II’s emphasis on deriving religious principles from reason and truth in his 1993 encyclical *Veritatis Splendor* (The Splendor of Truth) represents a Stage 6 version of biblical interpretation.

Two points are important to note from *Veritatis Splendor*. The first point, as Pope John Paul II stated, is that the Christian natural law tradition is concerned with truth and reason, as is the Enlightenment tradition.34 It is for this reason that John Paul II supported a reconciliation between faith and reason, including drafting an apology for the Church’s forced recantation of Galileo’s scientific insights, and indicating his belief that evolution is “more than just a hypothesis.”35 Pope Gregory XVI has continued papal emphasis on the value of a faith in God built on reason.

With respect to the particular issue of Darwinian evolution, Pope John Paul II’s views supported Catholic schools teaching Darwinian evolution as part of their science curriculum. In contrast, Pope Gregory XVI has supported an influential cardinal, Christoph Schonborn, questioning the accuracy of the Darwinian explanation of evolution, and supporting an alternative view, typically called Intelligent Design. Cardinal Schonbron wrote, “Evolution in the sense of common ancestry might be true, but evolution in the neo-Darwinian sense – an unguided, unplanned process of random variation and natural selection – is not. Any system of thought that denies or seeks to explain away the overwhelming evidence for design in biology is ideology, not science.”36 From a Stage 6 perspective, resolution of this issue should turn on whether in fact there is “overwhelming evidence for design in biology.” To that extent, the test proposed by Cardinal Schonborn is consistent with the Stage 6 view that science should be the ultimate determining guide. Contrary to the Cardinal’s assertions, however, from the perspective of science and reason, it is unclear there is any real evidence to support Intelligent Design, much less “overwhelming evidence.”

The second important point from *Veritatis Splendor* is the connection between the specific principles of morality stated in the Bible and the general moral command of “love of neighbor as oneself.” In *Veritatis Splendor*, Pope John Paul II stated:

---

[T]he commandments belonging to the so-called “second tablet” of the Decalogue, the summary and foundation of which is “the commandment of love of neighbor.” In these commandment[s] we find a precise expression of “the singular dignity of the human person,” “the only creature that God has wanted for its own sake.” The different commandments of the Decalogue are really only so many reflections on the one commandment about the good of the person, at the level of the many different goods which characterize his identity as a spiritual and bodily being in relationship with God.37

The view implicit in this passage is that one should understand biblical commandments based upon their consistency with being derivable from the background principle of “love of neighbor,” and not as independent principles separate from that concept. For example, during the Stage 3 period of American history, many religious Southerners resorted to text in the Bible to support the morality of the institution of slavery, as discussed at § 25.1 nn.3-6. To rebut such pro-slavery proponents’ citation of independent biblical passages alleged to condone slavery, the abolitionist movement emphasized Jesus’ and St. Paul’s general statements concerning “love of neighbor as oneself,” the equality of all persons, and the “Golden Rule” of treating one’s fellow human beings as one expects to be treated by others, that is, giving them equal concern and respect.

Such use of the Golden Rule rejected the stage 3 version of the Golden Rule, what Kohlberg called the “concrete Golden Rule,” as noted at § 15.2 nn.19-20, which is limited by the concrete beliefs of individuals at any one time. Under that view, persons might end up with different moral principles, since those principles would be dependent on the concrete variations in how different individuals might wish in fact to be treated by others, based on any egocentric desires or prejudices any individual may have that would affect how they would want to be treated in practice. Instead, the abolitionists adopted a Stage 6 understanding of deriving moral principles from an understanding of the logical implications of the principle of “equality of all persons” and “love of neighbor as oneself.” It is this derivation of moral principles from the basic principle of “love of neighbor as oneself” that is supported by Pope John Paul II in the passage from *Veritatis Splendor* quoted above. Under this derivation, all rational persons will agree on basic moral principles, since these principles are not dependent upon concrete variations in how different individuals might wish to be treated by others, including any egocentric desires any particular individual may have, but rather are based upon the logical implications of treating persons equally, logic being the same for all individuals.

When such a Stage 6 understanding of the Bible is placed alongside a Stage 6 understanding of the Enlightenment tradition, the disparities in moral judgment between the two should collapse, as both will reject the concretely, fixed prejudices of individuals in the past. At the end of the day, such a Stage 6 society will have the greatest toleration for individuals, both within and cross-community. Indeed, Stage 6 moral reasoning allows for little difference between the two kinds of toleration, since rights are based upon reason, not upon agreement within some group, as for Kohlberg’s moral reasoning Stages 3-5. Kohlberg’s moral reasoning Stages 3-5 all involve rules derived from group discussion: either the community of Stage 3, the rules of the system of Stage 4, or the social contract of Stage 5. Kohlberg’s Stage 6 differs, however, in that principles to which a rational person has become committed are universal principles of justice not dependent on any group.

This conclusion is a necessary corollary of the fact that these Stage 6 moral rights involve the equality of human rights and respect for the dignity of human beings as individuals, a dignity which no society, or community within society, should be permitted to infringe. Thus, customary or traditional practices that violate the dignity of human beings as individuals, such as slavery in colonial and pre-Civil War America, or female circumcision in some societies today, are inconsistent with Stage 6 moral reasoning, even if a society at Stage 3 would tolerate them as part of the customs of the community, or at Stage 4 if they are part of the rules of society, or at Stage 5 if part of the society’s social contract.

Some differences between traditional Christian doctrine and progressive Stage 6 doctrine reflect both these points from *Veritatis Splendor* regarding truth and deriving moral principles from the principle of “love of neighbor as oneself.” For example, during the Middle Ages, the traditional Christian doctrine was that charging interest on loaned money was immoral, based on the Aristotelian analysis that “money by its nature is barren.” From a modern perspective, this analysis is flawed, since there is a “time value” to having money for investment purposes that supports a reasonable interest rate being charged on money loaned.38 The flawed understanding was used during the Middle Ages to support anti-Semitism against Jews who charged interest rates on money loaned. In addition, during the Middle Ages, anti-Semitism was supported by reference to isolated passages in the Bible concerning the role of Jews in the death of Jesus, and the belief of Jews that Jesus is not the son of God. These customary and traditional anti-Semitic attitudes are contrary, of course, to the generic principle of “love of neighbor as oneself” as applied in a rational manner. Rational thought would not blame individual Jews today for actions taken 2000 years ago by Jews and Romans, nor would it blame Jews because their religious prism does not view Christ as the son of God, while the Catholic and Protestant religious prisms do view Christ in that way.

It is unquestionably true that individuals who view moral reasoning through the lens of Stage 3 customs of the community, or Stage 4 traditions of society, think it moral to impose on other individuals customary or traditional views, and think persons who do not share those views are immoral. While that view reflects adolescent peer group mentality, as discussed at § 15.3 n.40, that view does not reflect mature, adult Stage 6 reasoning. Merely because Jews are not the majority in most communities, and they have views different on some matters than the majority of Christians, or Moslems in predominantly Islamic societies, does not make their views immoral. As long as all individuals behave in a manner consistent with the principle of “love of neighbor as oneself,” any collateral view about the divinity of Christ, or any other matter, is not a matter of a moral imperative. Based on this more enlightened view regarding moral derivation of principles from “love of neighbor as oneself,” Pope John Paul II apologized in 1998 to Jews for the Catholic Church’s historic attitudes and centuries of discrimination against persons of the Jewish faith, including the Catholic Church’s less than vigorous role in opposing Nazi atrocities before and during the Holocaust.39

---

The difference between traditional Christian doctrine regarding birth control, stem-cell research, and abortion, and progressive Stage 6 doctrine, reflects the same dynamic at work. For example, on the issue of birth control, traditional Christian disapproval of birth control is based principally on the flawed Aristotelian analysis that “acts” have “purposes” and that the “purpose” of sexual activity is “procreation.” As discussed at § 16.2.2 nn.32-33, “acts” do not have “purposes”; people have “purposes” which people, themselves, define. Once that flawed Aristotelian analysis is rejected, there is nothing from the perspective of giving individuals equal concern and respect that prevents any individual from responsible use of birth control in the context of consensual, non-exploitative, non-coercive sexual relationships. Thus, from the perspective of Stage 6 reasoning, such views regarding birth control should no more be imposed on individuals who do not share those views than the view that it is moral to maintain a kosher diet should be imposed on individuals who do not share that view, as discussed at § 16.2.2 text following n.29. The parable of Onan in Genesis 38, who practiced coitus interruptus with his brother’s widow, provides no support for the immorality of masturbation or birth control in general, because his sin was refusal to follow ancient Jewish custom and provide an “heir” for his dead brother, a custom no major religious tradition supports today.

Of course, to the extent that some forms of “morning-after” birth control, or stem-cell research, or abortions rights are viewed as the destruction of individual human life, the Stage 6 principle of equal concern and respect for all individuals would counsel a very different approach, since individual human life would be at stake. For most forms of birth control, however, those considerations are inapposite. Customary or traditional attitudes sensibly do not view a woman’s unfertilized egg or a male’s sperm as individual human life. Thus, no major religious tradition requires women to try to get pregnant each month on the grounds that if the woman did not try to get pregnant, and merely permitted menstruation to occur, that is the purposeful destruction of human life, or, from the Christian tradition, violates a biblical command to “be fruitful and multiply.” Similarly, no major religious tradition requires men to try to implant every bit of their sperm before the life-span of that sperm dies. By the same reasoning, male vasectomies, or use of spermatoicide contraceptives, pose no moral issues in terms of the destruction of individual human life.

After conception takes place, however, an issue arises when a fertilized egg, and the developing embryo and fetus, deserves to be considered individual human life. From the perspective of scientific reason, that point would be when an individual actually exists, that is, the point of viability, roughly the 24th week of pregnancy today. Prior to viability, there is not biologically an individual to protect. There is only a potential individual, though a greater potentiality than in an unfertilized egg or sperm, and increasingly certain attributes of individuality as the pregnancy continues. At viability, however, the fetus becomes an independent life, since it is capable of meaningful life apart from its mother through natural or artificial support. Although some have argued to the contrary,40 the fact that the fetus contains a complete genetic set of human DNA is not critical, since all cells in any individual’s body contain DNA, and yet each cell does not have any individual right to exist. After viability, however, regulation of abortion is justified. As discussed at § 27.3.4.1 nn.249-52, where continuing pregnancy after viability would compromise the mother’s life or substantial health, a balance between the rights of the mother and fetus must be done.

For many individuals, however, the point at which individual human life deserves protection is when the “soul” enters the body. As noted in Roe v. Wade, the traditional doctrine of the Catholic Church until the 19th century was that the soul entered at the point of “quickening,” that is when the fetus first kicked, roughly at the 16th-18th week of pregnancy. Thus, abortions after that time were viewed as immoral. Once scientific understanding advanced to the point where “quickening” was no longer viewed as a critical point in fetal development, the modern Catholic and fundamentalist Protestant doctrine became that the soul enters at conception. Thus, any prevention of the fertilized egg from developing into a viable life, whether by use of a “morning-after” pill, or use of embryos for stem-cell research, or abortion, is viewed as the purposeful destruction of human life.

From the perspective of Stage 6 reasoning, there is no scientific evidence to support the claim that a “soul” exists in the religious sense, much less when the soul enters the body. From the perspective of reason, any point chosen is ultimately arbitrary. No passages in the Bible directly address this question either. Based on a Stage 6 commitment to reason, a Stage 6 religious approach would likely take the view, consistent with the secular view regarding individual life, that an “individual soul” enters the fetus once there is a fully-functioning “individual body” to enter, that is, at the point of viability, rather than entering at the stage of a 2-cell, or 4-cell, or 8-cell developing embryo.

Of course, from a Stage 6 perspective, it is always unfortunate if a women finds herself in a position of having an unwanted pregnancy. Ideally, through a combination of responsible sexual choices, including abstinence, where appropriate, and use of effective birth control methods, unwanted pregnancies would not occur. However, sometimes individuals are not always responsible, and other times birth control methods fail. And sometimes the pregnancy results from coercive or exploitative sexual practices, like rape or incest. In such situations, from a Stage 6 perspective, the individual should have the option, if the individual wishes, to have access to “morning-after” pills or an abortion prior to the development of individual human life at the point of viability.

From this Stage 6 perspective, the views of those who wish to impose on others their customary or traditional views on when the “soul” enters the fetus is not as much “pro-life,” as they view it, but rather “pro-slavery,” trying to “enslave” women against their will to continue pregnancies they do not want to continue by denying them choice regarding use of “morning-after” pills or abortions, or “enslave” persons with debilitating mental diseases from being freed from those conditions through the promise of stem-cell research. It is as offensive to Stage 6 reasoning as the other aspects of traditional Christian doctrine, which was used by similar groups of fundamentalists in American history – particularly “Deep South Red State” fundamentalists – to support slavery, segregation, anti-miscegenation laws, denial of equal rights for women, anti-Semitism, rejection of Darwinian evolution, and, as discussed next, denial of equal rights to gays and lesbians, at § 16.2.4.

§ 16.2.4 The Issue of Sexual Orientation as an Example of Stage 6 Reasoning from Both an Enlightenment and Religious Natural Law Perspective

One important example of the convergence of Enlightenment and religious natural law doctrine at Stage 6 involves the issue of gay rights. Like the issues of slavery, segregation, and anti-
miscegenation laws discussed at § 16.1, properly understood the debate regarding sexual orientation is not a debate between religious and secular moral traditions, but rather a debate among traditional and progressive views, both secular and religious. In every such debate during the 2000 years of Christendom, the progressive view has ultimately been viewed as just, even by those who originally held the traditional view. In each case, an important key to the triumph of the progressive view was the acknowledgment that the literal text of the Bible did not contain authoritative passages that spoke directly to the issue. This permitted a progressive interpretation of the Bible gradually to emerge that reinforced the progressive view held by most of those in the secular Enlightenment tradition.

This will likely be true for the issue of gay rights as well. Regarding the question of the literal text of the Bible, it is important to note that the individuals in ancient society had no awareness of sexual orientation. For them, the term “man” meant “heterosexual man,” since the ancients presumed that all individuals, no matter what their behavior, were heterosexual. It has been noted, “The Jewish and Christian scriptures say nothing whatsoever about homosexuality. Homosexuality and heterosexuality are modern concepts coined in German psychiatric practice in 1870. . . . [T]he concept of sexual orientation is totally absent in the ancient Mediterranean world.” Of course, the ancients were aware that some individuals engaged in homosexual acts. This typically occurred, however, as in ancient Greece, in the context of a married couple, with the husband also having homosexual relations with a younger boy, as with Socrates and Alcibiades, or a married woman, like the famous poet Sappho, of the island of Lesbos, enjoying the company of other women. The ancients viewed these acts, therefore, as aberrations from the individual’s usual pattern of heterosexual sexual activity. It was only in the late 19th century, following the beginnings of the modern science of genetics, that scientists began to understand that some individuals have a naturally occurring genetic predisposition towards same-sex sexual attraction.

43 See, e.g., Antares, Buggery & Skullduggery (www.kakiseni.com/articles/reviews/MDA1NQ) (“Socrates, himself, while married to Xantippe, had a passionate affair with an athletic and youthful male disciple named Alcibiades.”); Jennifer Goodall Powers, Ancient Weddings (www.ablemedia.com/ctcweb/consortium/ancientweddings12) (“Sappho encourages girls to look forward to marriage [but did not] necessarily suggest that the girls give up the love of other women, as shown in Sappho’s own ability as a married woman to write about her love for women.”).

44 See, e.g., Male Love in Ancient Greece (www.androphile.org/S/Culture/Greece) (“The term ‘homosexuality’ as it is used and understood today is not applicable to Greek antiquity . . . The Greek male was not only expected to marry and to raise children, but also to be available for friendship and love with worthy youths, not to the exclusion of marriage, but as its necessary complement . . . [P]assion and erotic love between two adult men . . . was generally considered unusual and held up to ridicule.”).

45 See, e.g., Homosexuality: Its Genetic Basis & Evolutionary Benefit 1 (www.danaanpress.com/alib/hsex) (“homosexuality is a product of genetics, . . . evidenced, among other things, in differences in brain structure and . . . responses to hormones.”).
Given these facts, it is clear that the Bible never addresses the morality of homosexuality as such, and could not, as the ancients had no concept of homosexuality to address. Because ancient linguistic use presumed that all “men” were “heterosexual,” biblical passages condemning homosexual acts by “men” can only properly be understood as being addressed to practices like the Greek practice of heterosexuals engaging in homosexual conduct. As has been stated, “No doubt Paul was unaware of the distinction between sexual orientation, over which one has apparently very little choice, and sexual behavior, over which one does. He seemed to assume that those who he condemns are heterosexual, and are acting contrary to nature, ‘leaving,’ ‘giving up,’ or ‘exchanging’ their regular sexual orientation. . . . Paul really thought that those whose behavior he condemned were ‘straight,’ and that they were behaving in ways that were unnatural to them.”

Such conduct may well be condemned by the Bible. Passages like those in Leviticus 18 which state that you shall not “have sexual relations with your kinsman’s wife” nor “lie with a male as with a woman,” underscore that the biblical passages were addressed to the morality of acts by men who “lied” with a woman, that is, heterosexuals. The most faithful reading of the Bible, thus, is that it does condemn homosexual acts when committed by heterosexuals, and well as condemning hedonism and exploitative sexual relationships, as in the parable of Sodom and Gomorrah, and condemning prostitution. Nothing in the Bible, however, explicitly addresses the morality of homosexual conduct by homosexuals.

Some commentators have gone farther to suggest that the Bible does not necessarily condemn any homosexual act done between consenting, adult partners in the context of loving, committed relationships, but only condemns homosexual acts done as part of prostitution, promiscuity, seducing children and other such acts. Contrary to this view, the position suggested here is that the most faithful reading of the Bible is that the Bible does condemn all homosexual acts between persons as they were understood to be by the Bible, that is, between heterosexuals, whether adult or children, consenting or not. Under this view, the Bible does condemn homosexual acts by the roughly 95% of the populace who are heterosexual. Thus, only with respect to the roughly 5% of the populace who are not heterosexual would current biblical understandings need to be changed.

Even though the Bible states nothing explicitly about homosexuals engaging in homosexual conduct, related biblical passages support the morality of homosexuals engaging in homosexual conduct in the context of loving, committed relationships. One of the 10 Commandments states that one “shall not bear false witness against thy neighbor.” Depending on whether one is Roman Catholic or

49 See generally Support for Gay and Lesbian Equality on the Rise, NGLTF Policy Institute Study Shows 1-2 (Dec. 6, 1999) (hereinafter NGLTF Policy Study) (noting that between 4-5% of the electorate indicated they were gay, lesbian, or bisexual in election exit polls in 1996 and 1998).
Protestant, this may be either the 8th or 9th Commandment. 50 The corollary to this proposition is the proposition that one shalt not lie. 51 Jesus told his disciples to live in “the spirit of truth.” 52 Applying this proposition to sexual conduct, it would be argued by those supporting gay rights that while heterosexuals should engage in heterosexual sexual conduct, homosexuals should remain true to their nature and engage in homosexual sexual conduct. Supporters of gay rights can argue that to encourage contrary behavior would be to encourage living a lie and not living in the spirit of truth.

A less controversial example, which makes the same point, involves the treatment of right-handedness and left-handedness. Just as the ancients had no accurate concept of sexual orientation, they had no accurate knowledge regarding right-handedness or left-handedness. For most of the 20th century, it has been recognized that being left-handed is merely a naturally occurring genetic variation to which no moral significance should attach. 53 To the ancients, however, the fact that less than 10% of the populace seemed to have a predisposition towards left-handedness meant that such individuals, being “not the norm,” were weak and sinister, and thus targets for discrimination.

For example, it has been noted that the word “left” comes from an Old English word meaning “weak” or “worthless,” and that our word “dextrous” comes from the Roman word “dexter,” which in turns meant “right.” The Roman word for “left” is “sinister.” Prejudices against left-handers abound, “for throughout history, lefties have been considered inferior. Centuries ago, the Catholic Church declared left-handed people to be servants of the Devil. For generations, left-handers who attended Catholic schools were forced to become right-handed.” 54 In paintings and other art work, the devil was typically shown as holding his scepter in his left-hand, while Popes were shown as being right-handed. The left side of anything “has long been considered a bad omen, unlucky, evil and dirty. Ancient tarot cards and pictures have often portrayed a left-handed Satan.” 55

50 See generally Ten Commandments (www.therain.org/studies/ten) (listing different biblical versions of the Ten Commandments).

51 See The Preacher’s Files, Lying Lips Are Abomination To The Lord (www.preachersfiles.com/sermon_outlines/sermonsund/lying); Psalms 101 (www.bju.edu/bible/pas/101) (“He that worketh deceit shall not dwell within my house: he that telleth lies shall not tarry in my sight.”).

52 See, e.g., Article 8 – The 8th Commandment (www.christusrex.org/www1/CDHN/eightnim) (“To follow Jesus is to live in ‘the Spirit of truth,’ whom the Father sends in his name and who leads ‘into all the truth.’ To his disciples Jesus teaches the unconditional love of truth: ‘Let what you say be simply ‘Yes or No.’”)

53 See, e.g., Parallels: A Comparison of Social Perceptions Toward Both Left-Handed and Homosexual People 8-9 (www.traceyourhand.org/cosmos/LGBTleft/left) (discussing, inter alia, the work of W. Franklin Jones, Ph.D., A Study of Handedness (1918)) (hereinafter, Parallels).

Other religious traditions also associated left-handedness with morally suspect behavior based on the fact that left-handedness is not the norm. For example, “Only a few decades ago in Japan, left-handedness in a wife was sufficient grounds for divorce. . . . In Arab nations, the right hand is used to touch parts of the body above the waist, while the left hand is used for below the naval. . . . Maori women weave ceremonial cloth with the right hand, because to use the left hand would profane and curse the cloth . . . . African tribes along the Niger river do not allow their women to prepare food with the left hand for fear of poisonous sorcery.”

While some of these views have sensible historical explanations, like the Islamic view that one should use one hand for touching above the waist and eating, while for hygienic reasons a different hand should be used for touching below the naval, particularly wiping oneself after using the restroom, which hand does which, right or left, is not a matter of moral choice. Many of these other views have no rational explanation and are based solely on the view that merely because most people are right-handed, left-handed acts are suspect.

Today, of course, no major Christian denomination holds that being left-handed is morally suspect. Even the practice in some public and Catholic schools in the first half of the 20th century of encouraging students to write right-handed, even if their natural tendency was to be left-handed, has fallen into non-use over the last 25 years. No serious biblical scholar today takes the view that the Bible, either explicitly or implicitly, holds that left-handed acts are immoral, whether writing, throwing, playing golf, tennis, bowling, or any other act. Indeed, in the 1992 Presidential election, all three major candidates, President George H.W. Bush, Governor Bill Clinton, and Ross Perot, were left-handed, and this did not provoke any religious consternation at all. Throughout history a number of “geniuses and icons” have been left-handed, including “Albert Einstein, . . . Issac Newton, Joan of Arc, Ben Franklin, Mark Twain, Julius Caesar, Napoleon and Henry Ford . . . . Of 42 American presidents, seven have been lefties.”

This is true despite the existence of some “language” and “metaphors” in the Bible that could be read to support right-handedness, such as where Jesus is reported to have said discussing charitable acts that one should “not let thy left hand know what thy right hand doeth,” or, regarding Judgment Day, that God “shall set the sheep on His right hand, but the goats on the left.” One author has noted, “One can see the similarities between the evolution of social attitudes towards left-handedness and homosexuality. . . . In each case, the initial set of doctors failed to find an exact cause, and . . . failed to prove anything conclusive. However, again in both cases, the respective doctors ultimately conceded that the condition is not a willful act, nor is it a mental disease, and that

the groups ought to be treated with respect and dignity, and ought not to be forced to ‘go the other way.’

An additional argument sometimes used to claim homosexuality is immoral is based on a version of Kant’s categorical imperative of “universalizability,” discussed at § 16.2.1 n.12, that individuals should “act only in accordance with a principle that one could will to be a universal law.” Under this argument, if everyone were consistently homosexual, that would be the end of the human race, and thus being homosexual must be immoral. Of course, if everyone were a man, or everyone were a woman, that would be the end of the human race also. So that argument proves nothing. In addition, as noted at § 16.2.1 n.20, Kant’s principle of universalizability is not the same as giving all individuals equal concern and respect, since the universalizability principle can be manipulated in different ways. Further, one could will as a universal law that everyone behave according to their own biological nature, and that would support the morality of gay rights anyway.

This conclusion regarding the morality of gays and lesbians engaging in homosexual relationships is independent, of course, of whether within the context of those relationships any particular gay or lesbian couple, or single gay or lesbian individual, would wish to take on the responsibilities of parenthood. Most human beings appear to have an inclination towards parenthood. Since the concept of homosexuality was unknown in the ancient world, it is not surprising that there are no explicit passages in the Bible dealing with the morality of homosexuals taking on parental responsibilities. Based on the general biblical imperatives of “love” and “the equality of all persons,” that desire to take on parental responsibility should not be denied to any human being.

Under this reasoning, homosexuals taking on parental responsibilities, either through temporary engagement in heterosexual activities, sperm donation, in vitro fertilization, or adoption, should be permitted, as long as that behavior is consistent with other moral principles, including concern for “the best interest of the child.” For most children, the best environment is to have loving parents, knowledgeable enough to challenge their developing intellects, with sufficient economic means to give them a rich environment in which to grow up. While some conservative groups have alleged that gays and lesbians cannot be good parents, and it cannot be in the best interest of the child to be raised in such a household, there is no sound evidence to support that assertion, and most mainstream organizations support gay adoptions and gay parentage for those gays wishing to be parents.

A number of Protestant denominations have already revised their understandings on the morality of homosexuals engaging in homosexual sexual activity, while other Protestant denominations are currently involved in a process of revisiting their views regarding the morality of loving, committed, homosexual relationships. The greater administrative inertia associated with the Catholic church

---

60 See, e.g., Parallels, supra note 53, at 10-11.

may mean that the Catholic church will be the last denomination to revise formally their doctrine regarding homosexuality, just as the Catholic church has lagged regarding their views on celibacy and the ordination of women. As this change comes about, from the religious natural law perspective, Jesus’ message of love and respect for all of God’s creations – whether man or women; white, black, brown, yellow, or red; right-handed, left-handed, or ambidextrous; straight, gay, bisexual, or transgendered; disabled or not – will be actualized better on earth. Even though the Catholic Church disagreed at the time, it is apparent today that Galileo was doing God’s work in the 17th century. Despite opposition from many Christians at the time, particularly in the South, it is apparent that the abolitionists in 19th-century America were doing God’s work in opposing slavery, as were the Lovings when they challenged Virginia’s anti-miscegenation law during the 1960s. By the same token, from a Stage 6 understanding of religious doctrine, supporters of gay rights are doing God’s work today.

In short, a Stage 6 understanding of this issue would adopt the view that Jesus supported the equal dignity of all human beings, and would not adopt the prejudice against homosexuals that is part of most societies’ earlier Stage 3 or Stage 4 reliance on concrete customs or traditions, or even Stage 5's embrace of participatory, pluralistic democracy. As noted at § 15.4.1 nn.77-81, under a Stage 6 moral vision, the protection of individual rights to liberty and equality are paramount. At Stage 6, a pluralistic democratic society is viewed not as an end-in-itself, as it is at Stage 5, but rather as the best means by which to ensure that society protects and advances the set of Stage 6 universal principles of justice. In short, the protection of liberty and equality for all individuals, and not necessarily any outcome of a democratic process, is what is critical.

This understanding of Stage 6 moral reasoning is consistent with the Stage 6 message of Pope John Paul II in *Veritatis Splendor*, discussed at § 16.2.3 nn.34-39. This is true even though on the particular issue of gay rights, like on the issues of birth control, stem-cell research, and abortion, John Paul II personally adopted a view based upon Stage 3 or Stage 4 reliance on concrete customs or traditions. This is similar to Thomas Jefferson’s view, discussed at § 6.2.3.2 n.94, that he was not prepared for women to be equal participants in public life, despite the message of Jefferson’s Declaration of Independence that proclaimed the equality of all individuals.

In this regard it is instructive to compare the majority and dissenting opinions in the 2003 Supreme Court decision in *Lawrence v. Texas*. Adopting a Stage 6 understanding of the term “liberty” in the 14th Amendment, Justice Kennedy wrote for the majority, “These references show an emerging awareness that liberty gives substantial protection to adult persons in deciding how to conduct their private lives in matters pertaining to sex. . . . When homosexual conduct is made criminal by the law of the State, that declaration in and of itself is an invitation to subject homosexual persons to
discrimination both in the public and private spheres. . . . [This] demeans the lives of homosexual persons.” Adopting a greater focus on the concrete customs and traditions of American society at Stages 3 and 4, Justice Scalia observed for the dissent, “[A]n ‘emerging awareness’ is by definition not ‘deeply rooted in this Nation’s history and tradition[s].’ . . . Many Americans [still] do not want persons who openly engage in homosexual conduct as partners in their business, as scoutmasters for their children, as teachers in their children’s schools, or as boarders in their home. They view this as protecting themselves and their families from a lifestyle that they believe to be immoral.”

As discussed at § 27.1.1 nn.9-31, there are two branches to determining what rights are part of the substantive due process liberty analysis. As stated by Chief Justice Rehnquist in Washington v. Glucksberg, the two branches are “[1] those personal activities and decisions that this Court has identified as so deeply rooted in our history and traditions, or [2] so fundamental to our concept of constitutionally ordered liberty, that they are protected by the Fourteenth Amendment.” As noted at § 27.1.1 nn.10-14, judges adopting a Stage 4 formalist theory of decisionmaking tend to focus on the first branch of this analysis, those activities deeply rooted in our “history and traditions.”

This is represented by Justice Scalia’s dissent in Lawrence v. Texas. From a Stage 4 perspective, moral reasoning is based on concrete operational thought and the concrete customs and traditions of society. Because Stage 4 moral reasoning is not based on more advanced formal operational thought, and its ability to make “judgments about judgments,” as discussed at § 15.4.1 nn.60-70, there is no perspective at Stage 4 from which to criticize the morality of any custom or tradition. Customs and traditions are moral merely because they are customs and traditions, and if customs and traditions are deemed not sufficient by themselves to justify the morality of action, then there are no moral restraints whatsoever. As Justice Scalia stated in Lawrence v. Texas, “State laws against bigamy, same-sex marriage, adult incest, prostitution, masturbation, adultery, fornication, bestiality, and obscenity are likewise sustainable only in light of Bowers’ validation of laws based on moral choices. Every single one of these laws is called into question by today’s decision.”

Moral reasoning based on formal operational thought – Stages 4½, 5, and 6 – is able to make “judgments about judgments.” Even Justice Holmes noted in 1897, from a Stage 4½ Holmesian perspective, “It is revolting to have no better reason for a rule of law than that so it was laid down in the time of Henry IV.” For Holmes, however, even though customs and traditions are not necessarily moral, as they would be for a Stage 4 formalist, the role of the judge is to defer to the

64 Id. at 598, 602 (Scalia, J., joined by Rehnquist, C.J. and Thomas, J., dissenting).
66 539 U.S. at 590 (Scalia, J., joined by Rehnquist, C.J., and Thomas, J., dissenting).
67 Oliver Wendell Holmes, Jr., The Path of the Law, 10 Harv. L. Rev. 457, 469 (1897).
dominant forces in society, Hobbes’ “Leviathan.” Thus, to the extent customs and traditions of society are reflected in legislation and executive enforcement, judges should defer to those customs and traditions until the democratic process moves society in a more morally enlightened direction. For this reason, a Holmesian, like Chief Justice Rehnquist, would be predicted to join Justice Scalia’s dissent in Lawrence v. Texas, as he did.

From a Stage 6 natural law perspective, the demands of rational thought and giving each individual equal concern and respect can be used to critique the morality of societal customs and traditions, with prejudice or animus toward individuals, even if customary, an illegitimate reason for action, as for cases involving animus toward persons in interracial marriages, the mentally disabled, “hippie” communes, or gay and lesbian individuals, as discussed at § 26.1.1.1 nn.17-21. Such reasoning focuses on the second branch of substantive due process analysis, whether a right is “fundamental to our concept of constitutionally ordered liberty.” Under a natural law style of interpretation, judges can take background moral principles into account when rendering decisions. One of these background principles, discussed § 7.2.3 n.6, is that “arbitrary coercion is wrong.” As noted at § 16.2.2 text following n.29, coercive sexual practices, as well as exploitative sexual practices, even if not directly coercive, violate the principle of equal concern and respect.

These kinds of principles make it possible to draw distinctions among Justice Scalia’s “parade of horribles” listed above. Bestiality can be prohibited as there can be no meaningful consent given by animals. Such acts are thus always exploitative to an extent, and more exploitative, of course, where the animal is the passive recipient of the human aggression. Prostitution or obscene speech that “lacks serious literary, artistic, political, or scientific value” also raise clear issues of exploitative sexual activity. Bigamy raises issues of whether one can give equal concern and respect to multiple spouses, particularly given the historical practice of exploitation of women that has often accompanied societies permitting men to have multiple wives. Concerns with the possibility of inevitable exploitation of deep emotions built up between family members suggest consent could never be truly non-exploitative in the context of adult incest. Further, as a matter of “history and tradition,” the first branch of substantive due process analysis, the legislative practice of virtually every state banning prostitution, bigamy, and incest, and a majority banning bestiality, is different than only 13 states banning sodomy at the time of the Court’s decision in Lawrence.

On the other hand, it may well be true that from a Stage 6 perspective any attempt to regulate masturbation or fornication would raise difficult problems of justification. Even with respect to adultery, while adulterous conduct in most circumstances would violate the principle of giving one’s spouse equal concern and respect – though it would be different if both parties knowingly and voluntarily agreed to have an “open marriage” – the question would arise whether this morality is a matter for state regulation or for private individual response, such as filing for divorce. With respect to the history and tradition branch of substantive due process, few states have criminal laws against adultery still on their books, only a dozen or so states still have civil actions for alienation of affection. Such laws are almost never enforced, with very modest penalties when enforced.

---

With regard to the issue of same-sex marriage, in 2003 the Massachusetts Supreme Court ruled 4-3 in *Goodridge v. Department of Public Health*, discussed at § 26.4.6 nn.477-80, that gay and lesbian couples must be given equal rights to marry under the Massachusetts Constitution’s Equal Protection Clause. This holding reflects a Stage 6 understanding of equal protection, rather than equal protection defined by the concrete practices and prejudices of Stages 3 and 4. Formalist judges, who believe in a static Constitution that would enshrine in constitutional doctrine traditional views at the time of enactment, and Holmesian judges, with a predisposition to defer to legislative and executive action, would predictably dissent from such a ruling. For non-radical natural law and instrumentalist judges, the question faced in the case would be whether the Stage 6 moral understanding of equality, which supports the decision, has become sufficiently embedded in background moral principles in Massachusetts that judges can rely upon it, even though the decision would not be supported by the specific historical intent of the framers and ratifiers of the Massachusetts Constitution, legislative and executive practice in Massachusetts, and the core holdings of Massachusetts precedent.

As American society is just in the process of evolving from a Stage 5 immigrant society into a Stage 6 post-modern society, as discussed at § 15.4.1 nn.77-81, this would be a difficult call if applied to America generally. The precise question in *Goodridge*, of course, involves evolution within Massachusetts and the background moral principles applicable to their state Constitution. As Massachusetts is among the more progressive states in the Nation, it is possible, though not certain, that the majority got the balance right. Of course, if the legislature and citizens in Massachusetts vote to amend the Massachusetts Constitution to enshrine the traditional view rejecting the concept of gay marriage, then it will be clear that the majority got the background moral principles in Massachusetts wrong at the current time. It appears, however, such amendment will not happen. In the fullness of time, the progressive view would likely prevail anyway, as it will for each issue discussed in this Chapter, as it already has for slavery, segregation, and anti-miscegenation laws.

§ 16.3  Stage 6 Moral Reasoning as an Efficient Cause in Constitutional Law

The Constitution’s text grants Congress sufficient legislative power under the Commerce Clause and other enumerated powers that Congress can seek directly to implement moral reasoning on most issues of human rights. Of course, under *Lopez* and *Morrison*, discussed at §§ 12.3.2 nn.87-104 & 18.2.5 nn.100-18, Congress may not regulate non-economic criminal or non-economic civil rights conduct under the Commerce Clause. Since Congress has no generic criminal or civil rights power, Congress is limited in this area unless the legislative power is tied to some other enumerated power in Article I, § 8, like tax fraud under the taxing power, or bribery as a “necessary and proper” aspect of the spending power, or counterfeiting laws under the power to coin money, or mail fraud under the Post Office power, or patent infringement under the Patent and Copyright power, discussed at §§ 18.3.1-18.3.5; or tied to some other power outside of Article I, § 8, like the 13th Amendment power to ban slavery and involuntary servitude, discussed at § 25.1, or Congress’ 14th Amendment power to enforce equal protection and due process rights against the states, discussed at § 28.3.

In contrast to this power granted to the legislative branch, the Constitution does not expressly grant any general power to the judiciary to impose moral notions on society, and the Court has never

---

70 798 N.E.2d 941, 949 (Mass. 2003).
claimed even an implied power to proceed entirely on the basis of moral principles alone. Indeed, the Court has not built on the one provision in the Constitution that most clearly could be used for that purpose, the Ninth Amendment, which provides, “The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people.” The judicial reasoning coming closest to using the Ninth Amendment as a basis for restraining government in the name of moral principles occurred in Justice Goldberg’s concurring opinion in *Griswold v. Connecticut*.

Joined by Chief Justice Warren and Justice Brennan, Justice Goldberg wrote, “The Ninth Amendment to the Constitution may be regarded by some as a recent discovery but since 1791 it has been a basic part of the Constitution which we are sworn to uphold. To hold that a right so basic and fundamental and so deep-rooted in our society as the right of privacy in marriage may be infringed because that right is not guaranteed in so many words by the first eight amendments to the Constitution is to ignore the Ninth Amendment and to give it no effect whatsoever.”

Justice Goldberg suggested a general test for determining when an alleged human right should be considered protected by the Ninth Amendment. He said, “The entire fabric of the Constitution and the purposes that clearly underlie its specific guarantees demonstrate that the rights to marital privacy and to marry and raise a family are of similar order and magnitude as the fundamental rights specifically protected.”

This “similar order and magnitude” test might have been used by the Court to protect a number of alleged rights. In fact, the Court has not used the Ninth Amendment as a source of alleged rights in this way. A majority of the Court has never held that any particular right is a personal right “retained by the people” within the meaning of the Ninth Amendment.” The Ninth Amendment is discussed in greater depth in Chapter 24.

Courts have adopted, however, Justice Goldberg’s alternative characterization of the Ninth Amendment in *Griswold v. Connecticut*. Justice Goldberg stated, “In sum, the Ninth Amendment simply lends strong support to the view that the ‘liberty’ protected by the Fifth and Fourteenth Amendments from infringement by the Federal Government or the States is not restricted to rights specifically mentioned in the first eight amendments.” This rationale supports the Supreme Court’s development of that branch of substantive due process doctrine dealing with so-called “unenumerated fundamental rights,” discussed at § 27.3. Under this approach, new fundamental rights can be identified if they are of “similar order and magnitude” to fundamental rights already acknowledged in Supreme Court precedents. For example, in 1942, in *Skinner v. Oklahoma*, the Court held that there was a fundamental right to procreate, just as there was a pre-existing fundamental right to marry acknowledged in the 1923 case of *Meyer v. Nebraska*, because both “[m]arriage and procreation are fundamental to the very existence and survival of the race.”

75 262 U.S. 390, 399 (1923).
The Court has recently used aspects of moral reasoning in another way in their decisions. Historically, reflecting a Stage 3 or Stage 4 view of moral reasoning that rights derive from community or system-wide customs and traditions, the Court deferred to such customs and traditions in determining whether any particular governmental interests were legitimate. For example, in *Plessy v. Ferguson*,
76 noted at § 26.2.1.1.B nn.10-13, the Court noted, “In determining the question of reasonableness, it [the state] is at liberty to act with reference to the established usages, customs, and traditions of the people.” In modern times, however, focused more on a Stage 5 respect for diversity in an immigrant society, or a Stage 6 view of moral reasoning as embodying rational principles of justice, the Court has been willing to call illegitimate some governmental interests that are based on societal customs or traditions where those customs or traditions reflect irrational prejudice or irrational stereotypical thinking about individuals.

For example, in applying rational basis scrutiny under the Equal Protection Clause, the Court held in 1973 that prejudice against “hippies” and “hippie communes” was illegitimate. In 1984, the Court held that prejudice against interracial marriage was illegitimate. In 1985, the Court held that prejudice against the mentally impaired was illegitimate. Finally, in 1996, the Court held that animus toward homosexuals as a group was illegitimate. In this latter case, *Romer v. Evans*,
77 Justice Kennedy quoted language from the 1973 case, *United States Department of Agriculture v. Moreno*, saying: “[I]f the constitutional concept of ‘equal protection of the laws’ means anything, it must at the very least mean that a bare . . . desire to harm a politically unpopular group cannot constitute a legitimate governmental interest.” In *Lawrence v. Texas*,
79 Justice Kennedy made it clear that the recognition in constitutional law of principles based upon moral reasoning such as this may change over time our understanding of the Constitution, noting, “As the Constitution endures, persons in every generation can invoke its principles in their own search for greater freedom.”

In deciding in individual cases whether to rule unconstitutional some Stage 3 or Stage 4 custom and tradition, based on its inconsistency with Stage 5 respect for immigrant diversity, or Stage 6 concern with equal concern and respect, the Court has balanced arguments of historical customs and legislative and executive traditions with natural law respect for a reasoned elaboration of precedent and instrumentalist sound social policy decisionmaking. The Court’s experience with societal resistance after 1954 to implementing *Brown v. Board of Education*, discussed at § 26.2.1.3, has cautioned the Court not to get too far out in front of society in implementing Stage 5 or Stage 6 moral notions. In America, it has typically been the “Blue States” of the North and West Coast that are closer to the moral reasoning of Stage 5’s respect for immigrant diversity and Stage 6’s principle of equal concern and respect for all individuals. The “Western, Plains, and Midwest Red States”

---

76 163 U.S. 537, 550 (1896).

are typically next in line, and the “Deep South Red States” usually have the strongest affinity for traditional and customary prejudices. For example, most Blue States never had anti-miscegenation laws, or repealed them during the formalist or Holmesian eras. Most Midwest, Plains, and Western Red States got rid of their anti-miscegenation laws during the first part of the instrumentalist era. The laws of the Deep South Red States against miscegenation were ruled unconstitutional in 1967, discussed at § 26.2.1.1.D n.132. Similarly, the Deep South Red States refused in mass to ratify the Equal Rights Amendment, along with Arizona, Nevada, Oklahoma, Utah, and, surprisingly, Illinois, noted at § 26.3.1.1 n.360. Thus, the Court created intermediate scrutiny for gender discrimination on its own during the 1970s. As discussed at § 27.3.4.2, although all states had laws against sodomy in 1960, only 24 states had such laws in 1986, and only 13 states, predominantly Deep South Red States, still had such laws in 2003 when the Court ruled them unconstitutional. As discussed at § 23.2.1.4, it was only when less than 20 states, a majority of those in the Deep South, still applied the death penalty to mentally retarded individuals and/or juveniles that the Supreme Court ruled those unconstitutional after 2000.

The experience with slavery before the Civil War, and the experience with segregation after the Civil War until Brown v. Board of Education, suggests that waiting for the customs and traditions of states to evolve on their own absent imposition is not a strategy for success. Individuals who do not think in moral terms based on reason, but rather based on customs and traditions, cannot be reasoned with by definition. Metaphorically, one can talk with such individuals until one is literally “Blue in the face” and they will stay with their “Red State” traditions. In contrast, if one imposes a new tradition on those states, a generation or so later the new tradition will be accepted by most individuals whose morality is determined by customs and traditions.

This has occurred in the United States either by military occupation, as after the Civil War with respect to slavery, or by Supreme Court decisions since 1954, with respect to segregation, anti-miscegenation laws, access to contraception, and equal rights for women. From a consequentialist perspective, such instrumentalist and natural law decisionmaking, as opposed to static/formalist or Holmesian deference to existing customs and traditions, has made for a more just society. Whether the issues of abortion rights and equal civil rights for gays and lesbians will become accepted at the current time, or whether on those issues the Court had gotten too far out in front of American society, remains to be determined. In the fullness of time, however, the Stage 6 moral vision is likely to be represented by the law in American society, just as it is increasingly the dominant moral vision in Western Europe and Canada. Hard-right conservative parties, grounded in historical customary and traditional prejudices, as the Tory Party became under Margaret Thatcher in England, or Jean-Marie Le Pen and his National Front Party are in France, have little chance of long-term electoral success in societies with an educated populace.

Of course, since those “Red State” individuals’ commitment to these Stage 6 moral notions is not based on Stage 6 reasoning, but only based on newly-imposed developing traditions, their commitment is not as likely to be as vigorous or complete an acceptance of those moral notions as individuals who reason at a Stage 6 level of moral reasoning. But the acceptance may be good enough. For example, many white conservative Southerners in the 1920s would have opposed Clarence Thomas for wishing to marry a person of a different race, and their laws before 1967 would have made it illegal for Justice Thomas to marry his wife in Virginia. A generation or so after the Supreme Court declared Virginia’s anti-miscegenation law unconstitutional in Loving v. Virginia,
Justice Thomas is one of the favorite Justices among white Southern conservatives and is able to live comfortably in Virginia despite being in an interracial marriage. Similarly, the issue of gay marriage may not be as controversial an issue as it is today a generation or so after it becomes more prevalent.

Certainly, not every individual in a Blue State reasons at a higher Stage 5 or 6 level, and not every individual in a Deep South Red State reasons at a Stage 3 or 4 level. Further, as noted at § 15.4.4 nn.100-03, some individuals who are cognitively bright do not apply that higher level of cognitive reasoning to moral or legal reasoning tasks. This can be because of a refusal to adopt advanced cognitive reasoning and its principle of “equal concern and respect” based on “love of neighbor as oneself” as a guide; or an unthinking adherence to traditional attitudes by not considering the demands of advanced cognitive reasoning, sometimes accompanied by blind adherence to traditional religious doctrine that cannot be defended based on a reasoned elaboration of “love of neighbor as oneself”; or a pathological rejection of reason; or just a sinister decision to behave less morally. For young children who do not have the capacity yet for formal operational thought, and thus have the “original sin” of being self-centered as an initial matter, as discussed at § 15.3 nn.28-32, or for older children whose educational progress is limited because of mental disability, environmental, or lack of individual effort factors, reasoning at lower levels of moral reasoning would be the best they can do until increased educational success brings such individuals along into more advanced stages of cognitive reasoning.

Historically stronger educational systems in the North have generally meant that a larger percentage of individuals in those states reason at higher levels of moral reasoning. Therefore, the customs and traditions of those states better reflect such higher levels of moral reasoning. Thus, even individuals reasoning in Blue States at the level of customs and traditions tend to follow customs and traditions reflecting Stage 5 and Stage 6 moral reasoning results. Similarly, progressive religious traditions can help individuals who reason at Stages 1-5 to adopt Stage 6 principles, based on Stage 1 obedience to progressive religious doctrine, or Stage 2 embrace of self-interest of a Judgment Day judged by progressive values, or supporting Stage 3 or 4 progressive customs and traditions for society, or helping to create a progressive society based upon Stage 5 social contract notions.

In contrast, the customs and traditions in the Deep South Red States tend to reflect more traditional attitudes based on an inadequate embrace of scientific truths and inadequate taking other persons’ perspectives into account. It is those customs and traditions, including “that old-time religion” that is “good enough for me,” that needs changing from the perspective of Stage 6 moral reasoning. Historically, such attitudes were prevalent among the Dixiecrat wing of the Democratic Party. Based upon the long-term results of President Nixon’s “Southern strategy” of the 1960s and 1970s, noted at § 14.2.5, these attitudes dominate the Republican Party, with the Republican Party the majority party in Congress, as of October, 2006, because it includes not only this perspective, but also sufficient numbers of fiscally conservative, but socially liberal legislators elected from “Blue States.”

These “Blue State” Republicans, who represent more Stage 5 and Stage 6 values, are connected to the older Republican Party that had a stronger “East Coast Establishment” or “Rockefeller Republican” wing. While a larger number of Dixiecrat Democrats have left the Democratic Party over the past 40 years, only a few such Republicans, such as Senator Jim Jeffords of Vermont, have left the Republican Party. Thus, the Republican Party has the “bigger tent.” To the extent the
Republican Party commits more completely to the traditional “Dixiecrat” view of social policy based on Stage 3 and 4 moral values, more “Rockefeller Republicans,” who hold more Stage 5 and Stage 6 values, may choose to vote Democratic, returning the parties to more equal competitive balance.

In the long run, the more cognitively advanced kind of moral reasoning is likely to prevail in America, just as it is tending to prevail in Western European countries and Canada. Over time, the demands of logic and rational thought have tended to drive societies with stronger educational systems. For societies with weaker educational systems, like those in Africa and the Middle East, evolution towards Stage 5 and 6 democracies will be more problematic, as noted at § 15.4.2.

In the American experience, it is perhaps no surprise that those states with historically stronger educational systems have typically adopted higher levels of moral reasoning at any particular time. For example, it has been noted about the 19th century in America, “Despite the controversy over enacting constitutional provisions and legislative statutes requiring individuals to pay taxes to support a public school system, public support for state-operated schools was gradually obtained. This process began with the New England states in the first few decades of the nineteenth century, spread to the mid-Atlantic and mid-western states in the decadespreceding the Civil War, and finally, came to the southern states in the war's aftermath.”80 Even after the Civil War, of course, the economic consequences of that War on the South resulted in educational systems that lagged behind the North for many decades. This educational disparity explains, in part, the South’s traditional stronger embrace of the inadequate kind of Stage 3 and 4 reasoning that supported slavery, segregation, anti-miscegenation laws, anti-Semitism, and a greater reluctance to embrace Darwinian evolution and other modern scientific findings, than occurred in the North. It has also meant that overcoming these kinds of attitudes have been more difficult in the South because of these customs and traditions, which often have been reinforced by traditional religious schooling and indoctrination, despite their inconsistency with the principle of “love of neighbor as oneself.”

Of course, it is important to note that many individuals at Stages 1-5 of moral reasoning have “a good heart.” It is nonetheless true that throughout human history individuals with “good hearts” have nonetheless embraced doctrines that are not moral from the perspective of Stage 6's concern with giving individuals “equal concern and respect.” At the time, such individuals may believe they are behaving morally, and if religious, may believe they are doing God’s work. From the perspective of Stage 6 reasoning, however, that would not be true. Actions are ultimately what count from a Stage 6 perspective, not intent. Similarly, from a Stage 6 understanding of the Bible, the message of Christ is not that having a “good heart” is enough to be a “good person.” The relevant biblical passages in this regard are “by their fruits, you shall know them” and “the truth shall set you free.”

It is important to note that at earlier stages there can be benign and invidious versions of each stage depending on background social conditions in society. For example, there can be relatively benign Stage 2 Monarchies, such as King Hussein of Jordan, while there can be invidious Stage 4 Nation States, such as Hitler’s Germany. Thus, it is not certain than evolving from a Stage 2 society to a

Stage 4 society necessarily will yield a more moral society. As discussed at §§ 16.2.2-16.2.3, all persons, both secular and religious, will agree on moral principles at Stage 6, since there is just one reason, and thus one set of purely rational principles. Once can thus measure the relatively benign or invidious nature of any Stage 1 - Stage 5 society by how far its basic moral principles depart from the principles a person would adopt at Stage 6 of giving each individual “equal concern and respect.”

This analysis can also be applied to individuals. For example, there are no doubt some individuals whose weaker educational level, and thus less cognitively advanced moral reasoning, reflects more the Stage 1 level of obedience to rules merely to avoid punishment, or, more likely, Stage 2 moral reasoning of self-interest. For a number of such minority individuals, the choice in voting would be between a Republican Party dominated today by the Stage 3 and Stage 4 customs and traditions of whites living in “Red States,” or support for a Democratic Party whose ideals reflect Stage 5 embrace of immigrant diversity and Stage 6 support for equal concern and respect. Given that choice, their natural self-interest is to vote Democratic. For many minorities operating at a Stage 3 or Stage 4 level, protecting the customs and traditions of their minority communities may also suggest voting for a Democratic Party more willing to embrace diversity and belief in equal concern and respect.

For a number of whites operating at the level of Stage 2 moral reasoning, their economic self-interest may lie with the Democratic Party, but their views on social issues may be more consistent with the Stage 3 and Stage 4 customs and traditions of whites living in “Red States.” Indeed, to the extent they view the Democratic Party as pandering too much to the economic self-interest of Stage 2 minority voters, through forms of welfare, affirmative action, and other such programs, they may view their economic self-interest as connected more to the Republican Party as well. Further, to the extent that such whites live in rural or suburban communities, without the direct, day-to-day, concrete experience of dealing with the diversity of large city life, it is easier for such individuals to settle in their moral reasoning into the comfort of their Stage 3 community values (their so-called “nice little lives”), without having to deal with, or respond equitably to, the reality of diversity that might push their moral reasoning toward Stage 5 embrace of immigrant diversity.

At the end of the day, no matter what mechanism suggests to individuals at various levels of moral reasoning which political party to support, the perspective of Stage 6 reasoning would look to the actual policies adopted by any political party, and ask how close those policies are in practice to Stage 6 reasoning. In doing this, one has to look beyond slogans. For example, the French Revolution was carried out against the backdrop of the slogan “liberty, equality, fraternity,” which reflects, as a slogan, equal concern and respect. As discussed at § 15.4.2, however, the French Revolution was a failed attempt to replace a Stage 2 Monarchy with a Stage 3 fledgling democracy, which fell back into the Stage 2 Dictatorship of Napoleon. Given the general level of education at the time, such a Stage 2 result should not have been a surprise. Similarly, although Hobbes and Nietzsche reflected Stage 4½ dominant forces theorizing, Locke reflected a Stage 5 social contract, and Kant reflected an attempt at Stage 6 rational principles of justice, individuals as Stage 3 or 4 have sometimes used their rhetoric to justify support for their customary and traditional practices.

It is important to note that use of Stage 6 moral reasoning to advance Stage 6 moral concepts through the Equal Protection Clause, Due Process Clause, and others Clauses in the Constitution is
consistent with a natural law approach to constitutional interpretation, whether based on the traditional Stage 3 natural law of the 18th and 19th century, or modern Stage 6 natural law today. As discussed at § 12.3.3 nn.119-28, under any version of traditional natural law – Enlightenment, Burkean, or Augustinian – critical advances in thought can help us see better today the permanent aspirations and truths reflected in that tradition, as opposed to the immediate preferences of those who drafted and ratified particular language. Persons holding such natural law beliefs would wish later generations to give a more enlightened interpretation to those natural law principles, as those principles are thought to exist independent of the more limited understanding any individual may have of those principles at any point in time. As discussed at § 12.2.1.1 n.6, under traditional natural law interpretation, the intent of the Constitution is not the framers and ratifier’s specific subjective intent, but rather the objective intent gleaned from applying traditional modes and canons of construction to the document’s text. As noted at § 12.2.1.3 nn.33-39, that intent is not the specific policy goal that may have motivated a particular clause, but the broader, more generalized principle, or rule of law, that the clause established. Thus, although many of the framers and ratifiers may have been operating at a Stage 3 level of natural law, where reason and custom were conflated, as noted at § 15.4.1 nn.50-56, and thus they had flawed specific views regarding slavery, women’s rights, or other such matters, as well as greater attention to widely-shared Stage 3 community norms like property rights, rather than Stage 6 equal concern and respect for all individuals, including protection for minority rights, their interpretive methodology would support judges today reasoning at the advanced Stage 6 level of moral reasoning when interpreting the natural law concepts they placed into the Constitution.

Further, even if one rejects such a natural law “evolving” Constitution based on reasoned elaboration of the law, and follows a more Jeffersonian formalist “static” model of interpretation, the “original intent” of the Civil War Amendments, even from a formalist perspective, was to reflect “Blue State” values, imposed on the “Red States” of the South, as noted at § 28.1. And, of course, even from Jefferson’s own perspective, individuals should embrace liberty and freedom, not traditional Christian doctrine, to the extent that doctrine is flawed from the perspective of reason, as some aspects are, as discussed at §§ 16.1-16.2. Jefferson is famous for noting, “In every country and in every age, the Priest has been hostile to liberty. He is always in alliance with the despot, abetting his abuses in return for protection to his own.”

For those framers and ratifiers who may have been thinking in Stage 6 terms, resort to Stage 6 moral reasoning would be even more consistent with their interpretive methodology. Certainly many of the framers and ratifiers viewed moral duties toward society in light of Adam Smith’s principle of the “impartial spectator” and the Scottish Enlightenment’s related view of duties of “sympathy” toward one’s fellow citizens. Similarly, one way to understand Jesus’ message in the Bible is that

82 Letters from Thomas Jefferson to Horatio G. Stafford and Dr. Thomas Cooper, 1814.

Jesus was thinking of the principle of “love of neighbor” from a Stage 6 perspective of universal human rights based on giving equal concern and respect to all human beings. This perspective would support a Stage 6 understanding of biblical passages today, despite the fact that the gospels were written at a time when most individuals were operating in the context of Stage 1 or 2 societies of Emperors or Kings, and despite the fact that for many centuries the Catholic and Protestant traditions have read the Bible from the perspective of some version of Stages 1-4 moral reasoning.

For example, a Stage 6 perspective would not support the anti-Semitism of most Catholic and Protestant traditions until recent Stage 5 Vatican II modernization, even though that anti-Semitism was part of almost 2000 years of custom and tradition in the Christian faith. Similarly, a Stage 6 perspective would not support an interpretation of the Bible based upon a Stage 1, “Old Testament” God as punisher interpretation of the Bible, or a Stage 2 “Pope as dictatorial interpreter of the Bible,” or Stage 3 “community of the faithful” interpretation of the Bible, or Stage 4 literalist interpretation of the Bible, each of which was used for many centuries to support slavery, segregation, and anti-miscegenation laws, as discussed at §§ 16.1 & 16.2.3. When Stage 3 & 4 religious conservatives claim to be acting in Christ’s name, that is unlikely to be true. Christ did not walk through Galilee extolling the virtues of existing customs and traditions, based on an adolescent peer group mentality way of thinking. Christ’s message was a transformative message of “love of neighbor as oneself” for all individuals, the mature, adult, Stage 6 kind of moral reasoning. It is the “truth” that shall set you free, not, in the words of Stephen Colbert of Comedy Central’s The Colbert Report, “truthiness” – the mere desire for one’s customary or traditional “gut” prejudices to be true.

§ 16.4 Stage 6 Moral Reasoning as a Final Cause for Constitutional Law

The thesis of this section is that Stage 6 moral reasoning is likely to be found increasingly as a guide in American constitutional law, as well as in American society generally and in its legal system. Predicting this is a chancy venture, as may be seen by considering the difficulties of an attempt in 1953 to predict what constitutional law would include by 1986. A predictor in 1953 would probably not have found it likely that the Court would soon end segregation in public facilities, recognize a fundamental right to choose abortion, expand First Amendment protection to commercial speech, and provide a host of new protections for defendants in criminal cases. The problem is even more complex because the Court has been more cautious since 1986 with respect to identifying additional fundamental rights and has given increased weight to concerns of federalism and protecting state governments from lawsuits brought by citizens seeking to vindicate individual rights.

The project starts with certain assumptions. First, a Stage 6 society will deal with moral reasoning by the use of reason, rather than by customs or traditions. Second, rational thought is not egocentric, but supports the principle of love of neighbor as oneself, which can also be expressed as equal concern and respect for others, or behave according to the logic of an impartial spectator. Third, when attempting to put further content into moral reasoning, an effort should be made to avoid irrational perspectives or prisms, and only to infer principles directly derivable from the principle of love of neighbor as oneself, such as not taking innocent life, respecting other persons’ bodily integrity and personal property, and not lying to other people for one’s personal gain.

It is also necessary to remember that there is a distinction between what rational moral reasoning may dictate with regard to personal behavior and what it suggests regarding the discretionary power
of law makers and the provisions of a constitution designed to limit that power. In addition, although morality may call for providing adequate remedies for persons who have been oppressed, that would not automatically translate into a legislative duty or a fundamental constitutional right for the government to provide food, housing, and other needs for all individuals who are poor. Also, legislative provision for the poor or disabled may reduce any pressure felt by the Court to find in the Constitution some protections for those and similar groups.

Unless the Court adopts a radical, Platonic Guardian model of natural law, Court decisions will also be limited by the requirement to balance any arguments based upon background moral reasoning against the requirements of constitutional text, context, history, practice, and precedent. As noted at § 8.3, our constitutional tradition is based upon a model that constitutional rights are to protect individuals from governmental regulation, and to ensure individuals have an equal opportunity to compete. There is no tradition recognizing group rights in our constitutional history, and only with rare exceptions, like the Sixth Amendment right to counsel funded by the government for indigent defendants, does any concept of a right to funding, or right to equal results, come into play.

This tradition is consistent with a proper Stage 6 understanding of rights. On the issue of individual versus group rights, from the perspective of rational thought, only individuals exist. There can, of course, be a group of individuals. However, there is no such thing as a group that is independent of the individuals that make up the group. The term “group” is merely a short-hand reference for the individuals who are in that group. To the extent those individuals all have some right, then everyone in the group will have that right. But rights belong to individuals who are entitled, from a Stage 6 perspective, to equal concern and respect. From a logical standpoint, there is no such thing as a group that exists independent of its members; thus, groups cannot have natural rights.

This is true even if discrimination practiced upon some individuals is practiced because of their membership in a group. For example, historically African-Americans were discrimination against by Jim Crow legislation because of their membership in a racial group, being African-American. Such unjust treatment would entitle any individual African-American so discriminated against to an appropriate remedy. From a Stage 6 perspective, however, that discrimination against an individual based upon group membership would not entitle every member of that group, that is every African-American, to the same level of remedial treatment. For example, an African-American family living in a progressive community that never engaged in any discrimination against that family, and no direct discrimination against any of their ancestors, so that only a modest claim of some indirect intergenerational effects of discrimination could be made, would be entitled to only modest relief.

Even more so, discrimination against one racial minority group would not entitle members of a different racial minority group to a remedy on the basis that all racial minorities are members of the larger group of minorities generally, and thus discrimination against any part of that group is

---

84 For a contrary argument that it is possible, and appropriate, to sometimes think of rights in “group right” terms, independent of the rights of individuals in the group, see, e.g., Ronald R. Garet, Community and Existence: The Rights of Groups, 56 S. Cal. L. Rev. 1001 (1983).
discrimination against all. As Justice O’Connor phrased this point in *Richmond v. J.A. Croson Co.*, “The foregoing analysis applies only the inclusion of blacks within the Richmond set-aside program. There is absolutely no evidence of past discrimination against Spanish-speaking, Oriental, Indian, Eskimo, or Aleut persons in any aspect of the Richmond construction industry.”

Equally, merely because a group may not be stigmatized by some action, that would not mean that individuals in that group harmed by discrimination should not have an appropriate remedy. For example, one might argue that affirmative action on behalf of minorities does not send a message of stigmatization to white persons as a group. Even if that were true, if individual white persons are harmed by the effects of some affirmative action program, they should be able to raise a complaint and have that complaint tested by strict scrutiny applicable to racial discrimination cases.

A Stage 6 understanding of a right to equal opportunity and autonomy versus a right to equal results or funding is more complex. The baseline issue is what are the demands of treating each individual with equal concern and respect. To the extent that individuals are viewed as having free will, individuals are charged with some responsibility for their actions. This would mean that not all individuals are entitled to equal results in all circumstances, because individuals engaging in different actions, for which they are responsible, will lead to different results. Such reasoning suggests viewing rights to equal concern and respect as rights to equal opportunity and autonomy.

On the other hand, all individuals have different genetic predispositions in certain areas with which they were born and which are not the product of their free will choice. In extreme circumstances, for example, some individuals are born with genetic mental or physical impairments that place them at a disadvantage to others. For such individuals, any rational concept of equal opportunity or equal autonomy will require some affirmative funding by the members of the rest of society to help equalize those disadvantages. Of course, as noted above, to the extent legislative provision is made for such individuals in statutes, like the Americans with Disabilities Act, which provides some response to issues of equal access and equal opportunities for the disabled, any pressure felt by the Supreme Court to find in the Constitution protections for such individuals will be reduced.

A final preliminary issue is important to consider. At discussed at § 2.3.1, in an exchange of articles in 1958, Professors Hart and Fuller disagreed over a positivist versus a normative theory of law. Professor Hart favored the positivist theory of law represented by his “rule of recognition” theory of legal obligation. Professor Fuller favored a version of a normative theory of law. From a Stage 6 perspective, grounded in rational thought, and aware of the limitations on ultimate reasoning about moral principles represented by Godel’s theorem, discussed at § 16.2.2, it is clear that no rational choice can be made concerning which of these two views on the nature of law is right, or more moral. From the perspective of Godel’s theorem, there are no “first principles” that are rationally defensible from which a choice can be made between these two approaches.

From an historical perspective, it is no surprise that societies operating at a Stage 1 or Stage 2 level of Emperors or Kings, or from a Stage 4 formalist or Stage 4½ Holmesian positivist theory of judicial review, would be likely to embrace Professor Hart’s positivist theory of law based upon his “rule of recognition.” It is no surprise that societies operating from a Stage 3 traditional natural law base, or an emerging Stage 6 modern natural law base, would tend to have a preference for Fuller’s normative theory of natural law. As discussed at § 15.4.1, for Stage 5 societies Kohlberg stated, “The ‘rights,’ or the general welfare consequences, insured by social contract procedures [at Stage 5] remain to some extent a derivative of these procedures rather than the purpose for their existence. Correlatively, then, the Stage 5 social contract conception yields something less than a set of universal, totally generated moral principles; it yields a universal set of procedural principles but not a universal set of moral oughts.”

Such a mixed set of procedural principles is reflected in Hart’s more advanced theory of his “rule of recognition,” where, in response to Professor Fuller’s critique in 1958, Professor Hart added in his 1961 book, *The Concept of Law*, what he called “a minimum content of natural law” based on the need for a minimum level of voluntary cooperation among individuals in society to ensure survival. Given that Professor Fuller’s natural law approach, as discussed at § 13.1, is a version of Stage 5½ political natural law, with its “internal morality of the law” also based on procedural regularity in cooperative rule-making and rule enforcement, there is not much difference between the final version of Hart’s Stage 5 minimum natural law and Fuller’s Stage 5½ political natural law. A similar Stage 5½ enterprise, resting legitimacy in procedures to ensure that the laws which are adopted be just, not merely social consent to any procedures, has been advanced by Professor Randy Barnett, and is consistent with Stage 5½ “deliberative democracy” theories, discussed at § 15.4.3.

As an historical matter, a fully-developed Stage 6 society is likely to adopt both Hart’s minimum natural law and Fuller’s internal morality of the law, as both require the government to be rational in its action, and to treat each of its citizens with some amount of equal concern and respect. A fully-developed Stage 6 society will go beyond both Hart and Fuller, however, in requiring a full measure of treatment of individuals with equal concern and respect, not only in the government procedures for rule adoption, or notice and hearings, but in the substantive principles of government itself. This will be done not because it can be proved this approach is more moral, which under Godel’s theory cannot be done, but because it is the approach adopted by a fully rational person who understands this is the only basis for rational agreement among members in society. Any other system, because ultimately based on irrational first principles, can obtain societal consensus only through force – either military force, psychological conditioning, or social pressure. It will also likely occur because history suggests that more educated people tend to adopt more cognitively advanced principles of morality, and for the religious among them, are able to revise their interpretation of religious texts to reflect those principles, given the language of, and inherent flexibility in, religious texts.

From the perspective of a Stage 6 thinker, a society that embodies to a substantial extent in its laws the Stage 6 principle of “equal concern and respect” deserves that individual’s obedience on “moral” grounds. Societies at earlier levels of morality deserve respect on “sociological” grounds to the extent working within the system is more likely to help that society evolve toward Stage 6 principles, rather than engaging in civil disobedience or civil revolution. From a Stage 6 perspective, “legal” grounds, while necessary from the perspective of “equal concern and respect” to legitimate a constitution do not provide sufficient legitimacy for law, as Stage 6 is a form of natural law, which rejects such “positivist” justification for obedience. Differences among “moral” versus “sociological” versus “legal” grounds for obedience toward law are reflected in recent writing about the duty to obey and law and constitutional legitimacy by Professor Richard Fallon.90

The core question at Stage 6 in terms of constitutional law is what principles are likely to be viewed as reflected in the Constitution based upon Stage 6 moral reasoning. How quickly this may happen, and with what level of success, will depend partially upon events in the political realm, including whom the President appoints and the Senate confirms to serve on the Supreme Court. In addition, any change in constitutional law depends in part on what cases or controversies get litigated, and are presented to the Court for decision. It can be predicted, however, that the Court will continue to grapple with such matters as separation of powers, federalism, affirmative action, freedom of speech, and the separation of church and state. All of these issues involve conflicts between majoritarian power and individual freedom, or between central and dispersed governmental power.

Dealing with this issue calls for a revision of perspective to viewing the Court’s role as promoting, within the limitations of a social contract natural law theory of constitutional interpretation, the Stage 6 vision of love of neighbor as oneself, or equal concern and respect, or behave according to the logic of the impartial spectator. An analogy to a similar revision in perspective was Justice Holmes’ insight in *Lochner v. New York* that the majority, which had found no sufficient relationship between a maximum hours work requirement and the health of bakery employees, was applying a particular economic theory. That allowed Holmes to utter words which later became orthodox theory, “But a constitution is not intended to embody a particular economic theory, whether of paternalism and the organic relation of the citizen to the state or of *laissez faire*. It is made for people of fundamentally differing views, and the accident of our finding certain opinions natural and familiar, or novel, and even shocking ought not to conclude our judgment upon the question whether statutes embodying them conflict with the Constitution of the United States.”91

Just as Justice Holmes’ new perspective, initially uttered in dissent, changed constitutional law once it became adopted by a majority of Supreme Court Justices after 1937, the new Stage 6 perspective, although initially represented in a number of dissenting or concurring opinions, may gradually be emerging in majority opinions, typically by natural law Justices O’Connor, Kennedy, or Souter, or moderate instrumentalist Justice Stevens. The fundamental idea behind this Stage 6 perspective is that governmental action should be tested by whether its means and ends accord with the logic of Adam Smith’s impartial spectator, which requires giving each person equal concern and respect.

---

Justice Stevens has made repeated use of the idea that government has a duty to govern impartially. For example, in *FCC v. Beach Communications, Inc.*[^92] the Court allowed federal cable television regulations to distinguish between facilities that served separately owned and managed buildings and those that served several buildings under common ownership or management. In his concurring opinion, Justice Stevens said that “it is reasonable to presume that Congress was motivated by an interest in allowing property owners to exercise freedom in the use of their own property. Legislation so motivated surely does not violate the sovereign’s duty to govern impartially.” Justice Stevens added, “[W]hen the actual rationale for the legislative classification is unclear, we should inquire whether the classification is rationally related to ‘a legitimate purpose that we may reasonably presume to have motivated an impartial legislature.’” This requirement of an “impartial legislature,” rather than deference to any conceivable legislative purpose, is reflected in the requirement, discussed at § 16.3 nn.77-79, that the legislature not advance irrational prejudices or irrational stereotypes, even if those prejudices or stereotypes are consistent with the customs and traditions of society.

In *Michael M. v. Superior Court*,[^93] the majority rejected an equal protection challenge to California’s statutory rape law which made men alone criminally liable for sexual intercourse with a female under the age of 18 years. Justice Stevens dissented. He said, “Even if . . . there actually is some speculative basis for treating equally guilty males and females differently, . . . any such speculative justification would be outweighed by the paramount interest in evenhanded enforcement of the law. A rule that authorizes punishment of only one of two equally guilty wrongdoers violates the essence of the constitutional requirement that the sovereign must govern impartially.”

An area in which government impartiality or neutrality has been expressly recognized by the Court as a significant factor is the Establishment Clause. For example, in *Rosenberger v. Rector and Visitors of the University of Virginia*,[^94] the Court held that the Establishment Clause did not compel a university to exclude an otherwise eligible student publication from participating in the student activities fund solely on the basis of its religious viewpoint. Justice Kennedy stated, “A central lesson of our decisions is that a significant factor in upholding governmental programs in the face of Establishment Clause attack is their neutrality toward religion.” The Court reached a similar result regarding charging students an activity fee used to facilitate extracurricular student speech that is viewpoint neutral in *Board of Regents of the University of Wisconsin System v. Southworth*.[^95]

Because a natural law style of interpretation adopts an analytic, normative approach toward judicial decisionmaking, a Stage 6 Court should consider fully the analytic goal of certainty and predictability in the law, which often suggests a categorical approach toward doctrine, versus the normative goal of fundamental fairness in each case, which often supports an inquiry into all the circumstances in the case. Justice Stevens’ opinion for the Court reflected this balance in *Tahoe-

[^92]: 508 U.S. 307, 311-13 (1993); *id.* at 323 & n.3 (Stevens, J., concurring in the judgment).

[^93]: 450 U.S. 464, 470-74 (1981); *id.* at 502 (Stevens, J., dissenting).

\textit{Sierra Preservation Council, Inc. v. Tahoe Regional Planning Agency},\textsuperscript{96} where the Court refused to create a categorical rule that a moratoria on building which lasted more than a year was a compensable taking. Justice Stevens explained that “the ultimate constitutional question is whether the concepts of ‘fairness and justice’ that underlie the Takings Clause will be better served by one of these categorical rules or by a Penn Central inquiry into all of the relevant circumstances in particular cases.”

From a Stage 6 perspective, an effort also should be made to avoid particular perspectives or prisms, at least when attempting to infer principles beyond those directly derivable from the foundational principle of love of neighbor as oneself. This perspective supports rejecting the instrumentalist use of background social policy, which places the Court in the position, in part, of making decisions for society reflecting a particular public policy prism. In contrast, a Stage 6 Court should restrict itself to protecting the core background principles of justice embedded in a Stage 6 understanding of constitutional concepts, including both “liberty” and “equality” in the 14\textsuperscript{th} Amendment.\textsuperscript{97}

For example, as noted at § 27.3.4.1 n.246, the instrumentalist opinions of Justices Stevens and Blackmun in \textit{Planned Parenthood v. Casey} followed \textit{Roe v. Wade} in its entirety, making every burden on abortion rights subject to strict scrutiny. This constitutionalized under a strict scrutiny approach all regulations on abortion, following Roe’s concern about specific harm if a pro-choice position were not adopted. This approach differed from the natural law approach of the joint opinion in \textit{Casey}, where the Court did not sit as a super-legislature regarding all aspects of abortion regulation. As discussed at § 27.3.4.1. nn.247-48, the importance of the undue burden analysis in the joint opinion in \textit{Casey} was to ensure that not every abortion regulation triggered strict scrutiny, and thus the Court did not act as super-legislature second-guessing every aspect of abortion regulation. Rather, strict scrutiny analysis was restricted in the joint opinion in \textit{Casey} to protecting the core principle of liberty from undue burdens.

The Court has applied this undue burden analysis in other unenumerated fundamental rights cases. For example, as discussed at § 27.3.3.1.A, in cases involving the right to marry, the Court has applied strict scrutiny to the “significant” and “substantial” infringement at issue in \textit{Zablocki v. Redhail}, but only rational review to a burden on the right to marry of a prisoner in \textit{Turner v. Safley}.\textsuperscript{98} Similarly, as discussed at § 26.5.1, the Court has applied strict scrutiny to significant burdens on the right to travel, as in \textit{Shapiro v. Thompson} and \textit{Memorial Hospital v. Maricopa County}, while applying only rational review to other burdens on the right to travel, as in \textit{Zobel v. Williams} and \textit{Hooper v. Bernalillo County Assessor}.\textsuperscript{99} In cases involving the right to vote, discussed at § 26.5.3, the Court has applied strict scrutiny for more severe burdens on the right to vote, as in \textit{Kramer v.}

\textsuperscript{96} 535 U.S. 302, 334 (2002) (Stevens, J., for the Court).

Union Free School District No. 15, while only applying rational review to less severe burdens, such as restrictions on voting for a water reclamation district in Ball v. James, or limitations on the voting rights of prisoners, in O’Brien v. Skinner.100

This use of undue/substantial burden analysis is consistent with a Court adopting an impartial spectator approach, rather than sitting as a super-legislature. From a Stage 6 perspective, basic principles of liberty and equality must be protected, since every individual has an equal right not to have imposed upon them other individuals’ non-rationally supported moral prisms. However, once that protection is assured, there are a number of collateral decisions that any society must make in order to assure persons can live together in peace and harmony with equal concern and respect given to all. Given the institutional competencies of each branch of government, these collateral decisions are best made in most circumstances by democratically elected officials, rather than courts.

For this reason, it is likely that a Stage 6 Court will use this undue/substantial burdens versus lesser burdens analysis in an increasing number of areas of the law. In each of these cases, the Court will have to consider what form of rational review analysis should be applied. Although the Court has suggested it was applying minimum rational review in the cases cited above, the actual reasoning in the opinions suggests more the “second-order” factor balancing rational review approach discussed in § 7.2.1 and summarized in Table 7.2.101 A similar case involving “second-order” rational review for a less than severe burden on associational rights in case of ballot access is Timmons v. Twin Cities Area New Party.102 This issue of whether rational review adopted in these cases is minimum rational review or “second-order” rational review is discussed further at § 21.2.3.

This Stage 6 impartial spectator approach similarly supports an analysis permitting “play in the joints” for social policy decisions, rather than constitutionalizing value decisions not determined by the principle of equal concern and respect, or the logic of the impartial spectator. This is reflected in cases like Locke v. Davey,103 discussed at § 32.2.2.5 n.265, where the Court in 2004 read the Free Exercise Clause and Establishment Clause to permit the legislature sufficient “play in the joints” to make the policy decision whether to fund scholarships to be used for religious training.

Similar deference to policy decisions of others, consistent with a concern for giving all individuals equal concern and respect, is reflected in the Court upholding the University of Michigan Law

School’s use of race in its admission process. A particular circumstance given weight by the Court was the university’s judgment that diversity would produce educational benefits. Justice O’Connor said for the Court in in *Grutter v. Bollinger*, 104 “Our scrutiny of the interest asserted by the Law School is not less strict for taking into account complex educational judgments in an area that lies primarily within the expertise of the university. Our holding today is in keeping with our tradition of giving a degree of deference to a university’s academic decisions, within constitutionally prescribed limits.” In contrast, the Court decided in *Gratz v. Bollinger*105 that the rigid absolute point system preference of the University of Michigan undergraduate program was outside “constitutionally prescribed limits,” since it was not the least restrictive effective alternative that could be used to assure that the undergraduate program received the educational benefits flowing from a racially diverse student body. The Court’s opinions in *Grutter* and *Gratz*, and the law regarding affirmation in education generally, are discussed at § 26.2.1.4.D.

Generalizing from the topic of diversity in education, and from the concept of impartiality in law, a Stage 6 Court will be likely to uphold efforts to achieve diversity and will apply its standards of review to require governmental toleration of ever more diverse ideas and behavior. A Stage 6 Court will protect freedom of speech, except where in the circumstances the expression advocates illegal conduct, constitutes a “true threat” to others, or is actionable “hate speech,” as discussed at §§ 30.1.1.1-30.1.1.4. As noted at § 15.4.1 text following n.79, groups that do not embrace the Stage 6 vision of toleration will be tolerated by the government and the courts only to the extent that they are isolated or ineffective in their practices because at Stage 6 all individuals should be protected from group domination. Because of the perceived universality of these principles of moral judgment, this protection from domination would naturally extend not only to domestic law, but also to rooting out intolerant international groups of global reach.

With regard to federalism and separation of powers concerns, the notion of the impartial spectator should mean that the Court should not take sides in choices regarding federal versus state power, or legislative versus executive power, as long as those choices are within constitutional limits. As noted at §§ 6.2.2.3 & 6.2.2.4, in our history conservative judges have tended to favor states’ rights and the executive branch in these kind of cases, while liberal judges have tended to favor the federal government and the legislative branch. An impartial spectator would reject either kind of favoritism. Such an approach would acknowledge that, within broad limits concerned with preventing tyranny against individual citizens, yet assuring sufficient governmental efficiency, most issues of federalism and separation of powers, like the issue of whether or not to follow a kosher diet, discussed at § 16.2.2, merely represent differing choices particular countries around the world have made, with many of those countries, such as in Western Europe, Canada, or Australia, no matter what their precise systems, committed to cognitively advanced notions of human rights and human dignity. For these issues, therefore, without any background moral principles to help resolve particular issues, the considerations of text, context, history, and practice should become more prominent in the Court’s opinions.

105 539 U.S. 234, 270-72 (2003); id. at 276-80 (O’Connor, J., concurring).
As noted at § 12.3.3 nn.132-36, Justice Souter’s views on the 11th Amendment best represent the mature Enlightenment vision on issues of sovereign immunity. While a majority of 5 Justices on the modern Supreme Court have favored states in their interpretation of the 11th Amendment, an approach more consistent with constitutional text and history of the original Constitution and the 14th Amendment, and more consistent with the Court not imposing policy choices on society, but deferring to the legislature where those choices are not required by the Constitution, would permit Congress by statute to determine whether individuals should be permitted to sue states for violation of federal law, rather than the Court preempting that decision. In this regard, it is likely that a Stage 6 impartial spectator approach would adopt Justice Souter’s views regarding 11th Amendment issues.

This would require overruling the Court’s recent 11th Amendment jurisprudence on the ground that those decisions are substantially wrong as reflecting too great a conservative preference for states’ rights, a preference not adequately represented in constitutional text, context, history, and practice. This would mirror the Court’s rejection in 10th Amendment doctrine of the greater conservative preference for states’ rights represented in National League of Cities v. Usery, and its replacement by the more balanced and textually faithful analysis of the 10th Amendment in Garcia v. San Antonio Metropolitan Transit Authority, discussed at § 18.4.1 nn.220-32. Of course, even under Justice Souter’s view, the plain text of the 11th Amendment would remain, which prevents states from being sued in federal court under diversity jurisdiction. The 11th Amendment doctrine is discussed generally at §§ 17.2.4.1-17.2.4.3.

For separation of powers cases, the Court should similarly reject a conservative preference for the executive branch, and the liberal preference for the legislative branch, in favor of an impartial spectator approach toward executive versus legislative power issues in light of constitutional text, context, history, practice, precedent, and prudential considerations.

Further examples hinting at future development of Supreme Court decisionmaking appear in Chapters 17-32, which consider Supreme Court decisions under specific doctrines in greater depth from the perspective of the four decisionmaking styles. In contrast, the discussion in Chapters 13-16 has attempted to provide insight into the basic historical development of law and society generally, with special reference to the American context. As noted in Chapter 15, explanation for that historical development has been grounded in stages of cognitive development, social perspective-taking, and moral development. The thesis is that when a critical mass of actors attain a particular level of cognitive development, social-perspective taking, and moral reasoning development, then political and legal institutions will change to reflect that fact.

As this book is mostly about American constitutional law, the discussion in Chapters 13-16 has been, of necessity, quite summary. Nevertheless, by analogy, in studying the human body, it is necessary to understand the basic features of the human skeleton and basic milestones in human development, such as the loss of baby teeth and their replacement by adult teeth, or the basic changes associated with puberty. There is a lot more to the human body than that, but understanding the skeleton and basic developmental milestones is important. The discussion in these Chapters of the basic stages of individual, social, and legal development is an attempt to provide an understanding of the background skeletal features and milestones in individual, social, and legal development as a means to give some context to the treatment of the “meat and bones” of law and society topics by others.
PART IV: THE FINAL CAUSE OF CONSTITUTIONAL LAW

Part IV of this book discusses the final cause of constitutional law – its purpose and that towards which it is becoming. In one sense, the final cause, or purpose, of constitutional law is the resolution of disputes, and thus the creation of a body of decisions, by courts or other actors, that establish and apply constitutional doctrine. In a larger sense, the final cause is the beneficial result for society in having a legal system that provides for reasoned debate on fundamental issues and their authoritative resolution – resolutions that are final for the time being, but that are subject to change. Part IV explores and evaluates the changing substance of these many “final” resolutions, and their intended and actual effects in society.

Two kinds of issues exist in constitutional law. First, there are structural issues concerning the relationships among the branches of the federal government and between the federal government and state governments. These issues are discussed in Chapters 17-20. Second, there are issues that deal with the relationships between governments and individuals, or, for the 13th Amendment that outlawed slavery, create individual rights against other individuals as well as governments. These doctrines are dealt with in Chapters 21-32. One aspect of each doctrine is important to emphasize at the outset: for every issue, if the government has a valid reason to act, that reason makes the action constitutional, even if other reasons for the act are not constitutionally valid.

With respect to both structural and individual rights issues, the cases and the doctrines they establish and apply reflect the four judicial decisionmaking styles. These styles were introduced in Chapters 1-4; their use of text, purpose, context, history, legislative and executive practice, judicial precedents, and prudential considerations were discussed in Chapters 5-8; their specific manner of constitutional law decisionmaking were discussed in Chapters 9-12. The cases also reflect the perspectives characteristic of the various eras in American law described in Chapters 13-16: traditional natural law, formalism, Holmesian, instrumentalism, and modern natural law. In addition, the discussion in Part IV addresses the views of various commentators on the Constitution. This discussion includes classic commentary, such as by Alexander Hamilton and James Madison in The Federalist Papers in 1788, or Justice Story in his 1833 work, Commentaries on the Constitution of the United States. It also includes discussion of 20th-century and 21st-century commentators. Without giving an exhaustive list of commentators cited in Part IV, this discussion includes those who have supported a very strong federal government model, as in Professor William Crosskey’s 1953 treatise, Politics and the Constitution; to more moderate views of federal power, as in the various editions of the treatises of Professor Laurence Tribe’s American Constitutional Law or Professors John Nowak and Ronald Rotunda’s Constitutional Law; to a more limited view of federal power, as in Professor Randy Barnett’s 2004 book, Recovering the Lost Constitution.

The intent of this discussion is to provide at least an introduction to the various possible interpretations of the Constitution that could be adopted by different individuals. The discussion will address how each reflects, or does not reflect, aspects of text, purpose, context, history, legislative and executive practice, judicial precedents, and prudential considerations. The discussion in Chapters 17-32 will also compare these possible interpretations with what the majority of the Supreme Court has decided at any particular time, or may be likely to decide in the future, both in terms of specific doctrines and in terms of general issues likely to be prominent for Court resolution.
The text of the Constitution, drafted during the summer of 1787, and ratified in special state ratifying conventions in all of the original 13 states by 1789, discussed at § 18.4.5, grants powers, distributes them among the branches, and provides for limitations or prohibitions on the use of government power. Drafted consistent with the natural law style of interpretation, which focuses on both purpose and literal text, discussed at § 12.2.1.1, the initial text of the Constitution, the Preamble, announced the purposes for which the Constitution was framed. It states: “We the People of the United States, in Order to form a more perfect Union, establish Justice, insure domestic Tranquility, provide for the common defence, promote the general Welfare, and secure the Blessings of Liberty to ourselves and our Posterity, do ordain and establish this Constitution for the United States of America.” Inferences to be drawn from the Preamble are discussed at § 18.1.

Following the Preamble, the Constitution contains seven articles. Article I creates a national legislature, defines methods for selecting its members, enumerates legislative powers, and adds specific prohibitions on federal and state power. The powers granted to Congress are discussed at §§ 18.1.1-18.3.10. Specific limitations on federal power are noted at § 18.5, while limitations on state powers are noted at § 18.6.1, including the Contracts Clause, discussed at § 22.1. Regarding separation of powers issues, discussed generally at § 19.1, Congress’ ability to delegate power to the other branches of government is discussed at § 19.2. The methods of selecting members to Congress and the means of passing legislation are discussed at §§ 19.4.1-19.4.2 & 20.1.2.2. Issues of legislative immunities from suit are discussed at § 20.1.4.1. Implied limitations on state and federal power resulting from intergovernmental immunities doctrine are discussed at § 20.2. Implied limitations on state power under the dormant commerce clause doctrine are discussed at § 20.3.2.

Article II of the Constitution contains similar material on election, appointment, powers, and immunities for the executive branch. Matters of executive election, appointment, and powers are discussed at §§ 19.3, 19.4.3 -19.4.4 & 20.1.2.1. Executive immunities are discussed at § 20.1.4.2. The removal of executive officials through Congress’ impeachment power is discussed at § 20.1.3.

Article III defines judicial power. The nature and scope of federal judicial power under Article III is discussed in Chapter 17. Judicial immunities are discussed at § 20.1.4.3. The removal of judicial officials from office through impeachment is discussed at § 20.1.3.

Article IV deals with relationships among the states. Its provisions provide for: Admittance of New States, § 3, cl.1, discussed at § 18.6.2.1; Federal and State Power over Property, § 3, cl.2, discussed at § 18.6.2.2; Guarantee Clause, § 4, discussed at § 18.6.2.3; Privileges and Immunities Clause, § 2, cl.1, discussed at § 20.3.3; Full Faith and Credit Clause, § 1, discussed at § 23.1.4; Extradition Clause, § 2, cl.2, discussed at § 23.2.2.4; and Fugitive Slave Clause, § 2, cl.3, discussed at § 25.1.

Article V covers the process of Amending the Constitution. The process of amendment is discussed at § 20.1.1.3. The ban on depriving a state of equal suffrage in the Senate without consent is discussed at § 20.1.2.2. The limitations on amendments regarding slavery prior to 1808 are discussed at § 25.1.

Article VI contains three clauses. Article VI, cl. 1, commits the United States to pay debts contracted under the previous Articles of Confederation, as well as under this Constitution, noted at § 17.2.4.3. Article IV, cl.2, contains the Supremacy Clause making the Constitution, and laws
and treatises made pursuant thereto, the Supreme Law of the Land, discussed at § 20.3.1. Article VI, cl. 3 requires federal and state officials to be bound by “Oath or Affirmation” to support the Constitution, along with the requirement that “no religious Test shall ever be required as a Qualification to an Office or public trust under the United States,” a clause which is discussed at § 32.1.2.1.

Article VII provides for ratification of the Constitution in special state ratifying Conventions by nine of the then-existing 13 States, discussed at § 18.4.5.

To ensure ratification of the Constitution, the supporters promised the states that they would draft a Bill of Rights to limit certain kinds of governmental power. The first ten Amendments became this Bill of Rights. As noted in Chapter 23, the first eight of these Amendments provide for a range of civil liberties protections. These Amendments are discussed in Chapter 23, with the exception of the Fifth Amendment Takings Clause, discussed at § 22.2; the Fifth Amendment Due Process Clause applied to civil matters, discussed in Chapter 27; and the First Amendment. The First Amendment doctrines regarding “freedom of speech, or of the press,” are discussed in Chapter 29; exceptions to speech and press rights are discussed in Chapter 30; freedom of assembly and association are discussed in Chapter 31; the Establishment and Free Exercise Clauses are discussed in Chapter 32.

Regarding the final two of the first ten Amendments, the Ninth Amendment states that the “enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people,” and is discussed in Chapter 24. The 10th Amendment makes clear that powers “not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.” The 10th Amendment is discussed at § 18.4.

The remaining Constitutional amendments are addressed in this book at the following places:

11th Amendment, regarding state immunity from suit in federal courts, discussed at § 17.2.4;
12th, 20th, 22nd, and 25th Amendments, regarding Presidential selection, discussed at § 20.1.2.1;
13th Amendment, banning slavery or involuntary servitude, discussed at § 25.1;
14th Amendment Citizenship Clause, discussed at § 25.2;
14th Amendment Privileges or Immunities Clause, discussed at § 25.3;
14th Amendment Equal Protection Clause, discussed in Chapter 26;
14th Amendment Due Process Clause, discussed in Chapter 27;
15th Amendment, banning racial discrimination in voting, discussed at § 25.4;
16th Amendment, regarding federal income taxation, discussed at § 18.3.1;
17th Amendment, regarding aspects of direct election of Senators, discussed at § 20.1.2.2;
18th and 21st Amendments, regarding imposition, and repeal, of Prohibition, discussed at § 20.4;
19th, 23rd, 24th, and 26th Amendments, regarding rights to vote for women, residents of the District of Columbia, any person without having to pay a poll tax, and persons who are 18 years of age or older, discussed at § 20.1.2.2;
27th Amendment, regarding no law varying compensation of members of Congress taking effect until after the next congressional election, discussed at § 20.1.1.3.

The power of Congress to enforce certain of these Amendments (13th, 14th, 15th, 19th, 23rd, 24th, and 26th) by appropriate legislation is discussed in Chapter 28.
As noted at § 5.2.2.2, there are four main elements of constitutional structure: judicial review, federalism, separation of powers, and checks and balances. Judicial review will be discussed in Chapter 17. Federalism will be discussed in Chapter 18. Separation of powers will be discussed in Chapter 19. Additional issues regarding checks and balances will be discussed in Chapter 20. Taken together, these issues provide the governmental blueprint for our form of constitutional democracy.

Given the focus of this book on constitutional law, the discussion of judicial review in Chapter 17 concerns the rules and doctrines regarding judicial examination of whether actions by government officials or other individuals have violated the United States Constitution. Chapter 17 also discusses what limits exist on judicial review regarding the actions of government officials or others.

Federalism concerns the relationship of power between the federal government and the states. As discussed in Chapter 18, this involves issues of federal power versus state power, both in terms of the outer limits of expressly granted or implied federal power, and in terms of prohibitions on federal and state power. Determining the extent of this power involves considering constitutional text on federalism issues; arguments of context, particularly related provisions in the Constitution and theories of federalism which structured the Constitution; the history leading up to a constitutional provision’s ratification; legislative and executive practice under that provision; the Supreme Court’s precedents in interpreting that constitutional provision; and prudential considerations.

Separation of powers doctrine concerns principles regarding the balance of power between the legislative, executive, and judicial branches. As discussed in Chapter 19, the separation of powers doctrine underlying our constitutional democracy combines two ideas. The first is that the Constitution identifies three distinct governmental functions: the legislative power, a power to make law; the executive power, a power to apply law or call for its application, subject to judicial review; and the judicial power, a power authoritatively to declare what the law is and to order or approve its application in specific cases. The second idea is that no one branch of government can exercise the central power of any other branch or substantially disrupt the operations of that branch.

Additional separation of powers concerns are discussed in Chapter 20. They involve such issues as immunities from judicial action for members of the legislative and executive branches; immunities for the federal government from state taxation or regulation and immunities for states from federal taxation or regulation; limitations on state action burdening interstate commerce, or protecting state residents from certain kinds of discrimination by other states; and the balance involved in finding limits on the power given states by the 21st Amendment over distribution of intoxicating liquors.

While other democracies in the world have differing blueprints for their forms of government, all share a concern with each of the various issues presented in Chapters 17-20. In each society, there has been a similar struggle among natural law, formalist, Holmesian, and instrumentalist kinds of decisionmaking styles, and each society is gradually moving, as discussed in Chapters 15-16, in the direction of modern natural law. While the focus in Chapters 17-20 is on the specific choices made in the context of American constitutional democracy, some comments regarding choices made by other countries are presented along the way, particularly regarding judicial review at § 17.1.4.
CHAPTER 17: JUDICIAL REVIEW

§ 17.1 Foundations of Judicial Review

§ 17.1.1 The Nature and Basis of Judicial Review

Judicial review has both a broad and a narrow meaning. In its broadest sense, judicial review encompasses all judicial inquiries into the legality of what has been done by lower courts, legislatures, administrative officials, or individuals pursuant to constitutional law, statutes, or the common law. However, in keeping with the focus of this book, the phrase is used here in its narrower sense to connote only judicial examination of whether actions by government officials or others have violated the United States Constitution.

With respect to judicial declarations of unconstitutionality, all courts in the United States, and most government officials and the American people, accept three basic principles rooted in the classic case of *Marbury v. Madison*,\(^1\) decided in 1803, and vigorously reaffirmed 155 years later in *Cooper v. Aaron*,\(^2\) the only Supreme Court opinion signed by all nine Justices. These three principles are:

1. The United States Constitution is our Nation’s basic law;
2. It is a judicial duty to say what the law is, and thus whether a federal or state law or its application has violated the Constitution; and
3. With respect to the judiciary in both state and federal courts, decisions by the Supreme Court of the United States are the final authority on the meaning of the Constitution.

The first of these three propositions is clearly supported by the Constitution’s text, particularly its Preamble ("We the People . . . do ordain and establish this Constitution") and the Supremacy Clause of Article VI, cl. 2 ("This Constitution . . . shall be the supreme Law of the Land"). Even the Virginia and Kentucky Resolutions of 1798-99, and the nullification movement in South Carolina and other Southern states in the 1830s and thereafter, discussed at § 25.3 nn.56-58, agreed with this proposition. They disagreed with the second and third propositions, specifically the view that federal courts could authoritatively pronounce on the Constitution’s meaning, instead of state courts or legislatures. In the words of the Kentucky Resolution of November 16, 1798, which was based on a draft by Thomas Jefferson, “That to this compact [the Constitution] each state acceded as a state, and is an integral party, its co-states forming, as to itself, the other party: that the government created by this compact was not made the exclusive or final judge of the extent of the powers delegated to itself; since that would have made its discretion, and not the Constitution, the measure of its powers, but that, as in all other cases of compact among parties having no common judge, each party has an equal right to judge for itself, as well of infractions as of the mode and measure of redress.”\(^3\)

---

1. 5 U.S. (1 Cranch) 137 (1803).

Page 553
The second of these propositions is not so clearly supported by constitutional text. No literal text in the Constitution expressly establishes an authority in the Supreme Court or in any other court to decide that governmental acts are repugnant to the Constitution and, on that ground, to declare them void. Thus, the defense of judicial review has had to be based upon sources of constitutional interpretation other than literal text: purpose, context, history, practice, precedent, and prudential considerations. For example, regarding legislative practice on this issue, in response to the Kentucky and Virginia Resolutions of 1798, the Massachusetts legislature responded on February 9, 1799, “That this legislature [is] persuaded that the decision of all cases in law and equity arising under the Constitution of the United States, and the construction of all laws made in pursuance thereof, are exclusively vested by the people in the judicial courts of the United States.”

The New Hampshire legislature responded on June 4, 1799, “That the state legislatures are not the proper tribunals to determine the constitutionality of laws of the general government; that the duty of such decision is properly and exclusively confided to the judicial department.”

As discussed at § 17.1.2.1, the result in Marbury v. Madison, where the Supreme Court held that the judiciary has the power of judicial review, has been a foundation for the rule of law in the United States since 1803. Basing judicial review on an asserted judicial power to declare the law has the significant consequence that even lower courts can make declarations of unconstitutionality, and such decisions are binding for the jurisdiction covered by that court, unless set aside by a higher court. For example, under the general grant of judicial power to the federal courts in Article III of the Constitution, lower federal courts, as well as the United States Supreme Court, have the power to bind even state legislative and state executive officials regarding matters of federal law, as long as the court has jurisdiction to decide the case, as discussed at §§ 17.2.1-17.2.3, and state sovereign immunity does not exist, as discussed at § 17.2.4.

The third of these three propositions – that concerning both state and federal courts, decisions by the Supreme Court of the United States are the final authority – is supported by inferences from the text of the Supremacy Clause and Article III. As Justice Story wrote in 1816 in Martin v. Hunter’s Lessee, the federal judiciary, in actions brought in federal court, can impose federal law on state legislative and executive action because of the Supremacy Clause. The Supreme Court can also engage in appellate review of state court decisions because otherwise the Court would not have appellate review in "all other cases" involving "the Laws of the United States, and Treaties made, or which shall be made, under their Authority," as authorized by Article III. As discussed at §17.1.2.2, a full defense of proposition three also requires resort to arguments of purpose, context, history, practice, precedent, and prudential considerations.

§ 17.1.2 Judicial Review During the Original Natural Law Era: 1789-1873

§ 17.1.2.1 Marbury v. Madison versus the Tripartite Theory of Judicial Review

In 1803, the Supreme Court held in Marbury v. Madison⁹ that the Supreme Court is the authoritative interpreter of the constitutionality of legislative action and that courts are not bound by an unconstitutional legislative act. In support of this conclusion, Chief Justice Marshall resorted to arguments other than express constitutional text on point, since the text of the Constitution does not directly address the issue of judicial review. Regarding arguments of purpose, Marshall noted that there would be no purpose for a written Constitution with limited powers if those limits could be passed at any time by those intended to be restrained. If the Constitution is on a level with ordinary legislative acts, written constitutions are absurd attempts to limit governmental powers. Regarding separation of powers arguments, Marshall noted that under the American theory of separation of powers, “It is emphatically the province and duty of the judicial department to say what the law is.” Regarding arguments of history, Marshall noted that all those who have framed written constitutions contemplate them as forming the paramount law.

While the term “law,” as opposed “paramount law” or “supreme law,” was used in the 18th century to refer to statutory or common law, not constitutional law, and thus it could be argued that what “is emphatically the province and duty” of the judiciary is only to determine statutory or common law,¹⁰ Marshall stated in Marbury that “[i]f two laws conflict with each other, the courts must decide on the operation of each. So if a law be in opposition to the constitution . . . the court must determine which of these conflicting rules governs the case. This is of the very essence of judicial duty.” In these sentences, Marshall used “law” and “rules” to refer to statutory and constitutional provisions.

Justice Marshall also made use of related provisions in the Constitution to defend Marbury’s holding that courts are not bound by a void legislative act. Under the Constitution, the judicial power is extended to all cases arising under the Constitution. Marshall stated that this section implies that courts should examine the Constitution. Judges swear to support the Constitution, which indicates it is not closed to them. Certain constitutional provisions, like those dealing with two witness to convict for treason, or the Ex Post Facto Clause, clearly anticipate judicial implementation. Article VI, cl. 2 declares as supreme law the Constitution and laws made "in pursuance" of the Constitution.

A most remarkable thing about this opinion is how Justice Marshall diverted attention away from the major weak spot in his decision. A gap in the opinion was the assumption that if Congress enacts a law, having decided that it is not repugnant to the Constitution, the Court has been granted the authority to disagree with Congress and find that the law conflicts with the Constitution. Justice Marshall dealt with this issue only indirectly when, to support the proposition that courts are not bound by a legislative act that is void because repugnant to the Constitution, he said it is the power and duty of courts to say what the law is. This argument merely assumes that courts can find a law repugnant to the Constitution even though Congress has made a contrary judgment.

---

⁹ 5 U.S. (1 Cranch) 137, 176-80 (1803).

Professor William Winslow Crosskey contended in his massive 1953 treatise, *Politics and the Constitution*,\(^\text{11}\) that the framers intended to adopt a "tripartite theory" of judicial review. That theory contends that each branch of government is the judge of the constitutionality of its own powers. The tripartite theory, which was supported by Thomas Jefferson,\(^\text{12}\) was suggested as the only true basis for judicial review in 1825 by Justice Gibson, of the Pennsylvania Supreme Court, dissenting in *Eaking v. Raub*. Justice Gibson said:

> In the very few cases in which the judiciary, and not the legislature, is the immediate organ to execute its [the Constitution's] provisions, they are bound by it, in preference to any act of assembly to the contrary. But what I have in view in this inquiry, is, the supposed right of the judiciary, to interfere, in cases where the constitution is to be carried into effect through the instrumentality of the legislature, and where that organ must necessarily first decide on the constitutionality of its own act.\(^\text{13}\)

Under this view, for a court to declare a law void, which has been enacted according to the forms prescribed in the Constitution, was to usurp legislative power. To affirm the right of judges to determine the existence of a collision between a law and the Constitution was to take for granted the very thing to be proved. Where the Constitution is carried into effect through legislative action, the legislature must decide the constitutionality of its act. In enforcing the law, the judiciary does not adopt legislative acts as its own. For his own part, Justice Gibson retracted this view in 1845, and, consistent with a natural law style of interpretation, embraced judicial review based upon practice and precedent.\(^\text{14}\)

Chief Justice Marshall avoided a discussion of the tripartite or other theories of judicial power by finding in *Marbury* that Congress' grant of original jurisdiction to the Court in mandamus cases was repugnant to the Constitution and then focusing attention on why courts are not bound by such a law. On these points he could rely on the supremacy of the Constitution over other laws, a concern about legislative omnipotence, and Article VI's reference to laws made "in pursuance" of the Constitution.

As a general matter, the fact that a majority of the framers and ratifiers may have been operating under a Stage 3 belief in natural law theory, as discussed at § 15.4.1 nn.50-59, does not answer the question of whether they endorsed judicial review. As Professor Robert P. George has noted:

It is certainly true that believers in natural law consider positive law to be legitimate and binding to conscience only where it conforms to natural law and, as such, respects the natural rights of people subject to it. But natural law itself does not settle the question of whether it falls ultimately to the legislature or the judiciary in any particular polity to insure that the positive law conforms to natural justice and respects natural rights. . . .

[It] is clear that authority to enforce the natural law may reasonably be vested primarily, or even virtually exclusively, with the legislature; or, alternatively, a significant measure of such authority may be granted to the judiciary as a check on legislative power. . . . And that is because questions of the existence and content of natural law and natural rights are, as a logical matter, independent of questions of institutional authority to give practical effect to natural law and to protect natural rights.15

Whether any particular society, operating at a Stage 3 level of concrete operational thought, will adopt some form of judicial review is ultimately dependent upon the concrete customs and traditions of that society. For societies like England and France, where the Stage 3 democratic revolutions against the authority of the King took place against a background of close connections between the King and the King’s courts, those democratic revolutions emphasized strongly the legislative supremacy of parliament, and rejected any concept of judicial review of the constitutionality of legislative acts. In the United States, however, the concrete reality was different. In an article entitled The Origins of Judicial Review, which is an exhaustive treatment of judicial review in America during the post-Revolutionary War and ratification era, Professors Prahash & Yoo noted:

Written in the aftermath of the Revolution, the first state constitutions did not explicitly establish judicial review. . . . [W]hen the early state constitutions were drafted the “judiciary was not yet seen as guardian of the constitutional order.” Nonetheless, the state assemblies were not to be omnipotent. Some state constitutions expressly incorporated Montesquieu’s famous maxim that the executive, legislative, and judicial powers ought to be kept separate. Other constitutions created institutions devised to check the legislature. Pennsylvania and Vermont . . . each had a Council of Censors . . . . [New York] created a council of revision . . . .

At some point, however, these declarations and institutions came to be viewed as insufficient. . . . [A]s the instances where the state courts engaged in judicial review (or were perceived as having done so) accumulated and as fundamental changes occurred in American ideas of government and law, judicial review came to be generally understood as an important check on the legislature under a written, limited constitution with a separation of powers.

. . . . Judicial review responded to, and was consistent with, several historical trends, circumstances, and problems in American constitutional and political thought of this period. First was the generic problem of a newly hyperactive legislative power. . . . Some came to believe that another institution was necessary to check the legislative vortex.

Second, there was a need to prevent states from ignoring or frustrating national enactments, particularly treaties. The Continental Congress lacked any formal method to enforce state compliance with the Articles of Confederation, federal resolves, and treaties. Judicial review by state courts over state legislatures arose as . . . to check the legislature. . . .

Third, the concept of the separation of powers grew in importance . . . . The separation of powers was not simply a check on the executive, but a guard against arbitrary, centralized government power and a protection of liberty. To the extent that this more robust concept of the separation of powers took hold . . . , it is more likely that the Founders would have understood judicial review as a product of the separation of powers.

Finally, one cannot overestimate the significance of the written nature of . . . constitutions. Before written constitutions were adopted, it might have been difficult to determine whether a legislature was acting unconstitutionally – after all, there was no baseline text; with a written constitution, however, all could compare a statute with actual constitutional text.16

This history suggests that Chief Justice Marshall accurately reflected the views of the framers and ratifiers when he announced the principle of judicial review in Marbury v. Madison. Further examples of historical evidence supporting Marbury, including evidence of the framing and ratifying period, and of legislative and executive practice and judicial precedents after the Constitution was ratified, but prior to Marbury, appear in the aforementioned article, The Origins of Judicial Review, and also in Professor Randy Barnett’s article, The Original Meaning of Judicial Power.17

Despite this evidence, the specific result in Marbury could be defended under the tripartite theory since the statute in question dealt directly with the nature of the Supreme Court’s original jurisdiction, and even under the tripartite theory judges are the appropriate actors to resolve questions of judicial power. If Marbury had been vigorously challenged by the Jeffersonians, the Court could have retreated to the tripartite position. This could have been supported by viewing the language in Article VI regarding laws made “in pursuance” of the Constitution as referring only to whether the laws were passed “according to the procedures of” the Constitution, such as following the bicameralism and presentment clauses of Article I, § 7, cl.2. As long as procedures were followed, under the tripartite theory the question of whether the substance of any legislative enactment was consistent with the Constitution would be determined by the legislative branch itself, not the courts.

As discussed at § 17.2.2.1, the Court’s ultimate conclusion in Marbury was that the Court lacked original jurisdiction to grant Marbury’s mandamus request to require delivery of his commission for a position as a federal justice of the peace. Thus, Jefferson and Jefferson’s Secretary of State, James Madison, prevailed in the case. Given this conclusion, the Supreme Court, per Chief Justice

17 Id. at 933-81; Randy E. Barnett, The Original Meaning of Judicial Power, 12 Sup. Ct. Econ. Rev. 115 (2004).
Marshall, was able to criticize the Jefferson Administration for violating Marbury's rights by denying him the commission, while avoiding the risk of impeachment by the Jeffersonians if the Court had ordered Marbury's commission to be delivered. Federal judges who differed with the Jeffersonians faced a risk of impeachment, as shown by the impeachment of Justice Chase in 1805, discussed at § 20.1.3 n.39. As stated by Professor Kermit Hall, “Marshall seems to have believed (probably correctly) that if Chase had been convicted, he would have been the next target.”

This result in *Marbury* blunted opposition by the Jeffersonians to the broader aspects of Chief Justice Marshall's reasoning on judicial review. Thus, Marshall planted a seed which grew to become the modern version of judicial review. Regarding the “in pursuance” language of Article VI, probably the better reading of that text, consistent with *Marbury* and historical evidence supporting the principle of judicial review, is that it refers not only to procedural limitations on legislation action, but also to substantive limitations. For example, a law “that went through bicameralism and presentment and that abrogated the right to jury trial hardly seems to have been ‘made in Pursuance’ of the Constitution. Instead, such a statute would be ‘made in opposition’ to the Constitution.”

Perhaps fortunately for the Marshall Court, it did not again undertake to invalidate an important general act of Congress. During Marshall's tenure as Chief Justice, the only other case holding an act of Congress unconstitutional was *Hodgson v. Bowerbank* in 1809. As in *Marbury*, the result in *Hodgson* could be justified under the tripartite theory because the Court struck down a provision of the Judiciary Act of 1789 regarding jurisdiction to hear cases where an “alien is a party,” which was alleged to confer jurisdiction on federal courts to try suits between aliens, a subject matter not mentioned in Article III's description of cases to which the federal judicial power extends.

The next act of Congress to be found invalid, an act to which the tripartite theory could not be applied, was the Missouri Compromise, struck down, at least in *dicta*, in 1857 in *Dred Scott v. Sandford*. However, that case can hardly be regarded as a solid foundation for judicial review, since it was overruled by the Civil War Amendments. The flaws in the *Dred Scott* opinion, however, did provoke comment regarding the nature of Supreme Court precedents. For example, in his First Inaugural Address, President Abraham Lincoln admitted that Supreme Court decisions on constitutional questions were entitled to great respect by other departments, but expressed doubt whether a judicial declaration of unconstitutionality ought to be binding on other persons acting in their representative capacities. He was concerned about the anti-democratic effects of attributing finality on the Constitution to an unelected Court. President Lincoln said:

> The candid citizen must confess that if the policy of the government upon vital questions affecting the whole people, is to be irrevocably fixed by decisions of the Supreme Court, the

20 9 U.S. (5 Cranch) 303 (1809).
...instant they are made, in ordinary litigation between parties in personal actions, the people will have ceased, to be their own rulers, having, to that extent, practically resigned their government into the hands of that eminent tribunal.22

This view is consistent with Marbury. Indeed, this view had been used earlier by President Andrew Jackson, who vetoed in 1834 a bill to re-authorize the Second National Bank of the United States, whose 20-year charter ran out in 1836. President Jackson vetoed the bill based in part on his view that the bank was unconstitutional, even though the Court in 1819 had declared it constitutional in McCulloch v. Maryland. Jackson’s view was that as President he could make his own determination of constitutionality for purpose of justifying a presidential veto. Similarly, under Marbury, Congress is free to refuse to pass a bill on grounds that a majority of the House or Senate believe the bill unconstitutional, even if Court precedents suggest a different result. Indeed, Congress is free to pass a bill that Court precedents suggest is unconstitutional, as Congress did when passing a “no flag burning” bill after the Court had struck down in Texas v. Johnson a similar state “no flag burning” statute. Predictably, in United States v. Eichman, the Court struck down the congressional statute.23

A more extreme view was stated in 1987 by Attorney General Ed Meese, but was later withdrawn. Under that view, as noted at § 5.3.3.3 n.101, a judicial decision is binding “only with respect to the named parties, leaving officials theoretically free to ignore the Supreme Court’s pronouncement in dealing with the remainder of the public – at least until officials are once again taken to court.”24 Such a view, adopting a form of civil disobedience by government actors, is contrary to respect for Marbury’s principle of judicial review. Of course, an even more vigorous rejection of Marbury is reflected in President Jackson’s ignoring the Supreme Court’s decision in Worcester v. Georgia in 1832 regarding the Cherokee tribe in Georgia, where, as noted at § 6.4.2 n.135, President Jackson is “apocryphally” reported to have said, “John Marshall made his decision; now let him enforce it.”

After Dred Scott, the next case to invalidate an act of Congress was the Legal Tender Act, struck down in Hepburn v. Griswold in 1870. That case, however, was promptly overruled in 1871 in Knox v. Lee.25 In sum, the power of judicial review over acts of Congress, while stated in Marbury, and applied thereafter, was not cemented by frequent use from 1789 to 1873.

§ 17.1.2.2 Martin v. Hunter’s Lessee and Federal Court Supremacy

Narrowly viewed, the core holding in Marbury v. Madison only applied to Supreme Court supremacy over the legislative branch of the federal government. Similar reasoning, however,

---

would make the Supreme Court’s interpretation of the Constitution supreme over the federal executive branch. Thus, *Marbury* has been viewed as answering fully the second proposition regarding judicial review stated in § 17.1.1, that is, the authority of the courts to be the authoritative interpreters of the Constitution.

The issue of Supreme Court supremacy over state courts, that is, the third proposition regarding judicial review stated in § 17.1.1, was addressed by the Court in 1816 in *Martin v. Hunter’s Lessee*.26 In *Hunter’s Lessee*, Justice Story wrote for the Court that the Constitution is to be given a reasonable construction so that a power granted in general terms is not to be restrained unless that restraint results from context, expressly or by necessary implication. Story then said that nothing in the Constitution limits the federal appellate jurisdiction that is given in broad terms by the grant in Article III of federal judicial power over all cases involving the Constitution, laws, or treaties of the United States. It was foreseen, he said, that many such cases would originate in state courts. To them the federal judicial power must extend by appellate review or not at all.

Justice Story added that such a power is not inconsistent with the purpose of the Constitution, with related provisions in the Constitution, or with prudential considerations.27 As Story noted, the Constitution is crowded with provisions that act directly on the states. Federal courts, exercising their original jurisdiction, can review state legislative and executive acts, and exercising the same right over state courts, by appellate review, is not a higher or more dangerous act. The final decision must rest somewhere, and common sense says the United States Supreme Court is the right place. Prudentially, it is important to have uniformity on matters within the purview of the Constitution, a motive for Court review “perfectly compatible with the most sincere respect for state tribunals.” Justice Story also noted that the Constitution “has presumed (whether rightly or wrong we do not inquire) that state attachments, state prejudices, state jealousies, and state interests, might some times obstruct, or control, or be supposed to obstruct or control, the regular administration of justice.” As a consequence, cases involving parties from different states, so-called diversity jurisdiction, discussed at § 17.2.2.1.B nn.108-11, are able to be heard in federal courts, rather than a state court which might favor its own citizens, even if the case only involves state law issues.

The holding in *Martin v. Hunter’s Lessee* was extended to appeals in state criminal cases by *Cohens v. Virginia*.28 There was a literal, textual argument against this result, that is, that the Court could not have appellate jurisdiction because a state is a party and the Court is granted original jurisdiction over cases in which "a State shall be a party." Marshall admitted there was *dicta* in *Marbury* stating that the grant of original jurisdiction implied the negative that Congress could not give the Court appellate jurisdiction over cases within its original jurisdiction. However, he distinguished *Marbury*, reasoning that the grant of original jurisdiction over cases in which a state is a party should not be construed to bar the appeal of cases involving a state where the subject is a question arising under federal law but where the case, from its nature, as in state criminal prosecutions, would not originate in the Supreme Court. Marshall said that to bar jurisdiction over such an appeal would

---

26 14 U.S. (1 Wheat) 304, 324-28 (1816).
27 Id. at 328-52.
28 19 U.S. (6 Wheat.) 264, 392-95 (1821).
destroy some purposes for which appellate power was conferred. Reflecting the natural law willingness to consider purpose as fully as text, which is distinguishable from the formalist greater reliance on literal text alone, Marshall stated that a negative should be implied from words granting original jurisdiction only where that promotes, and not where it defeats, the intention of the framers.

Despite this concern for uniformity, state courts need not follow lower federal courts’ interpretation of the Constitution. Under the “dual theory of sovereignty,” noted at § 5.2.2.2.B, state courts are part of an independent state judiciary, not hierarchically under the control of the lower federal courts. Thus, it is theoretically possible for a state court and a lower federal court to have differing views on the meaning and constitutionality of some state or federal law. Of course, the Supreme Court has the power under Martin v. Hunter’s Lessee to resolve the conflict with a decision binding both state and lower federal courts. Prudential considerations of uniformity of result, however, mean that most state courts pay great attention to lower federal court decisions on matters of federal statutory or constitutional law. The usual practice is that state courts ask themselves how the Supreme Court would decide a question, and use lower federal court decisions as well as Supreme Court decisions to answer that question. Not surprisingly, state courts tend to give great weight to lower federal court decisions if all the federal decisions have gone the same way. Reflecting the sovereignty of the state courts from the lower federal courts, however, a state court in California, a state part of the federal Ninth Circuit Court of Appeals, noted that no greater weight need be given to decisions by the Ninth Circuit than to decisions from other circuits. In practice, most state courts do pay more attention to federal opinions from the federal circuit court overseeing their state.

Under the dual theory of sovereignty, state Supreme Courts are the authoritative interpreters of the meaning of state law matters, including whether state statutes violate state constitutional provisions. As discussed at § 17.2.2.3, both the United States Supreme Court, and lower federal courts, are bound by state Supreme Court decisions on state law matters, as long as that state law does not conflict with federal statutes or the United States Constitution. In case of conflict, the Supremacy Clause of Article VI, cl. 2 of the United States Constitution provides that the United States Constitution, and federal laws and treaties made pursuant thereto, are the supreme law of the land.

§ 17.1.3 Later Views on Judicial Review

§ 17.1.3.1 Judicial Review During the Formalist Era: 1873-1937

The core holdings of Marbury v. Madison and Martin v. Hunter’s Lessee established the modern doctrine of judicial review. Between 1873 and 1937, formalist-era courts had only to apply that

doctrine to the cases that came before them. Thus, decisions of the formalist-era Court striking
down various governmental actions, particularly economic regulations adopted by Congress or by
various state legislatures, were consistent with almost 100 years of judicial practice. Despite the
lack of explicit textual support, the doctrine of judicial review had ceased to be an innovation and
had become a part of the American legal system. In terms of formalist theories of precedent,
discussed at § 9.2.2.2, judicial review had become “settled law.”

During the formalist era, many statutes were struck down as unconstitutional. By the turn of the
century, the Court had struck down application of the Sherman Act to manufacturers in United
States v. E.C. Knight Co., and was on its way to the many cases in the early 1900s that struck down
acts of Congress or state legislatures as violations of the 14th Amendment Due Process Clause or the
Commerce Clause.33 As discussed at § 27.3.2.1, during this Lochner era the Court was concerned
by what it saw as deprivations by legislatures of rights to contract and own property, rights thought
necessary for a successful economy. Criticism of formalist-era decisionmaking focused more on the
formalist style of constitutional interpretation, and not on the fact of judicial review itself.34

§ 17.1.3.2 Judicial Review During the Holmesian Era: 1937-1954

As discussed at § 27.3.3, the Holmesian era between 1937 and 1954 was characterized by a retreat
from Lochner-era review of social and economic legislation. Consistent with the Holmesian
approach toward judicial review, discussed at § 10.2.1.2, the Court gave considerable deference to
legislative and executive decisions. The Court invalidated only three minor actions of Congress
during this period. In 1943, the Court struck down § 2(f) of the Firearms Act, which established a
presumption of guilt based on a prior conviction and present possession of a firearm. In 1946, the
Court held that Congress had created an invalid Bill of Attainder when it provided that no salary
should be paid to certain named federal employees. In 1952, the Court held void for vagueness
under the Due Process Clause of the Fifth Amendment a provision of the Federal Food and Drug Act
that imposed criminal liability for refusing entry or inspection of business premises.35

At the extremes, the Supreme Court also held the President in check and invalidated a few state
laws. For example, the Court held that President Truman violated the Constitution when he seized
a steel mill to prevent a strike that could interfere with production needed for military action in

33 See, e.g., United States v. E.C. Knight Co., 156 U.S. 1 (1895); Lochner v. New York, 198
U.S. 45 (1905); Adkins v. Children’s Hospital, 261 U.S. 525 (1923) (Due Process cases); Hammer
v. Dagenhart, 247 U.S. 251 (1918); A.L.A. Schechter Poultry Corp. v. United States, 295 U.S. 495
(1935); Carter v. Carter Coal Co., 298 U.S. 238 (1936) (Commerce Clause cases).

34 See, e.g., James B. Thayer, The Origin and Scope of the American Doctrine of
Constitutional Law, 7 Harv. L. Rev. 129, 144 (1893).

35 Tot v. United States, 319 U.S. 463 (1943) (Firearms Act); United States v. Lovett, 328 U.S.
303 (1946) (Bill of Attainder case); United States v. Cardiff, 344 U.S. 174 (1952) (Food and Drug
Act case). For a listing of acts of Congress held unconstitutional by the Supreme Court, see Acts
of Congress Held Unconstitutional in Whole or in Part by the Supreme Court of the United States
(1999) (internet search using as key words “acts of Congress held unconstitutional”).
As an example of a state law invalidated, the Court held that enforcement of a racially restrictive covenant was a violation of the Equal Protection Clause.37

Despite a fewer number of cases holding governmental acts unconstitutional during the Holmesian era, as opposed to the formalist era, the basic concept of the judicial power to engage in judicial review remained as a matter of settled law. The main contribution of Holmesian jurists to the concept of judicial review was Holmesian Justice Brandeis’ statement in *Ashwander v. Tennessee Valley Authority* of seven basic principles of prudence that should be used to guide judicial review. Although these prudential principles are adopted by judges in each of the four decisionmaking styles, and *Ashwander* was decided in 1936 at the end of the formalist era, just predating the dawn of the Holmesian era, the principles are most consistent with the Holmesian focus on judicial restraint and deference to government. These *Ashwander* prudential principles state that the Court:

1. will not pass upon the constitutionality of legislation in a friendly, nonadversary case, because to decide such questions “is legitimate only as a last resort, and as a necessity in the determination of real, earnest, and vital controversy between individuals.”
2. will not “anticipate a question of constitutional law in advance of the necessity of deciding it.”
3. will not “formulate a rule of constitutional law broader than is required by the precise facts to which it is to be applied.”
4. will not pass upon a constitutional question although properly presented by the record, if there is also present some other ground upon which the case may be disposed of.
5. will not pass upon the validity of a statute upon complaint of one who fails to show that he is injured by its operation.
6. will not pass upon the constitutionality of a statute at the instance of one who has availed himself of its benefits.
7. “When the validity of an act of the Congress is drawn in question, and even if a serious doubt of constitutionality is raised, . . . will first ascertain whether a construction of the statute is fairly possible by which the question may be avoided.”38

An additional principle of judicial restraint suggests:

8. the Court should be willing to remand cases to lower federal courts if further factual development is necessary for a truly informed decision on constitutionality to be made.39

§ 17.1.3.3 Judicial Review During the Instrumentalist Era: 1954-1986

The instrumentalist Court between 1954 and 1986 remade many areas of constitutional law by frequent use of the power to declare unconstitutional both federal and state laws. The Court in those 33 years invalidated more than 50 congressional acts in whole or in part, beginning in 1954 when holding that Congress may not operate racially segregated schools in the District of Columbia.\(^4\) Of course, the Court also applied the *Marbury* principle of judicial review to executive branch action, including action of the President, and to action by states, including state legislatures and Governors. Many of these cases involved civil rights challenges to government action, or involved the rights of criminal defendants. This is consistent with the instrumentalist predisposition toward judicial review, discussed at § 11.2.1.2 nn. 17-20, which views the Court as a protector of the unempowered in society, with a special focus on civil liberties protections in the Constitution.

§ 17.1.3.4 Judicial Review During the Modern Natural Law Era: 1986-Today

The pace of invalidating federal laws has ebbed during the current period of domination by modern natural law Justices, and the emphasis has shifted from the heightened instrumentalist concern over civil rights to a concern with structural matters as well. For example, as discussed at § 17.2.4.2, the modern Court has invalidated a number of congressional statutes that attempted to abrogate state 11th Amendment immunity by authorizing civil actions against states as a means of enforcing the 14th Amendment. The Court found in each case that Congress exceeded its enforcement power because it had not sufficiently identified state violations of the 14th Amendment. As discussed at § 18.2.5, the Court has found unconstitutional statutes held to exceed Congress’ Commerce Clause power.\(^4\)

Based on the practice of 200 years of legislative and executive acquiescence, and uniform Court precedents, the doctrine of judicial review is firmly established in the law today. Under this doctrine, courts may declare a law invalid "on its face," so that it cannot be applied to any fact situation, or declare the law "invalid as applied" to a particular fact situation. The Court has expressed a preference for first considering an "as applied" challenge, since that enables courts to

\(^4\) *See, e.g.*, United States v. Nixon, 418 U.S. 683 (1974) (the President does not have an absolute claim of confidentiality for all communications).

\(^4\) *See, e.g.*, Brown v. Board of Educ., 347 U.S. 483 (1954) (state mandated segregated schools unconstitutional); Cooper v. Aaron, 358 U.S. 1 (1958) (the Governor of Arkansas must comply with *Brown v. Board of Education*).

avoid making unnecessarily broad constitutional judgments. This issue of “as applied” versus “facial” challenges is discussed at § 17.4.1.

Given the past 200 years of case decisions since *Marbury*, the possibility is remote of limiting the doctrine of judicial review to tripartite situations. Indeed, in 1990, that possibility was at least impliedly repudiated. In *United States v. Munoz-Flores*, the government contended, and Justices Stevens and O’Connor agreed, in accord with the tripartite theory, that the Court should not engage in judicial review of questions arising under the Origination Clause, which requires that all bills for raising revenue shall originate in the House of Representatives. They reasoned that the House could guard against Senate intrusion on its power by simply refusing to pass any revenue bill that originated in the Senate. However, the majority rejected even this remnant of tripartite theory. It held that judicial review should insure that a law complies with all relevant constitutional limits, including matters of procedure. Applying this theory, the majority held that the Origination Clause did not apply since the challenged law was not one for raising revenue. Concurring, Justice Scalia concluded that an enrolled bill's indication of the house of origin should be accepted, because a judicial inquiry would manifest lack of respect due a coordinate branch and produce uncertainty, a particular concern of formalist judges. Here there was no problem since the law was enrolled as H.J. Res. 648.

§ 17.1.4 Evaluation of Judicial Review

Evaluating judicial review remains a relevant exercise because a contemporary judge who has doubts as to the legitimacy or social benefit of judicial review may be less inclined to invalidate a particular law or its application. Chief Justice Marshall’s use of purpose and structural arguments in *Marbury v. Madison*, combined with the force of practice and precedent, should have strong appeal to contemporary judges who, like Marshall, bring a natural law approach to the decision of cases. As Justice Kennedy noted in the context of justifying the Supreme Court’s intervention in the 2000 Presidential election in *Bush v. Gore*, “Sometimes you just have to step up to the plate.” Professor Herbert Wechsler, a distinguished contemporary scholar, stated, "Let me begin by saying that I have not the slightest doubt respecting the legitimacy of judicial review, whether the action called in question in a case which otherwise is proper for adjudication is legislative or executive, federal or state." A number of his contemporaries have agreed, in such words as these:

---

46 495 U.S. 386, 403-08 (1990) (Stevens, J., joined by O’Connor, J., concurring in judgment).
47 *Id.* at 401.
48 *Id.* at 408-10 (Scalia, J., concurring in the judgment).
49 Newsweek, *Cover Story: The Secret Vote That Made Bush President* (Sept. 9, 2001) (quoting a remark by Justice Kennedy in a meeting at the Supreme Court with Russian judges).
The grant of judicial power was to include the power, where necessary in the decision of cases, to disregard state or federal statutes found to be unconstitutional. Despite the curiously persisting myth of usurpation, the Convention's understanding on this point emerged from its records with singular clarity.51

The approach also has instrumentalist appeal because it gives the courts the wherewithal to protect individual liberty, free speech, political processes, minorities, and individual freedoms. It is thus consistent with liberal instrumentalist views regarding sound social policy. Professor Laurence Tribe has said that by debating our fundamental values and deepest differences in the shared language of constitutional rights and responsibilities, the possibility is created for persuasion and moral education in national life.52 Dean Jesse Choper has said that the Court can use its power to secure individual liberty by protecting individuals from overexpansive uses of governmental power.53

From a social policy perspective, one negative aspect of judicial review on constitutional grounds is that it can produce long delays in learning whether a law is valid, and it is possible that certain cases may not be presented by the most able advocates. Also, the Supreme Court, a non-democratic body, may impede an enlightened democratic consensus, a matter that concerned President Lincoln. Furthermore, the Supreme Court has not always used its power wisely, as is indicated by cases such as Dred Scott v. Sandford, Plessy v. Ferguson, Lochner v. New York, and Hammer v. Dagenhart.54 Perhaps not surprisingly, each of these cases advanced the interests of dominant white propertied or corporate interests, the segment of society from which most Supreme Court Justices have typically been drawn. The possibility of judicial review may also result in Congress passing constitutional questions to the Court rather than giving the questions full consideration in the legislative chamber.

These kinds of considerations have a led a number of progressive theorists to become increasingly skeptical of judicial review, particularly given a Supreme Court majority since 1991 of 5 more conservative jurists, as indicated in a number of 5-4 opinions regarding states’ rights and federalism issues under the 10th and 11th Amendments, discussed at §§ 17.2.4 & 18.4.5; cutting back on various forms of aggressive affirmative action, as in Richmond v. J.A. Croson Co. and Gratz v. Bollinger,

54 Dred Scott, 60 U.S. (19 How.) 393 (1857) (in dicta, Missouri Compromise of 1820 limiting slavery to the South unconstitutional, among other flaws), discussed § 25.1; Plessy, 163 U.S. 537 (1896) (racial segregation of railroad cars not a violation of equal protection), discussed § 26.2.1.1.B; Lochner, 198 U.S. 45 (1905) (limit on baker’s working hours invalid as an unreasonable restraint on liberty of contract), discussed § 27.3.2.1; Dagenhart, 247 U.S. 251 (1918) (Congress lacks the power to ban from interstate commerce products manufactured using child labor), discussed § 18.2.2.
discussed at § 26.2.1.4; and the 5-4 decision in *Bush v. Gore*, discussed § 26.5.3. Prominent among such commentators sharing this concern is Professor Mark Tushnet. Professor Tushnet has noted a number of alternative forms of judicial review to that of *Marbury v. Madison*, and has proposed moving away from *Marbury*’s “court-centered” approach in favor of “populist” interpretation by citizens and elected government officials.55 Other progressive commentators have also focused on this problem, as have the proponents of deliberative democracy.56

With regard to judicial review, Holmesian jurist Dean John Hart Ely noted that judicial review can help create democracy by sustaining our political process in a variety of ways, such as removing impediments to free speech, publication, and political association, and by striking down discrimination against certain classes of voters,57 as noted at §§ 10.2.1.2 & 10.3.2. However, given Holmesian deference, Court review should be limited. As Justice Frankfurter, citing 19th-century Harvard Law School Professor Thayer, noted in *West Virginia State Board of Education v. Barnette*:

> Let [courts] consider how narrow is the function which the constitutions have conferred on them – the office merely of deciding litigated cases; how large, therefore, is the duty intrusted to others, and above all to the legislature. It is that body which is charged, primarily, with the duty of judging of the constitutionality of its work.58

In the same case, Justice Frankfurter also cited a passage from Holmes, stating, “When Mr. Justice Holmes, speaking for this Court, wrote that ‘it must be remembered that legislatures are ultimate guardians of the liberties and welfare of the people in quite as great a degree as the courts,’ . . . he went to the very essence of our constitutional system and the democratic conception of our society.”59 Professor Lino Graglia has similarly written that courts should not be public policy makers in society.60

58 319 U.S. 624, 669 (1943) (Frankfurter, J., dissenting), citing James Bradley Thayer, John Marshall 104-10 (1901).

59 Id. at 649, citing Missouri, Kansas & Texas R. Co. v. May, 194 U.S. 267, 270 (1904).

Formalist jurists should have a little more difficulty with the doctrine of judicial review, because the doctrine has no explicit grounding in literal constitutional text. Some formalist commentators have questioned Marbury and what it says about judicial review. For example, Professor Michael Paulsen has stated that Marbury does not stand for a robust theory of judicial review, and that to the extent it says anything about judicial review it mandates strict, textual construction of the Constitution. Professor Paulsen’s basic argument was that Marbury stands for the tripartite theory of judicial review. Further, adopting the extreme formalist theoretical position that rejects the binding force of precedent, discussed at § 4.3.1, Professor Paulsen rejected the influence of 200 years of constitutional precedents since Marbury. Professor Paulsen also stated that Marbury implicitly supported a formalist, static, textualist model of constitutional interpretation.61

As discussed at §§ 8.4.1, 12.1 & 12.3.3, as an historical matter it is difficult to claim that the framers and ratifiers predominantly believed in a formalist theory of constitutional interpretation. This is true despite the fact that, as discussed at § 12.2.1.3 nn.25-30, Chief Justice Marshall’s opinions were more “textualist” than later natural law opinions, which involve more historical “originalism.” Given this reality, even if, as noted at § 17.1.2.1 text following n.17, Marbury could be read in the narrower sense of supporting a tripartite theory of judicial review, under a natural law theory of interpretation, as discussed at §§ 12.2.2.1-12.2.2.2, the 200 years of legislative, executive, and social practice and judicial precedent supporting the broader reading of Marbury fix the broader theory of judicial review as authoritative today. This would be true under the natural law theory of interpretation even if one believes, likely erroneously, that Professor Paulsen, as opposed to Professors Prahesh and Yoo, has a better sense of what text, context, and history reveal about judicial review and the 1803 decision in Marbury.

From the perspective of the eras of societal development, discussed at § 15.4.1, the customs and traditions of any society at Stages 3 and 4 will determine whether that society has any form of judicial review. Given our Nation’s history, the customs and traditions have been more in favor of judicial review, although occasional attempts to limit, or alter, our form of judicial review have been made, such as Senator Robert La Follette’s proposal in 1922 to let 2/3 of both Houses of Congress overrule Supreme Court decisions invalidating federal statutes, or numerous proposals both before and after the Civil War to require supra-majority votes on the Supreme Court to hold statutes unconstitutional, such as a 2/3 majority, or 7 of 9 Justices, or unanimity.62 It has also been suggested that Justices should have fixed terms of office, such as 15 years, rather than life-time appointments, in order to minimize Supreme Court independence.63 The importance of life-tenure in terms of the independence of the federal judiciary has often been noted. Indeed, “[O]ne of the valuable things

courts do is make unpopular decisions that stick: decisions protecting the rights of minorities or preserving structural features of the Constitution that frustrate the majority's will but have long-run benefits.”

In contrast, societies based on the reasoned logic of formal operational thought, such as Stages 5 and 6, are more likely to evolve some form of robust judicial review. This is because, as Alexander Hamilton observed in The Federalist No. 78:

The executive not only dispenses the honors, but holds the sword of the community. The legislature not only commands the purse, but prescribes the rules . . . . The judiciary on the contrary has no influence over either the sword or the purse . . . . It may truly be said to have neither Force nor Will, but merely judgment . . . . It is far more rational to suppose that the courts were designed to be an intermediate body between the people and the legislature, in order, among other things, to keep the latter within the limits assigned to their authority. The interpretation of the laws is the proper and peculiar province of the courts.

The precise form of judicial review will naturally depend initially on the customs and traditions from which a society is evolving. Societies without a tradition of judicial review, such as most European countries, have tended to develop judicial review in the 20th century through the form of special constitutional courts, which resolve constitutional issues when referred to them by “elected politicians or ordinary judges,” rather than as part of ordinary judicial practice in the court system, as in America. Of course, the exact structure and design of these courts varies from country to country, including the provisions for service on the court, which in other countries have rejected life-tenure for judges in favor of fixed terms, in Europe typically between 6-12 years.

The development of this form of judicial review, with the practice of European courts typically having the power to issue advisory opinions based on issue referral, is elaborated in an article by Professor Alec Sweet entitled, Why Europe Rejected American Judicial Review – And Why it May Not Matter. As Professor Sweet discussed, over time constitutional review in Europe and the United States have tended to merge, since “ordinary” judges in Europe “now engage in a great deal of constitutional interpretation and review”; European constitutional courts “routinely determine

---

outcomes, just as any [American] court with general appellate jurisdiction”; and American courts are more willing today, as European constitutional courts have always been willing, to engage in the “abstract” review of legislation “prior to its application or enforcement,” typically through the power to issue declaratory judgments, discussed at § 17.3.2 nn.490-96.

At the beginning of the 21st century, only a few Western industrialized countries, such as New Zealand and Australia, have no real form of judicial review. Canada has judicial review, subject to a limited legislative override in the “notwithstanding clause” of § 33 of the Canadian Charter of Rights and Freedoms – a clause, however, which as of 2006 had never been used. England has judicial review to ensure conformity of parliamentary enactments with European Union laws, such as the European Convention on Human Rights. De Tocqueville’s famous observation in 1835 that in America “every political question becomes a judicial question” is increasingly true for all Western industrialized countries under developing doctrines of judicial review.

Regarding the nature of adjudication in these countries, Professor Thomas Grey has noted:

Modern rights typically are phrased in terms of broad moral concepts – for example, the right of human dignity was made the central organizing value in the German Constitution, and the prestige of that constitution, and of the German Constitutional Court in implementing it, have made that "dignity clause" particularly influential for other constitutional regimes around the world. . . . In several instances, courts have found the authority to articulate and enforce a body of unwritten constitutional rights, most notably in the European Court of Justice's determination that European Union legislation is implicitly subject to a body of general human rights drawn from the common traditions of the member states. . . .

[Further] is a cluster of phenomena usefully grouped under the label "judicial globalization." In Europe, the treaties establishing the European Union, and the European Convention on Human Rights agreed to by members of the Council of Europe, have taken on higher-law status within the domestic law of European states, and the European Court of Justice and the European Court for Human Rights have increasingly exercised active judicial review powers over trade and human rights law respectively. . . . Systems that come relatively late to strong judicial review, like the Eastern European countries after 1989, and the democratizing countries in Asia during the 1990s, find an established international style of constitutional and human rights adjudication ready for adoption. Human rights provisions are often borrowed from existing constitutions and conventions in the drafting of new ones, and this makes it natural for courts of different countries to cite each other's decisions, thus furthering the emergence of a new jus gentium of human rights. Judges increasingly meet with each other across national lines to discuss their work, and this creates more avenues for transmitting judicial techniques and doctrines that have proved successful and prestigious, for building judicial esprit de corps, and encouraging newer or less secure constitutional judiciaries to imitate the confident exercise of

---

This Stage 6 style of natural law decisionmaking focused on universal principles of human rights has naturally been criticized by Stage 4 formalists, both on the static constitution model ground that at the founding Americans and Europeans had very different notions of constitutional democracy then, as Justice Scalia has noted, and by other formalists, such as Professor John Yoo, on the ground that the United States should not be in sync with Europe in moving in the direction of a Stage 6 society based on “laws and rules and transnational negotiation and cooperation,” but rather should advance a vision more in line with “power politics,” a Stage 4 vision reminiscent of the McKinley era of “Manifest Destiny,” as discussed at § 14.4 n.120.

Use of international norms in this Stage 6 way is different than traditional interactions between domestic courts and international legal bodies. Given increasing globalization of commerce and travel, these traditional interactions have increased greatly over the past 25 years. It has been noted:

Talk of globalization is everywhere, but it still comes as a surprise to many lawyers and scholars who do not specialize in international law to learn that there are now more than fifty international courts, tribunals, and quasi-judicial bodies, most of which have been established in the past twenty years. More legal professionals are aware, at least in some general way, that a large volume of disputes are resolved through binding international arbitration. National courts, too, are increasingly being called upon to apply international law and to interact with these international courts and with the courts of other nations.

Consider a handful of recent cases. The World Trade Organization Dispute Settlement Body considers whether U.S. regulations designed to protect endangered sea turtles violate free trade rules. The U.S. Supreme Court considers whether to stay the execution of foreign citizens at the request of the International Court of Justice. A French court decides whether it has the power to regulate websites in the United States that violate French law but are protected by the First Amendment to the U.S. Constitution. The International Criminal Tribunal for the former Yugoslavia considers whether to follow a precedent of the International Court of Justice on the issue of state responsibility for war crimes. . . . Each case represents a facet of an emerging and interconnected international judicial system of trans substantive rules of process and procedure that govern relationships among courts involved in international adjudication.

---

Prudentially, the practice of judicial review as it has evolved in most Stage 5 and 6 Western industrialized democracies seems sound. Under a tripartite model of review, as Professor Paulsen has stated, there would be a “constitutional world in which multiple actors [courts, legislators, executives, in federal and state governments], exercising their independent interpretive power, strive in good faith to check one another and hold each other to the meaning of the words of the Constitution’s text, and to guard against departures from the nation’s paramount law by any of the branches or organs of the federal or state government. What a wonderful, wonderful world that would be.” 71 Contrary to this view, the conclusion reached by most governments in practice has been that such a vision would be a recipe for anarchy and chaos. Someone needs to have a final say on what is constitutional, and a Supreme Court is better suited than other constitutional actors because of its independence, detachment from politics, and tradition of reasoned decisionmaking. Further, judicial review encourages legislatures to consider the legitimacy of their goals, the extent to which a law's means relate to its goals, and the extent to which a law may interfere with individual or state rights, as they know their actions will be reviewed by courts. Finally, judicial review tends to insure against legislative omnipotence and executive abuses of power, and, thus, protects liberty. 72

As practiced in the United States, judicial independence is aided by lifetime appointment and a prohibition against diminished compensation. The Court, in turn, is checked by the manner in which its members are appointed, by Congress’ power over its jurisdiction and its size, and by the threat of impeachment. Further, judicial decrees must be enforced by the executive branch. If the executive branch threatens to break the law, the Court may check its activity, as the Court did with respect to President Nixon when it required him to turn over the Watergate tapes in United States v. Nixon, discussed at § 20.1.4.2. A threat of impeachment led the President to resign. Judicial review thus complemented Congress’ impeachment power to prevent a threat of tyranny.

Study of the cases indicates that although there have been a number of unfortunate Supreme Court decisions, the long-run systemic consequences for the Nation of the Marbury v. Madison approach to judicial review have been more positive than negative. The most significant result is that constitutional questions are subjected to a deliberative process with several levels of review and a tradition of reasoned decisionmaking, a result consistent with a Stage 6 commitment to the elaboration of rational principles of justice through the rule of law.

§ 17.2 The Jurisdiction of the Federal Courts

To bring an action successfully in a federal court, certain conditions must exist. These include: (1) (a) a case or parties falling within the Constitution’s grant of federal judicial power, which is not

71 Paulsen, supra note 61, at 2742.

barred by the 11th Amendment principle of state sovereignty, or the Fifth Amendment requirement of due process, plus (b) a jurisdictional statute authorizing federal court jurisdiction, with the exception of the Supreme Court’s grant of original jurisdiction which requires no congressional authorization; (2) one of the plaintiffs having standing, plus no reason for the court to decline an exercise of jurisdiction, that is, the justiciability issues of ripeness, mootness, and the political questions doctrine; and (3) a valid cause of action. This first of these issues is explored in the remainder of § 17.2. The second issue is explored in § 17.3. The third issue is explored in § 17.4.

§ 17.2.1 Federal Jurisdiction: What Article III Provides

Article III defines the nature of the federal judicial power. It has a number of provisions. First, Article III, § 1 includes a general grant of power: “The judicial power of the United States is granted to the Supreme Court and such inferior courts as Congress, from time to time, may establish.”

Second, Article III, § 2, cl. 1 provides that this power extends to all “Cases,” defined by subject matter or impact: (1) “arising under this Constitution, the Laws of the United States, and Treaties made”; (2) “affecting Ambassadors, other public Ministers and Consuls”; or (3) “admiralty and maritime Jurisdiction.” Article III, § 2, cl. 1 also extends federal judicial power to all “Controversies,” defined by parties, to which: (1) “the United States shall be a party”; or (2) between (a) “two or more States”; (b) “a State and Citizens of another State”; (c) “Citizens of different States”; (d) “Citizens of the same State claiming Lands under Grants of different States”; or (e) “a State, or the Citizens thereof, and foreign States, Citizens or Subjects.”

Third, Article III, § 2, cl. 2 provides that the Supreme Court has original jurisdiction over cases (1) “affecting Ambassadors, other public Ministers and Consuls,” and (2) “those in which a State shall be a Party.” In “all the other Cases before mentioned, the supreme Court shall have appellate jurisdiction, both as to Law and Fact, with such Exceptions, and under such Regulations as the Congress shall make.”

Commentators have sometimes proposed drawing distinctions between “cases” and “controversies.” This has included distinctions like “cases” involve civil and criminal actions, while “controversies” only involve civil actions; or “cases” involve judicial exposition of the law, while “controversies” merely require the judge to act as a neutral decisionmaker to resolve the case; or Congress cannot both limit lower federal court jurisdiction and Supreme Court jurisdiction over “cases” so as to give state courts the last word on such issues, but can exercise both powers over “controversies.”

In contrast, the Supreme Court has never drawn any such distinction between the two terms. Similarly, the framers never drew any distinction in using the phrase “all the other Cases before

---

mentioned” to refer to both “cases” and “controversies” in the “Exceptions” Clause of Article III, § 2, cl. 2, cited above. It is universally accepted that the Court’s appellate jurisdiction applies to all the disputes listed as “cases” or “controversies” in Article III, § 2, cl. 1, despite the “Exceptions” Clause only using the word “Cases” to describe them. Following that practice, this book will use the word “cases” to include all the disputes listed as “cases” or “controversies” in Article III.

§ 17.2.2 Types of Cases for Which Federal Jurisdiction Exists

§ 17.2.2.1 Constitutional Litigation Initiated in Federal Courts

Article III provides for litigation initiated in the federal court in two kinds of cases. First, there are cases of original jurisdiction to bring the case initially in the Supreme Court. Second, and most often, there is jurisdiction to bring the case in the lower federal courts, with a statutory right to appeal to the Supreme Court.

A. Original Jurisdiction in the Supreme Court

Original jurisdiction is granted to the Supreme Court under Article III, § 2, cl. 2 in “all cases affecting Ambassadors, other public Ministers and Consuls, and those in which a State shall be a Party.” The interpretation of this provision was at the heart of the constitutional issue addressed in Marbury v. Madison, where the doctrine of judicial review was established. The facts in Marbury v. Madison are relatively simple. As summarized by Professor Erwin Chemerinsky:

On February 27, 1801, less than a week before the end of [President] Adams’s term, Congress adopted the Organic Act of the District of Columbia, which authorized the President to appoint 42 justices of the peace. Adams announced his nominations on March 2, and on March 3, the day before Jefferson’s inauguration, the Senate confirmed the nominees. Immediately, Secretary of State (and Chief Justice) John Marshall signed the commissions for these individuals and dispatched his brother, James Marshall, to deliver them. A few commissions, including one for William Marbury, were not delivered before Jefferson’s inauguration. President Jefferson instructed his Secretary of State, James Madison, to withhold the undelivered commissions.

William Marbury filed suit in the United States Supreme Court seeking a writ of mandamus to compel Madison, as Secretary of State, to deliver the commission. A writ of mandamus is a petition to a court asking it to order a government officer to perform a duty. Marbury claimed that the Judiciary Act of 1789 authorized the Supreme Court to grant mandamus in a proceeding filed initially in the Supreme Court. Although Marbury’s petition was filed in December, 1801, the Supreme Court did not hear the case until 1803 because Congress, by statute, abolished the June and December 1802 Terms of the Supreme Court.74

74 Erwin Chemerinsky, Constitutional Law 1-2 (2d ed. 2005). Congress did provide for one Justice to hear procedural matters in August, 1802. That August Term was held each year until Congress abolished it in 1839. Ross E. Davies, A Certain Mongrel Court: Congress’s Past Power and Present Potential to Reinforce the Supreme Court, 90 Minn. L. Rev. 678, 688-705 (2006).
At the time, the relevant provision of the Judiciary Act, § 13, provided:

And be it further enacted, That the Supreme Court shall have exclusive jurisdiction of all controversies of a civil nature, where the state is a party, except between a state and its citizens; and except also between a state and citizens of other states, or aliens, in which latter case it shall have original but not exclusive jurisdiction. And shall have exclusively all such jurisdiction of suits or proceedings against ambassadors, or other public ministers, or their domestics, or domestic servants, as a court of law can have or exercise consistently with the law of nations; and original, but not exclusive jurisdiction of all suits brought by ambassadors or other public ministers, or in which a consul, or vice consul, shall be a party. And the trial of issues of fact in the Supreme Court, in all actions at law against citizens of the United States, shall be by jury. The Supreme Court shall also have appellate jurisdiction from the circuit courts and courts of the several states, in cases herein specially provided for; and shall have power to issue writs of prohibition to the district courts, when proceeding as courts in admiralty and maritime jurisdiction, and writs of mandamus, in cases warranted by the principles and usages of law, to any courts appointed, or persons holding office, under the authority of the United States.75

The most natural reading of this statute, consistent with the context of the mandamus provision among the related provisions in § 13, would be that the Supreme Court’s mandamus power exists only as a part of the Court’s appellate jurisdiction. The first half of § 13 deals with the original jurisdiction of the Supreme Court for cases involving states, ambassadors, and other public ministers and consuls. The last part of § 13, where mandamus is mentioned, deals with appellate jurisdiction regarding circuit courts, state courts, and writs of prohibition to district courts in admiralty and maritime cases originally brought in district courts. Under this reading, Marbury’s attempt to bring a mandamus action originally in the Supreme Court should fail as a matter of statutory interpretation, unless the case could be viewed as involving an aspect of appellate jurisdiction.

Marbury’s attorney did note in the oral argument before the Supreme Court that perhaps the case did involve appellate jurisdiction, since the Court was reviewing Marbury’s appeal from the actions of a government official, James Madison, in refusing to deliver him his commission. Chief Justice Marshall rejected this characterization in Marbury, stating, “It is the essential criterion of appellate jurisdiction, that it revises and corrects the proceedings in a cause already instituted, and does not create that cause. Although, therefore, a mandamus may be directed to courts, yet to issue such a writ to an officer for the delivery of a paper, is in effect the same as to sustain an original action for that paper, and therefore seems not to belong to appellate jurisdiction, but to original jurisdiction.”76

Chief Justice Marshall avoided reading § 13 as authorizing mandamus only as a matter of appellate jurisdiction by citing only the language dealing with mandamus in the last part of § 13, without regard to its context in the entire provision. By focusing on the mandamus clause, Marshall could

---

76 Marbury v. Madison, 5 U.S. (1 Cranch.) 137, 147-48 (1803) (attorney’s argument); id. at 175-76 (Chief Justice Marshall’s response).
correctly state that *Marbury* was a case where mandamus would be the appropriate remedy, and by reading the statute to authorize a petition for mandamus to be brought originally in the Supreme Court if mandamus were proper, Marshall was able to create a conflict between § 13, so interpreted, and the limited grant of original jurisdiction in Article III, § 2, cl. 2 of the Constitution to cases involving ambassadors, other public ministers and consuls, and states.

By creating a constitutional issue, Marshall was able to use *Marbury v. Madison* to establish the doctrine of judicial review, discussed at § 17.1.2.1. Given this result, it has always been a matter of some speculation whether *Marbury* was conceived by the Court as a vehicle to establish judicial review only after the case was filed, or whether from the very beginning the case was “set up” by Marbury to provide Chief Justice Marshall and the Court with an opportunity to use the case to establish the doctrine of judicial review. The case was filed by Marbury in December, 1801, over seven months after his commission was not delivered by Jefferson’s Secretary of State, James Madison. By this time, Marbury already had another government position in Maryland, due to his long-time friends in that state. Marbury could likely have filed his mandamus petition in the Circuit Court of the District of Columbia, and then appealed to the Supreme Court if met with an unfavorable ruling in that court. In theory, after *Marbury v. Madison*, Marbury could have re-filed in that district court, which he refused to do. These facts all suggest that Marbury was not really interested in obtaining the justice of the peace position, but filed the case for other reasons. Indeed, Chief Justice Marshall seemed to acknowledge the possibility that the case could have been brought first in a lower federal court, when he stated in *Marbury* that finding jurisdiction was not “necessary in a case such as this to enable the court to exercise its appellate jurisdiction.”

More generally, the Federalist-dominated Supreme Court, and the Jefferson Administration and its supporters who controlled a majority in the House and Senate, were at loggerheads on many issues at the time. Many Federalists were concerned about the possible “radicalism” of the new Jefferson Administration, particularly against the backdrop of Jefferson’s sympathy for the French Revolution, despite the associated “Terror.” With respect to judicial matters, the Adams Administration, in its final days, had enacted the Judiciary Act of 1801, which created 6 new circuit courts, staffed by 16 new judgeships; eliminated the Justices’ duty to serve as circuit judges and “ride circuit”; and reduced the size of the Court in the future from six to five, in order to limit opportunities by the incoming Jefferson Administration to fill any later vacant Supreme Court positions.

The Jefferson Administration repealed the Act in 1802. Both the requirement of “circuit riding” by the Justices and the repeal of the new circuit judgeships were challenged as unconstitutional in 1802, but no decision could be reached until 1803, as the Supreme Court Terms in 1802 were abolished by Congress. The Justices during 1802 had to decide whether to begin “riding circuit” again, or risk impeachment if they did not. Eventually, given the political realities, the Court members did agree to “ride circuit” again. At the time, this duty, while burdensome in terms of travel, would not have compromised the ability of Justices to decide cases before the Supreme Court, as the Supreme

---

77 *Id.* at 176. Regarding these speculations about *Marbury*, see generally Susan Low Bloch, *The Marbury Mystery: Why Did William Marbury Sue in the Supreme Court?*, 18 Const. Comment. 607 (2001), and sources cited therein.
Court’s docket in the early years was often less than 10 cases each Term. 78 The constitutional challenge to repeal of the Act – principally that removing judges who had been appointed to the now-repealed judicial positions violated the life tenure provision of Article III – was rejected in Stuart v. Laird, 79 decided one week after Marbury. In this climate, Marbury can be seen as a warning to Jefferson that attempts at radicalism would be met with some Supreme Court response. 80

The Court’s opinion in Marbury is distinctive in at least three respects. First, Marshall used the first half of the opinion to scold the Jefferson Administration for wrongly refusing to deliver Marbury’s commission, even though normal judicial practice, once a Court determines it has no jurisdiction, is to refuse to comment on the merits of the case. 81 This aspect of the opinion apparently infuriated Jefferson and his supporters, both on the ground that Jefferson believed, as for gifts or deeds, that delivery was essential for the commission to be valid, and on the grounds that this part of the decision, given the conclusion on jurisdiction, was clearly obiter dicta. 82 Second, the normal judicial practice is to read statutes, if possible, to avoid constitutional problems, rather than reach out, as in Marbury, to create a constitutional problem. 83 Finally, under contemporary standards of conflict of interest, Marshall should not have sat on the case, since it was his own behavior as Adams’ Secretary of State in failing to ensure delivery of Marbury’s commission that was at issue. 84

Additional aspects of Marbury also deserve comment. First, under a literal interpretation of Article III, there would perhaps be original jurisdiction for Marbury’s mandamus plea, since his case, brought against Madison as Secretary of State, did involve a case affecting a “public minister” of the United States. The related use of the language “Ambassadors, other public ministers or consuls, Justices of the Supreme Court, or other officials” in the Appointments Clause, Article II, § 2, cl. 2, suggests that Secretaries of Cabinet Departments are “public ministers” for purposes of that Clause, although perhaps “public ministers” in the Appointments Clause, like “consuls,” refers only to United States diplomats, and Cabinet Secretaries are covered by the “other officials” language. However, Marbury’s attorney did refer to Madison as a “public ministerial officer” in his oral

79 5 U.S. (1 Cranch.) 299, 308 (1803).

81 See, e.g., Louisville & N.R. Co. v. Mottley, 211 U.S. 149, 151-54 (1908).

83 See Ashwander v. Tennessee Valley Auth., 297 U.S. 288, 348 (1936) (“ascertain [if] a construction . . . is fairly possible by which the [constitutional] question may be avoided.”).

argument before the Supreme Court, suggesting that such a characterization of Madison was viewed as plausible by Marbury’s attorney.⁸⁵

This possible argument was not mentioned by the Court in Marbury because the purpose of granting original jurisdiction to cases involving “Ambassadors” and “other public Ministers and Consuls” in Article III relates to “foreign” ambassadors or public ministers who are serving in the United States in a diplomatic capacity, not United States officials. To encourage such foreigners to serve in the United States, they are given the protection of having their cases heard directly by the Supreme Court. This purpose emerges from the text of § 13 which, as cited at § 17.2.2.1.A n.75, defined such cases as involving “ambassadors, or other public ministers, or their domestics, or domestic servants, as a court of law can have or exercise consistently with the law of nations.” The “law of nations” refers to international law, and its rules regarding, among other things, diplomatic immunity. The reference to “domestic servants” indicates the provision encompasses all those persons serving as part of the country’s diplomatic mission. Section 13 states that cases brought against such diplomats must be brought in the Supreme Court, while giving such diplomats the option of suing either in district courts or the Supreme Court if the diplomat is the plaintiff. The contemporary version of § 13 makes this point clear, stating that the original jurisdiction of the Court extends to “actions or proceedings to which ambassadors, other public ministers, consuls, or vice-consuls of foreign states are parties.”⁸⁶ This example, however, underscores the dangers of a literal approach to interpretation, and the wisdom of considering a provision's purpose.

A second aspect of Marbury concerns an alternative interpretation of § 13 that might make Marshall’s interpretation of the section more plausible. This interpretation involves noting that the last two clauses of § 13 concern Supreme Court “power” to issues writs of prohibition and writs of mandamus, while the earlier provisions in § 13 speak to the Court’s “jurisdiction.” Under this view, the prohibition and mandamus provisions are not about jurisdiction, but merely confirm that the Court has the power to issue such writs whenever, from other sources of law, jurisdiction exists.⁸⁷

Under one variation of this argument, Marshall would still have misread § 13, as the earlier provisions in § 13 only give the Supreme Court original jurisdiction in cases involving ambassadors, other public ministers and consuls, and those in which a state shall be a party. Consistent with this view, Congress clarified this aspect of § 13 after Marbury, amending § 13 to provide that the Supreme Court’s mandamus power over executive officials only exists over “persons holding office under the authority of the United States, where a State, or embassador [sic], or other public minister, or consul or vice-consul is a party.”⁸⁸ For cases involving other executive officials, mandamus would have to issue from a lower court, with the Supreme Court policing that use by its appellate jurisdiction in § 13 “from the circuit courts and courts of the several states, in cases herein specially

⁸⁸ Id. at 456.
provided for” and its § 13 power to issue “writs of mandamus, in cases warranted by the principles and usages of law, to any courts appointed . . . under the authority of the United States.”

With respect to lower state courts, the Supreme Court held in 1821 on grounds of intergovernmental immunity that state courts could not grant writs of mandamus against federal officials. The doctrine of intergovernmental immunity is also reflected in § 13 which provides for Supreme Court mandamus against courts only to “any court appointed . . . under the authority of the United States,” not state courts. With respect to federal district courts, the Court also held in 1821 that federal district courts were not authorized to issue writs of mandamus in aid of diversity jurisdiction. At the time, Congress had not granted the federal district courts general “federal question” jurisdiction, which only came in 1875. Lower federal court jurisdiction to grant mandamus actions against federal officials was thus limited to the federal Circuit Court of the District of Columbia. As the Court held in 1838, that district court could exercise mandamus jurisdiction over executive officials subject to their in personam jurisdiction over the District of Columbia. Since most top executive officials then, as now, had their offices in the District of Columbia, this one lower federal court had the power to issue writs of mandamus to federal officials to perform their ministerial acts required by law, subject to review by the Supreme Court under its grant of appellate jurisdiction.

This review was expanded by later congressional acts increasing federal district court jurisdiction and power. During the formalist era, as part of using the federal courts to advance the Republican economic agenda, discussed at § 14.2.2, Congress expanded in 1875 the jurisdiction of the district courts to include general federal question jurisdiction. During the Holmesian era, as part of the triumph of the New Deal administrative state, discussed at § 14.2.3, Congress granted the district courts power in 1946 to review administrative agency action pursuant to the Administrative Procedure Act. In 1962, as part of the instrumentalist-era focus on providing individuals with greater protection against government abuse, discussed at § 14.2.4, Congress granted all federal district courts jurisdiction “in the nature of mandamus” to compel federal officials to perform their duties.

A second variation on the view that the writs of prohibition and mandamus provisions of § 13 involved grants of “power” to the Supreme Court, and not questions of “jurisdiction,” concludes that Congress actually intended in § 13 to grant the Supreme Court general “supervisory” power to issue writs of mandamus against all federal officials, in any case whatsoever, viewing this “supervisory” power as independent of any question of original or appellate jurisdiction. This interpretation can

90 Id. at 602-03.

be supported by noting that the Court, prior to Marbury, had considered a number of mandamus cases against federal officials without even raising the question whether original or appellate jurisdiction was involved in the case. 94 Under this view, Marshall and the Supreme Court, faced with Jeffersonian opposition, retreated from this established, broader reading of the Supreme Court’s supervisory power over executive action, in favor of locating mandamus power principally in lower federal courts, subject to congressional authorization, and thus to be used only when Congress joined with the district courts to authorize such mandamus power over executive action. 95 As has been noted, “By turning the question of access over to Congress, the Court was able to draw on the support of another branch of government before taking on the executive. Giving Congress the lead also permitted a degree of legislative experimentation with different modes of action, before settling on a final institutional arrangement.” 96

This would have been particularly prudent since Jefferson so strongly believed that the President was charged with enforcement of the law, not courts pursuant to a mandamus power, that Jefferson did not even send an attorney to argue his side of the case in Marbury, but ignored the proceeding altogether. 97 Despite “backing down” on general “supervisory” judicial power, the Court could use the result in Marbury to render the grant of mandamus power in § 13 unconstitutional, thus affirming the power of judicial review. This limitation on generic judicial power, independent of a statutory grant, was mirrored in a line of cases involving the issue of a federal common law of crimes, and the federal habeas power, which culminated in 1807 in Ex parte Bollman, 98 with the Court holding that habeas jurisdiction must rest on congressional statutory authorization, and in 1812, when in United States v. Hudson & Goodwin, 99 the Supreme Court rejected any power to enforce a federal common law of crimes, resting federal criminal jurisdiction on statutory authorization alone.

96 Merrill, supra note 92, at 511.

97 See McConnell, supra note 80, at 26-30.

98 See Pfander, supra note 93, at 1599-1604, discussing, inter alia, Ex Parte Bollman, 8 U.S. (4 Cranch) 75, 94 (1807) (allowing resort to the common law to define the elements of habeas, but insisting that Congress confer the power by written law). But see Francis Paschal, The Constitution and Habeas Corpus, 1970 Duke L.J. 605, 613-17 (1970) (arguing that despite Ex Parte Bollman, the Constitution intended to give courts power to issue habeas independent of statutory authorization).

Concerning the original jurisdiction of cases involving states, § 13 indicated that only cases involving a state versus a state entity (state, federal, or foreign government) must be brought in the Supreme Court, since § 13 provided that civil cases involving a state versus citizens, whether of their own state, other states, or aliens, can be brought in the Supreme Court, but can also be brought in district courts. This reflects the view of the drafters of § 13 that Congress can authorize cases within the Supreme Court’s original jurisdiction to be brought also in lower courts, and thus make such cases part of the Supreme Court’s appellate jurisdiction, as part of Congress’ power to make “Regulations” regarding the exercise of the Supreme Court’s appellate jurisdiction.\(^{100}\)

This power was used by Congress in § 13 to permit state versus citizens cases, as well as cases brought by foreign ambassadors or public ministers, to be brought in local district courts, which geographically might make better sense in an individual case rather than requiring the case to be brought in the Nation’s capitol. At the same time, § 13 required state versus state cases and cases against foreign ambassadors or public ministers, who are likely to be domiciled in the Nation’s capitol, to be brought exclusively in the Supreme Court, again making geographic sense. Since foreign consuls and vice-consuls, as opposed to ambassadors or other public ministers, are often domiciled in cities outside the Nation’s capitol, the language in § 13 permitting any case by or against a consul or vice-consul to be brought in a district court also makes geographic sense. Given less of a geographic concern today, under the current statute, 28 U.S.C. § 1251(b)(1), there is original, but not exclusive, jurisdiction for all cases involving “actions or proceedings to which ambassadors, other public ministers, consuls, or vice-consuls of foreign states are parties” or “the United States and a State.” The only cases today that must be brought originally in the Supreme Court are states suing states.

Despite this power to authorize some cases within the Supreme Court’s original jurisdiction to be brought in district courts, Congress has no power to increase the Court’s original jurisdiction by taking cases that could otherwise be brought in local courts and transferring them to the Court. This doctrine protects litigants from having to bring such cases in the Nation’s capitol, and protects the Supreme Court from having additional cases, requiring fact-finding and possibly trials, to be added to the Court’s docket.\(^{101}\) For most cases involving the Court’s original jurisdiction today, the Court will refer the case to a special master, who will receive evidence and prepare a record,\(^{102}\) rather than the Court hearing the evidence itself. In *Marbury v. Madison*, however, the Court did sit as a trial court to hear evidence regarding the failure of Marbury’s commission to be delivered.\(^{103}\)

As of the late 1990s, the Court had decided roughly 170 original jurisdiction cases in its more than two hundred years of existence. While textually this original jurisdiction appears to be mandatory, the Court has refused to grant leave in some cases it regards as “picayune, such as when the state

\(^{100}\) See generally Pfander, *supra* note 93, at 1762-63.

\(^{103}\) See McConnell, *supra* note 80, at 26-28.
of California filed a contract action against the state of West Virginia in 1981 based on the failure of a West Virginia state university football team to play a California state team.\textsuperscript{104} As a basis for justifying refusals to hear such cases, the Court cited in \textit{Texas v. New Mexico}\textsuperscript{105} the burdens imposed by both its appellate docket and 28 U.S.C. § 1251, which the Court interpreted "as providing us with substantial discretion to make case-by-case judgments as to the practical necessity of an original forum in this Court for particular disputes within our constitutional original jurisdiction." The Court noted in \textit{Massachusetts v. Missouri}\textsuperscript{106} its qualified authority to refuse to exercise its jurisdiction, given "the broad statement that a court having jurisdiction must exercise it is not universally true."

Just as Congress cannot add cases to the Supreme Court’s original jurisdiction, there is no provision in Article III permitting Congress to remove cases from the Court’s original jurisdiction. Even with respect to the cases involving states versus individuals or cases brought by ambassadors or public ministers, Congress did not remove such cases from the Supreme Court’s original jurisdiction, but only provided that such cases could also be brought in district courts. Indeed, the Supreme Court has always held that the Court’s original jurisdiction requires no authorizing congressional statute, but is “self-executing and needs no legislative implementation” to be effective.\textsuperscript{107}

Criminal cases involving state prosecution of individuals have been held to be not part of Article III’s federal jurisdiction, despite a literal reading of Article III that would include such cases. The language in § 13 regarding “civil cases” involving states underscores that the understanding of the framers and ratifiers of the Constitution was that “criminal cases” involving state law would be brought in state courts, with federal court review only for those cases that involved related federal issues, such as whether the state prosecution complied with the United States Constitution. Such review can happen either through an appeal from a state Supreme Court to the United States Supreme Court, as the Court held in \textit{Cohens v. Virginia}, discussed at § 17.1.2.2, or by a writ of habeas corpus filed in the Supreme Court for cases involving the Court’s original jurisdiction, or in federal district courts challenging the state prosecution in other cases, discussed at § 17.2.2.2.

\section*{B. Original Jurisdiction in Lower Federal Courts}

Original jurisdiction in the lower federal courts, whether federal district courts or special courts, such as the Tax Court or Patent Court, discussed at § 17.2.3.1 nn.159-62, has always been held to depend upon congressional action, based on the language in Article III, § 1 granting Congress the power to “establish” lower federal courts and in Article III, § 2, cl.2 to make “Exceptions” and “Regulations” regarding appealing such cases to the Supreme Court. Original jurisdiction in all civil actions arising under the Constitution, laws, or treaties of the United States, so-called “federal question” jurisdiction, has been granted to federal district courts since 1875 by 28 U.S.C. § 1331. With respect to actions against state officials, 42 U.S.C. § 1983 creates a cause of action for conduct

\begin{footnotes}

\end{footnotes}
under color of state law that deprives any person of a federal right, and 28 U.S.C. § 1343(3) gives federal district courts jurisdiction to hear such cases concurrently with state courts. Attorneys’ fees are granted to prevailing parties in a number of civil rights cases, including § 1983 actions, by 42 U.S.C. § 1988.

The Judicial Code also gives federal district courts jurisdiction in many other cases, such as between parties of different states that involve more than $75,000, the diversity statute of 28 U.S.C. § 1332; admiralty and maritime cases, where there is exclusive federal jurisdiction, 28 U.S.C. § 1333; and cases where the United States is a party, 28 U.S.C. §§ 1345-46. The “amount-in-controversy” requirement to trigger diversity jurisdiction has changed over time, from $500 in the original Judiciary Act of 1789; to $400 in the Judiciary Act of 1801, that reduction repealed as part of the repeal of that Judiciary Act in 1802; $2,000 in 1887; $3,000 in 1911; $10,000 in 1958; $50,000 in 1988; and $75,000 in 1996. Under § 1332, each plaintiff independently needs to meet the “amount-in-controversy” requirement. However, the Supreme Court held in 2005 in Exxon Mobil Corp. v. Allapattah Services, Inc., that under the supplemental jurisdiction statute – 28 U.S.C. § 1367, passed in 1990, discussed at § 17.2.2.4 nn.144-45 – a federal court may exercise supplemental jurisdiction over additional plaintiffs whose claims do not satisfy the minimum “amount-in-controversy” requirement, provided the claims are part of the same case or controversy as the claims of a plaintiff who does satisfy that requirement.

The Court had held that as a matter of the constitutional grant of diversity jurisdiction in Article III, § 2, cl. 1, cited at § 17.2.1, only diversity between one party on each side – so-called, minimal diversity – is required. Using its power to make “regulations” for the federal courts, Congress has provided under 28 U.S.C. § 1332 that complete diversity is required of all plaintiffs from all defendants. A single non-diverse party can contaminate every other claim in a lawsuit and require dismissal of the action in federal court. In such cases, if one party on each side is from the same state, that state’s courts can be presumed to be “neutral” between the plaintiff’s and defendant’s side of the litigation, and thus unbiased litigation can take place in that state. In cases where the number of parties involved makes a complete diversity requirement impractical, such as for mass tort cases that qualify under the Multiparty, Multiforum Trial Jurisdiction Act of 2002, 28 U.S.C. § 1369, or class actions involving more than $5 million in damages sought, under the Class Action Fairness Act of 2005, 28 U.S.C. § 1332(d), Congress has provided for only a minimal diversity requirement.

Between 1875 and 1980, “federal question” jurisdiction had the same “amount-in-controversy” requirement as “diversity” jurisdiction. That requirement was dropped in 1980 pursuant to Pub. L. 96-486, Dec. 1, 1980. Congress has also provided in 28 U.S.C. § 2284 that special three-judge district court panels will hear challenges to the constitutionality of state or congressional

---

redistricting plans, as well as in other cases provided for by federal law, such as in the Gramm-Rudman-Hollings Balanced Budget Act, the Line-Item Veto Act, and numerous statutes touching on First Amendment rights of free speech, such as some regulation of obscenity or indecency on the Internet. Appeals from those decisions are filed directly in the Supreme Court, pursuant to 28 U.S.C. § 1253.

In 1971, in *Bivens v. Six Unknown Federal Narcotics Agents*, the Court recognized for the first time an implied private action for damages against federal officers alleged to have violated a citizen’s constitutional rights. While Justice Brennan’s majority opinion did not discuss the jurisdictional issue explicitly, the authority to imply a *Bivens* action has been grounded in later cases, as it was in Justice Harlan’s concurrence in *Bivens*, on 28 U.S.C. § 1331, and its “federal question” language giving district courts jurisdiction to decide cases “arising under the Constitution, laws, or treaties of the United States.” *Bivens* involved a violation of the Fourth Amendment. Subsequent cases have recognized implied damage remedies under the Fifth Amendment in *Davis v. Passman* and under the Eighth Amendment in *Carlson v. Green*. As discussed at § 20.1.4.2.B, success in a *Bivens* action is limited by principles of executive immunity applicable to federal officials.

As might be expected, formalist judges, whether extreme or moderate, conservative or liberal, have resisted such an “implied” right of action, preferring to rest court power on explicit, literal text. Such resistance to an implied right of action is also supported by the Holmesian tendency to defer to the government, particularly strong among extreme Holmesians, and the conservative tendency to resist additional forms of actions. However, this view can be offset by: (1) a Holmesian willingness, particularly strong among moderate Holmesians, to follow the purpose behind provisions even in the absence of literal text; (2) the natural law maxim that “where there is a right, there should be a remedy”; (3) the instrumentalist focus on use of courts to advance social policy; and (4) the liberal tendency to create causes of action for individuals against government abuse. Thus, in *Bivens*, liberal instrumentalists, Justices Brennan, Marshall, and Douglas, strongly supported the *Bivens* result. They were joined by liberal Holmesian Justice White, who on remedial issues often voted with the liberal instrumentalists, as discussed at § 11.3.3, and by Justices Stewart and Harlan, who were conservative, but moderate Holmesians with natural law leanings, as discussed at § 10.4. *Bivens* was an easy case to justify implying such a remedy, since the plaintiff would not have had any other practical relief absent a *Bivens* remedy. Conservative formalist Chief Justice Burger, along with liberal formalist Justice Black, dissented in *Bivens*, reflecting their

---

formalist views. They were joined in dissent by Justice Blackmun, who during his first two years on the Court in 1971-72 voted most consistently with Chief Justice Burger, before finding his moderate, centrist natural law voice during the rest of the 1970s, and moderate, liberal instrumentalist voice during the 1980s, as discussed at § 11.4.

During its 2001 term, the Supreme Court held in *Correctional Services Corp. v. Malesko*¹¹⁶ that there was no *Bivens* right of action under the Eighth Amendment against private entities that engaged in an alleged constitutional deprivation while acting under color of federal law, such as a contractor providing a halfway house for federal inmates. Conservative Holmesian Chief Justice Rehnquist, wrote for a 5-4 majority comprised of himself and Justices Scalia and Thomas, the two formalist Justices on the Court, and Justices O’Connor and Kennedy, two natural law Justices. The Chief Justice noted that since 1980 in *Carlson v. Green*, cited at § 17.2.2.1.B n.115, the Court had “consistently refused to extend *Bivens* liability to any new context or any new category of defendants,” including *Bush v. Lucas* in 1983, which involved an action against a federal agency, rather than a federal official. Nor was there reason to extend *Bivens* here, where officials were claimed to have been negligent, because there was no lack of effective alternative remedies, inasmuch as a federal tort remedy was available.¹¹⁷

Reflecting the liberal instrumentalist willingness to imply private rights of action to advance social policies reflected in statutes or the Constitution, Justice Stevens, joined in dissent by Justices Souter, Ginsburg, and Breyer, said that the Court had never suggested that a category of federal agents can commit Eighth Amendment violations with impunity. He noted that the reasons that motivated *Bivens* should lead to the conclusion that corporate agents should not be treated more favorably than human agents, stating, “A tragic consequence of today’s decision is the clear incentive it gives to corporate managers of privately operated custodial institutions to adopt cost-saving policies that jeopardize the constitutional rights of the tens of thousands of inmates in their custody.” Chief Justice Rehnquist replied by noting that most of the examples used by Justice Stevens to support his conclusion involved private facilities that housed state prisoners – prisoners who already enjoy a right of action against private correctional providers under 42 U.S.C. § 1983.¹¹⁸ Justice Stevens’ approach reflects the moderate, liberal instrumentalism of Justices Stevens, Ginsburg, and Breyer, and the extreme natural law willingness of Justice Souter, discussed at § 12.3.2, to follow not only the core holdings of instrumentalist-era precedents, like *Bivens*, but their general reasoning as well.

In contrast, Justices O’Connor and Kennedy, reflecting their moderate natural law willingness to follow the core holdings of instrumentalist-era precedents, but not their general reasoning, discussed at § 12.3.2, were willing to distinguish *Bivens*, *Passman*, and *Carlson*, where other remedies were not viewed as adequate, versus *Malesko*, where other remedies were adequate. Thus, the natural law maxim of “where there is a right, there should be a remedy” was not strongly implicated in *Malesko*.

---

¹¹⁸ *Id.* at 71 n.5; *id.* at 81 (Stevens, J., joined by Souter, Ginsburg & Breyer, JJ., dissenting).
Reflecting the formalist reluctance to imply private rights of action, Justice Scalia, concurring with Justice Thomas, underscored the point that in the 2001 case of *Alexander v. Sandoval*\(^\text{119}\) the Court had indicated increased reluctance to invent “implied” private rights of action under statutes. There was even greater reason to abandon it in the constitutional field, since an “implication” imagined in the Constitution can presumably not be repudiated even by Congress.\(^{120}\)

## § 17.2.2.2 Federal Court Review of State Court Decisions Involving Federal Law Issues

Federal judicial power extends to review of state court cases that involve federal questions under the language of Article III, § 2, cl.1, which provides for federal jurisdiction in cases “arising under this Constitution, the Laws of the United States, and Treaties made, or which shall be made, under their Authority.” Under 28 U.S.C. § 1257, enacted in 1988, Supreme Court review of all final decisions by the highest state court is discretionary, through a petition for certiorari, where a decision could be had on any issue of federal law. This statute is clearly constitutional in view of *Martin v. Hunter's Lessee* and *Cohens v. Virginia*, discussed at § 17.1.2.2 and the power of Congress in Article III to provide for “Exceptions” and “Regulations” to the Court’s jurisdiction, discussed at § 17.2.3.1.

Under Supreme Court doctrine, a state court decision is not final until it has effectively determined the entire litigation.\(^{121}\) Under the current version of § 1257, Supreme Court review is authorized even if that final decision upholds a federal claim. Prior to 1914, the Supreme Court was authorized to review state supreme court decisions only if they rejected the federal claim. After 1914, pursuant to Act of 1914, 38 Stat. 790, the Supreme Court could review a case even if the state court upheld the federal claim and held a state statute invalid.

Note that only the Supreme Court has been granted jurisdiction by Congress directly to consider appeals from state court decisions. Lower federal courts have not been given appellate jurisdiction over state courts, although original actions can be filed collaterally in federal courts to question state court actions, as is done in habeas corpus proceedings pursuant to 28 U.S.C. § 2254. Prior to 1988, the Supreme Court was required to hear appeals from a state Supreme Court where a United States statute was declared invalid or a state statute was upheld. All dispositions were said to be binding precedents. Since 1988, almost all of the Court's jurisdiction is discretionary, and a denial of certiorari has no precedent value.\(^{122}\) Even when taking certain appeals was required, the Court declined some cases on justiciability grounds, discussed in § 17.3.\(^{123}\)

---

\(^{120}\) *Malesko*, 534 U.S. at 75 (Scalia, J., joined by Thomas, J., concurring).

\(^{121}\) See *Jefferson v. City of Tarrant*, 522 U.S. 75 (1997).

\(^{123}\) See, e.g., *Naim v. Naim*, 350 U.S. 891 (1956) (miscegenation case remanded to state court on ripeness grounds that the record below was not sufficiently well-developed for Court review).
In addition to these principles, the Court has adopted a general rule that an injured party must exhaust state remedies before bringing a constitutional challenge in federal court, although the Court has never decided whether this is an Article III requirement or a prudential principle capable of being altered by congressional statute.\textsuperscript{124} During the instrumentalist era, the Court held in 1963 in \textit{McNeese v. Board of Education}\textsuperscript{125} that 42 U.S.C. § 1983, which covers all suits against state officials for unconstitutional action, was an enormous exception to this exhaustion rule. Since 1963, \textit{McNeese} has been followed by Holmesian and natural law Justices as a matter of “settled law.”\textsuperscript{126}

For this reason, whether an action can be brought under § 1983, or only under some other statutory provision, such as a § 2254 habeas corpus proceeding, makes a difference in terms of whether state remedies must be exhausted first. For example, the Court held in \textit{Preiser v. Rodriguez}\textsuperscript{127} that prisoner challenges to the “fact or duration of confinement” can only be brought under the habeas corpus statute, since a habeas corpus proceeding directly addresses wrongful detention. Therefore, state remedies had to be exhausted before the claim could be brought. On the other hand, as held in \textit{Wilkinson v. Dotson},\textsuperscript{128} suits by prisoners challenging the constitutionality of conditions of confinement, or procedures used to determine the duration of confinement, such as the procedures involved in parole eligibility hearings, would not necessarily affect the “fact or duration of confinement,” and thus are not “core” habeas claims. Thus, those challenges can be brought under § 1983 in a federal district court without a requirement of exhaustion of state remedies.

\section*{Limited Federal Review of State Court Decisions on State Law Matters in Cases Also Involving Federal Questions}

Reflecting the dual theory of sovereignty, state Supreme Court decisions on purely state law matters cannot be reviewed by federal courts, since state Supreme Courts are the authoritative interpreters of their own state law.\textsuperscript{129} Further, issues of federal law resolved by a state Supreme Court will not be reviewed on appeal by federal courts if the state Supreme Court judgment rests upon an "adequate and independent" state ground.\textsuperscript{130} Thus, a state Supreme Court decision invalidating a state law on

\textsuperscript{125} 373 U.S. 668, 67-73 (1963).

\textsuperscript{127} 411 U.S. 475 (1973).

\textsuperscript{128} 544 U.S. 74 (2005). \textit{See also} Hill v. McDonough, 126 S. Ct. 2096 (2006) (whether lethal injection procedures would violate the Eighth Amendment affects conditions, but not fact or duration of confinement, and thus can be brought as an § 1983 action).

\textsuperscript{129} See Murdock v. Memphis, 87 U.S. 590 (1875).

both state and federal constitutional grounds will not be reviewed by the United States Supreme Court because that would result in nothing more than an advisory opinion. However, a state court's decision on state law grounds will not block Supreme Court review in two rare cases. These are if the state decision involves: (1) a good faith interpretation of state law that places unreasonable obstacles in the way of enforcing federal rights, such as a rule of local procedure that would frustrate the vindication of federal rights; or (2) an attempt to evade federal law through a strained interpretation of state law, as might occur with a strained interpretation of whether a contract exists and what rights were granted in the contract to avoid Contracts Clause review, or what is property to evade Takings Clause review. The Contracts Clause is discussed at § 22.1, and the Takings Clause is discussed at § 22.2.

Suppose it is unclear whether the state court decision rests upon an adequate and independent state ground? In Michigan v. Long, Justice O'Connor wrote for the Court that if a state decision seems to rest on or be interwoven with federal law, and the adequacy and independence of any possible state ground is not made clear by a plain statement, the Court will assume the state court believed that federal law required the decision. The Court will not review a state case if the state court makes a plain statement that federal cases are used only to guide the decision on state law. Justice O'Connor explained that this approach would serve the need for uniformity in federal law; reflect the dual theory of sovereignty, by expressing respect for state courts and minimizing interference by not asking state courts to clarify their opinions; manage the Court’s resources by minimizing the need for federal courts to determine state law; and help avoid advisory opinions. Each of these goals has been substantially served in practice by operation of the Michigan v. Long rule.

Each of the four liberal instrumentalists on the Court at the time Michigan v. Long was decided dissented from the Court’s presumption that the state ground was not independent absent a clear statement. Justice Stevens’ dissent was the most forceful, adopting the opposite presumption that the state grounds were independent absent a clear statement to the contrary. Justice Stevens said that if it appears the state court would protect a citizen under either federal or state law, the Court should not review the decision because no federal interest was offended, uniformity of federal law would not be compromised, and such a posture is consistent with judicial restraint. Such a presumption would also make it easier for state courts to develop their own constitutional law that might provide for greater protection for individuals than under the federal Constitution. Justices Brennan, Marshall, and Blackmun also refused to adopt the majority approach, but adopted alternative approaches of the Court either determining on its own, absent any presumption, whether the state

---

134 463 U.S. at 1066-68 (Stevens, J., dissenting).
opinion rested on independent state law grounds, or instead asking the state court for clarification.\textsuperscript{135}

For the separate issue of cases heard in federal court that involve resolving issues of state law, as can occur, for example, in diversity cases or interpretation of a state statute to determine if the statute violates federal law or the United States Constitution, federal courts must follow state Supreme Court opinions on point. Where the state law is not clear, federal courts will give persuasive weight to the opinions of both state Supreme Courts and lower state courts on the meaning of state law, may “certify” a question on state law to a state Supreme Court asking that court for guidance in cases where the meaning of state law is not clear, or may abstain from deciding the case, as discussed at § 17.2.4.4, based on the uncertainty.\textsuperscript{136}

The United States Supreme Court has indicated that it will give some deferential weight to a federal Court of Appeals judgment on the meaning of state law for those states covered by that federal Court of Appeals, on the ground that those judges are more likely to be familiar with those state law issues than the Supreme Court.\textsuperscript{137} However, that deference is often rebutted in practice.\textsuperscript{138} The Court indicated in \textit{Salve Regina College v. Russell}\textsuperscript{139} that Court of Appeals should not give such deference to district court determinations of state law, but instead apply \textit{de novo} review, based upon the better institutional competence of court of appeals judges to determine question of law, as opposed to questions of fact. Commentators have disagreed over the wisdom of the \textit{Salve Regina} decision.\textsuperscript{140}

Determining the meaning of a provision in a state Constitution can be particularly difficult for both state and federal courts where many state Constitutions have similar provisions. The question

\textsuperscript{138} See, \textit{e.g.}, Town of Castle Rock, Colorado v. Gonzales, 125 S. Ct. 2796, 2804 (2005).

naturally arises whether the framers and ratifiers in any one state intended their provision to have similar meaning to similar provisions in other state Constitutions. Resolution of this question will depend upon normal consideration of text, context, history, practice, precedent, and prudential considerations. In addition, many state courts adopt the same kind of prudential restraints on judicial review that federal courts have adopted under Ashwander, discussed at § 17.1.3.2.

§ 17.2.2.4 Jurisdiction Acquired by Removal of Cases from State Courts

Under 28 U.S.C. § 1441(a), a defendant can remove to a federal district court any civil action brought in a state court over which district courts have original jurisdiction. As the Court held in City of Chicago v. International College of Surgeons, this includes cases containing claims that local administrative action violates federal law that also contain state law claims for on-the-record review of administrative findings. This case originated as an appeal in state court from a municipal agency's denial of demolition permits. The Court explained that even though state law creates a particular cause of action, a case may be considered to arise under the laws of the United States if the right to relief under state law requires resolution of a substantial question of federal law.

With regard to accompanying state law claims, the Court said in International College of Surgeons that principles of pendent and ancillary jurisdiction apply. Under 28 U.S.C. § 1367, these principles allow a federal court with original jurisdiction to carry with it jurisdiction over state law claims that derive from a common nucleus of operative fact, such that the relationship between the original claim and the state claims comprise but one constitutional case. Under § 1367, district courts may decline to exercise supplemental jurisdiction over a claim if: (1) the claim raises a novel or complex issue of state law, (2) the state law claim substantially predominates over the claim or claims over which the district court has original jurisdiction, (3) the district court has dismissed all claims over which it has original jurisdiction, or (4) in exceptional circumstances, there are compelling reasons for declining jurisdiction. Exercise of such supplemental jurisdiction is thus a matter of discretion, not of right, based upon principles of economy, convenience, fairness, and comity.

---

144 Id. at 164-74. An instrumentalist dissent, focused on policy, said the Court was creating a cross-system appellate authority that would unwisely increase the jurisdiction of the federal courts at the expense of state court autonomy. Id. at 175-76 (Ginsburg, J., joined by Stevens, J., dissenting).

In addition, district courts may not decide state law claims, or stay their adjudication, where any of a number of abstention doctrines apply, as discussed at § 17.2.4.4.

§ 17.2.3  Limitations on Jurisdiction Imposed on the Courts

§ 17.2.3.1  Congressional Control of Judicial Review by Federal Courts

As stated in Article III, § 1, “The judicial power of the United States is granted to the Supreme Court and such inferior courts as Congress, from time to time, may establish.” Using its power, Congress established a limited number of federal district courts in 1789, with appeal from those courts to the United States Supreme Court. Additional district courts were added during the 19th century as the Nation expanded. To deal with the increased case-load of appeals from those district courts to the Supreme Court, Congress created 9 intermediate circuit courts of appeals in the Evarts Act, in 1891, with appeal from those circuit courts to the Supreme Court if certified by that court of appeals, or discretionary with the Supreme Court through a grant of certiorari, as noted at § 14.2.2 n.42. Since 1891, the number of the circuit courts of appeals has risen, with 12 general circuit courts (1st - 11th and the Court of Appeals for the District of Columbia), as well as certain specialized courts, such as the Federal Circuit, which deals with certain specialized federal cases, such as appeals from the Court of Federal Claims, the Court of Veterans Appeals, and intellectual property cases, such as patent, trademark, and United States Trade Commission cases. A map and internet links to the various lower federal courts appears at “www.uscourts.gov/courtlinks/”. 146

On behalf of the Federalist-inspired Marshall Court, which favored a strong view of federal power, as discussed at § 14.2.1 nn.14-19, Justice Story said in Martin v. Hunter’s Lessee 147 that Article III, § 1’s language vesting the federal judicial power in “one supreme Court,” and “such inferior Courts” as Congress “may . . . establish” meant that Congress must vest the entire judicial power somewhere in the federal judicial system. However, the Jacksonian-inspired Taney Court, which had a less expansive view of federal power, as discussed at § 14.2.1 nn.20-26, held in Sheldon v. Sill 148 that since Congress has the discretion under this language whether to create lower federal courts, Congress may withhold jurisdiction from the courts it creates. Several congressional enactments regarding jurisdiction have thus not vested all potential judicial power granted by Article III.

---

147 14 U.S. (1 Wheat) 304, 328-31 (1816).

148 49 U.S. 441, 448-49 (1850) (diversity jurisdiction removed for a class of contract cases where federal commercial law would have applied between 1842 until 1937 if the case were heard in federal court under the doctrine of Swift v. Tyson, 41 U.S. (16 Pet.) 1, 18-22 (1842), overruled in Erie Railroad Co. v. Tompkins, 304 U.S. 64, 71-80 (1938); under the statute the cases could only be brought in state court, so state contract law would apply, reflecting the states’ rights predisposition of both the Supreme Court and Congress during the Taney Court era. After Erie, state contract law would apply even if the case were heard in federal court, though federal procedure would apply).
For example, lower federal courts are not authorized to hear appeals from state court decisions. Two statutes bar federal actions where effective remedies are available in state courts: the Johnson Act involving state public utility regulatory orders, and the Tax Injunction Act, involving any state tax. In addition, the Anti-Injunction Act, 28 U.S.C. § 2283, prevents federal courts from enjoining pending proceedings in state courts except as expressly authorized by Congress, or when necessary to protect jurisdiction, or to effectuate the court’s judgments. The impact of the Anti-Injunction Act has been limited, however, by the Court’s holding in *Mitchum v. Foster* that 42 U.S.C. § 1983 is an express authorization that allows injunctions against even pending state court proceedings.149

The Court has held that Congress may withdraw appellate jurisdiction from the Supreme Court, even as to pending cases. In *Ex parte McCordle*,150 the concern of the Radical Republican Congress, which withdrew appellate jurisdiction over a class of habeas corpus petitions by individuals held by military authorities in the South following the Civil War, was that the Court might use the case to declare unconstitutional the military occupation of the South. The Court’s holding that Congress had this power, even as to a case after it had been argued in the Court, but before a decision was reached, was based on the literal text of the “Exceptions” Clause, which provides in Article III, § 2, cl. 2 no limitation on “such Exceptions, and under such Regulations as the Congress shall make.”

Congress has used this power sparingly in our Nation’s history. However, where a strong enough political need has arisen, that power has been used, as in, for example, the Norris-LaGuardia Act of 1932, involving limiting federal court power to issue injunctions or restraining orders in labor disputes; the Selective Training and Service Act of 1940, restraining federal court review of selective service cases, principally by providing the individual must submit to induction and then challenge the induction while in service; the Emergency Price Control Act of 1942, which provided that individuals can only challenge allegations of violations of price control measures before a special Emergency Court of Appeals; the Portal-to-Portal Act of 1947, which removed jurisdiction from the federal courts to hear cases on whether under the Fair Labor Standards Act certain work must be counted as overtime; the Voting Rights Act of 1965, which required state challenges to the Attorney General’s decision to suspend state voting regulations to be brought in the District of Columbia; and provisions limiting rights to appeal (typically prohibiting multiple appeals) for criminal defendants and aliens, such as in the Prison Litigation Reform Act of 1995, the Anti-Terrorism and Effective Death Penalty Act of 1996, and the Illegal Immigrant Reform and Immigrant Responsibility Act of 1996.151 In interpreting Congress’ intent, courts typically read limitations on jurisdiction narrowly, and have required a clear statement from Congress to remove jurisdiction from the federal courts.152

---

150 *Ex Parte McCordle*, 74 U.S. 506 (1868).

The Court’s holding in *Ex parte McCardle* was limited somewhat in *United States v. Klein*.\(^{153}\) In *Klein*, the Supreme Court refused to dismiss an action after the Civil War brought by a Southerner to recover property confiscated by Union forces, despite a congressional act requiring dismissal of such an action if the plaintiff’s loyalty was based on a Presidential pardon. Under the relevant Act, only loyal claimants, not rebels, could recover property under the law, and Congress did not want a Presidential pardon to make a person a loyal claimant, although the Court had ruled to the contrary in interpreting the effect of a Presidential pardon. The Court held the Act invalid because Congress had violated the separation of powers doctrine in two ways: it had denied effect to a Presidential pardon, and it had attempted to dictate how the Court should decide the factual issue of who was a loyal claimant. A principle was thus established that Congress cannot use its exceptions and regulations power to overrule a Court decision on constitutional meaning, as that would violate *Marbury*’s principle that it is “the province of the judicial department to say what the law is.” This is true, as in *Klein*, even if the congressional action is literally a regulation of the Court’s jurisdiction. Reflecting a natural law approach, the critical issue was the purpose and practical effect of Congress’ action, not a formalist focus on whether the Act was literally a regulation of jurisdiction.

A related set of issues concerns the extent to which Congress may limit the Court's appellate jurisdiction by legislation that either: (1) violates some provision or prohibition found in the Constitution, such as relating to Equal Protection, Due Process, the First Amendment, or the Takings Clause; or (2) violates general separation of powers principles by intruding too greatly into the powers of the judiciary. With respect to the first issue, though Congress has never been held to use its power over jurisdiction in this way, it is relatively well-established that other provisions in the Constitution do limit Congress’ power over jurisdiction. Thus, for example, the Equal Protection Clause would likely prevent an attempt by Congress to remove jurisdiction in cases brought by women, minorities, or members of particular national origins.\(^{154}\)

With respect to the second issue, it remains unsettled to what extent Congress can create significant barriers to the enforcement of constitutional rights through use of its power to create, or not, lower federal courts, and to create exceptions to the Supreme Court’s appellate jurisdiction. Although bills have often been introduced into Congress that would limit the Supreme Court’s jurisdiction over controversial decisions, such as taking away appellate power over transportation remedies in school desegregation cases, or in abortion cases, or in cases involving the validity of gay marriage, these bills have never become law. Thus, this issue has never been faced directly by the Supreme Court.

Under one view, adopted by most non-formalists, who engage fully in general contextual reasoning, general separation of powers principles should prevent Congress from being able to use its power

over jurisdiction to intrude too greatly into the powers of the judiciary. Of course, persons adopting this approach can differ over how much intrusion might be too much. The alternative view, adopted principally by formalists, notes that the power of Congress over jurisdiction in the Constitution is literally plenary, with the exception of the Supreme Court’s original jurisdiction, and this suggests that Congress should have an unfettered role over jurisdiction in cases where Congress disagrees with the Court’s substantive decisions.

For the non-formalist reasons of maintaining established general structural principles, as well as the liberal instrumentalist special concern with protecting civil rights, noted at § 11.2.1.2 nn.17-20, and the natural law maxim of “where there is a right, there should be a remedy,” noted at § 12.3.3 n.136, a majority of the Court today would likely view such congressional action as unwarranted. Even extreme Holmesian deference-to-government Chief Justice Rehnquist noted in Felker v. Turpin that Congress had not attempted to remove all jurisdiction from the Supreme Court in the Anti-Terrorism and Effective Death Penalty Act of 1996 and thus “there can be no plausible argument that the Act has deprived [the Court] of jurisdiction in violation of Article III, § 2.” This suggests that if Congress had gone farther, even Chief Justice Rehnquist might have had some concern.

A final set of issues regarding congressional control over federal court jurisdiction involves the question of the extent to which so-called Article I or Article II courts can be created to hear and try cases involving federal issues that are separate from Article III federal court jurisdiction. Under a narrow view of such power, Congress can only create federal courts which do not have the Article III protections of life tenure and no diminution in salary in three limited areas: (a) non-Article III courts in territories or the District of Columbia, because of the special congressional control over these areas listed in the Constitution; (b) court-martial courts, because of special congressional control over the military in the Constitution; and (c) legislative courts and administrative agency courts that adjudicate public, rather than private rights, by legislative and executive practice. Public rights cases involve actions to ensure compliance with a regulatory scheme. Since the rights in such cases are created by the legislative branch, and do not depend on pre-existing common-law or constitutional rights, the theory is that Congress can provide for Article I courts to adjudicate claims under these statutes since the rights did not have to be created by Congress in the first instance. This

---

156 See, e.g., Michael J. Gerhardt, The Constitutional Limits to Court-Stripping, 9 Lewis & Clark L. Rev. 347 (2005) (proposed statute stripping federal courts over power to hear cases involving the constitutionality of bans on same-sex marriage would be unconstitutional); Martin H. Redish, Same-Sex Marriage, the Constitution, and Congressional Power to Control Federal Jurisdiction: Be Careful What You Wish For, 9 Lewis & Clark L. Rev. 363 (2005) (proposed statute would likely be constitutional, though perhaps politically unwise).

category includes such special courts as the Tax Court to adjudicate tax matters, the Patent Court adjudicating patent claims, and the Claims Court, to hear cases involving claims on the federal treasury where the federal government has waived sovereign immunity, as under the Federal Tort Claims Act, as well as various administrative decisionmaking done by Administrative Law Judges, such as for social security disability claims or immigration law matters.

This narrow view is typically favored by instrumentalist judges, who prefer cases to be heard by Article III judges who have the independence of life-tenure and no diminution in salary. For example, in *Northern Pipeline Construction Co. v. Marathon Pipe Line Co.*, Justice Brennan’s plurality opinion, joined by Justices Marshall, Blackmun, and Stevens, concluded quite broadly that since bankruptcy courts do not fall into any of the above-named three categories, ultimate decisions in bankruptcy cases must be made by Article III judges. Despite this conclusion, as a practical matter bankruptcy judges, although now officially magistrates under the control of Article III district court judges, still make most determinations in bankruptcy cases.

This narrow view of Congress’ power to create Article I courts has never been adopted by a majority of the Supreme Court. Instead, while acknowledging the three named categories above, the Court has been willing to grant Congress greater flexibility. This is certainly true for formalist judges, based on the literal language of the Constitution granting Congress great power over federal court jurisdiction, and for Holmesian judges, based on their deference to government predisposition. Even natural law judges, however, have been willing to phrase the issue in terms of broader general separation of powers arguments concerning whether the individual's interests are adequately protected by the Article I court, and the province of the judiciary is not intruded into too greatly.

For example, in *Thomas v. Union Carbide Agricultural Product Co.*, Justice O’Connor wrote for the Court that the binding arbitration provisions of Federal Insecticide Act were constitutional, despite no Article III court review. Similarly, over a dissent by Justices Brennan and Marshall, Justice O’Connor wrote for the Court in *Commodity Futures Trading Commission v. Schor* that the Commodity Futures Trading Commission could be given power in reparation proceedings before the Commission to hear counterclaims based upon traditional state common law rights. In the bankruptcy area, however, the Court has continued the more stringent approach of the *Marathon* plurality opinion, in cases like *Granfinanciera, S.A. v. Nordberg*, a case also authored by Justice Brennan. Such an approach may reflect the natural law predisposition among all natural law judges to follow at least the core holdings of judicial precedents.

160 473 U.S. 568, 571 (1985); id. at 594 (Brennan, joined by Marshall & Blackmun, JJ., concurring in the judgment); id. at 602 (Stevens, J., concurring in the judgment).

161 478 U.S. 833, 848-57 (1986); id. at 859 (Brennan, J., joined by Marshall, J., dissenting).

162 492 U.S. 33, 54-56 (1989)
Note that because these Article I courts are not Article III courts, the Article III "case or controversy" requirements, discussed at § 17.3, do not apply. Thus, if statutorily permitted, such courts can render advisory opinions, and normal Article III rules regarding standing, ripeness, or mootness do not have to apply. In addition, though typically all these non-Article III courts have been created by Congress, there is the possibility of Article II courts created by the Executive. The most prominent possibility of this would be military tribunals created by executive order under the President’s Commander-in-Chief power to deal with aspects of the war on terror after 9-11. The creation of such courts, absent congressional authorization, would raise profound separation of powers problems regarding congressional versus executive power, and was substantially limited by the Supreme Court in 2006 in *Hamdan v. Rumsfeld*, as noted at § 19.3.3 n.57.

Even if created pursuant to express or implied congressional approval, the jurisdiction of such courts would also raise additional constitutional issues, such as pushing the boundaries of the special congressional control over the military. This would be true not only for instrumentalist judges, with their concern for protecting the unempowered in society, but also in terms of the natural law separation of powers concerns of whether individual interests are adequately protected by the tribunal, and the province of the judiciary is not intruded into too greatly. These issues would also have to be considered against a backdrop of Due Process Clause concerns and international obligations under various international treaties, such as the Geneva Conventions. These issues, which were also raised in *Hamdan v. Rumsfeld*, are addressed as part of the procedural due process discussion at § 27.4.4.8 nn.409-16.

§ 17.2.3.2 Constitutional and Prudential Due Process Clause Restraints on Jurisdiction of Cases Heard in Federal and State Courts

In addition to congressional restraints on federal court jurisdiction, the Fifth and 14th Amendment Due Process Clauses impose limits on federal and state courts concerning the assertion of personal jurisdiction over defendants. There are two kinds of personal jurisdiction: general and specific. If there is general jurisdiction, the defendant must defend regardless of whether the action arose in the state where the lawsuit has been brought, the so-called “forum” state. General jurisdiction exists when a defendant’s contacts with the forum state are sufficiently substantial, continuous, and systematic, even if unrelated to the instant cause of action. Specific jurisdiction may be found where a foreign defendant has purposively directed activities at residents of the forum, and the litigation results from alleged injuries that arise out of, or relate to, those activities.

During the original natural law era and the formalist era, the Court followed the customary rules regarding personal jurisdiction that focused on whether the defendant resided in the forum state, consented to suit in the forum state, or whether service on the defendant had been able to be brought in the forum state based on the defendant’s presence in the state, as in *Pennoyer v. Neff*. This doctrine is consistent with Stages 3 and 4 being based on concrete operational thought, as discussed

---

165 95 U.S. 714, 724-26 (1877).
at § 15.3 nn.37-43, and thus a focus on concrete presence in the state. However, in 1945, the Court broadened the required contacts in *International Shoe Co. v. Washington* to include all non-residents who have such minimum contacts with the forum that maintenance of the suit does not offend “traditional notions of fair play and substantial justice.” Such minimum contacts have been held to exist when “the defendant’s conduct and connection with the forum state are such that he or she should reasonably anticipate being haled into court there.” This doctrine is based more on the abstract formal operational thought reasoning typical of Stages 4½, 5 and 6, as discussed at § 15.3 nn.44-46, and thus a focus on abstract mental “reasonable anticipation.”

In assessing the defendant’s reasonable anticipation, “it is essential in each case that there be some act by which the defendant purposefully avails itself of the privilege of conducting activities within the forum State, thus invoking the benefits and protections of its laws.” Reflecting the greater use of balancing tests and factor weighing approaches since 1937, discussed at §§ 4.2.1 nn.33-38 (balancing tests) & 4.2.2 text following n.48 (factor weighing approaches), the courts post-*International Shoe* examine several factors to make this “minimum contacts” determination. These include: (1) the nature and quality of the defendant’s contacts with the forum state; (2) the quantity of the contacts; (3) the relationship between the cause of action and the contacts; (4) the forum state’s interest in providing a forum for its residents; and (5) the convenience of the parties.

As part of the dual theory of sovereignty, discussed at § 18.4.5 nn.236-38, federal courts must not only find that exercising jurisdiction over the defendant comports with federal standards of due process, but also that the state’s “long-arm” statute has authorized “service of process” in the case. Most states have enacted “long-arm” statutes that authorize jurisdiction co-extensive with the confines of due process. Thus, the question of exercising jurisdiction typically comes down to the Due Process Clause. A similar Due Process analysis applies to federal jurisdiction enforcing judgments reached under international law.

---

166 326 U.S. 310, 316 (1945).

In addition to this Due Process constitutional constraint, the Court also has developed a prudential restraint on the exercise of jurisdiction. Under *forum non conveniens* doctrine, a court will decline constitutionally permissible jurisdiction if another court is a more convenient forum for the lawsuit. This convenience may result from the easier availability of that forum for the plaintiff, the defendant, or witnesses that may be called to testify at trial.\(^{172}\)

§ 17.2.4 State Sovereign Immunity Limitations Against Enforcing Federal Rights in Suits Against States, State Agencies, and State Officers

### § 17.2.4.1 General History of the 11th Amendment

On February 19, 1793, the Supreme Court held in *Chisholm v. Georgia*\(^ {173}\) that federal jurisdiction extended to actions against a state by a citizen of another state, based upon the literal language of Article III, § 2, cl. 1 of the Constitution, cited at § 17.2.1, which provides for jurisdiction in cases “between a State and Citizens of another State.” The concern that federal courts would have such jurisdiction, particularly in cases involving individuals suing states for debts owed to them by states, as for monies borrowed to help finance the Revolutionary War, had been raised during the ratifying debates at a number of state conventions. The concern was muted, to an extent, by Hamilton in *The Federalist Papers*, published initially during the New York ratifying convention, and by statements of Madison and Marshall at the Virginia ratifying convention, that background principles of state sovereignty would prevent such suits from being brought without the state’s consent in these class of cases. Cases involving state debts were a particularly sensitive issue, since a number of states, including New York, had traditions that the legislatures in those states determined whether debts were owed and should be paid, not courts.\(^ {174}\) The *Chisholm* Court chose to follow the literal text of Article III, concluding that state sovereignty was limited in the new Nation. Even the lone dissent by Justice Iredell did not rest on the state having a constitutional immunity from suit, but only on the ground that Congress had not yet clearly authorized such suits by statute.\(^ {175}\)

Opposition in a number of states to the *Chisholm* opinion led to quick introduction in Congress of a draft for the 11th Amendment. Congress formally took up the issue the following year and approved the 11th Amendment in January, 1794, with state ratification by more than 3/4 of the states by 1795, although President Adams did not issue a proclamation declaring the Amendment ratified until 1798.\(^ {176}\) The 11th Amendment provides: "The Judicial power of the United States shall not be

---

\(^{173}\) 2 U.S. (Dall.) 419 (1793).

\(^{175}\) *Chisholm*, 2 U.S. at 433-38, 449-50 (Iredell, J., opinion).

By its literal text, the 11th Amendment does not apply to actions in federal courts against a state by its own citizens. One reason for this may have been that, at the time, there was no federal question jurisdiction to hear cases in federal court. Thus, the main source of federal court jurisdiction, absent admiralty and maritime cases, involved diversity jurisdiction, which the literal text of the 11th Amendment addressed. Regarding such cases, the Court had to address whether the 11th Amendment applied only to cases where a state was a named party to the litigation, or did it also apply to actions against state officials acting on behalf of the state, and thus affecting the state. In Osborn v. Bank of the United States, the Court held in 1824 that the 11th Amendment by its terms only applies where the state is a named party. As Chief Justice Marshall noted in Osborn, unlike the language in the Constitution granting jurisdiction for cases “affecting Ambassadors [or] other public Ministers and Consuls,” the constitutional text to which the 11th Amendment responds refers only to those cases “in which a State shall be a Party,” suggesting its reach is only to cases where the state is a named party on the record, not where the state is merely “affected” by the litigation.

Because of the lack of federal question jurisdiction, the only cases where a state sovereignty issue would likely be raised before 1875, other than diversity jurisdiction, would be admiralty and maritime cases, cases where the United States was a party, state versus state cases, and the Court’s appellate jurisdiction over state cases involving federal issues. The 11th Amendment, by its literal terms and in court precedents, has never been interpreted to apply to actions by the United States against a state, or in state versus state lawsuits. Actions in admiralty or maritime jurisdiction, such as United States v. Peters, or actions as part of the Supreme Court’s appellate jurisdiction, such as Osborn, noted above, were typically brought against state officials, not the state directly, and thus the 11th Amendment was held to provide no barrier to suit. Indeed, even where the state was a party on the record of the case, the Marshall Court held in Cohens v. Virginia that the 11th Amendment was no barrier to exercise of the Court’s appellate jurisdiction, since the 11th Amendment text only applies to cases “commenced or prosecuted” in the federal courts. Thus, it does not apply to cases initially tried in state courts that reach the Supreme Court through the Court’s appellate jurisdiction.

In addition, “because of the paucity of federal legislation prior to the Civil War, occasions for conflicts in the state courts between state and federal law were few.” Indeed, reflecting the uncontroversial nature of the 11th Amendment before the Civil War, the Constitution for the

180 19 U.S. (6 Wheat.) 264, 412 (1821).
181 Gibbons, supra note 176, at 1947. For discussion of the history of Supreme Court interpretations of the 11th Amendment during the initial natural law era, from 1798 until the advent of federal question jurisdiction in 1875, see generally id. at 1941-70.
Confederate States of America, which adopted the United States Constitution with appropriate modifications, such as broadly supporting slavery, but having a reduced Commerce Clause, as discussed at § 14.2.1 n.17, merely reproduced the 11th Amendment language without modification, despite the states’ rights bias of Southerners prior to the Civil War. In the few 11th Amendment cases after the Civil War, but before federal question jurisdiction became available in 1875, the Court followed the pre-Civil War precedents, which limited the 11th Amendment to diversity cases, and permitted cases against state officials, even where the state was the real party in interest.182

Once federal question jurisdiction became available in 1875, however, the potential for a greater number of cases against states in federal court increased. In one set of cases, the formalist-era court limited the principle of Osborn by refusing to apply it, in cases such as Louisiana v. Jumel, Haygood v. Southern, and In re Ayers,183 to cases where a state official was the named party in the lawsuit, but the state was the real party to the contract. Over the dissent, among others, of Justice Harlan, who followed the traditional natural law decisionmaking style, the majority of the Court dismissed the lawsuits based on the 11th Amendment, admitting that the decisions were in conflict with Osborn. In 1890, in Hans v. Louisiana,184 the Court held that the 11th Amendment bars actions in federal courts against a state by its own citizens, despite the literal language of the 11th Amendment only focusing on diversity jurisdiction. The Court based its decision on its view that the specific intent of the framers and ratifiers of the 11th Amendment was to provide a wide range of state sovereign immunity. The evidence supporting the Court’s decision in Hans was reviewed in great depth by the Court in the 1999 case of Alden v. Maine.185 This view is also consistent with the conservative predisposition, shared by formalist-era Courts, in favor of states’ rights, discussed at § 6.2.2.3.

Subsequent to Hans, the Supreme Court held that the principle of sovereign immunity applied to suits against states brought in federal courts by federal corporations, foreign nations, Indian tribes, or suits in admiralty.186 The Court has also held that the 11th Amendment applies to actions involving states, even if a federal court might otherwise apply the doctrine of pendent jurisdiction.187 Finally, in Alden v. Maine,188 the Court held that the principles of sovereign immunity which underlie the 11th Amendment require that states cannot be sued by individuals in state courts for violating federal law, as well as barring suits in federal courts.

182 See generally id. at 1968-70, discussing, inter alia, Davis v. Gray, 83 (16 Wall.) 203 (1872); Board of Liquidation v. McComb, 92 U.S. 531 (1875).

§ 17.2.4.2  Limits on the 11th Amendment Doctrine

One issue that has been much litigated is the question of what limits to place upon 11th Amendment immunity. In general, conservative formalists and conservative Holmesians, favoring states’ rights, have tended to read the 11th Amendment state sovereignty immunity principle broadly. Liberal Holmesians and liberal instrumentalists have tended to try to limit the 11th Amendment in order to provide broad federal protection of individual rights. The natural law approach responds to the two competing tensions: the structural “dual theory of sovereignty” supports a broader view of the 11th Amendment, while the actual text of the 11th Amendment supports a narrower view.

Certain principles are clear. By unequivocal expression or conduct, such as removing a case to federal court, after the state has waived sovereign immunity in its own state courts, a state has waived 11th Amendment immunity and consented to be sued in federal court. Whether such removal waivers aspects of state sovereign immunity if the state had not consented to be sued in its own state courts is not clear. Congress can make waiver of the immunity a condition of participating in a federal program or acting in any area that Congress can control. Additionally, an attorneys’ fee in a civil rights case is ancillary and not barred by the 11th Amendment. During the deference-to-government Holmesian era, in 1945, the Court held that states could litigate a case on the merits, and yet not waive the immunity defense, but hold it in reserve. That doctrine was rejected in the modern natural law era in Lapides v. Board of Regents of the University System of Georgia.

The modern Court has reaffirmed Chief Justice Marshall’s view that because the 11th Amendment refers to cases “commenced or prosecuted” in the federal courts, it does not apply to cases initially tried in state courts that reach the Supreme Court through the Court’s appellate jurisdiction. Regarding admiralty and maritime jurisdiction, while in theory the 11th Amendment can be invoked in such cases given Court precedents after Hans, the Court has limited this principle by holding, for

189  See Lapides v. Board of Regents of Univ. of Geo., 535 U.S. 613 (2002) (11th Amendment immunity waived by removing case to federal court where state consented to be sued in its own state courts); Meyers ex rel. Benzing v. Texas, 410 F.3d 236 (5th Cir. 2005) (state always waives immunity from suit in federal courts when it removes a case to federal court, whether or not it consented to suit in state court, although state may still argue it did not waive immunity from liability for damages); Stewart v. North Carolina, 393 F.3d 484 (4th Cir. 2005) (sovereign immunity not waived when state removes suit to a federal court that it had not consented to in state court).

190  See Dellmuth v. Muth, 491 U.S. 223 (1989) (waiver as condition on participation in a federal program); Pennhurst, 465 U.S. at 99 (state waiver must be clear and unequivocal); Hutto v. Finney, 437 U.S. 678 (1978) (attorneys’ fee ancillary).

192  See McKesson Corp. v. Division of Alcohol Beverages and Tobacco, Dep’t of Business Regulation of Florida, 496 U.S. 18, 26-31 (1990).
example, that the 11th Amendment does not bar an in rem action for a wreckage, nor an in rem action where the state is not in possession of the property, since in those cases the action is not in personam against the state, but in rem for the property. Regular 11th Amendment principles apply for in personam admiralty actions.\(^{193}\) Based in part on bankruptcy proceedings typically being viewed as in rem actions for monies in the estate, 11th Amendment immunity was held in 2006 not to apply in bankruptcy proceedings, despite a plurality of the Court’s conclusion, in 1989, that the federal bankruptcy act does not clearly express an intent to abrogate 11th Amendment immunity.\(^{194}\)

Based on its literal text, a formalist-era Court held in *Lincoln County v. Luning*\(^{195}\) that the 11th Amendment immunity, whatever its breadth, only applies to the state as such. It does not apply to counties, cities, or other municipalities within the state. While that doctrine has been reaffirmed many times, the Court has held in modern times, reflecting a non-formalist, practical approach, that where there is sufficient involvement of the state in local action, so that the relief would run in essence against the state, then 11th Amendment immunity applies.\(^{196}\)

This aspect of 11th Amendment doctrine regarding local governmental entities not being covered by the words “State” in the 11th Amendment is in conflict with holdings under the 14th Amendment, discussed at § 26.1 nn.1-4, where the word “State” binds counties, cities, or municipalities under the view that they are creatures of the state and state Constitutions. This doctrine has led to a confusing line of cases trying to determine if local agencies, boards, or officials are properly to be viewed as state actors, to which 11th Amendment immunity would apply, or county, city, municipality, or other kind of non-state actors, to which 11th Amendment immunity should not apply.

In making these decisions, the Court asks, as in *McMillian v. Monroe County*,\(^{197}\) whether the particular individual is making a final policy decision on behalf of the local entity, or making a policy decision on behalf of the state. In reaching this decision, state law is naturally relevant, although the decision is ultimately one of federal law. As the Court stated in *McMillian*:

> Our inquiry is dependent on state law. . . . This is not to say that state law can answer the question for us by, for example, simply labeling as a state official an official who clearly makes

\(^{195}\) Lincoln County v. Luning, 133 U.S. 529 (1890).

\(^{197}\) 520 U.S. 781, 785-86 (1997).
county policy. But our understanding of the actual function of the government official, in a particular area, will necessarily be dependent upon the definition of the official’s functions under relevant state law. Cf. Regents of Univ. of Cal. v. Doe, 519 U.S. 425, 429 (1991) (“[The] federal question can be answered only after considering the provisions of state law that define the agency’s character.”). 198

The decisions in these cases tend to be very fact specific, so that, for example, local sheriffs can be viewed as state policymakers in some states for some actions, as for enforcing state laws, but not in other states, or for other actions. 199 State universities are usually held to be state actors, 200 although there are cases based on state statutes granting the state university substantial independence from state control where the state university was held not entitled to 11th Amendment immunity. 201 The Court has held that the St. Louis Board of Police Commissioners was not a state policy body, based on their independent decisionmaking, even though the state Governor appointed a majority of its members. 202 The Court has noted that “the question of whether a money judgment against a state instrumentality or official would be enforceable against the State is of considerable importance to any evaluation of the relationship between the State and the entity or individual being sued.” 203 But that consideration is just one factor, with the factors of the nature of state control over decisionmaking, the manner of appointment (state or local election or appointment), and the manner in which state law characterizes the position, also relevant. 204 A better way to develop this confused doctrine, consistent with a focus on reasoned elaboration of the law, appears at § 17.2.4.3 nn.252-56. 205

An important limit on the 11th Amendment is the principle of Osborn, stated in 1824, that state officials can be sued, even though states cannot. This principle, as limited in 1887 by In re Ayers, 

198 Id. at 786.

200 See, e.g., Xechem International, Inc. v. University of Texas M.D. Anderson Cancer Center, 382 F.3d 1324 (Fed. Cir. 2004); Clay v. Texas Women’s Univ., 728 F.2d 714 (5th Cir. 1984); Shawer v. Indiana Univ. of Penn., 602 F.2d 1161 (3d Cir. 1979).

205 On these cases generally, see 13 Charles Alan Wright, Arthur R. Miller & Edward H. Cooper, Federal Practice and Procedure § 3531.11 (1998); Chemerinsky, supra note 204, at 194-97.
which held, as discussed above at § 17.2.4.1 n.183, that 11th Amendment immunity exists if the state is the real party in interest, was restated by the post-

"Hans formalist-era Court in 1908 in Ex parte Young. There, the Court held that federal courts may enjoin unconstitutional acts by state officials who are connected with enforcing a statute that is invalid on its face or as applied. The Court said that local officials were "stripped" of their public character when so acting. Under Ex parte Young, state officials may be ordered to pay benefits that would have been denied by an invalid state law, and may be ordered to comply with a consent decree entered into by state officials, as held in Frew ex rel. Frew v. Hawkins. However, Ex parte Young is limited by principles of executive official qualified immunity, discussed at § 20.1.4.2.B, and by Edelman v. Jordan, where the Court held that, in an action against state officials, retroactive relief from the state is not allowed, that is, payment of state funds for past violations.

Another limit on the 11th Amendment was discussed in 1976 in Fitzpatrick v. Bitzer. In Fitzpatrick, the Court held that by "unmistakably clear language" Congress may provide private remedies, including damage awards against a state that would otherwise be barred by Edelman v. Jordan, for persons injured by state violations of the 14th Amendment. This is so because the 14th Amendment, ratified after the 11th Amendment, was held to trump any 11th Amendment immunity. Because the intent must be "unmistakenly clear," the evidence must appear in the text of the statute, not legislative history. Applying this test of "unmistakably clear language," the Court has held that § 1983 does not manifest an intent to authorize retrospective relief.

In 1989, the Court extended Fitzpatrick's "clear language" exception to cases involving not merely congressional power to act under the 14th Amendment, but cases under the Constitution's original Commerce Clause. In Pennsylvania v. Union Gas Co., the Court held 5-4 that Congress can create federal court actions against states for damages acting under the Commerce Clause. Reflecting an instrumentalist approach, Justice Brennan, with Justices Marshall, Blackmun and Stevens forming a plurality, wrote that Congress could authorize law suits in federal court against states on federal question grounds. Justice Brennan's reasoning was that when the states ratified the Constitution they consented to suits against them in federal courts based on congressionally created causes of action. The 11th Amendment did not deprive Congress of this power because it merely made clear that Article III itself did not automatically sweep away all aspects of the doctrine of state sovereign immunity. Justice Brennan said that Hans v. Louisiana was not to the contrary since Hans

---

212 491 U.S. 1, 13-23 (1989).
did not specifically deal with Congress' authority under either the 14th Amendment or the Commerce Clause.

This result was supported by the fifth vote of liberal Holmesian Justice White, who wrote a concurring opinion which said he disagreed with much of Brennan's reasoning. Without providing his own reasoning, Justice White nonetheless joined in the result of the plurality opinion.\(^{213}\) This result is consistent with the liberal Holmesian tendency to defer to congressional exercises of power.

Justice Scalia's dissenting opinion, joined by Justices Rehnquist, O'Connor, and Kennedy, said it had been declared otherwise in *Hans v. Louisiana*. That case, Justice Scalia said, had held broadly that despite the limited text of the 11th Amendment, federal jurisdiction over unconsenting states "was not contemplated by the Constitution when establishing the judicial power of the United States."\(^{214}\) Justice Scalia observed that there was no need to state that conclusion in the 11th Amendment itself, since it was a background principle of wide acceptance.\(^{215}\)

In support of *Union Gas*, Professor Tribe has said that the 11th Amendment conferred rights only against the federal judiciary and not against Congress. Article I suggests that the national government was intended to have plenary power to regulate certain subjects when such regulation would serve the Nation's interests. Tribe added, however, that there are three limiting principles:

1. Congress cannot give an Article III court any authority to resolve disputes outside Article III's textual confines;
2. Any attempt to confer jurisdiction and abrogate immunity must be reasonably ancillary to an otherwise valid substantive exercise of federal lawmaking power; and
3. The 10th Amendment recognizes the states' constitutional role and suggests that the Court should not lightly infer congressional inroads on state autonomy.\(^{216}\)

Professor Tribe's carefully crafted limits on *Union Gas* were swept aside by a majority of the Court in 1996. By 1996, instrumentalist Justices Brennan, Marshall, and Blackmun had left the Court, as had Justice White. The dissenters in *Union Gas*, joined by newly appointed formalist Justice Thomas, voted to overrule *Union Gas* in *Seminole Tribe of Florida v. Florida*.\(^{217}\)

The opinion in *Seminole Tribe* was written by Chief Justice Rehnquist. Rehnquist said that none of the policies underlying *stare decisis* required continued adherence to the holding of *Union Gas*. It was always of questionable precedential value, he said, largely because a majority had expressed

\(^{213}\) *Id.* at 57 (White, J., concurring in the judgment in part and dissenting in part).

\(^{214}\) 491 U.S. at 32 (Scalia, J., joined by Rehnquist, C.J., and O'Connor & Kennedy, JJ., dissenting), citing *Hans v. Louisiana*, 134 U.S. 1, 15 (1890).

\(^{215}\) *Id.* at 31-32.

disagreement with the rationale of the plurality. The result and rationale departed from established understanding of the 11th Amendment and undermined the accepted function of Article III, since never before had the Court suggested that the bounds of Article III could be expanded by Congress operating under any constitutional provision except the 14th Amendment. Justice Rehnquist also noted that the Governor of Florida could not be sued for prospective injunctive relief under the doctrine of Ex parte Young because Congress here had prescribed a detailed remedial scheme for enforcement of a statutorily created right.\textsuperscript{218} It would be inappropriate for the court to supplement that scheme with one created by the judiciary, citing Schweiker v. Chilicky.\textsuperscript{219}

In reaching this result, Justice Rehnquist's opinion tracked the four-Justice dissent in Union Gas.\textsuperscript{220} His opinion blended formalist arguments of history and tradition, conservative Holmesian focus on deferring to states, and the natural law support for the “dual theory of sovereignty” theory of federalism established in past cases, including Hans.\textsuperscript{221} His opinion, therefore, was joined by formalist Justices Scalia and Thomas, and conservative natural law Justices O'Connor and Kennedy.

Justice Stevens, dissenting, said the 11th Amendment applies only to suits premised on diversity jurisdiction. He read Hans to hold only that federal courts should decline to entertain suits against unconsenting states as a matter of federal common law. He was especially concerned that the majority's opinion would prevent Congress from providing a federal forum for a broad range of actions against states. He said the sovereignty of the states is subordinate both to the citizenry of each state and the supreme law of the sovereign. He added that no one had identified any acceptable reason for concluding that the absence of a state's consent to be sued in federal courts should affect the power of Congress to authorize federal courts to remedy violations of federal law by states or their officials in actions not covered by the 11th Amendment's text.\textsuperscript{222} Justice Stevens’ arguments are predominantly liberal, instrumentalist prudential considerations. Although he undertook an analysis of precedents, he put more weight on consequences – limiting the power of Congress to create federal causes of action against a state, or its Governor, for the violation of a federal right.

Justice Souter, dissenting, with Justices Ginsburg and Breyer, also took issue with the holding in Hans that a state could plead sovereign immunity against a noncitizen suing under federal question jurisdiction, and for that reason a state must enjoy the same protection in a suit by one of its own citizens. Beyond that, he contended that the Court in Hans had misread statements in The Federalist Papers and that, in any event, Hans did not even consider whether Congress could abrogate the state's sovereign immunity by statute, since Hans involved a case concerning whether the state of Louisiana’s action violated the Contracts Clause. Justice Souter then explored historical materials to show that even those framers who expected common-law immunity to survive ratification were

talking about diversity jurisdiction, not immunity of a state against the general federal question jurisdiction of the national courts.\(^{223}\) These arguments are not liberal instrumentalist in nature. Instead, Justice Souter relied on his interpretation of cases, history, and general principles of constitutionalism, including the concept that express provisions of the Constitution should not be trumped by judicially discoverable principles “untethered” to any written provision.\(^{224}\)

Since 1996, a majority of the Justices have adhered to *Seminole Tribe*. Indeed, the practical impact of *Seminole Tribe* has been extended by several cases that have limited Congress’ power to abrogate state sovereign immunity by use of Congress’ § 5 power to enforce the 14th Amendment. The most important is *City of Boerne v. Flores*.\(^{225}\) There, in a 5-4 decision, Justice Kennedy wrote that § 5 authorized Congress only to remedy or prevent unconstitutional actions by states. Under § 5, Congress could not make a substantive change in the governing law. Justice Kennedy said that the line is not easy to discern, and the Congress must have wide latitude in determining where it lies. However, there must be a “congruence and proportionality” between the injury to be prevented or remedied and the means adopted to that end. Applying that test, Justice Kennedy examined the legislative record of the Religious Freedom Restoration Act, which purported to require strict scrutiny of all state action that substantially burdens religious exercise, rather than the rational basis test currently used by the Court. Kennedy said the legislative record lacked examples of modern instances of generally applicable laws passed because of religious bigotry. Thus, the Act was so out of proportion to any remedial or preventive object that it was not responsive to, or designed to prevent, unconstitutional behavior, and was an attempt to make a substantive change in the law.

Similar 5-4 conclusions have been reached with respect to federal statutes that purported to subject states, including state universities and university researchers, to federal court jurisdiction in damage actions for infringement of trademarks and patents,\(^{226}\) under the Age Discrimination in Employment Act,\(^{227}\) and under the Americans with Disabilities Act.\(^{228}\) In two recent cases, however, Congress’ power to abrogate state sovereign immunity under the 14th Amendment did prevail. These cases dealt with the Family and Medical Leave Act, and a portion of the American with Disabilities Act regulating access of disabled persons to state courthouses.\(^{229}\) Since these cases all involve aspects

\(^{225}\) 521 U.S. 507 (1997).

of Congress’ § 5 enforcement power under the 14th Amendment, these cases are discussed at § 28.3.

Not surprisingly, the same 5-4 split that appeared in Seminole Tribe reappeared in Federal Maritime Commission v. South Carolina State Ports Authority.230 A private party there brought an administrative claim before the Federal Maritime Commission (FMC). Any decision by the administrative law judge could be enforced only in a federal district court. Writing for the Court, Justice Thomas affirmed a dismissal of the suit, saying that the preeminent purpose of state sovereign immunity is to accord states the dignity consistent with their status as sovereign entities. He said, “Given both this interest in protecting States’ dignity and the strong similarities between FMC proceedings and civil litigation, we hold that state sovereign immunity bars the FMC from adjudicating complaints filed by a private party against a nonconsenting State.” Justice Thomas continued, “By guarding against encroachments by the Federal Government on fundamental aspects of state sovereignty, such as sovereign immunity, we strive to maintain the balance of power embodied in our Constitution and thus to ‘reduce the risk of tyranny and abuse from either front.’” Justice Thomas made clear that the FMC remained free to investigate claims against states and to institute own administrative proceedings against a state.

Dissenting, Justice Stevens said that in his view the 11th Amendment merely restricted federal courts’ diversity jurisdiction. Thus, even Hans v. Louisiana was in error.231 Justice Breyer also dissented, joined by Justices Stevens, Souter, and Ginsburg. Justice Breyer asserted that the principle of law enunciated by the majority had no basis in any text, in any tradition, or in any relevant purpose. Justice Breyer said that it denied the executive and legislative branches the structural flexibility needed to deal with modern government demands. Further, it would force growth of the federal bureaucracy to oversee the actions of the states, thus undermining the very constitutional objectives that the Court’s decision claimed to serve.232

§ 17.2.4.3 State Sovereign Immunity Considerations Generally

As noted at § 17.2.4.1 n.188, in 1999 the Court held in Alden v. Maine that states have immunity from being sued not only in federal court, but also in state court, with respect to suits by individuals against the state, unless some valid waiver of immunity is obtained. Affirming a state court decision dismissing an overtime pay claim under the Fair Labor Standards Act, the Court stated in Alden,233 “The sovereign immunity of the States neither derives from nor is limited by the terms of the Eleventh Amendment. Rather, as the Constitution’s structure, and its history, and the authoritative interpretation by this Court make clear, the States’ immunity from suit is a fundamental aspect of the sovereignty which the States enjoyed before the ratification of the Constitution, and which they

232 Id. at 772-88 (Breyer, J, joined by Stevens, Ginsburg & Souter, JJ., dissenting).

As discussed at § 12.3.3 nn.129-43, the Court’s decision in \textit{Alden v. Maine} involved an important discussion between Justice Kennedy and Souter on the question of historically what was the framers and ratifier’s structural theory of sovereign immunity against the backdrop of the “dual theory of sovereignty.” As noted there, this split between Justices Kennedy and O’Connor, on one side, and Justice Souter, on the other side, has been played out in each of the recent cases discussed above involving the 11th Amendment and related issues of state sovereign immunity. Coloring each side in this debate is the individual’s view on what the proper federalist balance should be. For example, there are no examples of direct federal regulation authorizing suits by individuals against states before the Civil War. Supporters of a strong theory of sovereign immunity can use that fact, as did Justice Kennedy in \textit{Alden}, to support the view that the framing and ratifying generation shared a belief that such regulation would be unconstitutional. Supporters of restricting the 11th Amendment to diversity jurisdiction point out that the framers and ratifiers may have felt comfortable restricting the constitutional protection to diversity jurisdiction, since they knew that the structural restraints built into the Constitution would limit most congressional intrusion on state sovereignty, absent important legislative goals.

Similarly, one proposed version of the 11th Amendment, which was rejected, provided that the “Judicial power of the United States, except in cases arising under treaties made under the authority of the United States, shall not be construed to extend to any suit in law or equity, commenced or prosecuted against one of the United States, by citizens of another State, or by citizens or subjects of a foreign state.” Proponents of a strong version of sovereign immunity can use the rejection of this proposal, as did Justice Kennedy in \textit{Alden}, as evidence that the framers of the 11th Amendment intended it to apply broadly, even as to treaties, as well as to all other aspects of federal law, including maritime and admiralty jurisdiction. Proponents of the narrower view can suggest this language was rejected precisely because if it were adopted the 11th Amendment would have been read to apply to other federal laws and to admiralty and maritime, and only not to apply to treaties.

---

234 \textit{Id.} at 742-43. This immunity is not necessarily waived by a state removing a case to a federal court, since removal waives the 11th Amendment jurisdictional barrier, see \textit{supra} note 189, but sovereign immunity is substantive. Stewart v. North Carolina, 393 F.3d 484 (4th Cir. 2005).

238 \textit{Alden}, 527 U.S. at 721.
This proposal was made by Jeffersonian supporter, and states’ rights activist, Albert Gallatin. This suggests that Gallatin viewed the proposal as increasing the breadth of the 11th Amendment, which suggests that narrowing the 11th Amendment was the intent of those who rejected the proposal.\textsuperscript{239} By striking the language, the Federalist Party, which controlled majorities in the House and Senate, probably intended to limit the 11th Amendment to diversity jurisdiction, and not have it cover treaties, federal laws, or admiralty and maritime cases.\textsuperscript{240}

At the time, the Federalist party held majorities in both the House and the Senate. The specific result in \textit{Chisholm} was being used by anti-Federalists to stir up suspicion of the new national government, with some states, like Massachusetts and Virginia, circulating petitions that could be used as a vehicle to call a new Constitutional Convention.\textsuperscript{241} Against this historical backdrop, Federalist support for a limited 11th Amendment to be sent to the states would take the more dangerous issue of a Constitutional Convention off the political agenda.

Despite the attempt by some to use statements by Hamilton, Madison, and Marshall during the ratification debates to support the strong theory of sovereign immunity, careful attention to their language, and the context in which it was used, actually supports the narrow view of limiting sovereign immunity to diversity jurisdiction. Each of their statements were directed to rebutting the concern of anti-Federalists that the Constitution, as drafted, would permit states to be sued in federal courts for their Revolutionary War, or colonial-era, debts. This was particularly a concern of Southern states since a number of Northern speculators had bought up war debts at depressed prices. Further, the Treaty of Paris in 1783, which ended the Revolutionary War, provided that Britain would get relief with debts owed to it paid in sterling, not paper money.

All of these creditors were hoping for relief under the Constitution. This relief could come either from the federal government taking over these debts, or relief in federal courts that might be more likely to hold states to their obligations than state courts, given the flexibility of the prevailing doctrine adopted in state courts that states would have to pay only under a broad concept of “moral obligation” or “good faith” performance.\textsuperscript{242} Although the federal government did take over basic state Revolutionary War debts in 1791, as well as assuming federal debts acquired under the Articles of Confederation, pursuant to Article VI, cl.1 of the Constitution, for other state debts, the anti-Federalist concern turned out to be real in terms of federal court intervention in \textit{Chisholm v. Georgia}. From this perspective, the 11th Amendment merely reinstated Hamilton, Madison, and Marshall’s views regarding states not being able to be sued in federal court for their state debts under state law pursuant to diversity jurisdiction.

\textsuperscript{241} \textit{Id.} at 1931-32.

\textsuperscript{242} For a good discussion of the problem of state Revolutionary War debts, see Paul E. McGreal, \textit{Saving Article I from Seminole Tribe: A View from the Federalist Papers}, 55 SMU L. Rev. 393, 396-406 (2002).
Hamilton’s views on state sovereign immunity consistent with this understanding are stated in The Federalist Papers No. 32 & 81. In No. 81, Hamilton addressed the concern that states might be amenable to suit in federal courts for their state debts, and rejected that view based upon his theory of state sovereignty developed in No. 32. In that article, Hamilton had discussed state immunity from the perspective of preemption theory, noting that states would retain all of their existing powers unless preempted by federal power. Hamilton listed three ways in which the Constitution provided for federal preemption of state power: (1) express grants of exclusive jurisdiction to the federal government, as for Congress’ power to make rules for the District of Columbia; (2) express grants of power to the federal government and express limitations on state power, such as Congress’ power to “lay and collect taxes, duties, imposts, and excises,” and the limitation that “No State, shall, without the consent of Congress, lay any impost or duties on imports or exports, except for the purpose of executing its inspection laws”; and (3) cases where federal power existed and concurrent state power would be “contradictory and repugnant,” although not merely “inconvenient.” As an example of this, Hamilton listed Congress’ power to make “uniform” rules of naturalization.

These three categories appear cover the range of preemption possibilities: express preemption, either by express grant or express limitation on state power, and implied preemption. As discussed at § 20.3.1.2 n.135, the category of implied preemption involves both (1) field preemption, where the entire field of state regulation is preempted, such as regarding naturalization, the example listed by Hamilton, and (2) conflict preemption, where (i) compliance with both state and federal regulations is impossible (in Hamilton’s terms, “contradictory”) or (ii) where state law stands as an obstacle to accomplishing Congress’ purposes (in Hamilton’s terms, “repugnant”).

Hamilton’s use of the terms “contradictory” and “repugnant” suggests Hamilton had in mind all manner of federal preemption, not merely the two provisions in Article I, § 8 that refer to “uniform” rules – naturalization and bankruptcy, in Article I, § 8, cl. 4. Had Hamilton only intended the two “uniform” clauses to be included, he would have used that term, not the broader “contradictory and repugnant” language. By tying state sovereign immunity to preemption principles, Hamilton’s view was that states would surrender sovereign immunity in any case where federal law had preemptive effect. This would involve any congressional exercise under Article I, § 8, consistent with Union Gas, and consistent with Hamilton’s strong federal power views, and would reject Seminole Tribe.

On the other hand, there would be no federal jurisdiction for cases involving state debts under state law, since there was no federal power to preempt over that subject matter. Chisholm held to the contrary, and thus the 11th Amendment was a corrective to reinstate the initial vision. The language of the 11th Amendment stating that the judicial power “should not be construed” to extend to diversity cases supports this view that the 11th Amendment was viewed by its framers as merely restating the original intent of the drafters. Under Hamilton’s preemption vision, states would be free to tax on their own areas that did not interfere with federal taxing schemes, the other concern of the anti-Federalists regarding the state debt issue. The anti-Federalists were concerned that federal taxing power would crowd out the ability of states to tax to fund their operations and pay their debts. Hamilton also specifically addressed this concern in No. 32.

\[243 \text{ Id. at 398-401.}\]
Marshall and Madison’s comments during the ratification debates were similarly made against a backdrop of this concern with state sovereignty. Both said that the language in Article III, § 2, cl. 1 on federal jurisdiction for cases “between a State and citizens of another State” or “between a State . . . and foreign States, Citizens or Subjects” referred to states suing as plaintiffs, not being sued by an individual and in the role of a defendant.244 Particularly given the context of these statements to rebut arguments concerning the state law issue of state Revolutionary War debts, these statements both literally, and were likely intended to, refer to cases where jurisdiction would be based on the nature of the parties, that is, the diversity cases, not cases involving federal questions. State versus state cases, of course, would involve a state suing as a plaintiff, and thus could be brought in federal court, as the Supreme Court has always held. This view is also reflected in the belief during the natural law era that states could be sued by foreign states based on treaty obligations, and thus under federal question jurisdiction, just not in diversity jurisdiction pursuant to the 11th Amendment’s text regarding no suit in federal court based on the parties being a “State” and “foreign States.”245

Had Marshall shared the broader concept of state sovereign immunity at the time of the framing, one would expect to see that vision expressed somewhere during Marshall’s 35 years on the Supreme Court. Yet consistently under Marshall Court decisions, the more limited reading of the 11th Amendment prevailed, restricting it to diversity jurisdiction, consistent with its text and this understanding of Hamilton, Madison, and Marshall’s views. Indeed, in Cohens v. Virginia,246 Marshall distinguished cases involving states where jurisdiction was based on the nature of the parties, to which the 11th Amendment did apply, from cases involving “the constitution or laws of the United States,” that is, federal questions, to which the 11th Amendment did not apply.

Some federal action intruded on states during the Marshall Court era. Cases came about either as a result of the impact of federal treaties on states, particularly treaties with Britain over debts and land, or as a result of admiralty and maritime jurisdiction, typically involving ownership and operation of ships. These cases could be troublesome for state finances, but sovereign immunity was never recognized in any of these cases, principally through the Osborn principle of being able to sue state officials, even for money damages, even when those damages would eventually be paid by state treasuries, as long as states were not the party of record in the case.247 Had the Marshall Court shared in the strong view of state sovereignty, they would likely have limited the Osborn principle, as did the formalist-era courts in In re Ayers, Ex parte Young, and other cases, noted at § 17.2.4.1 n.183. Given the limited amount of federal regulation, the Taney Court had no occasion, or need,

245 See generally Thomas H. Lee, The Supreme Court of the United States as Quasi-International Tribunal: Reclaiming the Court’s Original and Exclusive Jurisdiction over Treaty-Based Suits by Foreign States Against States, 104 Colum. L. Rev. 1765, 1767-70 (2004).

246 19 U.S. (6 Wheat.) 264, 412 (1821).

to upset the limited understanding of the 11th Amendment. Only with the more conservative, pro-
states’ rights formalist-era Court did the 11th Amendment come to have the broader meaning it has
today.

As noted at § 14.2.5, the Supreme Court has moved since 1986 into a modern natural law era of
judicial decisionmaking. As discussed at § 16.4 nn.92-96, the fundamental idea behind this modern
natural law perspective is that governmental action should be tested by whether its means and ends
accord with the reason and logic of an impartial spectator, which requires giving each person equal
concern and respect. As noted at § 16.4 nn.103-05, such a modern natural law impartial spectator
approach supports an analysis permitting “play in the joints” for social policy decisions, rather than
constitutionalizing value decisions not determined by the principle of equal concern and respect.
The text of the 11th Amendment, and history surrounding its adoption, seem to support on balance
the limited view of the 11th Amendment that would permit “play in the joints” for Congress to decide
on whether to grant individuals rights to sue states to enforce federal law.248

Further, such an approach would require giving equal concern and respect to the changes in
federalism wrought by the Civil War and reflected in the 14th Amendment, particularly its Privileges
or Immunities Clause249 and its Due Process Clause.250 As discussed at § 25.3 nn.55-63, one view
of the 14th Amendment Privileges or Immunities Clause is that it was intended, in part, to give each
citizen of the United States a right to have federal law enforced in the states. At a minimum, such
an approach suggests that the framers and ratifiers of the 14th Amendment believed in the more
limited view of the 11th Amendment as represented by the then-current Marshall and Taney Court
precedents, rather than the more expansive view of the 11th Amendment represented by Hans and
later formalist-era precedents.

Adoption of this doctrine would require overruling the Court’s recent 11th Amendment jurisprudence
on the ground that those decisions are substantially wrong as reflecting too great a conservative
preference for states’ rights, a preference not represented in constitutional text, structure, history,
or legislative and executive practice. This would mirror the Court’s rejection in 10th Amendment
doctrine of the conservative preference for states’ rights represented by National League of Cities
v. Usery, and its replacement by the more textually faithful analysis of the 10th Amendment in
Garcia v. San Antonio Metropolitan Transit Authority,251 discussed at § 18.4.4 nn.219-31.

Constitutional Text, 113 Yale L.J. 1663 (2004), and sources cited therein.

249 See generally William J. Rich, Taking “Privileges and Immunities” Seriously: A Call to
Expand the Constitutional Canon, 87 Minn. L. Rev. 153, 181-83, 200-10 (2002); William J. Rich,
Privileges or Immunities: The Missing Link in Establishing Congressional Power to Abrogate State

250 See generally Erwin Chemerinsky, The Hypocrisy of Alden v. Maine: Judicial Review,

Such an approach would also permit the Court to dispense with the unpredictable, and analytically unworkable, distinctions currently being drawn concerning how much state influence over local action is sufficient to make the local action attributable to the state. This would be similar to the Court rejecting in *Garcia* the unpredictable, and unworkable, aspect of *National League of Cities* regarding what is a traditional versus non-traditional governmental function, discussed at § 7.3.3.1 nn.146-51. Under current 11th Amendment doctrine, it is understandable that the Court does not want to make the 11th Amendment analysis fully applicable to local action, since, as has been noted, “it is [local government] that provides most social services in this country, such as police and fire protection, education, and sanitation. Therefore, if the Eleventh Amendment barred suits against municipalities, federal courts could not ensure compliance with the Constitution by those who are most likely to violate it.”252 Under a more limited view of the 11th Amendment, treating local governmental action as part of state action, as is done under the 14th Amendment, discussed at § 26.1 nn.1-4, would not pose that problem.

Of course, even under Justice Souter’s narrower view, the plain text of the 11th Amendment would remain, which prevents states from being sued in federal court under diversity jurisdiction. However, under this view, Congress could abrogate state sovereign immunity with regard to any valid federal enactment, including those enactments justified under the Commerce Clause, either under Hamilton’s preemption kind of analysis, or Marshall’s view that the 11th Amendment does not apply to cases “arising under this Constitution, the Laws of the United States, and Treaties made,” or as part of a 14th Amendment Privileges or Immunities Clause analysis, rather than having to prove, as under current doctrine, state action in violation of the Equal Protection or Due Process Clauses of the 14th Amendment. This would place the decision on immunity back in the hands of Congress, where the original Constitution, with its Supremacy Clause, and even more so the Civil War Amendments, with their limitations on state power, likely intended the power to be placed.

Viewing state sovereign immunity through the lens of the 14th Amendment would also solve the current anomaly in the law, where the 11th Amendment is viewed as a jurisdictional matter for most purposes of procedure, but can be waived by the state, which ordinarily cannot be done for jurisdictional matters.253 Under this view, the 11th Amendment is jurisdictional in nature, but the waiver is accomplished as part of the limitations on state power implicit in Article I, § 8 and the 14th Amendment, which are substantive, thus authorizing substantive waivers of sovereign immunity by the state itself or Congress.

Of course, under the current view of the 11th Amendment, there is an argument that since the 11th Amendment is jurisdictional, it should not be waivable, and should be raised *sua sponte* by a federal court if it is not raised by the parties themselves.254 One could also argue that the very use of the term “State” in the Constitution implies that the framers believed that individual states, like “foreign

---

252 Chemerinsky, supra note 204, at 194.

253 See id. at 215-16.

States,” were intended to have broad sovereign immunity applicable to individual nations. However, there is no specific historical evidence that supports the view that the framers made that kind of conscious choice, rather than just continuing the prevailing term “State” to describe the 13 states that were to make up the new federal union. Further, even in a confederation of independent states, as the states were under the Articles of Confederation, or under the model of the European Union today, there is no necessary requirement of broad state immunity from union-wide laws.

Practically speaking, of course, the broad state immunity granted under current doctrine is still limited by the fact that the federal government can always sue states to enforce compliance with federal law, as noted at §17.2.4.1 n.178; individuals can sue under Ex parte Young for injunction relief, discussed at § 17.2.4.2 nn.206-08; the federal government can create incentives for states compliance under its Spending Clause power, discussed at § 18.3.2.2; and states can choose voluntarily to comply with federal law, as did Maine after Alden v. Maine, where Maine began to pay its workers consistent with federal minimum wage and overtime laws, despite the lawsuit seeking damages for prior violations being dismissed on state sovereign immunity grounds.

§ 17.2.4.4 Additional Restraints on Federal Courts Involving State Court Actions: Abstention Doctrine and Other Prudential Restraints

For reasons of "comity" and respect for state courts reflected in the dual theory of sovereignty, often-termed “Our Federalism,” as well as a reluctance to grant an equitable remedy where there is an adequate legal remedy, the Court held in Younger v. Harris that federal courts should not enjoin pending state criminal prosecutions where the defendant seeks to invalidate on its face the law under which the action was brought. The Court said that at least where the state has not brought the action in bad faith, the burden of continued defense is not ordinarily "irreparable injury." In Hicks v. Miranda, this principle was extended to a criminal case where the state proceeding was brought after the federal case had been filed, but before the federal court had reached the merits of the case. The Younger abstention doctrine was extended to civil cases in Trainor v. Hernandez. That case involved the important state interests of the constitutionality of a state attachment proceeding used

---

256 See generally James E. Pfander, Member State Liability and Constitutional Change in the United States and Europe, 51 Am. J. Comp. L. 237 (2003).

258 401 U.S. 37, 54 (1971).

by the state to recover welfare payments allegedly wrongfully paid. In *Middlesex County Ethics Commission v. Garden State Bar Association*, a case involving a state bar disciplinary hearing, the Court phrased the relevant questions for purposes of *Younger* abstention as whether: (1) there is an ongoing state judicial proceeding; (2) do the proceedings implicate important state interests; and (3) is there an adequate opportunity in the state proceedings to raise constitutional challenges.

In *Pennzoil Co. v. Texaco, Inc.*, the Supreme Court went further to hold that even where the state is not a party a federal court should not enjoin a pending state civil proceeding if important state interests call for "comity." Reversing the Second Circuit Court of Appeals, which had enjoined Pennzoil from executing on a $12 billion judgment of a Texas trial court for tortious interference with a contract, the Supreme Court said that Texas had an interest in enforcing its own orders and judgments, and plaintiffs were unable to show that state procedural law barred presentation of its federal claims. Reflecting a liberal instrumentalist predisposition for effective enforcement of civil rights, Justice Brennan, concurring, urged the Court not to abstain in civil cases, especially § 1983 actions, saying that Texas had only a small interest in such litigation.

A second kind of abstention is *Pullman* abstention. The Court held in *Railroad Commission of Texas v. Pullman Co.* that federal courts should abstain from granting an equitable injunction if unresolved federal issues depend on the meaning of unclear state law, considering the degree of uncertainty and the delay and expense that will result from an injunction, and to avoid an unnecessary decision of constitutional questions. Justice Blackmun indicated in *Pennzoil* that he thought that case was appropriate for *Pullman* abstention, as did Justice Marshall, who noted the federal action was essentially an appeal from a state court judgment with a constitutional claim intertwined with the merits. Of course, if the meaning of a state statute is clear, or the state law is otherwise settled by state court precedents, or the injunction would be proper to grant under any possible interpretation of the state statute, then *Pullman* abstention does not apply.

---

262 481 U.S. 1, 10-17 (1987); *id.* at 19 (Brennan, J., concurring). On *Younger* abstention in civil cases, see also Gilbertson v. Albright, 381 F.3d 965, 968 (9th Cir. 2004) (*en banc* opinion) (*Younger* principles apply in civil cases to actions at law for damages, as well as for the injunctive or declaratory relief involved in *Pennzoil*, because a determination that the party’s constitutional rights have been violated would have the same practical effect as a declaration or injunction on pending state proceedings. However, federal courts should not dismiss actions where damages are at issue; rather, damages actions should be stayed until the state proceedings are completed).

263 *Pullman*, 312 U.S. 496, 501-02 (1941); *Pennzoil*, 481 U.S. at 29 (Blackmun, J., concurring in the judgment); *id.* at 23 (Marshall, J., concurring in the judgment).

Pullman abstention was extended in *Louisiana Power & Light Co. v. City of Thibodaux*[^265] to involve abstention in a state eminent domain proceeding, which though not formally an equitable proceeding, raised the same issue of respect for “comity” and “state sovereignty.” Professors Nowak and Rotunda have noted that it is “more precise to speak of Pullman deferral, to emphasize that Pullman recognizes that federal courts should not prematurely resolve the constitutionality of a state statute,” but that “the term ‘abstention’ is used too often that it is fruitless to insist on a change.”[^266]

A third kind of abstention, *Burford* abstention, applies when on-going state administrative action or state court litigation would help resolve difficult questions of state law and state needs for uniformity caution against federal resolution of the case.[^267] The Court noted that in *Burford v. Sun Oil Co.* that this kind of abstention should be rare, and only applies where the relief sought is equitable. Under *Burford*, a federal court has no right to stay or dismiss, or remand to state court, a damage action properly brought in federal court.[^268]

A fourth kind of abstention is the *Rooker-Feldman* doctrine. Based on *Rooker v. Fidelity Trust Co.* and *District of Columbia Court of Appeals v. Feldman*,[^269] the *Rooker-Feldman* doctrine bars a losing party in a state court from seeking what in substance would be appellate review of the state judgment in a United States district court, based on the losing party’s claim that the state judgment itself violated the loser’s federal rights. As phrased, the doctrine naturally does not apply to a federal suit brought by a non-party to the state suit.[^270] As applied by some lower federal courts to bar district court review even when the issue “had not been raised in state court, but could have been,” the doctrine has been criticized as limiting federal jurisdiction even for federal question cases merely because litigation on “inextricably intertwined” issues was begun first in a state court.[^271]

In *Exxon Mobil Corp. v. Saudi Basic Industries Corp.*,[^272] the Court limited the *Rooker-Feldman* doctrine to its core facts. The case involved a situation in which Saudi Basic Industries (SBI) had

filed an action against Exxon in a state court and Exxon had then filed an action in federal court for damages against SBI, not in an attempt to overturn any judgment entered by state court, but to protect itself in the event it lost in the state court on grounds, such as the state statute of limitations, which would not preclude relief in the federal venue. The state court in fact entered a substantial judgment for Exxon. Before the state court trial, SBI moved the federal court to dismiss Exxon’s action. The Third Circuit dismissed on Rooker-Feldman grounds, but the Supreme Court held in a unanimous opinion that properly invoked federal jurisdiction does not vanish merely because a state court reaches judgment on the same or a related question while the case remains under consideration in a federal court. Exxon was not attempting to overturn any state court judgment by its actions.

Of course, as the Court noted in Saudi Basic Industries, disposition of the federal action, once the state-court adjudication is complete, would be governed by preclusion law. As the Court noted, “The Full Faith and Credit Act, 28 U.S.C. § 1738, originally enacted in 1790, ch. 11, 1 Stat. 122, requires the federal court to ‘give the same preclusive effect to a state-court judgment as another court of that State would give.’ . . . . In parallel litigation, a federal court may be bound to recognize the claim- and issue-preclusive effects of a state-court judgment, but federal jurisdiction over an action does not terminate automatically on the entry of judgment in the state court.”

Because of the Full Faith and Credit Act, parties may not relitigate in federal court an issue that has previously been resolved by state courts of competent jurisdiction. For example, in San Remo Hotel, L.P. v. City and County of San Francisco a party sought to litigate a federal claim under the Takings Clause that was not ripe until the entry of a final state judgment denied just compensation. Plaintiffs contended that a $567,000 fee imposed by a city for converting residential rooms to tourist rooms was a taking. They had initially filed an action in a state court for an administrative mandamus against imposing the fee, but that action was stayed when they filed suit in a federal court for an as-applied challenge to the ordinance which authorized the fee. The federal court applied Pullman abstention, saying the claim was not ripe until the government entity charged with implementing the state regulations had reached a final decision regarding the application of the regulations to the property at issue. This conclusion was based on the Court’s precedent of Williamson County Regional Planning Commission v. Hamilton Bank of Johnson County.

Back in the state court, the plaintiffs argued the takings issue in their mandamus suit, and lost. They then returned to federal court, saying their case was now ripe. Justice Stevens wrote for a majority that interests in finality trumped the interest in giving a losing litigant access to an additional tribunal, particularly since they were not required to litigate the takings issue fully in the state court. Chief Justice Rehnquist, with Justices O’Connor, Kennedy, and Thomas, concurred in the judgment but expressed the opinion that Williamson County should be reconsidered because the

276 Id. at 342-48.
Court should rethink whether plaintiffs asserting a Fifth Amendment takings claim based on the final decision of a state or local government entity must first seek compensation in state courts. The Chief Justice noted the *Williamson County* rule had the practical effect that litigants who go to state court to seek compensation will likely be unable later to assert their takings claims in federal court. Related issues of “comity” based on the Article IV, §1 Full Faith and Credit Clause of the Constitution are discussed at § 23.1.4.

As a final point regarding prudential restraints on the federal courts, in *Ashwander v. T.V.A.*, discussed at § 17.1.3.2, the Court stated general principles of judicial restraint that constitutional questions should not be decided in a friendly suit; by *dicta*; more broadly than the facts; if there is another ground for decision, *e.g.*, an interpretation that would avoid the constitutional question; on behalf of a party not injured by the challenged law; on behalf of parties who have obtained benefits from the challenged law; or, for cases involving the constitutionality of a statute, whether a construction of statute is fairly possible by which the question may be avoided. These principles apply equally to considerations of the constitutionality of state or federal laws. Similarly, the constitutional and prudential limitations on federal court jurisdiction, discussed next at § 17.3, also apply to cases in federal court involving state or federal laws.

§ 17.3 Justiciability Limits on Federal Court Jurisdiction

As noted at the beginning of § 17.2, Article III grants federal judicial power over certain "Cases" and "Controversies.” Thus, a threshold question in every federal case is whether plaintiff has made out a “case or controversy” so the court has power to hear the suit. Four judicial doctrines are concerned with this issue of justiciability. These are the doctrines of standing, discussed at § 17.3.1; ripeness, discussed at § 17.3.2; mootness, discussed at § 17.3.3; and political questions, discussed at § 17.3.4.

Based upon a predisposition to resolve cases on the merits to advance sound social policies, the instrumentalist approach to these doctrines tends to favor finding that the party has standing, the case is ripe, not moot, and does not involve a political question. In contrast, the formalist preference for literal interpretation and bright-line rules tends to lead formalists to adopt a more strict interpretation of these doctrines. Similarly, based upon a predisposition to defer to government, the Holmesian approach in close cases tends to favor finding no standing, the case is not ripe, is moot, or involves a political question. The natural law approach tends to represent a middle between these extremes, without a strong predisposition in either direction, based upon the natural law respect for reasoned elaboration of the law against a background of considering the sources of text, purpose, context, history, legislative and executive practice, and judicial precedents.

§ 17.3.1 Standing to Sue: Constitutional and Prudential Limits on Federal Jurisdiction

§ 17.3.1.1 Introduction to the General Principles of Standing

The text of Article III of the Constitution, which provides for federal judicial power over certain

---

277 *Id.* at 348-52 (Rehnquist, C.J., joined by O’Connor, Kennedy & Thomas, JJ., concurring).
"cases" and "controversies," has been held to raise a question for every lawsuit brought in a federal court as to whether plaintiff has made out a case or controversy, so the plaintiff can be said to have "standing" to bring the case in court. Although the case or controversy requirement has existed from the beginning of the Nation, the first case to use the precise term "standing" to describe the issue was in 1944 in *Stark v. Wickard*.\(^\text{278}\)

The Court has stated, "[O]ur standing jurisprudence contains two strands: Article III standing, which enforces the Constitution’s case or controversy requirement, and prudential standing, which embodies ‘judicially self-imposed limits on the exercise of federal jurisdiction.’"\(^\text{279}\) To establish Article III standing, current doctrine requires that plaintiffs must allege a past or prospective “injury in fact” to themselves, “caused” by the challenged action, and likely to be “redressed” by a favorable decision. By "injury in fact," the Court means an invasion of a legally protected interest that is "(a) concrete and particularized, and (b) actual or imminent, not conjectural or hypothetical."\(^\text{280}\) By "causal" relationship, the Court means that the injury "fairly can be traced to the challenged action of the defendant," and has not resulted from "the independent action of some third party not before the court."\(^\text{281}\) By redressability, the Court means that the "prospect of obtaining relief from the injury as a result of a favorable ruling" is not "too speculative."\(^\text{282}\) The various prudential principles which affect standing are discussed at § 17.3.1.4.

To be granted standing, the plaintiff must clearly and specifically set forth facts sufficient to satisfy each of the above requirements. In addition, when assessing a claim of injury, the Court will presume a lack of jurisdiction unless the contrary appears affirmatively from the record.\(^\text{283}\) However, for the purpose of ruling on a motion to dismiss for want of standing, both trial and reviewing courts must accept as true all material allegations of the complaint, and must construe it in favor of the complaining party. When a case has proceeded to final judgment, the facts relating to standing, if controverted, must be supported by the evidence adduced at trial to avoid dismissal.\(^\text{284}\)

Article III standing requirements bind the Supreme Court not only for cases initially brought in the federal courts, but also when reviewing on appeal the decision of a state court, as held in *Doremus*

---

However, where the state court judgment on the claim was adverse to one of the defendants in the state court action, rather than adverse to plaintiffs, who because they did not have Article III standing for purposes of having their case heard in federal court had no real cognizable complaint in federal court about losing the state case anyway, the Court held in *Asarco, Inc. v. Kadish* that such adverse judgment is itself a form of injury creating Article III standing for defendant-petitioner when none existed before. The Court was concerned that if *Doremus* applied literally, the state court judgment would stand without any federal court review of its accuracy. Chief Justice Rehnquist, reflecting his conservative Holmesian deference-to-state-government predisposition, and literal-minded formalist Justice Scalia, dissented from the Court’s judgment and would have applied *Doremus* to let the state court decision stand without federal review. They noted such unreviewable state court decisions already occur in those states whose courts have the power, unlike the federal courts, to render advisory opinions, as discussed at § 7.3.3.1 n.516.

Usually it is not difficult to satisfy the three Article III standing requirements if the federal lawsuit is traditional in form, with the plaintiff complaining that the defendant's action, alleged to be unconstitutional on its face or as applied, has directly caused plaintiff a physical or economic injury which can be remedied by damages or an injunction. Difficulties arise, however, once plaintiffs are outside the classic case of individuals suing for their own physical or economic injuries. Thus, standing may be difficult to establish if the plaintiff complains about non-traditional kinds of injuries; or not as an injured individual but as a member of some large group, such as taxpayers or citizens; or as an individual or organization distressed by actual or threatened law enforcement directed at a third person; or more remote from personal injury, as an individual simply experiencing distress at observing an alleged constitutional violation. Problems are also raised by the federal Qui Tam statute, 31 U.S.C. § 3730, discussed at § 17.3.1.3.E., which allows private persons to bring actions on behalf of the United States.

These difficulties frame the two central questions of modern standing doctrine: (1) how difficult should it be to establish standing in these non-traditional kinds of cases, and (2) whether the difficulties which arise in these cases are constitutional difficulties mandated by Article III, or merely prudential difficulties that can be overcome by acts of Congress that grant standing. In the

---

1970s, in *Warth v. Seldin*, the Court said that in these situations it might invoke a non-constitutional "prudential" limitation on standing to sue, such as the prudential principle in *Warth* that a harm shared equally by a large class of citizens was a "generalized grievance" which for prudential reasons usually did not warrant exercise of federal jurisdiction. Since the 1980s, however, in cases like *Allen v. Wright* and *Lujan v. Defenders of Wildlife*, the Court has stated that plaintiffs who raise only generalized grievances about government do not state an Article III case or controversy.

In 1992, Professor Cass Sunstein, of the University of Chicago Law School, published in the *Michigan Law Review* a significant article on the doctrine of standing that addressed these two issues. Professor Sunstein concluded that the Supreme Court erred in 1992 when it decided in *Lujan* that, because Article III limits judicial power to cases and controversies, standing to bring a case in a federal court: (1) always depends on plaintiff suffering an "injury in fact"; and (2) this is true even if standing is authorized by Congress.

With regard to the first central issue of standing, *i.e.*, how difficult should it be to establish standing in non-traditional kinds of cases, Sunstein contended that the "injury-in-fact" requirement has no textual or historical support. Professor Sunstein noted, "What of 'injury in fact'? No court referred to this phrase before *Barlow v. Collins* in 1970. After that year, the phrase appears in about ten cases during each succeeding five-year interval, until a leap to ten references in the brief period from 1990 to 1992. Thus the injury-in-fact test played no role in administrative and constitutional law until the past quarter century." The correct test for standing, said Sunstein, is whether state or

---

293 *Id.* at 166-68.
294 *Id.* at 169. To emphasize his conclusion that modern standing law is not based on history, Professor Sunstein supplied some quantitative information derived from his search in LEXIS:

In the history of the Supreme Court, standing has been discussed in terms of Article III on 117 occasions. Of those 117 occasions, 55, or nearly half, of the discussions occurred after 1985 – that is, in the past seven years. Of those 117, 71, or over two thirds, of the discussions occurred after 1980 – that is, in just over a decade. Of those 117, 109, or nearly all, of the discussions occurred since 1965. The first reference to "standing" as an Article III limitation can be found in *Stark v. Wickard*, decided in 1944. The next reference does not appear until eight years later, in *Adler v. Board of Education*.

*Id.*
federal law or the Constitution has conferred on the plaintiff "a cause of action." This is a more flexible test and usually would be easier for the plaintiff to meet than the "injury-in-fact" test because historically a number of causes of action have existed, such as *qui tam* and informers' actions, which do not depend upon the plaintiff establishing any "injury in fact."^{295}

With regard to the second central issue of standing, *i.e.*, whether standing is a constitutional requirement or merely prudential so that Congress can freely enlarge standing, Sunstein contended that the "injury-in-fact" test may deprive Congress of a power that it properly has to enlarge standing by creating rights of action widely shared by many persons. According to Sunstein, Congress should be viewed as having broad constitutional power to create new causes of action, thus making standing doctrine principally a prudential matter subject to congressional control.^{296}

Professor Sunstein stated that the movement away from this correct view, which existed in the 19th century, was brought about largely by three 20th century developments. First, in the 1930s and 40s, there was a struggle over the constitutional legitimacy of the emerging regulatory state. Some Justices, especially Justice Frankfurter, raised justiciability issues to guard the New Deal from too frequent judicial attack.^{297} Second, in 1970, when attempting to establish a very lenient standing test for beneficiaries of the Administrative Procedure Act, so the beneficiaries could promote fidelity to legislative enactments,^{298} Justice Douglas introduced in *Association of Data Processing Service Organizations, Inc. v. Camp*,^{299} the two-pronged test of (1) "injury in fact", while (2) being within the "zone of interests" of the relevant law. Third, after confining the "zone of interests" test in later cases so it would not be a bar to standing, the Court toughened what was required to establish "injury in fact," for a variety of reasons. According to Professor Sunstein, these reasons include:

1. Resistance to Congress creating new kinds of property rights and allowing people to vindicate them, a resistance generated by deep familiarity with the traditional common-law catalogue of legal rights;
2. Article III separation of powers concerns; and
3. A belief that a distinction should be drawn between regulated objects and the beneficiaries of regulation, who ordinarily should not be allowed to sue for under-regulation because of: (a) concerns over whether certain governmental regulations are morally questionable; (b) concern about administrative over-enforcement or the capture of agencies by beneficiaries; and (c) questions about whether the Court can play a fruitful role in implementing regulatory statutes.^{300}

---

^{295} Id. at 166-67, 170-79.

^{296} Id. at 223.

^{297} Id. at 179.

^{298} Id. at 185.

Professor Sunstein attributed little weight to these three concerns. He would have the Court apply only the test of whether the plaintiff has a cause of action because of some source of law — common law, statute, or the Constitution. To avoid having *Lujan* cause the dismissal of future citizen-initiated suits, should it survive as a viable precedent, Sunstein recommended that Congress create a system of bounties for citizens in cases involving private defendants or the executive branch, so the bounty can be considered a property interest on which to base standing. He also suggested that Congress should exercise its power to create property rights in benefits provided by regulatory statutes, and to establish standing to vindicate those property rights.

Finally, Sunstein foresaw a glimmer of hope for his preferred outcome in the concurring opinion by Justice Kennedy in *Lujan*. The hopeful language was as follows: "In my view, Congress has the power to define injuries and articulate chains of causation that will give rise to a case or controversy where none existed before, and I do not read the Court's opinion to suggest a contrary view. In exercising this power, however, Congress must at the very least identify the injury it seeks to vindicate and relate the injury to the class of persons entitled to bring suit."

Sunstein hoped that this opinion might "open the possibility that Congress has the power to create quite novel property interests, to grant those interests to many people or even to citizens, and to confer standing to enable people to vindicate those interests." For Professor Sunstein this point is important, even if any particular Congress is unlikely to exercise this power to create additional private rights of action in many cases.

Some have described the evolution of standing doctrine as "confused," "amorphous," or an area regarding which only "worthless generalizations" can be made. As it true for the evolution of any constitutional doctrine, the evolution of standing doctrine can best be understood by paying attention

302 *Id.* at 232-35.

304 *Sunstein,* supra note 292, at 236.

to changes in Court personnel and the Justices' respective styles of decisionmaking. In general, when the standing issue was raised in the pre-instrumentalist Court eras, prior to 1954, the Court confined judicial power to traditional kinds of actions during the natural law and formalist eras (1789-1873 and 1873-1937, respectively). The Court gradually developed an Article III injuries test during the Holmesian era (1937-1954). The instrumentalist Court (1954-1986), particularly during its 1960s heyday, attempted to transform standing doctrine in ways that would permit "citizen attorneys general" wide latitude to bring actions in the federal courts against regulated parties and government officials to require compliance with the law. Finally, the post-instrumentalist Court (1986-today) has returned standing doctrine to a more traditional posture, and returned results in standing cases back substantially to where they were before the instrumentalist "blip" in standing doctrine.

It is true, as Professor Sunstein stated, that in post-instrumentalist standing cases the Justices have been giving greater explicit emphasis to the doctrine of separation of powers than did their pre-instrumentalist predecessors. Consistent with a modern natural law focus on reasoned elaboration of the law, this contemporary development is a reasoned elaboration of pre-instrumentalist precedent and will help bring about, as the Court has said more than once, the realization in standing doctrine of separation of powers concepts embedded in the Constitution.

§ 17.3.1.2 Constitutional Principles of Standing Doctrine

A. The Original Natural Law Era: 1789-1873

The traditional natural law approach toward justiciability issues began with the natural law premise that where there is a wrong, there must be a remedy. As stated by Chief Justice John Marshall in Marbury v. Madison,306 "The very essence of civil liberty certainly consists in the right of every individual to claim the protection of the laws whenever he receives an injury." Justice Marshall continued in Marbury, "The government of the United States has been emphatically termed a government of laws, and not of men. It will certainly cease to deserve this high appellation, if the laws furnish no remedy for the violation of a vested legal right."

Curbing the impact of these observations is the doctrine of separation of powers. Referring to the possibility courts meddling with executive prerogatives, Marshall said in Marbury,307 "The province of the court is, solely, to decide on the rights of individuals, not to enquire how the executive, or executive officers, perform duties in which they have a discretion." These principles sustain a standing doctrine that seeks to accommodate the duty of courts to provide a remedy for injuries with the need to avoid interference with other branches. As Justice O'Connor wrote for the Court in 1984, "[T]he law of Art. III standing is built on a single basic idea – the idea of separation of powers."308

---

306 5 U.S. (1 Cranch) 137, 163 (1803).
307 Id. at 170.
A typical Supreme Court case during the Marshall Court era related to standing was *Weston v. City Council of Charleston.* In this case, the owners of stock in a bank incorporated by Congress sought a writ of prohibition against a city's proposal to impose a tax on that stock. Standing was not brought into question since a writ of prohibition was a traditional common law action and the city's proposed action of imposing a tax would have directly injured the plaintiffs' property interests.

Drawing on state cases, Professor Sunstein pointed out that the details of "standing" doctrine in the original natural law period were based on the concept of the common law "cause of action." Under this approach, there was no independent inquiry into whether the plaintiff had an "injury in fact" that was "caused by the challenged conduct." Indeed, early on Congress passed *qui tam* statutes and authorized informers' actions whereby people could sue to enforce public duties and keep a share of the resulting damages or fines without regard to whether they had suffered any personal injury.

This understanding of standing has been noted by commentators as varied in their approaches to constitutional interpretation as Louis Jaffe, Raoul Berger, and Cass Sunstein. Thus, as an historical matter, the willingness of courts during the original natural law period to consider cases brought by citizens to vindicate what today we would consider to be generalized grievances appears reasonably well-settled, though no Supreme Court case of this era ever explicitly addressed the question. Analytically, however, the logic behind permitting suits for generalized grievances – to obtain court decrees that prevent the government from behaving unconstitutionally – also supports the notion of the Court rendering advisory opinions to prevent unconstitutional government behavior from occurring in the first instance. However, on separation of powers grounds, early United States Supreme Court decisions rejected the practice of rendering advisory opinions.

The first such case to so hold was *Hayburn's Case,* decided in 1792. One year after Hayburn's case, Chief Justice Jay, and the Associate Justices, sent a letter to President Washington's Secretary of State, Thomas Jefferson, confirming this view that the federal courts may not constitutionally give advisory opinions. The letter stated in part:

[T]he lines of separation [are] drawn by the Constitution between the three departments of the government. These being in certain respects checks upon each other, and our being judges in a court of the last resort, are considerations which afford strong arguments against the propriety of our extra-judicially deciding the questions [previously asked], especially as the power given

---

311  *Id.* at 171-77.
313  2 U.S. (2 Dall.) 409 (1792).
by the Constitution to the President, of calling on the heads of departments for opinions, seems to have been *purposely* as well as expressly united to the *executive* departments.  

In addition to this separation of powers argument, a concern with shielding judges from the charge of bias was also noted by a number of framers and ratifiers of the Constitution as supporting a ban on federal judges rendering advisory opinions. The charge of bias might result if judges were to decide on the constitutionality of legislation after having rendered an advisory opinion on that matter. Thus, in this instance, concerns regarding separation of powers and the appropriate role of the Court in our constitutional design triumphed over the broader view of standing reflected in customary English common law practice. As the Supreme Court has noted, the English practice at the time of the Constitution permitted English courts to render advisory opinions.  

In short, during the original natural law era the Court did not fully work out the tension between a separation of powers base to Article III jurisdiction, reflected in Marshall's language in *Marbury*, and the English "cause of action" base to standing doctrine. One reason the Court may not have been much concerned with this state of affairs appears to have been that there was discretionary power to refuse jurisdiction in cases where the plaintiff did not have a personal interest.  

This articulation is consistent with the influences on judicial interpretation discussed in Chapter 15. As noted at § 15.3, Stage 3 natural law was based on concrete operational thought, which is prior to Holmesian Stage 4½ and its base in formal operational thought. As noted at § 15.4.1 nn.50-56, there is a conflation of custom and reason at Stage 3, which is reflected in standing doctrine based on customary causes of action. One would not expect a full-fledged theoretical approach to standing to be developed during a period predominantly based on concrete operational thought reasoning.

**B. The Formalist Era: 1873-1937**

During the formalist era, between 1873 and 1937, the Court continued to articulate the concept of standing in terms of the traditional and customary meaning of "cases and controversies" as found in judicial precedents, including those of England, while continuing to acknowledge a separation of powers base to standing doctrine. While the language of the cases did not foreclose a broad view of standing, the specific case results did not evince much support for an expansive view of standing. As could be expected from Stage 4 formalism being based on concrete operational thought, discussed at § 15.4.1 nn. 60-66, during the formalist era the Court mostly followed the existing concrete precedents of the natural law era, giving them a more literal, or formalist, interpretation.

---

315 *See* Berger, *supra* note 312, at 830-32.

317 *See* Berger, *supra* note 312, at 838-40. *See also* Union Pacific R. Co. v. Hall, 91 U.S. 343, 356 (1875) ("Granting the writ [of mandamus] is discretionary with the court, and it may well be assumed that it will not be unnecessarily granted."). As noted in *Hall*, this discretion power to refuse jurisdiction was rarely used. *Id.* at 355.
For example, in 1875 in *Union Pacific Railroad Co. v. Hall*, the Court allowed private merchants to bring a mandamus action against a railroad to require it to build a bridge and use the bridge as part of its operating line, according to what the law required. The Court indicated that there would be no problem in allowing such an action in England, and that the preponderance of American authority also supported the doctrine that private persons may move for a mandamus to enforce a public duty without the intervention of the government. The Court continued, however, by stating that allowing such an action was discretionary with the Court, and that the Court was assuming that the defendant would not be harmed by many such actions. It should also be noted that, on the facts of the case, it was likely that the plaintiff merchants had suffered an injury in fact by the failure of the railroad to comply with its duties. Though *Hall* was brought as a writ of mandamus on behalf of the public generally, plaintiffs in *Hall* were "merchants in Iowa" who had "frequent occasion to receive and ship goods over the company's road," and thus were directly injured by the failure of the road to be built.

In 1911, the Court referred once again to the broad common-law tradition of standing in *Muskrat v. United States*. The Court stated, "By cases and controversies are intended the claims of litigants brought before the courts for determination by such regular proceedings as are established by law or custom for the protection or enforcement of rights, or the prevention, redress or punishment of wrongs." The specific holding in *Muskrat* was that under our common-law tradition Congress cannot create a procedure for testing the constitutionality of a law in a suit where there are no adverse interests. In 1921, the traditional form of a lawsuit was also not thought in *Fairchild v. Hughes* to encompass a claim by a citizen that the 19th Amendment should be declared void as not ratified according to proper procedures. The Court noted that the common law does not entitle one to sue "to secure a determination whether a statute, if passed, or a constitutional amendment about to be adopted, will be valid."

The most notable case on standing from the formalist era was the 1923 case of *Frothingham v. Mellon*. The State of Massachusetts and Mrs. Frothingham challenged the federal Maternity Act. It granted money to states if they consented to federal conditions attached to the grants. The Court said that to the extent a state had a traditional case of "rights of person or property," "rights of dominion over physical domain," or "quasi-sovereign rights actually invaded or threatened," the plaintiff state would have a justiciable case. However, Massachusetts suffered no injury, said the Court, since the federal law "simply extends an option which the State is free to accept or reject." Thus, the claim involved only "abstract questions of political power, of sovereignty, of government."

---

318 91 U.S. 343 (1875).
319 Id. at 354-56.
320 Id. at 354.
321 219 U.S. 346, 357, 361 (1911).
322 258 U.S. 126, 129 (1921).
323 262 U.S. 447, 480, 484-85 (1923).
The Court also observed that such cases do not fall under the traditional definition of justiciability, as defined in prior cases. The Court noted, "It is of much significance that no precedent sustaining the right to maintain suits like this has been called to our attention, although, . . . a large number of statutes appropriating or involving the expenditure of moneys for non-federal purposes have been enacted and carried into effect."324

Regarding Mrs. Frothingham's standing as an injured taxpayer, the Court focused more explicitly than in prior cases on the interplay between justiciability and separation of powers concerns that inform the traditional definition of justiciability. The Court stated:

Looking through forms of words to the substance of their complaint, it is merely that officials of the executive department of the government are executing and will execute an act of Congress asserted to be unconstitutional; and this we are asked to prevent. To do so would be not to decide a judicial controversy, but to assume a position of authority over the governmental acts of another and co-equal department, an authority which plainly we do not possess.325

The Court also noted a formalist concern with certainty and predictability, stating, “Her interest in the moneys of the Treasury . . . is shared with millions of others; is comparatively minute and indeterminable; and the effect upon future taxation, of any payment out of the funds, so remote, fluctuating and uncertain, that no basis is afforded for an appeal to the preventive powers of a court of equity.”326
